PRINTED IN THE NETHERLANDS
AUTHORS OF ARTICLES IN VOLUME III

For the benefit of readers who may wish to follow up an individual contributor’s articles, the Editors have decided to place after each contributor’s name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

A. ABDOSSELEM, University of Tunis. 684.

ADDENDA AND CORRIGENDA

VOLUME I

P. 19*, 'ABBASIDS, 1. 3, f<# 344/945 read 334/945.
P. 187*, CADHAB AL-$ABR, add to Bibliography:

P. 277*, AHMAD b. HANBAL, l. 7 of Bibliography, for 343-45 read 342-43.
P. 304*, 'ALI PASHA ORULU, l. 22 of the article, for May 1710 read May 1706.
P. 451*, AMR b. AL-ÂS, l. 1 of Bibliography, for li. 1 read li. 1.
P. 856*, BADA'CN, add to Bibliography: Yahya b. Ahmad Sirhindi, Ta'rikh-i Mubarak-Shahi, Baroda-1932, index under Badaon (Badayun).
P. 1047, BARID SHAHlS, add to Bibliography: Ta'rikh-i Mubarak-Shahi, for 234-43 read 324-43.
P. 277*, BHATTINDA, add to Bibliography: Yahya b. Ahmad Sirhindi, Ta'rikh-i Mubarak-Shahi, Baroda 1932, index under Baddaon (Badayun).
P. 1194*, BHATINDA, add to Bibliography: Yahya b. Ahmad Sirhindi, Ta'rikh-i Mubarak-Shahi, Eng. tr., Baroda 1932, 222 n. 9, and index under Tabarhinda.
P. 1250*, delete BOBASTRO [see BABBASTURU].

VOLUME II

P. 12*, CANDERI, lli. 21-2, read in the Mâlîwa internal struggles by Mahmûd Shâh Khalîlî.
P. 347*, DIYAR MUDAR, l. 43, for (485/1092) read (485/1092); lines 53-4, for In 553/1158 Zangi granted it in fief, read In 553/1158 the Zangi granted it in fief.
P. 372*, Mh DJA'FAR, add to Bibliography: Ra'amân 'All Ta'ayy, Tanavirat-i Dzhâ'â, Arrah 1910, 79-111; Awlâd Haydar Fawk, Tanavirat-i Djaldid Šûbâ Bihâr-o Urisa, Patna 1915, 285-381.
P. 402*, DJA'IÎI, the present members of the Dja'ilî family of Mosul have asked the editors to make known their views on this article, for which the second sentence of this article does not accord with their family tradition, according to which 'Abd al-Djalîl b. 'Abd al-Malik was born a Muslim in Dijâ'âbârî in about 1030/1621 (cf. 'All Amîrî, Ta'rikh-i Shu'aîrâd 'Amîd, Istanbul 1328, l. 258) and had extensive business connections with Mosul and Baghdad; he later settled in Mosul, and died in 1909/1679.
P. 558*, DÎJWAN, add at end of Bibliography: For his views on 'samâ' see Muhammad Dja'far Nadwt, Islâm awr Mu'ayyî (in Urdu), Lucknow 1956, 110-20, 168-75.
P. 778*, after FÂRÂB, insert: al-FÂRÂBî, Anf Isfahân Isfâhân [see Supplement].
P. 809*, FARRUKHÎBÂD, add to Bibliography: Debi Prashad, Tadhkira-i Shu'ârâd 'Amîd, Istanbul 1328, l. 258) and had extensive business connections with Mosul and Baghdad; he later settled in Mosul, and died in 1909/1679.
P. 879*, FEHMÎ, add to Bibliography: see also 'Abd Allah Sirhindi, Ta'rikh-i Mubarak-Shahi, Baroda-1932, 114-5.
P. 1004*, GHÂNÎ, add to Bibliography: Husayn-Dîst Sanbhâlî, Tadhkira-i Hûsâyînî, Lucknow 1875, s.v.; 'Abd Muhammad Mu'ayyî l-Dîn Miskîn, Tadhkira-i Shu'ârâd 'Amîd, Istanbul 1328, l. 258) and had extensive business connections with Mosul and Baghdad; he later settled in Mosul, and died in 1909/1679.
P. 1036*, GHÂZÂL, iv. l. 22, for Gondwana read Gonda.
P. 1130*, GUDÂRÂT, l. 8 of Bibliography, for al-Mirmâni read al-Kirmâni and after Bodl. Elliot 257 add (and further Pertsch 321, now at Tübingen, and King’s College Cambridge MS 67; see the note by Hameed ud Din in History and Culture of the Indian people, ed., Bombay 1960, 752-3, and idem, in Journal of Indian History, xi (1962), 765-777).
P. 1134*, GULBADAN BÈGAM, l. 5, for Zinda-Pil read Zehnda-Pil.

VOLUME III

P. 24*, HADÎTH, li. 38, for al-Bûbya read Ibn Bûbya; li. 41, for al-Îbitar read al-Îbiştar.
ADDENDA AND CORRIGENDA

P. 135a, HAMDALA, l. 14, for usually read regularly.

P. 231a, HARTNÂ, Bibliography, delete M. Ould Daddah, in GLECS 26(5/1965).

P. 246a, before AL-HASAN AL-A'SAM insert AL-HASAN 'ALÂ DIKKHIB 'L-SALAM [see Supplement].

HA', 26th letter of the Arabic alphabet, transcribed h; numerical value: 5, as in the Syriac (and Canaanite) Semitic.

Definition: unvoiced glottal spirant; according to the Arab grammatical tradition: rikhwa mahmuṣa; as regards the makhraj: aṣṣa 'l-balh "the farthest part of the throat" (al-Zamakhshari, Muṣafarāl, § 732). A voiced h can be found after a voiced phoneme but it is not a distinctive characteristic (see J. Cantineau, Cours, 75). Pause can develop a h to support the short final vowel of a word when it is not a vowel of inflexion (i'rab): this is the ḥa' al-sakh or ḥa' al-umūf or ḥa' al-istirība (see H. Fleisch, Traité, § 36 ee to ii). For the phonological oppositions of the phoneme h, see J. Cantineau, Esquisse, 177; for the incompatibilities, ibid., 201.

Modifications: the conditioned modifications of h are limited to its possible assimilation to a b preceding or following, and this between the final letter of one word and the initial of the next; or to reciprocal partial assimilation after an 'ayn, thus: <ḥ > <ḥḥ, as maḥṣum for maḥ'um "with them" (using the ancient dialectal form ma5), a particularly frequent phenomenon among the Banū Tamīm (see H. Fleisch, Traité, § 12 r and 11 e; J. Cantineau, Cours, 75). This latter assimilation is also found in Maghribi and eastern dialects (W. Marcais, Old Brahīm, 17 and n. 1; C. Bergstrasser, Sprachalas, Map 5, in ZDPV, xxviii (1915).

h disappears, in modern dialects, from the 3rd pers. masc. sing. of the pronominal suffix, in those dialects where the suffix is -o, -u and derives from *-ahā with loss of -a. The same is also true of the h of the 3rd person feminine singular and 3rd person plural pronominal suffixes in certain dialects of North African and Oriental sedentary groups (notably Aleppo, Lebanese dialects). For assimilations: to a preceding 'ayn, see Bergstrasser’s Map 5 referred to above; to other preceding consonants, see J. Cantineau, ibid., 76.

h as a demonstrative element appears in three forms: with a short vowel: ha-, the definite article in Hebrew; with a long vowel: kā, which, in Classical Arabic, did not go so far as to constitute a demonstrative in itself but which appears in compounds; with a diphthong: hāy; also in compounds, like hayta (= hāy + ta) of hayta laka in Kurān, XII, 23 [(come) here] (see H. Fleisch, Esquisse, 108-13), but hey "here" (L. Bauer, Palāstīnische A. 4, § 55, 6).

Bibliography: see in text and under ḥurūf al-muḥākāl; for a general discussion of the phonetics of Arabic as seen by the classical grammarians, see ḥurūf al-muḥākāl; for modern studies, see phonetics and linguistics.

(H. Fleisch)

ii. – IRANIAN AND TURKISH LANGUAGES

In addition to its consonantal value (as in Persian ham, pāhm, bīh, Turkish hep, laka, Urdu hem, bahu, vh, etc.) the letter h early acquired in Persian the role of mater lectionis for the final vowel -a. Whether this was due to analogy with the writing of the Arabic ending of the feminine singular, -a(h) or to a phonetic development within Persian, -ag > *-ay (> *-ah?) > -a (NPers. -e), it is impossible to decide. It was plainly from the spelling of final -a with -h, however, that the spelling of the much rarer final -i developed, as in ħh (earlier ħ, ḥy) = ki. In other languages practice differed: in Khārizmian final short vowels were not expressed other than by the Arabic barakād and the same was true of early Pashto spelling, but in the course of the last two centuries writings with -h have increased in Pashto for -a, -e, as in ᪣ pa, ᪣ ta, ta. In certain cases a morphological difference is expressed by a variant spelling, e.g., ፙ ḥa ḥa 'of him'. From final position the letter h later passed into use as mater lectionis for the short vowels -a, -e in medial position in some Turkish usage and is still so used (for -a) in the written Kurdish of Irāk.

In Persian and Turkish there is no visible distinction between final consonantal and 'mute' h, e.g., nh may represent Pers. na, nh, nūh, and Turk. ne. In the North Indian languages, however, the occurrence of aspirated consonants has led to further conventions: see below. (D. N. MACKENZIE)

iii. – INDIAN LANGUAGES

Generally in Indo-Aryan languages h is voiced in all positions (see W. S. Allen, Phonetics in Ancient India, Oxford 1953, 33 ff. with full references), and frequently a contiguous syllable can carry the breathy quality of the h; in some languages (Pandībā, some East Bengali dialects) h is replaced by a syllabic tonal distinction; in others (some dialects of Rājasthāni and East Bengali) there may be a phonetic differentiation between voiced h and voiceless h < s. In Urdu, Hindī and some dialects of Pandībā ah in tonic syllables when followed by short i, e, or a consonant, or in pawa, is fronted to [eh].

Besides this free h, there is also the characteristic aspiration of consonants: hh ḥh ḥh ḥh; gh ḡh ḡh ḡh ḡh bh. In the former series the aspiration is voiceless, in the latter series voiced; there is also the possible juncture of voiceless consonant and voiced...
h arising from morphological processes, distinguished from both serie.5. There is no phonetic distinction in Indian speech between h and k. In Urdu and Hind phonology contiguous final consonants do not occur, except in pedantic educated speech, and are separated by an anaptyctic vowel, usually a; thus falh is usually realized as fatha and pronounced as [fatha].

In the Perso-Arabic script as applied to Indian languages lah is generally called hā (sometimes choli hā 'little h' to distinguish it from baḥā 'big h', i.e., ḫā). The existence of the aspirated consonants -kṣh, -gṣh, -ph, -fath a; by an anaptyctic vowel, usually thus: "to praise" phonology contiguous final consonants do not occur, except in pedantic educated speech, and are separated by an anaptyctic vowel, usually a; thus falh is usually realized as fatha and pronounced as [fatha].

In the Perso-Arabic script as applied to Indian languages -h is generally called hā (sometimes choli hā 'little h' to distinguish it from baḥā 'big h', i.e., ḫā). The existence of the aspirated consonants -kṣh, -gṣh, -ph, -fath a; by an anaptyctic vowel, usually thus: "to praise" phonology contiguous final consonants do not occur, except in pedantic educated speech, and are separated by an anaptyctic vowel, usually a; thus falh is usually realized as fatha and pronounced as [fatha].

For the general discussion of the phonetics of Arabic as seen by the classical grammarians, see harrūf al-ḥarqā; for modern studies, see phonetics and linguistics. See also hā—iii, above.

HABABA, name of a singing slave-girl (ḥayma [q.v.]) of Medina who had learnt music and singing from the great singers of the 1st/7th century: Ibn Suraydij, Malik, Ibn Muhriz, Maḥbūb, Djamila, Ḥumayra [q.v.]. Her talent, beauty and charm conquered Yazid b. ʿAbd al-Mallik, who finally became her owner in circumstances which the sources describe very variably, but at a date after his accession (Shaʿbān 101/February 720); she was originally called al-ʿAyyiya and it is he who is said to have given her the name by which she has remained famous. Hababā is often associated with another ḥayma of Medina, Sallāma [q.v.], but the latter, also purchased by the caliph, seems to have played mainly the part of a singer (though see al-Masʿūdī, whose account is not convincing), while Ḥabbā exerted complete control over Yazid, who was infatuated with her. Neglecting his duties, he shared all his pleasures with her and even granted her authority, which she knew how to exert, to such a degree that he attracted bitter complaints from those about him, particularly his brother Maḥlamā. When the opportunity arose to pursue her policies, she was supplied with the verses she required by the poet al-ʿAbwās [q.v.]. According to tradition, she died of choking on a pomegranate seed, and her decease inspired such violent sorrow in the caliph that he kept her corpse by him for several days and even had it exhumed later in order to see her face one last time; shortly thereafter he died himself, of consumption, on 24 Shaʿbān 105/26 January 724, and was buried beside her. The enemies of the Umayyads did not fail to draw arguments from the dechaubed conduct of Yazid and his absolute subservience to Ḥabbā (see the speech of Abū Ḥamza ṣalīd al-Dāhilī, Bayān, ii, 123).

For the general discussion of the phonetics of Arabic as seen by the classical grammarians, see harrūf al-ḥarqā; for modern studies, see phonetics and linguistics. See also hā—iii, above.

HABBASH, HABASHA, a name said to be of S. Arabian origin [See HABASHAT], applied in Arabic usage to the land and peoples of Ethiopia, and at times to the adjoining areas in the Horn of Africa. Although it has remained a predominantly Christian
country, Ethiopia has an important Muslim population, and has moreover had relations with the world of Islam since the days of the Prophet. These will be examined under the following headings: (1) history, (2) the spread of Islam, (3) Hābash in Muslim geographical writings, (4) Ethiopian languages spoken by Muslims. A final section will deal with the Ḥabish in ancient Arabia. Reference may also be made to Erītra, Ḥabash (on Ethiopian Muslims) and Ḥabash (on the Ottoman province of that name). (Esp.)

1. Historical Background

Though Muslim traditions mention friendly relations between Muhammad and the Negus, the principal expansion of Islam occurred at a time when the Aksumite state was in a period of decline. The Persians had disrupted the sea and trade routes in the Red Sea, and the Muslim conquests soon enveloped the whole of Arabia and North Africa. Ethiopia was, however, at least temporarily, from its spiritual source, the Patriarchate of Alexandria. In fact, Islam had knocked on the very gates of the Christian kingdom: it had occupied the Dāhliak islands [q.v.]. The isolation of Abyssinia, which was to last for many centuries, had now begun. Trade and conquest were a thing of the past, and in the face of the great Islamic expansion there was nothing left to the people but to retire within their impenetrable mountain fastnesses.

While the internal upheavals in the heart of Ethiopia were at their height (towards the close of the first millennium A.D.), Islamic encroachment along the fringes of the kingdom became bolder and more dangerous. The internal troubles were eventually checked, and ground lost, both territorially and in the propagation of Christianity, was regained, but the effects of the disturbances on the periphery could not be mitigated in the same manner. Here the losses along the coastal plains proved irremediable; the Islamization of the lowlands continued at an accelerated pace, and Muslim powers succeeded one another in establishing their sovereignty, with varying degrees of effectiveness, over the African Red Sea littoral. But Islam threatened not only the coastal areas from which the Abyssinian Kingdom had been depopulated, but also among the nomadic groups who lived and moved between the sea and the eastern slopes of the Shoan plateau, where the pagan peoples of East Africa, as conversion was the easiest way of escaping this recruitment. The organization of this lucrative trade was enormous: it set up bridgeheads deep in the interior of the country, and what had begun as a raiding expedition developed into permanent control of entire areas and the establishment of a series of petty states and sultanates. Setting out from the Dānkal and Somali regions and the coastal towns, the slave-traders enveloped the Harar area, Arussi, and the lake district in the south-west.

It is impossible to say with any degree of certainty whether the origin of the Muslim state in eastern Shoa is due to slaving expeditions. Its beginnings are shrouded in impenetrable darkness, but it must have existed for a considerable period and have been under the rule of the Makhzumī sultans, probably since the late 3rd/9th century. The overthrow of this Shoa sultanate, in 1285, and its absorption within that of Ifat, the predominant Muslim state in Ethiopia, is described in a document published by Enrico Cerulli (KSE, 1914, 5-42). The sultanate of Ifat under the Walasma dynasty had become the focus of Islamic expansion in Ethiopia and of all those southern nuclei of resistance to Abyssinian and Christian encroachment who saw in the spread of Islam the lesser evil. Ifat was firmly established on the south-eastern fringes of the Shoa plateau and has impinged on many points and at several stages in the subsequent course of Ethiopian history.

The war of attrition between the central Christian highlands and the Muslim sultanates, entrenched all along the eastern and southern fringes of the Abyssinian plateau, is the principal feature of Ethiopian history during the period from the 8th/14th to the 10th/16th century. Proceeding from east to west we first encounter the sultanate of Adal (Muslim writers such as Maqrīzī refer to it as Zeila, but Adal and Zeila are largely synonymous and their histories closely connected) on the Dānkal and Somali coast. At times Adal formed part of the state of Ifat; its ruler was styled Amlīs or Islam (Negus in the Ethiopian chronicles), and one of them who opposed the Ethiopian King Amda Sion's march against Zeila, in 1332, was defeated and slain. Harar became a Muslim city-state and a great centre of Islamic commerce and cultural propagation. Ifat held the south-eastern part of the Shoa plateau and the slopes of the Awash rift-valley; it was the most important of the sultanates. To the west, the Ifat, in what is now the Arussi region, the Dawaro sultanate [q.v.] was founded by the Dānkal in the early 14th century; it controlled the whole of southern Ethiopia. It bordered upon the Bālī sultanate, while the small principalities of Shārkha and ArābaBī lay between Dawaro and the most westerly Muslim state, Hadya, which comprised the territory of the Sidama and Gurage.

Those were the Muslim sultanates ranged against the Emperor Amda Sion (1314-44). They covered a far greater area than that controlled by the Christian Emperor, but the latter had the advantage of a geographically compact state, while the Islamic peoples were spread in a vast semicircle without proper communications or political cohesion. Amda Sion seized the initiative, attacked Ifat and Hadya, and defeated both. He had thus gained the entire plateau down to the Awash River. And though these Muslim principalities displayed great powers of recovery, for the time being Amda Sion had relieved the pressure of Islamic encroachment. Victory brought mass conversions to Christianity in its wake; many monasteries and churches were founded at that time, and the name of Amda Sion himself was registered among the saints in the senkessar (Synaxarium).

Amda Sion's son and successor, Saīfa Ar'ād (1344-72), is principally renowned for his reigns
against Egyptian merchants in Abyssinia to show his disapproval of the persecutions to which Christians in Egypt had been subjected, culminating in the invasion of the Coptic Patriarch, Saita Ar'ad's son, Dawit I (1382-1411), brought about a temporary reconciliation with the Egyptian ruler, marked by an exchange of gifts. He also received an embassy from the Coptic Church in Egypt. But under his son Yešāḥ (1414-29) relations deteriorated once more, and the Ethiopian Emperor endeavoured to enlist the help of the "Franks" (possibly Aragon) in his war against Egypt. (This episode has been investigated by Hasan Habashi in an unpublished Ph. D. thesis, S.O.A.S., University of London, esp. chapter III). Ethiopian Emperors from time to time threatened to divert the course of the Nile in an attempt to mitigate the lot of their co-religionists in Egypt by so dramatic a gesture.

Meanwhile, the Ethiopians realized that the tense but "peaceful co-existence" with the Muslim strongholds in their immediate neighbourhood, on the Red Sea coast, could not last for ever. They therefore acted upon a suggestion, first advanced by Pedro de Covilha, to enlist the aid of Portuguese naval forces in the dislodgement of Muslims from the Red Sea littoral. The arrival of a Portuguese exploratory mission was, however, much delayed, and it did not, in fact, reach the country till 1520, by which time the general situation had undergone profound changes.

In the meantime the sultanate of Adal was convulsed by internal struggles. The recent defeat had done grave harm to the prestige of the Walasma dynasty, whose authority was now constantly challenged by the amirs and military commanders. The Sultan Abū Bakr had transferred the capital to Harar, possibly to extricate himself from the persistent pressure exerted by the generals who drew their principal support from the Dankali and Somali peoples. Chief among those forceful military commanders was Ahmad b. Ibrāhīm (nicknamed Gra, "the left-handed") [see Aḥmad Gra] who soon became the effective master of the Muslim possessions in Ethiopia and assumed the title of Iḥām. We are fortunate in possessing a detailed eye-witness account of the conduct of the conquests of the 15th/16th century, with the Iḥām Ahmad as the central figure, written by Shīhāb al-Dīn (Fūtāḥ al-Habashā, ed. R. Basset).

Gra had first made sure of the strength of his position in Adal and had then welded the Danakil and Somalis into a formidable striking force, inspired by the old ideal of the gikàd and lust of conquest and plunder. He initially concentrated on limited objectives, raids and incursions into the plains and foothills, before venturing upon the distant and difficult highlands. But in 1529, three years after the departure of the abortive Portuguese Mission, he struck and inflicted a major defeat on Lebna Dengel, the Ethiopian Emperor. He was, however, unable to drive home this advantage, as his armies disintegrated, drunk with victory and booty. It was only two years later that he was finally ready to begin the great conquest and invasion which inundated nearly the entire territory of traditional Abyssinian, burning churches and monasteries and forcibly converting large numbers of Christians. Dawaro and the Shoa province were conquered in 1531, and Amhara and Lasta followed two years later. At the same time Bali and Hadya as well as the Gurage and Siddama regions fell into Gra's hands. The accession to the throne of the Emperor Clau-

HABASH, HABASHA dius (1540-1559) thus occurred at a most critical moment in the history of Ethiopia—yet within less than two years the situation had radically changed, thanks mainly to the help given by the Portuguese. The 400 men under Christopher da Gama had disembarked at Massawa in 1541 and, aided by the Governor of the maritime province, who had held out at Debayoa, set out on their epic march into the interior. When the Portuguese contingent met the Iḥām Ahmad, they were successful in two encounters, but could not press their victory home. Meanwhile, Gra asked for and obtained reinforcements from the Turkish commander Özmēr [q.v.], with which he prevailed over the Portuguese and their leader, who was put to death. But the remaining 200 Europeans had not been demoralized; they managed to join forces with the remnant of Claudius' armies and, near Lake Tana, fought what was probably—at least until recent days—the most decisive battle in the history of Ethiopia. They smote the Muslim troops and slew Gra himself (1543).

Though there still followed some skirmishes, with the death of Gra the serious Muslim threat to Ethio-

piam had been effectively removed. Assisted by the soldiers of a Christian country from Europe, the Ethiopians had finally saved their ancient Christian kingdom and heritage. But the salvation had come at a very late hour: Ethiopia lay prostrate and exhausted; many of its churches and monasteries existed no longer, its clergy was weakened, and its people were either Islamized—however superficially—or terrorized and in urgent need of moral and material succour.

Adal, though greatly enfeebled, continued with harassing operations against the Ethiopians. A nephew of Ahmad Gra moved against the plateau, but he was beaten by Claudius, who subsequently advanced on Adal and wrought much devastation. Harar was now the main Muslim stronghold in Ethiopia, and it was from there that another attack was launched which, in 1559, led to the death of the Emperor Claudius.

But despite such isolated successes the Muslims no longer constituted a serious danger to the Abyssinian Empire. By the middle of the 16th century the prospect of an Islamized Ethiopia had become very remote. The next war between Muslim and Christian Islam did not occur until the last decades of the 19th century, when the reign of the Emperor John (1868-89) was characterized by constant wars against the Muslim powers encroaching upon his dominion.

Egypt, under the Khedive Ismā'īl [q.v.], had conceived plans for the conquest of Abyssinia. In these designs she was encouraged by the quick success of the British Expedition in 1868 and by the hope of Ethiopian disunity. In 1875 Egypt directed a threepronged attack against the Christian Empire; earlier already her agent, the Swiss adventurer Werner Munzing, had placed himself in charge of the Keren area and also assumed the governorship of Massawa. He now led the assault from Tadjura, but was overwhelmed and killed by Dankali forces. The second prong set out from Zeila under the command of Ra'uf Pasha and succeeded in occupying Harar. The Egyptians stayed there until they were dislodged, ten years later, by the Emperor Menlik. The third and largest column proceeded from Massawa, crossed Eritrea, and during their descent into the Mareb Valley, near Gunet, were attacked by John's Tigrean army and virtually annihilated.

The shock of this disaster was immense, and the Egyptians at once prepared another expedition, this
time of nearly 20,000 men under the command of the Khedive's son. The Emperor now organized a veritable crusade, and the whole country down to Menelik's Shoa hills reverberated with excitement and the call to deal a final blow to the Muslim foe. When the two armies met in 1876 near Gura, the Egyptian débâcle was so colossal that it quenched their thirst for Imperial aggrandizement in Ethiopia.

The most notable group of Muslims in Ethiopia are the Afar or Bedja region and from coastal settlements of which Zayla [q.v.]. The northernmost nomads, the Afar or Bedja [q.v.], were influenced both from the Nilotic and Somali in the plains. Islam made its inroads among pagans (mainly Galla), but also among northern nomads of the coastal plains known as 'Afar or Dangall [q.v.]. The northernmost nomads, the Afar [q.v.], were influenced both from the Nilotic region and from coastal settlements of which 'Aydhab [q.v.] was one of the most important. Zayla [q.v.] became an important diffusion centre and through trading relations the ruling classes of the developed southern Sidama kingdoms, as far west as Hadya around the river Gibe, adopted Islam. The religious culture penetrated northwards into Shoa and along the eastern shores of Lake Tana, and in the north (Eritrea and Tigrai) and are indistinguishable from the Bantu Nyika and Somali tribes. Islam spread only among the Somali [q.v.] and its diffusion is bound up with legends of tribal origins.

The central point throughout the history of this north-eastern region of Africa has been the Christian state of Ethiopia against which waves of nomad aggression tended to waste themselves. Muslim trading communities were present on the plateau but these waves also left behind small groups of Muslim agriculturalists. These Ethiopian Muslims living in plateau regions are known as Diabart ([q.v.] and see also ERITREA) and are indistinguishable from the Christians among whom they live except in customs which derive from religion. Those in the north (Eritrea and Tigray) speak Tigrinya and the others Amharic.

Before the 19th century, therefore, the only Muslims in the region apart from immigrant traders were the scattered groups of Diabart and the nomadic tribes of 'Afar and Somali in the plains. Islam made its greatest gains during this century, not merely among pagans (mainly Gallia), but also among northern Christian tribes in what is now called Eritrea. Many of the Gallia [q.v.] tribes which had penetrated into the highlands and were making a great if uncoordinated bid to gain control of the Christian stat-
adopted Islam in contradistinction to Ethiopian Christianity as a means to that end. A people known through them that those Galla who occupied the same region (Yedju and Raya or Azebo) and mingled with the preceding population adopted Islam as well as their hostility to Christian Amhara. Similarly, Islam spread among the Wolde Galla in the heart of the highlands (centre Dessié) to reinforce their attempt to remain distinct from Amhara. Many Wallo changed to Christianity during the reign of the Emperor John.

The 19th century was a period of anarchy in northern Ethiopia and the Christian state had no real control. The Egyptian conquest of the Sudan affected Eritrea (occupation of the Keren highlands 1860-76). Most of the Tigre-speaking tribes became Muslim between 1880 and 1885. These included the ruling classes of the nomadic Bait Asgedé (Habáb, Ád Taklés and Ád Tamúyán), many of whose serfs were already Muslim; the cultivating tribes of the Bilén or Bogós (Christian elements remain among the Bait Tarke section); the Marya living north-west of the Bilén; the Mensa; and Bait Juk. Muslim holy tribes formed themselves, one of the more important being the Ád Sháyyáb. Also the pagan negroid Baria, inhabiting the country around the Talkázé and Gash, became Muslim during the Turko-Egyptian occupation. The Mirgháni family [see Mirghaníyya] gained great influence among Eritrean tribes during this period, deepening the religion of the southernmost Béjja, the Banú Ámír (q.v.), who had been influenced by Islamic diffusion from the fábará of the Nilotic Fundjá (q.v.) state.

The northernmost Áfar tribes, mixing with other groups, gave rise to the Sahó tribes who occupy the eastern mountain slopes of Akèlé-Guzáé, Shimezana and Agame. Long exposed to Islamic influence, a movement into Islam began in the 8th/14th century. They were still predominantly Christian at the beginning of the 19th century, but during this period of change they became predominantly Muslim. They comprise the Asaortá, Hato or Hau, Mini-Fere, and Debrí-Mela, though they contain groups which have remained Christian, e.g. the whole of the Irób tribe and sections of the Mini-Fere and Debrí-Mela.

In the south, it has already been shown (e.g., al-'Umarí's account) that although Islam had entered the Sidama states by the 8th/14th century it had made no lasting mark upon the bulk of the population of these states and what little there was disappeared before the waves of Galá and subsequent upheaval and dislocation. The Galá first invaded the Muslim kingdom of Bálí (q.v.), where was situated the sanctuary of Sháyyáb Húsayn which they assimilated, and the eastern part of Sidama territory became Galá whilst the unmodified Sidama became confined to the valley of the river Omo. Only in the second half of the 19th century did the Galá of the Harar region adopt Islam; since then many of the Arusi have also come to call themselves Muslim.

The Galá who invaded the region beyond the Gibé formed a number of states (Guma, Gomma, Géra, Limmu Enarya, and Djj Sta Abba Djjifar) into which Islam spread in the middle of the 19th century, chiefly through commercial currents from the east, though there was also some Nilotic Sudan influence. It also spread among some Sidama (Gáro or Bosha, Tanbaró, Alaba, Hádiya or Guédéla, and part of the Walamo) and Gurágé groups (Waláné, Akekí-kabe, Gogót and Silté), though it should be pointed out that in many of these southern regions no clear-cut religious classification is possible. From the Nilotic Sudan Islam spread among certain Negro tribes (e.g. the Berta) of the western Ethiopian borderland known to the Amhara as Shánqela.

An aspect which distinguishes the Islam of the region from other parts of Africa is in the number of mágódhás which are recognized, owing to historical circumstances. The Banú (through Turkish or Egyptian influence) is found at Mášawa and elsewhere on the Eritrean coast, in parts of the interior of the Ethiopian state, and in a quarter of Hará city; the Múlíkí (from the Nilotic Sudan) in the extreme west and in the interior of Eritrea; and the Shálfí (from Arabia) in other parts of Eritrea, among the Sidáma, the Galá of Gibé region, and the Sónu. The spread of Islam was nowhere accompanied by Arabization and in consequence the people, especially the nomads, preserved their own social institutions as the basic feature of communal life, modified but not radically changed by Islamic institutions.

For further information the articles on individual peoples or regions should be consulted. (J. S. TRIMINGHAM)

## iii. — AL-HÁBASH IN MUSLIM GEOGRAPHICAL WORKS

Arabic writers often use the word Hábásha as vague by as some classical and mediaeval Europeans use Ethiopia, i.e., as approximately equivalent to the habitable part of sub-Saharan Africa, though the Arabs, unlike some European geographers, do not confuse it with India. Its eastern boundary was considered to be the Bahr Külzum and Bahr al-Zándí, its northern the desert separating it from Egypt; Idrísl extends it to the southern limit of cultivation in Africa. In the west Ibn Khurrádádhíb gives it a common frontier with the Šúrf state of Sídilímá, and al-'Umarí states that it is bounded by the country of the Takrúr; there is no reason to suppose he does not refer to the Sudanese Takrúrs. The Arabs derived their information partly from Pótemy, especially from the works on the Red Sea region, partly from the book of arf, the handbook he wrote to accompany the map compiled by order of al-Má'mún. In time this information became more rather than less confused as names became more corrupt. Muslim penetration was at this time practically confined to the lowlands on the western shore of the Red Sea. This is why so many Arab descriptions emphasize the extreme heat and aridity of Abyssinia. Their acquaintance with the plateau was very slight, though later accounts become more detailed and more accurate. The orders that ensued after the collapse of the Aksúmite kingdom, the prevalence of Christianity in the highlands, and the formidable physical obstacles to communication contributed to this ignorance. In general the early Arab geographers mention only the capital, Djarra, or Djarm, properly Djarma (Hudái, 473), really Garama, capital of the Garamantes of Fazán (q.v.), where Yákút places it. In the Hudái, for example, only three place names in Hábashá are given, Djarma, corrupted to Rásun, and two others, equally corrupt, but tentatively identified by Minorsky as 'Aydháb and Zaylá. Masúdí (Murád, iii, 34) gives the capital as Ku'bar. This cannot be Ankober as stated by the editors, nor can it be the same as Idrísl's Káljún. It is Ya'qúbí's Ká'ban or Ku'bar, capital of the Nadjástí. Its iden-

the last century, the influence of Amharic has grown, 
and it seems likely that the latter will slowly displace Harari altogether. The number of those still capable of speaking Harari has been estimated by Cerulli at 35,000.
Harari has generally been written in Arabic, and not Ethiopian, characters. Its literature is limited to some songs and some popular works of Islamic religious law.

Among non-Semitic languages spoken by at least a certain number of Muslims are Galá, Somali, the Sidama languages including Kaffa, as well as Beja and Bilen.

**AHABISH**

Ahábish is a plural form which may mean either (a) "Abyssinians" as derived from Ḥabab, or (b) "companies or bodies of men, not all of one tribe" (Lane), from ḥabūb or ḥabīb; in a poem *Uḫman* is said to have been murdered by "ahábioh from Egypt" (Nöldke, *Delectus*, 79, 7; from Ibn al-ução, i, 152). It is also said that the word is applied to men who formed a confederacy either at a mountain called al-Ḫabab or at a wadi called Ḥabash.

The Ahábish who are mentioned several times in the *sira* of Muhammad were a confederacy of small tribes or clans, at first allied with Banū Bakr b. Abd Manāt b. Khāna against Kuraysh (al-Azraq, *U. Wüstenfeld, Mecka, i, 71, 14), but subsequently allied with Kuraysh, The leading group was Banu 'Hārīb b. 'Abd Manāt b. Khāna, and the others usually named are: al-Muṣṭalik (of Khurās), and al-Ḥūn (of Khuzayma) with its subdivisions 'Aṣāl and al-Ḫāra (for references in Ibn Ḥišam, al- halkın, al-Wākidī and al-Ṭabarī see W. M. Watt, *Arabia Felix*, ii (1943), 259-75.

(C. F. BECKINGHAM)

While the above facts are clearly stated in several passages, there has been much dispute about the identity of the Ḥabāšī who supported Kuraysh since the appearance of the article by H. Lammens, *Les 'Aḥabīs* et l'organisation militaire de la Mecque, au siècle de l'hiḡirè (J.A, 1916, 425-82; reprinted in *L'Arabe occidental avant l'hiḡirè*, Beirut 1928, 237-94). Lammens put forward the view that the Ḥabāšī consisted of Abyssinian and other negro slaves attached to a core of nomadic Arabs; and further held that the power of Mecca in the early 7th century A.D. rested on these mercenaries. Lammens was correct in rejecting the older view that the Ḥabāšī were simply "die politischen Verbündeten" (J. Wellhausen), but his hypothesis as a whole is unjustified for the following reasons: (a) he sets too much weight on the meaning of "Abyssinians" and neglects the second possible meaning; (b) there is nothing in the sources to suggest that the tribes or clans of the Ḥabāšī are not Arab; (c) they are stated to be confederates (*ḥulāfā*) of Kuraysh, not slaves, and at their first mention they were confederates of enemies of Kuraysh; (d) they were organized under a chief (*sayyīd*), usually of Banu Ḥārīth b. ʿAbd Maʿān b. Khānān, who spoke to Kuraysh as an equal (e.g., Ibn Ḥāḳam, 506, 743); (e) in the Meccan campaigns the Ḥabāšī did not have the importance alleged by Lammens. The Meccans certainly had some Abyssinian slaves who fought for them; of the eleven slaves or freedmen who fought for Muhammad among the Emigrants at Badr, two were clearly of Abyssinian origin (Ibn Sa'd, *ii*; Watti, Muhammad al-Medinah, Oxford 1936, 344); but this is a small proportion, and there is nothing to show that such slaves were called Ḥabāšī. The word is used, however, of Abyssinians in the Yemen (S. Smith in *BSOAS*, xvi (1954), 455, 458, 465).

**Bibliography:** (further to that in the text): M. Hamidullah, *Les 'Aḥabīs* de la Mecque, in Studi orientalistici in onore di Giorgio Levi Delia Vida, Rome 1956, i, 434-7; Tabarī, 1, 2495-9; Ibn Durayd, 119; Abd al-Masih al-Kindī, Risāla, 213 foot. (W. Montgomery Watt) ḤABASH AL-ḤASIB AL-MARWAZI, AHMAD b. Abd allah, one of the most important and interesting figures in early Islamic astronomy, hailing from Marw, but living in Baghdad. The sobriquet "Ḥabāšī" ("the Abyssinian") is nowhere explained; it may refer to the dark colour of his skin. While the *Fihrist* (p. 275) mentions that he reached the age of 100, Ibn al-Kīṭīf (Taḥḥāḥ, 170) gives more detailed information on his life and the various stages of his scientific activity. According to him, he lived in the reigns of al-Māʾṣūr and al-Muṭṭaṣım, which is confirmed by Ibn Yūnus (in his *Great Ḥākimītī Tables*, see Kennedy, *Tables*, 126), who reports observations made by Ḥabāš in Baghdad in 214/829 and 230/846. The limits for the year of his death (250/864-260/874) as given in Suter, *No.* 22, p. 13, and Sarton, *Introduction*, i, 505, are pure conjecture. Nallino (al-Balāḏurī, i, p. 181, and *Raccolta*, v, 55) states that Ḥabāš completed the *ṣīdā* and announced it before Ibn Sa'd (Ahwārī, 1750), in 300/912. If this is true, we would have to assume that he made his first observations as a young boy of no more than 15, which is not very probable. For this reason, Nallino (*Bull. du XII* congr. int. d. orientalistes, no. 15, 11-2) excludes the possibility of his having collaborated in the Maʻmīnic observations; see Vernet, 505, note 31. Vernet's surmise that there were two different individuals bearing the name Ḥabāš al-Ḥasib is extremely unlikely. The titles of his works include the *Fihrist* and by Ibn al-Kīṭīf (differing with one exception only slightly) are the following: *The Damascuss tables; The Maʻmīnic tables; On the distances [of the planets] and [their] bodies; On the construction of the astrolabe; On sundials and gnomons; On the three tangent circles and the properties of their functions (kāyfiyyat al-waḍīl); On the construction of horizontal, vertical, inclined *mulūma* (see the first one of the 'main directions') planes. In Ibn al-Kīṭīf the last two titles are combined into one: On the tangent circles and the mode of their application (kāyfiyyat al-latīḍāl [better read istīlmāl] to the construction of . . . planes. If this is correct, the title would refer not to the construction of sundials but to stereographic projection and its practical application, the terms māʿī and munḥarih bearing on the ecliptic and on the horizon with the muḥanfarādī respectively.

Contrary to this list, which contains three *ṣīdā* of Ibn al-Kīṭīf in the *Fihrist* preceding it mentions three *ṣīdā* and under different titles: one according to the methods of the *Sīndhind*, "composed in his early days, when he still relied on the computations of the *Sīndhind*", in which he refrained entirely al-Fazārī's and al-Khārizmī's procedures and their application to the motion of precession according to Theon of Alexandria; another one, called al-ṣīdī al-mumlabān ("verified tables*, tabulas probabiles, for the meaning of the title see Vernet, 506), which was the most famous of his works composed after he had had recourse to his own observations; finally a third one, the "small *ṣīdā" called also the *ṣīdī al-ḥāḏh.*

It is hardly possible to decide whether the two extant *ṣīdā* bearing Ḥabāš's name (Berlin 5750 and Istanbul, Yeni Camī 284, 2°), both described in detail by Kennedy (nos. 13 and 16, and §§ 7 and 8, pp. 151-4) are at least in part identical with one or the other of the two great *ṣīdā* listed (the *ṣīdī al-ḥāḏh* is lost). The former, in which references to the *al-ṣīdā* of Yahyā b. Abl Manṣūr (Ms. Escorial 1927 (formerly 922), Kennedy, no. 51 and § 5, 145 ff., and Vernet, 507 ff.) are found, is obviously modified by some later author. The latter is "much more homogeneous than the other purported copies of early *ṣīdā*" (Kennedy). The latter contains among others a "Table for the correct positions" (*Dīwān al-tabām*) of which Abl Naṣr Manṣūr (Risāla . . . *īl-Biarrī, . . . fi bāḥārī a'māl dīwān al-tabām fi *ṣīdī Ḥabāš al-Ḥāḏh, in Rāsāl Abī Naṣr aīl *īl-Biarrī, Hyderabad-Deccan, 1948) has given an elaborate description. There the following four functions are listed for the argument *λ* (elliptical longitude) = 1, 2, . . . 90°: 1. the latitude *b* (*"al-*māyī al-ḥāḏh") of a point on the equator with longitude *λ*; 2. *cos b* 90-λ 3. ; 4. sin *ε* *t* *λ*.

With the aid of these functions many computations can be considerably abbreviated.

As for the *ṣīdī al-ḥāḏh,* the title seems to indicate that it was composed on the basis of parameters (e.g., longitude of the solar apogee) or even methods employed in the *Pahlavi tables* *Zik-i-gahrooyār*, known and in use already at the time of the astrologers of al-Manṣūr, such as Mā ṣāḥa'ī 'llāh, which in turn, as Nallino (*Raccolta*, v, 233) has shown, must have been based mainly on Hindu models (*Sūrya-stidhānta*).
There is no doubt that Habash possessed a perfect mastery of trigonometrical functions (sine, cosine, versine, tangent, cotangent) and their application to the problems of spherical astronomy. Curiously, however, Abu Nasr in his Risala on Habash’s giyawa al-tab’um (see above) avoids the term zill and consistently replaces it by the ratio of sine and cosine (thus the above fourth function is actually defined as “sin λ · sin ϵ/cos λ”).

Al-Biruni, who cites Habash on many occasions, himself wrote an improvement and correction to the tables of Habash (Tahmil ridg al-yahdāt al-bakhsh al-jābiha min al-zalal, Boilot, no. 4, p. 177). Ibn Yūnus, in his Ḥakimītīc tables, on one occasion at least makes the depreciatory statement that “Habash’s remarks concerning the latitudes of Venus and Mercury sound like those of one who does not understand what he is saying” (Kennedy, 126). Contrary to this, the unanimous opinion of all later writers seems to have been that Habash was one of the greatest astronomers of early Abbasid times.

Habash’s son ʿAbū Dīʿār b. ʿAbīd b. ʿAbd Allāh (Ibn al-Kifṭs, 396) was a renowned astronomer and instrument maker. He wrote a book on the planispheric astrolabe.

**HABASHAT**, a term found in several Sabaean inscriptions with apparent reference to Aksumite Abyssinia. Despite the absence of explicit evidence, it has generally been assumed to apply not only to the territory and people of the Aksumite empire but also to a South Arabian tribe related to the former and in close contact with them. To E. Glaser the term in its widest and most ancient usage signified no more than “incense-collectors” (Arabic ḥababsa “to gather”) and was confined to the peoples of the incense region, that is, of the Mahra and Somali coasts and Abyssinia proper. He equated it with the Greek *Aithiopoi* for which he posited an original *Afya* with the same sense. In Habashat of the inscriptions, however, Glaser preferred to see a region and tribe of South Arabia which he further recognized in the Abasenoi of Uranius (opus Stephanus of Byzantium) who inhabited the territory and people of the Aksumite empire. C. Conti Rossini rightly stressed the improbability of a people from Mahra colonizing across the Red Sea and was raised the linguistic objection that Ge’ez, the language of Aksum, shows closer affinities with Sabaean than with Ḥadrami. Consequently, if the Abasenoi were really Habashat they might more reasonably be seen as refugees from Abyssinia. For his part he took Ḥabashat as a South Arabian tribe, part of which had emigrated to Eritrea at a very early date, and sought their provenance in Western Yemen, which had obvious geographical advantages. A number of middle Sabaean texts attest their presence in the ancient district of Sahartān, roughly the region between Wādī Bayḥa and Wādī Surdū, and they were clearly in close relations with Aksum. This location, which was specified by the vicinity of Luhayya, was felt all the more convincing since many Yemeni place names, ancient and modern, were found to recur in Eritrea, a clear indication of early cultural contacts. However, it is pertinent to observe with A. J. Drewes that such theories on the South Arabian origins of a tribe Ḥabashat have tended to become confused with and to develop on the strength of a series of quite separate, quite different, theories of the origins of Abyssinian civilization generally, and of the latter there is little doubt. In fact there is no known mention of Habashat before the earliest references to Aksum, that is, at least 400 years later than the oldest Abyssinian texts. Even by the traditional chronology of A. Jamme, the Sabaean inscriptions citing the name are not earlier than the first century B.C. and other schemes would up-date them by three centuries. Habashat is attested in only one Aksumite text (*DAE*, 6/1 = 72) where it is the rendering of Aithiopoi in the Greek version (*DAE*, 4/2-3). In the Sabaean texts there is no suggestion that Habashat was anything other than a designation for the region comprising the nucleus of the Aksumite empire. Where the reference is to the people of Ḥabashat, the term employed is Ḥabbāṣi (‘Abbas). Consequently it is probable that in Sabaean and Aksumite Ge’ez the name simply represented the later Arabic al-Ḥabasaḥa, Abyssinia.

Fortunately Abyssinian history may be considered in isolation from the foregoing problem. Although the epigraphic and other evidence from Eritrea is scant compared with that from Arabia, the texts so far published permit certain general conclusions. The earliest date back to the fifth century B.C. and are written in South Arabian characters. They may be subdivided into those in Sabaean and those in a language resembling Sabaean but with divergences in vocabulary, syntax, and proper names. The latter show that a civilization was developing in the Aksum region which closely resembled that of Saba but whose roots, undoubtedly transmitted from Saba, must go much further back in time. Since some of the texts of the first category actually mention Saba and Marīb (mryb), the possibility of a later wave of Sabaean colonists in the fifth century is very likely. Thereafter, till the emergence of Aksum, the only inscriptions consist of a few uninformative graffiti, and it is possible that in this period the development of the local civilization was largely inhibited by the Ptolemaic presence in the Red Sea. The first mention of Aksum itself occurs in roughly contemporary South Arabian and Greek sources. The *Periplus Maris Erythraei* (traditionally about 70 A.D., more recently brought forward to about 230 A.D.) knew it as a flourishing trade centre under a king Zōkalsē and with links with Arabia and Egypt through its port Adulis. Ptolemy (160 A.D.) also mentions the city, and its people, but gives little indication of its status. The ethnographic and economic authors would suggest that, if not of recent foundation, it rose to prominence only after the eclipse of the Ptolemies. As a trading nation the Aksumites inevitably came into sharp conflict with the interests of Saba, and it is probably in this context that we should understand the part played by them in the struggle which developed between the rising state of Himyar and the traditional Hamdādūn dynasty in Saba. One Sabaean text (*CIH*, 308) tells how Gadarat, king of Ḥabashatān, concluded an alliance with ʿAlbān.
Nahfän of Saba. In the reign of his son Sha'ir Awtar, Gadarat appears on the side of the Himy rites in campaigns in Zahar, Sahartän and Nagran (Jambhe, 1965, 34-38). During the co-regency of Ishhār Yahūfū and Ya'zīl Bayyūn, the Nadžāshī 'Adhbah sided with the Himyrite ruler Shammad of Raydān during campaigns in Western Yemen which resulted in the defeat and surrender of the Himyrite faction (CIN, 314 + 954; Jamm, 574-7, 585). Jammf places all these events in a period of about three generations in the first century B.C., a date by no means confirmed by the South Arabian evidence. J. Pirenne however, in identifying Shammar with the famous Shammad Yuharīsh, brings the date of the troubles forward to about 250 A.D. and thereby introduces an attractive degree of cohesion into the early history of Aksum.

The greatest Aksumite ruler was unquestionably Ezānā (mid fourth century), whose inscriptions, composed in Greek, Ge'ez and pseudo-South Arabian, tell of campaigns extending from the confines of Egypt to Somaliland. His titles include king of Hamër (Himyar) and Raydān, and Sabā and Saḥḥān. It is difficult to assess the validity of this claim—the theory of an Aksumite occupation of the Yemen after the reign of Shammad Yuharīsh has been abandoned in the light of new inscriptions—but E. Littmann supposes that a successful campaign in South Arabia may have lain behind it. It is worth observing too that a predecessor, the unknown author of the Monumentum Adulantum, in the course of similarly wide-ranging conquests, had subdued the Arhabitat and Kainādkoplitā, who inhabited the coastal regions of Ḥiḍrāz and 'Āṣir down to the northern borders of Saba. If this operation may be seen as an attempt to curb piracy in the Red Sea, it is possible that Ezānā, too, may have had commercial motives for interfering in South Arabian affairs. Drewes, who attributes the Monumentum Adulantum to one Sembūthē, known from a fragmentary Greek inscription from Daqql Mahārī (DAE, 3), goes so far as to suggest the latter's identity with Shammad Yuharīsh and would thus explain the titulature. Apart from his statecraft, Ezānā's most notable achievement was to make Christianity the state religion. It had been introduced about 525 A.D. when the Emperor Justin called upon the Nadjashi Kāleb to intervene in South Arabia on behalf of the persecuted Christians there [see PHU 3], goes so far as to suggest the

The statements regarding the subdivisions and multiples of the habba also vary; the abba also varies; the

The statements regarding the subdivisions and multiples of the habba also vary; the habba is usually divided into 2 grains of barley (sha'ir) or 4 grains of rice (araw) or about 100 mustard-seeds (khardal); sometimes 3 and sometimes 4 habba on the other hand make a kêrāt [q.v.].

HABAT, South Arabian name for a sacred area which is under the protection of a saint and which is a place of refuge; see hāwta.

HABBA, literally grain or kernel, a fraction in the Troy weight system of the Arabs, of undefined weight. Most Arab authors describe the habba as 1/10 of the unit of weight adopted, as a 1/100 of the dānak (which in Arab metrology is a sixth part of the unit [see šikka]), but there are other estimates which vary from 1/10 to 1/10. The habba thus means something very different according to the unit of weight; there is a habba of the silver measure, a habba of the gold measure, a habba of the mihkāl, later of the dirham etc. On the supposition that the oldest Arab unit of Troy weight was the mīghāl [q.v.] of 4.25 grammes (61/2 grains Troy), we get as the most probable weight of the habba in the early days of Islam about 70-77 milligrammes (1.1 grains), which approximately agrees with the European apothecary's weight of the granum (grain, of the pound) as it was used throughout Europe down to the most recent times (cf. the English grain, the Spanish grano, the modern metric decagramme). The statements regarding the subdivisions and multiples of the habba also vary; the habba is usually divided into 2 grains of barley (sha'ir) or 4 grains of rice (araw) or about 100 mustard-seeds (khardal); sometimes 3 and sometimes 4 habba on the other hand make a kêrāt [q.v.].

HABBAN, a town in the Wahidi Sultanate of the former Aden Protectorate, situated in the wadi region the houses are strongly built like fortresses and a Hakir which stands as early as 400 B.C. in the inscription of the same name. It is very old and may be referred to as a Kasabdt (kasabdt) and numbered about 200 in 1947 and, though subject to the usual taxes and restrictions, were well treated so that relations with the Arab population were good. They were divided into five sections (bašâbbi) and came under the protection of the Sultan. They spoke Hebrew amongst themselves and had their own cemetery outside the town. By trade they were itinerant silversmiths. Habbân is also known as a centre for the cultivation of incense but the chief crops are dhura and barley. The land is very fertile and can support up to four harvests in one year. Indigo provides the Hadârîm with employment as dyers, and rubber has also been noted. The road from Bîl Hâm to Marjha passes through the town and a caravan trade was conducted with Nisâwa under the rule, not of an Ottoman governor, but of a tribal chief entitled nâdh. The kâshîfik in Lower Nubia had become hereditary, and the descendants of the Ottoman garrison, intermarried with the local population, became a hereditary military caste.

HABESH, Ottoman name of a province covering the African coastsland of the Red Sea south of Egypt as far as the Gulf of Aden, and including also the sandghijs of Djidda; the principal sandghijs were Ibrim, Sawâkin, Arkko, Masawwa, Zaylin and Djidda, so that its area corresponded approximately to the coastal districts of the present-day Sudan, Ethiopia, French Somaliland and the Zayli district of the Somali Republic.

The province was founded with the intention of expelling the Portuguese, who, since the last years of the Mamlûk sultanate, had been endeavouring to obstruct the Pilgrimage and the spice trade from their bases along the Red Sea coast. These Portuguese attacks caused a reduction in the customs revenues of such ports as Djidda, Suez and Tör; they also had unfavourable repercussions throughout the Muslim world, since word of them was spread by pilgrims (see H. Inalcik, in Belleten, xxii/83 (1957), 503-5). As protector of the Holy Places [see BARABRA], the Ottoman Sultan was forced to action; but after the failure of five expeditions against the Portuguese (between 930/1524 and 961/1554), it was decided that these regions should be permanently occupied and constituted a province.

In 962/1555, therefore, Özdemir Paşa [q.v.] was appointed beylerbeyi (Istanbul, Basvâkela Sârîvî, Reise nach Südarabisen, Dhiyâr-i Hûmayûn, part no. 213, 212); with an army gathered in Egypt, he launched an offensive up the Nile, but the operation failed, owing to the obstacles which this route entailed (see C. Orhonlu, in Altıncı Türk Tarih Kurumu Kongresi Teâbîleri, Ankara 1961). In a second expedition Özdemir Paşa embarked his forces at Suez and landed at Sawâkin. Using both land and naval forces, he conquered the whole region from Masawwa to Zayli, the province being finally constituted in 964/1557 (C. Orhonlu, XVI. asrin ûlk yarısında Kusânedîn sahillerinde Osmanlılar, in Tarih Dergisi, xii/10, 1-24). In order to consolidate their position, the Ottomans extended their conquests inland until 966/1559, when Özdemir Paşa died. After his death, Ottoman power declined rapidly. The remotest districts were abandoned or separately administered [see BARABRA]. In 1789 Bruce found Masawwa under the rule, not of an Ottoman governor, but of a tribal chief entitled nâdh. The kâshîfik in Lower Nubia had become hereditary, and the descendants of the Ottoman garrison, intermarried with the local population, became a hereditary military caste.

Since one of the primary duties of the beylerbeyi was to maintain order in the Holy Cities and the Yemen, the headquarters of the province was, from the last quarter of the 10th/16th century until the beginning of the 19th century, located in Djidda (Bayvâkela Sârîvî, Mûhimme def., xxi, 311, xxvii, 235, 6, 92). Owing to the disturbances in this region, Medina was temporarily made the headquarters in the 12th/18th century.

By 1814, when Burckhardt visited Sawâkin, Ottoman authority was reduced to the granting by the governor of Djidda of the amir, and the appointment of a customs officer in the port. The Ottoman sultan finally transferred all claims on the African parts of the province to the pasha of Egypt in 1830.

HABIB B. 'ABD AL-MALIK AL-KURASHI AL-MARKANI, great grandson of the Umayyad caliph of Damascus al-Walid I. After the
fall of the Umayyad dynasty, Habib b. 'Abd al-Malik fled from Syria and arrived in Spain in advance of his cousin Habib b. Abd al-Malik al-Dakhil, the future 'Abd al-Rahman I of Cordova; when this Umayyad claimant arrived, Habib gave him his support and encouraged him in his aspirations. On the eve of the battle of al-Muṣrā (138/756), which was to decide the fate of the throne of Cordova, 'Abd al-Rahman appointed Habib commander in chief of the cavalry.

After victory had been achieved, 'Abd al-Rahman I al-Dakhil retained his cousin Habib in his service, and he became his intimate confidant. The ruler entrusted to him the government of Toledo, a key point in the centre of the Iberian peninsula, which until then had been under the domination of the Fihrs, supporters of Yusuf, the willi dismissed by 'Abd al-Rahman. While Habib b. 'Abd al-Malik was at Toledo, this eastern town showed no sign of rebellion; this calm must be attributed to the energetic attitude of its governor, who also made use of this place as a centre of operations against the revolt which was taking place at this time in the adjacent territories—the rebellion of the Berber Shawkī which broke out in 131/748 and which was the most serious of all the many uprisings which took place during 'Abd al-Rahman's reign. The detachments sent by the governor of Toledo succeeded in penetrating into the main stronghold of the chief rebel, the castle of Sopetran, in what is now the province of Guadalajara. In 162/778 Habib was once again in action in his territory, against another rebellion—by the ḥārīd al-Sulami.

In reward for his services, the amīr granted great favours and benefits and many estates to Habib b. 'Abd al-Malik, who in addition did not hesitate to appropriate to himself, with the ruler's connivance, any land which he coveted; on one occasion, confronted by the vigorous support of the judge of Cordova for those who had been dispossessed, 'Abd al-Rahman went so far as to repay from his own money the value of the properties which Habib had seized. On Habib's death (date unknown), the ruler showed profound grief, which is described in graphic terms by the historians.

Habib b. 'Abd al-Malik was the founder of the line of Habibs who held the Andalus with some notable men of learning and of letters, among whom there stands out the branch of the Banū Dāhūn. Among the most noteworthy Ḥabibs may be mentioned: Ḥabib Dāhūn and Bishr b. Habib Dāhūn, both poets of the reign of 'Abd al-Rahman II; the hādi of Cordova, Ibrāhīm al-Kurāshī, also contemporary with 'Abd al-Rahman II; 'Abd Allāh b. Yahyā b. Dāhūn, a venerable fakih who lived to see the fall of the caliphate of Cordova and was the religious counsellor of Ibn Ḥazm (q.v.); Sa'd b. Ḥūqūm b. Dāhūn, a poet who lived at Porcuna and was the contemporary of Ibn Hamdīn (6th/12th century).

HABIB AL-NADJDJAR — HABIB WA KABIL

THAIB AL-NADJDAR — HABIB WA KABIL 13

HABIB ALLAH (HABIBULLAH) RAHAN (1872-1919), son of the amir 'Abd al-Rahman [q.v.] and of the concubine Guzı̃r, who came from the Wakhjān; ruler of Afghanistan in succession to his father, from 1 October 1902 to 20 February 1919, when he was assassinated at Kalla-gush in the valley of Ailingār not far from the residence of Kal'at al-Sīrāj (Laggān). In foreign affairs he adopted a pro-British policy, reinforced by frequent visits to India (and also with Russia, but without going so far as to establish the regular relations desired by the governor of Turkestān, Ivanov), and with Treasury loans to merchants. He carried out some public works, but it was in the field of education that most progress was made. With a military school supplementing it, there began to function from 1903 the high school called Ḥabibiyya, based on the type of the Anglo-Indian colleges and intended to train an administrative cadre: in its 12 classes, with local and Indian teachers, it taught the usual subjects and allowed for literature and the religious sciences, geography, chemistry, physics, history, mathematics; while among the languages, together with Persian, were English, Hindustani and, more sporadically, Persian. A suitable Dār al-ta'līf attached to the school attended to the preparation of textbooks, most of which were lithographed in India. In Kābul a littégraphique and printing works (the Ināyat press) was set up. For eight consecutive years from 1911, there appeared the 16-page fortnightly scientific, literary and political periodical Sirājāl al-akhbār-i āfgānīyya, with engraved illustrations and edited by the “father of modern prose”, Māhmūd b. Qulām Muhammad Tarzī (b. Kābul, 1285/1868-9, d. Istanbul 1335/1919). Thus schools and periodicals were the first two really modern manifestations of Afghan cultural life. The assassination of the amir, however, brought to an abrupt end this interim period of apparent tranquility and of imposed friendship with Great Britain, and opened the way to new and more definite national claims by the country.

HABIL WA KABIL, names of the two sons of Adam [q.v.] in Muslim tradition: Heşel and Kāsin in the Hebrew Bible (for the distortion and assimilation throughout Islam of the Hebrew and Arabic names of the two sons of Adam, see Table of Names, pairs of words Dālūt - Talūt, Harūt - Marūt, in the Hebrew Bible (for the distortion and assimilation throughout Islam of the Hebrew and Arabic names of the two sons of Adam, see Table of Names, pairs of words Dālūt - Talūt, Harūt - Marūt, Yahyā' - Mākūdjī; Kāsin is, however, attested sporadically). Although the Kurān does not give these names, it tells however (CV, 27-32/30-5, Medinan period) the story of the two sons of Adam, one of whom killed the other because his own sacrifice was refused when his brother's was accepted. Unlike the Bible, the Kurān also tells how the murderer learned from the example of a crow how to dispose of his victim's body. From this episode the Kurān argues for the prohibition of murder, underlined by a consideration inspired, no doubt indirectly, from the Mīghna, Sanhedrin, iv, 5: to take the life of an innocent being is as serious a crime as to cause the death of the whole of humanity; to save the life of a single person is as meritorious as to do so for ten men. If an exegetical tradition is to be believed, the Kurān, XXXIII, 72, is also referring to the first murderer: Kābil, having offered the trust (a'māna) to Adam, broke his word and killed the brother entrusted to his care, but this interpretation, foreign to the context, does not rest on any serious basis. Several later authors certainly know the biblical story: Ibn Ḫutayba, Ma'dīrī, ed. S. ʿŪkhāda, 171,
quotes an abridged form of Genesis, IV, 1-8; al-
Tabari adduces Genesis, IV, 9-16, following Ibn Isbâk; and they lay stress, in accordance with the his
tory of the time, on the subject of the sacrificers, as a reason for the fratricide, this rejection being due
to the poor quality of the fruits of the earth offered
up by Kâbl. In general, however, Muslim sources
show a preference for legendary versions derived from
the Jewish aggada and the "Treasure Cave", rather
than the slightly paraphrased scriptural data. And so
they try to find a motive for the drama in distant antecedents which claim to fill a gap in the biblical
narrative. The question, however, to the extent that Adam had
only daughters after the fratricide and after the birth
of Seth who was to replace Abel (Genesis, V, 4).
The legend readily repeated by Muslim authors
(following Wahb b. Munabbî) has it, in short, that
each of the two brothers had a twin sister (Akllma
and Labuda), each destined to be the bride of the
other brother; displeased with this arrangement,
other brother; displeased with this arrangement,
the motive of consanguineous marriage; the pole-
mical anti-Zoroastrian point is obvious). Tradition
also offers a number of variants as to the means of
murder: Hâbl was beheaded by a carpenter's axe, his
head was crushed by a huge stone while he slept,
zzo. Lastly, the Muslim legend has received the fable
already mentioned by Jerome, Ep. 36 ad Damasium
and attested in more recent midrashim about
Kâbl being killed by his blind descendant (Lemekh).
—As is often the case with similar material, Jewish
texts of a later period show some traces of the Muslim
legend.

HABITIYYA, followers of Ahmad b. Hâbl (q.v.).

HABOUS [see warf].

HABBISH, term used in India for those African communities whose ancestors originally came to the country as slaves, in most cases from the Horn of Africa, although some doubtless sprang from the slave troops of the neighbouring Muslim countries. The majority, at least in the earlier periods, may well have been Abyssinian, but certainly the name was applied indiscriminately to all Africans, and in the first days of the Portuguese slave-trade with India many such 'Habbish' were in fact of the Nilotic and Bantu races.

There is little detailed information concerning the numbers, the status and the functions of the Habbish in the earliest Muslim period, although the favour shown to the Habbî slave Djamal al-Dîn Yâkûtî by the Khalîfâ qeen Ka'îlyâ (q.v.) in the early 7th/13th
century indicates that even then Habbish were able
to rise to positions of power and eminence (but the
story that Djamal al-Dîn was the qeen's lover has no
support in the contemporary historians). The Habbish
were certainly well distributed over India by the Tugh-
lûk period, for Ibn Battûtîa, who travelled widely in
the sub-continent between 734/1333 and 743/1342,
notices them from north India to Ceylon, employed
especially as guards and men-at-arms by sea as well
as by land (Ibn Battûtîa, iv, 37, 59-60, 93, 185; tr.
Gibb, London 1929, 224, 229, 236, 260). Their
presence in large numbers in Gujûrât is nowhere
mentioned directly, it being noted by Ibn Battûtîa
that the district of Dâmâghi (q.v.) was renowned for
its quality of the fruits of the earth offered up by the Habsh (q.v.) in the early 7th/13th

Towards the end of the 8th/14th century the slave
Malik Sarwar, who was most probably a Habbî
enuch, became prominent under sultan Muhammad
al-Dîn Fath Shah. Fîrûz Shah, who succeeded him,
was appointed wâzir, but the Ilyas Shâh sultan Rukn
al-Dîn Bârbak Shâh, 863-79/1459-74, maintained that of his successors see IBRAHIM SHAH SHARKI and
SHARRIDS.

In Bengal, where Habbî slaves arrived directly by
sea, it is recorded that the Ilyas Shâh sultan Rukn
al-Dîn Bârbak Shâh, 863-79/1459-74, maintained
some 8000 African slaves mainly for military pur-
poses, many of whom were raised to high rank. They
became dangerously powerful under the rule of
Djâlal al-Dîn Fath Shâh (886-91/1481-6), who on
taking power, was deeply concerned about them, and
succeeded Malik Sarwar in the government in 802/
1399 as Mubârak Shâh; his younger brother suc-
cceeded him on his death the following year and, as
Ibrahim Shâh, ruled Dâjpur for nearly forty years,
a great patron of art and literature. For his reign and
that of his successors see IBRAHIM SHAH SHARKI and
SHARRIDS.

monarchy itself. The wazir was elected king, as 'Ala al-Din Husayn Shah, in 900/1493, and shortly thereafter expelled all Africans from Bengal; most of them eventually made their way to Gujurat and the Deccan.

It was perhaps in the Deccan that the Habshis were most conspicuous over a considerable period. Here again records of their presence in the early period are scanty, although Rafi al-Din Shirazi states in the Tadhkirat al-muluk that the Bahmani sultan Fizr, 800-25/1397-1422, had made him his personal attendant; some of his bodyguards were, he says, subverted by his brother Ahmad, who eventually encompassed Fizr's death at the hands of his Habshi gismad. Foreigners, especially Persians and Turks, had earlier been attracted to the Bahmani court, and Ahmad on his accession increased their number. This led to rivalry between the local Dakhni Muslims and the foreigners, not least on religious grounds since most of the influential foreigners were Shi'i. The Habshis, who were Sunnis, lost favour at the court, and came to support the local Sunni Deccan Muslim faction in their opposition. The Dakhni party managed to regain some favour in the later years of Ahmad Shah Walli's reign and, coming also to some power, commenced a persecution campaign against the foreigners, not excluding the Persian Mahmud Gawan [q.v.] in spite of the Bahmani sultan's efforts to divide and rule between the foreigners and the Dakhni party; in this division two of the four Bahmani provinces, Māhūr and Gulbārga, were governed by Habshis. The persecution culminated in the plot, in which a Habshi leader was the instigator, to discredit Mahmūd Gāwān, whom the sultan put to death. The hill outside Bīljāpur town where the Habshi community had their stronghold is still known as the Habshi Kof; the tombs of many Abyssinian nobles and soldiers are scattered over the hill (see G. Yaqdani, Bīljāpur: its history and monuments, Oxford 1947, 82 ff.). The next sultan, Mahmūd Shah, 887/1482-924/1518, who had succeeded to the throne with the help of an extreme Turkish faction, nevertheless appointed a Habshi divān of finance, Dīlāwār Khān. This officer failed to carry out a plan for the occupation of the Bahmani dominions from Bīljāpur, the king's command, and fled the country. Meanwhile a powerful Dakhni revolt had in 892/1487 attempted an unsuccessful coup to dethrone Mahmūd; he was saved by his foreigners, and gave orders for a general massacre of the Dakhni and Habshi. The differences were settled, but the Sunni Turk Kāsim Barīd [see BUKSHI] as wazir seized much of the government, and Dīlāwār Khān returned from exile to assist the king against him; but Dīlāwār Khān was defeated and the Barīd family gained a greater ascendancy over the Bahmani lands. In 901/1495 the Habshi governor of western Telengānā, Dāstūr Dīnār, rose in revolt on being replaced by Sultān Kuli Kūt al-Mulk, and was defeated by the Barīd minister with the aid of Yūsuf ʿAbdul Khān; he was however restored to the fief of Gulbārga in an attempt by Kāsim Barīd to curb the ambition of Yūsuf in Bīljāpur. On the death of Kāsim Barīd in 910/1504, Yūsuf marched on Dāstūr Dīnār, killed him, and annexed Gulbārga to his dominions. Yūsuf then took vigorous measures to establish the Shi'i faith, which led to renewed hostilities between the foreign and Dakhni factions in which the Habshis again took a leading part.

In 924/1518, who had succeeded to the throne with the help of his Habshi tradition, command of the island continued to be held by a number of influential Habshi officials who restored the foreigner, and gave orders for a general massacre of the Dakhni and Habshi. The differences were settled, but the Sunni Turk Kāsim Barīd [see BUKSHI] as wazir seized much of the government, and Dīlāwār Khān returned from exile to assist the king against him; but Dīlāwār Khān was defeated and the Barīd family gained a greater ascendancy over the Bahmani lands. In 901/1495 the Habshi governor of western Telengānā, Dāstūr Dīnār, rose in revolt on being replaced by Sultān Kuli Kūt al-Mulk, and was defeated by the Barīd minister with the aid of Yūsuf ʿAbdul Khān; he was however restored to the fief of Gulbārga in an attempt by Kāsim Barīd to curb the ambition of Yūsuf in Bīljāpur. On the death of Kāsim Barīd in 910/1504, Yūsuf marched on Dāstūr Dīnār, killed him, and annexed Gulbārga to his dominions. Yūsuf then took vigorous measures to establish the Shi'i faith, which led to renewed hostilities between the foreign and Dakhni factions in which the Habshis again took a leading part.

The Habshi navy at Dīlājīra and Surat. The power of the Habshi naval commanders continued until the end of the 17th century, when, under Ahmad Nizām Shah, the navy became a more effective power against the English forces as well as against the Marathas; but by about 1730 their sea power had
declined as that of the Marathas had risen, and they were no longer able to protect the Surat shipping.

In Gudjarat there seems to have been a continuous supply of Habshis by sea through the ports of Bharan, Surat-Rander and Kambhaya. The sultan Bahadur (933/1526-943/1559) especially welcomed foreign slaves to his service, and there were said to have been as many as 5000 Habshis in Ahmadabad alone (Hadidji al-Dabir, Zafar al-wadll, ed. Ross, i, 97, 407, 447); many of these appear to have been prisoners taken in the Muslim invasion of Abyssinia in 914/1514. The able Habshis rapidly obtained positions of importance: thus Sayf al-Mulk Miftah was governor of the fort of Daman, with a force of 4000 Habshis, at the time of the Portuguese conquest; Saykh Sa'd al-Habshi, a cultured and wealthy soldier, who had performed the Ha'didji and who maintained a fine library and a public kitchen (Hadidji al-Dabir, ii, 640-3), is remembered as the builder of the exquisite 'Sidi Sa'dt's' mosque (980/1572-3) in Ahmadabad; the titles Pudihar Khan and Ulugh Khan were borne by several Habshi nobles, one Ulugh Khan being the patron of the historian Hadidji al-Dabir, in the 10th/16th century, especially after the disorders which began with the accession of Mahmud Shih III in 949/1543. They formed a prominent faction opposed to the local Gudjarati nobility and the dissension of these rival nobles in the sultanate made possible the almost bloodless conquest of Gudjarat by Akbar in 980/1572-3. See further GUDJARAT, also KHAYYAR AL-MULK, ULUGH KHAN.

The Habshis were similarly prominent in the neighbouring sultanate of Khandesh [q.v.]; see also FAROSKIPAS, where the practice of the Habshi Malik Yaqut Sultan, in keeping the male members of the royal house in restraint in the mountain fortress of Asirgarh has led C. F. Beckingham, in Amba Gelein and Asirgarh, in JSS, ii (1957), 182-8, to suppose that this custom was imported from Abyssinia, the Ethiopian royalty having been detained in a similar way on the frontier. However this may be, to a man of Gargantuana appetite.

The Habshis were similarly prominent in the majority of the schools, in addition to the references in the article, see the bibliographies to the articles on the major regions of India. No systematic study of the Indian Habshis has yet been attempted, and much field-work, particularly anthropological and linguistic, is needed. R. Pankhurst, An introduction to the economic history of Ethiopia, London 1961, includes as Appendix E 'The Habshis of India', 409-22, incomplete and with dates unreliable.

HABUS [see ZIRIDA].

HAC OVASI [see MEZO-KERESZTES].

HADANA, (A.), bidana, in the technical language of the Sufahd, is the right to custody of the child, a ramification of guardianship of the person which though exercised as a rule by the mother or a female relative in the maternal line may in certain circumstances devolve upon the father or other male relative. This institution is of very great importance in judicial practice because of the numerous conflicts to which the subject gives rise, particularly where the spouses are “separated” and above all where the cause of separation is repudiation of the wife.

A.—In theory this right of custody begins with the birth of the child, whether boy or girl, the parents living together (al-Zayla'a, Tabyn, iii, 46). However most authors, of whatever school, recognizing that difficulties often arise at this point do not normally arise till dissolution of the marriage, confine their explanations to this hypothesis alone.

When the spouses are not separated there are only two sets of circumstances in which the right of custody sets husband over against wife. The wife has a domicile distinct from that of her husband, either because he permits this to her (Hanafl law), or because she has reserved this right to herself by a clause in the marriage contract (Maliki and Hanball law); or else the husband decides to take his small child on a journey, unaccompanied by his wife.

In these two cases it is only the Hanafls who have drawn the logical conclusions from the principle that hadana is a prerogative conferred upon the mother, even before dissolution of the marriage. Thus the husband is not entitled to travel with his child, still in custody of the mother, against the wishes of the latter (al-Kasani, iv, 44). Authors of the other schools pay less attention to this hadana during the subsistence of the marriage and their doctrine on the subject is very unstable.

B.—In the majority of the schools hadana ends at the age of seven for a boy, who can then “feed and clothe himself without the aid of a third party", and at pre-puberty for a girl (about the age of nine). In
Mālikī law it lasts until puberty for boys and until the consummation of marriage for girls.

In the three schools which terminate very early the privilege of the mother and others entitled to hadāna (Ḥanafi, Shāñī and Hanball), the question arises as to what becomes of the minor when no longer in the care of the mother. We must not forget that this concerns a child who has barely attained the age of reason. In Ḥanafi law he or she is then obligatorily given over (dāmm) to the father, or in default of the father through death or unworthiness, to the male relative on whom devolves the wilāya (of the child) within the same denomination as the child. In the case of a girl, that the wāli must be a relative "within the forbidden degrees". In other words the boy of seven and the girl of nine are not consulted, since the Ḥanafis consider them still too young to be able to make a reasoned decision.

The Shāñī's (Muhadhdhab, ii, 171) and Hanballis (Mughni, vii, 614) allow the boy of seven to choose between continuing to live with his mother and moving to his father's house. The same option is given to the girl who has reached the age of nine, but in Shāñī law only.

At puberty (towards the age of fifteen—see Mālīkī) the boy is accorded the right by all schools, of having a dwelling independent of that of his father, or of that of his mother if he had opted for her at the age of seven as permitted by the Shāñī and Hanball schools. However, he is "recommended" to stay with his parents. As for the girl who has reached puberty, it is surprising to find the Shāñī school the most liberal towards her. For the doctors of this school do not forbid her to have a separate abode, although they hold it to be morally "reprehensible" (mahrūk) (Muhadhdhab, ii, 169). In the other schools puberty does not release a virgin girl from the custody of her parents. We have seen that in Mālikī law she remains under her mother's control until consummation of marriage. Much the same solution is reached in Ḥanafi and Hanball law, where the virgin girl (bihr) cannot leave her father at puberty, "since she is ignorant of men and their wiles". On the other hand, the girl over the age of puberty who is no longer virgin (ghayyib), being widowed or repudiated, has freedom of movement. Even here the Ḥanafis make certain reservations concerning a girl whose consanguine is preferred to the child. Although ghayyib, she must still live with her father.

C.—The devolution of the right of custody follows differing rules in the various schools, which can be split, from this point of view, into two groups. On the one side we have the Ḥanafis and Mālikis, who make the right of custody, if not an exclusively feminine prerogative, at least a function in which women always take precedence, so much so that of two female relatives of equal degree the uterine will be preferred to the consanguine; and on the other side the Shāñī and Hanball schools which, while according an indisputable priority to some women (mother and maternal grandmother, great grandmother, etc.), do not hesitate in certain contingencies to prefer men to women even though the latter be quite closely related to the child.

According to the scholars of the first two schools hadāna belongs in the first instance to the mother; in default of the mother, or if she is unworthy or has forfeited her right, custody passes to the female ascendants of the mother, the nearer excluding the more remote, then to the female ascendants of the father (in Mālikī law maternal aunts come before ascendants of the father); these are followed by the full sister (because of the double link) and the uterine sister, before the consanguine; then nieces (except the consanguine, who is related to the child through the father only); maternal aunts are preferred to paternal uncles.

In these two schools men are invested with hadāna proper only in default of all female relatives within the "forbidden degrees" (for marriage). The two qualities must be united in one and the same woman if she is to bar the deviation of the right of custody upon a man. Thus no account is taken of the female cousin, even if full, since there is no obstacle to marriage between relatives. In the other schools, the presence of a wet-nurse or the daughter of a wet-nurse, despite the existence of a bar to marriage, does not keep men from hadāna since these women are not blood-relatives of the child.

The men in question are, first of all, the taṣabt (males related through males) who come in the same order as in the law of succession: first, therefore, the father; then, in the absence of any father, a male relative of the father (not within the forbidden degrees for marriage); and then those with whom marriage would have been impossible if the child had been a girl. Last of all come relatives, men and women, who are not within the forbidden degrees for marriage (full cousins, their issue, etc.)—men exercising hadāna over boys, women over girls. Only in default of all relatives does the bādī designate a person of trust.

In the other two schools (Shāñī and Hanball), the priority of women is less absolute than in Ḥanafi and Mālikī law, and men may assume hadāna even when there exist fairly close female relatives. Thus in default of the mother and female ascendants of the mother, or if the latter are prevented, or are unworthy or have forfeited their right, hadāna is conferred on the father, then on female ascendants of the father. Another peculiarity of these two schools is that the consanguine sister is preferred to the uterine and the paternal aunt to the maternal (Muhadhdhab, ii, 170 and 171; Mughni, vii, 623), both solutions being directly contrary to those of the Ḥanafi and Mālikī schools.

D.—The Ḥanafi scholars never fail to ponder the nature of hadāna. Is it a "right" (ḥākī) of the custodian or a "right" of the child? They generally conclude by saying that although it is a "right" of the custodian, it is a "duty" of the woman; although ḥākī, she must still live with her father.

The teaching of the other schools on all these points hardly varies from the Ḥanafi doctrine.
concerning capacity to exercise the right of custody: first, where the ḥādīna (especially the mother) remarries; second, where the father is a Muslim but the woman called to assume custody is non-Muslim.

On the first point the schools are unanimous. The remarriage of a repudiated or widowed mother is normally a cause of forfeiture of ḥādīna, unless she marries a man related to the child within the “forbidden degrees”. How do the scholars explain the rule and the exception, reconciling them with the principle that ḥādīna is established in the interest of the child? Their explanation is simple if not per-
tinent. The mother who remarries after widowhood or repudiation (for in practice it is only she who is concerned) must devote all her time to her new hus-
band—law, morality and religion require it; how could she, under these conditions, give to the child in her custody the care its tender years demand? It is another matter if the new husband is a close relative of the child (uncle for example) because it is sup-
posed that his natural affection will prevent him from taking offence at her wife’s attention to the child.

In order of frequency, the second problem con-

nected with the conditions of capacity to exercise ḥādīna is that of disparity of religion. Suppose the mother, widowed or repudiated by a Muslim husband, is not herself a Muslim. Should the ḥādīna be left to her? No, she is entitled to receive it, and the Malikis (Muzāhir, vii, 653), and their ar-

guments on this point are not without good sense. Is not misbelief (ḥifr) more serious than mere mis-
conduct? Now we have seen that this latter causes forfeiture of ḥādīna, in the case of women as well as men. Besides, if it is true that this institution was created in the interest of the child, how can it be maintained that this interest is safeguarded when the child’s most precious possession (its belonging to Islam) is threatened by possible proselytising on the part of the mother, exerting herself in favour of her own religion?

The Mālikis, not without a certain hesitation, and the Ḥanafis much more firmly, decide that the ḡummiyya (Christian woman or Jewess) has the right of ḥādīna. Still, the Ḥanafis add certain qualifications to the rule (al-Zayla’i, Tahāyin, iii, 49). The Malikis consider that a Muslim woman loses the custody of the child if she has tried to turn it from its father’s re-

ligion, provided the child has reached the age when it is able to understand its religious duties. Since this age corresponds more or less to that when ḥādīna

normally finishes, at least for boys, the Hanafis much more firmly, decide that the child if she has tried to turn it from its father’s religion, provided the child has reached the age when it is able to understand its religious duties. Since this age corresponds more or less to that when ḥādīna normally finishes, at least for boys, the Hanafis make it obligatory only when it is impossible to find another

custodian, for the interest of the child overrides the humanity of the mother (and others entitled) and also a measure of protection in respect of the small child, derive, res-
pceptively, from the Mālikis.

The woman entitled to custody of the child is not bound to accept it, except where the mother is con-
cerned, and even in her case the Ḥanafis make it obligatory only when it is impossible to find another

custodian, for the interest of the child overrides the “right” of the mother. This explains why any ḥādīna may normally (Ḥanafi law) claim a wage distinct from the cost of maintaining the child, which naturally falls on the father, unless the child has a personal fortune. This presupposes that the parents are “separated” and that the ḫaḍā (q.v.) period has ex-

pired. Outside the Ḥanafi school, the mother cannot claim a wage distinct from the nafa ḱa due to the child; and the Mālikis go so far as to refuse a wage to all those entitled to ḥādīna; if, in their doctrine, it sometimes happens that a needy mother may draw a nafa ḱa on the goods of the child, or part of the child’s allowance, she does so not in the capacity of custodian but as any mother in need (Dārdir-

Dasākī, ii, 534).

Although a “right” of women, ḥādīna is neverthe-

less established in the interest of children; it is not therefore permissible to modify the imperative rule fixed on this point by ḥifr. These rules belong to the public order, in as much as disregarding them would be injurious to the child. It is on the occasion of a
negotiated divorce (ghul) that the parties may attempt to circumvent this principle. Although it is permissible for the spouses to agree that the mother should undertake the full cost of maintaining the child, as consideration for the repudiation pronounced by her husband, it is not possible, on the other hand, for the husband to make it a condition of the repudiation that his wife should give up the hadâna (except perhaps in Mâlikî law); in such a case the ghul would be valid and the purported condition void. Nor could the wife, by agreeing to the repudiation, her husband's custodianship and payment of half the period of the hadâna, at least where boys are concerned, for such agreement is admitted in the case of girls (Ibn Nufîjâyn, Babr, ii, 98).

G.—Contemporary legislation inspired by Islamic law (codes of personal status and laws relating to the family) has introduced but few changes into the system of classical fiqh.

In countries of Hânaî allegiance, the main preoccupation has been to prolong the duration of hadâna, which the classical law of the school restricts unduly.

The Egyptian law of 10 March 1929 (art. 20) authorizes the judge, when "the interest of the children requires this measure", to extend this period to nine years for the boy, and to eleven years for the girl. This disposition was taken up by the Jordanian code of 1951 (art. 123), and the Syrian code of 1955 (art. 147). The Sudanese circular no. 34 of 1932 (art. 3) squarely adopts the Mâlikî doctrine (Sudanese Muslims are governed by Hânaî law, though ritually Mâlikîs); thus the boy is in the custody of females until puberty, and the girl till consummation of marriage. As for the Iraqi code of 1953 (art. 57, al. 5), it permits the judge to prolong the hadâna without fixing a maximum.

The two North African codes of personal status (Tunisia 1956 and Morocco 1958), while reproducing broadly the principles of Mâlikî law on the question, add a few modifications inspired by Hânaî law, which are not always very felicitous. Thus it is hard to see why the Tunisian code (art. 67) should limit the duration of custody by women to seven years for boys and nine years for girls, when the majority of actual Hânaî countries have abandoned the classical law on this point. The Moroccan code (Tunisia 1956 and Morocco 1958), while reproducing the classical law of the school restricts hadâna,

HADATH. minor, ritual impurity, in fiqh, is distinguished from major impurity (qiyâmaqân); Hâdadh is incurred: 1. — by contact with an unclean substance (fradaih, nadjis), which soils the person or clothing, etc.: sperm, pus, urine, fermented liquor, and some other kinds. There is some controversy about corpses or the bodies of animals. It is only in the view of the Mâlikî school that the pig and dog, when alive, do not soil. Except with the Shî'is, contact with a human being never soils according to Muslim law, unlike the prescriptions of Jewish law; 2. — by certain facts; by the emission of any substance whatever—solid, liquid or gaseous from the anus, urethra or vagina (further to those which bring about major impurity); by loss of consciousness—sleep, syncope, madness; by apostasy, and in certain other circumstances. The Mâlikî majority alone has elaborated a moral theory of hadath (slander, false swearing, perjury, obscene proposals, evil thoughts, etc.).

The muhdât retains its ritual purity, which the hadath has dispelled, by means of the simple ablation (wudu) which can be replaced, if it is impossible to use water, by the tayammum [q.v.]; as for the part of the body soiled by hadath, this must be washed, likewise in water that is ritually pure, to restore its purity. The same applies to the clothing of the man at prayer, and the place in which he intends to make his salât. Anyone who is in a state of hadath cannot therefore: a) perform the prayer; b) make the ritual circumambulation of the Ka'ba (tasâfîf); c) touch a copy of the Qur'an, but he can carry fragments of it (for example, on a medal or a piece of paper), and can also recite from it. For casuistical details, see the works quoted in the bibliography and also the articles gâja, jâbin on hadath. As general, practising Muslims and very familiar with the hadath, suppose the requirement, in case of qîmâmat, to make a ghul, this partially explains the existence of hammâms in urban centres.

Bibliography: The collections of hadâth (cf. the Handbook of Wensinck), and texts of fiqh, all of which start with the study of ritual purity; reference should be made, in particular, to the hadith collections, such as the Bida'ayat al-mudâjâhid of Ibn Rush'd and others. Even a mystic like Qâzâlî (Ihyâî), I, Book III, § 21 ff. (in the Analysis of Bousquet) deals with these questions in a way similar to that of the fidâhab, though in a slightly different spirit. G.-H. Bousquet, La pureté rituelle en Islam, in KHR, xxvi (1959), 53-71.

AL-HADATH, town, which today has disappeared, in the province of the 'Awâṣîm [q.v.], situated in a plain at an altitude of 1000 metres at the foot of the Taurus, near to the three lakes on the upper course of the Ak Su, one of the principal tributaries of the Dîjayân. Known as al-Hâdadh al-Hamrâ' (probably to avoid confusion with Hâdadh al-Zakâk in the Palmyra desert), it owed its importance to its situation on the Arabo-Byzantine frontier, between Marrâsh and Mâlîsîta, at the entry of the saddle
which guarded the route to Albistān. Its protection was assured by a fortress built on a hill called al-Uwaysah, "the Little Umayyad Dynasty. To the north-west of al-Hadath, in the massif of the Nurubak Dagh, was the darb al-Hadath, a narrow pass which was the scene of many battles and whose name the Arabs changed to darb al-salamā in an attempt to exorcise the evil fate which seemed to be attached to it.

Conquered under the caliph ‘Umar by Ḥabbā b. Maslama, who had been sent by the general ʿYād b. Ziyād. The fortress was used by Muʿwiyah as a starting point for incursions into Byzantine territory. The upheavals at the end of the Umayyad dynasty enabled the Byzantines to re-occupy the region, without, however, succeeding in changing very much the course of the frontier. In 961/778, the Byzantine general Michael Lachanodrakon sacked al-Hadath. The caliph al-Mahdi rebuilt it in 963/778 and the town was then called al-Mahdiyya or al-Hamdaniyya. His successor, ʿOmar b. Ḥālid, repopulated it with inhabitants from neighbouring towns. But these buildings of sun-dried brick could not long withstand the severe winter climate. Furthermore, the Byzantines overran it once again and burned it completely, whence its name Gōyuḵ, "burnt", used both in Turkish and Armenian. Hārūn ʿAlīṣ̱ al-Rāshīd rebuilt and fortified it and maintained a large garrison there, as in the other frontier-stations of this region. Thus under the ‘Abbasid caliphs al-Hadath became a strategic point which served as a base for their expeditions into Byzantine territory. But in 369/979, the son of Bardas Phocas, seized al-Hadath and left none of its fortifications standing. The town became Muslim again as the result of a victory by the Ḥamdūnī Sayf al-Daula, who rebuilt the walls in 343/954, but the Byzantine garrison took it in 346/957. After this, al-Hadath no longer played an important part in the military history of the region. However it fell again into Muslim hands in 545/1150 under the Saljuq sultan of ʿOmar Masʿūd b. Khūdā Aṛslān; then the Armenians seized it in their turn and made it a base for expeditions against the Muslims. In 671/1272, the Mamluk sultan Baybars seized al-Hadath from the Armenians. The fortress was burned and all that remained was the town, which the Kurds then called al-Mahdiyya or al-Hamdiyya. In 1356, the Mamluk sultan Barsbay used it as a base for his expedition against the Ḫūrūj al-ʿIṣkād. In 1540 various ruins at Saray-Köy, to the south of the lake of al-Hadath, were described and identified by R. Hartmann as being the remains of al-Hadath. This identification contradicts earlier opinions, which had situated al-Hadath on the site of the present-day Inekköy, in the meaning of limit, boundary, frontier [see ṣawāsim, qurban, ḥumārāt, ṣayyid].

In theology, hadd has become the technical term for the punishments of certain acts which have been forbidden or sanctioned by punishments in the Kurān and have thereby become crimes against religion. There are: unlawful intercourse (hadd [q.v.]; its counterpart, false accusation of unlawful intercourse (hadari [q.v.]); drinking wine [see ḥamār]; theft [see sīriq]; and highway robbery (kaft al-ṭarīq [q.v.]). The punishments are: the death penalty, either by stoning (the more severe punishment for unlawful intercourse) or by crucifixion and burning. But these buildings of sun-dried brick could not long withstand the severe winter climate. Furthermore, the Byzantines overran it once again and burned it completely, whence its name Gōyuḵ, "burnt", used both in Turkish and Armenian. Hārūn ʿAlīṣ̱ al-Rāshīd rebuilt and fortified it and maintained a large garrison there, as in the other frontier-stations of this region. Thus under the ‘Abbasid caliphs al-Hadath became a strategic point which served as a base for their expeditions into Byzantine territory. But in 369/979, the son of Bardas Phocas, seized al-Hadath and left none of its fortifications standing. The town became Muslim again as the result of a victory by the Ḥamdūnī Sayf al-Daula, who rebuilt the walls in 343/954, but the Byzantine garrison took it in 346/957. After this, al-Hadath no longer played an important part in the military history of the region. However it fell again into Muslim hands in 545/1150 under the Saljuq sultan of ʿOmar Masʿūd b. Khūdā Aṛslān; then the Armenians seized it in their turn and made it a base for expeditions against the Muslims. In 671/1272, the Mamluk sultan Baybars seized al-Hadath from the Armenians. The fortress was burned and all that remained was the town, which the Kurds then called al-Mahdiyya or al-Hamdiyya. In 1356, the Mamluk sultan Barsbay used it as a base for his expedition against the Ḫūrūj al-ʿIṣkād. In 1540 various ruins at Saray-Köy, to the south of the lake of al-Hadath, were described and identified by R. Hartmann as being the remains of al-Hadath. This identification contradicts earlier opinions, which had situated al-Hadath on the site of the present-day Inekköy, in the meaning of limit, boundary, frontier [see ṣawāsim, qurban, ḥumārāt, ṣayyid].

HADD

In kaldm and in philosophy, hadd is a technical term for definition of which several kinds are distinguished: hadd hasth which defines the essence of a thing, hadd lāfīn which defines the meaning of a word, etc. Opposed to the definition is the description (rasm), but the distinction is not very sharp, so that it is possible to speak of a hadd rasmī. A perfect or complete definition (hadd khamī) must be ġimmī 'mānī, “universal and proper”; this is achieved by giving the genus proximum and the differentia specifica.

In logic, hadd means the term of a syllogism; the minor term is called hadd aṣghar, the major term hadd akbar, and the middle term hadd awwāt.

In astrology, the degrees of each sign of the zodiac are divided into five unequal portions each of which belongs to one of the five planets; this portion or term of a planet is called hadd.

In the terminology of the Druzes, the main officers of their religious hierarchy are called buddūd; this usage is based on an allegorical interpretation of the Qur'ānic passages.

Before assuming its philosophical meanings, the word hadd follows a semantic evolution comparable to that of the Greek words that it translates, ὁφασμός and ἐφοσ. From its meaning of “limit” it passes to that of “delimitation” or “definition”, and from that of “furthest limit” or “extremity” to that of “extreme” or “term” in logic. In order to avoid any ambiguity between the two meanings, modern Arab authors who study mediaeval philosophy often follow hadd, in the sense of “definition”, with the word ta'rif in parenthesis, since one of the uses of ta'rif is in fact “definition”, although its meaning includes both description and name.

In metaphysics hadd means “definition”, in so far as it is a statement referring to the thing whose essential elements it sets out. It indicates the thing's quiddity, its māhiyya (secondary substance or predicative substance). In its strict sense “definition” can refer only to a substance, but in a wider sense we speak also of definitions of accidents, although these cannot be defined without the mention of an element that is foreign to them, i.e., the substance that receives them. Hadd is used also in a derived sense, to mean a commentary on the name of the thing; it is then a “nominal definition”, which is not composed of direct references to the thing's essence, but explains the name that does refer to the essence. In entities composed of matter and form, “definition” does not refer to form alone, but to everything that goes to make up the entity, i.e., to matter and to form. In entities that have no material element, it obviously refers to form alone; nevertheless, there can be no definition of the entity that is absolutely simple, since different essential elements cannot be distinguished in it. Definition applies to individuals, but there can be no definition of such a compound. The individual can be indicated only by combining various attributes that apply to it alone, for example by pointing out its filiation.

In logic hadd is used with different meanings according to the three mental processes, which are forming the concept, judging and reasoning. In the logic of the concept hadd has the meaning of “definition” as in metaphysics, and has also to give the essential elements of the thing defined, but in this case with reference to the concept, i.e., by uniting the essential meanings so as to produce in the mind an intelligibly equivalent to the essence of the thing. This statement is more explicit than the name, of which it gives an analysis; it is the name that expresses the meaning in one word only.

Perfect definition, hadd lāmm, is a statement of proximum genus and specific difference: “Man is the rational animal”. It cannot be arrived at by demonstration, but only by the methods that make it possible to determine this genus and this difference. The definition is obtained bi-ta'rif al-tarkih, by means of combination, i.e., by taking the essential attribute whose extension is just greater than that of the thing to be defined and combining with it the essential attribute peculiar to the thing. This is obtained by looking for all the attributes that belong to the essence of the genus that has just been defined, by making a kind of division, bīnīm, and finally by selecting that one which is predicable only of the thing to be defined.

In this perfect definition are included, on the one hand, all the *summa genera*, and, on the other, all the consequents of the essence. It is, however, often very difficult to find these two attributes. If they cannot be isolated from each other, the definition is imperfect, i.e., by uniting both attributes, for example: “Man is a rational animal”. It is possible to determine this genus and this difference by stating one or more of the thing's essential characteristics that are peculiar to it. The statement is thus equivalent in extension, but not in comprehension; it is a description, rasm, or an imperfect definition. When the cause of the existence of the thing defined gives the meaning of the thing, a causal definition is obtained, and when cause and effect are united in the same proposition, the definition is complete, hadd tāmīm, and resembles the conclusion of a syllogism. An example is: “Thunder is the noise that is produced in the cloud because of the fire that is quenched there”. (For details of the reasoning, see *Shaf'ā*, *Manāhī*, v, book 4, ch. 4, 290-1). Definition in no way refers to existence.

While hadd means “definition” in the logic of the concept, the same word means “term” in the logic of the proposition and in that of syllogistic reasoning. Hadd is, in that case, the word or statement used as subject or as predicate, major, minor or middle term.

The whole Islamic theory of definition, and that of terms of reasoning, follows Aristotle, sometimes reproducing what he says almost word for word. The brief mention of definitions made by the *Ikhān al-asfāl* is already in conformity with this; they apply the method outlined above to the definition of
species and genera, omitting "Substance", which can be the object only of a "description", rasm; it is the entity that is self-subsistent and receives contrary attributes"—this is in accordance with Aristotelian teaching. Al-Kindi uses the word in its accepted sense. Avicenna is the Hellenizing philosopher who most develops the study of hadd; it is a theme to which he returns again and again in his works. Al-Ghazālī scarcely mentions it in the first part of the Maḥābīd, Averroes comments on the relevant chapters of Aristotle's Metaphysics. Al-Dīnawarī's Tafsīr presents a rather different meaning, the various philosophical meanings, including that of "defective (mabīs) definition", obtained "by nearest (i.e., specific) difference alone, or by that and summum genus". In Sūfism, he adds, hadd, which has then the sense of "limit", "indicates the separation between you and your Lord".

**Hadīdī**

Al-ḤADĪD ILA 'L-HAKK, regnal name of the fourth 'Abbāsīd caliph Mūsā, son of al-Mahdī, who had been proclaimed heir in 159/775-6. His accession took place in Muḥarram 160/August 785, but it did not pass smoothly. Al-Mahdī died when he was actually on the way to Dūrjādī intending to force Mūsā, resident in that province, to renounce his rights in favour of his brother Hārūn, who had been appointed second heir in 166/782-3. Although the chamberlain al-Rabī' procured that the oath of allegiance to Mūsā was sworn in Baghdād, a revolt broke out in the capital almost immediately afterwards; it was swiftly put down, before even al-Ḥādīd arrived, but contemporaries saw in it the hand of adversaries of the new ruler.

On returning to Baghdād, al-Ḥādīd first made al-Rabī' his viceroy, but dismissed him soon afterwards and entrusted the central administration to various persons, none of whom seems to have made any mark. Once in power, al-Ḥādīd continued the persecution of the zindībīs which his father had begun, but abandoned the latter's moderate policy towards the Shiʿīs, adopting an attitude of frank hostility to the 'Alīds; hence he was led to repress brutally an 'Alīd revolt which had broken out in Medina and which ended in the massacre of Fakhkhī (q.v.). Other revolts had to be put down, both in Egypt and in 'Irāq. Throughout his reign, the most important question was that of the succession. Al-Ḥādīd wished to annul the right of his brother Hārūn, who then had as his tutor and adviser Yahyā the Barmakīd. Hārūn, vigorously rejecting his brother's proposals, was finally thrown into prison and threatened with a still worse fate. At this juncture, in Rabī' 1 170/ September 786, there occurred the sudden death of al-Ḥādīd, an event in which, according to some chroniclers, Hārūn's mother al-Ḥādīrūzān had some share. This ended the short reign of a caliph who left the reputation of being a ruler energetic to the point of brutality as well as addicted to pleasure; through the massacre of Fakhkhī he widened the gulf between the 'Abbāsīds and the 'Alīds; his only lasting achievement was perhaps an improvement in the financial departments of the central administration.

Al-ḤĀDĪD Ila 'L-HAKK, YAHYĀ, founder of the Zaydi dynasty of the Yemen [see ZAYDĪ].

**Hādīdī sabzawārī** [see sabzawārī].

**Al-ḤADĪD, iron.** According to the Sūrat al-ḤADĪD (LVII, 25) God sent iron down to earth for the detriment and advantage of man, for weapons and tools are alike made from it. According to the belief of the Šābians, it is allotted to Mars. It is the hardest and strongest of metals and the most capable of resisting the effects of fire, but it is the quickest to rust. It is corroded by acids; for example, with the fresh rind of a pomegranate it forms a black fluid, with vinegar a red fluid and with salt a yellow. Collyrium (al-ḥadīd) burns it and arsenic makes it smooth and white. Kazwīnī distinguishes three kinds of iron, natural iron, al-sabūrādhs—which can only mean dark iron ores such as micaceous ore, magnetic ironstone etc.—and that which is made artificially, which is of two kinds, the weak (Pers. narm-tham) or female, i.e., malleable iron, and hard or male, i.e., steel (falāḏīd). According to al-Kindī, however, the kind of iron called sabūrādhs is identical with male iron; both kinds are called natural iron, while steel on the other hand is not natural. These contradictory statements cannot be reconciled here. Chinese and Indian iron are particularly esteemed. The applications of iron and iron-rust in medicine and magic are fairly numerous and varied. See further MARĪN.

**ḤADĪD** [see nūḏūm].

**HADDĪDĪ, makhāṣṣ of a minor Ottoman poet who flourished in the first decade of the 17th century, the author of a verse-chronicle.** According to his near-contemporary Sehī, his home was Feṛājīk (near Enos), where he adopted khāfīb; he adopted the makhāṣṣ Ḥaddīdī because he was a blacksmith by trade.

His unpublished history of the Ottoman dynasty, completed in 930/1523-4, consists of some 7000 very pedestrian couplets in the hazadī metre; the last incident recorded is the appointment of Ibrāhīm
Paša as Grand Vizier (in 929/1523). In an introduction Ḥaddīdī states that his account, as far as the first years of the reign of Bāyazīd II, is a verse-p paraphrase of the prose history by the šekh al-ʿĀṣik Paša-ogli, i.e., ʿAshīk-Paša-zade (p.o.); but this section, the first two-thirds of the work, contains also some episodes characteristic of the Uruđī texts, e.g., the passage on Bāyazīd I's suicide, quoted disparagingly by Ṣaʿd al-Dīn (i, 217; cf. Hammer-Purgstall, GOR, i, 647; for another example see A. S. Leveud, Gazasvat-nümeler ..., Ḵanṣāra 1856, 1858). The rest of the work, his claims, original:

According to Ḵaṭṭī, he failed to procure the presentation of his work to the Sultan, Suleyman I. Although Pečewi names it among his sources (i, 3), it is probably of minor importance and only a few manuscripts survive, in Istanbul: Esad Efendi (Şüleymaniye) 2081, much damaged by fire towards the end; All Emiri manzum 1317, modern (for these two, see Istanbul Kültülpenceri ları-köşफey yaşamalar hikayeleri, i, nos. 69; University Library T 1268, a good old copy (see L. Forrer, in Isl., xxvi (1942), no. 17); Veliyiddin (Beyazıt) 152/3443 (see Tansklarlyqe Tarama Sözlük, iv, Ḵanṣāra 1957, p. X). There is a copy in the Berlin Staatsbibliothek (PERTSCH, Katal., 232) and a good, apparently old, manuscript has recently been acquired by the British Museum (Or. 1295).

Poems by a Ḥaddīdī are preserved in some anthologies (see, for example, F. E. Karatay, Topkapı Sarayı ... türkcə yəzəmlər kataloqlu, ii, nos. 2665, 2690).

Bibliography: Sehi, 101-2; Ḵaṭṭī, 127-9; M. F. Köprüzūa, in Mitt. öst. Gesch., i (1921-2), 220-2; Bursaı Mehmed Ṣaḥīr, ʿOmnınlı mücellifleri, ii, 45-6 (inaccurate); Babinger, 59 f. (with further references). (V. L. Mıracıb)

Al-Ḥaadīna, a small independent region of South Arabia, now in the Upper ʿAwašl Sultanate. It is one of the most fertile districts of South Arabia and is irrigated by canals from the Wādī ʿAbadān. The products of the soil, which is of volcanic origin, include indigo, which is exported to al-Ḥaṭwā, Ḥīra and millet. Al-Ḥaadīna is inhabited by the tribe Ahl al-Khālija which claims descent from the Ḥillal [p.e.]. When the Ḥillal emigrated from South Arabia they remained behind, whence their name Khālīja. In the past they ordinarily acknowledged no authority, but in time of war would serve under the banner of the Sultan of the Upper ʿAwašl in Niṣāb. According to Philby, who visited the region in 1936, they numbered about 300 male adults, giving a total population of about 1,000. There were nine clans in possession of some sixteen villages of which the most important was Ḡabīyya, a market and the seat of the ʿAвладr or ruler. Al-Ḥaadīna was famed in Landberg's day as a centre for cotton, which was exported to Baybān al-ʿAṣab and Ḥarīf. It lies on the caravan roads from Bāl Ḥāf to Markha, and Dīrōn to Baybān al-ʿAṣab and Mūhrīb. Bibleography: C. Landberg, Arabia, iv, Leiden 1897; H. von Malzahn, Reise nach Süd-arabien, Brunswick 1873; H. St. J. B. Philby, Sheba's daughters, London 1939; A. Grohmann, Süd arabien als Wirtschaftsgesell, Vienna and Brün 1922-33, 2 vols., index. (J. Schleifer-A. K. Irvine)

Al-Ḥaḍirā (Al-Huwaydī), nickname of the Arabic poet Kuṭba b. Abī. Very little is known of his life; he belongs to the Banu Thaʿlab b. Saʿd b. Dhūbyān, a tribe of the group Ghatafan. He had a quarrel with Zabbān b. Sayyār al-Ṣaḍār and satirized him in his verses. In another poem he boasts of the victory of his kinsmen at al-Kuṭafā. The leader in this battle, Ḥaḍirā b. Ḥusain al-Fazari, later on became Ḥaḍirā, Ṣaḥāba, i, 222, whilst al-Ḥaḍirā is called a pagan poet (dījkīl); so we may infer that he lived into the beginning of the 7th century. His poems, few in number, were collected by Muhammad b. al-ʿAbbās al-Yazīdī (d. 310/921-2). One ḱṣāda is included in the Muḥādīlīyāt (no. viii, ed. Lyall); it is said that this poem was greatly admired by Ḥaḍirā b. Ṣaḥāba. Bibliography: al-Haḍirān al-Yaṣīdi, al-ṣūrā al-ṣalībī (ʿawdī, 1858; Broekelmann I, 26; S. I, 154. (J. W. FÖCK)

Ḥadīth (narrative, talk) with the definite article (al-ḥadīth) is used for Tradition, being an account of what the Prophet said or did, or of his tacit approval of something said or done in his presence. Ḫabar (news, information) is sometimes used of traditions from the Prophet, sometimes from Companions or Successors. ᴠṭḥ, pl. ḥabr (trace, vestige), usually refers to traditions from Companions or Successors, but is sometimes used of traditions from the Prophet. Summa (custom) refers to a normative custom of the Prophet or of the early community.

I. THE DEVELOPMENT OF ḤADĪTH

Tradition came to be considered second in authority to the Kurān, but this was the result of a lengthy process. The Prophet had made a great impression on his contemporaries, and Islam had not only survived his death, but had quickly spread far beyond Arabia. It is therefore only natural that those who had known him should have much to tell about him and that new converts should have been anxious to learn what they could about him. Many of his Companions settled in conquered countries where it is reasonable to assume that they would be questioned about him; but there would be nothing formal about the retailing of stories and little attempt at first to record them. At that time there was no idea that Tradition was second in authority to the Kurān because there was no collected Tradition in the form of traditions. At the Prophet's death, the Kurān remained as the source of guidance and it was only gradually, as new problems arose, that men came to feel the need of a subsidiary authority. Individuals and groups in various regions developed an interest in Tradition, and many traditionists engaged in travels to learn traditions from authorities in different countries. The annual Pilgrimage would also provide an opportunity for people of different regions to meet, and traditions would be spread in this way. The demand for traditions was great, and inevitably the supply grew to meet it.

Gradually the necessity of producing authorities for traditions developed, and there is reason to believe that the practice was to some extent in force before the end of the first century; but it was late in the second century before it seems to have become essential to have a complete chain of authorities back to the source. Ibn Isḥāk (d. 150/767 or 151/768) quotes authorities in his biography of the Prophet, but not always with a complete chain, and the same applies to Mālik b. Anas (d. 797/795) whose law-book al-Muwatta gives many traditions with partial chains of authority, some with complete chains, and some with none. When books of tradition came to be compiled the traditions had two necessary
features: (1) the chain of authorities (isndd, or sanad) going right back to the source of the tradition, and (2) the chain of transmission.

But while traditionalists were collecting traditions and attempting to verify their authority, there were others who were not prepared to lay great emphasis on the importance of tradition. As a result there were disputes between parties; but largely as a result of the genius of al-Shafi'i (d. 204/820) [q.v.] the party of Tradition won the day, and Hadith came to be recognized as a foundation of Islam second only to the Qur'an. Thus Hadith was given a kind of secondary inspiration. Though not the eternal word of God, like the Qur'an it represented divine guidance. II. COLLECTIONS OF HADITH

The theory was held by some that traditions should be conveyed only by word of mouth and not written, and there are even traditions in the books supporting this view. Abū Dā`ūd (‘Ilm, 3) rather curiously gives two traditions, one after the other, the first stating that the Prophet gave command to write traditions and the second stating that he forbade writing them. Whatever justification there may have been for the view that writing was prohibited, there were, even quite early, men who made notes for their own guidance, and these notes formed a basis for larger works produced later. Among them mention may be made of ‘Urwā b. al-Zubayr (d. 94/712 or 99/717) in Medina who is quoted as transmitting many traditions from his aunt ‘A‘ṣa, and Muḥammad b. Muslim Ibn Shihab al-Zuhri (d. 124/741) who settled in Syria and was one of the most widely quoted authorities. Reference is even made to Ṣaḥīḥ (scripts) in which some Companions of the Prophet collected traditions.

When more formal books were first compiled they were of the type called musnad works, the word indicating that each Companion's traditions were collected together. While this arrangement has its interest, it is not very convenient. People would want to consult traditions on particular subjects and would therefore need to read through much irrelevant material before discovering what they were seeking. Such works as those of al-Ṭayālīṣī (d. 203/818) [q.v.] and of Aḥmad b. Ḥanbal (d. 241/853) [q.v.] are arranged according to this method. Mālik had arranged his Muwattā’ according to the subject-matter, but the 3rd/9th century was the time when the important muṣannaf (classified) works were compiled. They were said to be arranged al-‘ābāb (according to the sub-sections), and this arrangement of the material proved to be much more convenient. Six of these muṣannaf works eventually took precedence over others. The most authoritative were considered to be the Ṣaḥīḥs of al-Bukhārī [q.v.] and Muslim (d. 261/875), followed in importance by the Sunan works of Abū Dā`ūd [q.v.], al-Tirmidhī (d. 279/892), al-Nasa‘ī (d. 303/913) and Ibn Mādjā (d. 273/886). The Ṣaḥīḥs contain biographical material and Kurān commentary in addition to details of religious observance, law, commerce, and aspects of public and private behaviour which are the main interest of the Sunan works. The corpus of Tradition provides details to regulate all aspects of life in this world and to prepare people for the next. In theory the traditions of al-Bukhārī and Muslim are all considered sound, whereas those in the other books have varying degrees of worth; but criticism has been made even of some of al-Bukhārī's and Muslim's traditions.

There was no official body to commission the books of Tradition, so they had to make their own appeal to the community. By the 4th/10th century the collections of al-Bukhārī and Muslim were fairly generally recognized, and the others gained recognition after longer periods. For example, Ibn Khaldūn (d. 808/1406) did not recognize Ibn Mādjā's Sunan, but spoke of the 'five' books. Nevertheless the six books were eventually recognized, although some people preferred Mālik's Muwattā’ to Ibn Mādjā's Sunan. Other works also were compiled, and while they did not command so much general respect as the six books, they are recognized as important and are quoted. Among these mention may be made of the works of al-Dārinī [q.v.], al-Dārākūṭī [q.v.] and al-Bayhākī [q.v.]. Commentaries were written on the books of Tradition, and there are many works which give selections of one kind or another. A favourite type of work uses the title Ṭabḥān from the practice of collecting forty traditions on some particular subject. Larger works were also compiled giving selections of traditions from various sources. One of the best known of these is Mīḥāk al-sumna by al-Baghawi [q.v.], enlarged into the still more popular Mīḥāk al-maṣāhūb by Wali al-Din.

The works to which reference has been made are those recognized by Sunnis. The Shi`ites have books of their own, accepting only traditions traced through 'All's family, an important purpose being to support the claims of the Shī`a. They are al-Kāfī fi ‘īm al-dīn by Abū Jā`far Muḥammad b. Y`ākūb al-Kulaylī (d. 326/939); Kitāb man la yakhfurū ‘l-fadlāt bī Abī Jā`far Muḥammad b. ‘Ali called al-Bāḥbāyā al-Kummi (d. 581/991); Tahākīb al-akhbām by Abū Jā`far Muḥammad b. al-Ḥasan al-Tābt (d. 459/1067 or 460/1068), of which he produced a shorter version entitled al-Ḥabīsārī fīmā bātulis fīkī min al-akhbār. They are muṣannaf works covering subjects similar to those in the Sunni books.

III. CRITICISM OF HADITH

Before the recognized books were compiled the body of Tradition had grown enormously, and serious students recognized that much of it was fabricated. The kūsūdās (storytellers) were men who invented the most extraordinary traditions to which they attached seemingly impeccable isndds, their purpose being to astonish the common people and receive payment for their stories. The spurious nature of such was easily recognized. Others fabricated traditions to spread false doctrines, and this was sometimes so cleverly done that it had a chance of being undetected. For example, one such quotes the Prophet as saying, 'I am the seal of the prophets; there will be no prophet after me unless God wills'. The phrase 'unless God wills' is so common that it was sometimes so cleverly done that it had a chance of being undetected. For example, one such quotes the Prophet as saying, 'I am the seal of the prophets; there will be no prophet after me unless God wills'.
"I have not seen more falsehood in anyone than in those who have a reputation for goodness".Abū Asim al-Nabī (d. 212/827) is credited with the similar statement, "I have not seen the good man lying about anything more than about Hadith". The fact that different types of people invented traditions shows how important Hadith had become. Because of this, ingenious men made use of it to propagate their ideas.

Criticism was made of transmitters for various other reasons. Some were accused of carelessness in transmission, others of being inaccurate in old age, others of pretending to transmit traditions when they had lost their books and were depending on a faulty memory. Al-Ḥākim (d. 405/1014) accuses some of tracing back to the Prophet traditions which went back only to Companions or Successors.

As a result of the effort to investigate the genuineness of traditions biographical works were compiled regarding the people who appeared in īsmāḍ. It was important to know the years of their birth and death, for this shows whether they could have met the people they are said to have quoted. Statements were also recorded regarding the degree of their trustworthiness, but these raised problems for them frequently contradictory. Although it is said that such material was collected from the first century, the books were mainly compiled from the third century onwards. Arabs were notable as genealogists, and therefore one may not unreasonably assume that while the books began to appear comparatively late, materials for the earliest periods were available. Books were also written confined to traditionists in particular districts, madḥabs, or centuries, some including people of other interests. It is important to note that while these are called rīḍīl (men) works, they include many women traditionists (see further al-Djurī wa l-Tarīq). The criticism of traditions soon developed a series of technical terms, a number of which are found in the six books, where comments on traditions are common. Al-Tirmidhī made a notable contribution to the criticism of Tradition, for he not only supplied notes to the large majority of his traditions, but concluded with a chapter in which he discussed some particular aspects for the first time. These include the four types of Semitic Studies, vi (1964), 32 fl. The use of technical terms seems to have been a gradual development, but although a particular term might be used differently at different periods, fairly general agreement about most of them was eventually reached.

Traditions were divided into ʿašūk (sound), hasan (good), and daʿāf (weak) or saḥīm (inform). ʿAšíṣ traditions have seven grades: (1) those given by al-Buḫārā and Muslim; (2) those given by al-Buḫārā alone; (3) those given by Muslim alone; (4) those not given by either, which however fulfil their conditions (ḥuru); (5) those which fulfil al-Buḫārā’s ḥuru; (6) those which fulfil Muslim’s ḥuru; (7) traditions sound in the opinion of other authorities. Hasan traditions are not considered quite so strong, but they are necessary for establishing the text of the tradition. Indeed, most of the legal traditions are of this type. There are varieties of the hasan but authorities are not all agreed on the subject. Al-Tirmidhī has used hasan along with other words, but in his final chapter he has unfortunately not explained what he means by all the terms he uses. Weak traditions also have various degrees. Allowance is made for using weak traditions dealing with exhortations, stories, and good behaviour, but not for those dealing with matters of law or with things which are allowable or forbidden. Abū Dāʾūd has used ʿašīḥ for traditions about which he has made no remark, some being sounder than others. Some have held ʿašīḥ to be a grade inferior to hasan, but this view is not common. Ibn Ḥaḍjar al-ʿAskārīnī (d. 852/1449) distinguishes between ʿašūk al-ḥathīdādī (fit to be used as proof) and ʿašūk al-ḥathīb (fit to be considered), the former being equivalent to hasan and the latter, though weak in itself, deserving consideration to see whether it is corroborated. If that is so it becomes hasan bi-ḥurūr (fit through another tradition) and ʿašūk al-ḥathīdādī. But in classical terminology ṣahīḥ is applied to transmitters rather than to traditions.

Most of the following technical terms, mainly dealing with the īsmāḍ, acquired a stable meaning although all authorities did not agree in their interpretation of some. For convenience they are here arranged in five groups.

(i) With reference to the number of transmitters. Muṣawādī is applied to a tradition with so many transmitters that there could be no collusion, all being known to be reliable and not being under any compulsion to lie. Maṣḥūr is a tradition with more than two transmitters, some such being ṣahīḥ and others not. Muṣawādī is treated by some as equivalent to maṣḥūr, by some as equivalent to muṣawāṣur, but by most as an intermediate class. ʿĀṣī is used of a tradition coming from one man of sufficient authority to have his traditions collected when two or three people share in transmitting them. ʿGarb is a tradition from only one Companion, or from a single man at a later stage. It may apply to īsmāḍ, or maṭn, or both. It is to be distinguished from ṣarī ʿadb the ḥadīth which applies to uncommon words in the ʿadb. Facts can be used of an īsmāḍ with one one transmitter at each stage, or of a tradition transmitted only by people of one district. Ibn al-Ṣalāḥ (d. 643/1245) says every ʿard is not reckoned ṣarī; al-Nawawī (d. 676/1278) considers those from one district to be ʿard and those from individuals ʿgarb. ʿĀḥād is a tradition from a single authority which differs from what others report. If it differs from what others report, the latter are said to have quoted from the former. Some have held ṣahīḥ to be of insufficient reliability to have his unsupported traditions accepted, it is rejected. ʿĀḥād is used of traditions from a relatively small number of transmitters, not enough to make them muṣawāṣur. Ḥabar al-ṣaḥād, or al-ḥadīth al-ṣaḥābī is to be distinguished from Ḥabar al-waṣīḥ, a tradition from a single man.

(ii) With reference to the nature of the īsmāḍ. Muṣawāṣur is used of an unbroken īsmāḍ traced back to the source. If it goes back to the Prophet it is muṣawāṣur marfūʿ, i.e., to a Companion it is muṣawāṣur muṣawāṣur. Īsmāḍ is generally applied to a tradition with a fully connected īsmāḍ traced to the Prophet, i.e., both muṣawāṣur and marfūʿ, though it has been applied by some to connected traditions going back to a Companion or a Successor. Marfūʿ is a tradition traced to the Prophet whether or not the īsmāḍ is complete; but some would treat it as equivalent to muṣnad. Muṣnad is a tradition going back only to a Companion. Muṣīṣ is a tradition going back to a Successor regarding words or deeds of his. Al-Ṣaḥāf and al-Ṭabarānī used it in the sense of munṣaṣur, which has been used of an īsmāḍ including unspecified people, or one later than a Successor who claims to have heard someone he did not hear. It is also used of one later than a Successor quoting
HADITH

directly from a Companion; but commonly it is applied when there is a break in the isnād at any stage later. (At all subsequent division, but separated and divided) may be found applying to a tradition with several breaks in the isnād, to distinguish it from munbatāt. Mu'allak (suspended) is used when there is an omission of one or more names at the beginning of the isnād, or when the whole isnād is omitted. Mursal is a tradition in which a Successor quotes the Prophet directly. Mu'allal or ma'sil applies to a tradition with some weakness in isnād or main. Al-Hāfiẓ declares that it is a tradition mixed with another, or containing some false notion of the transmitter, or given as muttaṣil when it is mursal.

(iii) With reference to special features of main or isnād. Ziyādād al-ğibāl means additions by authorities in main or isnād which are not found in other transmissions. Views differ regarding the extent to which such information is acceptable. Mu'an'an is used of an isnād where 'an (on the authority of) is used with no clear indication of how the tradition was received. It is held that when those who use it are known to be genuine, and to have heard the person they quote, the tradition is muttaṣil. Musalsal is applied when the transmitters in an isnād use the same words, or are of the same type, or come from the same place. Musalsal al-ḥalif is a type in which each transmitter swears an oath, and musalsal al-yad is the type in which each transmitter gives his hand to the one to whom he transmits the tradition. Mudallās is used of a tradition with a concealed defect in the isnād. The defect of tadlis (concealing defects) may consist in pretending to have heard a tradition from a contemporary when that is not so (tadlis al-insād), or in calling one's authority by an unfamiliar ism, kunya, or nasba (tadlis al-ğiyūṣ), or in omitting a weak transmitter who comes between two sound ones (tadlis al-masāya). Mudhams (obscure) is used when a transmitter is named vaguely, e.g., rażīl (a man), or tān ḥulīn (son of so and so) without giving the man's ism. Maklub (transposed) is applied when a tradition is attributed to someone other than the real authority to make it an acceptable ḡhālib tradition, or when two traditions have the isnād of the one with the main of the other. Some use Ǧubayr 'aṣ wins later than the Successor. Musalsal confused. Tadlis (inserted) is used of a gloss in the main, or of giving with one isnād texts which differ with different isnāds, or of mentioning a number of transmitters who differ in their isnād without indicating this. Generally it is used of inserting something in the isnād or the main of one tradition from another to make this appear part of it. Muḍjarīb (incongruous) is used when two people or more disagree with one another in their version of a tradition, they being people of similar standing. The difference may affect isnād or main. Iđīṣrāb makes a tradition weak. When a man is called muḍjarīb al-ḥadīth it means his traditions are confused. Isnād ʿaṣīl (a high isnād), which is used when there are very few links between the transmitter and the Prophet, or between him and a certain authority, is considered it a tradition with good ground that the fewer the links the fewer are the possible chances of error. Isnād nūṣīl (a low isnād) means that there are many links. The quality of the former is called ʿawwaw and of the latter mutāl. Muḥarrf (altered) is used of a change occurring in the letters of a word. Musṣāḥaf (mistaken) is used of a slight error in isnād or main, commonly confined to an error in the dots. Musabbabāl (variegated, embellished) is used when two contemporaries transmit traditions from one another. Iṭībār (taking into consideration) means consideration of whether a transmitter who is alone in transmitting a tradition is well known, or whether, if the tradition is transmitted by one authority, someone in the chain has another authority, or whether another Companion transmits it.

(iv) With reference to acceptable traditions. Ma'rūf (acknowledged) is applied to a weak tradition confirmed by another weak one, or it is a tradition superior in main or isnād to one called munkar. Munkar (see below) is also applied to a traditionist when two or more transmit from him. Otherwise he is maṣḥūl, i.e., unknown either as regards his person, or his reliability. Mabbāl (accepted) is a tradition which fulfils requirements and is either ṣāḥib or baṣan. Makūfás (committed to memory) applies to a tradition which, when compared with one which is ʃahādāt, is considered of greater weight.

(v) With reference to rejected traditions. Munkar (ignored) is used of a tradition whose transmitter is alone in transmitting it and differs from one who is reliable, or is one who has not the standing to be accepted when alone. Some equate munkar with ʃahādāt, but munkar is normally considered inferior. When one says of a transmitter yarūs 'l-munṣārā (be transmits munṣārā traditions) this does not involve the rejection of all his traditions; but if he is called munkar al-ḥadīth they are all to be rejected. Mardūd (rejected) is the opposite of mabbāl. More particularly it is a tradition from a weak transmitter which contradicts what authorities transmit. Maaṛūf (abandoned) is a tradition from a single transmitter who is suspected of falsehood in Tradition, or is openly wicked in deed or word, or is guilty of much carelessness or frequent wrong notions. Mārib (cast out) is held by some to be synonymous with maṣṭūk, by others to be a separate class less acceptable than da'īf, but not so bad as maqādīs (fictitious), the worst type of all. Some other technical terms are given below. [See also al-Dījkār wa l-τα'ḍīl].

The criticism of traditions was very detailed, showing how seriously the work was undertaken, and one can appreciate the situation in the early days when the criticism was so thorough that the one who used it seems to have been saying that this does not involve the rejection of all his traditions; but if he is called munkar al-ḥadīth they are all to be rejected. Mardūd (rejected) is the opposite of mabbāl. More particularly it is a tradition from a weak transmitter which contradicts what authorities transmit. Maaṛūf (abandoned) is a tradition from a single transmitter who is suspected of falsehood in Tradition, or is openly wicked in deed or word, or is guilty of much carelessness or frequent wrong notions. traced back to the Prophet. While one does not feel justified in explaining away the whole body of Tradition on these lines, it is quite clear that much material coming from a later date has been attributed to the Prophet, and this makes it very difficult to find a satisfactory criterion by which one may recognize what is genuine. Material which accumulated within a certain circle may often have seemed to a later generation to have come from a Companion who settled in the area, and by a natural process to have been attributed to him with the assumption that he had the Prophet as his authority. One result of Western criticism is that we must be chary of accusing men like Abu Hurayra of inventing many traditions, for they probably heard and transmitted very little of what they are reputed to have told.

IV. THE STUDY AND TRANSMISSION OF TRADITION

The study of Tradition is called ʿUlam al-hadith (the sciences of Tradition). Various works have been written on branches of Tradition, but the first to attempt a comprehensive work was Abu Muḥammad al-ʿRāmahurmuzī (d. 360/971) whose lengthy work in seven parts is called al-ʿUmmāl al-fṣālī bayna l-rāʿūt wa l-wuʿūt. Al-Ḥākim al-Naysābūrī wrote a more systematic work entitled Maṣāʾiful ʿulam al-hadīth, divided into 52 nāw (categories), a method followed by later writers. The work of Ibn al-Ṣalāḥ, ʿUlam al-hadīth, which may be considered the classical work on the subject, has 65 nāw. The study covers minutely a wide range of subjects, dealing with classes of traditions and transmitters (emphasizing being specially laid on knowledge of the Companions—ṣaḥḥīth, and the Successors—tābiʿūn), with methods of learning and transmitting traditions, with rules about details of writing traditions and methods of making necessary corrections in one's manuscript, even with the ages at which it is appropriate to begin and to stop transmitting. To give one illustration of the rules for writing, when the phrase salta lākhu ʾalayhi wa-sallam comes after rasūl Allāh, one must not end a line with rasūl, for to do so would mean that someone happening to glance at the next line might think God was being invaded of His majesty. Ibn al-Ṣalāḥ gives the following: (1) Hearing (samā). Hearing directly from the shaykh's mouth is considered superior to other methods. (2) Reciting to the shaykh (al-baḍʿa ʿala l-shaykh), commonly called ʿard (submitting the material to him). One may recite to him his material from memory or from a book, and he may listen with or without his book for reference according to the quality of his memory. The important matter is that he should be able to guarantee the correctness of what is attributed to him. This method is equally valid if one hears someone else reciting. (3) Licence (iǧāsa). Licence to transmit a shaykh's traditions is of various kinds, some more precise than others as to the material and the person or persons to whom it is given. (4) Handing over (mudawala). This applies to a copy of the shaykh's traditions being handed to a student with or without iǧāsa. Ibn al-Ṣalāḥ held that iǧāsa must be received to make it valid, but said that a number of traditions held that mudawala alone was sufficient. (5) Correspondence (mukāṭabāt). Some held that material received thus may be transmitted though licence has not been given, but others disagreed. Ibn al-Ṣalāḥ holds that if the man who receives the traditions is familiar with the šaykh's handwriting he may transmit the traditions, making clear how he received them. If licence is given, this is equivalent to mudawala with iǧāsa. (6) Bequest (wasiyya). Ibn al-Ṣalāḥ says that receiving a book of traditions in a bequest does not give one the right to transmit them, but some consider that it does. Wasiyya is also used of a book entrusted to someone by one going on a journey. (7) A find (ašādīda). One who finds a book in a šaykh's handwriting may transmit the traditions if he finds how he got them, this giving a suggestion of a connected ismād. If the book contains the šaykh's traditions copied by someone else, one may say merely that he said such and such, this not suggesting a connected ismād. Some at least of these methods were used in the 3rd/9th century, and possibly earlier. Al-Bukhārī has chapters on reading over traditions to a šaykh and on mudawala and mukāṭabāt, and al-Tirmidhī speaks of reading over material to a šaykh.

Different words used in the transmission of traditions are discussed, such as haddathānī (he told me), hadāthānī (he told us), akhbarānī (he informed me), akhbarānī (he informed us), samīʿū (I heard), anbaʿānī (he announced to me), anbaʿānī (he announced to us), ʿān (on the authority of). Various views mentioned by people of the 2nd/8th and 3rd/9th centuries suggest that in their day there was no general agreement about the relative importance of these terms. Al-Ḥākim is more precise. He says haddathānī should be used when one hears a šaykh with no others present and haddathānī when others are present; akhbarānī when one reads over traditions to a šaykh with no others present, and akhbarānī when one hears someone else reading to the šaykh; anbaʿānī when one submits traditions to a šaykh and is given iǧāsa by word of mouth. ʿān, which is generally agreed to be allowable when the transmitter is reliable, often appears in al-Bukhārī's traditions. Al-Khaṭṭāb al-Baghdādī (d. 463/1071) justifies it especially when the ismād is long, as it avoids tedious details. An ismād which begins with one or more of the other words often uses only ʿān towards the end; or it may begin with one of the recognized words, and continue with ʿān. It is not sufficient, according to the strictest rules, to give merely the contents of a collection of traditions for which one has received iǧāsa; one must inscribe on one's manuscript the name of the šaykh from whom one received the traditions, telling how and when this took place, along with the line of authorities through whom he heard it. So not only the separate traditions but also the whole collection must have an ismād. This practice has continued in certain quarters, but the invention of printing has largely made it unnecessary. The text of some important scholar is printed, his authority suffering without any attempt to trace the transmission of his version down to the present day. But manuscripts always give details of the transmission of their contents.

In discussing the age at which people may begin to hear and transmit traditions and the age at which they should stop Ibn al-Ṣalāḥ holds that no hard and fast rules can be laid down. Some say the youngest age is five and that people should stop in their eigtieths, but he argues that some are not too young before five and some have not become senile in their eigtieths, although there are others who should stop earlier.

Inconsistency in traditions (mukhtasīf al-hadīth)
has caused difficulty, recognizing the existence of traditions which seem contradictory. Ibn Kutayba's Tahwìl (4 vols., Cairo 1313/1896; Fr. ed., C. G. Lecomte, Damascus 1962) is a standard work on the subject. By an exercise of ingenuity it may be possible to reconcile the traditions, or one may be given preference because of the superiority of its transmitters; or by a knowledge of when the traditions were promulgated one may conclude that the later one has abrogated the earlier. This subject has the title of al-nàfisà wa 'l-mansùbih (the abrogating which the abrogated). A tradition cannot be abrogated by iǧmāʿ; only a tradition can abrogate a tradition.

It is often said that the validity of a tradition depends not on the text but on the isnàd. While this is generally true, it is not the whole story. For example, al-Ḥakìm (Maʿruf ʿulàm al-hadîth, 59 ff.) mentions some traditions with very reliable men in the isnàd which he holds to be faulty and weak. He argues that one requires considerable knowledge to detect this, and can arrive at a conclusion only after discussion with people learned in the subject.

Wensinck, Handbook; Wensick and others, Concordance et indices de la tradition musulmane (in progress), Leiden 1936; Muhammad Fuʾād Ab al-Ḵâlî, Taṣâyṣ al-manṣa′a bi-šûbây Mîṣrî hünkuz al-sumna wa l-Muṣālah al-musâfishâr al-alâfîs al-hadîth al-nabawi, 8 parts, Leiden 1939 (detailed list of the bás in six books, and in the works of al-Dârîmî and al-Ḵâlî); al-Bukhârî, ʿAbî, ed. (13 parts), Cairo 1350-2/1931-4; al-Nâṣîbî, Sunan, 8 vols., Cairo 1348/1930; Ibn Mâḏâ, Sunan, 2 vols., Cairo 1313/1896. (J. Robson) ḤADĪTH KUDSI (sacred, or holy traditions) also called hadîth šâkhî, or râbbânî (divine tradition), is a class of traditions which give words spoken by God, as distinguished from hadîth nabawi (prophetic tradition) which gives the words of the Prophet. Although hadîth kusdi is said to contain God’s words, it differs from the Kurʾân which was revealed through the medium of Gabriel, is inimitable, is recited in the ṣalâh, and may not be touched or recalled by the ceremonially unclean. Hadîth kusdi does not necessarily come through Gabriel, but may have come through inspiration (iḥkâm), or in a dream. One statement, not generally accepted, says God revealed these traditions to the Prophet on the night of the Miʿrāj. The words are not God’s exact words, but express their meaning. They may not be used in ēid, and there is no harm if one touches them when ceremonially unclean. Disbelief in the Kurʾân is infidelity, but this does not apply to hadîth kusdi. When quoting a hadîth kusdi one must not say simply, “God said” as when quoting the Kurʾân he which was revealed through the medium of Gabriel, is inimitable, is recited in the ṣalâh, and may not be touched or recalled by the ceremonially unclean. Hadîth kusdi does not necessarily come through Gabriel, but may have come through inspiration (iḥkâm), or in a dream. One statement, not generally accepted, says God revealed these traditions to the Prophet on the night of the Miʿrâj. The words are not God’s exact words, but express their meaning. They may not be used in ēid, and there is no harm if one touches them when ceremonially unclean. Disbelief in the Kurʾân is infidelity, but this does not apply to hadîth kusdi. When quoting a hadîth kusdi one must not say simply, “God said” as when quoting the Kurʾân he
Hadith Kudsi — Ijadh: 29

Those who desire can find its isndd there. A collection of 101 fyudsi traditions entitled... texts, or at least some of them, do not maintain it. In the Book of Stones ascribed to Aristotle all the substances.

It would appear that al-Munawi, whose order. It is divided into two parts (cf. Hadidii Khalifa, ed. Flügel, I, 150 f.), the first with traditions beginning in the first, sometimes in the second, and usually in the third. ‘All al-Kārī’ merely mentions the Companion reputed to have heard the tradition from the Prophet. Another collection, also published, is by Ibn al-Ra‘īš as-Salman, originally Muḥammad b. Tādı al-Din al-Munawwī (d. 1031/1621). It was published in Aleppo (1346/1927) along with a... the explanation of the name would be that of Baladhuri. That this story is authentic (it is also given in Yakut, ii, 223), following the history of the town, Yakūţ (ii, 223), following Nābīya b. Yābib, who dis... 571 f., S II, 791 (Ibn al-Arabī), S II, 151 (al-Madāni), S II, 417 (al-Munawwī), S II, 530 (‘All al-Kārī).

Haditha, “New town”, the name of several cities.

I. Hadīthat al-Mawṣil, a town on the east bank of the Tigris, one farsakh below the mouth of the upper (Great) Zāb. Its ruins are to be recognized in the mound of Tell al-Shā‘ir. Various accounts of its origin are given. According to one tradition (Ibn al-Arabī, al-Madāni, al-Munawwī, Bālaik, ed. 340) Harthama b. ‘Arabī, after making Mawsil the capital, came to Haditha in the reign of ‘Umar b. al-Khaṭṭāb, where he found a village with two churches in which he settled Arabs.

II. Hadīthat al-Furāt, called also Hadīthat al-Nūra (Lime-Newtown) on the Euphrates, south of ‘Ānā (34° 8’ N. and 42° 26’ E.), a nābīya of the hadīt of ‘Ānā. The town itself is built on an island, only the caravan stations being on the western river bank. It has very much declined since 1910, when the reefs and dams in the river were blown up in order to make way for packet-boats which never came into service; it had formerly 400 houses, 2 dījānīs and 3 masjīdūs, 2 corn-mills, gardens with 1500 date palms (about 6000 in the whole nābīya). It was irrigated by great waterwheels called nābīra, which were erected at the rapids of the river. There are limestone quarries on the western side of the Euphrates valley. There are three saints’ tombs of the 5th/11th-13th centuries there, from N. to S.: 1. Shaykh al-Hadd (a certain Muḥammad b. Mūsā al-Kāzīm); 2. The Awhāl Sayyid Aḥmad al-Kīfā; 3. a certain Nadīm al-Din, said to have been one of the occupants of Noah’s Ark. As to the history of the town, Yakūţ (ii, 223), following Aḥmad b. Yābib b. Ḟīrifūr, observes that it was taken before ‘Umar’s time in the governorship of ‘Ammār b. Yābir. It had a strong castle on the island which was of some importance as late as the time of the Caliph al-Kā’īm (Marāṣid, 292). According to Abū Sa‘īd al-Sa‘mānī the inhabitants were Christians. III. Ḥādithat al-Balālī, a village in the Ghūṭah of Damascus (Yakūţ, ii, 225; Marāṣid, 292).

Hadiyya [see hiba].

Hadjar (locally pronounced hajar) is a cognate of the Ethiopic hager “town”, and was the normal word for “town” in the epigraphic dialects of pre-Islamic South Arabia. It is still in use today as an element in the place-names given to ruins of pre-Islamic town sites in South Arabia. See Azimuddin Ahmad, Die auf Südarabien bezüglichen Angaben Nāwān’s in Sams al-ulām, Leyden 1916, 108. (A. F. L. BEESTON)

Hadjar [see al-masāl].

Hadjar (A.), stone. The word is applied in Arabic as indiscriminately as in European languages to any solid inorganic bodies occurring anywhere in Nature; sometimes indeed it is used in a still broader sense, as in Sāra II, 60/57 and VII, 160, where the rock from which Mūsā procures water is called also ‘stone’. Although Sāra XVIII, 50/53 says: Be ye stones, or iron” may indicate a certain discrimination between stones and minerals, later texts, or at least some of them, do not maintain this. In the Book of Stones ascribed to Aristotle all the substances...
HADJAR — HADJAR AL-NASR

A survey of stones analogous to the surveys of animals and stars by Aristotle and Ptolemy respectively is not known in classical literature. There are a few objective descriptions in Theophrastus and Pliny, but their influence, if any, on Islamic literature has not yet been studied. Aristotle's treatises on the origin of minerals in general became known through the Arabic translation of the Meteorologica (see AL-TAHIR AL-ULWIYYA; the text contained in MS Yeni Cami 1779 has meanwhile been edited by 'Abd al-Rahmân Badawi, together with De coelo, 1961). It is to be noted that in the editions of the Greek text Book 3 ends (176b 5-6) with the announcement of a detailed discussion of the different kinds of bodies; in the Arabic translation, Book 4 begins (ed. Badawi, 90) with this same announcement, which was therefore judged to be the introduction to this spurious book. However, the promised detailed discussion does not appear there either. This was probably the reason for compiling the spurious Book of Stones mentioned above. In Latin translations of the Meteorologica, Ibn Sînâ's treatise on the origin of stones and mountains sometimes appears as an appendix, occasionally under Aristotle's name; the Arabic and Latin texts, with an English translation, were published separately by E. J. Holmyard and D. C. Mandeville: Avicennae de Congelatione et Conglutinatione lapidum, 1927 (see OLZ, 1929, cols. 374-6). Fragments of the Meteorologica of Theophrastus in Syriac have recently been edited and translated by E. Wagner and F. Steinmetz, Ein syrisches Kapitel derMeteorologica, 1960 (Ak. d. Wiss. u. d. Lit., Abh. d. Geistes- und Sozialwiss. Kl. 1964, i); see also P. Steinmetz, Die Physik des Theophrastos von Eresos, 1964.

Islamic books on the origin of stones etc. are listed in AL-TAHIR AL-ULWIYYA, and also in E. Wiedemann, Zur Mineralogie im Islam (Beitr. z. Gesch. d. Naturw., xxx, Sitz. d. phys.-med. Soz. in Erlangen, 1919, xxv, 1920). A comprehensive review of Islamic treatises on the subject, dealing with the origin of stones in general, and enumerating a great many of them in detail, is contained in al-Kazwînî's Cosmography, 203-45. Here ma'dîniyyât are divided into metals (the "seven bodies", al-adâjîm al-sab'a), stones and oily substances. Ethê's translation (Die Wunder der Schöpfung, Leipzig 1868, not mentioned in G.A.L) breaks off after the chapter on metals; the chapters on stones and oily substances were translated by J. Ruska (Das Steinbuch . . . des Kaiserîns überw. und mit Anm. versehen, Beil. zum Jahresbericht 1895/96 der provisor. Oberrealschule Heidelberg, Kirchhain 1896). The relation between 'Aristotle' and al-Kazwînî has been fully discussed by J. Ruska in the introductory chapter of his Das Steinbuch des Aristoteles, 1912.

Interest in descriptions of specific "stones" is very many-sided. Apart from the descriptions of substances in medical, commercial, technical and chemical literature, for which, inter alia, pharmacological and chemico-alchemical works may be consulted, there exists a special type of stone-books in which genuine information may be found but whose main purpose is magical. The Pseudo-Aristotle mentioned above is one; another, also ascribed to Aristotle, in which chapters on stones are incorporated, is the famous Sirr al-asrâr or al-Siyâsa fi lâbîr al-

riyâda, published by 'A. Badawi, Fontes Graccae doctrinarum politicarum Islamicarum, i, 1954. A bibliography of such literature was compiled by M. Steinschneider, Arabeische Lapidarien, in ZDMG, xvli (1895), 244-78, to be supplemented by H. Ritter, Orientalische Steinbücher, in Istanbuler Mitteilungen, iii (1935), 1-15. For the Lapidariûn of Alfonso the Wise, see BALINOS; for the use of stones for magical purposes, see H. Ritter and M. Plessner's translation of Ficatius (Ps.-Magrî, Zihyât al-kâmî, 1962); a chapter on this subject will be included in the forthcoming volume of studies on this book.

Since no attention has been drawn to the unique place in the mineralogical literature of Islam occupied by the al-Djumâhir fi mawrîf al-djauwîr of al-Bîrûnî [q.v.], a few remarks on it may be added here. The djauwîr proper, i.e., pearls and precious stones, occupy only part of the book; it deals also with many metals and other minerals, always giving exact descriptions, indications of the location of mines, specific weights, prices, uses, and tales concerning them, the last often aptly criticized (see AMâs). The book deserves a full translation with careful textual criticism. M. J. Haschmi's doctoral thesis Die Quellen des Steinbuches des Berûnî (Bonn 1935) was prepared simultaneously with the edition of F. Krenkow (Haydarâbâd 1935) and relies only on manuscript sources. It should be pointed out that al-Bîrûnî's questions on the genuineness of Aristotle's book of stones (Haschmi, 35; ed. Krenkow, 41). Only two chapters have so far been made accessible to non-Arabists: P. Kahle, Bergkristall, Glas und Glasflüse nach dem Steinbuch des Birûnî, in ZDMG, xc (1936), 321 ff.; F. Krenkow, The chapter on pearls in the Book of Precious Stones by al-Berruni, in JC, xv (1941), 399-421 and xvi (1942), 21-36. In the Bibliography of such literature cited in the article: M. Steinschneider, Lapidarien, ein culturgeschichtlicher Versuch, in Semitische studies in memory of Alexander Kohut, 1897, 42-72; art. Gemmen in Pauly-Wissowa, by O. Roebach, esp. 1097 ff.; art. Lithika, ibid., by Th. Hopfen; H. Ritter, Ein arabisches Handbuch der Handelswissenschaft, in Isl., vii (1917), 9-91 (passim); J. Ruska, Die Mineralogie in der arabischen Literatur, in Isis, i (1923), 341-50.

AL-HADJAR AL-ASWAD [see al-KÂBA']

HADJAR AL-NASR ("the rock of the vulture"), a fortress founded by the last Idrîsids [q.v.] in a natural mountainous retreat, placed by Ibn Khaldûn among the dependencies of the town of al-BAṣra [q.v.]. Its site has now been identified in the territory occupied by the small tribe of the Sumatra, east-north-east of the Moroccan town of al-Kaṣr al-Kabîr (Alcazarquivir). It is reported to have been known also by the name of Hadjar al-Shurafa. In 317/929-30 the Banû Muḥammad, expelled from Fâs after the assassination of their prince, the famous al-Ḥâdjîdm, settled at al-BAṣra. These descendants of Idrîs would not, however, have escaped the blockade and the Fâtimid persecutions had it not been for the regard in which the Berbers held the descendants of the Prophet. It is without doubt these sentiments which enabled al-Ḥasan b. Gannûn (Diânûn), the local ruler, to manoeuvre skilfully between the Umayyads of Spain and the Fâtimids and to carve out for himself a principality which in about 361/972 comprised not only al-BAṣra but also Tangiers and Tetuan. Al-Ḫaḳam II, the amir of Cordova, was finally routed by the activities of Ibn Gannûn into sending a fleet and an army to subdue him. The
Idrissid then took refuge in his fortress with his harem and his treasure and, after several reverses, he finally inflicted a bloody defeat on the Umayyad troops on 21 Rabi' II 1362/30 December 797; their leader, Ibn Tumlus, was killed and they had to seek refuge within the walls of Ceuta. In order to avenge this cruel defeat, al-Ḫakam II sent to Morocco his best general, the renowned mawali Gḥilib [q.v.], who gathered together his army as soon as he disembarked and set off to besiege Ḥaǧjar al-Nasr. Ibn Gannūn resisted so effectively that fresh reinforcements were sent from Spain, with a large supply of gold to buy over the allies of the Idrissid. The latter realized that he was lost and was obliged to surrender on 21 Dujūmād II 1363/19 March 798. A week later Gḥilib inflicted on him the bitterest defeat, the turning point in the history and the assassination of Ibn Gannūn (see 982510). With this exile the decay of the fortress presumably began; the texts make no mention of it after this date.

Bibliography: Ibn Khaldūn, ʿIbar (tr. de Slane, Histoire des Berbères, index); ʿAḫmad al- недел. Kīlāb al-ʿIsākhād, i, new edition, Casablanca 1954, which summarizes all the Arabic texts (tr. A. Graule, in AM, xxxi (1953)); Lévi-Provençal, Hist. Esp. Mus., ii, where further bibliography can be found. (G. Deverdun)

Hadjrāyān, a town in Ḥaḍramawt on the ʿIbīl of the same name, about five miles south of Maḥbūb ʿAll [q.v.] on the Wādī ʿAftān. Situated amid extensive palm-groves, it is built against the slopes of the Jībāl. The surrounding land is very fertile and produces ḡhura. Irrigation is provided through channels from the sayl and from very deep wells. The town is of importance as a centre on the motor road between Mukallā and Shībām. Its houses are built of brick and are large but the streets are narrow and steep. It belongs to the Kuʿaytīs of Shībām and was represented by a member of their family, who bears the title naṣib and lives in a palace on the summit of the hill. Hadjrāyān has about 3,000 inhabitants, many of whom have connections with Java and speak Malay. In the vicinity of the town there are relics of the pre-Islamic period, when the incense trade still flourished in the district.

The ruins of an ancient town, Raydūn, with incisions of Assyrian form, are found. (G. Deverdun)

Hajjarayn, some of its mysteries unveiled, Leiden 1933; A. Grohmann, Südarabien als Wirtschaftsgesch., Vienna and Berlin 1923-33, v, index.

(J. Schlieffer, A. K. Irvine)

Hajḍidj (a.), pilgrimage to Mecca, ʿArafāt and Minā, the fifth of the five “pillars” (arkān) of Islam. It is also called the Great Pilgrimage in contrast to the ṣumra (q.v.) or Little Pilgrimage. Its annual observance has had, and continues to have, a profound influence on the Muslim world. Those not taking part follow the same rules as the religious teachers, and nowadays the press, radio and television help them in this by providing doctrine and news bulletins. For the Muslim community itself this event is the occasion for a review of its extent and its strength. To the religious, social and even political significance which such a gathering has today, was added, until the 18th century, an economic aspect: then, at this time of the year, Mecca was the site of one of the greatest commercial fairs of the world in which were found the products of Europe, Arabia and the Indies. Moreover, in those times, when travelling was still difficult, the pilgrimage helped to produce a mingling among the elite of the Muslim world: scholars on the way to Mecca would stay temporarily at places in the way, forming friendships with colleagues or themselves teaching in the local mosques.

1. The pre-Islamic Hajḍidj.

The investigation of the original meaning of the root ḭid does no further than hypotheses, some however probable. The Arabic lexicographers give the meaning “to betake oneself to”; this would agree with our “go on pilgrimage”. But this meaning is as clearly denominative as that of the Hebrew verb. Probably the root ḥd, which in North as well as South Semitic languages means “to go around, to go in a circle”, is connected with it. With this we are not much farther forward however; for we do not even know whether religious circumambulations formed part of the original ḥadidj. We do know that in the pre-Islamic period two annual markets were held in the month of Dhu ʿl-Ḵaḍa, at Ḫukay and Maḥdiyān. These were followed in the early days of Dhu ʿl-Ḥijja by that of Dhu ʿl-Maḡzā and thence the people would go in direct to Mecca. The Muslim practice of going out from Mecca to ʿArafāt is therefore probably an innovation; and Islam knows nothing of religious circumambulations in ʿArafāt.

This ḥadidj to ʿArafāt was not a local peculiarity; pilgrimage to a sanctuary is an old Semitic custom, which is prescribed even in the older parts of the Pentateuch as an indispensable duty. “Three times a year shall ye celebrate for me a ḥaq” is written in Exodus (xxiii, 14), and “three times a year all thy males shall appear before the Lord Yahweh” (ibid., 17 and xxxiv, 22). But in Arabia also there were probably several places of pilgrimage where festivals like that of the ḥadidj of ʿArafāt were celebrated. The month of Aggathalbaeith mentioned by Eiphanius seems to presuppose a sanctuary in the north. The ḥadidj of ʿArafāt took place on 9 Dhu ʿl-Ḥijja; the most diverse Arab tribes took part in it, but this was only possible when peace reigned in the land. The consecutive months Dhu ʿl-Ḵaḍa, Dhu ʿl-Ḥijja and Maḥarram thus formed a sacred period during which tribal feuds were at rest; weapons were laid aside in the holy territory.

It may be regarded as certain that in Muhammad’s time the sacred festival fell in the spring. Wellhausen has, however, made it appear probable that the
original time of the **hadīdi** was the autumn. If, as is probable, the above mentioned intercalary month had its object to maintain this time of the year, the intercalation did not effect its purpose, but from what cause we do not know. If the **hadīdi** originally fell in the autumn, it is natural, when inquiring into its original significance, to compare it with the North Semitic autumnal festival, the "Feast of Tabernacles" (or Day of Atonement), a proceeding which finds further support in the fact that the Feast of Tabernacles in the Old Testament is often called briefly the **ḥag** (e.g., Judges, xxii, 19; I Kings, viii, 2, 65). We will indeed find several features in agreement (see below).

Great fears were from early times associated with the **hadīdi**, which was calculated on the conclusion of the date-harvest. These fears were probably the main thing to Muhammad's contemporaries, as they are still to many Muslims. For the ceremonies had already then lost their religious significance for the people. The following may be stated: a main part of the ceremony was the **wubāšī** "the halt", in the plain of 'Arafa; in Islam the **hadīdi** without **wubāšī** is invalid. This can only be explained as the survival of a pre-Muslim notion. Houtsma has compared the **wubāšī** with the stay of the Israelites on Mount Sinai. The latter had to prepare themselves for this by refraining from sexual intercourse (Exodus, xix, 15) and the washing of their garments (Exodus, xix, 10, 14). Thus they waited upon their God (God's **wukuf**, 11, 15). In the same way the Muslims refrain from sexual intercourse, wear heavy clothing and stand before the deity (**wukafa** = **wukuf** = stand) at the foot of a holy mountain.

On Sinai, the deity appeared as a thunder- and lightning-god. We know nothing of the god of 'Arafa; but he probably existed. Muhammad is related to have said at the Farewell Pilgrimage: "The whole of 'Arafa is a place for standing (**mašī'), the whole of Muzdalifa is a place of standing, the whole of Minā a place of sacrifice". Snouck Hurgronje has explained these words to mean that the particular places there, where heathen ceremonies were performed, were to lose their importance through these words. A little is known of these heathen places in Muzdalifa and Minā.

It is uncertain whether the day of 'Arafa was a fast-day or not. In Tradition it is several times expressly stated that Muhammad's companions did not know what was his view on this question: he was therefore invited to drink and he drank. The ascetic character of the **hadīdi** days is clear from the **ṣūrah** prohibitions. That these were once extended to eating, drinking and sensual pleasure. In early Islam ascetically disposed persons therefore chose the **hadīdi** as the special time for their self-denials (see Goldzirher in *RHR*, xxxvii, 318, 320 f.).

The **wubāšī** lasts in Islam from the month after mid-day till sunset. Tradition records that Muhammad ordered that 'Arafa should not be left till after sunset, which corresponds to 30 Dhu 'l-Hijjah, the **ṣīfāda** even before sunset. But the Prophet is said not only to have shifted the time, but even to have suppressed the whole rite by forbidding the running to Muzdalifa and to have ordered that it should be slowly approached. But how tenacious the old custom is, is clear from modern discursions of the **ṣīfāda**. Snouck Hurgronje thought he saw a solar rite in the latter, a view which was more definitely formulated by Houtsma in connexion with the character of the **hadīdi** (see below), viz. that it was originally considered a persecution of the dying sun. The god of **hadīdi** was **Kuzāb**, the thunder-god. A fire was kindled on the sacred hill, also called **Kuzāb**. Here a halt was made and this **wubāšī** has a still greater similarity to that on Sinai, as in both cases the thunder-god is revealed in fire. It may further be presumed that the traditional custom of making as much noise as possible and of shooting was originally a sympathetic charm to call forth the thunder.

In pre-Islamic times, the **ṣīfāda** to Minā used to begin as soon as the sun was visible. Muhammad therefore ordained that this should begin before sunrise; here again we have the attempt to destroy a solar rite. In ancient times they are said to have sung during the **ṣīfāda**: **ṣakīb** **thābir** **kaymā** **nughir**. The explanation of these words is uncertain; it is sometimes translated: "Enter into the light of morning, **Thābir**, so that we may hasten".

When they arrived in Minā, it seems that the first thing they did was to sacrifice; 10 Dhu 'l-Hijjah is still called **yaum al-ādātī** "day of the morning sacrifices". In ancient times the camels to be sacrificed were distinguished by special marks (**tābita**) even on the journey to the **haram**; for example two sandals were hung around their necks. Mention is also made of the **ṣīgdr**, the custom of making an incision in the side of the hump and letting blood flow from it; or wounds were made in the animal's skin. It is frequently mentioned also that a special covering was laid on the animals.

According to a statement in Ibn Highām (ed. Wüstenfeld, 76 f. = tr. Guillaume, 50), the stone-throwing began only after the sun had crossed the meridian. Houtsma has made it probable that the stoning was originally directed at the sun-demon; strong support is found for this view in the fact that the **ḥaddīdi** originally coincided with the autumnal equinox; similar customs are found all over the world at the beginning of the four seasons. With the expulsion of the sun-demon, whose harsh rule comes to an end with summer, worship of the thunder-god who brings fertility and his invocation may easily be connected, as we have seen above at the festival in Muzdalifa. The name **tarwiya**, "moistening", may be explained in this connexion as a sympathetic raincharm, traces of which survive in the libation of **zemzem** water. These are again parallels to the Feast of Tabernacles (or Day of Atonement): the goat, which was thrown from a cliff for 'Azazel, is not difficult to identify as the type of the sun-demon; and the libation of water from the holy well of **Siloom** was also a rain-charm, for the connexion between the Feast of Tabernacles and rain is expressly emphasized (Zach., xiv, 17). Further we may call attention to the illumination of the Temple on the Feast of Tabernacles, which has its counterpart in the illumination of the mosques in 'Arafa and Muzdalifa, as well as the important part which music plays at both feasts.

Quite other explanations of the stone throwing are given by van Vloten (*Feestbundel*. . . . *aan Prof. M. J. de G.), Revue d'Archeologie (Annales de l'Acad. Royale d'Arch. de Belgique, 5th Ser., Vol. iv, 272 f.). The former connects the stoning of Satan and the Kur'ānic expression **al-shayṭān al-rajīm** with a snake, which was indigenous to **'Akaba**. The latter finds in it an example of scopelism: the object of covering the **ḥaddīdi** ground with stones thrown on it was to prevent the cultivation of it by the Meccans. Both these theories have been satisfactorily refuted by Houtsma. Cf.
also Douet, Magie et religion, 430 ff.—On the significance of shaving in connexion with the history of religions, see the article IHRAM.

flesh of the sacrificed animals in the sun to take it i.e.,/Zeitschr.

Tradition has much to tell on the subject of this so-called farewell-pilgrimage (hadjdj al-maddi). These accounts of the ceremonies performed by Muhammad agree essentially with the later practice. The arrangements which he made on this occasion are of importance, however, for the history of the hadjdj, notably the abolition of the “intercalation” (nasi) and the introduction of the purely lunar year, which is mentioned in the Kur’ân with the words: “Verily the number of months with God is twelve months in all, of which four are sacred; that is the true religion. In these shall ye do no injustice to one another. But fight the unbelievers, as they fight you, one and all, and know that God is with the righteouss. The intercalation is but an increase of the unbelief, in which the unbelievers err, for they make it [i.e., the time in which it falls or should fall] lawful one year and unlawful the next” (Kur’ân, IX, 36 ff.). On other ordinances promulgated on this occasion see below.

A. The journey to Mecca. It is a duty obligatory on every Muslim man or woman who has reached the age of puberty and is of sound mind to perform the hadjdj once in his or her life provided that they have the means to do so (cf. Kur’ân, III, 97). The following are exempt for as long as their incapacity lasts: the insane, slaves, those who have not been able to obtain mounts or save the sums of money (procured honestly, kalil) necessary for the journey and for the sustenance of their families during their absence. The obligation is lifted also during periods when the route is unsafe by reason of war, abnormal brigandage, epidemics, etc. For certain categories of Muslims who are unable to go, the law provides the possibility of accepting or hiring the services of other Muslims who will take their place on the pilgrimage. Each substitute may represent only one person and must already have made the pilgrimage on his own behalf. In this way invalids and elderly people can delegate someone to replace them. Provision is even made for a substitute to be sent posthumously.

The pilgrimage of a child (with his family) or of a slave (with his master) is considered a meritorious act but does not fulfil the obligation and must be made again when the one has reached puberty and the other become free. Some ‘ulama insist that every woman must be accompanied by her husband or a close male relative (brother, son, etc.) who has the right to enter her harem; others say that a woman is obliged to go even if she has no such protector.

In practice, statistics show that only a small number of Muslims, especially in the case of those in countries far from Mecca, is able to perform the pilgrimage. It is beyond the reach of many people of limited means. And it is established that a fair number of those who could have afforded it die without having been to Mecca.

The hadjdj always takes place on the same dates of the lunar calendar, during the first two weeks of the month to which it gives its name Dhul ‘Hijjada. Ever since Islam suppressed the intercalary month [see nasi?] which every three years corrected the discrepancy between the solar and the lunar year (Kur’ân, IX, 36-7) the Muslim festivals, and consequently the pilgrimage, fall each year ten or eleven days earlier than the preceding year, and thus

Encyclopaedia of Islam III
run through the whole cycle of the seasons in 32-3 years. The journey is of course much harder when the hajj takes place in high summer, although the cold of winter, especially at night, can also be painful for the pilgrims, insufficiently protected by their ritual garments. Only Muslims may be present at the pilgrimage, though very rarely Christian travellers have been able to mingle with them, protected by a disguise. In the 11th/12th and 12th/13th centuries Muslims sometimes took with them Christian slaves, who thus penetrated into the forbidden territories.

Until the 18th century, the methods of travel available to pilgrims were either sailing ships as far as Djidda, or caravans. The latter were in effect convoys organized by the authorities of the great Muslim countries. The dangers of the journey (the risk of losing their way in the desert, of being caught in a sandstorm or in the torrent of a river-bed filled with water by sudden rain, the danger of attack by Bedouins, of epidemics, etc.) rendered it a serious undertaking, and the pilgrimage knew that he might die on the way. For this reason there have long been more men than women pilgrims. The authorities, for their part, had built at the most important points of the route forts, some of them quite small, which were manned by small garrisons and served also as stations for supplies of water and food. A military escort accompanied the convoy, supplying as it passed the annual relief of the garrisons. The nomad tribes whose territory was crossed were won over by the distribution of money (called *sura, "purse" [*q.v.*]) and of robes of honour. Each section was directed by a pilgrim leader [see AMIR AL-HADJ]. In addition to whom there were the leaders of secondary caravans in case the main caravan became divided. From the 7th/8th century onwards, a famous palanquin, the mahmal [q.v.], was carried to symbolize the political authority of certain Muslim countries, especially Egypt, and then the Ottoman Empire. Other displays of prestige consisted of taking musicians as part of the caravan and of letting off fireworks at certain points; [for details of the material organization of a caravan, see J. Jomier, *Mahmal*].

An important caravan was mustered at Damascus and then hajj by road, as far as Medina, the direction later taken by the Hidżaz railway through Ma‘ān and Ma‘ān-Shālīb. It was accompanied by a Syrian mahmal and the journey from Damascus to Medina took about thirty days (see R. Tresse, *Pelerinage syrien*).

A caravan from the Magrib, sometimes with a parallel group proceeding by sea as far as Alexandria, made its way first to Cairo, and was sometimes joined en route by groups of pilgrims from Senegal and Timbuktu. Then groups of Egyptians and Maghrabis set off again for the Hidżaz at twenty-four hour intervals. Their route led through ʿAdjerūd, ʿAkhaba, the country of Madyan and the eastern shore of the Red Sea. The Egyptian caravan travelled with its mahmal, while the new exterior hangings (kiswa [*q.v.*]) for the Kaʿbah were carried on other camels. The journey from Cairo to Mecca took about 35 days. However some pilgrims preferred the sea route; indeed at the time of the Crusades there was no choice, and to avoid passing too close to Frankish territory pilgrims coming from Egypt travelled up the Nile and then across the desert to the port of ʿAyyāḥab, where they took ship for Djidda. In spite of the resumption of the overland caravan under Baybars, the sea traffic continued. Towards the end of the 8th/9th century ʿAyyāḥab was replaced by the port of ʿĀrāb (in Sinai), and later it was Suez which, in the 19th century, monopolized the steamship traffic. The last official Egyptian caravan to go by the overland route was in 1300/1883 and it consisted of only 1,170 persons. But once in the Hidżaz, the Egyptian pilgrims continued to group themselves into official caravans around their mahmal, which had been brought there by ship, until 1926 when the palanquin was seen in the Holy Places for the last time.

There was also a caravan from ʿIrāq, across Arabia, and another from the Yemen [see Burckhardt, *Travels*, appendices i and ii]. The pilgrims from central Africa made their way to Port Sudan, where they embarked for Djudda. The arrival at Mecca of the principal caravans, especially those from Syria and Egypt, was a great event for the inhabitants of the city. They camped in places specially allotted to them (see the plan of Mecca in C. Snouck Huzongo, *Mecca I* or in Rifʿat Pasha, *Masāʾīl aṭ-Ṭaraμayn*), and they generally did not appear until a few days before the hajj.

During the last century the journey to the Hidżaz has been greatly changed, first by the advent of steam navigation, then by the building of the short-lived Hidżaz railway [q.v.] (opened in 1908) and finally by the introduction of motor vehicles into Arabia and the spread of air travel. It has been altered also by public health measures, by the introduction of quarantine, and above all by the use of vaccination, so that the terrible epidemics of earlier centuries are now a thing of the past. Nowadays the death rate is relatively low and the main causes of death are the advanced age of some of the pilgrims, and sunstroke. The annual reports of the Muslim quarantine doctors who have accompanied the pilgrimage to the Hidżaz form a collection of extremely valuable documents; they consist mainly of technicalities, but often contain much that is of human interest and are often vividly written and sometimes very moving (texts printed practically every year since the beginning of the 20th century by the Quarantine Office at Alexandria, not for sale).

Up to the present only a rough annual figure has been available for the number of pilgrims. For one thing it is difficult to estimate how many Muslims from Arabia itself take part in the hajj, and then the rather fragmentary information provided by the quarantine services or the pilgrimage offices in the different countries, which alone could provide the numbers of non-Arabian pilgrims, would need to be brought together systematically. Dr. Buez, in *Une mission au Hidjaz*, Paris 1873, 84, gives the approximate total of pilgrims for 23 years between 1807 and 1873. The minimum was 50,000 in 1853 and 1859, the maxima 150,000 in 1873 and 160,000 in 1858. In 1926, a very exceptional year for this period, 250,000 pilgrims are reported.

According to the Meccan press during the last few years (but always excluding the pilgrims who come from the Arabian peninsula itself), from 1957 to 1962 there was an annual total of between 140,000 and 180,000. During this period the chief annual contingents varied within the following limits, reckoning in thousands: Egypt 30-40 (with only 10 in 1962 because of tension between Egypt and Saudi Arabia), Iran 10-28, Pakistan 9-23, India 13-20, Indonesia 7-13, Syria 5-13, Sudan 5-7, Nigeria 3-15, Iraq 3-11.

Pilgrims have always been able to make financial arrangements with agents (mahāwīm), or nowadays with organizations, who undertake mainly to provide for them in advance all the material needs of the journey.
Some pilgrims take advantage of the journey to pay long visits to places on the way and to spend some time on the pilgrimage, but their aim may be devotion, study, commerce, or even simply to work to earn enough to continue their journey. In the Middle Ages many used to arrive at Mecca in Ramadan, the month in which the performance of the 'umra is held to be especially meritorious. A special caravan, the Razgalabyiya, which set off from Cairo in Razjab, is mentioned from time to time in the 8th/14th century chronicles, and was one of the decisions of the pilgrims. The year in which the station at 'Arafat fell on a Friday was held to be particularly blessed, and to die near to the Holy Places was considered to bring especial grace. Until the 19th century many, by carrying on commercial activities during the pilgrimage, were enabled to cover, in part or entirely, the expenses of the journey, and some big merchants were even able to make a considerable profit. Finally it should be mentioned that there exist at the present time in the most important Muslim cities associations whose aim is to encourage the pilgrimage. (For some aspects of a pilgrimage made by a Shafi'i at the beginning of the 20th century, see Kazem Zadeh, Relation d’un pèlerinage à la Mecque, in RMM, xix (1922), 144 ff.) The word hadidi so often added to Muslim names is an honorific title meaning "one who has made the pilgrimage".

E. Arrival at Mecca. The pilgrim will already have put on the sacred garment or shirām (q.v.) when he passed through (or was on a level with) one of the places prescribed for this by tradition, or before he boarded the plane for Djidda. He is then muhirm, in a state of holiness, observing the prohibitions laid on those who are in this state and repeating frequently the invocation known as talbiya (q.v.). The rites on arrival at Mecca are the same for all, for the hadidi is in fact an 'umra, that is a rite of visiting the Ka'bah, which is completed by the rites of visiting the Holy Places in the neighbourhood of Mecca. The 'umra consists of walking seven times round the Ka'bah (tawaf (q.v.)), praying two rak'as facing the Makâm Ibrahim and the Ka'bah (this prayer, according to the various juridical schools, is either only sunna or hadidi), and finally traversing seven times (four times going and three returning) the distance between Safa and Marwa (sa'y (q.v.)). What follows these observances depends on the intention which the pilgrim formed at the time of assuming the shirām. He intended to perform either the hadidi alone (ifrād) or the 'umra and the hadidi together (kiyām); in either of these two cases he does not relinquish the state of shirām after having performed the rites of arrival. But if he wanted to perform the 'umra first and then to enjoy (tamattu') the freedom of a normal life, not resuming the shirām again until the last minute for the hadidi, he deconsecrates himself by having a few locks of hair cut off and coming out of the shirām. But in this case he will have to offer a sacrifice, which can be made wherever he chooses in the sacred territories and within a period upon the duration of which the jurists differ.

In general, the pilgrim joins a group led by a guide (shaykh, dalâl, mutawwif). In this town, where the pilgrimage is the sole source of revenue for the inhabitants, who naturally try to gain as much as possible from it, it is useful to have the protection of a guide, no matter what this costs. Some guides visit the various Muslim countries from time to time to recruit their clients in advance.

C. The collective ceremonies of the hadidi. Unlike the preceding observances, which each pilgrim carries out individually and at any date he chooses within the months set aside for them, the visits to the Holy Places in the vicinity of Mecca are made collectively in a traditional order, between 8 and 12 Dhu 'l-Hijjah. We can give here only the broad outlines of the question, which has provoked an abundant literature among the casuists, each juridical school having its own requirements regarding details. These will be found in a table given by al-Batānî, al-Riḥâla al-Ifidjaziyya, 176.

On 7 Dhu 'l-Hijjah, there is preached in the mosque of Mecca a sermon or khutba in the course of which the pilgrims are reminded of the duties which will fall on them.

It is generally on 8 Dhu 'l-Hijjah that the pilgrims who have relinquished shirām for tamattu' assume it again. This day is called "day of watering", yaum al-tarniya; for, say the Arabic writers, on this day the pilgrims water their animals and provide themselves with water for the following days. This explanation is not accepted by Wensinck and Gaudefroy-Demombynes, among others, who prefer to see in this name traces of an ancient rain rite.

The pilgrimage then becomes part of an immense crowd moving towards the east. Tens or hundreds of thousands of men and women in their white ritual garments enter a desert valley overhung with mountains and rocks. Formerly this was a mass of people on foot, and of camels, in which the pilgrims were accompanied by merchants who were there in order to offer them whatever could be sold in such circumstances. Today, cars and lorries proceed along the metalled road, while a string of first aid posts is set up for some days.

The night from 8 to 9 is spent at Minā (merely from custom) or already at 'Arafat (25 km/15 miles from Mecca), where in the 10th/16th century a fire-work display was held.

The central event of the hadidi is the station (wudud), on 9 Dhu 'l-Hijjah, in front of the Diabal al-Rahma, a small rocky eminence in the valley of 'Arafat itself. All the juridical schools consider this to be an indispensable ruhn. The station begins at noon (when the sun has passed its apogee) with the joint recital of the prayers of suhr and of 'asr brought forward, and it lasts until sunset. A sermon is preached to commemorate that which was given by Ibrahim (this prayer, according to the

Diabal al-Rahma is not prescribed by the Law and can be dangerous with such a crowd of people. Finally he said that it is not necessary to remain there until night, so that one adds to the jostling crush as the crowd leaves 'Arafat.

The doctors of the law admit that those who have
been delayed can still perform individually a brief but valid station at Arafat during the following night and until, but not beyond, the dawn, before hastily overtaking the main mass of pilgrims; but once this permitted period is over they will have to perform the whole pilgrimage again. In the Middle Ages it was sometimes known for pilgrims to remain twenty-four hours at Arafat in order to be quite sure of the validity of their pilgrimage when there was doubt about when exactly the lunar month began and thus of which day was in fact 9 Dhu ’l-Hijjah.

The mass of pilgrims leaves Arafat on the evening of the 9th, when the sun has set. Then there begins the running (called ifâda), in which the pilgrims retrace the road by which they have come from Mecca. They pass the ‘Alamayn, or boundary marks, which show that they are entering again the Haram which surrounds Mecca. It is said that there is sometimes great confusion among the rushing crowd. The Maqgrib and ’Idhâ? prayers are recited together at Muzdalifa, the second of the Holy Places outside Mecca which the pilgrims are to visit. The Kur'ân speaks of this place under the name of al-Maqâ'ar al-Haram. The mosque here is illuminated. The night is passed here by all except the women and the frail and sick, who may omit this and go ahead of the others toward Aqâba, to proceed calmly during (but not before) the second part of the night to the ritual stoning of Aqâba.

On the morning of the 10th, the day called yawm al-nahr, after the recital of the first prayer (al-fajr), the crowd proceeds from Muzdalifa to Minâ, which for three days will be the place where the pilgrims gather. The pilgrims first proceed to throw seven small stones at a construction called diqamal al-Akabâ (see al-qimam) which stands against the mountain at the western exit from the valley of Minâ. This is the only stoning which takes place on the 10th. Around this place, which now in the thoughts of the pilgrims symbolizes the Devil, the crush is indescribable and all that can be seen is a mass of outstretched arms.

Next follow the sacrifices which have given this day the name of ’Idhâ? of Sacrifice. Ten of thousands of sacrificial victims, mainly sheep and goats, are offered for sale by the Bedouins and the merchants of Minâ; only dignitaries of high rank sacrifice camels. A rock near Aqâba is held to be the most auspicious site for the sacrifice (Burckhardt, Travels, ii, 59; Burton, A Pilgrimage, ii, 240); but in fact the doctors of law insist that sacrifice can be made anywhere in Minâ. The pilgrims themselves consume a part—of the meat from the slaughtered animals, then the poor take what they want and the rest is abandoned. For the last fifty years, the local authorities have regulated the slaughter and especially the burial of the remains, so as to put an end to the smell which in former times very soon arose from this huge charnel-house. This offering of a victim in memory of that of Abraham springs from a private devotional act, rules for which are sometimes laid down by the doctors; it is not absolutely obligatory. Many offer at this time the sacrifice which is due for their tamattû (or their kirân, as certain doctors stipulate). It should be noted that this is a simultaneous offering of many individual sacrifices and not a collective ceremony.

It is usual after the sacrifice to have the head ritually shaved (or the hair cut short). Then the pilgrim returns to Mecca to perform a fawâd around the Kâ’ba, which is now seen for the first time adorned with its new exterior hangings (kiswa). This is the fawâd of the ifâda, which forms an indispensable part (ruku) of the pilgrimage. It is best if it is done on the 10th, but it can be transferred to the following days under certain conditions laid down by the jurists. The pilgrims who are making only the hadidî or the hadidî and ‘umra combined (kirân) have now finished the main part of their observances. Only those pilgrims who have chosen tamattû have still to perform the ritual running of the sa’î.

After the ritual shaving (or the trimming of the hair of the head or the body) the prohibitions end and the pilgrims can leave the state of ihram. Conjugal relations (diqâma), however, are permitted only after the fawâd of the ifâda (or the sa’î for pilgrims who have chosen the tamattû). According to certain doctors the order of performing the stoning, sacrifice, shaving and fawâd may be reversed. As an act of devotion also the water of Zamzam is drunk and a further visit is made to Minâ.

The 11–13 Dhu ’l-Hijjah are called ayyûm al-ta’alû (see below). These are days of social relations, and of visits in company to Minâ. Witnesses speak of the striking contrast between this motley crowd, clad in the greatest possible variety of local dress, and the sight of it on the previous day in the uniformity of the ritual garments. In the 1oth/11th century a firework display was given on the first night. Each day normally between mid-day and sunset, every pilgrim has to throw seven stones at each of the three diqmar of Minâ, ending with that of Aqâba (the only one which had been stoned on the 10th). This order of stoning follows a tradition of the Prophet who is said to have acted thus [see al-Qimam]. It is also the custom to sacrifice near a granite block on the slope of Mount ‘Ibâr (cf. Burckhardt, Travels, ii, 65; al-Hatamuni, Rida, 196, map 184); Abraham is said to have prepared his son for sacrifice here. It is permitted to leave Minâ on the 12th and thus to omit the three ritual stonings still prescribed for this day. It appears that the pilgrims usually take advantage of this permission and so return to Mecca. When they are about to leave the town for good, it is the custom for them to perform at a point called Tan’îm (or their tawdîf) a sort of farewell sacrifice.

The pilgrims take advantage of their presence at Mecca to visit the places which are connected with memories of the Prophet and his family. Those who have performed only the hadidî (ifâda) and who now wish to perform an ‘umra will again assume the ihram at a place called Tan’îm. But it was above all during these days that, until the 17th/18th century, the commercial fair of Mecca reached its height. Finally, a large proportion of the pilgrims make arrangements to go to Medina, either on the way to Mecca or on the return journey, in order to visit the tomb of the Prophet.

The ceremonies briefly described above are the normal ceremonies of the hadidî. There is laid down a series of acts which are to be performed in preparation for the omission of one or another of the secondary rites or for any negligence in performing them. They range from the offering of a sacrificial victim to fasting and the giving of food as alms to the poor. But nobody must fast during the feast days at Minâ, unless for very special reasons which have been examined by the doctors of law.

D. The spiritual significance of the hadidî.

The sermons and discourses given in recent years on Cairo Radio have made it possible to trace in outline the spiritual significance of the pilgrimage as it is regarded today. The primary obligation of the pilgrims is to perform
a monotheistic act of worship; obeying the order of the One God, they come as “guests of God” to visit the “house of God”, towards which Muslims throughout the world turn at each of their five daily prayers. Firstly, the pilgrims are exhorted to make this journey for God alone, to purify themselves of all that could estrange them from God, and to avoid all quarrelling. They are to ask of God pardon for their sins and beseech Him to grant them His mercies. Secondly, the traditional formula of the prayers making the pilgrims especially report that God is One and has no associates. It is thus expressed in the formula of the talbiya [q.v.], and in this invocation which is often repeated at ‘Arafat: “There is no god but the One God, Who has no associates; to Him belongs power, to Him belongs glory. He holds all good in His hands and has power over everything”.

There are many invocations of the same type.

Furthermore, the pilgrim frequently hears preachers telling of the deeds and actions of the Prophet during his last pilgrimage (hajj al-wadd) in the year 10/632. The “descent” of Qur’ān, 5/53 at ‘Arafat and the hajj of the Prophet at this same place are especially emphasized. Moreover, everything reminds the pilgrims of the existence of the Ummah (the Muslim community) and its extent. Sermons and articles are fond of repeating that the pilgrimage is the last important event of the Muslim world. The equality of all Muslims before God, and its symbolization by the uniformity of the ritual garments, are firmly emphasized. Many pilgrims buy for one of the parts of their ihram a piece of cloth large enough to serve later as a shroud—the thought of death and judgement is never far off. The pilgrims are counselled to exercise the social virtues of patience and calmness in the face of the thousand and one little incidents which may arise. Finally, in the town of Mecca itself, which saw formerly the defeat of the polytheists at the hands of the Muslims, there are many reminders of the duty of the Holy War (jihād), in all the forms of hot or cold war which this struggle can assume in our time. The sacrifice at Mina is used nowadays to demonstrate the necessity of sacrifice in the fight for the cause of Islam.

The mercy of God of Abraham is sometimes evoked concerning the sacrifice, but it is more often linked with the Ka’ba and with the pilgrimage in general, for the Qur’ān attributes to Abraham both the building of the sanctuary and the call to the pilgrimage. If the properly performed pilgrimage is rewarded by complete forgiveness of sins (as is taught by Abu Ḥārām b. Muslim), this forgiveness is not linked to any particular rite and certainly not to the slaughter of an animal offered as a sacrifice. The pilgrimage does not include a sacrifice for sin.

As always, the preachers present the ideal state of things; the reality is very much more prosaic. There are all types among the pilgrims, the fervent and the lukewarm, those who are truly pious and those who come out of self-interest or to conform socially. Immediately the period of prohibitions is over, most of them waste no time in returning to the pleasures of life. Until the last century, many of the wealthy pilgrims would buy a concubine slave-girl to take back with them to their country. Nevertheless, it is undeniable that many of the present-day pilgrims who return from the Ḥijāz, and are welcomed home with great celebrations, have a powerful desire to return again to these places which have made an unforgettable impression on them. It is much more difficult to know the exact kind of spiritual influence which is exerted by the pilgrimage. Does it consist primarily of a development of the sense of belonging to a community? Or is it a loftier attachment to other and strictly Muslim values? This is known only to God.

(A. J. Wensinck–J. Jomier)

The social, cultural and economic effects of the Pilgrimage in medieval Islam are of immense importance. Every year, great numbers of Muslims, from all parts of the Islamic world, from many races and from different social strata, left their homes and travelled, often over vast distances, to take part in a common act of worship. These journeys, unlike the mindless collective migrations familiar in ancient and medieval times, are voluntary and individual. Each is a personal act, following a personal decision, and resulting in a wide range of significant personal experience. This degree of physical mobility, without parallel in pre-modern societies, involves important social, intellectual and economic consequences. The pilgrim, if wealthy, may be accompanied by a number of slaves, some of whom he sells on the way—as a kind of traveller’s cheques—to pay the expenses of his journey. If he is a merchant, he may combine his pilgrimage with a business trip, buying and selling commodities in the places through which he travels, and thus learning to know the products, markets, merchants, customs and practices of many lands. If he is a scholar, he may take the opportunity to attend lectures, meet colleagues, and acquire books, thus participating in the diffusion and exchange of knowledge and ideas. The needs of the pilgrimage—the commands of the faith reinforcing the requirements of government and commerce—help to maintain an adequate network of communications between the far-flung Muslim lands; the experience of the pilgrimage gives rise to a rich literature of travel, bringing information about distant places, and a heightened awareness of belonging to a larger whole. This awareness is reinforced by participation in the common ritual and ceremonies of the pilgrimage in Mecca and Medina, and the communion with fellow-Muslims of other lands and peoples. The physical mobility of important groups of people entails a corresponding social, cultural mobility, and a corresponding evolution of institutions. It is instructive to compare the stratified, rigidly hierarchic society and intense local traditions within the comparatively small area of Western Christendom, with the situation in medieval Islam. The Islamic world has its local traditions, often very vigorous; but there is a degree of unity in the civilization of the cities—in values, standards and social customs—that is without parallel in the mediaeval west. 'The Franks' says Rashid al-Dīn 'speak twenty-five languages, and no people understands the language of any other' (Històire des Franses, ed. and trans. R. K. Jahn, Leiden 1951, text 11, trans. 24). It was a natural comment for a Muslim, accustomed to the linguistic unity of the Muslim world, with two or three major languages serving not only as the media of a narrow clerical class, like Latin in Western Europe, but as the effective means of universal communication, supplanting local languages and dialects at all but the lowest levels. The pilgrimage was not the only factor making for cultural unity and social mobility in the Islamic world—but it was certainly an important one, perhaps the most important.

Islamic scholarship provides many examples of the impact of the pilgrimage; the biographies of learned and holy men are full of accounts of formative
meetings and studies in the Holy Cities, on the way there, and on the way back. The wandering scholar is a familiar feature of medieval societies: the pilgrimage ensured that the wanderers met, at a determined time and place. It provided the Islamic world as a whole with a centre and a forum, which contributed greatly to the formation and maintenance of an Islamic consensus—almost, one might say, an Islamic public opinion. The Almoravid and Almohad revolutions in the Maghrib were started by returning pilgrims, made aware through travel of the religious backwardness of their own peoples. Indian pilgrims brought the revived Nakshbandi movement to the Middle East; other Indian pilgrims brought back the stimulus of Wahhabism.

The Almoravids and Almohads of the 12th and 13th centuries established a pattern which was to have a lasting effect on all the communities from which the pilgrims came, through which they travelled, and to which they returned. (B. Lewis)

asked him to leave his territories; he settled in Dinguiaye, which he fortified and where he pushed forward his preparations for conquest and the holy war by recruiting supporters—whom he called ansār—and by laying in stocks of arms and ammunition; his military commander was Alfa 'Umar, son of the tyerño Baila, whose army was eager to fight for the faith.

He came to blows with the minor chieftian of Yimba who was demanding some small-arms from him, defeated him and seized his territory. Between 1848 and 1854 he conquered the Manding, Tamba Ounde and Bandioungou Kelta chiefs and overran Bourre and Bambouk. At Kolon he defeated a Bambara army from Nioro, and captured Koniaikari, Yeljmane and Nioro in 1854. He overcame Kandia Koulibilah, the last Massassi king of Kaarta, and had him beheaded. His authority at that time extended through the entire territory between Futa Djallon and Hôdh.

Meanwhile, on 21 Dhū 'l-Ka‘da 1268/6 September 1852, after the prayer of the 'Īsha, he heard three times a voice authorizing him to wage holy war. From that moment, “he strove to sweep the country clean and impose Islam”.

His conquests, though rapid, were precarious. As early as 1854 he was obliged to leave Dinguiaye and resume the struggle against the Bambara of Kaarta: the latter were constantly defeated, but continued to revolt. He also fought against the Diawara of Kingi, suffering heavy losses; the kings of Segou and Macina refused to be his allies. In 1855 he made his headquarters at Nioro, and beat off a siege. Under these threats, he launched an attack against Ahmadou Ahmadou, the king of Macina; the Fulani being Muslim, he forced them in order to impose on them the practice of the Tidiani, and won a victory at Kassakeri on 12 August 1856. It was during that period that he established cordial relations with the Moorish shaikh Sī Ahmad al-Bakkāy, the enemy of the Fulani; he warred against the Kassonke and attacked the chiefs of the Bondou and the Futa.

Al-Hadidj 'Umar was an excellent military leader and his campaigns were swift and victorious; pagan prisoners and wounded were put to death and the women and children enslaved; on the other hand, any Muslim enemies who were wounded were bandaged and sent home.

In 1857 the people of Kaarta, fleeing from the war, took refuge in Khasso; the shaikh laid siege to the French fort of Médine which had received the refugees; the town, defended by the half-caste Paul Holl, resisted for three months and finally Faidherbe relieved it.

In 1858 the shaikh fortified Koundián, then invaded the Bondou and the Futa and attacked Matam in 1859; he was repulsed and returned to Nioro; the French took Guéou and relieved the outskirts of Bakel. In 1859 he lost Dimar and Dama, both occupied by the French, while the Futa Toro was slipping away from his domination.

He then tried to move the populations of Futa Toro and Bondou in order to repopulate Kaarta, which had been cleared of its inhabitants; his aim was to bring the loyal populations nearer to Nioro. Despite his great religious prestige, the Toucouleur were reluctant to emigrate; he had villages burnt down to force the people to leave, thereby causing a terrible famine. In 1860 he reconquered the Bambara empire of Segou, which was decimated. At Tio, in January 1861, he defeated the armies of "Ali Diara king of Segou and Ahmadou Ahmadou king of Macina. He took Nyamina, Sansanding and Segou on 10 May 1861; this date marks the Islamization of the Bambara country, whose population henceforth took the five obligations of Islam. Segou was fortified and the Tidiani practice enforced on all.

He conquered Macina in 1861 after a renewed offensive by "Ali Diara and Ahmadou Ahmadou, who were defeated. He suggested to the latter that they should both submit to the judgement of God, on the occasion of a great battle, and on 8 April 1862, when with an army of 50,000 men, he defeated the Fulani who were commanded by Ba Lobbo, after which he crushed a second Fulani army of 50,000 men; Ahmadou Ahmadou was wounded.

In 1862 he seized Hamdallah and had the king beheaded. Macina surrendered; he solemnly designated his son Ahmadou as his successor, and himself took the title of sultan of Macina. The shaikh then took and sacked Timbuctu, but the Kouma Moors of the Bakkâyya allied themselves with the Fulani, who plotted together and besieged him in Hamdallah. The siege lasted for eight months and eventually the town was reduced owing to famine; al-Hadidj 'Umar had it burnt and took refuge among the cliffs of Bandiagara, deserted by his followers, he died mysteriously, probably by blowing up a keg of gunpowder. The date of his death is taken to be 4 Ramadan 1280/12 February 1864. As his heir he left his son Ahmadou al-Kabir al-Madani.

His empire stretched from Macina to Faleme and from Tinkiasso to Sahel, but it fell to pieces sixteen years after his death. His body never having been found, some believed that he would return.

He was regarded as a saint and man of letters; he knew by heart the two Saḥiks, of Muslim and al-Bukhārī, and spent long hours in meditation and prayer before taking his decisions. He had, it is said, received five privileges from God:—he had the power to see God's Messenger, either in dreams or when awake; he knew the unknown "great name" of God; he could read men's hearts; he had God's authorization to direct men spiritually along the right path; he had received God's sanction to wage holy war. In Alhass, he had various visions of the Prophet; he saw another and greater appearance of the shaikh asleep and then awake; he knew the unknown "great name" of God; he could read men's hearts; he had God's authorization to direct men spiritually along the right path; he had received God's sanction to wage holy war. In Alhass, he had various visions of the Prophet; he saw another and greater appearance of the shaikh asleep and then awake; he knew the unknown "great name" of God; he could read men's hearts; he had God's authorization to direct men spiritually along the right path; he had received God's sanction to wage holy war.

AL-HADİDJ B. YUSUF, AL-ḤAKAM B. 'AŠR AL-INJĀDI, ŻΩU, the most famous and most able governor of the Umayyads, of the Ablâf clan of the Banū Thâlîf, born
in Ta'if about 41/661. His forebears, poor and of lowly origin, are said to have earned their living as stone carriers and builders (Ibn 'Abd Rabbih, 'Ikhād, v, 38; Ibn al-Āthīr, Chronicon, iv, 313); his mother, al-‘Ārīfa, also from the tribe of the Banū Thākīf, was the divorced wife of al-Mughīra b. Shu‘ab, a man as capable as he was unscrupulous, who was appointed by Mu’tawwiyah as governor of Kūfah. Already as a child al-Ḥadīdjadī had been given the nickname Kulaayb (‘little dog’), under which he often appears in the satires of the poets (Mubarrad, Kāmil, 290 l.); as a young man he was nicknamed al-‘Ajība (‘a stranger’), a name which was finally settled on him by the poets. Apart from this nothing is known of his youth, and little of the early years of his public life: he does not seem to have distinguished himself in the battles in the Harra of Medina in 63/682 (Ağdānī, xvi, 42) and al-Rabadhah in 65/684 (Tabarî, ii, 579) or as governor of Tabālā in the Tihama (Ibn Kutayba, Ma‘īdī, ed. 'Ukashā, 596).

The change began when al-Ḥadīdjadī, in the first years of the reign of ʿAbd al-Malik, set out from Ta'if to Damascus to serve in the police force (shurta) under ʿAbdū Zūrā Rawb b. Zinbā al-Djūdāmī, the vizier of the caliph. He attracted the attention of ʿAbd al-Malik because he succeeded in a short time in restoring discipline among the mutinous troops with whom the caliph was about to set out for ʿIrāq against Muṣāb b. al-Zubayr. In the drastic means with which he discharged this task there could already be recognized the method which was later to make him famous, indeed notorious. On the campaign against Muṣāb, al-Ḥadīdjadī seems to have led the rearguard and to have distinguished himself by some feats of valour. After the victory over Muṣāb at Masʿīlin on the Dūdayl in 72/691, on the caliph's orders he set out from Kūfah in the same month at the head of about 2000 Syrians against ʿAbd Allāh b. al-Zubayr, the anti-caliph of Mecca. He advanced unopposed as far as his native Ta'if, which he took without any fighting and used as a base. The caliph had charged him first to negotiate with Ibn al-Zubayr and to assure him of freedom from punishment if he capitulated, but, if the opposition continued, to starve him out by siege, but on no account to let the affair result in bloodshed in the Holy City. Since the negotiations proved unsuccessful, al-Ḥadīdjadī and the anti-caliph began to make the city presentable and to persuade the residents to join them. A sudden thunderstorm, in which the uneasy soldiers detected a warning of Divine punishment, he was able to interpret to them as a promise of victory. After the siege had lasted for seven months and 10,000 men, among them two of Ibn al-Zubayr's sons, had gone over to al-Ḥadīdjadī, the anti-caliph with a few loyal followers, including his youngest son, was killed in the fighting around the Ka'ba, together with the pilgrims there assembled. A sudden thunderstorm, in which the uneasy soldiers detected a warning of Divine punishment, he was able to interpret to them as a promise of victory. After the siege had lasted for seven months and 10,000 men, among them two of Ibn al-Zubayr's sons, had gone over to al-Ḥadīdjadī, the anti-caliph with a few loyal followers, including his youngest son, was killed in the fighting around the Ka'ba (Djumādā 1 i 73/October 692).

Thus the unity of the state was restored, and the year 73 is sometimes called the “Year of Unity” (dām al-qiwmāt, 'Ikhād, v, 33). ʿAbd al-Malik showed himself grateful and conferred on al-Ḥadīdjadī the governorship of the Ḥijāz, the Yemen and the Yamāma. The governor himself led the Pilgrimage in the years 73 and 74 and provided for the re-build-
Al-Hadjjadj B. Yusuf

ing to orders; he pacified each territory as it was conquered, ensured supplies and accustomed his troops gradually to the different climatic conditions. Al-Hadjjadj, with his usual impatience, ordered Ibn al-Ashtath in several offensive letters to advance without delay, and threatened if he did not do so to transfer the command to his brother Ishak. Ibn al-Ashtath left the decision to his chief officers, whom he knew to be opposed to Al-Hadjjadj and to this endless war in distant lands. They gave their allegiance to him, and, with an army which soon grew to 100,000 men, Ibn al-Ashtath marched against Al-Hadjjadj, occupied Kufa and Basra, and, in the suburbs of Basra, besieged the governor, who was again obliged to call Syrian troops to his aid. The Syrian army, under the leadership of two sons of 'Abd al-Malik, was instructed first to negotiate with Ibn al-Ashtath and to hold out to him the prospect of the recall of the hated governor. As he would agree to none of the proposals, the Syrians attacked and defeated him decisively in 82/701 at Dayr al-Djamadijm and at Maskin on the Djudjat; three years later he died by his own hand (Baladhi, Futat, 400; Tabarti, ii, 1155; the chronology of these events is not quite certain).

This was the last revolt of the Arabs of 'Irak. After Al-Hadjjadj had suppressed them and had also pacified the Kurdish and Daylamic brigands (Baladhi, Futat, 133 f.), he was the master of the Syrian East rule over the country. In 83/702 he built midway between Kufa and Basra the fortified town of Wasi, made it his own residence and transferred there the majority of the Syrian troops, ostensibly to protect the inhabitants from encroachments by the Syrians, but in reality to isolate them from the 'Iraki and to bring them firmly under his authority. Al-Hadjjadj was now master of the whole of the Islamic East, with the exception of Kurraisan, where the reigning governor, Yazid b. Muhallab, the son of the famous conqueror, was only very slowly applying himself to the extirpation of the last followers of Ibn al-Ashtath. When he did not obey repeated summonses to Wasi, Al-Hadjjadj finally procured from 'Abd al-Malik his dismissal (83/702; Tabarti, ii, 1140 f.) and imprisoned him.

Although 'Abd al-Malik had now and then restrained the activities of his governor, Al-Walid (86-96/705-15) gave him a free hand in everything and relied on him all the more in that he was indebted to Al-Hadjjadj for his succession to the throne, which Al-Hadjjadj had urged to 'Abd al-Malik against the claims of 'Abd al-Asid b. Marwan (Tabarti, ii, 1156 f.; Alghani, xvi, 60). Also Al-Walid's great victories in the East were the result of Al-Hadjjadj's efforts: Transoxania was conquered by Kutaibah b. Muslim, 'Umar b. Mudjdija b. Sif (cf. H. Klein, Kapitel xxxiii der anonymen arabischen Chronik Kagh al-ghumma al-aclims al-akhir al-umma . . ., thesis, Hamburg 1938, 28), India by Muhammad b. al-Kasim al-Thakafi—three outstanding generals whom Al-Hadjjadj had wisely appointed in view of their abilities. He did not himself take part in the campaigns, but personally, sparing no expense, since he calculated that with victory he would recover his expenses many times over. In domestic affairs also Al-Walid conformed to the wishes of his governor, appointing and dismissing officials at his prompting.

Al-Hadjjadj was now anxious to improve the prosperity of the country, which had suffered terribly from the twenty years of war. This too was his ultimate aim in concerning himself with the production of a uniform tradition of the text of the Kur'an; he wanted on the one hand to put an end to the quarrels of the theologians over the different readings and to produce a single text which the Islamic community should be obliged to use, and on the other hand to pururge this text of any kind of anti-Umayyad allusions. The division of the Kur'an into separate ajzat seems to go back to him (Noldke, Geschichte des Qur'an, iii, 260), and it may have been on his orders that new vowel points were introduced (op. cit., 262). In any case he himself shared the conviction that he had been sponsored to be henceforth the only valid one and forbade most strictly the kirda of Ibn Mas'ud. In connexion with the monetary reform by 'Abd al-Malik in 76/695, Al-Hadjjadj began to strike purely Arabic coins, which gradually superseded the Byzantine and Sasaniid currencies, until then in general commercial use. For this purpose he founded his own mints, first in Kufa and then in Wasi, putting them under the management of a Jew named Sumayr (whence these coins were called al-sumayriyya) and punished most strictly the making of counterfeit coins or even the most trivial faults in production (Ibn al-Athir, iv, 337 f.). Many theologians disapproved of the striking of these coins with the name of God upon them (and hence at first called also al-durrakh al-musthna) for they might fall into the hands of infidels (Baladhi, Futat, 468; Ibn al-Athir, iv, 337).

Yet the new coins strengthened themselves in circulation as legal currency and helped to promote the circulation of money and the stabilization of economic conditions. Al-Hadjjadj caused to be translated into Arabic the tax-djizd which had hitherto been kept in Persian (Baladhi, Futat, 300 f.; cf. also Djahshshiyar, Wasara, Cairo 1357/1938, 38), in order to be able to study the tax registers himself. One of his reforms, however, sat with Al-Hadjjadj's efforts to improve agriculture. Like the Sasaniid kings before him, he was anxious to drain the marshes on the lower Euphrates and Tigris by a system of canals, and thus to obtain fertile land; when embankments broke he spared no cost in repairing them (Baladhi, Futat, 274 and 294). He gave to notorious Arabs, such as Bashshar b. Muslim, a brother of Kutaibah, uncultivated lands as fiefs (Baladhi, Futat, 362). He took further new steps against the migration of countrypeople into the towns which had led to a disastrous reduction in the kharjadi, and forced the newly converted Muslims to return to the fields which they had left and to continue paying the kharjadi. When the farmers of the Sawad complained to Al-Hadjjadj about the depopulation of the land—a result of the many wars—he is said to have forbidden them to slaughter cattle in order to preserve the animals for ploughing (on this see the two satirical verses in Alghani, xv, 98).

Al-Hadjjadj was the most loyal servant that a dynasty could wish for. His obedience towards the Umayyads and his willingness to serve them were unbounded, and the caliphs repaid him for this with their unstinted favour. 'Abd al-Malik, it is true, often urged him to practice restraint, for instance when he was charged with the too liberal in the raising of taxes, was too liberal with public resources, or was shedding more blood than was necessary. But in his answers, often pointed by verses composed by himself or others, Al-Hadjjadj was always able to give practical reasons for his actions, so that no mistrust on the part of the caliph ever resulted. The books of adab provide a large number of examples of this correspondence. The caliph and the governor were dependent on each other.
The latter's occasional journeys to Damascus strengthened the relationship, which was a personal as well as an official one: one of al-Hadjijdjād's nieces—the daughter of his brother Muhammad, who under 'Abd al-Malik was governor in the Yemen—was married to a son of 'Abd al-Malik, the later caliph Yazld II; the first son of this marriage was named al-Hadjijdjād in honour of the governor ('Tabi, iv, 452; Ibn Kutayba, Maṭrīf, 390). The governor for his part named his first three sons after members of the Umayyad house, while his daughter named al-Hadjjdjadj in honour of the governor. His relations with al-Walid seem on the other hand to have been of a more formally correct nature; the relevant correspondence is limited to purely administrative affairs. Al-Hadjijdjād feared nothing so much as the death of al-Walid and the accession of Sulaymān, whom he had made his implacable enemy because of his interference in the question of the succession to the throne; add to this his measures against Yazld b. al-Muawahih, who was Sulaymān's especial protegé. It was thus his anxious wish not to outlive al-Walid (Tabari, ii, 1272). This wish was fulfilled: he died one year before al-Walid in Ramadan 95/June 714, only 52 years old, prematurely aged and worn out by the load of strain, danger and disappointment which he had had to bear, and was buried in Wāsiṭ. The cause of death is said to have been cancer of the stomach (wakā'it fi ḥamāshī 'l-nikla: Mas'ūdī, Prairies, v, 377; Ibn Kathir, i, 347, according to Barhebraeus, Ta'rifk muḥtasaṣ al-dawdaw, ed. Šāhāni, Beirut 1890, 395, he died of consumption). The traces of his grave were obliterated in order to preserve it from profanation. His death was mourned by only a few, chief among whom were al-Walid, the poet Djarīr (Nakabīd Djarīr wa'l-Farazdāda, ed. Bevan, 486 f., cf. 496), and also Khālid al-Kasri, the governor of Mecca ('Tabi, v, 30 f.); above all Yazld b. Abi Muslim, al-Hadjjdjād's mansūd, and later governor of Ifríqiyah, dared to call Sulaymān's attention to the merits of the deceased (Mas'ūdī, Prairies, v, 404-6).

Scarcely any figure of the early period of Islam has become the subject of Arabic literature to such an extent as al-Hadjjdjād. He was a man of many stories and verses in which are reflected the arguments for and against him are innumerable. Most of them are pungent anecdotes and allow us to understand exceptionally clearly the traits of his character. The 'Abbasids remembered him with hatred, but in reality envied the Umayyads this governor. There is no doubt that in the interests of the state al-Hadjjdjād could be stern and pitiless; every kind of obstinacy was in his eyes a crime against the State. But the mass executions and other atrocities which were attributed to him are the inventions of his enemies. He is often, and justly, compared with Ziyād b. Abihi, Muṣawwira's governor: "They both considered themselves not as holders of a lucrative sinecure, but as representatives of public order and of the Sultan, and repaid the trust of their sovereigns, who granted them great authority and left them in office until the end of their lives, by faithfully fulfilling their duties, unconcerned whether or not they found favour with public opinion" (Wellinghausen, Reich, 159; cf. English tr. The Arab Kingdom, 254).

That al-Hadjjdjād did in fact have such a conception of his position can be gathered from his own words which are recorded by al-Muqaddasi b. Zakariyyā al-Nahrawānī (d. 390/1000) in Kitāb al-Djālīs al-sālik al-hāfī wa'l-anis al-nāṣih al-maṣīh, Ms Istanbul, Topkapsarayi, Ahmed III 3231, fol. 44a. When, after the death of Ibn al-Aswād, there was peace in Ifrīk and al-Hadjjdjād rewarded the Kaysis richly for their support, 'Abd al-Malik wrote to him that he must be less generous with public funds. Al-Hadjjdjād replied to the caliph with the following verses:

"By my life! The messenger has brought the pages written by you which, after dictation, were folded and sealed.

It is a letter which contains both gentle and harsh things and in which I have been admonished—admonishments are always useful to men of understanding.

Many misfortunes betell me, for this I shall now supply explanations and also reasons and thus justify myself.

When I was a punishing scourge for the people without seeking personal advantage thereby,

—whether they were pleased or angry about this, whether I was praised or blamed or even abused by them—

(and when) in a country into which I came, on my arrival the fires of enmity blazed everywhere,

then I have endured of all that is known to you and fought unceasingly, until death had almost overcome me!

You have heard how many tumults there have been there, and if another than I had been (there), he would have perished from terror.

Always when they wished to commit one of their unhappy deeds, I have proffered my head without disguising myself,

and if brave men (i.e. the Kaysis) had not defended me against them, jackals and hyenas would have shared out my limbs!"

On the strength of this justification—which tersely outlines the whole of al-Hadjjdjād's achievement—the caliph could only write: "Act as you think proper!"

Al-Hadjjdjād's assurance and precision in administration, his firmness and knowledge of men, and his quick instinctive grasp in critical moments must have seemed somewhat sinister to his contemporaries. The fact that he did not tolerate bribery and punished the unlawful acquisition of riches, must have made him thoroughly hated by a civil service in which both were traditional. His chief faults were impatience and lack of self-control; he lacked the balance (ḥilm) which had earlier distinguished Muṣawwira. Thus he sometimes demanded the impossible from those under his command, and had fits of rage if his orders were not carried out quickly enough. Nevertheless al-Hadjjdjād was a highly cultivated man: his eloquence was well known, and if brave men (i.e. the Kaysis) had not defended me against them, jackals and hyenas would have shared out my limbs!"

The unprejudiced judge sees in al-Hadjjdjād one of the greatest statesmen, not only of the Umayyads, but of the whole Islamic world.

HADJDJI BAYRAM WALI (? 753/1352-833/1429-30), patron saint of Ankara and founder of the order of the Bayrâmiyya [q.v.], was born at the

village of Sosfallas, 7 km. north-east of Ankara, the son of a certain Koyunlûcû Ahmed; his personal name was Nu'mân. After studying at Ankara and Bursa, he taught at the Kara Medrese at Ankara, but abandoned teaching to become a follower of Shaykh Hâmid (on whom see Shâbîl, tr. Medjdî, 77 f. = tr. Rescher, 29 f.) to join him at Kayseri (they are said to have met on Kûrbân bayramî, whence he was given the name Bayrâm); as his mûrid he accompanied him to Syria, thence on the Pilgrimage, and back to Akseray. After his master’s death (in 805/1402, according to Mustâkimzâde, see A. Gûlbahârî, Mandik-i HasBayram Çeşmesi ... , Istanbul 1938, 120) he returned to his native Ankara, where he gathered a following: among his disciples are counted Âk Shams al-Din (q.v. and Dede ‘Umar Sikkini (heads of the two branches into which, after his death, his order split), the poet Shaykhî [q.v.], the brothers Yazîdî-oghlu Muhammed and Ahmed Bîdîn [q.v.], and Ashraf-oghlu Rûmi, author of the Musasikî al-nuwasî, who became his son-in-law. In spite of the extremist tendencies of some of his followers, his own teachings did not exceed the bounds permitted by orthodoxy; he seems to have lived a humble life, supporting himself by manual labour, and practising and encouraging works of charity. His activities are said to have aroused the suspicions of Murdî II, which were, however, allayed when he was brought before the Sultan at Edirne; a tradition that he had preached in the Eski Djami there is reported by Ewliyâ (ii, 437; iii, 430 f.). He was buried in a türbe beside the mosque, abutting on the Temple of Augustus, which he founded. Assigned to Hâdjidî Bayram are five poems (fullest text given by Okhan, see Bibl.), much commented on by his followers, in the style of the ilahîs of Yûnus Emre.

The current attribution of the mosque to Mi'mâr Sinân (presumably based on Ewliyâ, ii, 430) is unjustified (see F. Taeschner’s brief description in ZDMG, lxxii, 1928, 108); the only inscriptions (Ger. tr. by P. Wittek in M. Schede and H. St. Schultz, Ankara und Augustus, Berlin 1937, 45-6, and cf. 36-41) record a repair in 1126/1714 (the inscription published by Mübârek Ghalib, Ankara, ii, 1928, p. 41, no. 82, has no connexion with the mosque). In the Ankara Etnografya Müzesi are preserved clothes allegedly worn by Hadidji Bayram, and the wooden doors (photograph in Yıldız Anıtmaar Dergisi [Ank. Ünl. Ihatiyat Fak.], i, 1956, 231) and shutters of the türbe (restored in 1947).

Bibliography: No critical study of the life of Hâdjidî Bayram has been published. The available sources (many in MS) are listed by M. F. Körprüli, Ikc mualasazvîlar, Istanbul 1918, 577, n. 2; some of these have been used for the monographs of Bursall Mehmed Tahir (Hâdjidî Bayram Welî, Istanbul 1329, reprinted 1331), Mebmed Ali ‘Aynî (same title, Istanbul 1343) and Mehmet Ali Okhan (Haci Bâyram Veli, Istanbul 1950). Schede, Der Tempel in Ankara, Berlin and Leipzig 1936, 60-1 (P. Wittek); for the political and social context of Hâdjidî Bayram’s movement see P. Wittek, De la défense d’Ankara ..., in REI, xii (1938), 3-34. (V. L. MÂNEGE)
the Giray dynasty of Khan of the Crimea. On his coins he calls himself 'al-Sultan Hadidji Kerey b. Ghiyath al-Din Khan' (see O. Retovsky, Die Münzen der Giray, Moscow 1905, nos. 1-44); according to Abu 'l-Hasan Baha-oddin (see K. Nüüs, Türkler ve Şairler, Trabzon 1967, 226 ed. Solgağ Nür, Istanbul 1925, 184) his father and grandfather were Ghiyath al-Din and Tash-timur respectively (cf. M. Rıûja, al-Sab'i al-sayıyar, 69-71). The identification of him with Dewlet-berdi (V. D. Smirnov, Krımşo khanıstw...), St. Petersburg 1887, 221-34) seems incorrect. Dewlet-berdi (for a coin of his see Lane-Poole, Cat., vi, no. 568) appears in one source (C. L. R. W. Heyd, ii, 399, 400;) as the brother of Ghiyath al-Din; he was still ruling as khan at Solgağh (Eski-Kırımln in Dhu 'l-Ka'da 832/August 1249 (N. Iorga, Notes et extraits...), i, 25; see further Spuler, Horde, 157). According to Polish sources (Spuler, loc. cit.), Hadidji Giray was born near Troki in Lithuania and was assisted in assuming the khanate by Vitovt (Witold, 1430); it is known that the Grand Dukes of Lithuania gave sanctuary to Toktamish and to Hadidji Giray and his successors, and assisted them against the khans dwelling at Saray and supported by the powerful amir Edidij (M. Khrushevskiy, Istoriya Ukrainy-Rossii, iv, Lvow 1907), and this same policy was to assist Hadidji Giray in occupying the Crimea and maintaining himself there. One of the main factors facilitating the rise of an independent khanate in the Crimea under Hadidji Giray was, according to the native sources (al-Sab'i al-sayıyar, 69-71; 'Umdat al-tawdrikh, 94-6), the movement westward, over the northern coasts of the Black Sea and into the Crimean peninsula, of the principal tribes—the Shirin, Konghurat and Barın—upon whose support the rulers of the Golden Horde relied. With their help, Dewlet-berdi and Ulugh-Muhammed attempted to seize control of the whole territory of the Golden Horde; but Hadidji Giray was at attempt to centralize his authority in the Crimea and its immediate neighbourhood, being greatly assisted by Tekine Mırza, the leader of the Shirin and the rival of Edidij's descendants. This much is definite, that in 836/1433 and 837/1434 Hadidji Giray, as Khan, was fighting with the Genoese of Kefe (Spuler, op. cit., 136) shows that the town held out; Hadidji Giray withdrew, agreeing to accept in future the annual tribute of 1200 gold pieces which the Genoese had earlier taken to pay. Later, it seems, the Genoese succeeded in turning the tribal leaders of the Crimea against Hadidji Giray; they deposed him and made his son Haydar khan in his place (600/1456). After a few months Haydar was obliged to flee and Hadidji Giray resumed power; from thenceforward he had good relations with the Genoese (Colli, op. cit., 120-1; W. Heyd, Hist. du commerce du Levant, ii, 398). Confronted by the efforts of Seyyid Ahmed Khan to restore the former power and unity of the Golden Horde, Hadidji Giray maintained the old alliance with Lithuania and Poland, who were faced by the same threat, and also acted in concert with the grand prince of Moscov (Spuler, 170-2). He thus played an important part in the fragmentation of the Golden Horde. When Sayyid Ahmed marched on Moscov in Muharram 870/July-August 1465, Hadidji Giray attacked him near the Don and obliged him to withdraw. The attempt of the Papacy to use him against the Ottomans (H. H. Howorth, History of the Mongols, ii, 451) failed that he at this time one of the most formidable figures in Eastern Europe. His yarlıg of 26 Safar 857/8 March 1453 gives important details about the extent of his territories: his capital (Ordu-i muazzam, Saray) was at that time Kırımlı, Kefe, Kerê, Taman, Kabadâ, and Kickaç. The tribal forces of the Crimea, the Kırımlı tarmâ (6000-7000 men), were under the command of the khan of the Shirin, Mırza; the tribes folk of the Daş-tî Kickaç were not to be relied on. Coins of his, struck at Kırımlı in 845, 847, 857, and 871, and at Kırk-yır in 847, 858 and 867, are known (see Retovsky, Markov, Lane-Poole, op. cit.). Pero Tafur's description, of 841/1437, of the Ordu-basar near Solgağh (Travels and adventures, ed. M. Leets, New York and London 1926, 136) shows that he maintained the traditions of nomadic life; but Kickaç was a powerful fortress. Hadidji Giray died towards the end of the summer of 871/1466 (Heyd, ii, 398; al-Sab'i al-sàyyar, 73), and was buried in the tomb of his ancestors at Saladjik near Baghcesaray (Simferopol). He had eight sons: Dewlet-yär, Nûr-dewlet Kân, Haydar Kân, Kuthuk-zamân, Kildîsh, Mingî Giray Kân [q.v.],
HADJDJI GIRAY — HADJIB

HADJDJI KHALIFA [see KATTIB ELLEMI].

HADJDJI NASIM OGHLU [see AL-NSARJ].

HADJDJI PASHA, Djalal Al-Din Khidr B. 'Ati, eminent 8th/14th century Turkish physician and author of several important medical texts, including the famous Shifd* al-asfidi wa dawd* al-daldm (Brockelmann, II, 233; Haddji Khalifa, ii, 1949). He was also an outstanding minister of the 8th/14th century in Konya (and not Aydin, as stated by Tsag'skopr-bud, Shakhd* al-nu'mdniyya, stated by Tashkoprii-zade, dldm including the famous Shifd* al-asfidi wa dawd* al-daldm al-fifd* al-ma'mdniyya, in marg. of Ibn Khallikân, Cairo 1310, 114; Turkish trans. by Medjili, Istanbul 1269, 74), whence he went to Cairo to study under Mubârak Shâh al-Mantshed and Akmal Al-Din Bârbart. As the result of an illness, he changed his studies from fifch to medicine, and his abilities were great enough to secure for him later the position of chief physician in the Manşurîyya hospital. Early in the last quarter of the 8th/14th century he returned to Anatolia, where he served both as physician and as haddiib, and it was to 'Asâ b. Muhammad b. Aydân that he dedicated his Shifd* (783/1381). His death occurred in the 20's of the 9th/15th century, and he is buried in Birgi.

His works, most of which are in Arabic, include philosophy, mysticism and Kur'anic exegesis, but it is his medical writings which have assured his fame. However, even the scholars who would most insist on his importance in the history of Turkish medicine can claim little originality for his work, and it is probably his Turkish abridgments and simplifications of the Shifd*—known as the Muniahd* and the Tashîl—which most command interest today, being amongst the earliest specimens of Ottoman didactic prose. Both have been used and quoted extensively in Vol. ii of the historical dictionary (Tansklariyle Tarama Sozlug) published by the Turkish Linguistic Society.

Bibliography: A. Süheyl Ünver, Hekim Konyalı Haci Paşa, hayat ve eserleri, Istanbul 1953; Abdülhak Adnan-Adivar, Osmanlî Türklerinde Ilim, Istanbul 1943, index; 1A, fasc. 59, 290 (Istanbul 1961); A. Shopov, Hâdmâ, term which may be translated approximately as chamberlain, used in Muslim countries for the person responsible for guarding the door of access to the ruler, so that only approved visitors may approach him. The term quickly became a title corresponding to a position in the court and to an office the exact nature of which varied considerably in different regions and in different periods. Basically the Master of Ceremonies, the haddiib often appears as being in fact a superintendent of the Palace, a chief of the guard or a righter of wrongs, sometimes even as a chief minister or a head of government. The word haddiib itself is derived from the verb haddaba “to prevent”, and should be considered in conjunction with the term haddiib which, together with sitr, is used about the period of the Mawardi, who sometimes managed to procure the haddiib, as he found himself occupying the highest position when the caliph decided to dispense with a vizier.

During the reign of this caliph the authority of the chamberlain had diminished somewhat compared with that of the wazir who, with a staff of highly specialized kutdab, had become in fact a head of government. He was rivalled also by the amir who, at this period, was the commander in chief of the army. Yet his influence was not negligible, becoming apparent particularly when there were palace revolutions, for he had directly under his orders certain lâhâmets of the guard, notably the Masâfîyya. Thus the attitude of the chamberlain was determined by the unsuccessful coup d'état against al-Mukhtadâr in 296/908.

During the reign of this caliph another chamberlain, Nasr Al-Kushuri, who held office continuously from 296/908 until 317/929, was regarded with particular esteem, having been appointed vizier by al-Mukhtadâr, and then by al-Mustasîf, who governed the empire between the caliphs al-Hadi and al-Mustasîf. Thus the attitude of the chamberlain was determined by the unsuccessful coup d'état against al-Mukhtadâr in 296/908.

The regime of this caliph another chamberlain, Nasr Al-Kushuri, who held office continuously from 296/908 until 317/929, was regarded with particular esteem, having been appointed vizier by al-Mukhtadâr, and then by al-Mustasîf, who governed the empire between the caliphs al-Hadi and al-Mustasîf. Thus the attitude of the chamberlain was determined by the unsuccessful coup d'état against al-Mukhtadâr in 296/908.

Beginning of the Umayyad period. Certain chroniclers list carefully the names of the persons, nearly all of them who were chamberlains to the first caliphs, from the reign of Mu'âwiya onwards; various texts prove that even at that time palace ceremonial was already developed, so the importance of the haddiib can readily be understood. The chamberlain not only introduced into the sovereign's presence friends and visitors; his duty was also to supervise the organization of the solemn audiences, at which these persons formed three groups: on either side of the hall, leaving the centre of the floor vacant for those who were admitted to address the caliph. At this period the haddiib figures in the caliph's entourage on a level with the secretaries (kutdab), with no pretension to equality in dignity.
From 317/929 onwards, however, the year of another unsuccessful coup d'état against al-Muktadir, the Ḥādījīb’s post assumed more of a military aspect and the chamberlains became rivals of the amīrs who by now had succeeded in gradually supplanting the viziers and in imposing their authority on the caliph. The new chamberlain, an officer and former governor named Ẓākūt, was for some time able to hold his own with the all-powerful Muʿnis and to have his own son appointed Prefect of the Police. But both father and son were dismissed soon afterwards at the demand of Muʿnis and his associates; thus the office of Ḥādījīb passed from the Samanids to the Umayyad empire in Spain the princelings of the Buyids to the same extent as in the more central- and the bureaucrats of the Samanids were modelled on those of the Abbasid Caliphate. The new chamberlain of al-Irāq, Ibn Ẓākūt, who was at the same time amīr, took over the government and controlled the viziers. The chamberlains were on the point of becoming the real masters of the State, at this period when the authority of the caliph was becoming daily weaker; but they did not enjoy so great financial resources as the provincial governors, to whom they were obliged to yield place. It is for this reason that the caliph finally selected, as the person entrusted with the task of government, the amīr Ibn Ṣūr’s, who received the title amīr al-umarā in 324/936. As a compensation, the chamberlain’s title was made more exalted: in 326/938 he became Ḥādījīb al-Hudjīdā, a more impressive title, although the number of Ḥudjīdā under him was decreased.

At this period, as appears from the statements of Ḥillāl al-Ṣāḥībī, the official duties of the chamberlain were still to supervise all the persons concerned with the service or the guard of the sovereign, to control all that went on within the palace, and to organize the audiences, determining precisely the positions of the various dignitaries and courtiers (lābīr al-bawāṣīq).

ii.—SPAIN.

In Muslim Spain the position of the Ḥādījīb was very different from what it was in the East. In the amīrat, and later the caliphate, of Cordova, the title of Ḥādījīb was always superior to that of wasir, the latter belonging to mere counsellors of divers origins, whose the ruler gathered around him and from among whom, almost invariably, he chose the Ḥādījīb. The Ḥādījīb assisted the prince in the tasks of administration and government and acted as chief minister, controlling the three services of the civil administration, namely the royal residence, the chancellery and the financial department. The Ḥudjīdā did indeed remain vacant for some thirty years in the reign of ʿAbd al-Raḥmān III, but it was filled again, on his death in 333/946, by his son al-Ḥakam II; a few years later it served as a spring-board for the ambitions of Ibn Abī ʿAmīr, the Arab-born secretary who in 352/967 procured for himself appointment to the Ḥudjīdā and managed to gather all power in his hands, becoming, in the reign of the young Hīṣām II, in effect “Mayor of the Palace”; in 371/981 he adopted a royal lābīr, al-Manṣūr ibn ʿIlāḥ, caused his name to be mentioned in the khutba immediately after that of the caliph, and then in 386/996 had himself called al-sayyid and al-malik al-khārim. The prestige thus attached to the title of Ḥudjīdā did not disappear, for with the break-up of the Mayyad empire in Spain the princelings of the Ḥudjīdā adopted the title of Ḥudjīdā in preference to that of malik, in order to indicate that they regarded themselves as representatives of the caliph.
the Ghaznavids, their successors in Khurasan, and Bayhaqī's 
Tārīkh-i Mas'ūdī shows the wide extent of its usage in 
Ghaznavid military life. As with the Sāmānids, the Commander-in-Chief of the army 
under the Sultan held the title of Ḥādjīb-i Buzurg, 
and there were ḥāджībīs, generals, directly beneath 
him. These top commanders had the special desig-
nation of a black cloak, a distinctive type of belt and a 
two-pointed cap (kulāh-i dādshākh). The majority 
of them were Turks. It seems that the Ghaznavid 
Ḥādjīb-i Buzurg, compared with the Sāmānī one, 
was one step further away from possessing direct 
control over the palace organization, for the day-to-
day running of this was in the hands of a Wākhī-
i ḥāфесс and the palace guard was responsible to a 
special general officer, the Sālārī-i Ghuldāmīn-i Sarāy (see Bosworth, The Ghaznavids: their empire in 
Afghanistan and eastern Iran 994-1040, 68, 101, 138). 
He was nevertheless a most powerful and influential 
figure. In the succession dispute of 421/1030 after 
Mahmūd's death, the Ḥādjīb-i Buzurg was 'All 
Kālsī or 'All Khāṣḥawī, a kinsman of the dead 
Sultan, and it was the transfer of his support from 
Mahmūd to Mas'ūd that gave the latter a bloodless 
victory over his brother (Gardīzlī, ed. Nāẓim, 92-3; 
Bayhaqī, ed. Ghani and Fayyād, 1, 12 ff., 50 ff.). 
When the Sultan did not act personally as war-
leader, the Ḥādjīb-i Buzurg had supreme responsi-
ability in the field; thus until just before the final 
disaster at Dandānḵān in 431/1040, Mas'ūd left the 
fighting in Khurāsān against the incoming Saljuqs 
to his Commander-in-Chief, Sībāṣhī Tīgin.

In the Sāḷḏūq period, there appears to have 
been a general tendency for the importance of the 
office of Ḥādjīb to decline, relative to Ghaznavid 
times. He was no longer specifically the commander 
of the army but rather a court official. The various 
army commanders tended to be referred to by the 
title ṣafāḥsār or ṣipāšārān. The ḥāʤīb, however, 
was the senior commander of the military expeditions and in some cases commanded 
a section of the army of one of the Sāḷḏūq sultans 
or maḥk. Thus, for example, 'All b. 'Umar, the ḥāʤīb 
of Mahmūd b. Mahmūd, led the advance guard against 
Ṣangīr ( Ibn al-ʿĀbīr, x, 386); he eventually became paymaster of the army ( ibid., x, 391).

Rāwandi, quoting the alleged practice of the 
Sāmānīan Ardashīr b. Bābāk, states (p. 97) that a 
king needed a waṣīr for the maintenance of the 
stability of his kingdom, a ḥāʤīb who would ad-
minister punishment (ṣiyāsāt ʿafāyād), a courtier 
(nadīm) and a secretary (dābīr). Nīẓām al-Mulk 
describes the functions of the ḥāʤīb as those of a 
court official. But since the court was a military 
court, the ḥāʤīb was, in practice, normally 
a Turkmen and the men under him were usually 
ṣūlāms (military slaves, see ṣūlām; cf. ʿSiyāsā-
nāma, 94-5, and the description of Sāmānī practice 
cited above). He was concerned with military 
discipline as well as court ceremonial; he was the 
most important official at the court, ranking above 
the amīr ḫaras (chief of the guard and chief execu-
tioner, ibid., 121). Under Mahmūd b. Malikshāh 
the amīr ḥāʤīb acted as intermediary between the 
sultan and the waṣīr; he received the orders of the 
sultan and passed them on to the waṣīr (Bundārī, 
117). Nīẓām al-Mulk also mentions an official 
whom he calls the ḥāʤīb-i dārgah, who was in 
charge of ceremony and procedure at the royal court 
(ibid., 111). It is not clear whether his office was 
different from that of the amīr ḥāʤīb; but it is 
probable that the two were the same.

Rāwandi mentions at the beginning of each reign 
the waṣīrs and ḥāʤībīs of the sultan. Some of these 
were comparatively unknown persons; others, 
however, like the amīr Komaḵ, ḥāʤīb to Malikshāh 
and Barkyārūk (pp. 125, 139), Khāḥ Beg, the ḥāʤīb 
of Mas'ūd b. Mahmūd (p. 225) and Malikshāh b. 
Mahmūd (p. 249), 'Abd al-Rāmahī b. Ṭogḥān-
yūrēk(?) , also ḥāʤīb to Mas'ūd (p. 225), the atābāq 
Ayyāz b. ḥāʤīb to Mahmūd b. Mahmūd (p. 259) and 
Arlān b. Ṭoghrīl (p. 252), the atābāq Pahlavān, 
ḥāʤīb to Arslān b. Ṭoghrīl (p. 282), and the atābāq 
Ay Ḫāṣaḥ b. Ṭoghrīl b. Arslān (p. 332) were 
among the powerful of the day. There does not 
appear to have been any hereditary tendency in 
the office, and Rāwandi records only one case of a father 
and son both holding the office of ḥāʤīb, namely 
ʿAll Bār, who was ḥāʤīb to Muhammad b. Malikshāh, 
and his son Muhammad, who was ḥāʤīb to Mahmūd 
b. Mahmūd (pp. 153, 203). In addition to the 
amīr ḥāʤīb, there were a number of lesser chamber-
lains (ḥāʤībīs) at the court (cf. H. Horst, Die 
Staatsverwaltung der Gross-Seljuqs und Ixoramsahs 
(1000-1122), Wiesbaden 1964, 103, 105).

The great amīrs and provincial governors had 
their own courts and they, too, had their ḥāʤībīs. 
Ibn al-ʿĀbīr mentions Ṣaiḥāl b. Din Mahmūd al-
Yaghṣīyān(?) , who was amīr ḥāʤīb to al-Bursukī 
and subsequently to ʿĪmād al-Dīn Zanī (x, 453, 454). 
Many prominent men also had their ḥāʤībīs or 
chamberlains (ḥāʤībīs) at the court (cf. K. K. 
Rhoads, Iran, Ghazna, Pahlavan, Ayyaz, Hacib, 
39i). Under the Ilkans the ḥāʤīb was a chamber-
lain, and so far as the royal court or the provincial 
courts were concerned tended to be a member of the 
military class; this was also the case in Timurid 
times (cf. H. F. Roemer, Staatsgeschichte der Timu-
ridenzeit, Wiesbaden 1952, 42, 55).

Under the Ikhwāns the ḥāʤīb was a chamber-
lain, and so far as the royal court or the provincial 
courts were concerned tended to be a member of the 
military classes. Under the Timurids the 
ḥūḍībīs are mentioned among the officials of 
the court and the provincial administrations 
and he himself is occasionally referred to as the 
ḥūḍīb al-diwan, the chief of ceremonies (Tādī 
al-Salāmān, Sams al-ḥusn, ed. Roemer, Wies-
baden 1956, 29). There was a change of terminology 
der the Safawīs, the chief ḥāʤīb becoming known as the ḥūḍīb al-diwan (q.v.), whose 
functions were similar to those of the ḥāʤīb-i ḥud[db discussed above. Under the 
Ṣafawīs, the chief ḥāʤīb became known as the ḥūḍīb al-diwan (q.v.), whose 
functions were similar to those of the ḥāʤīb-i ḥud[db discussed above. Under the 
Ṣafawīs, the chief ḥāʤīb became known as the ḥūḍīb al-diwan (q.v.), whose 
functions were similar to those of the ḥāʤīb-i ḥud[db discussed above. Under the

A. K. S. LAMBOT

IV. — EGYPT AND SYRIA.

The chief chamberlain of the Fāṭimid court was an 
exalted functionary known as the Ṣāḥib al-bāb 
(q.v.); his subordinates, however, were called ḥāʤībīs, 
and he himself is occasionally referred to as the 
ḥāʤīb al-hud[db, in place of his more usual title. 
In describing the officers required for the Fāṭimid 
chancery, Ibn al-Ṣaṣṣrāf (Kūmān dīwān al-rashīdī, 
117) speaks of a ḥāʤīb al-diwan, whose duty was to 
keep unauthorized visitors and thus safeguard 
the secrets of the state. The Seldjūk rulers of Syria 
introduced the military ḥāʤīb familiar in the East; 
Zangī and Ayyūbīd institutions, in this as in other 
respects, show strong signs of Ṣeldjūk influence. 
The ḥāʤīb is now a military officer, with military func-
tions—as for example to command a citadel (Abū
In the Mamluk Sultanate, the ḥādjīb still retains some of the functions of a chamberlain. The chief ḥādjīb—ḥādjīb al-faddiḥīb—presents envoys, guests, petitioners and other callers at the Sultan's court; he is also responsible for the organization of military parades. The primary functions of the ḥādjībūn under the Mamluks, however, were not ceremonial but judicial—the administration of justice among members of the Mamluk military class, in accordance with the laws of the Mongol Yasa [q.v.]. According to some Egyptian sources, this separate jurisdiction was set up in the time of Baybars, when the Mamluks and their allies—mainly the Syro-Egyptian state and, though Islamized, insisted on following Mongol custom in personal matters. "They therefore set up the ḥādjībūn," says Makrizī, "to adjudicate disputes between them, to restrain the strong among them and give justice to the weak, in accordance with the rules of the yasa. They also assigned to him . . . disputes concerning ḥādjīb's [q.v.] . . ." (Ḳhitāf, ii, 221; cf. Ibn Ṭabgḥībīrī, Cairo, vii, 182 ff.). The ḥādjībūn thus maintained a form of feudal privilege, whereby the Mamluks had immunity from the courts and laws to which the natives were subject—that is, the ḥādjīb's courts administering the Şarīʿa, and were answerable only to special military courts, with Mamluk not native judges, administering the yasa—the laws of the most powerful and most respected of the steppe peoples, among which most of the Mamluks were recruited. These special courts dealt with matters concerning members of the Mamluk class, including lawsuits about their fiefs.

In time, the scope and scale of the chief ṣamāʾū's judicial actions were considerably increased. At first, he was subordinate to the Sultan's viceroy in Egypt, the Nayīb al-saltāna [q.v.], but gained greatly in power when this office was left vacant or, later, allowed to his Mamluk called ḫālib al-saltāna. Islamic judicial authority by the ṣamāʾūn from the mid 8th/14th century. Sultan Shāh Ḫūn (746-7/1345-6) transferred the judicial power previously exercised by the Nayīb al-saltāna to the chief ṣamāʾū, who thus became head of an independent court dispensing administrative (ṣiyāṭ) justice. During the reign of Ḥādjīb Šama, Rawdatayn, ii, 69), to act as Shīfiynā (Ibn al-Kalanisi, 208, 224, 234) or, sometimes, as envoy (Ibn al-Kalanisi, 232; Makrizī, Suluk, i, 4). The term ṣamāʾū was still, however, used in Egypt in the 7th/13th century in the sense of chamberlain (as for example in a verse of Ibn al-Nabī, d. 686/1287, who links it with the Persian term pārdaḏār [q.v.]; cited in Eos, ed. A. T. Hatto, The Hague 1965, 271).

The Muslim sources complain of the encroachments of the ṣamāʾū, who dealt with cases involving native civilians, and even presume to give rulings according to Muslim law. Many litigants preferred the more expeditious and better enforced decisions of the ṣamāʾū to those of the ḥādjīb, while the ṣamāʾū for his part had a financial interest in dealing with more cases. Makrizī speaks of Mamluk āmīrs who held no fief but lived entirely on fees and fines which they collected as judges. "Today the ṣamāʾū has come to be the judge of the mighty and the humble alike, whether the case be one of ḍharti or of what they call administrative (ṣiyāṭ) justice" (Ḳhitāf, ii, 219-20).

At first there were three senior officers at the centre: the ṣamāʾū al-faddiḥīb, the Ṣamāʾū, and the ṣamāʾū ḥāmi; Barʿūk increased the number to five. The position of the chief ṣamāʾū in the table of precedence varies, at different times and in different sources, from the 3rd to the 12th place after the Sultan. The chief ṣamāʾū (amīr ṣamāʾū) of a prescribed city, third, and sometimes second, after the governor, whom he could replace in an emergency. Subordinate ṣamāʾūn served under him, in varying numbers. In Damascus, Aleppo and sometimes Tripoli the chief ṣamāʾū was an amīr of the first class, in Ṣafad, Ḥaḏm and Qaḥāza of the second class. In Barʾūk's time there were six lesser ṣamāʾūn in Damascus, three in Aleppo, two or one in other towns. Kāʾit Bay introduced a new functionary, with the Persian title pārdaḏār, to discharge the duties of court chamberlain. This office, held by an amīr of the second class, continued to the end of the Mamluk Sultanate.

--North Africa.

In North Africa, the office of ḥādjīb, which had existed under the Fatimids, disappeared shortly afterwards—certainly under the Zirids—to be of importance again under the Hafsids. The institution of the ḥādjībūn seems to have been introduced from Spain into Ifrīkiya, where at first, in the reign of Ābū Išāk (678-82/1279-83), the ḥādjībūn was merely a kind of superintendent of the palace, acting at the same time as the intermediary "between the sovereign and persons of all classes"; after the reign of Ābū
HADJIB — BANU HADJIR

Hafs (683-94/1284-95), the fyididba proper was separated from the control of the palace, and the hadjib acquired increased importance, to the degree that Abû Bakr (718-47/1318-46) used his hadjib as his chief minister, introducing in Tunis the practice of the amirs of Constantine and Bougie to make the local hadjib their right-hand man; the most influential "chamberlain" was Ibn Tafrağûn, who, in the second half of the reign of Abû Bakr, made the hadjibâ, already an influential office, a post of great responsibility, "by the extent of its powers almost a dictatorship, and, soon, under a young sultan, the means to hold him in tutelage and to make all the machinery of the state work as he wished"; for more than twenty years it was he who controlled the whole administration of the realm and directed its policy as he pleased. After the Hafsid restoration in the last third of the 8th/14th century, the title of hadjib was maintained but the powers attached to the office were suppressed, the chamberlain becoming once more a kind of chef du protocole. See H. R. Idris, Zbrides; R. Brunschvigt, Hafsides, ii, 54 ff. and index; Ibn Khaldûn, Muhaddidma, Cairo ed., ii, 210, tr de Siane, ii, 15, tr Rosenthal, ii, 18.

Further west, the hadjibî of the Marinids was at Fas an intamate of the ruler, while at Timcen, under the "Abd al-Wâdihs [q.v.], he became the major-domo of the palace and minister of finance, but disappeared almost completely after the Marinid interregnum.

See further Kâfiq, Mabyyind, ed. Adârîn, Sâhib al-bâb, Teshribat, (Ed.)

HADJIB B. ZURĀRA B. 'UĐUS B. ZAYD B. 'abd Allâh B. Dârim B. Mâlik B. Hânâiza B. Mâlik B. Zayd Manât B. Tamîm, an eminent sayyid of the Dârim of Tamim in the period of the Djâhilîyya. His name was, according to Abu Yâkânâ, Zayd, and his kunya Abû 'Ikrîgâ.

Hadjib, a member of one of the noblest families of Bedouin society, was known for his mildness. A particular incident in connexion with Kurâd b. Hanifa later caused Hâdjiib to kill Kurâd, which led to clashes between some families of Dârim.

The first battle attended by Hâdjiib was the battle of Djaâbala [q.v.]. He was captured and freed himself of Djaâlala, after he had successfully carried out his mission he was "crowned" by the Persian ruler.

Some traditions claim that Hâdjiib embraced the religion of the Magians. Whether Hâdjiib met the Prophet is rather doubtful, since traditions claiming this seem not to be trustworthy. He died in the twenties of the 7th century.

Bevan), index; al-Farazdak, Diwan, ed. al-Sâwî, 44, 116, 139; Schultehs, Dîvan, ed. al-Masâkim, 1956, 199. (M. J. Kister)

Aghdîn, According to this report Hâdjiib gave his bow as pledge when he was entrusted by the Persian ruler to become a caravan to 'Ukâh. After he had successfully carried out his mission he was "crowned" by the ruler of Persia.

Some traditions claim that Hâdjiib embraced the religion of the Magians. Whether Hâdjiib met the Prophet is rather doubtful, since traditions claiming this seem not to be trustworthy. He died in the twenties of the 7th century.
herding, occupied central al-Hasa Province (now Eastern Province). Always loyal to Ibn Sā'ūd in his wars against al-‘Uqlīmān, Mūtabār, and other tribes, Banū Ḥādirj established colonies in al-Djāwft at Yākrūb, Shuḥaylāt, Ṣalālīj, Fūdā, and ‘Ayn Dār. With the decline of the Ḥādirj colonies after 1930, these villages were abandoned. The Saudi Arabian Government in 1932–1933 encouraged resettlement of these sites; and a few Banū Ḥādirj groups, particularly Āl Ḥamāma, were cultivating small agricultural plots.

ḤADIRJ (A.), literally prevention, inhibition, is the technical term for the interdiction, the restriction of the capacity to dispose. The term expresses both the act of imposing this restriction and the resulting status; a person who is in this status is called mahḍir (abbreviated from mahḍar ṣalāyah). Subject to ḥadirj are (a) the minor, (b) the insane, (c) the irresponsible, and in particular the spendthrift, (d) the bankrupt, (e) a person during his mortal illness, and (f) the slave. Whether ḥadirj comes into being or needs to be imposed by the ḥādirj, is a subject of controversy between the several schools in the cases (b), (c), and (d), and so are numerous questions of detail. Abū Ḥanīfa, for instance, denied that the irresponsible person who was of age was subject to ḥadirj; Abū Yūsuf and Schaybānī held that he was, and, in addition to the spendthrift, they regarded as liable to ḥadirj a debtor who refused to sell his property in order to pay his debt, a debtor of whom it was feared that he would spirit away his property by fictitious transactions (these two rulings obviously link up with the ḥadirj of the bankrupt), and a person who by the use of his own property caused prejudice to his neighbours. The extent of the ḥadirj or, conversely, the kind of transactions which the mahḍar is entitled to conclude on his own, varies according to the type of case; the ḥadirj covers all transactions of the insane, so much so that he cannot even validly adopt Islam if he is a non-Muslim, and of the minor; the others are, generally speaking, entitled to make certain transactions of a personal nature, such as a marriage (supposing they are married), although these may create pecuniary obligations; the bankrupt is, in principle, prevented only from diminishing his assets, and a person during his mortal illness only from concluding unilaterally disadvantageous transactions if, taken together with any legacies he may have made, they amount to more than one third of the estate. The ḥadirj imposed on recalcitrant debtors and on persons who cause prejudice to their neighbours applies only to the transactions and dispositions which are directly relevant. Some texts list many more classes of persons under ḥadirj, and sometimes even the dead are included. The curator of the mahḍar (his guardian in the case of a minor) is called wa’il, and his power to represent his ward, wīdīya [q.v.]. It is, as a rule, either the father or the grandfather, or the ḥādirj or his representative, and the master in the case of a slave. He may confer on the minor the capacity to dispose, but not with regard to purely disadvantageous transactions. In particular, the master may confer the capacity to dispose upon his slave, whether for a single transaction, such as getting married, or in general, for trade; a slave who has received this last permission is called mad‘īdan. This permission, too, does not include unilaterally disadvantageous transactions. The revocation of this permission is also called ḥadirj.

This concept of ḥadirj has formed the subject of a number of legislative measures in Algeria and in British India.

AL-ḤADR, Arabic name of the ancient Hatra (Atra, "A’ra"). situated in the desert to the west of the Tharthar, three short days’ march to the southwest of al-Mawṣil. The Arab geographers, who no longer knew the exact site of this former caravan and commercial centre, provide certain legendary details regarding its ancient greatness. According to Yaḥūb (ii. 282), it was built entirely of hewn stone and possessed 60 large towers, each of which was separated from the next by nine smaller towers and linked to a palace and baths. Ibn Ḥawqal and al-Muqaddāsī do not mention it, however, and the historians, principal among whom was particularly Pazdawī (d. 482/1092), Kasāf al-azrār, and Saraḥkī (d. 483), Kīwāb al-‘Usal. (J. Schacht)

The account of the Sasanid victory is accompanied by a legend that is very widely disseminated among the Arab authors of the first centuries of Islam and derived from two sources: the first is the Kābulīdāna translated by Ibn al-Muqaddāsī [q.v.] under the title Kišāth Siyār mutakāl ‘alā Şā‘īb; the second is an Arab translation transmitted by Ibn al-Kalbī and founded mainly on the verses of ‘Aḍī b. Zayd [q.v.], Abū Dū‘ūd al-Iyādī [q.v.], and others of greater or lesser authenticity (see F. Gabrieli, L’opera di Ibn al-Muqadda’s, in RSO, xi/3 (1932), 209; G. E. von Grunebaum, Abū Dū‘ūd al-Iyādī: Collection
of fragments, in WZKM, li/4 (1950), 277 and references cited, with the addition of al-Djāhīz, Ḥayyān, vi, 149). The versions that we possess contain considerable divergencies, but they are all arranged according to a single plan, which is presented in the following way: an ancestor of al-Nuṣmān b. al-Mundhir [q.v.], named al-Dayzan (see LA for the meanings of this word in Arabic) b. Muʿāwiya (usually, b. Djāhīz), from his mother’s name), who was himself descended from Tanbūk b. Mālikī [q.v.], reigned over al-Ḥadr with the title of Sāṭīrūn (= Sanatrakes, according to Noldeke; this title, signifying “king” in Assyrian, is sometimes regarded by the name of the founder of the town, al-Sāṭīrūn b. Usayyīrūn in al-Masʿūdī); as he had plundered the territory of the Sāṣānīd king, the latter came and laid siege to Ḥatra; after two (or four) years he had still failed to capture it, and it was then that al-Ḍayyan’s daughter, al-Nadīra, saw Shāpur, became enamoured of him, and offered to deliver the town to him if he would consent to marry her and give her his firstborn son. The capture of Ḥatra is related in various ways: al-Nadīra made her father and the garrison intoxicated and gave the key of the town to Shāpur, or else she showed him how to render ineffective the talisman that protected the town. Shāpur, now master of the place, massacred al-Ḍayyan and his troops, took away al-Nadīra and married her. During the wedding night she was unable to sleep, and for hours turned restlessly on her couch, soft though it was; in the morning, Shāpur discovered in a fold of her belly the cause of her sleeplessness, a myrtle-leaf which had lodged there (according to another version, the leaf was found under the cushions). On discovering to what extent she had been tampered with by her father, Shāpur, indignant at such ingratitude and fearing a similar act of treachery towards himself, brought about al-Nadīra’s death by tying her by the hair to a horse’s tail.

The holy legend is repeated in a fairy story by Hans Andersen (see A. Christensen, La princesse sur la feuille de myrte et la princesse sur le pois, in AO, xiv, 241-57).

For the legend of al-Nadīra, see Ibn Khūṣūṣ, Sīra, ed. Sabāqī, etc., i, 71-2; Ibn Khūsūṣ, Uṣūl, i, 189; Ibn Tayhārī, ii, 159; Tabārī, i, 827 ff.; Masʿūdī, Murādī, iv, 81-6; Aḥḍārī, i, 140 (Beirut ed., ii, 116-8); Tāḏīlībī, ed. Zotenberg, 492; Eutychius, ed. Cheikho, i, 106-7; Yākūṭ, s.v. Tīzānābādh; A. Christensen, L'Irān sous les Sassanides, 218-9. (CH. PELLAT)

ḤADRÁ, “presence”, is used broadly by mystics as a synonym of ḥadār, “being in the presence of Allah”. Its correlative is ḡayyāb (♀, with references there given), “absence” from all except Allah. On the controversy as to whether in expressing this relation to Allah ḥadār or ḡayyāb is to be preferred—this is, which is the more perfect, final element—see especially R. A. Nicholson’s trans. of the Ḫaṣṣīj al-maḥāḏīb, GMS xvii, 1911, 248 ff. The term was later extended by Ibn ‘Arabī, in working out his monistic scheme, to the “Five Divine Ḥaḍārāt”, stages or orders of Being in the Neoplatonic chain [see Άλαμ and ‘abd al-‘Azāz al-qāṣāḥi]. There is a short statement of these in the ‘Arūfī of Djurdjund (‘Abbasī, 1321, 5), which has been translated by A. Christensen, Die Dynastie des philosophischen Systeme des spekulativen Theologen im Islam, Bonn 1928, 294 ff., where, and at p. 153, he gives also some minor uses of the term. See also L. Massingue’s edition of the Kithā al-Ṭawāsín, Paris 1913, 183, with a reference to Ibn ‘Arabī’s Fuṣūs al-ḥikm, and Hughes, Dict. of Islam, 169. In consequence, the Plotinian scheme of dynamic emanations laid down in Islam madkhāl ḥaḍārāt (Ibn Khuldūn, Muḥaddath, 106; tr. de Selincourt, 100; tr. Rosenthal, iii, 89). Dervishes call their regular Friday service ḥadāra [see qhikr]. For the use of ḥadāra (ḥadrāt, ḥadād) as a title of respect, see Ḥasan al-Bāshī, al-ʿĀlībī al-islāmīyya, Cairo 1957, 260-4, and Ḳākāb. (D. B. MacDONALD)

ḤADRAMAWT. The name Ḥadrāmawt is applicable in its strictest sense to the deep valley running parallel to the southern coast of Arabia from roughly 48° E. to 50° E., between precipitous walls rising to a high plateau (the Djol), which on the south separates it from the narrow coastal plain and on the north from an arid tract merging into the sand desert of the Empty Quarter of Arabia. The eastern end of this valley, where it turns southward into the sea, has the special name of Ṣāḏīb Masāʾila, and is not properly speaking part of the Ḥadrāmawt. In a more extended sense, however, the name Ḥadrāmawt has always been applied to a much larger area, comprising the districts to the north and south of the Ḥadrāmawt proper, together with an area on the west which includes not only the highlands providing the head-waters of the Ṣāḏīb Wādī Ḥadrāmawt but also a number of wādī-systems draining off those highlands north-westward into the Ramlat Sab‘yān (an outlier of sand desert isolated from the main part of the Empty Quarter) and southwards into the sea. The western limit of Ḥadrāmī territory can be said to lie approximately at longitude 47° E. [see map to AL-‘ARAB, DJAZIRAT].

The Hebrew form of the name, Ḥażārāmawwet, is partly modelled on the classical Arabic form, but no doubt partly influenced by a folk-etymology assuming a connexion with the idea of “presence of death” (which may also have operated to some extent on the classical Arabic form). The native Ḥadrāmī inscriptions use the spelling hārmī, which contrasts with the Sabaean spelling hārmīt; and this is in all likelihood based on the root ṣrām (cf. Arabic ṣarām “burning heat”), enlarged by a feminine termination -t and a prefix comparable (as C. D. Matthews has suggested) with the definite article encountered in the present-day dialects of southeast Arabia, which fluctuates between -a-, ha- and -h-.

I.—PRE-ISLAMIC PERIOD

Evidence for the early history of this area is extremely scanty. One possible reason for this may be that some of the main urban centres have not undergone those population shifts which have, further west, left centres like Mārib, Sirwāh, Tumma,
etc. as deserted ruins capable of furnishing a rich archaeological and epigraphic booty. The two main centres of the Ḫadramawt, Ṣhibām and Tarfīn, are millennium-old foundations still in full occupation; and such archaeological evidence as may have been there has either been destroyed by subsequent occupation or is irretrievably buried under the present towns. The same may well apply to other sites in the Wāfd. The only site in the whole area which has been scientifically excavated is Madhāb, an ancient village settlement on the opposite side of the Wāfd (Amran) from the modern Ḥuraydā, excavated by Caton-Thompson in 1937-8. Some superficial investigations have been made at Ṣhabwā, the ancient metropolis of Ḫadramawt. Other important sites which have been recorded are an impressive wall at Ṣayfā'at (about 15 km. north of the present-day administrative centre of Ṣayfā'at in the Wāḥidī sultanate); the traceable ground-plan of a large settlement at the ancient haven of Cane (Juz-Ṣūq) about 50 km. north of present Bīr Ṭālī (showing the site beneath a covering of sand and rocks); an area of adobe brick at Gassy (about 15 km. north of the portant sites which have been recorded are an im-

The situation of the “metropolis” of Ḫadramawt (as Eratothenes terms it) at Ṣhabwā is remarkable, for it lies right on the north-west perimeter of Ḫadramī territory in a small wadi draining into the Ramlat Sab’atayn. Evidently it owes its importance to commercial factors, since it was the principal entrepôt for the incense trade. Frankincense, produced in the Mahra country north of Ḫadramawt, was at this point handed over to the caravans which assured its transport up the west coast of Arabia to the markets of the Mediterranean and Mesopotamia. The salt workings in the neighbourhood may also have contributed to its commercial importance; according to Philby (Sheba’s daughters, 91) they are today “the chief or only economic asset of the locality”.

Closely connected with the trade factor was the significance of Ṣhabwā as a pilgrimage centre. Pliny’s descriptions of the methods of handling the incense at Ṣhabwā indicate strong religious sanctions governing the process; and it remained a shrine and pilgrimage centre down to the latest days of the pre-Islamic South Arabian civilization, as is attested by a fifth century A.D. graffito there associated with the monotheistic cult of Raḥmān. In the earlier polytheistic period, the Ḫadramī pantheon shows a close similarity to those of other South Arabian areas, dominated by the astral triad of moon, sun and Venus-star; except that the moon god in Ḫadramawt bore the distinctive name Sin, borrowed from Babylonian religion. He is commonly referred to as “Sin of ʾɪm”, and it has been conjectured that the latter term is the name of the principal shrine of this deity.

Muslim sources are agreed that Ḫadramawt was the original homeland of the tribe of Kinda, an offshoot of which founded the central Arabian kingdom of Kinda (g.v.); but it has to be appreciated that these were nomads, and down to about the beginning of the Christian era the nomadic populations of South Arabia were culturally totally distinct from the settled folk whose culture is the one to which our main epigraphic evidence bears witness; and this is the early period about which it would be pointless to say anything about the nomads. Only in the few centuries before Islam do we begin to see a fusion and intermingling of the two cultures. The early Islamic writer Muḥammad b. Ḥabīb still speaks of Kinda and Ḫadramawt as if they are regarded as independent ethnic entities (“Ḫadramawt” representing the ancient settled culture), though both inhabiting the geographical Ḫadramī area.

The language of the pre-Islamic Ḫadramī inscriptions is close enough to Sabean, Minaean and Qatabanian to rank with them as all dialects of a single “Epigraphic South Arabian” language. With Minaean and Qatabanian it constitutes a group using a sibilant for the causative verbal prefix and pronominal affixes, against Sabean ʾa in these functions. Its own main distinctive peculiarities are the use of a preposition ʾa, “to, for” (Sabean and Qatabanian ʾa; Minaean k-); the fact that t and s have coalesced into a single phoneme spelt indifferently with either letter; and a differentiation between the masculine and feminine forms of the pronominal affix, not found in the other dialects, though paralleled in the modern Sahori dialect (see Beeston, Descriptive Grammar of Epigraphic South Arabian, § 37: 6).
HADRAMAWT — HADY

II. — ISLAMIC PERIOD

The editors regret that, for reasons beyond their control, they are obliged to abridge this section of the article to the Supplement.

HADUR (ḤADŪR NABI SHU’AYB), a mountain massif in the Yemen on the eastern edge of the Sarāt Allān, some twelve miles west of Ṣan’ā’. (q.v.), lying between the wādis Shāhm and Sūrdūd. It is separated from the Harās range to the west by the Ḥaymat al-Khāridiyā (q.v.), known in Hamdān’s time as the Balad al-Aḥkrūdī and inhabited by the Sulayh, a branch of Hamdān. The massif is named after Ḥadūr b. ‘Adī b. Mālik, an ancestor of the Prophet Shu’ayb b. Mahdām, who is mentioned in the Kur’ān (cf. Ṣūra VII, 83 f. and XI, 85 f.). He had been sent to preach to and to warn his people on Diabal Ḥadūr and was slain by them there. According to Arab tradition, Ḥadūr Nabi Shu’ayb was the highest of the three mountains which remained above the waters during the Deluge. The other two were Diabal Shayhār and Diabal Kanīn (3,400 metres) in Khwālān. The main ridge of Ḥadūr is about three miles long and has seven peaks, the highest being Diabal Kāhrī (Diabal Bayt Khwālān) which is 3,720 metres high and is often covered with thick snow in winter for days at a time. On it is the celebrated tomb (with mosque) of the Prophet Shu’ayb, which is much visited (particularly by women), in which to be buried is considered a great blessing (there); on the last day of Ramādān and on the festival of ‘Arafa great festivities are held there.

On the range itself there are several villages. It is traversed by numerous wādis, among them Wādī Dāwūd and Wādī Yāsīl, which disperse their sayl-waters in all directions. In these valleys excellent vines are found in addition to various fruit-trees. In the deeper parts of Ḥadūr the cereals particularly grown are barley and wheat. To the east lies the fertile plain of Khwālān. The main ridge of Hadur is said to have been built by Sinan Pasha. It is about 3,310 metres high. Both were explored by Eduard Glaser in 1885.

HADY, oblation, from the Arabic root h d y which has the meanings “to guide”, “to put on the right path”, “to make a present”. The word is used to denote the sacrificial offerings destined for the lord of the Meccan sanctuary (Ibn Sa’d, Tabābā, i, 92). The ritual of the taḥlīl and the ighār, to which we shall return, suggests that the hady had to be some kind of humped animal, especially selected. It appears that the slaughtered beast was left by the man making the sacrifice for the poor and for animals (Ibn Ḥighām, Sīra, i, 146). The term and the consecration ritual survived in Islam, which, however, tended to replace hady by dakhīyya.

Occurring rarely in the Kur’ān (only seven times and that in Medinese sūras: II, 196, V, 2, 95, 96, XLVIII, 25), hady there denotes the oblations intended for the Ka’ba (XXII, 33), without further definition. But hādith and Kur’ānic exegesis are generally agreed in restricting the word to victims chosen from the anṣām (VI, 143) or animals in flocks or herds. It is the normal offering of the pilgrim, which he must for preference choose from the camel family, or failing that from the bovines, or else the sheep, or finally the goat family (Ibn Ṭuṣ, Bidda, i, 222; al-Taḥlīl, Ḥāfiyya, i, 555). The sacrifice must take place on the completion of the Pilgrimage, preferably by the sacrificer himself, so marking his return to secular life.

Although the offering of a hady is in theory optional, the prescriptions of the ĥadīth and also possible transgressions of the strict taboos of the šūrām in practice render it obligatory. In the first place, we should recollect that the pilgrimage can be performed outside the month of the pilgrimage, but that is to say if he accomplishes the ḫummah alone, at the prescribed time, the umrah and tamattu’. The first consists of making the hādith alone, at the prescribed time, the umrah being performed and the pilgimage, but not the travel back, being left to the pilgrim himself. The second consists of the hādith and the umrah, the pilgrim performing the whole pilgrimage, but not the travel back, being left to the pilgrim himself. In this case, the believer is not bound to offer a hady. But he must make compensation if he chooses the tamattu’ (Kur’ān, II, 196), that is to say if he accomplishes the umrah at the same time as the pilgrimage, resumes secular life and dedicates himself once again for the hādith. Similarly, a kind of penalty is envisaged with regard to the ḥarām, one who takes the šūrām at the same time for an umrah and for a hādith, and who releases himself from the vow only when the pilgrimage is accomplished. In these last two methods, which are regarded by jurists as indulgences, one can redeem oneself by the sacrifice of a hady. An obligation is similarly owed by the pilgrim who, having taken his šūrām, finds it impossible to reach the holy city on account of an illness or on account of an illness or a certain transgressions of the strict laws of pilgrimage (violation of the prohibition on hunting [V, 95] and the sexual taboo; cutting of the hair or shaving before desecralization [II, 196]) can similarly be redeemed by the sacrifice of a victim. It is important, however, to make clear that although highly commendable, the offering of a hady is not obligatory, and one can also secure redemption by fasting or alms-giving (II, 196, V, 95).
From this it emerges that hady is sometimes propitiatory, at other times expiatory. But in no case is it meant to be corrupt, since in any event it is considered earned by the sacrificer, his family and the poor (Kur'ân, XXII, 28, 36), or by the last-named only (this is the case, for example, with the hady owed by the pilgrim when besieged, muhsyar [al-Shâfi'i, Umm, ii, 144 and 184] and in general with every expiatory hady).

The animal offered as hady must meet certain requirements in regard to age and appearance defined by fiqh. The legal age varies according to the species; it is 5 years for camels, 3 for cattle, 1 for goats, and 6 months for sheep (Ibn 'Udâma, Sharb, ii, 534, 537; Ibn Rushd, Bidâ'iyah, i, 255). Moreover, the victim must be fat and free from blemish; in particular, it must not be lame, blind or one-eyed, scabby or puny, nor must it reveal certain brand-marks which recall the pre-Islamic wasm. Once it is chosen, the pilgrim will proceed to its consecration to the taklîd and the ishdâr. For the purpose, he hangs a sandal (naâm) or a piece of leather from its neck, and with a spear-head cuts a piece of its skin (wasm). It is a case of an animal without a hump.

Having been thus consecrated, the hady thereafter belongs to the deity. Except for certain circumstances specified by fiqh, it is then no longer possible to exchange, sell or replace it or to inherit it. It is also forbidden to make any profit whatever from it. However, in contradistinction to pre-Islamic practice, it can be ridden by the sacrificer, on condition that no harm comes to it. It is in fact regarded as a valuable object entrusted to the man, who must do everything possible to restore it to its lawful owner, Allâh.

What essentially characterizes the hady and distinguishes it from other blood sacrifices is that this is a question of a sacrifice in a fixed place, in that the sacrifice, except when performed under compulsion, must necessarily take place in Mecca. Moreover, and particularly with the hady offered for a pilgrimage completed by the dahiyya was thus substituted, especially in current speech, for the term hady. But in the books of religious jurisprudence the former denotes sacrifices on the day of 'Arafât and Muzdalîfah, this period being regarded as especially propitious for an expiation.

It appears that among the ancient Arabs of the Hûdâz the sacrifices of Minâ took place before sunrise. The institution of the dahiyya, which is the Islamic equivalent of the hady, reveals the reformer's desire to break away from sun worship by transferring the time of sacrifice to the hour known as jumâ, after the morning prayer. The word dahiyya was thus substituted, especially in current speech, for the term hady. But in the books of religious jurisprudence the former denotes sacrifices on the day of nahr (slaughter), sacrificed at places other than Minâ, reserving the latter for those at Mecca.

**HAFAR AL-BAṬIN** [see BAṬIN].

**HÂFIZ** [see KÂRÎ and KUR'ÂN].

**AL-HÂFIZ**, the regnal name of the seventh Fatimid caliph of Egypt, whose real name was Abu 'l-Maymûn ʻAbd al-Majîd, born at Ascalon (date of birth uncertain: 466, 467 or 468/1073-6) while famine raged in Egypt (Ibn Khallîkîn, i, 389).

Little is known of his life before he took his place in the person of his father Abû al-Mudîbs and then overthrew Hâzârzâm and ʻAbd al-Majîd, threw the latter into prison, seized the treasures of the palace, and declared himself the representative and lieutenant of the expected imâm of the Twelver Shî'â (Lavoix, iii, p. 163, n. 439). Though he did not suppress the Ismâ'îlî faith, he aroused the hostility of its followers, who no doubt resented its replacement by Twelver Shî'ism as the official doctrine of the state (Suyûtî, Hûsîn, ii, 177-8).

A year later, on 16 Muharram 526/9 December 1131, the supporters of the Fatimid state made a successful counter coup, with the help of the young followers of al-Mîr, the "'Amîriyyâ", led by the chamberlain Yânîs [q.v.], who was of Armenian origin. They killed Kutayfât, and freed ʻAbd al-Majîd from prison. At first he was restored as regent, but a few months later a decree (sidjîll) was read, proclaiming ʻAbd al-Majîd this time as caliph with the title al-Hâfiz li-dîn Allâh (Kalkashandl, vi, 237 ff.). It was perhaps at this time that he formed his own pretorian guard, called "Hâfiziyâ" in his honour (Kâlûshandjî, iii, 452, 508).
This time the caliph ruled alone, with the help of his sons. He nominated Sulaymān heir-presumptive and gave him all the duties of vizier (tābi'a). When, after two months, Sulaymān died, he appointed another son, Ḥaydara (Kalkashandi, ix, 377–9). But a third son, al-Ḥasan, jealous because of this nomination, plotted against his father and brother. He seized power, killed several army leaders and formed a private corps, Sibyān al-sarād, the young cuirassiers. But the army, offended by the massacre, gathered in front of the palace and demanded al-Ḥāfiz, then had his son poisoned by the agency of his Jewish doctor (Kalkashandi, iii, 27–9).

This time he appointed to the vizierate Bahram, a Christian Armenian. But this choice provoked a revolt among the Muslims, for once Bahram came to power he formed an Armenian army of 20,000 men, infantry and cavalry. The Egyptians are said to have feared that he would change the religion of Islam (Ibn Muysassar, 79 ff.).

The Muslim troops being discontented, the caliph incited against Bahram the governor of Ascalon, Ṣiwān b. Wandalhashi, who had beenbanished by Bahram, but Bahram sent him away again to the prefecture of al-Gharbiyya. The people of Egypt were grateful to Ṣiwān for having prevented the Armenians from entering Egypt when he was at Ascalon. He later gathered troops and Bedouins and drove Bahram out of Cairo into Upper Egypt. The caliph, however, gave Bahram a safe-conduct (amanāt) (Kalkashandi, Subh, xiii, 325) because of the intervention of the king of Sicily, Roger II (Subh, vi, 458–63).

But once Ṣiwān became vizier (Subh, viii, 342–6), he seized all power and took the title of king (mašūk) (Kalkashandi, ii, 305). He was also a Sunnī and when he attempted to depose the caliph he was assassinated in 540/1147 (Kalkashandi, ii, 173).

After this al-Ḥāfiz appointed no more viziers, but the troubles and the disturbance continued. He died of a violent intestinal colic (kawland) in Dihmādā II 544/October 1146.

ḤĀFIZ, (Khwāja) shams al-dīn muhammad Shīrāzī, Persian lyric poet and panegyrist, commonly considered the pre-eminent master of the ghazal form. He was born in Shīrāz, probably in 726/1325–6, though Kāsim Ghānī argues for 717/1317 and others favour 720/1320. With a few marked absences, he seems to have spent the greater part of his life in Shīrāz, for long moving in or near the court-circle of the Muẓaffarid dynasty. He is believed to have died in Shīrāz, in 792/1390 (or 791/1389), and his tomb is perhaps that city's best known monument. Though credited with learned works in prose, his fame rests entirely on his Divān. There are few aspects of the life and writing of Ḥāfiz that have not given rise, and especially from about 1930 to 1955, a vigorous scholarly dispute over matters of both interpretation and fact. The reverence in which he is held, not only in Persia but widely throughout East and West, as the undoubted composer of some of the world's most sublime and technically exquisite poetry, will doubtless ensure continued concern with these problems, however intractable and ultimately insignificant some of their ramifications may seem to be.

Apart from its general historical framework, the presumed facts of Ḥāfiz's life were for long largely drawn from biographical prefaces, from the usual anecdotal taḥkīra sources like Dawlāṭgāh, or from casual references by writers like Muḥammad b. Ḥanīf and his grandson. Such material has of course frequently been viewed sceptically; but most of it is of its nature difficult to disprove conclusively, and in line with many of these sources, a biography was prepared in the reign of Sultan Ibrāhīm Khān b. Ṣafar (r. 789/1387), research has only tended to strengthen, if not fully to confirm, the legend. Informative biographies of Persian poets are a notorious rarity, and it seems unlikely at this late date that any significant new material of an explicitly biographical nature will be discovered relating to Ḥāfiz. Though not a new technique, it has recently become fashionable to analyse the poems themselves for new biographical evidence or for some bearing on the material already at hand. The latest, and the most comprehensive and ingenious work of this kind, has been done by Kāsim Ghānī and by R. Lescot; but the net result so far is somewhat disproportionate to the formidable effort involved. At best, it has now been convincingly demonstrated that the Divān bears a much more direct relationship to the milieu of its composition than was suspected in the traditional view. Such methods always have their dangers, particularly where the basic biographical material is itself so slight; in the case of Ḥāfiz, the problem is exacerbated by the continued lack of a reasonably authentic text. All this being so, it still seems proper to give here the main outlines of the life in more or less traditional form.

Ḥāfiz's father, Bahāʾ al-dīn or Kamāl al-dīn (some sources refer to his grandfather), is said to have migrated from Isfahān to Shīrāz, where he died in the poet's infancy, leaving the family in poor circumstances. In a close-knit, flourishing centre of Islamic civilization such as Shīrāz at that time, humble beginnings were only a relative handicap; and it is plausibly suggested that Ḥāfiz received a thorough education on the usual classical lines. It was no doubt in youth alone that he earned the right to use the title kāfīz (Kur'ān-memorizer), which became his pen-name; his verse bears ample evidence of familiarity with Arabic, with the Islamic sciences and with Persian literature generally. He is reputed to have been among other things a baker's apprentice and a manuscript-copyist during these years of adolescence and early manhood; but, to judge in particular by the dedication of a number of poems to Kiyām al-dīn Ḥasan (d. 754/1353), sometime vizier to Shāh Aḥmad Ishākhīndī, he was into his poetic stride as a panegyrist before the age of thirty. An oft-cited poem (Broekhuis, no. 579; Kavvāli-Ghānī, 365) mentions nostalgically other Shīrāz notables of this period, including the ruler himself. Already by his twenties, in the wake of the disintegration of the Il-Khānīd order, Ḥāfiz had
lived through dynastic upheavals in and around Shiraz.

A second phase in the poet's life begins in 754/1353 with the capture of Shirâz, after a protracted struggle between the Indû and Muʿaffarid dynasties, by Mubârîz al-Dîn Mûhammad. The latter ruled for five years, before being deposed and blinded by his son Djalâl al-Dîn Shâh Shudjâ. These years were apparently a period of rigid Sunnî observance, hard on Hâfîz and his fellow-citizens alike; but the poet seems to have recommended himself with some success to Mubârîz al-Dîn's chief minister, Burânî al-Dîn Shâh Shudjâ, and to have been appointed by him to the madrasa, in 759/1358-84, while at no time settled politically, and though far from being a period of continuous prosperity and success for Hâfîz, coincides with his phase of maturest composition. It was during these years that his fame spread throughout Persia, as well as westwards into Arabic-speaking lands and eastwards to India; it seems, nevertheless, that he recedes in his original condition to somewhat commentator. The Muʿaffarid dynasty effectively came to an end at the hand of Timûr, in 789/1387, during the last few years of Hâfîz's life, though random representatives of it, like Shâh Shudjâ al-Dîn Mânûrûr, seem to have shown the poet sporadic favour to the end.

It is generally believed that Hâfîz was more or less out of favour with Shâh Shudjâ for a period of some ten years (768-78/1366-76), during which time he is said to have spent a year or two in Isfahân and Yazd. The reason for such a fall has never been fully explained, though it is traditionally related to the poet's allegedly libertine views and behaviour. Though thereafter he enjoyed favour, from time to time, from the throne and from ministers like Djalâl al-Dîn Tûrânshâh, he seems never fully to have regained his former standing. Yet it should be remembered that there is still no real certainty as to what standing actually signified: certainly there is frequent reference to poverty throughout the poet's life (whether it be regarded as a complaint, a hint or a literary device), and there is no serious suggestion that he held a regular, richly rewarded office as "court poet". At one time he is said to have been a professor of Qur'ânic exegesis at a madrasa, but there is doubt as to which of his patrons might have obtained him this preferment and no record of his period of tenure.

Legend credits Hâfîz with editing his Diwân in 770/1368, i.e., over twenty years before his death, but no manuscript of this version is known. Less speculative, perhaps, but still unattested by real evidence, is the edition (with a preface of doubtful biographical value) compiled after the poet's death by a disciple, a certain Mûhammad Gulandâm. From this tradition version are assumed to derive the thousands of manuscripts now extant and over 100 printed editions: many of these versions differ widely in the order and number of poems, in the order and number of verses within a given poem, and in their detailed readings. The bibliography is very extensive, and, while some of the principal editions or translations can be mentioned here. (In general, it may be said that serious interest in Hâfîz seems to have passed, after his death, to the Persian world and to India, whence it came by the late 18th century to Europe, returning in strength to Persia only in the 20s and 30s of the present century). First, it should be mentioned that several manuscripts are known in Persia, in Europe and elsewhere, which date from about the second and third quarters of the 15th century, i.e., from thirty to sixty years after the poet's death; the most reliable of these contain just under 500 poems, while later versions rise to 900 and beyond. (In 1958, P. N. Râhânlî published a manuscript dated around 818/1414 that contains 152 poems in good textual condition). Derivative manuscripts, sometimes with commentaries in Persian, Turkish or Urdu, continued to circulate throughout the next four centuries.

The earliest historic recension, for long accepted as authoritative, and as a source of Hâfîz's life, was that of the Ottoman Südt (d. 1000/1591); he was at one time charged with having suppressed one or two poems of Hâfîz's and rejected much modern scholarship when it had justifified him by failing to find these poems in early manuscripts, and by casting at least some doubt on Hâfîz's Shî'ism. This recension was taken as the basis for another long-dominant edition, the three volumes (692 poems) of H. Brockhaus, Leipzig 1854-61. The late 18th and early 19th centuries saw much fragmentary and dilettante preoccupation with Hâfîz among Europeans (chiefly British and French), but a landmark in printed texts was the Calcutta edition of 1791 (275 poems), associated with the name of Upjohn; this edition was still based on late manuscripts and largely on the Südt recension; its introduction provided much of the material for the traditional life. J. von Hammer-Purgstall produced in 1812-3 a massive German prose-translation of the Diwân, which was known to Goethe at the time he was writing the West-d{"u}nker Diwan. Between 1858 and 1864, i.e., roughly at the same time as the Brockhaus edition mentioned above, and using substantially the same sources, V. von Rosenweig-Schwannau brought out another three-volume edition of the text, accompanied by a remarkably skillful verse-translation in German. The English renderings, partial or complete, of the late 19th century (those, for example, of H. Bicknell, H. Wilberforce Clarke, Gertrude Bell and W. Leaf) deserve only passing mention, despite interesting merits of their own. By 1900 a largely spurious, second-growth Hâfîz stood beside the several approximations to the real figure. The 20th century saw the rebirth of serious Hâfîz scholarship in Persia. Special mention has already been made of the fundamental research of Kasîm Ghânî, but there are few eminent Persian scholars of the present day who have not contributed important articles in this field. In particular, three editions merit notice: that of Abd al-Rahîm Khâkhâl, Tehran 1927 (495 poems, based on a manuscript of 828/1424, but marred by errors); that of Huseyn Pizhmân, Tehran 1936 (994 poems, marked as doubtful); and that of Muhammad Kâzîm Kâzîm Ghânî, Tehran 1941 (576 poems; the most scientific and reliable edition so far, based on some very old manuscripts; contains a good introduction, but lacks a critical apparatus). A new edition, also based on very early manuscripts, is reportedly in preparation by H. Ritter.

It will be seen that the two basic tasks of all research on Persian poetry, the establishment of a significant biography and the edition of an authoritative text, have assumed added and special dimensions in the case of Hâfîz. In briefest sum, one may state the dilemma thus: no text of Hâfîz, however good in itself, can be fully intelligible at any level without a marked amplification in our knowledge of his life and times; yet much of such knowledge must come from an analysis of the text, and one can have little confidence in the results of analyses, however scrupulously conducted, that are
based on texts of doubtful reliability. It may well prove that neither task is fully susceptible of solution, even within limited terms of reference: while solidification of the biography must largely wait on the text, the creation of an inventory of the worth of a rich yield; any acceptable text will inevitably be based on virtually the sole criterion of seniority of manuscript, and the oldest Oriental manuscripts, particularly if falling outside the author's lifetime, are not necessarily the fullest or the most accurate in any absolute sense. This is especially true of poetry, and indications so far suggest that it is even more so the case of the poetry of Hafiz.

There is, too, the fundamental question of the poet's own intent: should everything he ever wrote (or perhaps merely countersigned) be included, even if he might himself have chosen to omit certain items from the supposed canon of 770/1368? Did he have second (or later) thoughts about the inclusion, the order, or the actual text of whole poems or individual verses? If we cannot now hope to answer questions of the classical Western sense, we may hope to do more in effect than publishing early manuscripts and observing their differences from later ones. Certain generally useful conclusions may be drawn, but we may well never be sure what such differences signify in any particular case.

Failure hitherto to solve these basic problems has never quenched interest in several secondary problems related to them. Scholars living in an age of non-representational art and literature are perhaps less concerned than most of their forebears (E. G. Browne was in advance of his age here) to discover positively "whether Hafiz meant what he said", whether he was a mystic or a libertine, a good Muslim or a sceptic, or all of these by turns. It is now generally claimed (without prejudice) merely that he spoke through the standard themes and terminology of hedonism, the lament for mortality, human and mystical love, and so on; that he was a superbly linguistic and literary craftsman, who took these forms so far beyond the work of his predecessors that he practically cut off all succession; and that he revolutionized the ghased and the panegyric both, by making the one the vehicle for the other in the place of the kasida. Nevertheless, useful new work has been done (particularly by R. Lescoat) in establishing the nature of certain poems so as to suggest a development in Hafiz's attitude, style and methods. The secondary problem most hotly debated in recent years concerns the "artistic unity" of the poems: even supposing that the present varying order of verses were reduced to an original unity, is there any genuine unity in these poems? Even supposing that the present varying order of verses were reduced to an original unity, is there any genuine unity in these poems? The result of this endeavour was the Madjam, which contains: A. Introduction and Contents. — B. The Chronicle of al-Tabari translated by Bal'amal. — C. Conclusion of this work to 865/1458 by Hafiz-i Abrü. — D. Introduction to the Di'imi al-tawarih, which contains an extract from the al-Mamlik wa-suwar al-afyldim, probably one of the redactions of the al-Balkhi. In this unfinished and untitled work he could not repress his interests as a historian and included in it extensive historical passages especially on the history of Fars, Kirmân and Khurâsan.

While occupied with this geographical work Hafiz-i Abrü was in 820/1417 charged by Shâhrukh to compile a voluminous historical enterprise consisting of three famous older historical books, with supplements and a continuation written by himself. The result of this work was the Muttamâ, which contains: A. Introduction and Contents. — B. The Chronicle of al-Tabari translated by Bal'amal. — C. Conclusion of this work to 856/1452 by Hafiz-i Abrü. — D. Introduction to the Di'imi al-tawarih, which contains an extract from the al-Mamlik wa-suwar al-afyldim, probably one of the redactions of the al-Balkhi. In this unfinished and untitled work he could not repress his interests as a historian and included in it extensive historical passages especially on the history of Fars, Kirmân and Khurâsan.

Bibliography: In addition to the references in the text, see: Kâsim Ghanî, Bahdr dar 'akhâr wa aâhâr wa abhdî-i Hâfiz, Tehrân 1321-2/1942-3 (2 vols. only appeared before the author's death); J. Ryhka, Iranische Literaturgeschichte, Leipzig 1959, 256-68 and bibliographical references (the best and fullest summary to date); H. R. Roemer, Probleme der Hafizforschung und der Stand derer Lösung, Wiesbaden 1951; A. Göpplari, Hafiz Divans, Istanbul 1944 (useful Preface); R. Lescoat, Chronologie de 'l'œuvre de Hafiz, in B. E. Or., 1944, 57-100; A. J. Arberry, Hafiz: fifty poems, Cambridge 1947 and reprinted, 1-34; idem, Classical Persian literature, London 1958, 329-63; Browne, iii, 271-319; IA, s.v. Hâfiz, by H. Ritter.
The further great historical enterprise of Hafiz-i Abrü is the Madimâ al-tawdrikh, a universal chronicle divided into four voluminous parts. The first part, dedicated to the life of Timur (736-807/1336-1405), is subdivided into two parts, the first dealing with the life of Timur to 772/1370 and the second with the reign of Shahrukh to 782/1380. The second part is the third enlarged redaction of his history of Shâhârkh. The date of his birth is uncertain. Hafiz Ahmed was ordered to restore Ottoman control over Bagdad, where the subâbi Bekir was in rebellion, but he failed in this mission, the forces of the Safawid Shah Abbâs I seizing the town in the winter of 1033/1623-4. Hafiz Ahmed became Grand Vizier in 1034/February 1625. The main event of his Grand Vizierate was his negotiations against the Druze chieftain of Lebanon, Fakhri al-Din. Hafiz Ahmed was an interesting example of the manner of working which relate to these years. The second part is the third enlarged redaction of his history of Shâhârkh.

As this survey shows, the works of Hafiz-i Abrü are an interesting example of the manner of working of a Persian historian of the Middle Ages in what concerns the use of works of other authors and his own former books. For the first 22 years of the reign of Shâhârkh his work is the best source. The fourth part of the Madimâ al-tawdrikh was practically the sole source of the Mâtla‘ al-salâ’în by ‘Abd al-Razzâk Samarkandî and hence of the later Persian chroniclers.

**Bibliography:**

**Signoria of Venice, states that he was then about forty years of age (Barozzi and Berchet, i, 146: ‘... Câbîl bassa già capitan del Mare che regge ora D. Matteo da Darmasco sarà di 40 anni ...’). He rose in the enderûn-i humdân to the status of muṣâkh, i.e., confidant of the sultan, and to the office of doghândi baghî. On leaving the enderûn-i humdân he became a vizier and also Kapûdân Pâshâ, i.e., High Admiral of the Ottoman fleet—an appointment that he filled (22 Shawwâl 1036/February 1626 until 16 February 1630: cf. Na‘îmî, ii, 23 and Salingar, 259, note i) with little distinction, since he failed, in contrast, in 1037/1627 to stop the ship of the Sultan of Egypt from Alexandria to Istanbul, a number of vessels being lost to a Florentine squadron near Rhodes as a result, in no small measure, of his negligence. Hafiz Ahmed, deposed from the office of Kapûdân, was now made Beglerbeg of Sham (Damasco). During his tenure of this appointment (April 1609-January 1615: cf. Laoust, 199-201) he was engaged in operations against the Druze chieftain of Lebanon, Fakhîr al-Dîn. Two years later, being then Beglerbeg of Diyarbekir, Hafiz Ahmed was ordered to restore Ottoman control over Bagdad, where the subâbi Bekir was in rebellion, but he failed in this mission, the forces of the Safawîd Shâh Abbâs I seizing the town in the winter of 1033/1623-4. Hafiz Ahmed became Grand Vizier in Rabi‘ II 1034/February 1625. The main event of his Grand Vizierate was his negotiations against the Druze chieftain of Lebanon, Fakhîr al-Dîn. Hafiz Ahmed was an interesting example of the manner of working which relate to these years. The second part is the third enlarged redaction of his history of Shâhârkh.

As this survey shows, the works of Hafiz-i Abrü are an interesting example of the manner of working of a Persian historian of the Middle Ages in what concerns the use of works of other authors and his own former books. For the first 22 years of the reign of Shâhârkh his work is the best source. The fourth part of the Madimâ al-tawdrikh was practically the sole source of the Mâtla‘ al-salâ’în by ‘Abd al-Razzâk Samarkandi and hence of the later Persian chroniclers.

Hafiz Ahmed Pasha — Hafiz Rahmat Khan

Hafiz Ibrihim, Muhammad, Egyptian poet and writer, was born between 1869 and 1872 on the banks of the Nile near Dayrūt (madīrīyya of Asyūt). On the death of his father, when he was four years old, he was given a home by his maternal uncle, first in Cairo and then at Tantâ, where he had the opportunity of attending, albeit irregularly, the few courses given in the al-Ahmed mosque, and of familiarizing himself with Arabic classical poetry, especially that of the Abbasid period, while serving his apprenticeship in the offices of several lawyers. Continually seeking anxiously for the vocation which he had not yet discovered, and weary of living at his uncle’s expense, he left Tantâ to enrol in the military college at Cairo; after graduating, he entered Government service first in the War Ministry and then in the Interior. As an officer, he served for a long time in the Eastern Sudan, at the time of Lord Kitchener’s campaign, but after a riot in which he had been involved he asked to be retired. Returning to Cairo in 1906 he had the opportunity of attaching himself to Muhammad ‘Abd al-Muwaylihi (q.v.), whose disciple he was, and of devoting himself more freely to poetry. He was also at this period in contact with such political leaders as Sa‘d Zaghlul (q.v.), Musâfaš Kâmil (q.v.) and Kâsim Amin (q.v.), as well as with the intellectuals gathered round Khâli‘l Mu‘trân (q.v.) and others. It was only in 1911 that he succeeded in becoming a member of the civil service and in being nominated head of the literary section of the Khedivial Library (now the Dâr al-Kutub) at Cairo, a post which he retained almost until his death on 21 July 1932.

Hafiz Ibrâhim must be counted among the representatives of the innovating Egyptian poetical school, whose leader was Sâmî al-Bârûdî (q.v.) and who followed in his footsteps at the end of the 19th/18th century. Some of his ancestors (memorizer) of the Qur’ân, was the Afghan, a tribe of highlanders aiming to detach themselves from tradition. But he set himself apart from other spokesmen of the new generation by his more spontaneous adherence to the cause of the people and the cause of the Arab community in general, whose legitimate emotions and ambitions he succeeded in reproducing. In fact, the pieces in his DISRA (Cairo 1937, 2 vols.) reveal a mass of details and direct observations which on the one hand throw light on several aspects of Egyptian political and social life during the first decades of this century, and on the other allow us to glimpse the frequently polemical standpoint of the poet. Particularly in those verses which are immediately recognized as poetic, he demonstrates his perfect grasp of the reality of the situation, that is, that the three authorities struggling for the good opinion of the public (British, the Sultan, and the Khedive) must be flattered and that he must above all smother his anger and despair and conceal his thoughts. Thus his occasional poems, in which the poet of the imagination. Suffering, complaints, anxiety and melancholy are the basis for the best verses of Hafiz Ibrâhim, who reserved for such themes his most delicate choice of images and his most effective vocabulary, in a structure that is far from ignoring the classical tradition. In this article, his poetry, which cannot be subjected to exhaustive criticism in this article, became known fairly rapidly in the learned circles of al-Azhâr and received a flattering welcome among the cultured élite and the political leaders of Egypt. Hafiz Ibrâhim, in his sympathy with the wretched, became above all the echo of the sufferings and hopes of his people; it was perhaps this predisposition which led him to translate certain episodes from Victor Hugo’s Les Miserables (al-Bu‘asîd) (Cairo 1903, and reprints), remarkable especially for the splendour of his Arabic prose; another aspect of his narrative style is represented by Layâli Sa‘îf (1st ed.: Cairo 1906, 2nd ed.: n.d.) in which there appear more strongly the moral objectives which the imitators of the mahâmât (q.v.) cherished at the end of the 19th century; this long mahâmâh contains a critical survey of Egyptian moralists and a parodic attempt (al-Bârûdî 1913, 5 vols.).

Bibliography: To the references in Brockelmann, S III, 57-71, the following should be added: Hasan Kâmil al-Sayyâfî, Hafiz wa-Shawâbî; Ahmad al-Tâhir, Mu‘hâdârât al Hafiz Ibrâhim, Cairo 1954; Shawâk Hilî‘, al-Adâb al-arabî al-mu‘âsir (I) fi Misr, Cairo 1957, 82-92. (U. Rizzitano) Hafiz Rahmat Khan, b. Shâh ‘Alâm Khân b. Mâhmmûd Khân b. Shâhâb al-Dîn known as Rôtâ Bâbâ . . . B. Bharêf Shân . . . b. ‘Abd al-Râghîd, the legendary ancestor of the Pathâns or Afghans, a hafiz (memorizer) of the Qur’ân, was the head of an important ruling family of Rohilkhand during the 12th/18th century. Some of his ancestors had migrated from Shôrabak in the Pishin district of West Pakistan to Târ Hazâra where the family ultimately settled. He was born in 1120/1708 at Târ Shâhâmâtâpur, a small little-known village in râb (i.e., a hilly country, a term loosely applied to the tribal areas of present-day West Pakistan and the adjoining regions). The story of his first visit to India where, in the territory then known as Kaftîr (modern Rohilkhand) one of his slaves, Dàwûd Khân, had been able to gain wealth and influence with the local râjâs and zamindârs, whom he served as a mercenary. Gradually Dàwûd Khân was able to carve out a separate principality for himself. His almost meteoric rise to power attracted many of his fellow-countrymen to India including Shâh ‘Alâm Khân, father of Rahmat Khân. On arrival in India he was warmly received by Dàwûd Khân, in the manner befitting a master. But Shâh ‘Alâm Khân apparently became jealous of the success of his former bondsman, who had him murdered. Soon afterwards Dàwûd Khân was himself killed, and succeeded by his adopted son ‘Alî Muhammad Khân. A brave and daring soldier, he was awarded a standard and kettle-drums along with the title of Nawwâb by the reigning Mughal emperor, and won the favour of the Grand Vizier Kâmar al-Dîn Khân. Emboldened by this patronage the Rohillas, under ‘Alî Muhammad Khân, began their depredations in and around the parganas of Bareilly (q.v.). Complaints reached the emperor Muhammad Shâh (reg. 1731-1779/1165/1748) who ordered punitive
measures against them. An unexpected victory over an imperial force encouraged the Rohilla adventurer to further annexations. These alarmed Sa'd-Allah Khan, who had his own plans of expansion. Himself a Shi'i, he disliked the orthodox Rohillas, and instigated the Mughal emperor against 'Ali Muhammad Khan. An expedition, led by the emperor himself, was mounted against the Rohilla chief, who submitted and, on the intercession of the wazir, was forgiven but carried as a prisoner to Delhi. Hafiz Rahmat Khan, the right-hand man of the emperor, was allowed to withdraw, left free. The detention of 'Ali Muhammad Khan was taken as a national insult and Rahmat Khan misused the liberty granted to him by raising a large force and marching to the capital in order to coerce the emperor into releasing his patron 'Ali Muhammad. He succeeded in brow-beating the wazir and other councillors into accepting his demands. Consequently 'Ali Muhammad Khan was released from captivity, and the government of the pargana of Sirhind, at that time disturbed by roving bands of Sikhs and Diâjs, was conferred on him. Rahmat Khan again distinguished himself by breaking the resistance of the refractory zamindârs and dispersing the marauders. 'Ali Muhammad Khan had not been at his post for long when news of Ahmad Shah Abdâli's invasion of India (1161/1748) reached Delhi. As a precaution against the defeat of the Rohillas, 'Ali Muhammad Khan was removed from Sirhind and reappointed to his old post in Katehr.

On the death of the emperor Muhammad Shah in 1168/1748 and that of the wazir Kamar al-Dîn Khan, there was a keen contest for this key-post in the empire. Sa'dar-Djiang, an aspirant to the office, was able to enlist the support of 'Ali Muhammad Khan, who deputed Rahmat Khan to help him achieve his ambition. Rahmat Khan marched to Delhi with 1,000 choice troops and by a bold stroke compelled the emperor Ahmad Shah (reg. 1161/1748-1169/1754) to confer the office of wazir on Sa'dar-Djiang. Soon thereafter 'Ali Muhammad Khan died, on 3 Shawwâl 1162/14 September 1749, having, according to Gulistân-i Rahmat (see Bibliography), nominated Rahmat Khan as his successor only two days before his death. Rahmat Khan, however, willingly withdrew in favour of his elder brother 'Abd Allah Khan, who had been retained as deputy of Safdar-Djiang, to whom he devoted all his energies. 'Abd Allah Khan virtually adopted the rôle of regent during the minority of Sa'd-Allah. This situation tempted the rapacious Sa'dar-Djiang to try and gain the Rohilla acquisitions for himself. He succeeded in pitting Ka'im Khan, the Bangash Nawâb of Farukhabad [q.v.], against the Rohillas. A pitched battle was fought at a place three miles from Badaun [q.v.], in which Ka'im Khan was slain and his large force of 60,000 horse routed. As fruit of the victory Rahmat Khan annexed many parganas belonging to the vanquished Bangash chief. Sa'dar-Djiang turned the defeat of his own instrument to advantage and captured Farrukhabad, maltreating his fallen ally's family. Ahmad Khan, younger brother of Ka'im Khan, however, soon recovered his lost patrimony by defeating and killing Nawal Rây, the deputy of Sa'dar-Djiang. This incensed Sa'dar-Djiang, who assembled a huge force and marched against the Afghans. On an appeal for help from Ahmad Khan, Hafiz Rahmat Khan joined in the battle and their combined troops inflicted a heavy defeat on the Awadh army. Smashing the army, Sa'dar-Djiang called in the Marathás under Malhar Râo Holkar and Djay Appâ Sindhiyâ. Hafiz Rahmat Khan, finding himself unequal to the Marathás, did not respond to Ahmad Khan's appeals for help, but joined the forces of Sa'd-Allah Khan, acting independently of the regent, and a pitched battle was fought at a place three miles from Badaun, in a fierce battle near Fateghar on 28 April 1751. By imprudently refusing help to a brother Afghan ruler in trouble, Rahmat Khan brought misfortune not only to the Afghans but also darkened his own prospects as an independent ruler of Rohilkhand. Desirous of wielding more power, he then strengthened his position and sided with Safdar-Djiang, who, after his dismissal from the office of wazir, was trying to make trouble. In the armed conflict that followed between the Marathás and the ruler of Farrukhabad, Rahmat Khan enigmatically remained neutral. Elated by their victory, the Marathás and their ally Sa'dar-Djiang now thought of invading Ka'têr and annexing it. Sensing their designs, Rahmat Khan and other Rohilla chiefs fled to the difficult reaches of the Terai, where they entrenched themselves. Sa'dar-Djiang and the Marathás laid siege to their camp, but the difficulties of the terrain and the news of Abdâli's impending invasion of India discouraged them. Considering it prudent to retreat, they agreed, at the instance of the emperor Ahmad Shah, to open peace negotiations with the Rohillas. The peace treaty was finally signed at Lucknow in February 1752. By it the Rohillas were required to pay an indemnity of fifty lakhs of rupees to the Marathás, the price of their participation in the conflict in aid of Awadh and Ka'têr. To establish his superiority further, Sa'dar-Djiang compelled Rahmat Khan to accompany him to Awadh. However, after reaching Môhâân, 15 miles from Lucknow, Rahmat Khan was allowed to return to his own country. With a view to further reducing the position and influence of Rahmat Khan, the two elder sons of 'Ali Muhammad Khan, who had been kept as hostages at Kandahâr, were released by Ahmad Shah Abdâli in 1166/1752 on the occasion of his making yet another invasion of India, and were sent back to Ka'têr "with a letter strongly recommending their guardians to carry out Ali Muhammad's will." Willy-nilly Rahmat Khan had to part with his father's acquisitions of 1,000 miles, divided equally, each to the three major sons of 'Ali Muhammad, i.e., 'Abd Allah Khan, Fayd al-allah Khan and Sa'd-Allah Khan (the ruling prince, but the younger son). The presence of Rahmat Khan as a virtual 'regent' was resented by 'Abd Allah, an ambitious and headstrong young man, who attempted to poison him, but the attempt was foiled; it led to the banishment of 'Abd Allah Khan from Katehr. This division of the country and his subsequent loss of revenue and prestige compelled Rahmat Khan to seek new possessions, and he consequently extended his rule to Pillîbhit which he renamed Hafîzabâd (a name which never became popular) and which now became the principal seat of his government; Bareilly [q.v.], which had all along been the major centre of his activity, was relegated to a secondary position. At Pillîbhit he constructed a huge palace, a Diwan-i 'Amm and a Diwan-i 'Amîn to complete the appurtenances of rulership. In the meantime, Sa'dar-Djiang was preparing to fight the emperor's party and summoned Rahmat Khan to his assistance. He at first refused, but on second thoughts considered it prudent to remain neutral. This was construed as an open act of rebellion against the emperor, for as a loyal subject Rahmat Khan was expected to side...
with the emperor's party against a refractory subject. Hafiz Rahmat Khan had to pay dearly for this political blunder which led to the ruin of the short-lived Rohilla kingdom and dimmed the prospects of Afghan rule in India. In this internal conflict, which may rightly be termed the rebellion of Sa’dar-Djang, the only Afghan chief who responded to the call of the emperor was Nagib al-Dawla. It was the very next year Ahmad Shah Abdali invaded India for the third time, and ordered Rahmat Khan to help him. He marched against Durrani with his troops. For the help rendered by Hafiz Rahmat Khan, the Durrani chief conferred the pargana of Etawah on him. Rahmat Khan expelled the Marathas, who still held it. Soon afterwards Shudja\(^{1}\) al-Dawla thought of settling old scores with the Bangash ruler of Farrukhabad and in alliance with his former foe, Nagib al-Dawla, who had now become waiz\(^{2}\) and amir ul-umara\(^{3}\), commenced operations against Farrukhabad. Hafiz Rahmat Khan sided with the weaker side and was able to avert the fall of the small Afghan kingdom. The next notable event in which Rahmat Khan was involved was the attack on Patna, then held by the British, in 1127/1765, and the battle of Buxar fought in 1128/1764 between the British and Mir Qasim 4All, the deposed nizam of Bengal and Rahmat Khan's ally Shudja\(^{4}\) al-Dawla, who greatly feared the growing power of the British in India. Shudja\(^{5}\) al-Dawla was defeated and sought refuge with Rahmat Khan, who was then encamped at Hasanpur (district Muradabad). Finding him unwilling to render active help, Shudja\(^{6}\) al-Dawla turned to the Marathas and they both fell on the British at Kofa Di\(\text{a}\)hanabad in 1129/1765. However, their troops could not withstand the destructive fire of the English batteries and were completely routed. Shudja\(^{7}\) al-Dawla was captured and retired to Shudja\(^{8}\) al-Dawla, who gloated over it. The corpse was later recovered from the battlefield and the severed head was sewn to it. It was despatched to Bareilly, where it was buried. In 1129/1775 Rao Pah\(\text{a}\) Singh, who had received a number of villages in d\(\text{d}\)gov from Rahmat Khan, erected a mausoleum over his grave, which was completed by Dhu 'l-Fa\(\text{r}\)\(\text{i}\) 4All Khan, a son of Rahmat Khan, in 1194/1780. It was repaired from time to time but is now in a sad state of neglect.

After the death of Hafiz Rahmat Khan, the victorious armies fell to depredation and spoliation of the helpless population. Thousands of villages which refused to surrender were burnt down and the inhabitants driven out. Hundreds of buildings which had been erected by the Rohilla chiefs or which were an eye-sore to Shudja\(^{4}\) al-Dawla as an extreme example of show and display, were razed to the ground. Close relations of the fallen hero were not spared and were subjected to all sorts of indignities. They were reduced to great straits and even the women-folk were forced to march on foot from Pilibhit, where they had taken refuge, to Basawli. For days together during the fatiguing march via Aonla and Bareilly several members of the ex-ruling family died of hunger and other privations. The prisoners were eventually transferred to the fort at Allahabad, where they remained for only a few months since the concentration of Rohilla forces under Fayd Allah Khan at Laldh\(\text{a}\)ng and the serious illness of Shudja\(^{4}\) al-Dawla compelled the latter, who had earlier refused to listen to the entreaties of his own mother, to relent and set free some of the prisoners. Mahabbat Khan, another son of Rahmat Khan, however, preferred to remain in detention along with his mother, the widow of Rahmat Khan, and other ladies of his household rather than to win his own personal freedom.

The regime of Rahmat Khan, a just and humane ruler, was marked by all-round peace and prosperity. "Under his . . . rule the peasants were protected; the artisans and craftsmen were encouraged to pursue their vocations in peace and without let or hindrance; trade and commerce flourished; and vexatious taxes . . ."

\(1\) Shudja\(^{4}\)al-Dawla with the provision to pay Rs. 1,000,000 in cash and the balance in three equal instalments of Rs. 1,000,000 to be spread over three years. To this agreement Sir Robert Barker, the British commander-in-chief, was a witness (cf. C. E. Aitchison, Treaties, Sanads and Engagements, i, 5).

As Hafiz Rahmat Khan felt that the conditions binding him to pay forty lakhs of rupees for warding off the menace of the Marathas had not been fulfilled, he declined to pay. This was construed as a breach of agreement solemnly entered into by the Rohilla chief. The British commander-in-chief, the notorious Durrani with their troops. The court of the fallen hero were not spared and were subjected to all sorts of indignities. They were reduced to great straits and even the women-folk were forced to march on foot from Pilibhit, where they had taken refuge, to Basawli. For days together during the fatiguing march via Aonla and Bareilly several members of the ex-ruling family died of hunger and other privations. The prisoners were eventually transferred to the fort at Allahabad, where they remained for only a few months since the concentration of Rohilla forces under Fayd Allah Khan at Laldhang and the serious illness of Shudja\(^{4}\) al-Dawla compelled the latter, who had earlier refused to listen to the entreaties of his own mother, to relent and set free some of the prisoners. Mahabbat Khan, another son of Rahmat Khan, however, preferred to remain in detention along with his mother, the widow of Rahmat Khan, and other ladies of his household rather than to win his own personal freedom.

The regime of Rahmat Khan, a just and humane ruler, was marked by all-round peace and prosperity. "Under his . . . rule the peasants were protected; the artisans and craftsmen were encouraged to pursue their vocations in peace and without let or hindrance; trade and commerce flourished and vexatious taxes . . ."
upon trade were abolished". A patron of learning and literature, he supported five... of Afghan poets preserved in the British Museum are... by C. Elliot, London 1831 (a rather partisan account, but not entirely unhistorical); Muh. Sadr-Dat Yar Khan, Gulam Rafrmat (still in MS), an enlarged version of Gulamst-Rahmat, Agra 1836 (under the Persian title Dikh-i Hafiz Rafrmat Khan); J. Strachey, Hastings and the Rohilla War, Oxford 1892 (gives a one-sided picture of the war which led to the ruin of the Rohillas); Kamal al-Din Haydar, Ta'rikh-i Awadh (Kaysar-tawahir), Lucknow 1597-1597, 1, 57 ff; Nadim al-Ghanî Râmphâ, Ta'rikh-i Awadh, Lucknow 1795, i, 117 ff, ii, 289-295 (quotes several authorities, not seen by me); idem, Akhbar al-samadâd, Bada'un 1918, Attal 'All Barâ'î, Hayât Hafiz Rafrmat Khan, Karachi 1963 (a fairly well-balanced account); Ghulam Husayn Khan, Siyar al-muta'aabkhdirin, Lucknow 1238/1886, vols. ii and iii passim; Nûr al-Din Husayn Khan, Sargudhad-i Nawâd Nadîg al-Dawla, Urdu tr., Aligarh 1924; Ghulâm 'All Khan Nakawi, 'Imdâd al-sa'adât, Lucknow 1857; Mill and Wilson, History of India, London 1958, ii; H. A. S. Bazmee Ansari

HAFEZ AL-DIN [see AL-NASAFI]

HAFEZ ('ABD AL-), 'Alawi Sultan of Morocco, commonly known both in Europe and Morocco by the name of Moulay Hafid. He was born in 1880 to the Sultan Moulay Hasan [q.v.] and his legal wife al-'Aliyya, who belonged to the Arab confederacy of Shâwiyya. On the death of his father, his younger brother 'Abd al-'Aziz [q.v.], who had become Sultan, appointed him khâlifa at Marrûkûsh. After a long underhand struggle and with the aid of the great khâdî Madâni Glâwi [see GLÀWA] he was proclaimed sultan at Marrûkûsh on 16 August 1907. But at Fâs in January 1908 he was recognized as Sultan only on the strength of his promises to follow a xenophone policy imposed by the powerful Moroccan élite. (An attempt to lure the Sultan to take place at this time but without result). In spite of the support which Moulay Hafid found in Germany, the foreign powers did not recognize him until 1909, and then only after he had defeated the troops of his deposed brother and promised to respect the undertakings given by the latter to the European nations at the Conference of Algiers (1906). Very well-read, a jurist and a theologian, he did not possess his father's moral qualities and was ill-prepared for the insurmountable difficulties he had to face. During his reign France and Germany reached the agreement of 1909 which recognized the "special interests" of the former in Moroccan affairs and made possible the signing of the Franco-Moroccan protocol of 4 March 1910. This act of diplomacy established "the understanding between the two countries" and enabled an international loan to be launched, which was greatly needed by Morocco. In November of the same year, the settlement of the disorders in Melilia resulted in the signing of an agreement between the Sultan and Spain. Serious incidents occurred in the beginning of 1911 and, faced by increasing disorder, Moulay Hafid officially requested the help of the French troops who had been stationed at Casa-blanca since 1907. They were soon able to relieve Fâs and facilitated the arrest and execution of the agitator (rogu) Bû ْحمارة [q.v.] who had been at large in the countryside since 1902. The Spaniards, in order to counterbalance the French operations, occupied Larache (al-Azîq) and then Arzila (Asîlî). This interference provoked the disapproval of Germany, who sent a gunboat to Agadir and created for herself a zone of influence in the Sûs. The Agadir incident was settled by the Franco-German agreement of November 1911, which gave France a free hand in Morocco in return for considerable territorial compensations in Equatorial Africa. On 30 March 1912 at Fâs the sultan signed with M. Regnault, representing the French government, the Protetectorate Treaty. Immediately afterwards an insurrection broke out around the capital and, on 17 April, serious riots took place in Fâs. They cost the lives of scores of French soldiers and civilians and of a large number of Moroccan Jews whose ghetto (mahlîq) had been plundered. General Lyautey was then appointed Resident Commissioner General of the French Republic alongside H.M. the Sultan of Morocco. The position of Moulay Hafid became impossible, both in the eyes of France and of the Moroccan people, and he decided to abdicate. After he had very skilfully settled his own position and that of his family, the decision was officially announced on 13 July 1912. The Sultan then paid a visit to France, returning thereafter to Tangier, along with H.M. the Sultan of Morocco, who was again at his disposal. During the 1914-18 War he lived in Spain. He died at Enghien (France) on 4 April 1937. His body was taken back to Fâs with the honours appropriate to his rank.

HAFIZABAD — IJAFSA

Pakistan, lying between 31° 45' and 32° 20' N. and 73° 10' and 73° 50' E. on the east bank of the river Cenab, with an area of 894 sq. miles. It is 33 miles by road from Gudiranwala, which lies on the main rail-road to Lahore. It is now a small town mainly known as a wholesale market for agricultural produce, chiefly rice, wheat, and oil-seeds. Founded by one Hafiz, said to have been a favourite of the emperor Akbar, it is of little historical importance. During the Sikh supremacy, it suffered along with other parts of Gudiranwala district. Its two leading tribes—the Bhattas and the Taraafs—resolutely resisted the Sikhs and consequently suffered heavily. During the disturbances after the first World War, Hafizabad was also badly affected, with the result that martial law was imposed.

(A. S. BAZMEE ANSARI)

HAIFRAK, a district in the seventh 'Ustân (Fars), situated in the plain where the Pulvar Rud joins the Peşâwar and Lahore. It is now a small town mainly known as a wholesale market for agricultural produce, chiefly rice, wheat, and oil-seeds. Founded by one Hafiz, said to have been a favourite of the emperor Akbar, it is of little historical importance. During the Sikh supremacy, it suffered along with other parts of Gudiranwala district. Its two leading tribes—the Bhattas and the Taraafs—resolutely resisted the Sikhs and consequently suffered heavily. During the disturbances after the first World War, Hafizabad was also badly affected, with the result that martial law was imposed.

(A. S. BAZMEE ANSARI)

HAIFSA, daughter of 'Umar b. Al-Kha'itab and wife of the Prophet, is said to have been born five years before Muhammad's mission, while the Kuraysh were rebuilding the Ka'ba. Her mother was Zaynab bint Maz'un, the sister of the famous Ummân b. Maz'un [q.v.]. Married first to the Kuraysh al-Khuways b. Hudhâfa al-Salm and widow-
ed while still childless (her husband, a Badri, died at Medina on the return from Badr), she was offered by her father in marriage to Abū Bakr and to ʿUmmān b. ʿAffān; the latter refused, explaining that he did not want to marry at that time; the former said nothing and later made his excuses to ʿUmar, saying that he had understood that Muḥammad himself intended to marry Ḥafṣa. Muḥammad did indeed propose marriage and ʿUmar accepted, naturally with enthusiasm. It is very likely that the Prophet was led to contract this marriage for reasons of policy, wishing to strengthen his bonds with such a valuable supporter as ʿUmar, all the more so because shortly before this he had asked in marriage Ḥafṣa, her father in marriage to Abu Bakr and to ʿUmmān b. ʿAffān.

The name of Ḥafṣa is mentioned in the sources in connexion with the following events. Ḥiğraː she emigrated to Medina with her father. Marriage: According to the majority of the sources, Muḥammad married her in the month of Ẓubayr 3/February 625, after his marriage with ʿAisha, and before the Battle of his wives, generally given as his fourth wife. Episodes concerning Muḥammad's harem: At the beginning of Sūrā LXVI are verses alluding to an event or events which are certainly of a domestic nature: God reproaches the Prophet concerning his wives and reminds him that one of them has divulged a secret which he had entrusted to her; an allusion is then made to the alliance of two wives against the Prophet and the passage ends with a threat of general repudiation. The commentators, the authors of books of asbūb al-nusul, the biographers and the muḥaddithūn explain these verses thus: Muḥammad, during a temporary absence of Ḥafṣa, had invited into her room Mary the Cop[te][see māriya] and had relations with her there. Ḥafṣa, returning, surprised them and created a scene. Muḥammad then placated her, swearing that he would have no more relations with his slave, but at the same time insisted that she should not breathe a word of the affair. Ḥafṣa was unable to refrain from telling her friend ʿAisha and the news of the incident spread. The Prophet was annoyed and divorced Ḥafṣa, but soon retracted his decision because Dhiḥrī came down from Heaven and charged him to take back his wife because she was very devout and was to be his wife in Paradise (Ibn Saʿd, vii, 58); moreover, ʿUmar was so grieved by the treatment inflicted on his daughter that he was to be pitied (it was probably ʿUmar's resentment which caused the Prophet to reverse his decision). He freed himself from the oath which he swore concerning Mary by means of a kaffāra, and for twenty-nine days avoided his wives. Nödeke dates this episode to 7/628-9, Caetani to 9/630-1. Some reporters of ṣaḥiḥ are obviously not very happy about this story, which they consider as dishonourable to the Prophet: they assert that the secret confided to Ḥafṣa, and by her to ʿAisha, was the fact that Abū Bakr would succeed to power after Muḥammad and that ʿUmar would follow Abū Bakr (al-Baladhuri, Anṣāb, 1, 424, etc.). For verse 9 of the same Sūrā LXVI the sources supply another sabab al-nusul, while keeping for the verses which follow the explanation given above: Muḥammad visited one of his wives given as Umūm Salama, but sometimes as Ḥafṣa (Ibn Saʿd, viii, 59, etc.; in this case the names change in what follows) and stayed with her longer than usual because she offered her a honey drink of which he was very fond. ʿAisha then agreed with Ḥafṣa and some of the other wives of the harem on a way of preventing this from becoming a habit: one after the other said to Muḥammad when he visited her that a disagreeable smell came from him and that he must have eaten some maghāfīr (a sweet of the date palm tree). But Muḥammad had not eaten this; the smell could only have come from the drink which he had tasted earlier when visiting Umūm Salama; the cause must therefore be the bees which frequented the ʿursift trees. Consequently Muḥammad denied himself the use of honey. But God had allowed it and Muḥammad abrogated the prohibition. According to one hadīth (al-Buhārī, iii, 358, iv, 273 f.), the secret which the Prophet confided to ʿUmar because he was trying to make the latter more generous towards the ʿAisha refers to be connected with this prohibition of honey (and not with the episode of Mary the Cop).

Thus already very early some relaters of traditions, conforming to a different ethical system from that which prevailed in the Prophet's milieu, endeavoured to modify as much as possible the accounts transmitted by the others. This tendency to draw a discreet veil over Muḥammad's domestic life is confirmed in the modern saḥiḥs and notably in Muḥammad ʿAli's notes to his edition and translation of the Kur'ān published under the auspices of the Ahmadiyya. Another episode, which has no connexion with the Kur'ān, shows us once again ʿAisha and Ḥafṣa conspiring to play a trick on a woman of noble family, Asmaʾ bint al-Nuʿmān al-Diāwīnya, whom Muḥammad had sent for from her tribe with the intention of marrying her. After having adored her for her modesty with the Prophet, they advised her to say when he approached her for the first time "I take refuge with God against you," for, they told her, he pleased him when a woman uttered this sentence on such an occasion. The result of this advice was that Muḥammad threw the sleeve of his mantle over his face and cried out three times "It is I who take refuge" and went away. Immediately after this she sent the new bride back to her tribe with gifts to assuage her sorrow; the poor girl did not marry again and died in grief. Ḥafṣa as one of the four privileged wives of Muḥammad: According to Kur'ān, XXXIII, 35, the Prophet was authorized by God to invite to him whichever of his wives he chose without observing any order. The wives to whom he gave preference were ʿAisha, Zaynab and Umūm Salama, but al-Baladhuri (Anṣāb, ii, 448 and his version of the oath (s.w.q) and Ḥafṣa. During the final illness of the Prophet: Some hadīths mention attempts made by ʿAisha and Ḥafṣa to arrange for the Prophet to have private conversations before his death with their fathers, to the exclusion of the other Companions, and especially of ʿAli. This is certainly possible, though these hadīths are contradicted by others in the matter of the persons who were summoned by Muḥammad to his bedside, and it is impossible to tell which are nearer to the truth. Some hadīths mention Ḥafṣa even in connexion with Muḥammad's delegating to Abū Bakr the leading of the public prayer. On the advice of ʿAisha (or of Abū Bakr through ʿAisha as an intermediary), she is said to have suggested to the Prophet that he should entrust this task to ʿUmar instead of to Abū Bakr, asserting that the latter was too weak and that his voice would be strangled by tears. It seems strange that this advice should come from ʿAisha; it has, however, been pointed out that the person chosen to lead the prayer might have suffered harm instead of gaining advantage by taking the Prophet's place at a time when there was not yet any political significance attached to this duty. But in this case also there are some hadīths which are completely different. After the
death of the Prophet: Hafsa, like the other wives of Muhammed, received an annual endowment and enjoyed the respect of the Muslims, but she did not play any political role and spent her time in caliphate duties of her father; all that is reported of her during this period concerns matters which are of minor importance: some of the Companions asked her to persuade Umar to allocate to himself from the public treasury a more liberal allowance, but Umar would not be persuaded to do this, being inspired by the Prophet's example to live very soberly and simply; as he ate frugality and dressed in too mean a fashion, she exhorted him to spend more on himself. Overcome with anger by Abū Lu'lu'a's assassination of her father, she was among those who incited 'Ubayd Allah b. 'Umar [q.v.] to take vengeance on al-Hurmuzaün, and it was because of this interference that her brother 'Abd Allah b. 'Umar exclaimed "God have pity on Hafsa!" ( Ibn Sa'd, ii/1, 259). When Hafsa revolted with Talhah and Zayd after her father (cf. Ibn Hanbal, vi, 141, 237 f.), this campaign, but her brother 'Abd Allah b. 'Umar persuaded her not to become involved. During the conference at Alqurah, she urged 'Abd Allah b. 'Umar to participate in order to prevent a split in the Muslim community. These are the only two active actions she took in any part in the events during the period of the civil wars. Death of Hafsa: According to the majority of the sources, Hafsa died at Medina in the month of Safar 13/662-3, immediately after his accession, and Ibn al-Ash'ir (ii, 73) gives it as 27/647-8 (1). When Muhammad at one time was threatening to return them to their owner when the work of destruction had been finished, she took after her father (e.g., Ibn Hanbal, vii, 180, 1810, 2241, 2242, 2732, 3100, 3101, 3105, ii, 2244 f.; Ibn Hanbal, Tusnad, Cairo 1313, i, 236, ii, 27, ii, 478, vi, 75, 141, 237 f., 267, 283-8; Bu'dhārī, ed. Hafsa Bint al-Hajdaj — Hafsids

Of her poetical production, strongly tinged with touches and genuine sentiments often expressed in a style quite free from rhetorical artificiality may be perceived.

(Ch. Fellay)}

Hafsa Bint al-Hajdaj, a dynastic line of Eastern Barbary (662/1262-1254), whose eponymous ancestor was the celebrated Companion of the Mahdi Ibn Tumart [q.v.], the shaykh Abû Hafs 'Umar b. Yahyâ al-Hintâf [q.v.], one of the chief architects of Almohad greatness. His son, the shaykh Abû Muhammad Abû al-Wâhid b. Abû Hafs, handed over his caliphate to his two brothers (Abû Zakariyya, Abû al-Mu'min, and Shadhili when they died) and was succeeded by them. Under the pretence of defending the purity of Almohad tradition, which he claimed was being undermined by the Hâfsids, the latter finally succeeded his father without difficulty. He gave free rein to his love of ostentation, and from 650/1253 he adopted the caliphal title of al-Mustansir bi'llah. His self-confident policy was rewarded by important diplomatic triumphs in Morocco, Spain and even in the Hijaz and Egypt. His rule was never jeopardised by a few plots and rebellions, often started or supported by the Arabs. In 658/1260 he executed the chief of his chancellery, the Andalusian writer Ibn al-Abbar [q.v.]. On the whole, relations with Christian merchant communities (Spanish, Provençal and Italian) settled in the ports, particularly in Tunis and Alarach, and the Hafsids had consuls. At the beginning of the 7th/13th century many Spanish Muslims, craftsmen, men of letters and so on, emigrated to Hâfsid Ifrikiyya, and before long constituted a powerful Andalusian body along-side the Almohad caste in the capital (see Andalus, vi, appendix).

II. The caliph al-Mustansir (647/1249-77). As heir presumptive, Abû Abû Allâh Muhammad succeeded his father without difficulty. He gave free rein to his love of ostentation, and from 650/1253 he adopted the caliphal title of al-Mustansir bi'llah. His self-confident policy was rewarded by important diplomatic triumphs in Morocco, Spain and even in the Hijaz and Egypt. His rule was never jeopardised by a few plots and rebellions, often started or supported by the Arabs. In 658/1260 he executed the chief of his chancellery, the Andalusian writer Ibn al-Abbar [q.v.]. On the whole, relations with Christian merchant communities (Spanish, Provençal and Italian) settled in the ports, particularly in Tunis and Alarach, and the Hafsids had consuls. At the beginning of the 7th/13th century many Spanish Muslims, craftsmen, men of letters and so on, emigrated to Hâfsid Ifrikiyya, and before long constituted a powerful Andalusian body along-side the Almohad caste in the capital (see Andalus, vi, appendix).

I. The amîr Abû Zakariyya? Yahyâ (625-47/1225-49). Having achieved independence, he gathered together what was to be henceforth the Hâfsid territory, i.e., the whole of Ifrikiyya, by seizing the surrounding provinces of Constantine, Tripolitania and the country south of Constantine of the persistent rebel Ibn Ghâniyâ (631/1234). The following year he annexed Algiers, and then subdued the Chelif valley. He encouraged the expansion of the Banû Sulaym (Ku'ûb and Mirdâs) when they pushed back the Banû Riyâd (Dawâwida) in the Constantine region and the Zâb. In 636/1238, he subdued the Hawwara of the Algerian-Tunisian Powers. He then turned to his former territory (639/1242), and launched an attack against Tlemcen, which he took early in 640/July 1242, handing it back to the 'Abîd al-Wâhid in return for his submission to the Hâfsid rule. On his way back, he conceded to the chiefs of the tribes of the Banû Tûdjin their rule over their respective territories, thus setting up in the Central Maghrib a number of small vassal states capable of ensuring his security. From 635/1238 onwards, the power of Abu Zakariyya spread as far as Morocco and Spain, whence tokens of submission flowed in. When he died, he was in control of the whole of northern Morocco, and Nasrids and Marinids acknowledged his overlordship.

He upheld Almohad tradition in his civil and military administration, and in his capital Tunis, on which he conferred many benefits: misraj, sâb, hâshâb and madrasas (the oldest of the public madrasas of Barbary). Malikism was not interfered with by official Almohadism, nor was the mysticism associated with Al-Dâmiyâni (b. 621/1224), 'Abî al-Afzî and al-Maldaîwi, Sîdi Abû Sa'id (d. 628/1231), al-Shadhili (d. 656/1258 [q.v.]), and 'A'nîsha al-Mannûbiyya (d. 665/1267 [q.v.]).

Rapid economic growth followed peace and security, and exchanges became more frequent with Provence, Languedoc and the Italian republics, with whom treaties were signed. From 636/1239, relations with Sicily became closer when the Hâfsid ruler began to pay yearly tribute in return for the right to maritime trade and freedom to import Sicilian wheat. About the same time, bonds of friendship were forged between the crowns of Tunis and Aragon. Christian merchant communities (Spanish, Provençal and Italian) settled in the ports, particularly in Tunis and Alarach, and the Hafsids had consuls. At the beginning of the 7th/13th century many Spanish Muslims, craftsmen, men of letters and so on, emigrated to Hafsids Ifrikiyya, and before long constituted a powerful Andalusian body along-side the Almohad caste in the capital (see Andalus, vi, appendix).
HAFSIDS

lengthy period of disturbance and secession (675-718/1277-1318).

III. The reign of his son al-Wathik (675-77/1277-79) began well, but was marked by the scheming of his Andalusian favourite Ibn al-Habbabar and the rising in Bougie (end of 677/April 1279) in favour of a brother of al-Mustansir, Abū Ishāk. As early as 651/1253 he had led a revolt of Dawāwida Arabs, and, after taking shelter at the Naṣrid court of Granada, had been well received by the 'Abd al-Wādīd of Tiemcen when al-Mustansir died. Al-Wathik was at last forced to abdicate in favour of the other one of his sons, who was dead at Tunis as its master (Rabi‘ II 678/August 1279); he had been helped to some extent by military aid forwarded by Peter II of Aragon, who was anxious to secure the allegiance of the Hafsid state in his struggle with Charles of Anjou. 

IV. Abū Ishāk (678-83/1279-85) executed al-Wathik, Ibn al-Habbabar and several other notables, and entrusted the governorship of Bougie to his son Abū Bakr, who, with the support of the Sicilians, for whom the Hafsid had been well received by the Almohad shaykhs, gained control, and set up a pretender to the throne of Ifrīfīya, and set up a pretender to the throne of Tunis, who rejected by the Almohad shaykhs, who was anxious to secure the allegiance of the Hafsid state in his struggle with Charles of Anjou. 

V. Abū Hafs (683-94/1284-95) succeeded in the task of restoring Hafsid authority. Pious and peace-loving, he initiated much religious building. He attempted to reduce the disaffected Kingdom of Bougie (695/1296), soon to be threatened also on the west; for Algiers had submitted to the Marinids, and when these had mastered the Mitidja they laid siege to Bougie (699/1299). Abū Zakariyyāʾ died in 700/1301, and his son and successor Abū 'l-Bākāʾ set once again to work about a reconciliation with Abū 'l-Āṣida; eventually they signed a treaty (707/1307-8) which had as object to reunite the two Hafsid branches, and which provided that on the death of one of the two monarchs the survivor should inherit the vacant throne. 

Particularly during the last three years of his reign, the realms of Abū 'l-Āṣida were seriously disturbed by the Kuṭūb Arabs. We know of certain treaties he concluded with Christendom, but the levying of the "tribute" of Tunis and the occupation of Djarba kept him opposed to Frederic of Sicily.

VII. Abū Yahyā Abū Bakr al-Shahīd (709/1309). A second cousin of Abū 'l-Āṣida, he was proclaimed by the Almohad shaykhs of Tunis, who rejected the arrangement whereby all Hafsid territory was to pass to Abū 'l-Bākāʾ; but the latter took only seventeen days to get rid of him, and forced the reunion of the two Hafsid states.

VIII. Abū 'l-Bākāʾ (709-11/1309-11) was unable, however, to prevent a new defection of the Constantine region under his brother Abū Yahyā Abū Bakr, who also made himself master of Bougie in 712/1312. Meanwhile, the old Almohad shaykh Ibn al-Lihyānī had seized the throne of Tunis, which Abū 'l-Bākāʾ was forced to give up.

IX. Ibn al-Lihyānī (711-7/1311-7). To begin with, relations between the two Hafsid monarchies were cordial. But, after resisting the onslaughts of the 'Abd al-Wādīd of Tiemcen (713-15/1313-15), the ruler of Bougie, Abū Yahyā Abū Bakr, attacked Tunisia (715-16/1315-16), and Ibn al-Lihyānī had to give it up.

X. Abū Darba (717-8/1317-8). The Tunisians made this son of Ibn al-Lihyānī their ruler, but he resisted for only nine months the attacks of Abū Yahyā Abū Bakr, and Hafsid unity was again restored. 

XI. Abū Yahyā Abū Bakr (718-9/1318-19). After 684/1285, Abū Zakariyyāʾ, a son of the amīr Abū Ishāk and nephew of Abū Hafs, gained control, with the help of the Arabs, of all the western part of Hafsid territory, including Bougie and Constantine. Next year he marched against Tunis. Thrown back, he seized Gabēs and advanced towards Tripolitania, but was forced to draw back to defend his capital Bougie, threatened by an 'Abd al-Wādīd incursion instigated by Abū Yaḥṣar, who still exercised suzerainty over the sultan of Tripolitania. Simultaneously, local independent states developed in the Djarid, at Tozeur, and at Gabēs, while the Arabs of the south and of Tripolitania began to show hostility.

On the other hand, the allegiance of the Central and Eastern Arabs won for them, for the first time in Hafsid history, grants of land and of revenues. During the last years of the reign, Bougie annexed the Zāb, to whose governor, from 653/1254 onwards, Abū Zakariyyāʾ conceded the control of all southern Constantine. In the same year, the lord of Gabēs also recognized the suzerainty of Abū Zakariyyāʾ. Here begins the decline of Hafsid influence, and from now on the opposition of Bougie to Tunis recalls that of the Hammādids to the Zirids.

VI. Abū 'l-Āṣida (694-708/1299-1309). A posthumous descendant of the clan of 'Abd al-Wādīd, Abū 'l-Āṣida succeeded to the succession, which had devolved on his brother Abū Hafs, in the person of Ibn Abi Dabbūs (1287-8), who was the heir-apparent of Tlemcen. He attempted to reduce the disaffected Kingdom of Bougie (695/1296), soon to be threatened also on the west; for Algiers had submitted to the Marinids, and when these had mastered the Mitidja they laid siege to Bougie (699/1299). He attempted to reduce the disaffected Kingdom of Bougie (695/1296), soon to be threatened also on the west; for Algiers had submitted to the Marinids, and when these had mastered the Mitidja they laid siege to Bougie (699/1299). But, after resisting the onslaughts of the 'Abd al-Wādīd of Tiemcen (707/1307-8) which had as object to reunite the two Hafsid branches, and which provided that on the death of one of the two monarchs the survivor should inherit the vacant throne.

Particularly during the last three years of his reign, the realms of Abū 'l-Āṣida were seriously disturbed by the Kuṭūb Arabs. We know of certain treaties he concluded with Christendom, but the levying of the "tribute" of Tunis and the occupation of Djarba kept him opposed to Frederic of Sicily.

VII. Abū Yahyā Abū Bakr al-Shahīd (709/1309). A second cousin of Abū 'l-Āṣida, he was proclaimed by the Almohad shaykhs of Tunis, who rejected the arrangement whereby all Hafsid territory was to pass to Abū 'l-Bākāʾ; but the latter took only seventeen days to get rid of him, and forced the reunion of the two Hafsid states.

VIII. Abū 'l-Bākāʾ (709-11/1309-11) was unable, however, to prevent a new defection of the Constantine region under his brother Abū Yahyā Abū Bakr, who also made himself master of Bougie in 712/1312. Meanwhile, the old Almohad shaykh Ibn al-Lihyānī had seized the throne of Tunis, which Abū 'l-Bākāʾ was forced to give up.

IX. Ibn al-Lihyānī (711-7/1311-7). To begin with, relations between the two Hafsid monarchies were cordial. But, after resisting the onslaughts of the 'Abd al-Wādīd of Tiemcen (713-15/1313-15), the ruler of Bougie, Abū Yahyā Abū Bakr, attacked Tunisia (715-16/1315-16), and Ibn al-Lihyānī had to give it up.

X. Abū Darba (717-8/1317-8). The Tunisians made this son of Ibn al-Lihyānī their ruler, but he resisted for only nine months the attacks of Abū Yahyā Abū Bakr, and Hafsid unity was again restored.
to preserve the unity of his territories by entrusting
the administration of the provinces more and more
to his sons, advised by chamberlains. The second
half of Abu Yahyā Abū Bakr's caliphate (733-47/ 1333-46) is notable for the rise of the Almohad
Ibn Tafrağn to a all-powerful position as chamberlain (744/1343), the stern quelling of Bedouin
turbulence, some diminution of disaffection, the
immediate neighbour now that the latter had
annexed Tlemcen and the 'Abd al-Wādīd kingdom.

XII. Abu 'l-Abbās Ahmad. His father, the late
amir, had secured the Marinid Abu 'l-Hasan's
support for his accession to the throne, but Abu
'l-Abbās Ahmad soon met his death at the hands
of one of his brothers, Abū Ḥafs, and this murder
was Abu 'l-Hasan's excuse for an easy conquest of
Irfīkiya.

The Marinid occupation (748-50/1348-50) received
little support, and the abolition of the revenues
which the Bedouins had been collecting from the
settled populations set off an Arab revolt, which
resulted in such a resounding defeat for Abu 'l-Hasan
(749/1349) that his reputation never recovered from
it. The loss of the greater part of Barbary and the
growing hostility of Irfīkiya forced him to escape
by sea to the west (Shawwāl 750/late December 1349).

XIII. Al-Fadl. This son of Abū Yahyā Abū Bakr,
governor of Bōne, was proclaimed in Tunis, but was
soon (751/1350) put down by Ibn Tafrağn, who
replaced him by a brother of al-Fadl, Abū Ishākh.

XIV. Abū Ishākh (750-70/1350-60). The new prince
was so young that the wily Ibn Tafraghn himself
was for fourteen years the real power behind the
throne. Disturbances and movements towards
autonomy multiplied on all sides; the Banū Makki
held the south-east and the Ḥafsids the Constantine
region, whereas Abū Ishākh had to endure many
attacks, some of them severe (752-7/1351-6).

The Marinid of Fez, Abū 'Inān Fāris, fired with
the idea of imitating his father's heroic exploits, took
Tlemcen, Algiers, and Mēdēa. The mutual hostility
of the two factions of Abū Yahyā Abū Bakr and
Abū Ishākh lightened the task of the invader; who
in addition had the support of the Banū Muzni of the
Zāb and the Banū Makki of Gabēs.

The second Marinid conquest of Irfīkiya (753-9/ 1352-6) began brilliantly with the capture of Bougie (753/1352), slowed down for a while, and then
(757-8/1356-7) achieved its objective with the
capture of Constantine, Bōne and Tunis and the sub-
mision of the Djarid and Gabēs. Yet the collapse
came even more swiftly than it had for Abu 'l-Hasan,
and for a similar tactless act—the refusal to permit
the Dawāwīda to collect certain taxes from the settled
population. His forces routed, Abū 'Inān Fāris had
to fall back on Fez (758-1357). Abū Ishākh and Ibn
Tafrağn returned to Tunis only a few months after
they had been turned out. The Marinid died in 759/ 1358 without having succeeded in re-establishing
his authority in eastern Barbary.

While an 'Abd al-Wādīd restoration was taking
place in Tlemcen, matters in the East returned to
the conditions ruling when Abū Ishākh began his reign:
Bougie, Constantine and Tunis governed by three
different and independent Ḥafsids, and the whole
of the south, the south-east and a part of the Sahel
maintaining their independence of the Ḥafsids of
Tunis. When Ibn Tafraghn died (766/1364), Abū
Ishākh was able to rule in person; but to do no great
effect. On the contrary, the policy of the Ḥafsids of Constantine, Abu 'l-Abbās, seized Bougie from his cousin Abu 'l-Allāh and succeeded in uniting the whole of the Constantine region (767/1366).

XV. Abu 'l-Bakrā Khlālid (770-2/1369-70). The situation rapidly worsened under this prince, who
was too young when he succeeded his father, so that
for the third time Irfīkiya was united by a Ḥafsīd of
Constantine and Bougie, Abu 'l-Abbās.

XVI. Abū'1-Hasan (772/1371-73). By his qualities
of mind and heart and his gentle firmness he
restored the prestige of the dynasty, of which he
was one of the most notable members. From him
descended all the succeeding Ḥafsīd sovereigns.

Once he had checked the Bedouins (773/1371) and
foesened their hold on the sedentary population,
he regained piecemeal the lands his forefathers had
lost to the south and south-west (773-83/1371-81)
and even recovered the Zāb. From 783/1381 onwards
Abū 'l-Abbās was occupied in consolidating his
achievements and curbing any attempt to revive the
suppressed local independencies of the south.

Thanks to internal 'Abd al-Wādīd quarrels and the
intense rivalry between 'Abd al-Wādīds and Marinids,
he had nothing to fear from the west. Relations
between Barbary and Christendom were soured by
the Franco-Genoese expedition against Mahdīa
(792/1390) was halted. Later, a reconciliation with
the Italian republics was brought about.

XVII. Abū Fāris (796-827/1394-1434) carried his father's task to a brilliant completion. In Constantine
and Bougie (798/1396), as well as in Tripoli, Gafsā,
Tozeur and Biskra, whose local dynasties he had
uprooted (800-4/1397-1402), he appointed officials
chosen from among his freedmen. He led daring expe-
ditions to the Aurās (800/1398) and the Saharan
borders of Tripolitania (809/1406-7). He cleared up
a serious crisis which agitated the Constantine region
and the south-east in 810-11/1407-8, and rounded it off
by taking Algiers (813/1410-1). There followed a long
period of calm, broken by the launching of several
attacks in the west whereby Abū Fāris attained
control over the 'Abd al-Wādīs of Tlemcen (827-34/ 1424-31). He intervened in Morocco as well, and even
in Andalusia. His relations with Christendom were
sometimes friendly, sometimes strained, but at
times close, and much diplomatic activity went on
all through the reign.

The propitious state in which Abū Fāris's father
had left the realm, and his own military prowess
account only in part for his unusual success; he
benefited in addition from the popularity which he
enjoyed for his care for justice and his policies of
religious orthodoxy, which was manifest in many
ways: favours bestowed on the pious, the 'ulamā',
the shāris, the celebration of the masīḏ, his efforts
to foster Sunnism in Djarba, religious and civil
building, the suppression of taxes not authorized
by the Sharī'a, the expansion of the voluntary
privateering regarded as dhīhad. Mālikī formalism
prevailed, owing to the influence of the famous
jurist Ibn 'Arafā (860-906/1450), who was
mainly responsible for banishing Ibn Khaldūn to
Cairo, where he died in 808/1406. The palace of the
Bardo, first mentioned in 823/1420, illustrates how
far Andalusian influence had penetrated into Ḥafsīd
Barbary. Besides being the ruler of a prosperous
state and a generous patron, Abū Fāris won a great
reputation in the Muslim world by his far-reaching
and discerning liberality. The septuagenarian who had defeated Alphonso V of Aragon at Djarba two years before ended his days in the Ouarsenis at the head of an expedition marching to subdue Tlemcen (837/1434).

XVIII. Al-Muntaṣār (837-9/1434-5). This grandson of Abū Fāris had to contend with rebellious relatives and their Arab allies. He erected a fountain and the madrasa al-Muntaṣāriyya which was to perpetuate his name.

XIX. Uṯmān (839-93/1435-88). Brother of the foregoing, he carried on the work of his illustrious grandfather Abū Fāris. Pious and just, he initiated many hydraulic works, and constructed numerous zāwiyas. He took the Tunisian miracle-worker Sīdī Ben ʿArūūs (d. 868/1463) under his protection. He too had to contend with his relatives, especially, for the space of seventeen years (839-56/1435-52), his uncle Abu ʿl-Ḥasan ʿAlī. This son of Abū Fāris was expelled from the governorship of Bougie in 843/1439, but for long afterwards held out against the troops of the sultan in the Constantinois. Uṯmān also undertook military operations in the south (845-55/1441-51). But in fact, once the first phase of Abu ʿl-Ḥasan’s venture was over (towards 843/1439), the greater part of the country was at peace. The provinces were governed, as they had been in Abū Fāris’s day, by the prince’s freedmen, with the title of ʿābd. One of them, Nābīl, affronted Uṯmān by the assumption of too great authority at the court, and was imprisoned (857/1453). The second part of the reign was clouded by outbreaks of famine and plague, and by the revival of tribal unrest, which was particularly troublesome in 867/1463; it was checked with severity, but not entirely suppressed. On many occasions Uṯmān marched against the south and south-west (864/1463, 870/1465). An ʿAbd al-Wādīd had taken Tlemcen and though brought once to heel (866/1462), he had again to be reduced to obedience (871/1466). The last years of the reign (875-93/1470-88), as indeed those of the dynasty, are obscure. Uṯmān tended more and more to appoint his own relatives to provincial governorships. It seems that he retained his hold on Tlemcen and in 877/1472 the new lord of Fez, the founder of the dynasty of the Banū Wāṭāt, recognised his suzerainty.

XX. Abū Zakariyyāʾ ʿAbd Yaḥyā (893-4/1488-9). This grandson of Uṯmān succeeded him. He dealt pitilessly with those of his relatives who challenged his rule, and was in the end himself killed by his first cousin ʿAbd al-Muʿāmin b. Ibtāḥīm.

XXI. ʿAbd al-Muʿāmin b. Ibtāḥīm (894-5/1489-90) was soon dethroned by a son of his predecessor and enemy.

XXII. Abū Yahyā Zakariyyāʾ ʿAbd Yaḥyā (895-900). The Hāfṣid state might conceivably have recovered its strength under this ruler, had he not died of the plague while still young.

XXIII. Abū ʿAbd Allāḥ Muḥammad (899-932/1494-1526). A first cousin of the preceding, he was given over to pleasure, and the decline of the dynasty went on apace. He restrained the rebellious Arab tribes only with difficulty, and the Spaniards took from him Bougie and Tripoli in 1510.

XXIV. Al-Ḥasan (932-50/1526-43). Son of the former ruler, he was driven from Tunis in 941/August 1534 by the Pasha of Algiers, Khayr al-Dīn Barbarossa, but after Charles V had occupied La Goulette he restored him to his capital (Muḥarram 942/July 1535). He fought against the Turks of Kayrawān (1535-36) and then against Sīdī ʿArafa (1540), the chief of the peculiar marabout state founded at Kayrawān by the Shāhībiyya tribe. His eldest son Ahmad deposed him.

XXV. Ahmad (950-76/1543-69). He too continued the struggle with the Shāhībiyya, whose new chief, Muḥammad b. ʿAbd Taḥyīb, had allied himself with the Spaniards and with Muḥammad, the legitimate heir of the late Hāfṣid ruler. Meanwhile, the pirate Dragut (see ʿUrūḥiyya), in alliance with the Turks and Ahmad, was trying to establish himself in the Sahel. In 959/1552 the Shāhībiyya were defeated by Ahmad. The latter rewarded his own subjects with kindness and Dragut, returning from Istanbul with the title of Pāgha of Tripoli, took Gafsa (December 1556) and Kayrawān (December 1557). In 967/1569, the Pasha of Algiers seized Tunis, and Ahmad went to join his brother Muḥammad at La Goulette. Finally, in 982/1574, Don John of Austria lost Tunis which he had taken the year before, and the city was reduced to the rank of chief-town of an Ottoman province.

HĀHĀ, Moroccan confederation of Berber tribes (ibāhana) belonging to the sedentary Masmūda [g.v.], inhabiting the plateaux of the western High Atlas as far as the sea. In the 1939 census they numbered 84,000, among whom were 20 Jews, despite the traditional prohibition upon any Jew travelling about in this territory. It is a country on the ancient route (prehistoric remains) between North and South, between the plains of Marrākush and Tarūdant, either by the mountain passes or by the coast road. The Hāhā are a good example of Berbers that are islamized (perhaps by ʿUkba b. Nāfi’i) but almost devoid of Arab blood. They speak the tashelhit dialect (chleuh) and for the most part understand colloquial Arabic. Their territory includes almost the whole steppe- and forest-covered region of the argan-tree [see ARGAN] but, for lack of rain, they have to resort to extensive agriculture and goat-rearing. The houses are not grouped together in villages but are scattered, and each section lives separately. The confederation first appeared in history in the 5th/11th century (al-Bakrī does not know of it) as a supporter of the Almoravid movement, and later of the empire of the Almohads, either voluntarily or under compulsion. After the collapse of that dynasty, their geographical situation, though not giving them complete independence vis-à-vis the Marinid sultan, allowed them to show their regard for the nomadic Arabs deported by the Almohads, particularly the Ḥātīth and the Kalabiyya. Ibn Khaldūn praised their intellectual standing at that time and their long presence in the region. Over a century later Leo Africanus, followed by Ibn Khaldūn praised their intellectual standing at that time and their long presence in the region. Over a century later Leo Africanus, followed by Marmol, confirmed their juridical singularities and attributed to them a territory more extensive than that which they occupy at the present time; it apparently extended as far as the Asif al-Māl, a tributary on the left bank of the Wādī Tansift. Leo also noted that although some of their elements, no doubt near the plain or the coast road, still paid tribute to the last Arab nomads on the occasion of
their annual migration with their flocks, it was not without resistance. The same author records the
struggle against the Christians lasted for a long time, at the cost of much bloodshed and misery among the
confederation (see R. Ricard, Sources inédites, 1st series, Portugal, v, Paris 1953). It was
among the Haha; the surviving remains and the defunct series, Portugal, v, Paris 1953). It was
established a section of their cane-sugar industry among the Haha; the surviving remains and the
defore station of the region still testify to the economic significance of each song notes concerning the
(rhythm and
or decorate them in his manuscripts—a further indication that al-
Hâ'ik did not come from Tetuan. In spite of the detailed character of his collection, al-Hâ'ik did not collect all the Andalusian music which was sung in his time, for several verses of vanished
naubas which are still sung at Tetuan are not found in his manuscripts—a further indication that al-
Hâ'ik did not come from Tetuan.

In the absence of a system of musical notation, al-Hâ'ik had no instrument with which to indicate the melody from memory, adds in the margin of each song notes concerning the mlsân (rhythm and time) and separates the asâghûl songs with the number of their adwar.

The work begins without an introduction and then sets out the 722 songs which comprise the 24 modes, grouped into 11 naubas. At the beginning of each nauba there is a short explanation on the modes, including their origin and their qualities, and illustrated by examples of songs which actually belong to them. Next, arranged by rhythm, are found the various songs which form the nauba and whose number is not the same in all cases.

Above the song is given its title of tawwûh, sâdjûl or ghwîl, and almost all of them have in the margin a variant which is sung to the same melody. In the margin to the right of the number given in the margin are the nauba and whose number is not the same in all cases.

The work begins with an introduction and then sets out the 722 songs which comprise the 24 modes, grouped into 11 naubas. At the beginning of each nauba there is a short explanation on the modes, including their origin and their qualities, and illustrated by examples of songs which actually belong to them. Next, arranged by rhythm, are found the various songs which form the nauba and whose number is not the same in all cases.

The majority of the musicians of present-day Morocco, who continue the mediæval tradition, have
no knowledge of musical theory, so that the melodies and the texts of songs have undergone alterations; this gives al-Hâ'ik's work an especial importance in that it has rescued from oblivion all that remained of them in his time. The original manuscript does not survive, or at least it has not been known where it is, but a number of copies of it exist in various Moroccan towns; not all of them give the naubas in the same order or contain the same songs, the copyists having given preference to those which were most commonly sung in a given locality.

In 1333/1934-5, there was published at Rabat a book of 182 pages entitled Madjma'at al-a^shûn
al-mâshlikya al-andalusija al-marâifa bi 'l-Hâ'ik. Its author, al-Makki Ambrikâh, has collected the songs of the naubas Ramal al-mâya, al-^Ushshâk, al-Isbahdn, Gharbat al-Husayn, al-Râsad and Râdad al-dhayl after having, he claims, compared several MSS. This work, of unequal value, is incomplete, for, in addition to the fact that it contains only six naubas out of eleven, its author has not collected all the songs, nor included those which are found in the margins of the good manuscripts.

In the absence of a system of musical notation, al-Hâ'ik had no instrument with which to indicate the melody from memory, adds in the margin of each song notes concerning the mlsân (rhythm and time) and separates the asâghûl songs with the number of their adwar.

The work begins with an introduction and then sets out the 722 songs which comprise the 24 modes, grouped into 11 naubas. At the beginning of each nauba there is a short explanation on the modes, including their origin and their qualities, and illustrated by examples of songs which actually belong to them. Next, arranged by rhythm, are found the various songs which form the nauba and whose number is not the same in all cases.

HāʿIL [see ḥāyil].

HāʿIR (أ.), term [proved by various lexicographical investigations to be identical with hayr, see H. Pères, La poésie andalouse en arabe classique, Paris 1937, 129] whose meaning is clarified by the study of the remains of hayr still surviving around ancient princely residences of the Islamic Middle Ages. The frequent references by Arab authors, which lead to the conclusion that they were either parks or pleasure-gardens, provided sometimes with a summptuous pavilion, or more exactly zoological gardens like those which are recorded at Sāmarrā or at Madinat al-Zahra (cf. H. Pères, op. cit., index s.vv., ḥār and ḥayr), are supplemented by the data provided by the ruins of Umayyad or ʿAbbāsid castles, and by the ruins of the Ghaznawid castle of Lashk̸ār-i Bāzār in Afghanistan.

The numerous enclosures which surrounded the palaces of Baḥداد and Sāmarrā in Ṭrāk, enclosures filled with rare plants and stocked with animals, to make them hunting-reserves, have, it is true, now vanished without leaving any appreciable traces; but on the other hand, at Umayyad sites with the significant names Kaṣr al-Hayr al-Ḥarbil and Kaṣr al-Hayr al-Sharīkī (q.v. and architecture) and at Khirbat al-Mafaḥir (q.v.), various types of outer walling have survived to a degree sufficient to provide valuable information on the appearance and the dimensions of the gardens which they enclosed. In each case are found walls of stone and brick, now fallen into ruin but formerly of considerable height, which were supported by semi-circular buttresses built alternately against the inner and the outer face; these walls enclosed vast areas of arable land irrigated by aqueducts and with other elaborate installations for bringing and holding water; sluice-gates made it possible to drain off superfluous water brought by torrential rain-storms. The areas enclosed may have been pleasure-parks, continuing the tradition of the elaborately planned gardens of ancient Orient. More probably, however, the land was under very productive cultivation, planted particularly with bushes and trees (fruit-orchards and olives in the steppe-country around Palmyra, orange-trees in the Jordan valley); this would explain the presence of edifices built by members of the aristocracy, and sometimes by caliphs, in places which assured the owners substantial revenues from the products of the soil.

HĀṬ al-Ḥaḍūz “the wall of the Old Woman” (the form ḥāṭ al-Ḥaḍūz is sometimes found, notably in al-Harawi) the name given by Arabic writers to a wall said to have been built by the mythical queen of Egypt, Dalūkā [= al-ʿAdjūz], who is said to have mounted the throne after the army of al-Walīd b. Muṣṭafā [sic = the Khazars of Moses], in pursuit of the Israelites, had been engulfed by the Red Sea. In order to protect the surviving women, children and slaves from the attacks of the peoples of the East and of the West, Dalūkā is said to have surrounded the Nile Valley, from al-ʿArīsh to Aswan, by a rampart flanked by military posts each within call of the next; according to another tradition, this wall, which remains of which still existed in the 19th century. This wall was mentioned by many Arabic writers, but whereas al-Masʿūdī (332/943) for example saw only ruins of it, al-Harawi (d. 611/1215) had followed along it “on the tops of mountains and in the depths of valleys” from Bīl̸īys to the Nubian frontier “for a distance of about one month’s walking”, and Ibn Faḍl Allāh al-ʿUmari (d. 749/1349), while admitting that the greater part of it had disappeared, stated that he had followed it from farthest Upper Egypt to Dandara.

(Ch. Pellat)

ḤAḴĀṬ, plural of ḥāṭha = truth, as a technical term denotes the gnostic system of the Ismāʿīliyya (q.v.) and related groups. In this technical sense the term is used particularly by the Taḥyūṣīs. During the 9th century, the term was part of the law—the time of concealment (sāṭr)—the ḥāṭha are hidden in the bāṭin (see bāṭiniyya), the interior truth behind the exterior (zāhir) of the scriptures and the law. While the law changes with every new prophetic era the truth of the ḥāṭha is eternal. This truth is the exclusive property of the divinely guided Imam and the hierarchy of teachers installed by him. It cannot be revealed to anyone except on formal initiation. The Kāʿim will abrogate all prophetic law and make the hidden truth public. In his era the ḥāṭha are fully known free from all symbolism. The teaching hierarchy is no longer needed and discarded.

The two main components of the ḥāṭha system are an interpretation of history as the permanent struggle and eventual victory of the hierarchy in the progress of the esoteric truth over the exoteric, and a cosmology dividing the world into a spiritual, an astral, and a physical realm. History is viewed as a progression of cycles with recurrent types and situations leading to its consummation in the appearance of the Kāʿim, who will rule and judge the world. The roots of this interpretation of history are Shiʿi, and it appears in its main features already in Ismāʿīli texts of the 3rd/9th century. The basis
texts as “a branch of the judicial power” (although, on the other hand, an arbitrator’s decision is regarded as a transaction). Indeed the hakam is obliged to give judgement in conformity with the rules of the Law; arbitration in simple equity, by friendly agreement, seems therefore to be impossible. But this disadvantage is offset by the fact that the parties may empower their respective arbitrators to agree, in their name, upon a compromise solution.

Scope. — Tahkim is possible only for the settlement of private conflicts of interest concerning property.

There may be only a single arbitrator, or the parties may nominate two or more arbitrators. In the last case the arbitrators must, in principle, give a unanimous decision. Nevertheless the question is discussed whether, if the parties agree, a majority decision may be given.

The necessary qualities of an arbitrator are the same as those demanded of a judge; and the same impediments and grounds of objection apply.

Effects. — The agreement to submit to arbitration is not binding, inasmuch as the appointment of the arbitrator is regarded as the nomination of a proxy, so that either party may revoke it ad nutum, even when it is the case of a single arbitrator appointed with the agreement of the two parties. This rule admits of only one modification: when the appointment of the arbitrator has been submitted to the judge for his approval, revocation is no longer possible. Nevertheless in the Hanbali madhhab one opinion teaches that revocation is no longer possible after the arbitrator has commenced proceedings. The Mālikī madhhab rejects these distinctions and recognizes the agreement to submit to arbitration as obligatory in all circumstances.

As for the arbitrator’s decision, it is binding in all the madhhab, except for one contrary opinion in the Shāfi‘i madhhab. It has therefore full legal force, and does not need to be confirmed by the ratification of a judge. Nevertheless an arbitrator’s decision carries less authority than a judge’s. On the one hand, it is generally agreed that an appeal against it may be made before the judge, who may annul it if it seems to him to be contrary to the teaching of the madhhab which he follows. (Yet it should be remembered that such an appeal may be made also against judicial decisions. In this case the party profiting by the arbitrator’s decision is free to submit it to a judge, who will confirm it, certifying that it is in conformity with his madhhab; in this case the decision will have the validity of a judgement proper. On the other hand, the effects of the decision are strictly limited to the persons who are directly involved. Thus whereas judgements may affect persons not involved in the proceedings but regarded legally as involved, the arbitrator’s decision is limited to the parties who are directly involved. Thus whereas judgements may affect persons not involved in the proceedings but regarded legally as involved, the arbitrator’s decision is limited to the parties who are directly involved.)

AL-HAKAM B. ‘ABDAL B. DIJABALA AL-ASAD B. ABU ASAD AL-ASHAD, satirical Arab poet of the 1st/7th century. Physically deformed, for he was hunch-backed and lame, he possessed some spitefulness, which shows in his diatribes, but he had a lively wit, prompt repartee, humour, and the subtlety of the Ghādira clan to which he belonged (cf. Al-Ghādirī). He was born
at Kufa and lived there till 'Abd Allâh b. al-Zubayr drove out the Umayyad authorities (64/684) whom he followed to Damascus where he was admitted to the intimacy of 'Abd al-Malik b. Marwân. He then went back to Kufa and was closely connected with Bishr b. Marwân [q.v.] whom he accompanied to Baṣra when the latter was appointed governor there (74/693-4), and whose death he was to lament at the end of that same year. He was also on excellent terms with 'Abd al-Malik b. Bishr, and frequented the salon of al-Ḥâdîqâdî, who on one occasion rewarded him richly. While poetry was certainly his means of livelihood, he is recorded to have used his literary gifts in more practical and pompous eulogies that poets used to address to the great; he contented himself with merely sending short letters in verse to his benefactors, appealing to their generosity, and the fear of his satires was generally enough to assure him success; al-Ḍâhibî (Bayûn, iii, 74) and other authors after him even describe how, once his reputation for redoubtable satire was established, he limited himself to sending his written satires to his spiritual sons and relations with Ruḍûdi [q.v.] (d. in about 796) and, in particular, Muslim b. al-Walîd. The two men were enemies, to the point that they sometimes came to blows, and it is related that Muslim took a long time to get the better of his adversary. The epigrams that they exchanged do not appear to have been scurrilous, and it is interesting to see in them the revival of the old tribal disputes and rivalries between the Muḥājjirûn and the Ansâr, Ibn Kanbâr acting as defender of the former against Muslim who never gave him too little of his poetry to draw conclusions of any value.

ḤAKAM b. SA'D, tribe of Arabia dwelling in the Tihâma. [q.v.].

(Al-)ḤAKAM IBN 'UK(K)ÂSHA, an Andalusian adventurer. His ancestor 'Uk(k)asha had been one of the numerous muwâlîs who had joined forces with Ibn Bâlsûn to rebel against the central power. But when Abd al-Malik b. Bishr went to Baghdad, where he appears in the company of Ibn al-Sâka, the vizier of Ibn Dîhwar [see MAWARIIDS]. The assassination of the vizier led to the imprisonment of (al-)Ḥakam, who nevertheless succeeded in escaping and joining the King of Toledo, al-Mâ'mûn. The latter, who also was aiming at annexing Cordova to his possessions, was anticipated by al-Mu'tamid of Seville. But when al-Mâ'mûn set him in command of one of his fortresses on the frontier of the Cordovan territory, Ibn 'Uk(k)âsha, much helped by the hostility which the Cordovans felt for the 'Abbâidis, managed by a sudden attack to gain entrance to the town and kill the governor 'Abbâd, the son of al-Mu'tamid, together with Ibn Martín, the chief of his mercenaries. He met with no resistance in making himself master of the city, and proceeded to proclaim as ruler al-Mâ'mûn, the son of al-Wâdîd. After a few months spent in Cordova was solemnly recognized as ruler on Friday 23 Dîjamâd II 467/13 February 1075. However, he died, possibly through poisoning, four months later on 14 Dhu 'l-Ka'âda 467/1 July 1075. The Cordovans rose in revolt and summoned back al-Mu'tamid; Ibn 'Uk(k)âsha fled without contemplating resistance, and as he was crossing the bridge over the Gua- dalquivir he was killed by a Jew on 29 Dhu 'l-Hijâda 467/15 August 1075. As a sign of contempt, his body was crucified together with that of a dog. His son Harzû fled to Toledo, where al-Kâdir, al-Mâ'mûn's successor, put him in command of Cala- trava (Kal'aṭ Rabâb); he is mentioned as a poet by al-Šâfi, Ibn Khâkân and Ibn al-Abbâr.

(A. Huici Miranda)

AL-HAKAM I b. HÎGÎM, Abu 'l-'Âs, third Umayyad amîr of Cordova. The second son of his father, who died prematurely, he succeeded on 3 Safar 180/17 April 796 when 26 years old. At his
proclamation the internal truce was broken and his uncles Sulayman and 'Abd Allāh, sons of 'Abd al-Rahmān I, disputed his authority. He therefore accompanied his forces to Barbary to Spain. 'Abd Allāh made for the Upper Frontier, but he found conditions unfavourable there and went with his sons 'Ubayd Allāh and 'Abd al-Malik to negotiate with Charlemagne at Aix-la-Chapelle and offer him support in a campaign against Barcelona and the region of the Ebro delta. In the following year Sulayman also landed in the Peninsula with his forces and, at the instigation of his cousin, was uncovered, and 72 Cordovan notables were crucified and exposed on the causeway which he was proposing to have allegiance sworn to him. This action was the result of a stroke which he had suffered two years before falling ill he gave evidence of exemplary piety, in contrast with the conduct of his father, even before falling ill he gave evidence of exemplary piety, in contrast with the conduct of his father, and his artistic predilections seemed to augur well for a long and fruitful reign, but his health, which had always been delicate, took a serious turn for the worse as he lost his health and he withdrew into his palace. He died on 350/15 or 16 October 961. He had acquired a long and direct experience of public affairs and as a statesman showed himself not unworthy of his illustrious father. The fifteen years of his reign were peaceful; the only alarm to disturb them was a raid by the Danish Madīğ, which landed first at Alcacer do Sal and were repulsed on the plain of Lisbon in 365/975. The indubitableness of the Caliphs forces ensured the most complete security of the borderland right from the beginning of al-Hakam II's rule. It also imposed a truce on Christian Spain during which embassies arrived in Cordova continuously from 356/966 until 365/975, when count García Fernandez of Castile, with Galician and Navarrese support, broke the peace and was defeated at S. Esteban de Gormaz and later at Langa on the Duero and Estercuel near Tudela. Al-Hakam's activity in Morocco, now that the Fātimids had removed to Egypt, and until the rise to political and military power of Muḥammad b. 'Amir, known as al-Manṣūr (Almanzor of the Christian Chronicles [see AL-MĀNṢŪR]), was confined to deposing the Idrisid princes. In the course of ten years, by dint of intrigues, distribution of gold, and armed intervention, he saw to it that his best general, the famous muwāllad Ghalīb, subdued the Idrisid al-Hasan b. Gannūn and transported him and his relatives to Cordova. This minor triumph was celebrated with great pomp as marking the resolution of the last major problem for the Abd al-Rahmānids: the occupation of al-Andalus. This minor problem had been delicate, took a serious turn for the worse as he lost his health and he withdrew into his palace. He died on 3 Safar 366/1 October 976, and the bay'a to Hishām II took place on the following day. Even before falling ill he gave evidence of exemplary piety, in contrast with the conduct of his father, and sought with enthusiasm the company of jurists and theologians as well as literary men and scientists.

**AL-HAKAM II — HAKIKA 75**

**HAKIKA**, Various approximate translations of this word can be given, as will appear. The meanings that predominate are "reality", in the sense of the intelligible nucleus of the thing existing, or "nature" of the thing, or "transcendental truth" of that which exists. The term is not Kur'anic, unlike *madīd* or *tasawwuf*; but always in keeping with a connation of "reality", the "true"). — There are two attitudes according to Avicennan usage, *hakika* possesses a two-fold meaning, the ontological and the logical. 

1. In rhetoric (and exegesis, *tafsir*), *al-hakika* is the basic meaning of a word or an expression, and is distinguished (a) from *madīd*, metaphor, metaphorical and figurative meaning, and (b) from *kayfīyya*, in the general sense of analogy. — Ibn Taymiyya has left (ms., coll. Rashīd Rīdā, Cairo) a treatise *al-Ḥakikat wa ʿl-madīd*. When the *madīd* becomes so habitual in use that it acquires as it is the basic meaning of a word or an expression, and becomes an abstract substantive. — Ibn Taymiyya is here clearly differentiated from *al-hakika* of a thing as it is in itself ("the exact conception of the thing") and its quiddity (*māhiyya*). — Deity and God, says L. Massignon, reserve *al-hakika* as a sense of the absolute intelligibility of things, understood through the spirit of the mystic, which thus leads to the Real but is not itself the Real. 'The [essential] reality ([al-hakika] of a thing is on this side of the real ([dān al-hakika])", said al-Hallādī (cf. Louis Massignon, *Passion*, 508). (b) From this same logical point of view, *hakika* or *madīd* is here clearly differentiated from *al-hakika* as the ultimate reality of the real itself in the uniqueness of being of all existence (*waḥdat al-wujūd*); and the *hakika* of the universe is to be God manifested in His attributes (cf. the central thesis of the *Fusūs al-ḥikam* of Ibn ʿArabī). Experience of union or identification will therefore be an effective experience (of intellectual-gnostic type) of the unique "reality" beyond the real. — Some Ṣūfī expressions applying this second meaning (al-Dūrjānī, *op. cit.*, 95): *hakibat al-hakika* is, "unique and universal degree of all realities", also called "presence of union" and "presence of being"; *hakibat al-asma* "realities" of the divine Names, determinations of the Essence (*dād*) and its connection with the manifested world, — that is to say, the attributes by which each thing is distinguished from each other; *al-hakika al-muhkamaddiyya*, the divine Essence in the first of these manifestations, "and it is the supreme Name". 

2. In falsafa (especially according to Avicennan usage), *hakika* possesses a two-fold meaning, the ontological and the logical. 

(a) Ontological meaning (*hakibat al-ḥakay*): "Everything has a *hakika* through which it is what it is. . . . It is what we have called "existent proper" (al-wujūd al-ḥakay); by that, we mean that we do not meant to signify concrete (*dhāt*) existent, immanent to that in question, but everything *hakika* which is its quiddity (*māhiyya*)." (Ibn Sīnā, *al-Shifā*, *al-Ṭibb*). Then *hakika* then becomes the "basic, divine and definitive meaning" (*ibid.*, n. 2).

(b) From this same logical point of view, *hakika* or *madīd* is here clearly differentiated from *al-hakika* as the ultimate reality of the real itself in the uniqueness of being of all existence (*waḥdat al-wujūd*); and the *hakika* of the universe is to be God manifested in His attributes (cf. the central thesis of the *Fusūs al-ḥikam* of Ibn ʿArabī). Experience of union or identification will therefore be an effective experience (of intellectual-gnostic type) of the unique "reality" beyond the real. — Some Ṣūfī expressions applying this second meaning (al-Dūrjānī, *op. cit.*, 95): *hakibat al-hakikat*, "unique and universal degree of all realities", also called "presence of union" and "presence of being"; *hakibat al-asma*, "realities" of the divine Names, determinations of the Essence (*dād*) and its connection with the manifested world, — that is to say, the attributes by which each thing is distinguished from each other; *al-hakika al-muhkamaddiyya*, the divine Essence in the first of these manifestations, "and it is the supreme Name". 

3. Other usages could be reviewed. Some references may be given, by way of example, to the usage of al-Ghazālī, who stands so to speak on the hinge between the two vocabularies of falsafa and tasawwuf (before the full elucidation of the "Uniqueness of Being"). — *Al-hakika* is the profound reality, the quintessence of things, the flesh that is discovered behind the peel. The expression *hakibat al-umūr*, "the essential realities of things", often recurs (e.g. Munkidh, 8), *hakibat al-umūr* here being almost synonymous with *asrār*; similarly *hakibat al-hakikat* is the "essential reality of the Real" (e.g. *Ishdrdt*, 56), which in a flash leads faith (iman) to *yaḥsin*, absolute certainty. 

We may further define the meaning of *hakika* according to two correlative distinctions (*mukābāl*) which frequently serve to explain it. A. *Hakika* is distinct from *ḥakīb*. The analyses given above form the first step. *Hakika* and *ḥakīb* can be differentiated as the abstract and the concrete: "reality" and "real". — Deity and God, says L. Massignon (*Passion*, 468). Now, "if reality is on this side of the real" (see above), "everything real, affirms al-
Halladj, has its essential reality" (ibid., 801, n. 1). And again (from al-Sulami, cf. L. Massignon, Lexique technique de la mystique musulmane, Paris 1954, 310): "The confusion of the students of the truth is, of course, due to their lack of comprehension, they are one single (Name); from the point of view of the Real (al-ha$k = God), they are Reality (al-ha$kha$)". Determined by the definite article, al-ha$k$ is the very Name which will most usually denote God in Şifa; usage; thus it could not be confused with ha$kika. But, without the article, ha$k$ can assume a fully abstract sense which approximates it to ha$kika, reality, truth (cf. L. Massignon, Lexique, 1954, 310, n. 2). Subsequently (in later Şifism), al-ha$kika$ so coming to denote an effective, deeply felt experience, the man in quest of God will fix his heart upon this by a purification (tansik) of his idea of the divine attribute (cf. al-Hudjwiri, Kashf al-mahk$u$b, Eng. trans. by Nicholson, Leiden-London 1911, 381). It is in this sense that ha$k$ can denote in God the essence not manifested, and ha$kika$ the divine attributes which are indeed the most important of things, their essential reality (cf. Dict. of techn. terms, 333 ff.). The Şifs of the "unity of Being" like to call themselves "the People of the ha$kika"; but "the People of the Sunna and the Community" claim the title of ali al-ha$k$ (cf. H. Laoust, La profession de foi d'Ibn Battja, Damascus 1958, 166, n. 2).

B. -Ha$kika$ differentiated (by contrast) from shari$'$a. This is one of the themes of the Kashf al-mahk$u$b of al-Hudjwiri. Ha$kika$ here receives a meaning very near to Ghazâlî's usage. It is the profound reality which remains immutable "from the time of Adam to the end of the world", like the knowledge of God, or religious practice, which only the inner purpose renders perfect. Shari$'$a ("Law") is the reality which can undergo abrogations or changes like ordinances and commandments. Two errors are to be guarded against: that of the pure jurists who refuse to distinguish between inner reality and the regulations of the Law, and that of the batin$'$iya and extremist Şî$lîs (eg. Karmâtî), teaching that the Law is abolished when profound Reality is attained. In fact, says al-Hudjwiri, the shari$'$a cannot possibly be maintained within the Law. If of the latter without observance of the shari$'$a (Kashf al-mahk$u$b, Eng. tr., 381). Each of them rests on three pillars: for ha$kika$, it is the three-fold knowledge (a) of the Essence and Unity of God, (b) of His Attributes, (c) of His Actions and His Wisdom; for shari$'$a, the three-fold knowledge (a) of the Kur$'$an, (b) of the Sunna, (c) of the ijma$'$ (ibid., 24). In conclusion, the "mutual relation of (shari$'$a and ha$kika$) may be compared to that of body and spirit" (ibid., 383).

Thus ha$kika$, in the sense either of profound or essential reality, or of transcendental truth, was to be currently used in very different lexicons (the Hanball al-Barbahârî, Tarba$'$h, ii, 22, was to speak of "the reality of the faith"; ha$kî$zat al-î$mân, which only observance of the whole body of religious prescriptions guarantees; cf. H. Laoust, op. cit., 82, n. 1). Falsafa was to make it a precise term of ontology and logic; and tasawwuf employed it very differently, depending on whether the inner experience specified was or was not situated within a monist view of the relations of God and the world.

HAKIM [see Tabîb].

HAKIM-ATA (d. (?) 582/1186), Turkish saint of Khârizm, the disciple and third ka$'$ifa of ʻAbd-al-Ḥarîm, author of of popular poems on the mystic life. His personal name was Sulaymân and he was the niais Bastaghân là (i.e., [according to Barthold, Turkestân], 200 and n. 1) of ʻAbd-al-ʻAzîz, a locality near the modern Kung,ad, in the delta of the Amû Daryây, where his tomb is still pointed out.

The legendary biography of ʻAbd-al-ʻAzîz is recounted in the anonymous Ḩakîm Ata kitâbî (Kazan 1846); as a child he attracted the attention of ʻAbd-al-Ḥarîm, and at the age of 15 became his muhîd; he was given the name Ḥakîm ("wise") by the prophet Khîdr (see al-Ḥakîm), who inspired him to utter his poems (kitâbîs); his Ḥakîm having sent him out on a camel with orders to settle wherever the camel brought him, at Binâwî he attracted the attention of ʻBughra Khân' and received in marriage his daughter ʻAnbar, by whom he had three sons (for a summary see M. F. Koprulûzâde, İk mutasawwflar, 98-104).

Three works, all very popular down to modern times in Turkestan and especially in the Volga basin, are attributed to him: (1) Bahrgâm ha$kîlî (MS very common, printed Kazan 1846, etc.) is a collection of the works of 14 authors, consisting of 124 poems of which 44 are by ʻSulaymân') and 8 versified tales (with two, on the mi$'$râd$'$ and on Abraham's sacrifice of Ismâ'îl, by Sulaymân) the spirit and style is close to that of ʻAbd-al-Ḥarîm's Diwân; (2) ʻA$'$îr samân kitâbî (Kazan 1847, etc.), in hasâ$'$â metre, on the Day of Judgement; (3) Ḥavatî-i Maryam ha$kîlî (Kazan 1858, etc.), in maddî metre, on the death of Mary the mother of Jesus (a story given also by Râghîbî [s.v.]). His Mi$'$râd$'$-nâmé and some of his short poems are included also in the Diwân-i Hikmet of ʻAbd-al-Ḥarîm (Istanbul 1899, 47-56).

GÖNYÂ ALPAY

ḤAKĪM-BÂSHI [see HEKIM-BÂSHI].

AL-ḤAKĪM BI-AMR ALLĀH, sixth Fâtimid caliph, whose name was ʻAbd al-ʻAzîz al-Mansûr, one of the most famous caliphs because of his excesses, his cruelty, his persecutions, particularly of the Christians, the divine character which certain of his supporters attributed to him and which is an article of faith with the Druzes, and because of his mysterious end. It is difficult to form an exact idea of his personality, so strange and even inexplicable were many of the measures which he took, and so full of contradictions does his conduct seem. His main characteristic is a tyrannical and cruel despotism, with intervals of liberalism and humility.

Al-ʻAzîz, born in 375/985, was only eleven and a half years old when his father, Al-ʻAzîz, died at Bilbays on 28 Ramadân 386/14 October 996. He had been proclaimed wali al-ʻulâm in 383/993. On his deathbed, Al-ʻAzîz had instructed the chief ʻAlî Muhammad b. al-Nîmân and the leader of the Kutâfâ, al-Hasan b. ʻAmâr, to proclaim his son caliph. He made his entry into Cairo on the day following his father's death, dressed in a monochrome
durra, wearing a turban ornamented with precious stones, with a lance in his hand, a sword at his waist and preceded by his father's corpse. On the following day he was solemnly presented to the dignitaries in the great ʿsāfāt of the Palace, seated on a golden throne, and was greeted with the title of ʿṣāfāt with the lašab of al-Ḥakīm bi-amr Allāh.

Right at the beginning of his reign, the Kutāma Berbers, who were the mainstay of the dynasty, insisted that the leadership of the government be entrusted to their chief, al-Ḥasan b. ʿAmrār, who was also the leader of the Kutāma Berbers. In Sicily, and he was appointed ʿṣāfātāt [see ʿṣāfātāt], with the lašab of Amin al-Dawla. He showed favour to the Berbers in the army, at the expense of the other elements—Turks, Daylamis and Blacks, had ṣaṣa b. Nasṭūrus, the vizier of al-ʿAẓl, put to death, and quarrelled with the young caliph's tutor, the eunuch slave Bardiawan [q.v.]. The latter, made anxious by the plan formed by the followers of Ibn ʿAmrār to suppress al-Ḥakīm, made an alliance with the governor of Damascus, the Turk Manguṭekin. But Manguṭekin, having marched towards Egypt accompanied by his Bedouin ally Mufarridj b. Daghfīl b. al-Djarrah [see Djarrahids], was abandoned by him and defeated near ʿAṣkāla by Ibn ʿAmrār's troops under the command of Sulaymān b. ʿAṣfāt b. Fallāḥ. However, Ibn ʿAmrār's government lasted only a short time. One of the most powerful Berbers, Diṣṣysh b. Šamsāma, who had been dismissed from his post as governor of Tripoli, joined with Bardjawān. A revolt broke out against Ibn ʿAmrār, who was defeated and had to go into hiding, and Bardjawān seized power and took over the position of ʿṣāfātāt at the end of Ramadan 397/beginning of October 997 and caused the oath of loyalty to the young caliph to be sworn again. Ibn ʿAmrār, at first pardoned, was later assassinated.

The administration of Bardjawān, helped by his secretary, Fahd b. Ibrāhīm, had to face numerous difficulties: the Byzantine offensive in northern Syria, a rebellion at Tyre of the adventurer ʿAllākā with Byzantine support, and disturbances at Damascus and at Barša in Tripolitania. Affairs in Syria ended successfully when the defeat of the Byzantine army at Tyre, with the help of the most powerful Berbers, Diṣṣysh b. Šamsāma, although at first defeated outside ʿĀfamiya, pursued and conquered the Byzantines who were disorganized by the death of their leader Damascus (see M. Canard's translation of the account by Ibn al-Kalānīn in Reves des Études Byzantines, Paris, xix (1961), 297 ff.). Just before the beginning of this campaign against the Byzantines, Mufarridj, who wished to make himself master of Ramla, had had to submit to Diṣṣysh b. Šamsāma. Order was restored at Damascus. It was restored also at Barša, but the attempt to take Tripoli from the Zirid ruler of Ifirkiya failed. The negotiations with the Byzantines, begun after the ʿĀfāmiya incident and initiated either by the Emperor Basil or by Bardjawān, came to nothing and Basil began a new campaign in 390/1000, which was being rebuilt, and the erection in its place of the Rāšida mosque (on this see al-Makrizi, Khitāt, ii, 282); the conversion of two other churches into mosques; the transfer of the Melkite Christians from their own quarter to that of al-Ḥamra (on which see ʿAbd b. ʿAbd al-Majīd, Khitāt, i, 298): the prohibition of wine, although Muslim law permits it to Christians, and orders to destroy the wine-jars and to empty the wine onto the ground.

The measures taken against the Christians and the Jews were one of the most striking features of his reign, and it must be admitted that there had already been similar edicts issued by the ʿAbbasid caliphs. We list al-Ḥakīm's measures briefly here: 393/1004: a proclamation of the prohibition of wine which was being rebuilt, and the erection in its place of the Rāšida mosque (on this see al-Makrizi, Khitāt, ii, 282); the conversion of two other churches into mosques; the transfer of the Melkite Christians from their own quarter to that of al-Ḥamra (on which see ʿAbd b. ʿAbd al-Majīd, Khitāt, i, 298): the prohibition of wine, although Muslim law permits it to Christians, and orders to destroy the wine-jars and to empty the wine onto the ground.

395/1004: the forcing of Christians and Jews to wear black belts (ṣumārd) and turbans.
396/1005-6: a new prohibition of wine.
397/1007: the prohibition of the Palm Sunday procession at Jerusalem and elsewhere.
398/1008: the confiscation of the possessions of the churches and monasteries in Egypt.
399/1009: the forcing of Christians and Jews to wear black belts (ṣumārd) and turbans.
400/1009-10: the demolition of the Church of the Holy Sepulchre at Jerusalem; according to Ibn al-
This was because the caliph was indignant at a fraud practised by the monks in the miracle of the descent of the holy fire on to the altar (on this miracle see Krakovskiy, The "holy fire" according to the accounts of al-Biruni and other Muslim writers of the 10th-12th centuries (in Russian), in Khristianskiye Vostochnii, iii/3 (1915), 226-42).

In the same year: the prohibition in Cairo of the Epiphany Procession, the Muslim authorities being forbidden to attend it as they had formerly done; the destruction of the Melkite monastery of al-Kasir on the Makaat'ajm Hills and the desecration of the graveyard; the destruction of a church at Danietta.

401/1010: the repetition of the order to the Christians and Jews to wear black belts; a new prohibition of wine and of its use in the Mass.

402/1011-12: the forbidding of the display of crosses and the sounding of lahūs [q.v.].

403/1012-13 (in 404, according to al-Maqrizi): an order to the Christians and the Jews to wear black turbans and head veils (taylasathom), and to Christians to wear a wooden cross round their necks; an order forbidding them to ride on horseback; the replacement of Christian officials by Muslims. These measures were made still more severe after Christian petitions were received, and a large number of Christians were forced through fear to embrace Islam. This was a disastrous year for the Christians, all of their convents and churches being destroyed and their treasures confiscated. Only the monastery of Sinai was spared, thanks to a ruse on the part of the abbot. But it did not escape confiscations, since, in 411/1021, the abbot complained to the caliph about them.

In general this policy had the approval of the Muslims, who hated the Christians because of acts of misappropriation and of favouritism by the Christian financial officials, which led for example to the execution in 393/1003 of the secretary Fahd b. Ibrāhim, who had been at the head of affairs for more than five years, and the imprisonment, although temporary, of several Christian secretaries of the various offices. It should be mentioned that these measures were perhaps not always strictly enforced, otherwise they would not have been necessary to repeat them.

On the other hand, in 404/1013 al-Ḥākim allowed the Christians and the Jews, even those who had embraced Islam, to return to their faith and to emigrate to Greek territory. In 412/1021, when he learned that some Christians who had become Muslims were attending Mass in certain houses, he took no action against them, and in the same year he produced a whole series of measures in favour of the Christians: authorizing the rebuilding of the monastery of al-Ḵaṣr and the restoration of its possessions, granting protection to all the churches of Jerusalem, restoring some churches and returning their possessions to all the churches, and authorizing Christians who had embraced Islam to apostatize.

One wonders whether al-Ḥākim was not at times inspired by the memory of his Christian mother. The specifically Shi'i and anti-Sunnī measures encountered a vigorous opposition from the mainly Sunnī population of Egypt, and were, either because of this or in an access of liberalism, sometimes repealed. Although, in 393/1002-3, thirteen people were arrested, publicly exhibited and imprisoned for three days for having performed the prayer of al-duhd [see §11.2] which had been forbidden since 370, in 399/1009 it was once again permitted to perform it, according to Yahyā b. Sa'id al-Anājī. Similarly there were authorized the kullāt [q.v.] in the Friday prayer (which was considered as having been introduced during the 4Abbāsid period: cf. al-Nu'mān, Daš'atim, i, 121) and the prayer of the tarāwīh in Ramadān; it was permitted in summoning to the prayer of al-fāṣir to say twice (talawih), in accordance with Sunni practice, "prayer is better than sleep"; it was no longer obligatory to call, in the adhām, "Come to the best of works", which was a specifically Shi'i formula (cf. al-Maqrizi, ii, 287 and 342, where the latter matres de ligature are repeated similarly in al-Maqrizi, ii, 342, in 403/1012 he ordained a return to the formula "Come to the best of works", suppressed the talawih and once again forbade the salāt al-duhd and that of the tarāwīh. The forbidding of women to weep and lament at funerals should probably also be attributed to a reaction against a popular practice which had been forbidden by the Prophet but which the Sunnīs do not seem to have combated very successfully.

One of the measures which often gave rise to disturbances was the anathema pronounced in 395/1005 against the first caliphs and the Companions of the Prophet: orders were given to inscribe these maledictory formulas on the walls of the mosques and of various other buildings and also on the bazaar shops, and this gave rise to a brawl at the time of the return from the Pilgrimage. The edict was therefore repealed twice years later and an order was given to efface the anathemas and to punish any who insulted the Companions. This order was renewed in 403/1013. To this reversal of policy and return to Sunni practice belongs also the authorization to celebrate the fast and the breaking of the fast as the Sunnīs did, when the new moon was actually observed, whereas the Fātimid law fixed the beginning of the month by astronomical calculations; and also the suppression of the Feast of Ḥaḍīr Khumm (al-Maqrizi, i, 389, 10).

The rigorous measures against the Sunnīs produced a great zeal for Shi'ism and people thronged the lectures which were given at the palace by the chief Kādi' Abād al-'Azīz b. Muhammad b. al-Nu'mān, to such an extent that people died of suffocation.

The creation of the dār al-tīm or dar al-ḥikmah [q.v.] in 395/1005 was another measure intended to combat Shi'i propaganda and promote Sunnī doctrine.

The edicts of an ethico-social character are among the most curious decisions of this caliph, and when they were not the result of caprice and of outright whims, it is possible to attribute them to an anxiety to promote good morals and to combat libertinism.

The prohibition of wine which we have already mentioned affected the Muslims as well as the Christians. It was not observed during the revolt of Abū Rakwa (see below). It was repealed in 396/1006, when al-Ḥākim's physician had pointed out to him that wine would be beneficial for his health. But this order was re-introduced several times, certainly out of a concern for morality. Of a similar nature were the suppression of houses of ill-fame, the forbidding of people to appear in baths without wearing a loin-cloth, the forbidding of the sale of slave singing-girls, the suppression of the sale of honey and of raisins (which could be used to make intoxicating drinks), the prohibition of musical instruments and the forbidding of performances by singers and musicians. For the same reasons he forbade women to adorn themselves and to display their jewels, to go to the baths, the cemeteries and even, at one time, to go out at all, in 405 forbidding the shoemakers to make shoes for them so that they were forced to remain indoors. Some women who
went to the baths in spite of the prohibition were walled up there.

Al-Hākim also forbade pleasure parties on the banks of the Nile and boating excursions on the Khaldjī; he also ordered all doors and windows which overlooked the Khaldjī to be closed. He even forbade people to walk about at night or to keep shops open after sunset, though at other times he himself took pleasure in strolling in the crowded streets.

All these measures were extremely unpopular; al-Hākim was certainly anxious to deal severely with the tendencies to criminals and to profligates among the population and he did not hesitate to punish most severely any infringements of the prohibitions.

Although it can be admitted that the caliph's motives in issuing certain of the prohibitions were serious, the same cannot be said of a number of other measures. Among these was a series of prohibitions concerning food, which werereesome both for trade and for the consumers. He forbade mushroom, a magnumious vegetable, on the pretext that Abū Bakr, Abū 'Isha and Mu'āwiya had liked it; the salad known as muuwakaliyya (rocket), lupins, certain shell-fish (tellina), fish without scales (which recalls the prohibition in Deuteronomy, XIV, 3 ff.). The forbidding of the killing of cattle except for the Feast of Sacrifices may have arisen from the need to preserve them for agriculture (compare the policy of al-Hadīdja). But we can say of the order, twice issued, to kill all the dogs because their barking annoyed the caliph, and of the prohibition of the game of chess? What explanation can be found for al-Hākim's confiscation in 399 of his mother's, his sister's and his wives' possessions?

Infringements of all these regulations were sometimes punished by death, for al-Hākim resorted to executions for all kinds of reasons, among them to inspire terror and as a method of government. The number of viziers, high officials and ordinary individuals whom he put to death is considerable. We mention here only a few cases: the assassination of Bardjawaun and execution of Fahd b. Ibrāhīm (see above); the execution in 395/1005-6 of all the inmates of the prisons; tortures inflicted in 399/1009 on a number of Christian officials (hanging up by the heels of them in 399/1009, execution of the vizier 'Ali b. al-'Uṣayna, the Maghribī, and of the ex-vizier Sālih b. 'Ali, and in 401/1010 of his successor, the Christian Mansūr b. 'Abdūn, and also of Husayn b. Djawhar and 'Abd al-ʿAzīz b. Muḥammad b. al-Nūmān who, after having fled to the Banū Kurra, had returned under safe-conduct; in 401/1010, the mutilation of Abu 'l-ʿKāsim al-Dīwrāja and of the black eunuch Ghayn, a high official of the Palace, and in the same year the execution by drowning of several of al-Hākim's concubines; in 405/1014, the execution of the vizier al-Ḥusayn b. Zahir al-Wazzaun and of two other viziers, one of them being al-Fadl b. Diʿyar b. al-Furāt. He even had secretly put to death, in 400/1010, his maternal uncle Arsenius, the Melkite patriarch of Alexandria, whom he himself had elected ten years earlier. His hypocrisy and cynicism were such that he would even load with gifts people whom he was soon afterwards to execute.

It is not surprising therefore that the whole population stood in terrible fear of al-Hākim.

One of his most cruel acts—for it was inspired solely by the desire for vengeance—was his decision, at the end of 410/March 1020, to burn al-Fustāṭ, as a result of the circulation of libellous statements against him, accusing him of abandoning Islam completely and of having abolished its fundamental prescriptions (fasting and the pilgrimage) and of preaching of al-Darāzī and of Ḥamza (see below), and because of the riots which had followed the proclamation of the divinity of al-Hākim by a propagandist at the Mosque of ʿĀmr. He gave orders to his black troops to plunder and to burn al-Fustāṭ, and these troops committed atrocities on the inhabitants. The eunuch slave ʿAdī, whom the caliph had sent to restore order, gave him such an angry account of what had happened that al-Hākim had him killed on the spot. But he had to intervene himself to stop the fighting, for the Turks and the Berbers had taken the side of the inhabitants of al-Fustāṭ and were fighting against the black troops. Some traditions state that the caliph was hypocritical and cynical enough to ask: "But who gave orders for this?", and that he amused himself by watching the burning of al-Fustāṭ from the top of the Mūṣṭaṭṭam hills. The disturbances lasted for a whole week and left much of al-Fustāṭ in ruins:

The reign of al-Hākim was moreover disturbed by a number of rebellions. First there was a revolt of the Arab tribe of the Banū Kurra in the region south-east of Alexandria, the Buḥayra. But the most serious was that of Abū Rakwa Walīd b. Ḥishām, an Umayyad prince driven out from Andalus. After several adventures in different regions, even in Syria, he appeared in the region of Burj and won the support of the Zanāta Berbers. He already had with him the Banū Kurra, who had revolted previously. He set himself up as anti-caliph and defeated first one army at the end of 395/1005, then that of the Turk Inal (according to Yahya, the Armenian Kābul) which al-Hākim had sent against him. At this point al-Hākim's distress was all the greater in that the population of Egypt and the troops, tired of the executions and the cruelties that the caliph had inflicted on the Banū Kurra and the Kutāma of the Syrian army, showed their joy and hoped that they would be rid of the tyrant. It seems even that the vizier Husayn b. Djawhar had entered into correspondence with Abū Rakwa. Al-Hākim then called on the Ḥamdānī ghulāms who were in Syria and on the Ṣayyid Bedouin of Mufarrīdī b. Daghlīf and put them under the command of al-Fadl b. Salīh. A battle took place between detachments of the two armies on the outskirts of Alexandria. Then Abū Rakwa penetrated as far as the Fayyūm and sent one of his detachments towards Diža where the caliph had sent reinforcements under the command of ʿAll b. Fallāḥ, who was defeated. But in Diḥa 'l-Hidīdja 396/August 1006, al-Fadl b. Salīh gained a decisive victory over Abū Rakwa at Fāyūm and. Abū Rakwa, who was fleeing towards Nubia, was captured and delivered up by the amīr of the Nubian marches and executed in Cairo in Diḵmād II 397/March 1007. The alarm had been great. The caliph had had to humble himself to regain the sympathy of the troops, apologizing for the executions which he had ordered. It seems even that at one point he considered fleeing to Syria, for it was expected that the rebel would enter Cairo and the unrest of the population had caused a serious rise in prices. During the two years that this rebellion lasted, al-Hākim's prohibitions concerning food were waived and it was at this time also that he mitigated the anti-Sunnī measures.

A further alarm was caused by the revolt in 402/1011-2 of Mufarrīdī b. Diḏarrābīd in Palestine,
encouraged by al-Husayn b. 'Ali al-Maghribi (the vizier al-Maghribi), who had taken refuge with his son al-Mansur b. Lu'lu', after the execution of his father 'Ali al-Maghribi in 400. See the article DARRĀHĪDS for details of how their intrigues were successful in installing in Palestine an anti-caliph in the person of the Sharif of Mecca in 403/1012-3 and how al-Hākim bribed Ḥassān to abandon the Sharif, who returned to Mecca and gave himself up to al-Hākim, who pardoned him.

The eccentricities in which al-Hākim indulged when he was no longer under the tutelage of Bar-djwān are well-known. He began to wander around the streets and alleys of al-Fustāṭ at night, accompanied by a few companions. When this happened, the merchants would illuminate their shops and houses and the streets were as lively as in the day-time. He liked to watch scenes of wrestling (muṣṭarā'ā) among the street loafers—brawls which sometimes degenerated into murderous battles between rival groups. He showed at times an unhealthy curiosity. Ḣāybhā b. Sa'īd relates a revolting scene which took place in 407/1016-7, when actually in the street he made one of his black attendants make an old debauchee submit to a degrading assault and laughed as he watched this spectacle. Sometimes during these walks he was seized by a fit of absolute madness. One day as he passed a butcher's shop he seized the butcher's chopper and with it struck and killed one of his attendants, passing on without paying any more attention to the body; the terrified crowd did not dare to do anything and the body remained there until al-Hākim sent a shroud in which to bury him.

In 405/1014-5 these expeditions increased; he was seen in the streets several times in one day. He did not give up his outings even when he was ill, but he had himself carried in a litter.

There can also be counted among his eccentricities his sudden fits of humility and of asceticism, unless it is thought that he had always an inclination towards Sīfism. In 405/1013-2 we see him forbidding his subjects to prostrate themselves in front of him, to call him "Our Lord", and to beat drums or sound trumpets in the neighbourhood of the palace. He made a great point of celebrating the two great Islamic festivities without a procession and without ornaments. He showed abstinenence in all he did—in food and in bodily pleasures. He allowed his hair to grow long and wore coarse garments of black wool, rode only on a donkey and distributed alms lavishly. In 404/1013, after his cousin 'Abd al-Rahmān b. Ḥāytham had been proclaimed heir-presumptive, he delegated all the affairs of state to him. It was the heir who rode on horseback in the official processions, wearing all the insignia of the caliph, whereas the latter continued to ride on a donkey. Towards the end of his reign, this humility and asceticism increased to the point that he no longer changed his clothes and wore them filthy with sweat and dust and sticking to his body, that he travelled about the countryside, climbed the Mukāṭṭām hills and went for longer and longer solitary walks, when, having ordered his attendants to wait for him at a distance, he imagined that he was speaking to God.

His madness (unless it really was absolute religious conviction—Ismā'īlism taken to its ultimate conclusions) led him to accept and encourage the theories of Iṣnaṣrā'īl extremist factions, particularly of the Druzes, who were accompanying him and whom he had ordered to wait for him. They did not see him again and returned to the palace next morning. A search was made and five days afterwards his clothes were found, pierced by dagger blows. According to one plausible version, he was assassinated at the instigation of his sister, Sitt al-Mulk, with whom he had had a disagreement: Sitt al-Mulk had reproached him for his extravagance against the body of the caliph by an unknown assassin, to have taken refuge in a monastery to end his days there, etc. The Druzes believe in a mysterious gha'ib (q.v.) (a well-known Shi'i theme) which is to last until the time when he will re-appear (the Shi'i theme of the "return" [see RAQIA]). The theory that al-Hākim withdrew into solitude because he saw the impossibility of realizing his ideas in Egypt (A. Müller) is merely hypothetical.

The picture we have given of the reign of al-Hākim does not apply to the whole present him in a favourable light. It is not, however, he said that his reign was particularly unfortunate for Egypt. It had some less gloomy aspects.

During his reign the vast Fātimid domain lost none of its territory and in fact al-Hākim was even recognized at Mosul by Kirwāsh, the Uqaylid of Mosul, for a time in 407/1016-1. It was during his reign, also, in 406/1015-6, that Ṣaṣḏuṣr b. Lu'lu' of Aleppo submitted
to the Fatimid caliphate, and after his disappearance Aleppo had several Fatimid governors. It is true that at the end of his reign the situation at Damascus was troubled. In 410/1019-20, he had appointed as governor the designate who had introduced liberal measures, such as the authorization of wine-drinking, which were not in accordance with al-Hakim's ideas; he had the support of some classes of the population—the abdātīs—but others did not approve of him. As he had in addition entered into relations with the Djarrāhīd, al-Hakim recalled him. He obeyed this order very reluctantly; al-Hakim was satisfied and sent him back to Damascus. But there broke out a revolt against him and, on the death of al-Hakim, Sitt al-Mulk had him arrested and brought back to Cairo.

It is to al-Hakim that Cairo owes the building of the mosques of al-Rāṣīda (see above) and of al-Maks and the completion of the mosque known as that of al-Hakim which had been begun by al-ʿAzīz. He was also responsible for the foundation of the first Muslim university, that of al-Miṣrīkh, where he himself attended to the lessons (see above), with its considerable library. He patronized the development of the sciences and of letters; the historian al-Muṣabbībī was one of his close friends and the astronomer ʿAlī b. ʿAbd al-Rahmān wrote for him his work al-Ziyā al-kabīr. He was on excellent terms with the physician Ibn Muḥāṣṣhir, on whose advice he returned to wine-drinking. It is true, however, that he had another physician put to death.

At the beginning of his reign his intention was to rule in regular consultation with the important men of Cairo, but he soon tired of this. This was no doubt one of his fits of humility which, like the others, seems to have contained more of affectation than of sincerity. But all the historians agree that he was generous; that he did his utmost to combat famine by making gifts and by trying to stabilize the price of food; that his concern for justice was such that he himself attended to the ḥisāb, and that he appointed in addition to the chief of police two ʿaddī witnesses, without whose consent no sentence could be pronounced. Yāḥyā states that he never allowed himself to seize anyone's property, that he abolished taxes (mukāṣ) and other unjust dues and that he restored to their owners goods which had been unjustly appropriated. The same writer depicts him among the people, welcoming all their requests and endeavors to satisfy them. He abolished the "fifth" (no doubt the fifth that Fatimid juridical theory decreed should be paid to the caliph on any profit made), as well as the nadīd, the tax which had to be paid by those who were present at the majlisāt al-ḥisma, the Ismāʿīli learned meetings which were held at the Palace.

A pen-name of al-Hakim by a Jewish writer is found in a fragment of a chronicle published by Neubauer in JQR, ix, 25; in it he appears as a benefactor of the country and the author praises his sense of justice (see D. Kaufmann, Beiträge zur Geschichte Aegyptens aus jüdischen Quellen, in ZDMG, li (1897), 442-3; but also M. Schreiner in REJ, xxxi, 217, on the burning by al-Hakim of a Jewish quarter).

It is an account of his liberality also which has been preserved in some of the tales of the roor Nights, such as the story of the Cairo merchant who, having given splendid hospitality to the caliph when he had stopped in front of his garden during an official procession to ask for a drink, received from al-Hakim as a reward all the coins struck by the Mint in that year (Lane, The Arabian Nights . . . , London 1914, iii, 56). Similarly, in the Hīdāyat Wardān al-Dījasr maʿ al-mara wa l-dubb (1002 Nights, Cairo, nights 333-5): a treasure guarded by a bear is discovered by the butcher in question (see the complicated story) and he gives it to al-Hakim who has come on his donkey to see the treasure that the butcher has told him about; the caliph keeps a part of it and gives the remainder to the butcher who is thus enabled to build all the shops of the sūk which is called after him Sūk Wardān. This story is related by Ibn al-Dawārāḏī, who claims to base it on the Hāl al-rumās fi sim al-kuns of a certain Muḥammad b. ʿAbd al-Raẓāq b. Abūl-ʿAbd al-ʿAfra al-Kayrawānī.

The historians have formed very varied judgments of al-Hakim; they judged according to their own ideas of al-Hakim's personality. Dozy and A. Müller have tried to show that there was in him a certain idealism. Ivanov, Rise, 123 ff., thinks that he was anxious to realize the ideals of the Sunnis as well as of the Ismāʿīlim and to this end to suppress Christianity, and that in addition he was always trying to make the Ismāʿīlī doctrine more perfect. But he sees in him also a desire to "play to the gallery" and thinks that there may have been a histrionic streak in him. He even sees a democratic flavour in some of his acts; but this is going rather far.

Yāḥyā, who was a physician as well as a historian, tried to give a medical explanation of his "madness" as a mixture in his brain of pernicious and morbid humours which from his childhood caused him to suffer from a kind of melancholy (in the true sense) and a trouble of the mind which made him a prey to fantasies. He states that in his youth he was subject to fits and that the ill-constitution of his brain caused him to suffer from insomnia (see Yāḥyā-Cheikh, 218 ff.). This insomnia may explain al-Hakim's nocturnal walks.

In any case, al-Hakim's personality remains an enigmatic one. He seems to have been several persons in succession or even simultaneously.

**AL-HâKIM BI-NAYSÂBûRÎ, MùHAMMAD B. ‘ABD ALLAH B. MùHAMMAD ABU ‘ABD ALLAH IBN AL-BAVYY, a traditionist of note, b. 321/933, d. 405/1014. He travelled in various countries to study Hâdîth and heard traditions from about 2000 shaykh. Because he held the office of kadi for a time he became known as al-Hâkim. He wrote many books, among them, Ma‘rijat ‘ilmâm al-haddîth, an important work on the science of Hâdîth, which set a standard for the method of dealing with the subject. Though he was held in high esteem for his scholarship and was visited by many scholars, his writings have met with criticism. He has been called a Shî‘î, but al-Subki stoutly denies this. Al-Dhahabî who, in Taqdîrât al-buhîsîs, calls him “the great kâlis, the divine of the traditionists”, also includes him in his Mîsân al-Hâdîdî, where he says that he made mistakes in his book al-Musâdrakh ‘ala ‘l-Sâhkây, Ibn Hâdjâr, in the parallel passage in Lisân al-mâhn, remarks that he is too distinguished to be mentioned among weak traditionists, but that some say he became careless in old age. In spite of criticism he holds an honoured place among traditionists. Printed works by al-Hâkim: al-Musâdrakh ‘ala ‘l-Sâhkây, Haydarâbâd 1334-42; al-Madjkah jî usâl al-hâdîdî; ed. Muhammad Râghîb al-Tâbâkhâb, Aleppo 1351/1932; An Introduction to the Science of Tradition, ed. and trans. J. Robson, London 1953; Ma‘rijat ‘ilmâm al-haddîth, ed. Mr. Mâzqâm Husayn, Cairo 1937.

J. (Robson)

**HÂKK.** The original meaning of the root hkk has become obscured in Arabic but can be recovered by reference to the corresponding root in Hebrew with its meanings of (a) “to cut in, engrave” in wood, stone or metal, (b) “to inscribe, write, portray” (also in a Canaanite inscription of the 8th cent. B.C.; S. A. Cooke, North-Semitic inscriptions, Oxford 1903, 171, 185), (c) “to prescribe, fix by decree”, therefore “prescribed, law, ordinance, custom”, (d) “due to God or man, right, privilege” (cf. Brown-Driver-Briggs, Hebrew and English lexicon, Oxford 1952; L. Koehler and A. W. Baumgartner, Lexicon in Veteris Testamenti libros, Leiden 1953). The word hâkk, meaning “right, true, just, real”, is common in pre-Islamic poetry and in the Arabic translation of the Hebrew University lists 916 passages in edited texts); it also occurs, with the meaning “truth”, in the proverbs of the Arabs (Maydânî, ed. Freytag, Arabum proverbia, nos. 83, 123, 232). Derived from this is hâkî as a Divine Name. This is already attested, in the forms hakt and ḫkt, in the South Arabic inscriptions (V. Mâzqurr, Les noms, titres and attributes of Dieu dans le Coran et leurs correspondants en épigraphie sud-sémétique, in Musel, 1955, 86 ff.), and it also occurs in the Arabic translation of the Diatessaron (A. Cicais, Tisâmî Evangeliorum Harmoniae Arabice, Rome 1888, 172, on John, XIV, 6).

The primary meaning of hâkk in Arabic is “established fact” (al-thâbit hâkîkî), and therefore “reality”, and the meaning “what corresponds to facts”, and therefore “truth”, is secondary; its opposite is bîtîfî (in both meanings). This is well stated by Djrîdji (Ta’rifat, s.v.), whereas some of the lexicographers start from the secondary meaning (cf. Lane, Lexicon, s.v.) Hâkk in its primary meaning is one of the names of Allah (cf. AL-ASMA‘I AL-HUSNÂ, no. 52), and it occurs often in the Kurân in this sense, as the opposite of bîtîfî. The commentators of the Kurân, however, “to invert (a word or expression);” (Diwân, ed. Huber, xli, 9); a-lâ kullu shay’ mî hâkîkî, “Lo, everything except Allah is vain, unreal.” (The occasional explanation of the Divine Name hâkîkî as “Creator” is based merely on its alliterative contrast with hâkîs, “creation”. For another explanation, see Masâîbîn, K, al-Tawbîn, 174). But the use of hâkîkî in the Kurân, in Islamic traditions (cf. Wensinck, Concordance et indices, s.v.), and in Arabic literature in general, is not restricted to the Divine Name; it may refer to any “reality”, “fact”, “truth”; thus, the features of the Day of Judgment, Paradise and Hell are hâkîkî. A further meaning of hâkîkî (pl. hâkîkî) deriving directly from the primary one, is “claim” or “right”, as a legal obligation (see urûg); this use of the term is already fully developed in the hâkîkî Allâh, mainly Allah’s penal ordinances, and the hâkîkî, the civil right or claim of a human.

In Shi‘i terminology, hâkîkî al-ya’dânî, an expression taken from sûra LVI, 95, is that “real certainty”
which comes to the creature with his passing away (fana) in his fudl after he has acquired visual certainty ("ayn al-khimān") in intellectual certainty ("ilm al-qabāl"); cf. Dhjurānī, Tarīqat, s.v.; Koshayri, Risāla, Būlāk 1290, ii, 99 ff. In Sufi terminology, too, the hukak al-nafs are such things as are necessary for the support and continuation of life as opposed to the ḥusūṣ, things desired by the nafs but not necessary to its existence. The use of the formula ana 'il-hakak, 'I am the Ḥakak', by al-Ḥallāj [q.v.] was one of the counts on which he was condemned and exiled.

To sum up, the meanings of the root ḥkk started from that of carved, permanently valid laws, expanded to cover the ethical ideals of right and real, just and true, and developed further to include Divine, Spiritual Reality.

[1] (D. B. Macdonald—[E. E. Calverley])

HAKKĀRĪ, (1) name of a Kurdish tribe, who from ancient times have inhabited the practically inaccessible mountain districts south and east of Lake Van, a region called after them Hakkarīya by Arab geographers and historians [see kurds], and hence (2) the name of the extreme south-east wilâyêt of the modern Turkish republic (modern name: Hakkârî), population (1960) 67,766 (the most sparsely populated area of Turkey, with a density of only 7 persons per sq. km.); the chief town is Cölemek, s.v.). Named by Yaḵūṭ (Muḍjām, s.v.) as a town, district and some villages in the Ḩakkarī ṭarā, al-Kurūn, s.v., Venice, 1953, iv, 78). The district came under Ottoman suzerainty as a result of the winter campaign of Umar [see IBN IBAḤ], Paris 1836, 328; Admiralty, Histoire des Mongoles, London 1964, 221-2; Police Departmental, La Turquie d’Asie, ii, 1942-3, indexes s.v. Hakkarî. For a recent description of the region, with further bibliography, see D. C. Hills, My travels in Turkey, London 1964, 145-80. (Ed.)

[2] AL-HAKKĀRĪ [see ABD AL-HAKKĀ R SAYF AL-DĪN].

HAKKI [see İHHĀM HAKKI, ISMA‘IL ḤAKKI].

HĀL, as a term of grammar [see nahu].
a concomitance of several: the heart possessed by a hāl is seized entirely, even though this hāl evokes, as it were spontaneously, a second which finally brings it to perfection and denies it (dialectic of the muḥābāt).

Two remarks follow from this: (a) The same mansīl, the same resting-place, according to the authors and their analytical processes, may be classified among either the maṣāḥfūt or the āḥwāl, for example, maḥābba (love of the soul and of God). For al-Kalābādhi, this is the loftiest of the maṣāḥfūt reached; and for al-Anṣāri, the first of the maṣāḥfūt. (cf. Anawati and Gardet, Mystique musulman, Paris 1961, 127-8 and n. 10). (b) Repentance, asceticism, long-suffering, poverty, humility, fear of God, piety, sincerity, etc., the maṣāḥfūt follow one after another, the order no doubt varying to suit each particular treatise, but obeying a progressive principle. The āḥwāl, on the other hand, are subject to every sentiment that takes possession of the soul during its quest for God, and they can be received, according to the various degrees of activation, equally well at the start as during the progress or at the conclusion of the procedure. In conformity with a psychological law upon which the writers of taṣawwuf insist, they often present themselves in muḥābāt, in pairs of complementary opposites—contraction and dilation of the heart (kāf and baṣāf); absence and presence (γηγαβ and ghubāb); annihilation and survival (in God: fana and baḥā), etc.

It would be fruitless to attempt to draw up precisely defined lists of maṣāḥfūt and āḥwāl. Different examples are to be found in practically every treatise of Ṣūfism, e.g., the Luma of al-Sarrāj (seven maṣāḥfūt and about ten āḥwāl), the Kitāb al-Taʿāruf of al-Kalābādhi, the Manṣūrī of al-Anṣāri (ten āḥwāl, no "section" entitled maṣāḥfūt), etc.

It must also be noted that certain writers, basing their analyses upon the etymological meanings of these terms, maintain that hāl, once received through pure grace, can become maṣāḥfūt through the zeal of the recipient. "If the hāl endures, it becomes a possession (milk) and is then called maṣāḥfūt. The āḥwāl are given, the maṣāḥfūt are acquired; the āḥwāl come from the gift itself, the maṣāḥfūt are produced by the man: the first is the active and the second is the received" (says al-Djurjānī, Taʿārīfī, ed. Flügel, 85): establishing a continuity between hāl and maṣāḥfūt, the activation received in the soul being as it were destined to be possessed by it. A further point to note is a phrase of al-Hudjwīrī, according to whom "the fleeting state (hāl) of the saint is the permanent station (maṣāḥfūt) of the prophet!" (Kāḡī al-Mahdī, English trans. by R. A. Nicholson, Leiden-London 1911, 236). In general, however (cf. below, § 3), the stabilized hāl is rendered by some word other than maṣāḥfūt.

2.—Hāl and ṣawt. Unlike maṣāḥfūt, ṣawt may be said to occur on the same analytical level as hāl. As we have seen, hāl evokes a point of equilibrium, the impact of an "encounter". Ṣawt (time) must not be understood as a temporal measure; it transcends measured and measurable time, it is "the unit of psychic measure" (L. Massingham, op. cit., 556) of the wāḍıj, of the encounter, or its absence; cf. al-Hudjwīrī (op. cit., 368) for whom, to "the time of encounter", there corresponds "the time of absence (fakīd)". A whole Sūfī line, culminating in Ibn 'Abbād of Ronda, professes "the spirituality of time". But it is frequently emphasized (e.g., al-Hudjwīrī, 369) that ṣawt "has need of hāl", that hāl (state) is that which descends upon "time" (wāḍıj) and adorns it, as the spirit adorns the body". It is the actualization of hāl which is possible to lose wāḍıj, and it is thanks to wāḍıj that the hāl received is actualized in the soul. According to the degree of completeness of the spiritual experience, emphasis will be placed on either the one or the other. It is said that Jacob was the possessor of wāḍıj, while Abraham possessed hāl. Similarly, hāl qualifies the object of desire (murād) and wāḍıj the degree introspectively attained by the one who desires (murād). So much so that the maṣāḥfūt (which connotes the idea of novice, beginner) is "in himself in the pleasure of wāḍıj", and the murād "with God in the delight of hāl" (al-Hudjwīrī, op. cit., 370).

Hāl, an inner received state, may well at the start of the spiritual life be burdened with speech; however, it must succeed in transcending every description (naʿīl), just as wāḍıj inserted in time shatters time, when from "encounter" it becomes "ecstasy" (cf. al-Kalābādhi, Kitāb al-Taʿāruf, ed. Arberry, Cairo 1952 (1913), 54).

3.—Hāl and tāmkin. Muḥāsibī, taking his idea of hāl from the medical vocabulary (cf. above), laid stress on the point of equilibrium experienced internally, from which it followed that hāl, not measured temporally, was enduring. Other writers (e.g., al-Ghazzālī, Ḩiyā, Cairo 1932, iii, 16-7) emphasize the multiplicity of āḥwāl in the soul, the lack of continuity in their order, and the extreme difficulty of stabilization.

But it is generally stated that hāl, the internal reality of self transiens, unstable at the start of spiritual life, can tend to become stabilized—beyond speech and beyond temporal order. The vocabulary of al-Djurjānī, who regards it as becoming maṣāḥfūt because "possessed" by the subject, here seems to be at fault. For preference, it is the idea of tāmkin, strengthening, stability, that emerges. The maṣāḥfūt is a place, the station where one remains; tāmkin is the spiritual act of enduring and stability. Tāmkin, says al-Hudjwīrī (op. cit., 372), is contrasted with taḥāw, which indicates a change, an alternating transition from one state to another.

Moreover, maṣāḥfūt, exactly like hāl, can and must be strengthened by tāmkin. And this last is of two kinds, depending on whether the action of God or the subject's act is dominant. In the second case, it qualifies the maṣāḥfūt and the āḥwāl and is coloured by them; in the first case, "there are no attributes". The weak soul could not persist in the act of hāl—which may arise, vanish, give way to some new favour. The soul endowed with tāmkin becomes stabilized beyond the reach of every psychological change.

According to al-Anṣāri, the stabilized āḥwāl progressively become "ascendencies", wāḥid, then "realities", baḥāʾīkh, in order finally to attain the "limits" of the mystical ascent, niḥyādī. Cf. S. de Beaurecueil, introduction to Sharh al-manṣūl, of Ābd al-Muṭṭ, Cairo 1954.

HALAB, in Turkish Halep, in Italian, English and German Aleppo, in French Alep; town in Syria, the most important after Damascus.

It is situated in 38°6'5" E. and 40°12' N., and at an altitude of 390 metres/1275 ft., at the north-west extremity of the inland plateau of Syria and on the banks of a small river, the Kuwayk (average rate of flow varying from 10 to 12 cubic metres per second) which descends from the last foothills of the Taurus. It is surrounded by a vast chalk plain with a healthy though severe sub-desert climate with wide variations in temperature (winter average: 5° to 17° Centigrade; summer average: 20° to 30°) and a low and irregular rainfall (annual average: 420 mm/16½ ins, spread over 40 to 50 days). The basic resources of this arid country come from the growing of wheat and cotton and the rearing of sheep; olive and fig-trees and vines also thrive there, and, in addition, in the immediate outskirts of Aleppo there are market gardens along the banks of the river, and pistachio trees (L. Pistacia vera), which have for centuries been a great speciality of the town. At all periods these local resources have supplied Aleppo with commodities for trade and for sale in the neighbouring regions and also the opportunity to develop manufacturing industries which are still active today: chiefly textiles and soap-making. In addition it is a market centre for the nomadic Arabs of the steppe of the northern Shamíyya who bring to it sheep, alkalis and salt (from the lagoon over 40 to 50 days). The basic resources of this arid country come from the growing of wheat and cotton and the rearing of sheep; olive and fig-trees and vines also thrive there, and, in addition, in the immediate outskirts of Aleppo there are market gardens along the banks of the river, and pistachio trees (L. Pistacia vera), which have for centuries been a great speciality of the town.

In addition it is a market centre for the nomadic Arabs of the steppe of the northern Shamíyya who bring to it sheep, alkalis and salt (from the lagoon over 40 to 50 days).

Aleppo's importance as an urban centre dates largely from pre-Islamic times: it is certainly not an exaggeration to claim that it is one of the most ancient cities of the world and that no other place which is still inhabited and flourishing can boast of a comparable history. Aleppo is first mentioned in history in the 20th century B.C., under the same name as it now has (Hittite Khalap; Egyptian Khrb; Akkadian Khalaba, Khalman, Khalwan) and in conditions which clearly imply that even at that early date it already had a very long past behind it. It seems that a rural settlement was formed there in prehistoric times and that this village gradually gained ascendance over the others in the area, owing to the relatively wide resources of its site and in particular to the presence there of a rocky eminence on which the citadel still stands today: it was this acropolis, one of the strongest and the most easily manned defensive positions in the whole of northern Syria, which enabled the masters of the place to extend control over their neighbours so as to found the "great kingdom" which was, in the 20th century B.C., to enter into relations with the Hittites of Anatolia.

At first the relations of the two states were friendly; but at the end of the 19th century B.C. the Hittite king Mursil, attempting the conquest of northern Syria, "destroyed the town of Khalap and brought to the land of the citadel of Khalap the Hittite army of Mitannis (before 1650 B.C.) and about 1430 fell again into the hands of the Hittites, who formed there a principality which was destined to collapse at the same time as the Anatolian kingdom. The Aramaeans, who then settled in northern Syria, seem to have neglected Aleppo in favour of new localities which they founded in its neighbourhood. Nothing is heard of the town either in the period of the Assyrian or of the Persian domination; it seems that this temporary disappearance was the consequence of a more or less serious destruction of the settlement, which probably occurred at the time of the fall of the Hittite kingdom and the effect of which was to reduce it to the status of a small rural town.

Aleppo owed its recovery to the conquests of Alexander and to the foundation of the Seleucid kingdom. Seleucus Nicator, to whom it was allotted, founded on its site, between 301 and 281 B.C., a colony of Macedonians called Beroia, built according to a regular plan (a rectangular town with streets crossing at right angles, ramparts whose four sides formed a square, and a system of canals bringing water from the springs of Haylan 11 kilometres away. Though Beroia never took an important part in the destinies of the Seleucid kingdom, this foundation nevertheless formed a decisive turning-point in the history of the place: not only did it restore to it permanently the urban character which it had lost, but its layout was to be maintained in the Islamic town, some of its characteristic features surviving until the present day.

Incorporated into the Roman province of Syria, which was formed in 64 B.C., Aleppo owed to its new masters a long period of peace and the construction of magnificent market buildings (an agora and a colonnaded avenue). A Christian community established itself there at an early date and it would seem that the town had a very active economic life during the Byzantine period, for many Jews settled there and there grew up at this period, outside the walls, a suburb for caravan trains inhabited by Arabs of the Tanūkh tribe, whence its name, of Arabic origin, al-Ḥādir ("the settlement of sedentarized Bedouin"). But the Persian invasion of 540 A.D., led by the king Chosroes I, inflicted a great blow on Aleppo: the citadel, into which the population had retreated, held out against the attack, but the town itself was burned. Its defences were rebuilt by Justinian, who built there a fine cathedral, but the sack of Antioch and the constant threat of Persian invasions inevitably prevented the recovery of the district.

It was in 16/636 that the Muslim troops appeared before Aleppo under the command of Khalid b. al-Walid: the Arabs in the suburb surrendered immediately, followed very soon by the rest of the inhabitants, in favour of whom Abū 'Ubayda signed a solemn pact guaranteeing them their lives, the preservation of the fortifications and the possession of their churches and houses, against their agreement to pay tribute. As a consequence of this the first mosque of the town was built on a public roadway; it was in fact the monumental arch which stood at the entry to the colonnaded street; its bays were simply walled in to transform it into an enclosed space.

Attached to the qurud of Hims, and then to that of Kinnasrin, Aleppo played an important political rôle under the Umayyad caliphate, although some governors of the province did reside in its neighbourhood. Its life seems to have been modified only very slowly by the Muslim conquest; not only did there remain a large Christian community, which continued to be split by the same dissensions as in the past, but in addition it was to be more than a century before the number of Muslims in the region had increased enough to warrant the building of a monumental Great Mosque: it is not known whether it was al-Walid I [q.v.] or his brother Sulayman [q.v.] who was responsible for the construction of this building on the site of the ancient agora, which was
to remain until modern times the chief place of worship in Aleppo. The Abbasid caliphate was for Aleppo, as for the whole of Syria, a period of eclipse: it remained during this period a provincial centre, deprived of any political or administrative importance. It fell into the hands of Ahmad b. Tülün [q.v.], who appointed as governor the chief of the Arab tribe of the Kilab; this encouraged an influx of the latter to this city into northern Syria, which was later to have regrettable consequences for the town. Disputed between Ibn Rā'îk [q.v.] and the Ikhshïdîs, Aleppo was finally captured from the latter, in 333/944, by the famous Hamdânîd amîr, Sayf al-Dawla [q.v.], who established himself there.

Thus, for the first time since the advent of Islam, Aleppo became the capital of a state and the residence of a ruler, and was to share in the admiration accorded by historical tradition to the Hamdânîd prince because of his military successes against the Byzantines, and the brilliant literary activity which centred round the vast palace which he built outside the walls: al-Mutanabbî [q.v.], Abû Fârâs al-Hamdânî [q.v.], al-Wâ'wâî [q.v.], Ibn Nubâta [q.v.], Ibn Khâlahâwî [q.v.], Ibn Dûmmî [q.v.] and many others less famous, were to give to the court of Sayf al-Dawla a brilliance which at this time was unique. In contrast to this, the administrative methods do not seem to have been very favourable to the development of economic activity. Furthermore, during the winter of 351/962, Nicephorus Phocas appeared unexpectedly before the town, took it by storm after elaborate siege operations, and left it as a deserted ruin, having methodically pillaged and burned it for a whole week and either massacred its inhabitants or led them away captive.

It was to be a long time before Aleppo recovered from this catastrophe. Sayf al-Dawla abandoned it for Mayyâfîrîkîn [q.v.] and on his death it passed to his son Sa'd al-Dawla Abu 'l-Ma'sîî Sharîf, whose accession there began the darkest period in the history of the town since the Muslim conquest. The ambition of the governors and the weakness of the central administration: the latter soon became so pronounced that the Turks annexed Aleppo to the empire of the Great Seljûcks in invasions, the Bedouin raids, and the repeated attempts of the Fâtîmîd[s] of Egypt to seize a place whose possession would have opened to them the route to 'Irâk all resulted in half a century of disorders, fighting and violence (for details see HAMDÂNIDS). Nor did the Fatimid occupation in 406/1015 bring any noticeable improvement, because of the revolts of the governors and the weakness of the central administration: the latter soon became so pronounced that in 414/1023 the Bedouin tribes of Syria decided to divide the country among themselves. In this way Aleppo fell to the chief of the Kilab, Sa'îh b. Mirdâs, whose descendants, the Mirdâsîs, remained in possession of it for slightly over fifty years under the merely nominal suzerainty of the caliphs of Cairo. Sa'îh himself was powerless to do back the Fatimid[s] temporarily as far as Palestine, but the division of their territories among his sons was the signal for an incessant series of quarrels and civil wars which brought anarchy and misery to the town and enabled the Byzantines and the Fatimid[s], each in turn appealed to for help by the rival claimants, to intervene continually in the affairs of the dynasty: thus in 457/1065 the Mirdâsî Rashîd al-Dawla Ma'mûd succeeded in taking Aleppo from his uncle with the help of Turkish mercenaries enlisted with funds provided by the Byzantines.

It was in fact in the Mirdâsî period that the Turks began to penetrate into Syria, as isolated bands which the Mirdâsî princes often took into their service, but which usually roamed the region unhindered in search of plunder. Towards the end of the 5th/11th century, Aleppo itself was to come under the domination of the Turkish dynasties.

In 462/1070, under the pressure of political circumstances, Ma'mûd had officially caused the Abram [q.v.] to be received in the name of his great-grandfather al-Kâsim al-Kâsimî and of the Seljûk sultan Alp-Arsîlân, in spite of the disapproval of the inhabitants, the majority of whom had from the time of the Hamdânîs been adherents of the Imâmi Shî'î doctrine. This attachment to the Seljûk empire remained a purely theoretical one, in spite of a military demonstration by the sultan outside the walls of the town in 463/1071. Some years later, on the occasion of a dispute between two Mirdâsîs for the succession, Ma'mûd [q.v.], sent against Aleppo his brother Tutuş [q.v.:] the Arabs of the Kilab and the Uqaylîd chief Muslim b. Kuryây [q.v.,] who had joined him, having secretly entered into negotiations with the besieged prince, Tutuş raised the siege, to return to the attack in the following years. Unable to hold out against him, the last Mirdâsî, Abu 'l-Qâdî Alî Sâbi', surrendered the town to Muslim b. Kuryây (472/1079).

This could be only a provisional solution, but the political conditions of the time, in a world which was in the process of change, meant that no stable situation could immediately be established: it was to be another half-century before the fate of Aleppo was settled.

On the death of Muslim b. Kuryây, which occurred in 478/1085 in an encounter with Sulaymân b. Kutûlûmî, Tutuş, at the request of the citizens of Aleppo themselves, hastened from Damascus in order to oppose Sulaymân's design on the town, but he in his turn had to retreat before Malik-Shâh; the latter, in 479/1086, sent to Aleppo as governor Kâsim al-Dawla Ak-Sunkûr [q.v.], whose beneficial administration ensured for the town a few years' respite. This annexation of Aleppo to the empire of the Great Seljûks was not to remain unquestioned, because of the political conflict created by the death of Malik-Shâh. Tutuş defeated and put to death Ak-Sunkûr, who had set himself up as defender of the rights of Bâkyûrûk [q.v.], and thus made himself master of Aleppo; on his death in 488/1095, it passed to his son Ridwan [q.v.]; Ridwan was succeeded in 507/1113 by his son Tagh al-Dawla Alp-Arsîlân, who was assassinated in the following year and replaced by his brother Sultan-Shâh, a minor to whom there was given as regent one of his grandfather's slaves, Lu'îrû al-Ya'la. This small Seljûkî dynasty was not to gain any more than a purely local importance: the smallness of its territory, of modest dimensions and impoverished by so many years of wars, disorders and impov-erishments, its rivalry with the Seljûkî dynasty of Damascus, the resistance of the Shî'î elements of the population (to whom were joined Ismâ'îlîs, who were active and dangerous enough for it to be necessary to humour their demands), all combined to render its authority precarious. The princes of Aleppo were not, any more than were their neighbours, of a stature successfully to oppose the Crusaders, who were able to push forward their enterprises in northern Syria; they even came to attack the town itself (493/1100, 497/1103), which was forced to submit to paying
tribute to them. The assassination of Lu'lu' was to render this long political crisis still more acute: the assassination of Lu'lu' was to
tribute to them. The assassination of Lu'lu5 was to render this long political crisis still more acute: the assassination of Lu'lu
remained until the Mongol conquest powerful enough to oppose with some success the claims of al-Malik al-Adil [q.v.], against whom it obtained support by means of an alliance with the Ayyubid kingdom of Mayyâfârîkîn and with the Saljûqs of Konya. Ghâzî himself, his wife, Dayfa-Khâtûn, and his mam-lûk Toghrî, who was proclaimed regent on Ghâzî's death, all displayed remarkable political qualities and were able not only to preserve Aleppo in the hands of the direct descendants of Salâh-ad-Dîn, ousted everywhere else by those of al-Malik al-Adil, but also to make it the capital of a strong and prosperous state (annual revenue of the treasury in the middle of the 7th/13th century: about 8 million dirhams), which was surpassed only by the realm of Egypt. This period marks the apogee of mediaeval Aleppo. Increased by new suburbs in which there lived the Turkish cavalry of the rulers, its industries stimulated by the presence of the royal court, enriched by the trade with the Venetians whom the commercial treaties (1207, 1225, 1229, 1254) had authorized to establish a permanent factory there, its fortifications restored according to modern techniques, its citadel entirely rebuilt to become one of the most splendid works of military art of the Middle Ages, its canal system repaired and extended to reach throughout the town, and its sâks enlarged, Aleppo became at this time one of the most beautiful and most active cities in the whole of the Muslim East. Madrasas continued to be built (the Zâhirîyya madrasa of Ghâzî; the Madrasat al-Firdaws of Dayfa Khâtûn), as well as Sûfi convents (the Khânjâh of Farâra, of Yûsûf II), both erected in a logical and sober style of architecture and housing an intellectual life which was remarkable for its time, as is witnessed by the names of Shîhâd al-Dîn al-Suhrawârdî [q.v.], of Kamâl-ad-Dîn Ibn Hûdâr 5-31, of Kamâl-ad-Dîn Ibn Shaddâd [q.v.], of Ibn Salâh al-Shahrûzî (Brockelmann, I, 356), and of 'Alî al-Harâwî [q.v.].

The reign of Yûsûf II [see al-Malik al-Nâşîr] was to mark at the same time the zenith and the collapse of the dynasty: chosen as sultan by the amirs of Damascus, he annexed central Syria and began at the same time an open conflict with the Mamlûks of Egypt, which was ended by the intervention of the caliph of Baghhd. But, on the other hand, Aleppo, which had already had to defend itself twice against armed bands of Khârîzim, was attacked by the Mongols of Hâlûgâd; abandoned by its ruler and a proportion of its inhabitants and taken by assault on 8 Safar 658/24 January 1260, it was ruthlessly sacked, and Yûsûf II, taken prisoner by the Mongols, was put to death.

Occupied by the Mamlûks after the battle of Ayn Djalàt, retaken by the Mongols, again recovered by the Mamlûks, Aleppo was to remain under Mamlûk domination until the Ottoman conquest; it was made by these, the capital of a niyâba which came immediately after Damascus in the hierarchy of the provinces: corresponding roughly with the area of the former Ayyubid kingdom, it owed its importance to its geographical situation, on the northern fron-
rier of the empire, whose protection it ensured. Nevertheless the town recovered only slowly from the disaster it had suffered in 625/1228: the continual threat of a renewed Mongol offensive kept it in a semi-deserted state for nearly half a century; it was 32 years before the citadel was repaired and 130 years before the destroyed fortifications were rebuilt. Once security had been restored, the revolts of its governors, the turbulence of the troops and the severe taxation system scarcely helped to restore its activity, and the ravages of the Black Death of 1348, soon followed by those of Timur, completed its paralysis.

But from the beginning of the 9th/15th century, the destruction of the Armenian kingdom of Cilicia and of the Genoese factories on the Black Sea, through which the commercial traffic between Europe and Persia had passed, gave Aleppo a considerable economic advantage, which was very soon to make its fortune: the town became the starting point for the caravans which fetched silk from Diyarbakr to sell it to the Venetians in exchange for cloth of Italian manufacture, and thus enjoyed a vigorous impetus whose effect was to change its topography. While its suks grew and were provided with large khans which are among the most remarkable and typical buildings of the town (the Khan of Abrak, the Khan of Özdemir, the Khan of Khayr-bak), vast and populous suburbs grew up along the caravan routes, doubling the area of buildings and necessitating the rebuilding further out of the eastern walls. In all of these suburbs there arose great mosques provided with minarets (the mosques of Altunbugha, of Akbugha, of Manklibugha) and zaviyas intended for the devotions of the Sufis, whose doctrines and practices were then very popular. One of these suburbs housed the Christians—Maronites, and especially Armenians—who served as brokers and dragomans to the European merchants.

Occupied without fighting by the Ottomans after the battle of Marj Dâbiik, Aleppo became the capital of a vilayet, which corresponded to the nizâb of the Mamlûks and whose governors had the rank of mir-i mirân.

The rebel governor of Damascus, Dînbirdîl al-Ghazâlî [see al-Ghazâlî, Dînbirdîl], failed to capture Aleppo in 926/1519, which was incorporated in the new province of Syria. The first detailed (muqâsâl) register of the Dafar-i Khâhnî [q.r.] is dated 924/1518; several other surveys were made during the 10th/16th century. During the Ottoman decline, from the late 10th/16th century, it suffered like other provincial capitals from the factional and political activities of the local military forces. For some years the Janissaries of Damascus imposed their domination on Aleppo, from which they were finally expelled only in 1023/1614. Situated at a junction of the trade of Aleppo did not exceed even 2 million gold francs. The intense commercial activity of its hey-day naturally was reflected in a further extension of the khans, many of which were entirely rebuilt in cut stone; the raw materials supplied by its hinterland (drugs, cotton, nut-gall). In 1775, the total annual value of this trade stood at nearly 18 million gold francs, but after this date it declined continually because of the slowing down of the industrial and maritime activity of France, which had finally obtained a virtual monopoly over Aleppo. Another reason for this decline was the corrupt administration, and also the earthquake of 1822 which destroyed the greater part of the town; in addition, the constantly expanding place which the new trade with Asia and America was filling in world economy deprived the Levant of much of its former importance: in the period from 1814-16 the trade of Aleppo did not exceed even 2 million gold francs.

The intense commercial activity of its hey-day naturally was reflected in a further extension of the khans, many of which were entirely rebuilt in cut stone; and clients of the Aleppine našîb al-Âşrâf, Muḥammad b. Ahmad Tâhâzâde, called Celebi Efendi. There is evidence that the Âşrâf tended to belong to the higher social groups, while the Janissaries, assimilated to the townspeople, were petty artisans and tradesmen. The factional struggles continued after Celebi Efendi's death (1786); in a notorious clash in 1212/1798, the Janissaries treacherously slaughtered a party of Âşrâf. The leader of the Âşrâf was now İbrahim Khârîşâh, a former servant and protege of Celebi Efendi. On the occasion of the restoration of Syria, he commanded a contingent of Âşrâf, sent to fight the French: there was a separate Janissary contingent. İbrahim was twice appointed governor of Aleppo, but failed to perpetuate his power there, or to secure the ascendancy of the Âşrâf. The Janissaries regained power after his removal in 1223/1808, and although proscribed by the governor, Capan-ı Şehzâde DÎnârî Pasha, in 1228/1813, remained a force in local politics. In 1235/1819 they combined with the Âşrâf to head an insurrection against the governor, Khoûrshîd Pasha. Even after the dissolution of the Janissary corps in 1826, they survived as a faction in Aleppo, as did the Âşrâf, until the mid-19th century.

During the whole of this period, in spite of the heavy taxation (treasury revenues farmed out in 921/1515-4 for the towns proper, 3,503,095 akîses; total together with the surrounding villages: 6,497,829 akîses), Aleppo did not merely maintain the commercial importance it had acquired under the last Mamlûk sultans, but developed it to the point of becoming at one period the principal market of the whole of the Levant. The signing of capitulations with the western European powers led, in fact, to the opening of new factories there: besides the Venetians, who in 1548 had brought there their consulate and their commercial headquarters, the French in 1562, the English in 1583 and the Dutch in 1613 also opened there consulates and trading offices which, throughout the 11th/17th century, were in fierce competition. Relegated to second place by the rapid development of Smyrna (Izmir) and by the Ottoman wars against Persia, whose effect was to cut it off from the regions with which it traded, and still more adversely affected by the efforts of the English and the Dutch to make Russia and the Persian Gulf the commercial outlets for Iran, Aleppo nevertheless continued to be a centre of world-wide importance, importing from Europe, via Alexandria and Tripoli, manufactured goods (cloth, metals, chemical products, glass, paper, etc.) which it re-exported to eastern Anatolia, Kurdish and Persia, exporting the products of its own manufacture (Silk, cotton) and the raw materials supplied by its hinterland (drugs, cotton, nut-gall). In 1775, the total annual value of this trade stood at nearly 18 million gold francs, but after this date it declined continually because of the slowing down of the industrial and maritime activity of France, which had finally obtained a virtual monopoly over Aleppo. Another reason for this decline was the corrupt administration, and also the earthquake of 1822 which destroyed the greater part of the town; in addition, the constantly expanding place which the new trade with Asia and America was filling in world economy deprived the Levant of much of its former importance: in the period from 1814-16 the trade of Aleppo did not exceed even 2 million gold francs.
Meşmed Paşa, 963/1555: a great mosque, three khamâs, three hasiriasivas and four suks, covering nearly 3 hectares; the ma’âf of İbrahim-Khan-zâde Meşmed Paşa, 982/1574: the customs kham and two suks consisting of 344 shops, the whole covering 8,000 square metres; others, which conform more closely to the traditional type, are no less noteworthy (the kham of the Vizier, the kham of Kurt-bak). Thanks to these building works of the Ottoman paşâs, Aleppo possesses today the most beautiful suks in the whole of the Muslim world. The great mosques, built at the same time, which reproduce the building style current in Istanbul, show the same breadth of conception, the same lavish resources, and the same successful result (the djami of Khusraw Paşâ, and of Bahram Paşâ; the Ahmadiyya madrasa, the Şâbâniyya madrasa, the madrasa of Othman Paşâ).

At the same time, as a result of the commercial activity in the town and the impoverishment of the rural districts, which together produced a drift of the peasants to the town, new suburbs arose, inhabited by small craftsmen (weavers etc.), increasing the town to an area approaching that which it occupied today: at the end of the 11th/17th century, it contained about 14,000 hearths, a considerable figure for the time.

The installation of the European merchants had naturally been profitable to their habitual intermediaries: the Jews and more especially the Christians. The latter in addition, by acting as dragomans for the consulates, were able to obtain diplomas of immunity [see Beratî]. Thanks to the activities of European missions, many of them became Roman Catholics (4,000 Catholics in 1700; 14,478 Catholics as against 2,638 non-Catholics in the middle of the 19th century). Their suburb grew and middle-class houses were built in it which are among the finest in the town, and it even became a centre of intellectual activity.

Thus, in many respects, the first half of the Ottoman period (10th/16th-12th/18th centuries) constituted the culminating point in Aleppo's history.

From 1831 to 1838 the Egyptian occupation [see İbrahim Paşa], which temporarily removed Aleppo from Ottoman administration, placed a heavy burden on the population and the financial resources which were imposed, but, here as elsewhere, it opened a new chapter in the history of the town: the revolt of 1266-7/1850, led by the leading inhabitants against the Ottoman governor, can be considered as the last spectacular manifestation of a social system which was already doomed. Throughout the second half of the 19th century, profound changes took place, under the influence of Europe, in social (schools, newspapers), administrative (the legal system) and economic life (the introduction of the tomato, and of kerosene and machines). New districts, planned and built in western style (Azi-ziya, Djamîliyya, Talal) grew up outside the old town and attracted primarily the more Europeanized elements of the population: Christians and Jews. When Aleppo became linked by railway to Hama and Damascus (1906), and then to Istanbul and to Baghdad (1912), the proximity of the stations gave a new life to these districts, and today the centre of gravity of the town tends to move towards them.

Joined to Syria at the end of the 1914-18 war, Aleppo increased in administrative importance but suffered a great economic crisis, being cut off by the new political and customs frontiers from the countries with which it had formerly been trading—Anatolia, Upper Mesopotamia and Irâq. This crisis was averted fairly rapidly by the discovery of new outlets for the commerce and manufactures of the town. The capital of a muhâmmed was equipped with a very well-organized and methodically organized administrative machinery, and provided with many flourishing schools, Aleppo gradually became an industrial town (spinning and weaving mills) and a political and intellectual centre second in importance only to Damascus. Its continually expanding population, which in 1945 was approaching 300,000, even made it appear, immediately after the Second World War, that it had a future as great as its past.

In fact the town of Aleppo now has over 450,000 inhabitants, among them 320,000 Muslims, 130,000 Christians and a few thousand Jews. But it is unfortunate that this development has taken place without any definite measures of town-planning and that the new districts which have grown up on the outskirts, and which are occupied mainly by a population of manual and minor office workers, have not been planned as a harmonious extension of a city whose originality of architecture and intense activity had ensured it a unique place among the other great Muslim cities of the Near East. Although its commercial activity has recently benefited from the construction of the port of al-Ladhikîyya, the increase in vehicles has led to traffic problems which caused the authorities to open some thoroughfares through the ancient blocks. In addition Aleppo suffers from its situation as the "second" town of Syria, in relation to a capital to which both its history and its ambitions are traditionally opposed; the problems arising from the development of the northern provinces of Syria and of the "market place" among which has long served as their centre.

**Bibliography**

The basic work remains J. Sauvaget, Aleppo: essai sur le développement d'une grande ville syrienne des origines au milieu du XIXe siècle, Paris 1941, of which the above article is a résumé and which contains a systematic bibliography and list of the sources. See also IA, s.v. Haleb, which is here reprinted (with some additions and revisions). Various later publications should be added, in particular the following studies: M. Canard, Hôtel-dieu et jalous, ed. S. Dahan, i-ii, Damascus 1953-7, 4-6 (tr. 6-12). Wikayat al-nu'as of Burchan al-Din
Muhammad al-Mahbudi (on whom see Ahlwardt, cat.
Berlin, no. 4546). Completed in 923/1517, it had an immediate success, acquired very numerous com-
mentaries (the two most popular ones are the
Madgima al-anhur of Shaykh-zade, d. 1078/1667, and
al-Shakdik al-nu^mdniyya (q.v.), which is an exhaustive treat-
mentary (the two most popular ones are the
Mukhtdr al-Sira al-awan of Ibn
al-Salahiyya. He died in Cairo on 29 Sha'a'bân 1044/ 17 February 1635. His best known work is the
Insin al-nayin commonly known as Al-Sira
al-Halabiyah. It is a biography of the Prophet, written at the request of Abu 'l-Mawâhid b. Muhammad
al-Bakri, then head of the leading Shaykh-family of Egypt. The work is based on two earlier biogra-
phies, viz. 'Uyin al-anher by Ibn Sayyid al-Nâsh [q.v.] and Al-Sira Al-Sha'amiyya by al-Sâhibî, but it also contains materials taken from other sources. It found a wide circulation, was printed several
times and translated into Turkish. For ms of it and of its abridgments see Brockelmann II, 307 and S II, 418. Amongst his other writings enum-
erated by al-Mujabbî, we may mention Al-Nâshiha
'l-Awsiyah fi bayn bu'nu tarîkat al-sâda al-Ahmadiyyah in defence of the Brotherhood of Ahmad al-Badawi [q.v.].
(Bibliography: Mujibibi, Kuqilasa al-dâhar, iii, 122 ff.; Brockelmann II, 307 and S II, 418.
(J. W. Fock)}
On 4 Ramadan 1217/29 December 1802 he was appointed ambassador to France, with the rank of bahş-mühālîb. His mission to Paris was a failure, but it enabled him to learn about the Western world.

After his return to Istanbul (late 1806) he was appointed be在家 kişis vekişi and on 23 Rabî’I 1222/31 May 1807, two days after the revolution which deposed Selim III, was promoted to the post of re’sî al-hātîb[a]. At the request of the French ambassador Sebastiâni, who alleged that he was pro-British in his policy, he was dismissed on 5 March 1808 and exiled to Kütâhâya; this banishment was in fact a fortunate accident for the young Mustafa IV, who was exiled on 28 July following. In Şabâb 1224/September 1809 he was permitted to return to Istanbul.

The new sultan Mahmûd II sent him on a mission to Baghdad, where he arrived on 25 Dümâdâ I 1225/28 June 1810. His task was to persuade the quasi-independent wallî Kültûcî Sîleymân Paşa to pay various sums due to the sultan. When Sîleymân refused, Hâlet Efendi retired with the Mülûk to Mosul where, with the help of the merchants of Mosul and Bûhân, he prepared a military expedition against the recallînt wallî. The expedition was successful, Sîleymân Paşa being murdered and the former kethâdû ʻAbd Allâh Âgha being appointed in his place.

In 1226/early 1811 Hâlet Efendi was appointed kethâdû-ı rûhî-i hâmâyûn and on 5 Şawwâl 1230/10 September 1815 niğhâbâni. He enjoyed the confidence of Mahmûd II, who sought his advice in state affairs (for the secret correspondence between Hâlet Efendi and the berber-bashi ʻAli Âgha, see Diewdet, Ta‘rîkh, 3, x, 262-78, xii, 226-8). He supported the sultan in his policy of subduing the derebeyran [q.v.] in the provinces, but he did not favour the project to abolish the corps of the Janissaries: indeed he used them as an instrument to maintain his influence over the sultan. For a time he was so powerful that he controlled nominations to the posts of Grand Vizier and of Shâykh al-İslâm. According to Slade, his intimacy with the Phanarions brought him under suspicion, and he tried to justify himself by showing ‘as great hatred to the Greeks as he was supposed to have friendship’ (Record of travels, i, 246). His fall was brought about by the part he played in procuring the deposition, in 1820, of ʻAli Paşa Tepedelenli [q.v.].

During his short term in office he took charge of the office of the gegenbeg, upon the deposition of the sultan. He was permitted to return to Istanbul.

Despite many vicissitudes, Hâleti had, on the whole, a successful career and reached the second highest position of his profession; his diwân, however, is full of complaints against Fate, and the jealousy of intriguing colleagues. The sources generally agree that Hâleti was one of the most learned men of his time. He wrote and translated many books on law, and he left a library of several thousand volumes, most of them annotated in his own hand.

Apart from various religious treatises, he is the author of: (1) Diwân, dedicated to Mehmed III in its early version. It has not been edited. MSS contain varying numbers of қâṣidas, ḡaṣâls and қâfîs. Some include his rub‘îs, some do not. For a fairly good copy, see Topkapî Sarayî Müzesi, Hazine 894, which contains 31 қâṣidas 721 ḡaṣâls, 300...
Haletl cannot be considered a major poet, but his *diwan* contains many poems of impeccable form, fresh inspiration and colourful imagery. He owes his fame and place in Turkish literature almost entirely to his *rubd'is*, for which reason he has often been compared with 'Umar Khayyam. His *rubd'is* are either included in copies of his *diwan* or form an independent *risâla*. In both cases their numbers vary greatly (between 70 and 600). These *rubd'is* are exquisite in form, impeccable in style and often very personal in expression, are not always original in respect to matter. They treat mostly the old themes common to most *diwan* poets: All things are ephemeral, Fortune is fickle, life is fleeting, Fate is merciless, the beloved is cruel, consolation is to be found in mystic love, etc. But all these thoughts and feelings are so skilfully expressed that poets, scholars and biographers alike proclaimed him as the greatest master of *rubd'is* (cf. Nedim's famous verse: *Hâleti* in *Rubd'is* Umar Khayyam. His *diwan* contains many *rubd'is* and he is on the topmost heaven of *rubd'is* like the *Abâh*.

2) *Sâki-nâme* (the Book of the Cup-bearer), a *matnâvari* of 520 distichs in *mutahârib*, which *Hâleti* wrote following the vogue of the time, when many poets produced works of varying length in this genre, introduced from Persia. It consists of a short introductory prologue followed by 15 sections (*makâles*) and an epilogue (*hayâm-i keîâm*). Following the pattern, *Hâleti* uses this genre to glorify mystic love symbolized by wine, elaborates on the transience of worldly things and mocks the ostentatious practices of the hypocritically devout; finally he invites all "men of heart" to join in drinking this wine and become brothers.

3) *Munzâhâd*, a collection of the letters *Hâleti* wrote to various important personalities of the time. Although they are written in the usual flowery and bombastic *inkâh* style, they contain a number of enlightening references to events and personalities of the time.

*Bibliography*: Kâtîb Çelebi, *Fedhileke*, ii, 135; Riyâdî, *Tedhîrî* (in MS), s.v.; Fâzûl, *Tedhîrî* (in MS), s.v.; *'Aţâ'î, Hadâmî al-bahtîb*, 739-41; Gibb, *Ottoman Poetry*, iii, 221 ff.; A. C. Yöntem, *Hâleti*, in *IA*; Rieu, *Haddîk al-hâdîk,* (in MS), s.v.; Istanbulul Kütüphaneleritürkçe yasama divânlar haikalîhâletî*, (hâletî hydrî)*HALFÁ'* (A.), alfa-grass, esparto-grass. This name is generally used, loosely, of two rather similar plants: the true alfa-grass (*stipa tenacissima*) with leaves folded into a half-sheath and ears which somewhat resemble those of barley; and the lygeum or esparto-grass or "wild alfa" (*lygeum spartum*), a smaller plant which has stiffer leaves. The former grows in mountainous districts and on high plateaus; in Tunisia it is called *halbâ* (*halbâ*) and *halâm*; the latter prefers low-lying ground (*halbâ* *mahâila, semnâgh*). Although it is difficult to recognize them at first, the experienced eye can distinguish the yellow-green of alfa-grass from the blue-green of esparto-grass. A field of alfa or a pre-Saharan steppe pasture where alfa is predominant is sometimes given the name *zemêla*.

The true alfa flourishes in the area extending from the Dabra of Morocco to beyond the Djabal Nafusa in Libya and including the Ksûr Mountains, the plateau of the Awlad Siddî Shâykh, Djelfa, Bû Sa'dâ, the Bû 'Ṭâleb and the Ma'sûdî, in Algeria, and the High Tell, the *ziqâlb* situated to the south of the Dorsal, the chain of the Matmâta and the plateau of the Hâwiya, in Tunisia. This alfa is sometimes sub-divided into "sparterie" alfa, with very fine stalks about 40 centimetres long, which have a regular diameter, and "paper-making" alfa, with coarser stalks of varying length. It is used in paper-making, etc.

Usually only the true alfa is used to make pulp for paper-making, since the discovery, in the 1850's, by Thomas Routledge of Eynsham of the possibilities of its use in this industry. The wild alfa or esparto-grass, although its fibres are equally suitable for paper-making, is preferred for sparterie (see below) and rope-making. They are, however, to a certain extent interchangeable.

The alfa fields have given rise to many juridical problems. Originally the state of Tunisia tended to consider the alfa areas as its domain and to instal there workers to harvest it, and public weighing officials. Soon, however, there developed a system of "concessions" with privately employed workers.

The season for the harvesting of alfa, but not of esparto-grass, is officially fixed from September 15th to April 30th, the spring months being left to allow the plants to grow again. The alfa is harvested by women and consists of separating the fibrous stalk from the sheath by a sharp pull done with the help of a rod (mogla) 30 centimetres long. The woman takes a handful of stalks (mostra), twists them round the rod, and, with a brisk action, separates them from the rhizomes. The product of the harvest, first collected into hanks (terza), then bound into sheaves (hâdîq) of from 10 to 12 bunches, is put into a wide-meshed net (djeyyâba, ghabka) to be carried to the public weighing machine in the market place (mungâra). A good worker can gather as much as 100 kgs. in a day. Among the Awlad 'Âziz (Maknâsî) a woman's harvesting ability is considered as part of her dowry. After being weighed, the alfa is put into stacks (gûm) in the stack-yard to dry thoroughly. After a week it is put into bales which are piled up (testîl) to await transport by train or lorries to wholesale markets or factories.

In Tunisia, the markets, the first of which were set up at Sousse and Karyâwân, multiplied with the building of the railway between Hanshir Swâtîr and Sousse. Local markets were set up near stations: Ḥâidejeb al-'Uyûn, Sbyetla, Kâsîrin, Thelepte, Haydra, in the High Tell. Centres at Mazzûna, Sénéd, Maknâsî, Khâsfâ, Siddî Bû Zîd, Fayîl and Bîn Hafey supplyalfa to Sfax or to the recently built cellulose factory at Kâsrîn.

In addition to this industrial use there should be mentioned some uses of alfa in local handicrafts. In Hergla, the Chebbâ and Kerkêna it is used for plaiting the special baskets (şâdâmî) which are used for holding the pulp of crushed olives when it is put under the press to extract the oil. In Zriba, Takrûn, and the Matmâta it is used for weaving on a high-warplow loom decorated mats with a warp of wool and a weft of alfa, the stalks being either left in their natural colour or died red and black; this craft is done by women and those of Bû 'Ṭâleb (Algeria) also excel in it. Alfa is used also to make long plaited strips (dîfra) which are made into hump covers for camels (bîgâh), double panniers (šûdîya) or pairs of saddle-bags (sombîli), grain silos (gambîli, rušîna) which are stored in the ksars of the south or in the court-yards of cave-dwellings, sleeping mats, and even sandals (tarbûga), which consist of a simple sole fastened to the foot by two or three thongs which are passed between the toes and round the side of the foot and fastened in front. If soaked in lukewarm water alfa can if necessary be twisted into ropes.

In southern Tunisia alfa is used also as fodder for...
camels. In spring the semi-nomadic camel-owners graze them on the surrounding alfa-growing plateaus.

Esparto is more easily worked than alfa rusiyya and there are two methods of using it. A. Louis (Les Keersmaeker, 1913) describes the various processes which transform esparto: from the bale to the soaked fibre (drying, baling, steeping in the sea, drying again, silage) and from the beaten fibre to useful objects.

Fibre which has been steeped in sea-water and beaten on a round stone or a wooden block, then twisted (teftil) once, is made into string or thin ropes (tefa). This fibre, which is being washed up from water wells or for haulage (khol, djarr) and even, after being twisted again on an implement for twisting the strands (zaghla), ropes for fishing boats. Twisted cords of esparto are used also for making nets for carrying loads, camel harnesses, sacks and various objects in current use in agriculture and fishing.

Esparto which is simply soaked and not beaten is used for plaiting. The plaits are then joined to make double donkey-panniers, hump covers for camels, saddle bags, carriers for water-coolers (nagila), and various other everyday objects similar to those made from the true alfa.

This is a family craft and many are skilled in it (though it is agreed that the inhabitants of Kerkena are specialists in twisting and plaiting alfa), hence the proverb "A house without alfa is a deserted house".

Halil (مَهْلِل) appeared in 1884 and of the life and work of Sayyid Ahmad Khan (Ifayt-i Djawayd) in 1901. Beginning of the modern standards of literary criticism in Urdu.

Halide Edib (see KHALIDE EDIB).

Halima, a mare, or a valley, or a Ghassanid princess, after whom was named one of the most famous of all the ayyam [g.s.] of pre-Islamic Arabia, sometimes identified with the yaawm of ‘Ayn Ubaghi. It is possible that yaawm Halima was the “day” which was the victory of Ghassan over Salih [g.s.] late in the 5th century AD. But more probably, it represents the victory of the Ghassanid al-Harith b. Djabella over the Lakhmid al-Mundhir b. Nu’man, who was killed in the encounter. If true, the battle would have taken place in June, A.D. 554, at the spring of ‘Udhayiya, in the district of Kinnasrin.

Halima Bint Abi Dhu’ayb, foster-mother of the prophet Muhammad. She and her husband belonged to the tribe of Sa’d b. Bakr, a subdivision of Hawazin. Muhammad was given to her to suckle from soon after his birth until he was two years old. Well-to-do families thought desert-life residence are legendary: Halima and her family prospered miraculously while Muhammad was with them; she and her foster-brother were herding lambs, two men cut him open, purified his heart with snow and returned it to his body, and Halima, fearing demonic possession, hastily took him back to his mother.

(W. Montgomery Watt)

Halk al-Wadi (the “throat”, or the “gullet”) of the wadi, in French La Goulette (from the Italian form Goletta), township situated on the coastal strip which encloses the wide but very shallow lagoon of Tunis (less than 3 feet deep), to the north of the channel by which it is linked to the sea. After the ports of Carthage were abandoned, this became the port of Tunis; for a long time it had no artificial improvements, the ships anchoring at the entrance to a channel which had to be constantly dredged. There goods were trans-shipped onto flat-bottomed boats which carried them to Tunis, 10 kilometres away, at the west of the lagoon, as is described by al-Idrisi as early as the 6th/12th century (Description, 111-121). The entrance to the channel was guarded to the north by a fortress which is probably the “castle of the chain” mentioned by al-Bakri in the preceding century (Description, 85); it was used for defence and as a customs post. When La Goulette and Tunis were captured from the Hafsidis in 940/1534 by Khayr al-Din (Barbarossa), the fortress was extensively rebuilt and became a strong bastion. The following year, however, it was seized by the Emperor Charles V who left a garrison there. During his reign and that of Philip II, the bastion was incorporated in a large citadel. But in Rabf II 682/August 1574, the Turks, under the command of Sinan Pasha and Uludj Ali, drove the Christians permanently from Tunis and La Goulette. The Turks restored the old fortress, but demolished the other parts of the citadel, of which only the substructure now remains. La Goulette was a haunt of corsairs, which was scarcely disturbed by the demonstrations of European fleets. Under the Bey Hammuda (1782-1814), the fortifications were completed: in about 1829, the traveller Nyssen saw there a second fort (to the south) and several batteries. The Bey Ahmad (1837-1855) built there an arsenal and a summer palace. La Goulette was the first Tunisian port; between 1861 and 1865, it was visited by an average of over 600 ships each year, carrying a total of 50,000 tons**, which comprised 90% of the imports and 45% of the exports of the Regency (Gaunier, 55-6). In 1872, that is to say nine years before the establishment of the French Protectorate, La Goulette was linked to Tunis and to the palace of the Bardo by a railway track, which never, however, offered serious competition to the inconvenient small boats.

With the construction of the port of Tunis at the end of the lagoon and the digging out in the mud of a channel 20 kilometres long and 7.5 metres deep, La Goulette became, after 1893, the outer harbour of the capital, with a basin of eleven hectares which now permits ships with a draught of up to 10.5 metres to come alongside: iron ore and phosphates from the Haut Tell are loaded there and hydro-
carbons and coal are unloaded; it contains the main electricity station, whose output has recently doubled. This outer harbour is shortly to be enlarged. There exist two bastions—a fishing village whose inhabitants are mainly of Italian origin and which has become a doubled. This outer harbour is shortly to be enlarged.

Tunisia became independent).

whom 2,000 were Jews and nearly 4,000 Europeans, two-thirds of the latter being Italians; in 1956 its

Mzab

a religious council made up of twelve "recluses" to which the whole existence of the Mzabi putative for their needs. Unfortunately apart from already heard of this institution. This took place in the first half of the 5th/nth century) there belonged another Ibadi scholar who

Al-Dardimi [q.v.]

women of the town of al-Hamma in the Tunisian

did have a wife, a fact which disturbed him greatly). It seems therefore that celibacy was considered essential for a member of the halka already in this "prehistoric" stage of the institution as represented by the group of students presided over by Abu 'l-Kasim. There is reason to suppose that a "council of recluses", composed, as will appear below, of twelve members grouped around a shaykh, existed also at a still earlier date among the Nukkār [q.v.], an Ibāḍī sect which was hostile to the Ibāḍīs. In fact, according to a passage in Ibn Khaldūn's History of the Berbers, the famous political head of this sect in the first half of the 4th/10th century, Abū Ya'qūb, a famous Ibāḍī scholar of Djarba, were very active, particularly under Abū 'Amrād, the Aures (in about 331/942-3), in revolt against the Fatimids. Since Abū 'Ammār was teaching in the first half of the 4th/10th century in the Bilad al-Djarid (at Tuzer or at Ṭāqyūs, i.e., Kuf, Tagyūs, the ancient Thuges), where he was the teacher of Abū Ya'qūb al-Ma'ṣūl and Abu Zakariyya b. Abu Nuh Sa'd, who lived in the second half of the 4th/10th century. After the death of Abū Nūḥ, Abū 'Abd Allāh Muhammad b. Bakr, who was responsible for the first rule concerning the constitution of an Ibāḍī council on his native island. To the following tabāka (first half of the 5th/11th century) there belonged another Ibāḍī scholar who was a native of the Bilad al-Djarid: Abū 'Abd Allāh Muhammad b. Bakr, who was responsible for the first rule concerning the constitution of an Ibāḍī council, was Abū 'Abd Allāh Muhammad b. Bakr who was responsible for the first rule concerning the constitution of an Ibāḍī council.

According to al-Shāmamākhi [q.v.], he also presided over a halqa in his native island.

The first mention of the halqa among the Ibāḍīs of the Maḡrib is found in the chronicle of Abū Zarkariyya [q.v.].

Abū Ya'qūb, a famous Ibāḍī scholar of Djarba [q.v.], who was the teacher of Abū 'Amrād, the Aures (in about 331/942-3), in revolt against the Fatimids. Since Abū 'Ammār was teaching in the first half of the 4th/10th century, Abū Ya'qūb al-Ma'ṣūl and Abu Zakariyya b. Abu Nuh Sa'd, who lived in the second half of the 4th/10th century. After the death of Abū Nūḥ, Abū 'Abd Allāh Muhammad b. Bakr, who was responsible for the first rule concerning the constitution of an Ibāḍī council, was Abū 'Abd Allāh Muhammad b. Bakr who was responsible for the first rule concerning the constitution of an Ibāḍī council.
very similar versions of these rules, one of which is
contained in the Kitāb Ṭabarāt al-maṣāḥihīyāt of al-
Darqūfīn (7th/13th century) and another in the
Kitāb Dīwān al-muṣnūhīyāt of al-Barrādī (beginning
of the 9th/15th century). The critical edition of the
Siyar al-ḥalākā based on these two versions is by
M. R. Rubinacci. This document shows that the members of a ḥalākā were known as ʿaṣṣāba (singular form: ʿaṣṣābi). They were distinguished from the laity by their tonsure (they had to shave their heads completely and wear simple white habits. New members were admitted to this council only after a very detailed investigation. At the head of a ḥalākā was a ʿghaykh, who retained this position until his death. He governed the ʿaṣṣāba, took charge of the administration, judged, and taught, being responsible for the material possessions (kubus) and the spiritual well-
being of the ḥalākā. He was assisted by a khalīfa who might take his place if necessary. It was he also who appointed certain experts (inspectors, ushers) known as ʿurafāʾ (singular: ʿarif), one of whom supervised the collective recitation of the Kurʾān, while another took charge of the communal meals, and others were responsible for the students’ education, etc. All the time which the ʿaṣṣāba had free after the performance of their professional duties was devoted to prayers and other pious exercises, important among them being the formal recitations, prayers, and the recitation of the Qurʾān. The members of the ʿaṣṣāba were subject, according to the rules laid down by Abū ʿAbd Allāh Muḥammad b. Bakr, to a severe discipline. They were governed by a strict moral code and any misdemeanour was punished immediately.

Tradition also attributes to Abū ʿAbd Allāh a missionary zeal, considering him to have been the most active agent in disseminating and popularizing ʿIbadism in the northern Sahara. It is in fact mainly to him that is attributed an achievement which had far-reaching consequences in the history of African ʿIbadism: the conversion of the Banū Muṣāb, a Berber tribe settled in the Tadmayt, in the area of the present-day Mzab, which until then had adhered to another mountain tribe of the Tinawat, from the fraction which was held in the mosque of the town Kufra. He was responsible for the production for this “council of recluses” of a special code of rules (in Arabic sīra) which has to a large extent retained its importance until the present day and which today among the ʿIbadī scholars of the Mzab is known as Sirat Abī ʿAmmar Abī al-Kāfī al-Warg-
glānī. It is a small work of about ten pages, of which the ʿIbadī collection at Kraków possesses two manuscripts brought from the Mzab by the late Z. Smogorzewski and part of which has been translated into French by E. Masqueray (Chronique d’Abou Zakaria, 254-7, note). The ʿaṣṣāba, say these regulations, must cut themselves off from their family and live only in a retreat. They must pray at night on the mountain tops. They must wear only woollen clothes; they must know the Kurʾān by heart and must occupy without complaining the post assigned to them by the ḥalākā. An ʿaṣṣābi must be anxious to possess the Sciences, he must defend energetically the rights of the weak, and he must maintain order in the town. The ʿghaykh of the ḥalākā must be intelligent, polite and moderate. He appoints the members of the ḥalākā and distributes them into three sections, the first of which consists of the wardens of the mosque for the Ibāḍīs, the second of which consists of the wardens of the mosque for the Ibāḍīs, the third of which consists of the wardens of the mosque. The first section consists of four other eminent members of the ḥalākā, and they form, with the ʿghaykh, a special coun-
cil which directs all the affairs of the ḥalākā (there is also a full council composed of all the members of the ḥalākā). When one of the members of the special coun-
cil dies, another ʿaṣṣābi has to replace him. Among the members of the ḥalākā there is a muḥtārin, three others teach the children in the school, five wash the corpses of the dead, one acts as imām and recites the prayers in the mosque, and two others manage the possessions of the mosque. One member of the ḥalākā is responsible for distributing the food to the ʿaṣṣāba and to the pupils and another supervises the cleaning of the mosque.

Al-Darqūfīn, who was a member of the ḥalākā of Wargla for two years (616/1219-617/1220-1), has given us a number of details concerning the internal life of this institution (R. Rubinacci, Op. cit., 74-5). It is interesting to learn that it was composed not only of the people of Wargla, but also of ʿaṣṣāba who were natives of other ʿIbadī communities, including the Mzāb, such as the pious Abā Yāzmīr al-Muṣābīl, who had preceded al-Darqūfīn in the ḥalākā in question by seven or eight years.

The “council of the recluses” soon became an institution so closely linked with the ʿIbadī-Wāḥḥī sect

the organization of the ḥalākā. He was the founder of a ḥalākā which was held in the mosque of the town of Tīghīrīt (Tunis) in the Wādī Rīgh. It was prob-
ably for this council that Abū Zayd drew up a rule which we find mentioned by al-Darqūfīn and by al-
Shāmīn al-Muṣābīl. This seems to be the beginning of the use of mosques for the ʿIbadī ḥalākās.

After Abū Zayd, it was Abū Ṭāmmār Abī al-
Kāfī al-Tīghīrītī al-Warglānī who made a consider-
able contribution to the definitive elaboration of the rules of the special council, of which the most eminent ʿIbadī scholars of the period, originated from the Berber tribe of the Tinawat, from the fraction which had settled in the Warglān (Wargla) oasis. He lived in the first half of the 6th/12th century. After having begun his studies in this oasis, he went to Tunis, where he studied among other things the Arabī language. Then he performed the Pilgrimage to Mecca. He died at Wargla and was buried there. He is renowned in the history of ʿIbadism for the part he played in the organization of authority in the ʿIbadī communities, helping to centralize this in the institution of the ḥalākā. He was responsible for the production for this “council of recluses” of a special code of rules (in Arabic sīra) which has to a large extent retained its importance until the present day and which today among the ʿIbadī scholars of the Mzāb is known as Sirat Abī ʿAmmar Abī al-Kāfī al-Warglānī. It is a small work of about ten pages, of which the ʿIbadī collection at Kraków possesses two manuscripts brought from the Mzāb by the late Z. Smogorzewski and part of which has been translated into French by E. Masqueray (Chronique d’Abou Zakaria, 254-7, note). The ʿaṣṣāba, say these regulations, must cut themselves off from their family and live only in a retreat. They must pray at night on the mountain tops. They must wear only woollen clothes; they must know the Kurʾān by heart and must occupy without complaining the post assigned to them by the ḥalākā. An ʿaṣṣābi must be anxious to possess the Sciences, he must defend energetically the rights of the weak, and he must maintain order in the town. The ʿghaykh of the ḥalākā must be intelligent, polite and moderate. He appoints the members of the ḥalākā and distributes them into three sections, the first of which consists of the wardens of the mosque for the Ibāḍīs, the second of which consists of the wardens of the mosque. The first section consists of four other eminent members of the ḥalākā, and they form, with the ʿghaykh, a special coun-
cil which directs all the affairs of the ḥalākā (there is also a full council composed of all the members of the ḥalākā). When one of the members of the special coun-
cil dies, another ʿaṣṣābi has to replace him. Among the members of the ḥalākā there is a muḥtārin, three others teach the children in the school, five wash the corpses of the dead, one acts as imām and recites the prayers in the mosque, and two others manage the possessions of the mosque. One member of the ḥalākā is responsible for distributing the food to the ʿaṣṣāba and to the pupils and another supervises the cleaning of the mosque.

Al-Darqūfīn, who was a member of the ḥalākā of Wargla for two years (616/1219-617/1220-1), has given us a number of details concerning the internal life of this institution (R. Rubinacci, Op. cit., 74-5). It is interesting to learn that it was composed not only of the people of Wargla, but also of ʿaṣṣāba who were natives of other ʿIbadī communities, including the Mzāb, such as the pious Abā Yāzmīr al-Muṣābīl, who had preceded al-Darqūfīn in the ḥalākā in question by seven or eight years.

The “council of the recluses” soon became an institution so closely linked with the ʿIbadī-Wāḥḥī sect
that Ibn Khaldun, writing (towards the end of the 8th/14th century) in a passage of his History of the Berbers, (tr. of 1934) of the Ibadi-Wahbi inhabitants of the Wadi Righ (which he contrasts to the Nukkâris), refers to them simply as al-'azâbâ.

A halka seems to have existed (but only in an undeveloped form, more akin to a simple gathering of a group of students round a famous shaykh) on the island of Djérba, in the second half of the 4th/10th century. This institution still existed there in about 916/1510, at the time of Navarro's expedition against Djérba. The council of the 'azâbâ, presided over by the legal scholar Abu 'l-Nâджât Yûnûs b. Sa'id, directed at this time the affairs of the Ibâdi-Wahbi inhabitants of Djérba, in this case assisting the "governor" of this island, one Abu Zakariyyâ, who also was an Ibâdi. At the same period, there were also some Ibâdi-Wahbi 'azâbas in the Djabal Nafusa (see AL-NAFUSA, DJABAL), in the northern part of Tripolitania; they were in communication with the 'azâbâ of Djérba. In fact 'azâbâ existed in this district until very recently. Indeed, the Ibâdi mudir of Djadu, who lived in the middle of the 19th century and who was known to H. Duveyrier, bore the by-name of al-'azâbî. In the Berber description of the Djâbal Nafusa composed at the end of the 19th century, there are mentioned houses belonging to the families of the 'azâbâ in the bayr of Umm el-Djârsn (cf. A. de C. Motylinski, Le Djebel Nefousa, Paris 1899, 73). It must nevertheless be admitted that very little is known of the history and organization of the 'azâbâ in the island of Djérba and in the Djâbal Nafusa.

After the disappearance of the Ibâdi-Wahbis from the Wâdî Righ and Wargla, which took place between the 9th/15th and the 12th/18th century (Ibn Khaldûn still speaks towards the end of the 8th/14th century of the existence in the first of these oases of a large number of Ibâdis belonging to the various branches of al-Ibâdiyya), the Ibâdi halkâs survived in the kusûr of the Mzab where the remnants of the Ibâdi population of these two oases had fled. According to the description of the Mzab given by Leo Africanus in 1526 (Description de l'Afrique, tr. A. Épaulard, Paris 1956, ii, 437), there were already six of these kusûr, inhabited by a wealthy population. They were composed of "the candidate were obligatory. According to the regulations, an 'azzâbî might not reveal the secrets of the halka, on pain of being excluded from the council. The 'azzâbî were expected to uphold the interests of those who had suffered wrongs, and to judge impartially between rich and poor. The regulations dealt also with the organization of the meetings of the halka and the rules of procedure of the council of recluses, of the mosque and for the support of the 'azzâbî and talaba, etc. It is interesting to note that they are silent on the question of the celibacy of the 'azzâbî, which hâd formerly been so important.

The part which the 'azzâbî played in the Mzab immediately before the French annexation of the country was a very important one. An account of the history of one of the Mzâbi towns, Karâra (Guerara), composed in about 1883 by Si Muhammad b. Shetlwl, 7
b. Silmân, an orthodox Muslim inhabitant of this town, gives an impressive picture of the importance of the Makrîs in the Mzab. According to this account, the administration of Karara in the Mzab was used of "everyone who is not a jâlib" and the armed force responsible for maintaining order, composed of soldiers who were known as makârîs. The word makârîs, of which makârîs is a plural, means in Algerian Arabic "an adolescent of 12-14 years" and in the Mzab they had already ceased to possess any political power. Their authority nowadays is limited only to the 'aszâba and the falâba of the individual towns of the Mzab, and to the mosque itself. They also ensure that the lay population fulfils the regulations of the Ibâd doctrine, making use in serious cases of a tabrî'a (excommunication). Within this field the authority of the 'aszâba and of the shaykh of the halka is still very great. They control all the Ibâdi population of the Mzab. The halka still remains the supreme religious and moral institution of the Makrîs. Nowadays a Mzabi halka has 12 'aszâba members (sometimes there are 24, 12 of whom, however, are only substitutes). The 'aszâba are recruited from among the falâbas, i.e., students (in the Berber of the Mzab they are called arû, plural urwân), both the oldest and the most learned, though it is true that the moral qualifications of the candidates often take precedence over their learning. One exception only is known: Banû Ismân, where candidates for admission to the rank of aIsh, known as urwân, are subjected to an examination (they have to know the whole of the Kûr'ân by heart). The candidates must be married, in contrast to the rule of Abû 'Amrâm 'Abd al-Kâfi al-Wardjâlî who obliged the candidate to separate from his wife. The shaykh, who is today primarily a teacher, teaches the falâba in a mosque. The falâba are supervised by an arîf chosen from among the oldest and most learned of the urwân. Another arîf supervises the communal meals (which are provided by the kubus and from gifts). Two or three masters are chosen from among the 'aszâbas to teach the children the elements of the Arabic language and also the Kûr'ân (such an 'aszâba bears the title mutâlîm). One 'aszâba acts as imâm, another is mu'âlîhîn, four or five wash corpses, etc. The shaykh selection is made from among the members of the halka by the other 'aszâbas. The choice of the hakkas is made by a shaykh, chosen from among the eldest and most learned of the urwân. Another arîf supervises the communal meals (which are provided by the kubus and from gifts). Two or three masters are chosen from among the 'aszâbas to teach the children the elements of the Arabic language and also the Kûr'ân (such an 'aszâba bears the title mutâlîm). One 'aszâba acts as imâm, another is mu'âlîhîn, four or five wash corpses, etc. The shaykh selection is made from among the members of the halka by the other 'aszâba. The hakkas are elected by the halka, which is the thirteenth member of this council. The four eldest 'aszâbas, summoned by the shaykh, form the special council which acts in more important cases. The decision of this council is binding (also for the shaykh himself). The halka meets in the town mosque and the meetings of the 'aszâba are always secret. They are also in the Mzabi towns hakkas composed of women. These female 'aszâbas have an imâm (who also is a woman), but no shaykh, and the hakkas of women have only a limited power. Thus, for example, the tabrî'a concerning a member of such a halka may be imposed only by a shaykh from a halka of men in the area.

Lewicki, Les historiens, biographes et traditionnistes ibdîdites-wahbîtes de l'Afrique du Nord du VIII* au XVI* siècle, in Folia Orientalia, lii (1961), 29-31, 33-7, 56; idem, Notice sur la chronique d'al-Darîfînî, in RO, xii (1936), 146-72; E. Masqueray, Chronique d'Abou Zakaria, Paris-Algiers 1878; M. Morand, Les Kanouns du Mzab, Algiers 1903; A. Maârîs, of the laity of the Islamic religion, who were responsible for the administration of the individual towns of the Mzab, there was also a djamâ'a, or rather a general medînîs, composed of the delegates from the whole country (at least two 'aszâbas from each town). This djamâ'a, which was responsible for the most important matters which concerned all the Mzabi towns together, met in the mosque of the cemetery of the shaykh 'Abd al-Rahmân al-Kurtî, situated between Bû Nûra and Banû Ismân, near Ghardâtây.

After the annexation of the Mzab by the French in 1882, the shaykhîs of the 'aszâbas still continued to wield great moral authority in the Mzab towns, but they had already ceased to possess any political power. Their authority nowadays is limited only to the 'aszâba and the falâba of the individual towns of the Mzab, and to the mosque itself. They also ensure that the lay population fulfils the regulations of the Ibâd doctrine, making use in serious cases of a tabrî'a (excommunication). Within this field the authority of the 'aszâba and of the shaykh of the halka is still very great. They control all the Ibâdi population of the Mzab. The halka still remains the supreme religious and moral institution of the Makrîs. Nowadays a Mzabi halka has 12 'aszâba members (sometimes there are 24, 12 of whom, however, are only substitutes). One 'aszâba acts as imâm, another is mu'âlîhîn, four or five wash corpses, etc. The shaykh selection is made from among the members of the halka by the other 'aszâba. The hakkas are elected by the halka, which is the thirteenth member of this council. The four eldest 'aszâbas, summoned by the shaykh, form the special council which acts in more important cases. The decision of this council is binding (also for the shaykh himself). The halka meets in the town mosque and the meetings of the 'aszâba are always secret. They are also in the Mzabi towns hakkas composed of women. These female 'aszâbas have an imâm (who also is a woman), but no shaykh, and the hakkas of women have only a limited power. Thus, for example, the tabrî'a concerning a member of such a halka may be imposed only by a shaykh from a halka of men in the area.

HALKA — AL-HALLÄDJ

(T. Lewicki) HALKA, term used in Ayyûbid and Mamlûk times for a socio-militaiy unit which, during most of the period of what is known as the Mamlûk state, was composed of non-Mamlûk soldiers. The sources do not indicate the date of its foundation, and there is no convincing explanation of the meaning of its name (for two different views, see Quatremère, Histoire des Sultans mamlouks, i/2, see Quatremère, i/2, 305, reprinted in Studies on the civilization of Islam, London 1962, 74). Under Sa’ûd al-Dîn it seems to have been called the elîte of his army. Under his Ayyûbid successors, this unit is mentioned only rarely, yet it must have preserved a considerable part of its power and status, for even during the early years of Mamlûk rule it was still very strong. In those years the halika included a considerable number of pure Mamlûk commanders. The commanders of the unit, called mubaddam al-halika, held honoured positions, and were named side by side with the Mamlûk amirs in all important ceremonies. They also served as envoys to important states, functions which were usually reserved for the hâßikatîyya (see also Z. Smogorzewski, Unpublished materials on the Mzâb; Watîn, Les Tolbas du Mzab. Origine. Part I). (unpublished account known thanks to the full extracts made by Z. Smogorzewski; the original was in 1913 in the Archives de la Direction du Personnel Militaire des Territoires du Sud.)

I. — BIOGRAPHICAL DETAILS

Origins. Al-Hallâdj was born in about 244/857-8 at Tûr, to the north-east of al-Bayyâd in Fars. In Tûr an Iranian dialect was spoken; al-Bayyâd was an Arabized town where Sîbawayh was born. It is said that al-Hallâdj was the grandson of a gâ’ith (see also Zubda, 103-6, and BSOAS, xvi, 71-2). The halika survived in Syria, after a fashion, into Ottoman times (see B. Lewis, in BSOAS, xvi (1954), 479).

Bibliography: D. Ayalon, Studies on the structure of the Mamluk Army, in BSOAS, xv (1955), 448-59 (the reasons for the halika’s decline being discussed at 455 f.). (D. Ayalon)

AL-HALLÄDJ (the wool-carder), Abu ‘l-Mughith al-Husâyn b. Mânsûr b. Mâshâ‘im al-Bayyâdî, Arabic-speaking mystic theologian (244-309/857-922). His life, his teaching and his death throw light on a crucial period in the history of Muslim culture, and the interior experience which he describes can be considered a turning point in the history of tasawwuf. (This article includes, as well as the article of EI², some extensive additions drawn from the later works of L. Massonii.)
Prophet. His father, who was probably a wool-carder, left fur for the textile region which extended for the textile region which extended minority, and the centre of a famous school of Kur'ān readers. At Wāsīt, al-Husayn lost the ability to speak Persian. Before he was 12 years old, he learned the Kur'ān by heart and became a kāfīf. He very early attempted to find an inner meaning in the teaching of the suras and applied himself to asceticism at the school of Sabīl al-Tustarī.

At Baṣra. When he was twenty he left Tustarī to go to Baṣra. There he received the habit of the Ṣūfīs from ‘Amr Makki, and married Umm al-Husayn, the daughter of Abū Yaḥyā al-Akṭā’ī. He did not take any other wives and he and his wife remained united all their lives, having at least three sons and one daughter. His marriage earned him the jealousy and the opposition of ‘Amr Makki. When he was absent from home, al-Hallādī was able to entrust the support of his family to his brother-in-law, a Karnabā’ī. Through the latter, he found himself in contact with a clan which supported the Zaydi rebellion of the Zanjī [q.v.], who were contaminated in varying degrees by Shi‘ī extremism; this is probably the origin of his persistent but unconfessed passion as being a Shi‘ī da‘ī or “missionary preacher”. He retained from this period some curious and apparently Shi‘ī expressions, but continued to lead at Baṣra a fervently ascetic life and to remain profoundly faithful to Sunnism. He went to Bağhdād to consult the famous Šūfī Djiunaydī, but in spite of the latter’s advice, tired of the conflict which existed between his father-in-law al-Akta’s and ‘Amr Makki, he set off for Mecca immediately after the Zanjī rebellion and was crushed.

First Pilgrimage. At Mecca he made his first Pilgrimage, and made a vow to remain for one year of umra in the courtyard of the sanctuary, in a state of perpetual fasting and silence. In this he was trying out his personal way to union with God, and, going against the discipline of secrecy, began to proclaim it. ‘Amr Makki then broke off relations with him, yet he began to attract disciples. Khūṣīzān, Khurāsān, Tustarī. Having returned to Khūṣīzān, he gave up the tunic of the Šūfīs and adopted the “lay” habit (probably the kābā, a cloak worn by soldiers), in order to be able to speak and preach more freely. This beginning of his apostolate, the main aim of which was to enable everyone to find God within his own heart, and which earned for him the name of Hallādī al-Aṣrār, “the carter of consciences”, exposed him to suspicion and hatred and scandalized the Šūfīs. Some Sunnīs, former Christians some of whom were to become viziers at Bağhdād, became his disciples. But some Mu’tazīlīs and some Shi‘īs, who were important treasury officials, accused him of deception and of false miracles and incited the mob against him. He left for Khūṣīzān to continue his preaching among the Arab colonies of eastern Iran and remained there for five years in the city or in its suburbs, standing for some time on the frontiers in the fortified monasteries which housed the volunteer fighters in the “Holy War”. He returned to his region of Tustarī, and, with the help of the Secretary of State, Ḥamd Kunānī, was able to instal his family in Bağhdād.

Second Pilgrimage, distant journeys. Third Pilgrimage. With four hundred of his disciples, he then made his second pilgrimage to Mecca, where some of his former friends, Șūfīs, accused him of magic and sorcery and of making a pact with the Devil. In 301/913, the vizier Ibn Mu’tazz, seeing that he undertook a long tour in India (Hinduism) and Turkestān (Manicheism and Buddhism), beyond the frontiers of al-dīr al-Islāmīm, “the del of the Communauté musulmane, c’est à toute l’humanité qu’il pense pour lui communiquer ce curieux désir de Dieu, patient et pudique, qui dès lors le caractérise ...” (L. Massinou). About 290/902, al-Hallādī returned to Mecca for his third and last Pilgrimage. He returned there clad in the musurāka’s, a piece of patched and motley cloth thrown round his shoulders, and a sāfā, an Indian loin-cloth, round his waist. His prayer at the station of ‘Arafāt was that God should reduce him to nothing, should make him despised and rejected, so that God alone might grant grace to Himself through the heart and the lips of His servant.

Final preaching at Bağhdād. After returning to his family at Bağhdād, he set up in his house a model of the Ka‘ba, prayed at night beside tombs and in the daytime proclaimed in the streets or the sāfās his burning love of God and his desire “to die accursed for his Community” “O Muslims, save me from God” ... “God has made my blood lawful to you: kill me” ... This preaching aroused popular emotion and caused anxiety among the educated classes. The Ẓāhir Muhammad b. Dīwādī was angry that al-Hallādī should claim a mystical union with God; he denounced him at the court and demanded that he should be condemned to death. But the Șūfī jurist Ibn Surayjī maintained that mystical inspiration was beyond the jurisdiction of the courts. It was at this period that, according to the hostile account of the grammarians of Baṣra, al-Hallādī replied to al-Shiblī, in the Mosque of al-Mansūr, by the famous ērābī (“theopathic phrase”): Āma l-hābīk, “I am [God] the Truth”, proclaiming that he had no other “I” than God.

Arrest. A movement for the moral and political reform of the community was taking shape in Bağhdād, inspired by the preaching of al-Hallādī and by those of the faithful who were anxious to see in him the hidden “Pole” [see āyān] of the time. He dedicated himself to Hannām and composed several treatises on the duties of viziers. In 296/908, some Sunnīs reformers (under the Hanbali influence of al-Barbāhārī, see H. Laoust, La profession de foi d’Ibn Baṣṭa, Damascus 1958, passim) made an unsuccessful attempt to seize power and to raise Ibn al-Mu’tazz to the caliphate. They failed, and the infant caliph, al-Muqtadir, was restored, his vizier being the Șūfī financier Ibn al-Furāt. Al-Hallādī was involved in the consequent anti-Hanbali repression and succeeded in fleeing to Sās in Aḥwāz, a Baṣran town, although four of his disciples were arrested. Three years later, al-Hallādī himself was arrested and brought back to Bağhdād, a victim of the hatred of the Sunnīs Ḥāmid. He remained in prison for nine years.

Imprisonment. In 301/913, the vizier Ibn Ḥisā, the cousin of one of al-Hallādī’s disciples, put an end to the trial (cf. the fatwa of Ibn Surayjī) and the imprisonments and the executions of the Șūfīs were released. Nevertheless, owing to pressure from his enemies and the influence of the chief of police, who was an enemy of the vizier, al-Hallādī was exposed for three days on the pillory with “Karmātī agent” written above him. He was later confined in the palace, where he was allowed to preach to the ordinary prisoners. In 303/915, he cured the caliph of a fever, and in 305 “restored to life” the crown prince’s parrot. The
Mu'tazilis denounced his "charlatanism". The vizier Ibn 'Isa, who had been favourable to al-Halladj, was replaced in 304-6 by Ibn al-Furat, who was anti-Halladj, but the influence of the queen-mother prevented the latter from re-opening the trial. It appears that two of al-Halladj's most important works date from this period: the  Date al-Asal, a meditation on the case of Iblis, "the disobedient monotheist", and the short work on the "ascension" (mīrād) of Muhammad, who hailed on the threshold, two bow-shots from the Divine Essence.

The condemnation was refused and suggested that beyond the experience of Muhammad there could be attained a union in love between man and God. They seem to have been a reply to the Shī'ī extremist al-Shalghamān, who considered that faith and impiety, virtue and vice, election and damnation were all mubādal ("related opposites") and equally pleasing to God. Al-Shalmaghānī had a considerable influence at the Baghdad court and even on the course of the trial of al-Halladj.

The condemnation. The trial was re-opened and the case argued in 308-9/921-2. The background to it was Hāmid's financial speculation, which had been opposed in vain by Ibn 'Isa. It was to destroy the latter's influence that Hāmid procured the re-opening of the trial of al-Halladj. He was helped in this by Ibn Mughālīd, the respected leader of the corporation of the Kur'ān readers and a friend of the Sūfīs Ibn Sālim and al-Shībī but opposed to al-Halladj. The Ḥanbalīs, at the instigation of Ibn 'Atā', himself a Ḥanbali and a mystic, held demonstrations and "prayed against" Hāmid: both in protest against his fiscal policy and in order to save al-Halladj. They even demonstrated against al-Ṭabarī, who condemned the riot. These disorders gave the vizier Hāmid the opportunity to make Ibn 'Atā' appear before the tribunal. But Ibn 'Atā' refused to witness against al-Halladj and maintained that the vizier did not possess the right to judge al-Halladj. They were ill-treated by a guard during the court hearing and died from the blows he received.

Hāmid and the Mālikī šaikh Abū 'Umar Ibn Yūsuf, who always supported those in power at the time, arranged in advance the judgement of the tribunal which was to condemn al-Halladj. Al-Halladj had said "The important thing is to proceed seven times around the Ka'ba of one's heart": they therefore accused him of being a Karmāṣī rebel who wished to destroy the Ka'ba of Mecca. There was no Şāfīi present at the trial. The Ḥanafī šaikh declined to give judgement, but his assistant agreed to support Abū 'Umar, and the syndic of the professional witnesses succeeded in producing eighty-four signatures. Sitting in judgement, Abū 'Umar, urged by Hāmid, pronounced the formula: "It is lawful to shed your blood".

The execution. For two days the grand chamberlain Naṣr and the queen-mother interceded with the caliph, who, stricken with a fever, countermanded the execution. But the intrigues of the vizier triumphed over the hesitation of al-Muqtada. When he was hearing a great banquet, sighted the warrant for al-Halladj's execution. On 23 Dhu 'l-Ka'da, the sounding of trumpets announced the impending execution. Al-Halladj was handed over to the chief of police, and in the evening in his condemned cell exhorted himself to face martyrdom and foresaw his glorious resurrection. These prayers, noted down and handed on, were to be re-grouped in the  Abkhab al-Halladj.

On 24 Dhu 'l-Ka'da, at Bāb Khurasān "before an enormous crowd", al-Halladj, with a crown on his head, was beaten, half-killed, and exposed, still alive, on a gibbet (sālih). While rioters set fire to the shops, friends and enemies questioned him as he hung on the gibbet and traditions relate some of his replies. The caliph's warrant for his decapitation did not arrive until nightfall, and in fact his final execution was postponed until the next day. During the night there spread accounts of wonders and supernatural happenings. In the morning, according to al-Tūnī, those who had signed his condemnation, grouped around Ibn 'Ata, cried out: "It is for Islam; let his blood be on our heads". Al-Halladj's head fell, his body was sprinkled with oil and burned and the ashes thrown into the Tigris from the top of a minaret (27 March 922).

Witnesses reported that the last words of the tortured man were: "All that matters for the ecstatic is that the Unique should reduce him to Unity", recapitulating the appeal to the one authentic tawākīl, that which God utters through his heart of hearts; and that he then recited Kur'ān, XXII, 18.

II. — Principal (published) works

(1) Twenty-seven Rūḍāyīt, collected by his disciples in about 290/902, in the form of hadīth kudāsī, Arabic text in 3rd ed. of the  Abkhab al-Halladj (Fr. tr. L. Massignon, Passion d'al-Halladj, Paris 1922, 893-904); (2)  Kitāb al-Tawāfūn, a series of eleven short works (including the  Tā Sin al-Asal), Arabic text and Persian version of Baklī, ed. by L. Massignon, Paris 1933; (3)  Kitāb al-Šalāt, 3rd ed. (Fr. tr. L. Massignon, Paris 1931; new Fr. tr., Paris 1938; (4) some logia and especially the novissima verba of the last night, collected in the  Abkhab al-Halladj, ed. L. Massignon (Paris 1914; *Paris 1936; *Paris 1957). (For the other writings of al-Halladj and the discussion of their authenticity, see L. Massignon, Kitāb al-Tawāfūn, introd. i-iv; Kitab al-Shamā'il, Paris 1922-23; 804-22; Diwān al-Halladj, 1913 ed., i-5; and Opera Minora, Beirut 1963, ii, 40-5 and 191).

III. — The main accusations

The trial of al-Halladj took place against the background of the religious and political intrigues, and those concerning financial policy, which disturbed the Baghdad court during the minority of al-Muqtada. It illustrates the position of the 'Abbāsid dynasty at the beginning of the 4th/10th century and the rôle played in it by the viziers held together by common interests. Al-Halladj's two main enemies were the Shī'ī vizier Ibn al-Furat and the Sunni vizier Hāmid. All his sermons in the Baghdad sūbahs were aimed at a drastic application of the values of faith to the inner life and at the proclamation of a union in love between the soul and God: all this within the framework of a dogma which deliberately stressed the Sunni axioms. But his sermons fell on deaf ears, not only among the political circles of the court, but also in the world of the traditional jurists, the majority of them Mālikīs and Ḥanafīs, who revolved around them. It is surprising that al-Halladj's strongest supporters were recruited among the Ḥanbalīs, whose pietism had at that time a considerable influence among the common people. Al-Halladj's demands for moral reform and his influence on the
people were an annoyance to many of those in power. They based their accusation on two pretexts:

(a) Religious pretext: al-Halladj's unprecedented utterances called in question the esoteric prudence and the discipline of secrecy which had become the rule in Sufi circles since the time when Nuri and his followers had been called to give an account before the courts of their teaching on the love of God. One result was that the Sufis such as "Amr Makki and Djinayd who had been al-Halladj's friends blamed him for having spoken publicly of his personal experience and for having expressed it in "theopoeic statements" (takāshādā); in addition, some rather confused Sufi tendencies, particularly those concerning "Ujālī love", felt that they had to condemn the search for the One through willing love and the way of suffering. This was perhaps the main reason why the Zāhirī Ibn Dāwūd became an enemy of al-Halladj, bent on his destruction. After this al-Halladj was accused of blasphemy and of claims to ḥulul (substantial union with God); and his anxiety to give an inner significance to ritual acts ("proceed seven times round the Ka'ba of your heart") was denounced as a wish to abolish the acts themselves.

(b) Political pretext: this was probably the most telling and the most decisive. Al-Halladj's marriage had connected him with the Zaydi Čālgī; his distant travels made him seem to be a Karamī dāfī ("missionary"); and the language which he used, and even his themes of meditation, did borrow a certain number of Ǧītha thematic elements, even although his replies to the interrogations on this matter remained of profoundly Sunnī inspiration. His accusers, who feared his influence on the people as well as on the members of the court, then decided to present him as an agitator and a rebel who was a threat to the order of the Community. A falsely literal exegesis of some of his sayings (see above) accused him of wishing, like the Karmātīs, to destroy the Ka'ba at Mecca. It thus became "lawful to shed his blood" in the name of the Community itself.

Actually, during the last years of his life, al-Halladj seems to have drawn onto himself his tortures and condemnation—but for quite different reasons: recognizing that the way of union with God through love and suffering which he must follow was something which transcended the juridical framework of the Community, and offering himself as a sacrifice for this Community by submitting voluntarily to its laws.

IV. — SIGNIFICANCE OF THE EXPERIENCE AND THE WITNESS

In the history of tasawwuf, al-Halladj retains a privileged position in the line known as ṭawādat al-ghuṣūd. It has sometimes been suggested that this phrase should be translated as "unity of vision" or "of look" (in reference to the meaning of the 3rd form of the root šḥṭ-d); or, rather better, by "unity of presence". But ʿghuṣūd really means the act of being present at, of being a witness of, and we consider it admirable to retain the meaning of "unity of witness" (or "monisme testimonial"), L. Massignon, Lexique technique de la mystique musulmane, Paris 1954, 103). The ṭawādat al-ghuṣūd is not only "sight" or "look", but an actual presence which is total witness: it is God witnessing to Himself in the heart of His votary (ʿābdī). This union with God (djām) leads to a unification (istiḥdād) which is not a unification of substance, but operates through the act of faith and of love (jāhī, makhbāba), which welcomes into the emptiness of oneself the Loving Guest (God), the essence whose "Essence is Love", as al-Halladj expressed it.

The mystical experience thus understood was to be sharply criticized by the other main Sufi line, that of the ṭawādat al-ʿawdīydī ("unity of the Being" or "monisme existential"), Massignon, ibid.), which was dominant from the 6th-7th/12th-13th centuries [see ALLĀH, 416]. A double objection was made:

(1) An objection to the idea of ʿḥūlūl, infusion of substance, was probably the most telling and the most decisive. Al-Halladj was accused of blasphemy and of the ṭawādat al-ʿawdīydī had in fact written: "Thy Spirit has mingled itself with my spirit as amber mixes with fragrant musk" (Diwan, M. 41), and above all "We are two spirits fused together (ḥalānī) in a single body" (ibid., M. 57). But the whole context of the poems and the writings makes it clear that ʿḥūlūl here was not to be understood in the sense, which later became current, of "incarnation" or fusion of substance. In its most obvious sense the ʿḥūlūl of al-Halladj is to be understood as an intentional complete union (in love), in which the intelligence and the will of the subject—all in fact which enables him to say "I"—are acted upon by Divine grace. Thus the "we are two spirits fused together in a single body" should be compared with the saying of the Christian mystic St. John of the Cross: "Two natures (God and man) in a single spirit and love of God".

(2) From this arose the second, and most frequent, objection aimed at al-Halladj by the ṭawādat al-ʿawdīydī, which was to be, as expressed by Ibn 'Arabī, that he maintained in the djām and the ʿistiḥād a "duality". The monism of the "unity of Being" in fact intends that the ʿistiḥād should operate not, indeed, through ʿḥūlūl but through a total submersion of the divine "I" for the empirical "I". To be "one" (ahād) with God is to make actual the divine which in man's spirit has emanated from God (emanated, not been created ʿex nihilo; cf. al-Ghazālī's statement in the Risāla ḥudūdiyya: "the (human) spirit is from the amr of God"). This charge of "duality" aimed at the "unity of witness" reveals the difference in orientation between the two ways: the unification in and through the acts of faith and love (supreme Witness), for the ṭawādat al-ʿawdīydī; and the reabsorption of the acts of the created being in his first act of existence (conceived here as emanating from the Divine Being) for the ṭawādat al-ʿawdīydī.

V. — VOCABULARY AND "TECHNICAL TERMS"

The principal writings of al-Halladj are either meditations on themes symbolizing the progress of the mystic in his quest for God, or the direct (poetic) expression of this actual progress. He was constantly making his vocabulary more precise; his profound knowledge of the technical vocabularies of ʿfikh, of ʿilm al-ḥalām and of the nascent falsafa combined to produce a semantic equipment which was strikingly suited to the analysis of the "spiritual states" (ahādī). "Halladj, a dialectician and an ecstatic (cf. Lullius, Swedenborg), endeavoured to bring doxa into harmony with Greek philosophy on a basis of mystic experience; he was in this a precursor of Ghazālī" (L. Massignon in ElI).

In the last section of the Kitāb al-Taʿāruf, al-Kalābdīḥī devotes several chapters to the ʿistiḥdād ("technical terms") of Sūfism. The definitions of these terms are clearly based on al-Halladj: thus ʿwādī ("ecstasy"), ʿubr ("intoxication"), djām ("union"), etc., and in particular those mukbhāls
("related opposites") which are ta'frijd ("enclosed solitude") and ta'frid ("open solitude"); ta'dfllad ("action of veiling, making secret"), farad ("annihilation") and bakh ("continuing existence"), etc. These terms were to have a very precise meaning in the waqdat al-ghuwhad of the school of al-Halladj; they were to receive another meaning in the future waqdat al-wudjul; and in each case were to be understood with reference directly to the experience being described and to the conception of the world which underlay their formulation. Nevertheless their first definition by al-Halladj was of prime importance in the development of the im al-tasa'awwaf. It often gave rise to disagreements, even among al-Halladj's followers themselves: as with the use of ishk, concurrently with, and often in preference to, mahabba, for the love of God and of man. Ishk was part of the vocabulary of the earliest Sifism (cf. al-Hasan al-Baqli); but the sense of "desire", which was one of its usual connotations, was to be rejected, through fear of attributing to God either mutability or passivity. L. Massignon has shown that the editors of the texts of al-Halladj among them the Shfi Bakli, had no hesitation in substituting mahabba for iskh in these texts, thus diluting al-Halladj's thesis that iskh is a divine attribute of Essence (cf. Notion de l'essentiel D'sir", in Massignon, Opera Minora, Beirut 1963, ii, 226-53).

VI. — THE SCHOOL AND THE SECTS OF THE HALLADJYYA

It seems that in 909/922 al-Halladj's disciples had been formed into a farida (religious fraternity). After the execution of their Master, they went into hiding and dispersed, and thus even became split up. In fact legal persecution continued, and in 311-2/924-5 several followers of al-Halladj were beheaded in Baghdad.

A certain number of disciples fled to Khurasan, where several of them took part in the Hanafi-Maturidi reform movement. Ibn Bishr and particularly Farkis Ibn Isr (founder of the Hallajiyya-Buuliyya) upheld and spread al-Halladj's teaching in the SfLI circles in Khurasan. The Kitab Ta'awuruf of al-Kalabadji stems from this tradition. In the 5th/11th century, according to al-Sulami and al-Kh. the doctrines of the Hallajyya became subdivided into three groups: (a) Jurists, which is subdivided into radd (simple rejection) and takfif (excommunication); indicated in the following list by the sigla radd; (b) takfif ("canonization") or wilaya (affirmation of sainthood), which is subdivided into iti'dhar (justification with excuse) and kabul (full and complete acceptance); sigla fr; (c) tawabuf (suspension of judgement, abstention): sigla t.

(A) Jurists (fuqaha'): Zahiris: Ibn DAW and Ibn Hazm (radd); Ismailis: Ibn Bidaya, Abu 'Abdurrahm Tusi and HilI (radd), Shushtari, 'Amili (r); Malikis: Turtis, 'Uyayn, Ibn al-Kaladani (radd), 'Abdari, Duhailawi (r); Hanballis: Ibn Taminia (radd), Ibn 'Akl (who retracted), Tawft (r); Hanafis: Ibn Buhuri (t), Naululis (r); Shafiis: Ibn Surayji, Ibn Hajar, Suyuti, 'Urmi (r), Dhuwayri, Dha'ababi (radd), Makdisi, Yafi, Sharawi, Haythami, Ibn 'Akl, Sayyid Murtada (r).

(B) "Theologians" (mu'takallimun): Mursiis:
The page contains a text discussing various topics such as historical figures, their contributions, and their significance in the context of Islamic history. It also references a variety of works, including those by Ibn Tufayl, Suhrawardi, and others. Additionally, there is a section discussing the geography and economy of Haly, a region in the Arabian Red Sea coast. The text is rich in detail and provides insights into the cultural and political landscape of the time.
link between Ham and the black races, produced by multiple incests, Afrldun should also be considered as descended from him, at least according to an indication in al-Bad` wa *l-ta*rîkh, iii, 144-9.

Languages. Words derived from this name have served to designate languages related to the Semitic languages. The Hamito-Semitic family (chamito- semitique, hamitisch, chamitiques) has had its name since 1887. It was generally believed to embrace a clearly defined group, the term Hamitic must be used to designate languages related to the Semitic group. As the non-Semitic branches do not show any common characteristics by which to unite them in a defined group, the history of this study and its bibliography can be found in Marcel Cohen, Essai comparatif sur le vocabulaire et la phondite du chamito-sembitique, Paris 1947; see also by the same author the chapter Langues chamito-sémites, in the 2nd edition of Les Langues du monde, 1952, and Résultats acquis de la grammaire comparée des langues chamito-sembitiques, in Conferences de l'institut de Linguistique de l'Université de Paris, 1976. For a detailed comparison see SâM.

Physical types. The terms Hamites (Hamiten, Chamites), Hamitic (Hamitische, Chamitiques) are sometimes used to designate the African peoples who speak non-Semitic Hamito-Semitic languages and certain others, and seem to be a mixture of Whites and Blacks; these elements are also referred to as African whites and Ethiopians (in the anthropological sense). See William H. Worrall, A study of races in the ancient Near East, Cambridge 1927 and, more recently, in R. Bisutti, Le razze e popoli della terra, Turin 1953-7. (M. Cohen)

HAMA (see Hamat).

HAMADHAN (HAMDÂN), city in central Iran located in a fertile plain just south of Mt. Alwand, 48° 31` E. (Greenw.), 34° 48` N., altitude ca. 1800 m. (6000 ft.).

Hamadhan is a very old city. Whether the name is first mentioned in cuneiform sources dating about 1100 B.C., telling of the conquests of Tiglatpileser I, is uncertain but unlikely. Herodotus (1, 98) says that the Median king Deiokes in the seventh century B.C. built the city called Aqbatana, or Ekbatana according to other Classical authors. This name has been interpreted as an Iranian word *hamangata, "(place of) gathering", but an Elamite form *hâl. matsu na, "land of the Medes", might suggest another etymology. The city was well known as the capital of the Medes, a winter capital of the Achaean medes, and an important city on the trade route between Mesopotamia and the east under the Seleucid, Parthian and Sasanian dynasties. The city is mentioned in Armenian sources as Ahmatan and Hamatan, in the Bible as Ahmeta (Ezra, VI, 2), and in Syriac sources in various forms. It underwent sieges and suffered destruction several times in its ancient history.

The ancient, but mythical, pre-Islamic history of the city was known and mentioned in many Arabic sources, principally the geographers (see Schwarz, below). After the battle of Nahawand, in 641 or 642 A.D., the Persian commander in Hamadhan made peace with the victorious Arabs. The circumstances of the Arab conquest of the city are contradictory in the sources, but it seems that the initial agreement of submission of the inhabitants and the city had to be taken by storm, probably in the spring of 645 (Tabari, i, 2650, 6 and Baladhuri, 309). Arabs from the tribes of Rab`a` and `Udî were settled in the city, since they are mentioned as residing there in 77/696 (Tabari, ii, 994, 17). Christians and Jews are mentioned as part of the population.

The city is described by the geographers as strongly fortified, perhaps the strongest in the entire area called Dibbî by the Arabs, which encompassed ancient Media. In the fighting between Ma`mûn and Amlûn for the caliphate in 195/810, the city underwent a long siege (Tabari, iii, 829, 15).

Hamadhan of the 4th/10th century is described by the geographers as a large city, mostly rebuilt since the Arab conquests. It had four gates in its walls, three bazaars, and extensive suburbs. The main mosque was already then called an old structure. Unfortunately, no history of Hamadhan has survived. A history of the city by Abu Shudâr Shârâyây b. Shahvâd (died 509/1115) was used by...
Yākūt in his geographical dictionary. Ḥāḍīḍī Khālīfī (i, 310) mentions other histories of the city, none of which have survived, an indication of the lack of a strong and continuous scholarly tradition in the city. One of the famous sons of Hamadhān was the rustic poet Bābā Tāhir, also a mystic, who lived under the early Ṣalāṭūkūs. Ibn al-Fāzik al-Hamadhānī, the geographer (d. circa 903/1207) also came from the city, but he gives few details about his birthplace.

Under the Il-Khāns Hamadhān regained its former importance, and Abābā Khān died there in 681/1282. The ruler of the Il-Khāns was the rustic poet Baba Tahir, also a mystic, who was probably born in Hamadhān circa 645/1247. The city, of course, passed from under the Diwān to Timūr, and later to the Aq Ḵoyūnlu, until the Ṣafawīs established their rule in the city after 908/1503. Several times during the 10th/16th century Hamadhān was occupied by Ottoman troops. In 1126/1712 Ahmed Paša, the Ottoman governor of Ḵūbdahūd, held the city until he was expelled by Nāṣirī, where the intellectual atmosphere appeared as a two-volume survey (see Dāftār-i Ḵārāfī) of the town and district of Hamadhān, compiled during this period, is preserved in the Turkish archives—see B. Lewis in Māngūn Musāti, Tehran 1963, 260). After changing fortunes Hamadhān reverted to Iran in 1732. In 1759 the city was taken by Aḥṣ̄ā Muḥammad Kāḏīr, founder of the Kāḏīr dynasty, and the citadel, on the hill now called al-Muṣṣalī, was destroyed.

The population of the city about 1820 was estimated at 40,000 by Ker Porter. Curzon in 1889 estimated it as 20,000. The 1931 census gave 51,000; in 1934 it was 60,000, and in 1950 about 120,000. The principal remains of the past in or near the city are the Gandj Kūnā-i Ḵūnān, two Old Persian inscriptions by Darius and Xerxes carved on Mt. Alwand 12 kilometres south-west of the city, the pre-Islamic stone statue of a lion mentioned in Arabian sources (see Schwarzer, 528), the so-called tomb of Esther and Mordecai, the Ala-wiŷān mosque from the Ṣalāṭūk period, the Burdī-i Kūrbān, a mausoleum from Mongol times, and the tomb of Bābā Tāhir.

Bibliography: A Guide to Hamadhān published by the geographical division of the General Staff of the army, under the direction of Ḥ. ʿA. Ṭārān (Tehra 1954) gives a map of the city and general survey. Schwarzer, Iran, i, 513-34, and Le Strange, 194-196, give references to the geographers. There is no general history of the city and historical citations have been mentioned above. For more recent history see R. Ker-Porter, Travels in Georgia . . ., London 1821; G. N. Curzon, Persia, London 1892.

AL-HAMADHĀNĪ, Ahmad Bādiʾ al-Zamān “the Prodigy of the Age”, Arabo-Persian writer and letter-writer, was born at Hamadhān in 358/968 and died at Herāt in 398/1008. He pursued his early studies in his native town, where his master was Ibn Fāris [q.v.]. Aided by an exceptional memory and talents, he was soon noted for his virtuosity in handling the Arabic and Persian languages. He apparently remained true to Shiʿism for the greater part of his life. At about 22 years of age, he settled at Rayy where the intellectual atmosphere appeared favourable to his ambitions; the Būyid waṣīr Ibn ʿAbdāb [q.v.] granted him his patronage; it is possible that in this town the young man mixed with the local beggars’ guild and notably with the unorthodox poet Abū Dulaf, an intimate friend of the waṣīr (see al-Ṭāribīlī, iii, 175-94). It may be supposed that these contacts gave to al-Hamadhānī the idea of composing certain of his first Maḥāmātī. Perhaps as a result of a quarrel, the young man went to Dūr-gān where he is said to have come into contact with Ismāʿīlī elements. In 385/992 he went to Nihāpūr, apparently attracted by the renown and the activity of this intellectual metropolis; there he made some useful contacts but clashed with the letter-writer Abū Bakr al-Khārīzmi, then at the height of his fame; he finally prevailed and eclipsed his adversary, who died, overcome by chagrin. From this time al-Hamadhānī undertook a series of journeys which were also triumphs; perhaps he went to Zarandjī (in Khurāsān) to the court of the Khorasānīs, whose panegyrist and favourite he was. After the deposition of the Sāmānīs, he attached himself for a while to Māhmad of Ghazna, whose praises he sang (see al-Thāribīlī, iv, 200) before settling finally at Herāt where he died, scarcely aged 40; a short time earlier he had embraced Sunnism.

Even in his lifetime it would appear that al-Hamadhānī had created for himself a certain reputation as a master of the waṣīr, under his name (ed. Cairo 1903) does not, however, reveal any originality, and by the subjects dealt with as well as by the style it is related to the poetical works composed at this time in the circles of the wāṣīr of Irāk and Iran. The same may be said of the “Epistles” or Rasaʿūli in rhymed and rhythmic prose, part of which has been published (İstanbul 1298, Beirut 1890); the brilliance of the often affected style does not succeed in convincing us that so much artistry should be put to the service of such wordly and empty preoccupations. Of a completely different interest is the volume of Maḥāmātī or “Séances”, which has perpetuated the writer’s name. Al-Hamadhānī seems to deserve the title of creator of this genre. The hypothesis of Zakī Mubārak that the idea of the “Séance” is to be found in the works of the grammarian Ibn Buraydī arises from a mis-interpretation of a passage of al-Ḥusr. The composition of the Maḥāmātī, begun about 380/990, seems to have extended over many years. Al-Hamadhānī is said to have dictated not less than four hundred of them; only fifty-two are now known. These “sketches” vary in length but rarely exceed a few pages; they are made up according to a strict balance; they are of rhymed and rhythmic prose, mixed with verse; the learning and the wit of their author are sometimes also panegyrics of patrons. It may be said that in al-Hamadhānī’s hands the maḥāmātī reflects contemporary society. This writer has the final merit of having given a framework to this genre; with the exception of a few “sketches” which are narratives set in the past (such as the Sêance of Ghaylān, Beirut ed., 42-8), the greater part of the collection is made up of accounts which portray a cultivated and cynical bohemian and a bourgeois suffering for his own credulity. The “Séance” thus conceived was to serve as a model for almost a thousand years (see Maḥāmātī.

Bibliography: Thāribīlī, Yalta, iv, 107 ff.; Ibn Khallīkān, Cairo 1310, i, 39; Maḥāmātī
Hamallism, or Hamaliyya, Hamallism, an African Islamic movement which is named after Sharif Hamallah, whose name was thus transcribed by the first French writers (P. Marty, Étude sur l’Islam et les tribus du Soudan, Paris 1920, v); others have rendered it as Ḥamā Allāh, or Ḥamāla. His followers call themselves Ḥamāliyyin; their Tijānī adversaries call them “eleven beads”, ṣaṣo ẹ g’d (in Tukolor), and akhdar, beginning of this century, not as a new confraternity to the structure of society of that period.

The founder of this movement was Shaykh Sidi Muhammad b. ‘Abd Allāh, known as Sharif al-‘adbīn, a native of Touat, who is said to have received the Tijānī wādī from Tābir b. Abū Tayyib (Thaar ben Bou Tayeb), wādī of the Tijānī zānīya of Tlemcen (Algeria). He settled at Nioro in 1904 and determined to restore the Tijānīyya to its pristine purity; he caused the chaplet with eleven beads to be adopted, but he died in 1909 without being able to spread his doctrine, despite the help of some Wolof messengers. His disciple, Sharif Amadou Ḥamā Allāh Haydara, born in 1886 and 26 years of age when his master died, took over the teaching with much greater success. Ḥamā Allāh belonged to the tribe of the Ahl Sidi Sharif of Tichit. His grandfather and his father Muhammad ʿabd (wālīd) Sayyidna ʿUmar, of a Sharīf family, were traders who had settled in the town of Nioro at the end of the 19th century; his mother Aissa Diallo was a Fulani from Niamina. Shaykh Ḥamā Allāh traced back his genealogy to Abū Bakr, the Prophet’s son-in-law, through Muhammad Ghali, in Mecca; but, in his work al-Rimāḥ, he wrote that the true number of recitations was eleven.

In about 1925, he took the title Shaykh and appointed mukaddams. Without leaving his niyya, he was able to employ propagandists who spread his teaching to Niore, Walata, Kiffa, Kayes, Timbreta, Nara and Nema. In a few years his doctrine, which had not had much success with the Moors, had spread over a wide area among the negroes inhabiting the river basins of the Senegal and Middle Niger; he also had mukaddams among the Awlād Zayn, Aḥl Terenni, Aḥl Tobga, Ladoum, Awlād Naṣir, Awlād Måbrek, Aḥl Sidi Ṣāmīd and Laghāli. He preached the purified Tijānī waṣīda, his followers vowed themselves for life and could not adopt any other creed; the obedience of his waṣīda had to be absolute. He was reputed to be a ‘aṣīr, and some regarded as māhdi. Among his disciples he had officials of the administration and some of the local police. His prestige spread throughout the Sahel, but he lost control over the most turbulent of his followers.

The preaching of Ḥamā Allāh soon came up against very lively resistance from Tijānī circles, especially among the Kaba Diakité and the Sila, disciples of al-Hādīdī ʿUmar [q.v.]; it was also challenged by the Kādiryya and several Moorish tribes. The origin of this hostility, apart from the matter of the eleven beads, lay in the fact that his preaching was given in Nioro, the fief of powerful Umarian families, and that it revealed a social aspect that was opposed to the structure of society of that period.

Shaykh Ḥamā Allāh granted the wādī to women, prisoners (Harāṭin [q.v.]) and young people, releasing them from paternal authority or that of their masters; finally, he authorized women to take part in ceremonies which brought men together without any distinction of caste. He criticized the depravity of women and recommended the wearing of decent garments; secular and social problems he ignored. It is certain that although Ahmad al-Tijānī had prescribed the recital of the prayer Dīwārat al-Kamāl eleven times on the instructions of the Prophet whom he saw in a dream, which was in conformity with the mystique of numbers, he had the same prayer recited twelve times, for reasons not explained, at a period when he was compelled to struggle against the Turks (ʿĀyn Mahdī was captured by the Turkish forces in 129/1813 and in 202/1807); it is possible that the number eleven derives from Muhammad al-Ḵabīr. The Ḥamāliyya chaplet consists of eleven beads on each side, counting from the pendant.

Al-Hādīdī ʿUmar Tall, initiated in 1835, practised the eleven recitations until the moment when he received the wādī, for the second time, from Shaykh Muhammad Ḥālī, in Mecca; but, in his work al-Rimāḥ, he wrote that a great number of recitations was eleven.

Ḥamā Allāh’s disciples preached the equality of castes, of men and women; they made recruits among the opponents of the Tall clan, among people of caste, slaves, and also certain families with mystical tendencies. The doctrine was exalted by the mukaddams, some of whom disturbed public order by extravagant hero-worship of the Shaykh; one of the most active was Yaqūb (Yaṣṣūb) ʿṢylla of Kayes. The conflict passed swiftly from the social sphere to the political. The French administration tried to temporize and to avoid becoming involved in a religious quarrel, but was compelled to intervene when incidents became more serious: in 1923, politico-religious conflicts broke out between the Lāghāl and Tenourdajou tribes, starting a vendetta which lasted for several years. In 1924, the Ḥamāliyyists attacked...
HAMALIYYA — HAMAM

the chief of Nioro's house; Shaykh Hamâ Allah, who had not intervened to put a stop to these incidents, was sent to Mederdra. In 1939, Yacouba Sylla was the source of a scandal in Kayes; the Tidjâns accused him of orgies and seditious songs, and to avoid disturbances he was sent away to Kaedi. In the same year, further serious incidents broke out in Kaedi, on the occasion of his preaching on the equality of women, the wearing of jewellery and the uselessness of the Kurân; he caused luxurious textiles to be burned and gold necklaces to be sold; later, Yacouba Sylla organized public confessions which led to numerous divorces; he also organized the "dances of Paradise"; on 15 February 1930 a riot in which Tidjâns and Hamallists were the opponents led to fifteen deaths. In 1933 Fodie Sylla proclaimed the usefulness of the Kur'an; he caused luxurious textiles to be burned and gold necklaces to be sold; in the town itself, more than half the population is Hamalliyya. They teach their faith in about thirty Kurân schools; in the rest of Mali, there are about 150,000 followers at Bamako, Ségou, Timbuktu, Amongo, Kidal, Kayes and Bandiagara. In Mauritania, there are more than 300,000 Tidjâns and Hamallists; some are found as far away as Atar; in Haute-Volta there are about 80,000 at Ouahigouya, Dori, Yako and Bobo Dioulasso; and there are some in the valley of the Senegal and at Niamey.

The present holder of the word is apparently Sharif Ahmad ould Hamâ Allah, who is 50 years of age and lives at Nema, in Mauritania.

HAMAM (pl. hamâmîm, hamâmâdi), a collective substantive which, taken in a wide sense, denotes any bird "which drinks with one gulp and coos" (kull fayr 'abbâ wa hadara fa-huwa hamâm), that is to say the family of the Columbidae, with which the mediaeval Muslim naturalists incorporated that of the Pteroclidae, the sand-grouse (sâdâ [q.])..morphologically they are fairly numerous in Egypt and Syria, but the Hamâmâdi, which hamâm represents, are fairly widespread from 'Iraq to the Maghrib with their different species of pigeons and turtle-doves, both resident (awbûd) and migrant (bawîdî). In the genus Columba we find—(a) the ring-dove or wood-pigeon, Columba palumbus (warâqân, såh bûr, hâyâwân, dalâm, Maghrib: za'âsî, saâfî), a bird of passage in 'Iraq and Syria, absent from Egypt and resident in the Maghrib with the sp./ C.p. exelsus;—(b) Bruce's green pigeon, Treron vaalais, (hadâm, abu 'l-ahhâd, hâdrât), especially in southern Arabia;—(c) the stock-dove or blue dove, Columba oenas (yamâm, hamâm barri), a winter visitor in 'Iraq and Egypt and the Maghrib;—(d) the rock-dove, Columba livia (î-uri, hamâm khalasa), with the sp./ C.l. livia, in the Maghrib, C.I. palaeasinae in Syria, Jordan and northern Arabia, C.I. gaddi from Palestine to 'Iraq, and C.I. schimperi in Egypt; it is from this pigeon that all the tame and domesticated breeds are descended. The genus Streptopelia is represented by—a) the turtle-dove, Streptopelia turtur ('Iraq: shîfin; Arabia and Syria: wârîshâl, târkhûl, 'âbîr Allâh, Abû 'âbîr, şarûfî; Egypt: bârî; Maghrib: imâm), with the sp./ S.l. turtur, a bird of passage in autumn and spring in...
all the Arabic-speaking countries, S.t. arenicola which nests throughout the Maghrib as far as Tripolitania, a bird of passage in Syria, Palestine, ‘Irāk and northern Arabia, S.t. aegyptiaca a resident in the highlands of Jordan, S.t. isabellina a bird of passage on the east coast of Arabia;—e) the red-eyed dove, Streptopelia decaocto (fīkhīta, sitt al-rūm, yd karīm, karīma), with its flight; ordinarily they were sent in duplicate, without any mention of address; any Muslim, not the intended addressee, could claim to be the owner of the bird. This was a very popular sport among those who had the means to keep such birds and enjoy them in competitions.

In the restricted sense, hamām denotes the domestic pigeons originating from the rock-dove, whether the free or “roof-pigeons” that are established in towns (hamām ahli, hamām al-‘amādr) and on which the Meccans prided themselves (hamām Makka), or the artificially bred or “dove-cot” pigeons (buṣīt, dāḏīm) trained to live (muwaṭṭān) in private lofts (‘amādr, pl. ‘amīda) or official pigeon-houses (burūj, pl. burūj). It is to this last category that mediaeval writers in Arabic devoted so much of their work in both prose and verse; indeed; the contact established between the Muslims and the pigeon-loving Byzantines gave such a fillip to pigeon-keeping (laḥ bi ‘l-hamām) among the Arabs that it quickly became a pastime that attracted several caliphs, such as the ‘Abbāsids’ al-Mahdī, Hārūn al-Raṣīl, al-Wāḥik and al-Nāṣir. It is necessary only to recall the lengthy passages devoted by al-Dajhīz to the homing pigeon (K. al-Hayawān, iii) to be able to assess the passion with which this hobby was pursued in the great cities of Baghdad, Basra, Damascus and Cairo. On the subject of the “sporting pigeon” (al-hadīl, pl. al-huddāl) the philologists have compiled a large quantity of lexicographical material drawn from the technical vocabulary of pigeon-devotees (arbāb al-hayawān) and on which the bird is said by the Muslim historians to have no margin and should be without any preamble (inhtidd), it had to be trained so that its homing instinct should be “acquired” (muwaṭṭ). For this purpose it was mated at a very early age, and the owner relied on the absolute constancy of the pair to make completely certain that the bird would return when taken away from its mate; it was carried in a basket, the distance being increased each time, and was released from each of these stages (masḏūlāt).

Like the Greeks and the Romans, the Muslims made skilful use of the valuable qualities of the homing pigeon, employing it as an entirely trust-worthy means of communication. Pigeon post, an official institution integrated into the Intelligence Service (barīd), is said by the Muslim historians to have been the work of the atabeg of Syria Nur al-Dīn Maḥmūd b. Zangī (541-60/1146-74). The ‘Abbāsids caliph al-Nāṣir li-Dīn Allāh (575-622/1180-1225), an ardent pigeon-enthusiast, restored this institution, which disappeared with the coming of the Mongols (656/1258) under the caliphate of al-Mustaṣim bi ‘l-lāh; we know from Jowith-ul that when St. Louis landed at Damietta (1249) “for a moment the sky was darkened by the thousands of pigeons released by the inhabitants to warn the sultan of the danger threatening their city. The Mamlūk Baybars (688-76/1259-78) made Cairo a centre for pigeon-keeping, and it included nearly two thousand pigeons bearing the symbol of the State (dāḏ); only the sultan himself used to open the messages, which had to be brought to him by the pigeon-officer (barīd, barīda) as soon as they arrived. These notes were written on special very thin paper called “bird-paper” (warāq al-tayr) and were perfumed if they contained good news, bad news being carried by a bird whose plumage was darkened with soot. It was the custom that the text of the message should have no margin and should be without any preamble of formal praise of Allāh, since it might fall into the hands of infidels, that it should not bear the date of the current year but only the day and year and what by way of signature at the end there should be the formula kafā bi-lālīh ḥaḍīt** (Allāh is sufficient guide). These air-borne letters were rolled up and fastened to one of the carrier pigeon’s remiges, without in any way interfering with its flight; ordinarily they were sent in duplicate, without any mention of address; any Muslim, not the intended

recipient, who by chance received a message of this sort felt it his duty to send it on, after attending to the pigeon's needs and making a note of his action on the back of the message.

It was during the 9th/10th century that the use of the pigeon-post gradually disappeared. Whatever the chroniclers may say, there is every ground for asserting that this method of communication was in current use in Islam well before the 6th/12th century, as is proved by the remains of the "pigeon stages" (marāhi al-ḥamām) placed at regular intervals (mudarralādja) along the shores of the Persian Gulf, following a continuous line of ribāt (q.v.) and ensuring the safe dispatch of the correspondence of the Aghlabid governors of Ifriqiya (3rd-4th/9th-10th centuries); the modern place-name Hammamet (al-Ḥamāmd, "the pigeons") is a living reminder.

The theme of the "gentle dove", the messenger of love, peace, and good fortune, was the unfailing inspiration of Arab poets of all periods and in all the Muslim countries, and it would be useless to try to enumerate all the frasidas (mardkiz al-badmūn) which, in their conclusion, evoked the image of eternity in the tender cooing of turtle-doves (al-ḥaṣālīf) up high among tall trees. In Islam, as everywhere else, this bird is regarded with popular affection, and a pair in a cage are very often the chosen companions of the Muslim home; at a very early date, this affection found expression in various proverbs and legends which hold up the Columbidae as examples of sweetness, attachment and fidelity, as for instance Noah's dove, or the two carrier pigeons sent from Mecca by Allāh to the Prophet Muhammad when hidden in the cave. It appears, however, that the latter did not share this feeling of affection since, by a tradition which relies on the testimony of Abū Hurayra (see Sunan of Abū Dāwūd), he is alleged to have included pigeons among the ranks of the demons. Nevertheless, in the eyes of Kurānic law the flesh of the columbidae is permitted as food, and mediaeval Muslim medicine credited both it and also pigeon-dung with great inspiration of Arab poets of all periods and in all the Muslim countries, and it would be useless to try to enumerate all the frasidas (mardkiz al-badmūn) which, in their conclusion, evoked the image of eternity in the tender cooing of turtle-doves (al-ḥaṣālīf) up high among tall trees. (Ed.)

HĀMĀSA (A.), "bravery", "valor" (used nowadays together with hamās, to translate "enthusiasm"), is the title of a certain number of poetic anthologies which generally include brief extracts chosen for their literary value in the eyes of the anthologists and classified according to the genre to which they belong or the idea which they express; these works are related to a more general category, that of "poetic themes", maʿāni l-šarʿ [q.v.], but differ from it in the apparent effacement of the author who abstains from any comparison or judgement and imposes his taste without indicating the reasons for his choice. The origin of the title, which has embarrassed modern critics, seems however very clear: al-Ḥamāsa (verses on bravery in war) is the title of the first—and incidentally the longest—chapter in the oldest and most celebrated anthology of this type, that of Abū Tammām (d. 231/849 [q.v.]) following a procedure currently practised until our own times in many literatures, this title has been adopted for the complete work a whole and has replaced the name which its author had given to it: al-Iḥṣāʿ al-mūmān in ghīr al-ghawra, the name of another name which more probably attributed to it (see al-Masʿūdī, Murūdī, vii, 160). This anthology met with such success, in both Maghrib and Maghrib, that later anthologists imitated it and retained the title, which little by little lost its etymological sense to become synonymous with mukhāṭārāt, "selections", "anthology"; this is so much the case that the Hāmāsa of Ibn al-Shaqqārī (see below) was also published, in Cairo, in 1306, under the title Mukhāṭārāt ḍūwarī al-ʿArab.

1. — ARABIC LITERATURE

The Hāmāsa of Abū Tammām marks a new orientation in comparison with earlier anthologies which contained complete poems [see e.g., Al-Muḥfaddal al-Ḍabbī] or the whole available work of a poet, or even of a tribe [see e.g., Ḫuwaylī]. Here, on the contrary, the anthologist, himself a poet, allows his own personal taste to be exercised in extracting from a poem the one or more verses which seem to him to illustrate most felicitously a literary genre and later, after Abū Tammām, a given theme. This Hāmāsa is divided into ten chapters of unequal length containing respectively, in no apparent order, lines on bravery in warfare, death (marāḥi), morality (adab), love (nasīb), the faults of the adversary (ḥaḍīth), hospit-
ality (diyafa'), various qualities (sifdt), the sleep enjoyed by travellers (al-sayr wa'l-nu'ds), witticisms (al-sayr wa'l-nu'ds), al-wati'a (diyafa'), various qualities (sifdt), the sleep enjoyed by travellers (al-sayr wa'l-nu'ds), in fact feeling convinced of the superior value of their own poetry, they scarcely knew the Iliad or the Odyssey, and going back to the pre-Islamic period or to the beginnings of Islam, but some are more recent.

The success of this Hamása inspired several commentaries (see al-Baghdādi, Khizdna, Cairo ed., i, 33), of which that of al-Tālīrīzā (his name is best known (see R. Blachère, HLA, i, 151; see also Abu Tammām, adding there: a Hamása sughri or K. al-Wāhidīyīdī by him was edited by al-Kayāfī, Damascus 1964). In the Maghrib, its vogue was no less great; study of it constituted one of the foundations of literary culture (see H. Pērs, Poésie andalouse, 28), and al-Aʿlam al-Šāntamārī, who imitated it, made a new commentary on it.

In order not to be left behind, al-Buhtūrī (d. 584/1187 [q.v.]) also composed an anthology which he entitled Hamdsa, so contributing in a decisive manner to the definitive adoption. In the Hamása of al-Buhtūrī, the verses are no longer divided under a small number of rubrics, but are grouped together, according to the poetic themes that they contain, in 174 very subtly graded chapters (e.g., thirteen of them are concerned with fleeing from the enemy), with the result that this anthology may be considered to come into the category of maʿdīi l-ghīr. It should be added that it enjoyed far less success than the earlier work; it does not seem to have been studied in Spain, where al-Buhtūrī was, however, held in great esteem, and only a single manuscript of it has been discovered.

The next work chronologically appears to be that of a certain Abū Dūnmāgh (or Dīmāgh), of which we have only a brief mention in the Fihrist (Cairo ed., i, 120); then come those of Muḥammad b. Khālaf Ibn al-Marzūbān (d. 309/921), of which we know only the title (see Fihrist, ii, 384, which does not mention the Hamása; Yākūt, Udābā, xix, 52; F. al-Bustānī, Dīrāt al-maʿārif, iv, 31-2) and of Ibn Fāris (d. 395/1004) entitled al-Hamása al-muḥdathī (see Fihrist, 119; Yākūt, Udābā, iv, 84). The two Khālidūs, Abū Bakr Muḥammad b. Ḥāshim (d. 380/990), and his brother Abū ʿUṯmān Saʿīd (d. 400/1010), who lived in the entourage of Sayf al-Dawla, are the authors of a Klifā Hamūṣat al-maḥdithīn, the title of which shows the gradual change in the meaning of the word hamása (see Fihrist, 240; M. Canard, Sayf al-Dawla, Algiers 1934, 295-3; their Hamása, also entitled al-ʿAshīb al-wāl-natāʾir, survives in manuscript in Cairo).

In the following century, it was in Spain that al-Aʿlam al-Šāntamārī (d. 476/1083 [q.v.]), already the author of a commentary on Abu Tammām, composed a Hamása (quoted by al-Baghdādi, Khizdna, i, 33).

The same literary form was again followed by Ibn al-Shāṭari (d. 542/1148 [q.v.]), whose Hamása was published under this title by F. Krenkow at Haidarābād in 1345 (see above). Somewhat later, ʿAll b. al-Ḥasan al-iṣlaṣ al-Ḥumaym al-Ḥili (d. 601/1204 [q.v.]) composed a new and more original one; this grammarian and poet, with his inordinate pride and uncompromising xenity, thought himself entitled not only of selecting the best poems of the earlier poets, but also of himself writing other and equally good poems; thus, following Abū Tammām, he composed a Hamása in which he included only poems of his own composition (see Yākūt, Udābā, xiii, 72 ff.).

It was an Andalusian living in Tunis, Abu ʿl-Haidārī Yūsuf b. Muḥammad al-Andalusī al-Bayāṣī (572-653/1177-1255) who was the author of the next Hamása; a philologist, historian and poet well schooled in classical poetry, he compiled in Tunis in 646/1248 a collection of poems, stories and fables to which he unwarrantedly gave the name Hamása (see al-Maḵḵarī, Analectes, index; A. González Palencia, Literatura, 107; R. Brunschvig, Ḥafṣīsides, ii, 384, 399, 406; this work exists in manuscript at Goa.

The last Hamása that we know is that of ʿṢadr al-Dīn ʿAll b. Abī ʿl-Faḍrāl al-Baṣrī (killed in 659/1261); it is known by the name al-Mamās al-Baṣrīyya (see al-Baghdādi, Khizdna, i, 33), and a manuscript of it is preserved in Cairo.

The interest of these works, and especially of the Hamása of Abu Tammām, is multiple. For us, their merit lies in preserving poems by poets otherwise unknown, and of serving in a subsidiary way as secondary sources for the publication of the dīdāms of ancient poets, but they also provide us with reasonably precise indications in regard to the tastes of a period.

For general information on the subject, see U. al-Māʾṣūrī and F. Krenkow at Haidarābād, and also of himself writing other and equally good poems; thus, following Abū Tammām, he composed a Hamása in which he included only poems of his own composition (see Yākūt, Udābā, xiii, 72 ff.).

in any case were daunted by the difficulties of translating verse (see G. Wiet, Les traducteurs arabes et la poésie grecque, in MUSJ, xxviii/16 (1960), 361-8; the embarrassment of Mattā b. Yūnus is nevertheless instructive for, in his translation of Aristotle's Poetica (A. Badawi, Ṭabīṣūfī, Fanning, ‘al-aṣhr, Cairo 1953, 96), he was content to render ṣīwāl by ǧāl (while Badawi, in his own trans., 3 and passim, uses maḥlāmāh).

It has also been said that the rule of the monorhyme excluded long compositions in verse; now the ṣurdāsā permits the composition of very long works, and it is precisely in ṣūdāsā that some poems have been written that come near to being epic, without, however, ceasing to be versified when they have a purely didactic character; Ibn al-Mu‘āτazz is one of the first representatives of this form, which flourished especially in al-Andalus in the hands of Ghażāl, Ibn ʿAbd Rabbīh, Ibn Zaydūn, Ibn ʿAbdūn, Ibn al-Ḵaṭīb and others. In certain poems of Abū Ya‘qūb al-Ḵuraymī, of Abū Tammām, of Abū Firās or of al-Mutanabbī, there is certainly a strong feeling of epic, but it would be exaggeration to regard these ṣurdāsā as true epics.

Rather than attempt to find an explanation for the Arabs' continued ignorance of a noble literary form which has contributed to the universal prestige of the great literatures of antiquity and the Middle Ages, it is fitting simply to reflect that, while possessing all the necessary documentary, literary and technical elements for the creation of the epic, they did not achieve the final stage of the process; they preferred to follow a tradition which may be called national, and which Islam helped to anchor still more deeply in their hearts. This is basically the opinion of many modern Arab critics—from the talented translator of the Ilīad, Sulaymān al-Bustānī (see his Introduction) to Ahmad Abū Ḥāka, author of the Fanning, ‘al-aṣhr al-maḥlāmāh (Beirut 1960)—who agree that the epic genre, in spite of the works mentioned above, is lacking in Arabic literature.

From the nineteenth century onwards, the translation of Homer and the reading of great epics have inspired some more or less successful attempts, among which may be mentioned those of Ahmad Mūḥarram, al-Ḥīyāhā al-islāmiyya (an epic of the Prophet), of Būluṣ Saḥāla, Ṭal‘ al-Qadr (a Shī‘ī epic) and Ṭal‘ al-Riṣād (a Sa‘udi epic), and of Fawāzi Ma‘īnī, Bīṣīl al-‘ānī, which Abū Ḥāka considers the best.

ii. — **Persian Literature**

When introduced into Iran by the Arabs, the word ḥamāsā at first retained its original meaning (bravery) and then, rather later, was used in Persian to denote the heroic and martial epic (ḥamāsā-i pāhlavānī), a literary genre, the works composed in this form being comparable with the heroic epics of the other Indo-European peoples; this is the meaning of ḥamasa-sarāyit (from sardāyidan, to sing, and, by extension, to compose), the title of the work by Dr. Ṣafā on the Persian epic.

The earliest texts of a heroic character are concerned with the kings of antiquity and the period when the Iranians were still in direct contact with the Aryans of India. In brief, the heroic legend in Iran started to take shape even before the Iranians emigrated from India towards what was later to be Iran; it was subsequently enriched with new elements and developed into oral or written narratives, particularly during the last period of the Sāsānid dynasty. Upon comparing the Vedas and the Avesta, one observes that the Indo-Iranians, even before their separation, were familiar with the legendary exploits of the national heroes. Some of these narratives were mainly products of the imagination (the creation of the world and of man); others had some historical basis but, with the passing of time and the accretion of oral elements, they assumed a legendary aspect.

In the Avesta, the Yašt are of great importance in regard to national legends. Several sections allude to legends and beliefs similar to those found in the Vedas; thus Vivasvat, father of Yama, and Trīta Aptya (of the Rig-Veda) correspond to Vivasvan, father of Yima (Djam), and to Athwīya (Abtin) father of Thraetaona “the child of Thrīta” (Farīdūn) who are named in the Hom Yašt (of the Yasna), “the most important chapter for the comparative historical of the beliefs of Avestan Persia and Vedic India” (J. Darmesteter, Zend-Avesta, i, 79); they appear later in Persian epic texts (see ḫawāmsī ḫanīdī, Farīdūn); other Yašt mention heroes, most of whom figure in the Book of Kings of Firdawsi, and places situated in North-West Persia (ancient Media). According to Nöldeke (in Gr.I.Pk., ii, 131), it can be accepted that, at the period when the Avesta took shape, some presentation of the mythical history of Iran, if not written at least traditional, was in existence. But, unlike the Persian epics composed from the 5th/11th century, which bring together a mass of details, these particulars are short and incomplete in the Avestan texts.

On the other hand, striking analogies have been found between the legendary accounts recorded by Greek historians and several episodes in the Book of Kings of Firdawsi—but only from the time of the Achaemenids: for example, the fragments by Ctesias, physician to Artaxerxes II (4th century B.C.), collected in his History of Cyrus the Siculo (i, 50); they inform from Median tradition; as for the parallels, Achaemenes as a child was brought up by a falcon, according to Aelianus, just as the hero Zal (in the Shāh-nāma) was brought up by the Simurgh (a kind of phoenix); the histories of Cyrus and Kay Ḵurṣaw, the one recounted by Herodotus, the other by Firdawsi, present obvious analogies; on the one hand we find the new-born Cyrus exposed by order of his maternal grandfather Astyages, king of the Medes, but left in the keeping of shepherds by his minister Harpagos and, on reaching manhood, overthrowing the empire of the Medes; on the other hand the infant Kay Ḵurṣaw left among the shepherds in the mountains on the orders of his maternal grandfather Afrāṣīyab (the murderer of his son-in-law and king of Turan), then recognized as the lawful heir of the kings of Persia and taking vengeance on Afrāṣīyab for the murder of his father and his uncle; in the 5th century A.D., Moses of Khorene attributes the same adventure to the Sāsānid king Ardaghīr and records other legendary Iranian narratives (the Persian epic had a great influence on the Armenian epic; see F. Macler, in J.A., ccxxvii, 549). In short, the influence of the Avestan texts was maintained over what was later to become the Persian epic up to the time of the Parthian period and even later, for the
ancient names were often given to the sovereigns and leading personages of the Sasanid period. Moreover, on the decline of the Sasanids, several works were written in Pahlavi containing traditions and stories of heroes; and there were also others during the 7th and 8th centuries A.D. Of some, only the title is known (through the medium of Arab authors): such are the Kšab al-Sakhasaran, the title of a prose work named by al-Mas'ūdī (Murūjī, ii, 118 = tr. Pellat, § 541)—probably Saghṣaran (the chiefs of the Saka, of Sistān, perhaps connected with the family of the Barmakids, see A. Christensen, Les Kayamids, 143)—and hence a text of great importance for epic traditions, translated into Arabic by Ibn al-Mu'allaḳa, and the Kitāb-ı Payqār, “Book of combats”, named by al-Mas'ūdī (Tanbih, Fīrūz, tr. c. 136). Others were preserved in part; such are the history of Bahram Cabīn, which survived thanks to the Arab historian al-Dinawari (Akbār wa ṣuwar, ed. Guirgass, 81-104) and also to Firdawsi (trans. J. Mohl, in-12, vi, 450) and vii; the duel of Rustam and Iṣafendyr, translated into Arabic prose by al-Ṭā'ālībī (Qharar) and into verse by Firdawsi (iv, 461 ff.); the Mudūjmīl al-tawârikh mentions a work relating to the hero Fīrūz (Tehrān ed., 66, 70) and an ‘Aḥā-ī Ardāshī (61-4) which was used by Miskawaih (Ṭaḏḡārī al-umum); the Ta'rīḥī-ī Sistān (Tehrān ed., 8) mentions a Bakhshār-nāma devoted to the great exploits of a commander-in-chief under Ḥusraw Parvīz. The history of Alexander by the pseudo-Callisthenes was probably translated into Pahlavi, and then from Pahlavi into Arabic, with additions relating to Dhu 'l-Karnayn (see ISKANDAR NĀMA); other works concerning the Sasanid period and mentioned in the Fihrist (Ṣāfā, Hamāsa, 45 and n.) survive as fragments in the works of Arab authors; several short Pahlavi post-Sasanid works (collections of moral aphorisms, pand-ndmak) are to be found scattered in Firdawsi.

All of these works, only two survive in their Pahlavi text; they are therefore essential for the study of the genesis of the Persian epic. The Memorial of Zarir (Aštakēr-ī Zarirān; see Gr.I.Ph., index, s.v. Yatāk) the versified form of which (in syllabic metre) has been identified by E. Benveniste, represents the Sasanid adaptation of a poem of the Araš period. Before the work was completed, A.D.—the time of the Persian invasion under Yazdgard II, written down systematically, with the assistance of mobads and learned men (Nōdeke, in Gr.I.Ph., ii, 141)—this book was entitled Khwāly-nāmak; several Arab and Persian authors refer to the Arabic translation of it under the title Sīyār al-mulūk, which corresponds with the Pahlavi title, the word khwâlīd (‘god’) having also the meaning of ‘sovereign’ (cf. al-Bīrūnī, Aḥārār, Leipzig ed., 103); it gave the history of the kings of Iran, from mythical times to the end of the Sasanids, mingling legendary and historical facts, the latter being predominant for the Sasanid period. The Arabic translation by Ibn al-Mu'allaḳa (2nd/8th century) was an indispensable source for Arab historians. The Pahlavi original disappeared, but much of it was preserved thanks to Ibn al-Mu'allaḳa (cf. al-Ṭā’ālībī, Histoire des rois des Perses, ed. and tr. Zotenberg, introd. 42). On account of the copyists' carelessness, copies of the Sīyār al- mulūk are by no means in agreement: according to Hamza Ḥefāḥī, Mūsă b. ‘Īsā al-Kasrawī collated several copies and did not find any two the same. According to Ibn al-Mu’allaḳa, others (who are named by al-Bīrūnī, Aḥārār, Leipzig ed., 99) had translated the Khwālīd-nāmak into Arabic, each in his own way, sometimes introducing accounts from other countries into the history of Iran (Nōdeke, Tabarí, Gesche Abd al-Perser . . . zur Zeit der Sassaniden, introd.; and especially the résumé of V. Rosen's study of these Arabic translations and the changes and alterations of the Pahlavi text in these translations: A. Christensen, op. cit., 54 and n. 1). Not one of these translations survives; but fragments from them can be seen in a series of Arabic and Persian works, with occasional variants resulting from the diversity of the sources. Apart from the material issue, the importance of the traditions and legends transmitted orally is not negligible. But it is certain that the earliest Persian epics derive from written sources, using Pahlavi documents (either directly or through Arabic translations), as well as traditions preserved in families and transmitted orally by narrators or story-tellers (rāst) from Khurāsān, Sistān or Transoxania. Al-Bīrūnī gives the names of some of those he had heard (Aḥārār, 42, 44, 90); the author of the Mudūjmīl al-tawârikh states that “the rāstes of earlier days based their stories on the ancient books of the Fārsīs” (Tehrān ed., 2). Finally, the influence of the Arab authors who devoted themselves to the history and legends of ancient Iran must not be forgotten. All these factors led the Iranians to undertake a general compilation, on the lines of the annals drawn up on the orders of the ancient kings: thus, during the 4th/10th century, three prose Shāh-nāma were written [see FIRDAWSI], the last of which, by Abū Maṣūr, was freely used by Dāḵšt and later by Firdawsi; all that remains of it is the very important introduction, published by Muhammad Kāvān (Bst masūla, Tehran 1313/1935, ii, 1-64); it was consulted also by al-Bīrūnī (Aḥārār, 112 and 116), which tends to prove that at the end of the 4th/10th century
century, and afterwards, it was regarded as the accepted Shdhndnma al-Tha'labi (Ghurar) similarly drew upon it to a considerable extent, a fact which provided Nizami with the opportunity to complete the whole epic structure that he had brought into being; poems celebrating Gershasp (the most original and the oldest, composed about 458/1066 [see ASADI]), his grandson Sâm, the three children of his great-grandson Rustam—Dzhâhîndr, Farâmarz and Banû Gushasp—, Bârzo (see Bârzo-Nâma), Bahman, Rustam’s redoubtable adversary (by Irângâhî, in about 499/1066), Shâhryâr, Bârzo’s son, the Persian (see Mukaîr, d. ca. 545/1150) and about eight epics celebrating minor heroes (Sa’fâ, op. cit., 3rd part, ch. III).

From the 6th/12th century onwards, the decline of the epic gradually became evident under the influences of Islam, of Arab culture and, later, of the predominant of the Turks; in any case, the great epic and national subjects of Iranian antiquity had already been treated. However, one of these subjects, which Firdawsi was unable to develop to its fullest extent, provided Nizami with the opportunity to write a vast and learned epic (587/1191), the Romance of Alexander [see ISKANDAR, ISKANDAR NâMA, NIJAMI]—a subject to which Amir Khusraw and Dzhâmi later returned, not to speak of the adaptations made in Turkey, India and other Oriental countries. The first epic to honour a contemporary prince was the Shâhnhâd-NâMA, written by Muhammed Padâ’zî in honour of sultan ’Ali al-Din Muhammed Kh’warizm Shâb, in about 506/1200. The most important historical epic, after Firdawsi’s, is the Zafar-NâMA (Book of victory) of Hamd-Allâh Mustawfî Kazwîni which concludes the Book of Kings from the occupation of Iran by the Arabs up to the period in which the author was living, the time of the Mongol invasion; hence the real interest, at once historical and romantic, of the first part and last part of this poem which consists of 75,000 bayts (completed in 735/1335). Another epic relating to the history of the Mongols down to the successors of Chingiz-Khân is the Shâhnhâd-NâMA, completed by Ahmad Tabrizî in 739/1338. The epic by Abu’l-Tust (d. 866/1462), devoted to the history of the Bahmanid sultans of Dakhân, left unfinished, was completed by an anonymous author. The hero’s resounding exploits were celebrated by Hâtîfî (d. 927/1521), a nephew of Dzhâmi, under the title Zafar-NâMA (ed. Lucknow 1889); to the same poet we owe a thousand lines of verse of an epic on the reign of Shâh Ismâ’îl which he left unfinished. The reign of this same ruler and that of his son formed the subject of an epic written by Kâsim Gunahâbî and completed in 939/1533 (ed. Bombay 1287); to him we owe also an epic on the reign of Shâh Rukh, the son of Timur. The capture of the island of Khîshn and the town of Hurmuz (Djarun) from the Portuguese was recounted in verse by Kâder (Djângâhî-NâMA Kishn, 1032/1623, and Djarun-NâMA). Lastly, a Shâhnhâd-NâMA was written by Ŝabâ’ (d. 1282) in honour of Fa’th ’All Shâb. These are the principal epic works, most of them written under the influence of Firdawsi or Nizâmî. In addition, throughout the 11th/17th and 12th/18th centuries, a series of secondary works commemorated certain sovereigns and leading personalities of Iran, India and Turkey (Gr.I.Ph., ii, 238).

As regards the second category of these epics (devoted to heroes of the Shi’i faith; Ŝabâ, op. cit., 305 ff.), the oldest is the Khâvarrân-NâMA of Ibn Hûsâm (d. 875/1470), celebrating the virtues and exploits of the caliph and imâm ’Ali. The anonymous Shâh-bî-rîn-NâMA (1072/1662) similarly honoured Hâmza b. ’Abd Minhâj, the son of the most important among these heroes, the Hamla-i Haydarî, glorifies the lives of Muhammed and ’Ali, their saintliness and their achievements; its authors are Muhammad Ra’fi Bâdghîl, a native of Ma’shûd, who had emigrated to India where he held high office; after his death (1123/1711), his work was completed by Abu Tâlib Fanduruski. The same subject was used in a more extended work (30,000 bayts) written in a better style than the preceding one by Mullâ Bâmân ’Ali (ta’khâsilis; Râjî) entitled Hamla-i Râdîji (ed. 1270/1854). Sa’âb, named above, is the author of the longest of the works in this category, the Khudîvand-NâMA, on the same subject as the Hamla-i Haydarî; here, more than in these other works, the influence of Firdawsi is to be discerned.

As hamâsëa denoted exclusively the heroic epic, it has been necessary to leave out of this account the cycle of romantic epics (the earliest of which, Zaryadves and Odatis, was known as early as the 4th century B.C., according to Athenes, XIII, 575), that is to say the episodes devoted to love, which are treated briefly in the Shâhnhâd of Firdawsi and which the poets of different periods (Nizâmî, Amir Khusraw and Dzhâmi in particular) magnified into vast versified romances (not to mention Firdawsi’s other works, for example Farkhâd u Şîrîn, and Gurgânî’s Wîs u Kâmîn; see also ASADI).

himself on the fropuz, have not survived, and the
Oghuzndme, the national epic of the Oghuz Turks, can
be studied only through a prose compilation made in
the 8th/14th or 9th/15th centuries. But although the ancient
destam, epic poems transmitted by oral tradition,
have not survived, there are known some works of
epic character, which are composed according to the
rules of Arabo-Persian prosody, in the
epic character, which are composed according to the
metre, and which have the title
ramal. For example, the
Kitdb-i Dede Korfrut
of Umur Pasha,
destdn.
To this category belong the
Iskenderndme
of Enwerl, written in 869/1465, which celebrates
the form of an epic poem, the history of the first Ottoman
destdn.
Huns copied some poems from their Gothic allies as
that these copied them from the Huns. Indeed, al-
though there may have been mutual influence and
although each of the two peoples may have cultivated
both panegyric and epic lay, the extant evidence
permits us safely to infer only the panegyric lay for
the Huns and the epic lay for the Goths. The fact
that these copied them from the Huns. Indeed, al-
cultivated both epics; the poet often gives to these verse chronicles
the name of destam. To this category belong the
Ghazawetndme which forms part of the Iskenderndme
of Ahmed [q.v.] (d. 816/1413) and which relates, in
the form of an epic poem, the history of the first Ottoman
rulers up to Emir Sulayman (d. 813/1410), and the
Destam of Umur Pagha, the second part of the
Destam of Enwerl, written in 881/1475, which celebrates
the exploits of Umur Aydnoglu [q.v.]; to describe
this part of his work, written in the form of a popular
tale in verse, the poet uses the term

I. MELIKOFF

IV.—CENTRAL ASIA

However near to extinction the tradition of oral
heroic poetry among the Turkic-speaking peoples may
or may not be, it is one of the most important in
living memory and deserves closer study in the West
than it has as yet received.

Oral heroic narrative in Turkic dialects ranges from
the hero-tales of the Altai tribes (Schifmer, Radloff, Ulagachev)
from the hero-tales of the Altai tribes (Schifmer, Radloff, Ulagachev)
full-scale epics of great
bards like the Krlzg Sagimbay and Sayakbay (Manas)
or the Özbek Fazl Yulduz-oghîl (Alpamish). If we
go north of the Altai to include the hero-tales of, in
part, non-Turkic tribes, we can trace one of several
hypothetical lines of epic development entire, from
shamanistic adventures in the upper and lower worlds,
where the hero is borne on the wings of eagles if not
of thought itself, to military expeditions against
empires beyond the steppe, where man's dream of
free movement and unimpeded conquest is
matured in the taming of that heroic beast, the
horse.

If, as is probable, some Huns were Turks, the Turkic
peoples will have had some form of heroic poetry for
at least the past fifteen or sixteen hundred years. As
companion of a Byzantine ambassador extra-
ordinary, Priscus witnessed a performance of
panegyric heroic poetry glorifying Attila as he presided at
a banquet. "When evening fell, torches were kindled,
and two thousand people went into the banquet hall,
and recited lays of their composition lauding his
victories and warlike qualities. The feasters gazed at
them fixedly, and while some took delight in the
verse, others recalled the battles and were fired in
their hearts, while yet others, because their bodies
were grown frail with age and their spirit abated,
shed tears." ('Epistugnogenie eü eüstéras dedes

 nouns, the Tangut of the Koko Nor region, or with
fellow-Turks of the 'idolatrous' Buddhist religion,
the Uigur—patterns which are repeated in the 19th
d and 20th century epics, with the Kalmik as hated enemy.
The form is that of long couplets with rhyming
caesura: A-J-A, A-f-x, B-J-B, B-J-X, etc. This enables
scholars to reassemble couplets scattered by al-
Kâshghârî, as Brockelmann has done, under
the three heads: 'Battle with the Tangut', 'Campaign
against the Uigur', 'Battle with the Yabaqû' (a Turk-
icized Mongol tribe), furnishing some idea of what
a 9th or 10th century Turic lay may have looked
like: but there can be no guarantee of unbroken
sequence among these couplets, as some have as-
sumed. The internal sign of Islamic influence,
and it is a negative one, is the unquestioning assu-
ance with which the warriors desecrate the images of
the Buddhist Uigur.

Although there is no surviving epical version, the
legend of Oghuz Kaghan, the mythical eponymous
founder of the Oghuz tribes, cannot be omitted from
even the briefest account of Turkic epic. Both Rashid
al-Dîn [q.v.] (Chap. I) and Abu 'l-Qâhîr [q.v.] quote
the legend; but the most important witness to it is
the text in the unique Schefer ms. Paris, Bibl. nat. suppl. ture 1001, written in the Uigur script. It is reasonable to suppose that the account of the realms subdued by Oghuz Kaghan must postdate the period of Cingiz and his immediate heirs; but, after this, opinions diverge. Pelliot (followed by Şekerbak) considered the text to be a recension in the Uigur of the 13th century (while Şekerbak considers the writing to resemble that of the yarlık of Toktamış). Bang, on the other hand, held that it was written in 'later East Turkic' but that beyond this its date and dialect are totally inscrutable. Stürmer argues that it was written in Iran, under Ghażan Khan or his successor, by an Uigur bahdand or bitikçi on the basis of Türkmen oral narrative. The text is incomplete at beginning and end, and there are other imperfections. As the text stands, it is not possible to determine whether the hero's birth is miraculous or merely remarkable, though one must suppose the former in the light of what follows. For, later, Oghuz Kaghan's acquisition of at least the first of his two wives (future matrons of groups of tribes) is due to heavenly intervention. His first exploits are against wild beasts, and preeminently a unicorn. Before he sets out to conquer nations, he assembles his princes, proclaims himself Kaghan, and chooses 'Grey Wolf!' as his war-cry. And, indeed, before his first battle, a grey wolf emerges (like his first wife) from a heaven-sent ray, and leads the army. Together they conquer Asia, Egypt and Byzantium. Various Turkic tribes, like the Klîpa and Karluk, are founded en route; and when Oghuz Kaghan comes to rest he gives each of the three sons of his first wife, Kûn (Sun), Ay (Moon) and Yultuz (Stars), a third of a golden bow, and the sons of his second, Kök (Sky), Tagh (Mountain) and Tengiz (Sea), each a silver arrow as insignia of their tribal organization. The legend is evidently a tribal origin-myth fused with a wishful travesty of the saga of the more dazzling Mongols as reflected in their Secret History, from the totemistic Grey Wolf onwards, but always at the poetic level of myth and folk-tale. The form of the narrative is prose, but Riza Nur and Pelliot each detected a group of 'fragments' at the end of the manuscript preserved by Oghuz Kaghan in octo-syllabic rhyming metre (XI, 6-XII, 3; XII, 3-7), which Pelliot interprets as citations from an epic poem now lost. Nevertheless, prose or rhyming prose breaking into verse at points of heightened interest is a favoured narrative vehicle among the Turkic and neighbouring peoples. As to the influence of the legend in later days, it is thought that the figure of Manas in the 19th and 20th century Kirgiz cycle owes something, in his rôle of conqueror, to the figure of Oghuz Kaghan.

Some modern epics, like the Kirgiz 'national epic' Manas [q.v.], are confined to one Turkic people, though some of its characters (including Manas himself) may also appear in the epics of other Turkic peoples. Other epics, like Alpamış [q.v.], Edige-b, Kol-b, Shora-b, and the romantic epic Közî Köröög, may be shared by several peoples, although not at the same level of literature and development. For example, among the Özbek at least ten variants of Alpamış are known, among the Kazakhs two, among the Karakalpaks one, and the scale ranges from shorter poems of ca. 2,500 lines to full scale epics of some 14,000; whereas in the Altai it appears as the rather primitive hero-tale of Alp-

Beyrek in the Kıdigr-i Dede Korkut [q.v.]. Manas is unique in that by a process of dynastic and other cyclization, it has engulfed not only Kirgiz epics which were once independent of it (e.g., Er Kükä, Er Tööök, the latter a tale of a hero's adventures in the underworld much as in Altaic hero-tales) but also the bulk of Kirgiz oral folklore, leaving only such 'minor epics' as Dianích and Bayyök closely linked with the Türkmen-Özbek Yüşef and Ahmed, v. infra), Kurmanbek, Soylu, Er Tabibi intact. The Manas-bards (manasci) were either permitted or encouraged to record in the laboratory such high numbers of Manas and of its continuations: Semey (2nd generation) and Sytelek (3rd generation) as 250,000 ( Sağlimbay, 1867-1930) and 400,000 (Sayakbay, b. 1894) respectively. The ca. 12,500 lines of Manas recorded by Radloff in the latter part of the 19th century on the other hand represent rather the 'bare bones' of possible live performances, having been taken down by the frustrating method of dictation to hand. Genuine performances suited to various types of patrons and audiences could last from one evening to many weeks of evenings and so run to many thousands of lines. Such length was obtained not so much by wealth of incident as by means of 'static' lyrical elaboration of any matter of beauty or interest. This fluidity in the treatment of basic themes also extended in part to the subject-matter itself; for example, as a compliment to Radloff (or is he thought), his singer introduced the White Czar (a figure to whom the great Manas himself looked up in awe), compelling him of the remote Czar of Russia and the great white god of the shamans. So far, two main 'schools' of Manas tradition have been distinguished: those of Tien Shan ( Sağlimbay) and Issik KuP (Sayakbay). Themes of Manas are the hero's miraculous birth and prodigious boyhood; his unification of the Kirgiz tribes after defeating rebellious kinsmen and other khâns; various expeditions, above all the Great Expedition to China with its tragic return, ending in Manas' death; and his resurrection, linked with legends attached to ancient tombs in Kirgizia. Unusual depth is given to the epic by the unhappy rôle of Manas's milk-brother Almambet, a Chinese (Radloff: Oirot) prince converted to Islam, to whom he demoting loyal old Bakay in order to do so and thereby inflaming Kirgiz jealousy. In addition to relying on magic animal helpers who are clearly of shamanistic origin, Manas has the stock Turkic retinue of forty warriors (kirk-lro), most of whose names are common to Radloff and the 20th century bards. The chief Kazakh heroic epics are: Alpamîs-b, Edige-b, Er-kokâ, Er-samî, Er-targhî, Kumbat-b, Koks, and Shora-b. (period of the capture of Kazan). Kiz-ibek and Kûzî Köröög and Bayan Süli (the Turkic Romeo and Juliet) are of a more lyrical and romantic turn. Ayman Sholpan and Uruk-b are derive from the Russian influence on Central Asia. As stated above, the poem of Alpamış attained truly epic dimensions in Özbek. Özbek shares the military romance of Yuşef and Ahmed with the Îbarizm Türkmen (Boz-Ogkhan) and also has the historical dastan Shevshisî-khân and the romances Kûntumgsh, Şirîn and Şakhar, and Orijül. The leading epic of the Karakalpaks is Kîrök-lro—'The Forty Maidens'. Although this poem has undergone much influence from the recent past, the heroine Gulaym conforms to an ancient Central Asiatic type of woman-maiden remembered in poetry over a wide area despite the intrusion of Islamic notions of womanhood. Gulaym's
father Allayar, ruler of the Karakalpak stronghold of Sarkop, gives her the fertile region of 'Miueli'—widely known but has not been taken to the stage of epic. As well as in Turkey, Armenia, Georgia and Persian Adharbaydjan, the Gorogll cycle is kept alive in the specie of the Turkmens, Karakalpaks and Uzbeks, the last of whom told it elaborately, though not yet epically, as 'The Forty Dastans of Gorogll'.

In the epics of the Kazakhs, and, through them, of the Krglz, the heroic prestige of the Nogay, like that of the Achaean in Homer, is great. In Radloff's version of the Krglz epic, Manas himself is of the Nogay-Nogay, whereas Sagimbay makes him the grandson of the eponymous Nogay-khan. This is undoubtedly a reflection of the standing of the historical Nogay (d. 1299), and then of his following, among the Tatars of the Golden Horde and also among their eastern neighbours. As was stated above, the Kazakhs also know an epic of Edige, another Emir of the Horde (d. 1419). It is from this time onwards that the modern epics receive traces of names or events, however faintly or however generalized, which can be related to the aecasaneous to myth and legend. The Krglz, Kazakhs and Karakalpaks share their conception of the pififid, jibbering, heathen Kalmk as paramount enemy. This must derive from the centuries of Kalmik expansion and pressure from the lands of the Turkmens, Kazakhs and Karakalpas. In recent centuries the epics have come to the West. Epic poetry of its nature is intimately bound up with political life, and the Iliad will have been no exception, so that it is not of itself disturbing that modern bards have become, for example, radio personalities. But the Central Asiatic and Mongolian epics have experienced such marked fluctuations of fortune, following political and social decisions, that they are not disinterestedly given. Some recent publications, however, both editions and critical studies, encourage the belief that the basic recordings of a still living major tradition of heroic epic are intact and may one day be given to the world in full.

HAMASA

The first heroic epic poem in the modern sense is, perhaps, a short anonymous Dakani mañiwañi written to lament the fate of Títpa Sulthan [q.v.] fighting with his back to the wall. Mū'min Kháñ 'Mū'min' (1800-1851) is the most eminent of Urdu poets who wrote short heroic poems supporting theджхкан and the movement of Sayyid Ahmad Barelwi [q.v.]. Mawlawi Liyâkät al-Lâh and others among Barelwi's disciples wrote the short rasmîyâ mañiwañi for incitement and the call to theджхкан in an unpoetic and colourless style.

The marthiya written in Lakhnaū in the middle of the nineteenth century lamenting the tragedy of Karbalâ (61/680) receives epic treatment and rises to epic grandeur in the work of Mr Babar 'All 'Aniś' (1802-1875) and his contemporary Mirzâ Dabîr (1803-1875). In the vein of martyrological epic it dwells upon the theme of the heroic martyrment of Husayn b. 'Alî, fighting heroically against overwhelming odds; it contains elaborate descriptions of the desert and the hero's horse and sword, but confuses anachronistically the emotional and social, and to a large extent geographical, milieu of ist/7th century Trâk with nineteenth-century Awadh.

After 1857, when Urdu poetry entered its modern phase, the epic theme and glory of historical Islam became the dominant note underlying the political poem which began with Altâf Husayn 'Half's muṣṭaddas Ma’dd-a dijâr-i Iklâm and culminated in the poems of Iklâb. In the political poem the epic intent emphasizes revivalism and juxtaposes it with modernism; usually the treatment is not narrative and the epic motive is served by references to particular men or events in Islamic history. Hażî Dîjjâlandhârî has written a narrative Shâhkâñ-i Islâm which is versified history and lacks genuine epic elements.

Sâdiq, A history of Urdu literature, London 1964.**,208,209**

**HAMAT**, town in central Syria, 54 km. north of Hîmâs and 152 km. south of Halaq on the road which connects these two towns, and built on both banks of the Nahr al-ʿÂsî [q.v.] or Orontes, which at this point winds a great deal. The steppe plateau which surrounds the town is in part made into ploughed land (cereals), Mediterranean-type orchards and market gardens, thanks to the hydraulic installations which bring water from the river to its fertile soil.

The town of Hâmat goes back to early antiquity: it was occupied by the Hittites, who left inscriptions there, then, in about the 17th century B.C., it passed into the hands of Aramaean kings; it is at this period that it is mentioned in the Bible under the name of Hamath. After having been fought over, in the reign of Solomon, to recognize the supremacy of the Hebrews, these kings regained their independence, then, in the middle of the 7th century B.C., fought on the side of the Aramaean kings of Damascus against the Assyrian Salamaneser and finally, in 738 B.C., had to pay tribute to Tiglath-pileser; soon afterwards, in 720 B.C., following a revolt, the Aramaean kingdom
of Hamat was incorporated into the Assyrian empire. In the Hellenistic period, the town received, probably under Antiochus IV Epiphanes, the name of Epiphanes, which it did not retain after the Arab conquest. This took place in 156/57 and the town, now of little importance, which had been taken "by capitation", belonged until the beginning of the 4th/10th century to the giyūd [q.v.] of Hims. Little is known about its organization at this time; we know only that already in the Umayyad period it contained a Great Mosque, which seems to have been built on the site of a Byzantine church, parts of which were used in building it, which was later restored under the Abbāsid caliph al-Mahdī, and that during the reign of the caliph al-Mu'taḍijd (end of the 3rd/9th century) it was a large market town protected by walls.

During the reign of the Ħamdānī Sayf al-Dawla, the town of Ħamāt was incorporated into the district of Ḥalab, and until the beginning of the 6th/12th century its destiny was to continue to be linked with that of Aleppo in one direction and to Eftum and Damascus in the other. At the beginning of the 20th century its population seems to have been stable: approximately 60,000 inhabitants are recorded in 1893 and in 1930. By this time such importance as the town had arose in the 8th century its destiny was to continue to be linked with that of Aleppo in one direction and to Eftum and Damascus in the other. At the beginning of the 20th century its population seems to have been stable: approximately 60,000 inhabitants are recorded in 1893 and in 1930. By this time such importance as the town had arisen.

In the Ayyūbīd period, and during the govern-orchry of Abu 'l-Fidā', the town of Ḥamāt (which was the birth-place of the geographer Yāḥūd [q.v.]) enjoyed true prosperity. Its unusual appearance is stressed by eastern and western travellers, and in particular by Ibn Djubayr. While possessing no monuments of outstanding grandeur, it occupied an unusual site, on both banks of the Orontes, with its houses crowded close to the river, and possessed its own peculiar charm which, it was said, was appreciated only by those who explored its various quarters. Along the river thirty-two water-wheels or norias (madīrā) of various sizes (the tallest being 22 metres high) raised water to aqueducts which supplied both sections of the town and irrigated the surrounding gardens; drinking water was provided, it is not known exactly from what date, by a special aqueduct which came from the region of Sa'amia. On the right bank there extended a quarter which Ibn Djubayr describes as a "suburb" and which, joined to the other bank by an arched bridge, was known as the wadi, which was going through a troubled period. It is known that after the raid of Nicephorus Phocas in 557/968, during which the Great Mosque at Ḥamāt was burned, northern Syria had been under the nominal domination of the Fāṭimids, who allowed the Mirdāṣids to ravage it, and had then passed into the hands of the Saldāṣik princes. On the death of the last Saldāṣik, Rīdāwān, in 507/1113-14, Ḥamāt was probably occupied by the atādeh of Damascus, Tughtakār [q.v.], but in 509/1116-17 it fell into the power of the governor of Hims, Khūrkhān b. Karāḏḏā, who later gave it up to his brother Shīhāb al-Dīn Maḥmūd. During the first third of the 6th/12th century Ḥamāt was one of the principal stakes in the struggles between the rulers of northern Syria and those of southern Syria, while the Franks also coveted it, though they never succeeded in taking it. On the death of Maḥmūd, in 517/1123, the town of Ḥamāt was taken again by Tughtakān, then, in 522/1128, belonged to his son and successor Taḏā al-Mulūk Būrī [q.v.], who installed there his own son Sevīnd. After concluding an agreement with Zangī [q.v.], Būrī sent Sevīnd to him in 524/1130, when he was immediately and treacherously imprisoned. Zangī was thus able to enter Ḥamāt together with Khūrkhān b. Karāḏḏā to whom he had previously restored it, and which was taken over by the Zangī at this time that As'ad of Tripoli, but in the middle of the 18th century the town was attached to the qaṣīda of Damascus as a fiṭṭal (mālīkāne) of the Pasha. It was at this time that As'ad Pasha al-Azm built there a residence which still exists, now used as a museum, and which, while not the equal of the "Asm Palace" at Damascus, is nevertheless a very fine specimen of Ottoman civil architecture, and remarkable for its terraces overlooking the Orontes. In the 19th century, at the time of a new administrative reorganiza-tion, Ḥamāt was attached to the wilāyāt of Damas-cus. In 1906 the town was linked by railway to Aleppo in one direction and to Ḥims and Damascus in the other. At the beginning of the 20th century its population seems to have been stable: approximately 60,000 inhabitants are recorded in 1893 and in 1930. By this time such importance as the town had arose
from its position as a market used mainly by the Bedouin from the surrounding district, who obtained there various products which they needed and notably some very good textiles, while it remained one of the most picturesque cities of Syria, with nine norias still working out of the eighteenth recorded in the 18th century. But, since 1945, the town of Hamat has shared in the general tendency to expansion of the towns of Syria and its population now exceeds 150,000.

There remain in Hamat several monuments worthy of note. The most important is the Great Mosque, which dates from the Umayyad period, and is preserved by the presence in its courtyard of a pavilion on columns intended as the local bayt al-mal. The hall of prayer is of an original plan: its three naves are in fact each of different width and its eight pillars support five cupolas in the form of a cross. The courtyard is surrounded by vaulted porticoes with the western semi-circular arches, some of which appear to date from the time that the mosque was built. The western porch-Demohynes, La Syrie à l'époque des Mamelouks, Paris 1953, 81-7. Principal Arabic texts and inscriptions, see: E. Von Mü llen, A genealogy of the tribe, having both tribal followers and client villagers in their service.

With the exception of one offshoot, which went to Shíráz, the tribe is supposed to have migrated from the area of Kirmānšāh, in Persia, about 1755/1775. They supported the Šabān princes of Sulaymānīya until their autonomy came to an end in 1847. For some decades thereafter the tribe continued to harass the Ottoman and Persian authorities equally, and earned themselves considerable notoriety by taking to systematic brigandage over the whole area between Baghdad, Kirmānšāh and Mosul. In 1889, however, having suffered losses at the hands of the Persians, they retired to Bāzān and were then deported by the Ottoman authorities, half to Adana and half to Tripoli in North Africa. Seven years later the latter contingent, men, women, and children, fought its way back to Bāzān and the whole tribe was shortly allowed to reunite. As late as 1908 caravan travellers from Kirkuk to Sulaymānīya did so in terror of attack from the tribe.

upper reaches near Medina were called al-Kanah, and a tributary of Wadl al-Hamd near the city was called al-Kanah, and a tributary of Wadl al-Hamd near the city was still known by that name. The name Idam occurs in several places, such as Idam al-Malich near the dam of Idam which was built on the Wadl al-Hamd near Hadiyya Station, 165 km. from Medina, and follow its course nearly all the way to the Holy City.

HAAMD ALLAH B. ABI BAKR B. AHMAD B. NASR AL-MUSTAWFI AL-£AZWINI, Persian historian and geographer, born about 680/1281-2 at Kazvin, d. after 740/1340. His name is that of a Shi'i family which had provided a series of governors of Kazvin in the 3rd/9th and 4th/10th centuries. His great-grandfather had been the Auditor-General of Úrâk and the family had since then borne the appellation Mustawfi. Hâmd Allâh was appointed financial director of his home town and of several neighbouring districts by the well-known minister and historian Rashîd al-Dîn (q.v.), who also inspired his historical studies. About 720/1320 he began with a Firdawsi, closely imitating Firdawsi in style and diction, which in 75,000 verses describes Islamic history up to 734/1333-4, that is, almost to the end of the Îlkân empire. Hâmd Allâh worked for 15 years on this material and in that connexion wrote his own studies of Firdawsi. This work has not been published. Ta'rîkh-i gustâ (completed 730/1330) is similar in content, concise and very readable in style; in essentials it depends on known sources (al-Tabari, Ibn al-Athîr, Dîwâynî, Rashîd al-Dîn, and also on the Shîk-nâma; or for the mythical period), but it contains a quantity of useful information about the author's times which is not to be found elsewhere, so that it is indispensable as a source for the later Îlkân period (pub. in facsimile with English paraphrase by E. G. Browne and R. A. Nicholson, Leyden and London, 1911-15; GMS, v, 316, esp. 10, 19, 321 f.; N. N. Poppe, Moschisch-nachsammelung der Ûrâk, Sultân, al-lahâka Kazvini (Mongolian animal-names in Hâmd Allâh's work), in Zapsiki Kollegii Vostochnoi, i (1926), 195-208). (B. Spuler)

HÂMD ALLÂH, SHAYKH, Ottoman calligrapher (see KLATT)

HAMDALA means the saying of the formula al-hamdu ilîlâh (for the different vocalizations—di, du, da) as an introductory phrase, does not seem to be used by itself in magic as is the basmala. Again, the tendency to use the phrase as an introductory phrase as Palmer does in his translation of the Kurgan. As the phrase occurs twenty-four times in the Kur'âan, besides other forms such as lâhu l-hamd, it naturally became frequent in Muslim usage. All things come from Allah, and for all things, pleasant or grievous, He is to be praised. Yet the word hamdala does not seem to belong to the classical language and is thus later than basmala, which may even be pre-Islamic. In the Shâhî and the Lîsîn it does not occur, though basmala is in both, in the latter fortified with a verse from 'Umar b. Abi Rabî'î (Schwarz, Dîsânî, no. 413, ii, 241; the evidence for the line and its usage is solid, in the Târist)." "Vaire belokho Allâh"; for from Him all praise-worthiness proceeds. Yet the word has been borrowed from the first of the seven stages of the Rîfâî târîkh (W. H. T. Gairdner, Way of a Mohammedan Mystic, 12, 23). Even in orthodox tradition the Fâthâ has begun to have magical value; cf. in al-Bûhlârî (Kilah al-Târsîf, Bîb Fâthât al-Kilah) the story of the man who used it as a charm (mekaya) against snake-bite, and the Prophet approved. For later elaborate developments in magic, see al-Bûnî, Shams al-ma'sârîf, fasî X, and Ahmad al-Zârîkî, in Mafātih al-qâyûb, 175. But the hamdala does not seem to be used by itself in magic as is the basmala. Again, the tendency to use the phrase as an introductory

Poppe, Moschisch-nachsammelung der Ûrâk, Sultân, al-lahâka Kazvini (Mongolian animal-names in Hâmd Allâh's work), in Zapsiki Kollegii Vostochnoi, i (1926), 195-208. (B. Spuler)
formula soon expressed itself as a tradition from the Prophet: “Whatever is not begun with praise of Allāh is маuad [see "basmala"]. Thus the Ḥamdala became one of the three required things at the beginning of any formal writing. But this requirement was distinctly later, for, while the use of the "basmala" in this way held from the earliest times, we do not find the Ḥamdala prefixed to the Sira of Ibn Ḥighām nor to the Kitāb al-ʿAgānī nor even to the Fihrist. See on this usage and the traditions supporting it, the commentary of Sayyid Murūdijā on the Ḣydā, i, 55 f. and on the praiseworthiness of thisclamation especially the sermon (khutba) in the mosques usually begins with the Ḥamdala; and in earlier days a khutba lacking the Ḥamdala was called baṭrā. Bibliography: References as above and also Baydāwī, ed. Fleischer, i, 5, 26 ff.; Ṭabārī, Tafsīr, i, 45 ff.; Rāzī, Maḥfīẓ, i, Cairo 1307, 115 ff. There exist numerous minor works, still in manuscript, on the "basmala" and the Ḥamdala but these works of W. Montgomery Watt, "Hamdan the Arab and His Movement," in the Tafsīr and the treatises. (D. B. MACDONALD)

ḤAMDĀN, a large Arab tribe of the Yemen group, the full genealogy being Hamdān (Awzala) b. Mālik b. Zayd b. Rabīʿa b. Awsala b. al-Khiyār b. Mālik b. Zayd b. Kahlān. Their territory lay to the north of Ṣanʿāʿ (q.v.), stretching eastwards to Maʿrib and Nadjran (q.v.). Ibn al-Kalbi (q.v.) mentions a large body of them in Kufa (cf. J. Wellhausen, Reste, 20, 22). Ibn al-Kalbi (Aṣnām, 10) suggests that they may have accepted Judaism at the time of Dhu Nuwās; many of their allies of Bal-Harith were Christian. There is little mention of them in poetry and in the accounts of early battles. When ʿAbraha (q.v.), ruler of the Yemen, marched against Mecca, Ḥamdān joined in the attack made on him by a Yamani prince, Dhu Nafr, allegedly to defend the house of God. On the “second day of Kulab” they, along with Kinda (q.v.), fought against the ruler, who shortly afterwards turned against them. The battle was fought at al-Kifā in the day of the Ḥamdān. To seek alliance with Muḥammad a deputation from Ḥamdān came to Medina in 9/631, led by the poet Mālik b. Namat and Abū Thawr Dhu l-Mīghāṛ, probably a prince (Ibn Ḥighām, 963; cf. Ibn Saʿd, ii, 73 f.); but this deputation seems to have represented only a part of the tribe. Others are said to have submitted to ʿAlī on his expedition to the Yemen in 10/632-3 (al-Masʿūdī, Ṭambīk, 274). Muḥammad set ʿʾĀmir b. Shahr (of Baklī) over Ḥamdān (Ṭabārī, i, 1851-3). At the riddā some of the tribe were inclined to revolt, but most stood firm behind the leaders (cf. W. Hoenerbach in Abh. der Akad. der Wissenschaften und der Literatur (Geistes- und sozialwissenschaftliche Kl.), Mainz 1951, 274-7). According to al-Kalkashandā (Nihdyat al-arab, Cairo 1959, 438 f.) Ḥamdān became dispersed as they moved into the conquered lands, apart from those who remained in the Yemen. For a time, however, there was a strong body of them in Kūfā (cf. J. Wellhausen, Arab Kingdom, index); including ʿʾĀmir b. Shahr (Uṣūd, s.v.) and the poet Aṣḥāb b. Ḥamdān (d. 83/702 (q.v.), they were nearly all fervent supporters of ʿAllī and his sons (cf. al-Masʿūdī, Muṣrāf, index). Twelve thousand of them are said to have been in ʿAllī’s army at Sīfīn, and their leader Saʿd b. Kāys took a prominent part in the battle. For a time they were reckoned, along with Ḥamdān and Ḥimyarī, a “seventh” of the Arabs (Ṭabārī, i, 2495). The geographer al-Ḥamdānī (d. 334/945) (q.v.) belonged to the group remaining in the Yemen. ḤAMDĀN KARMAJ b. ṬABRĪZĪ, the leader of the Karmaṭi movement in the ʿabbāsid period in al-Ḥimyar and al-Ḥimyarī, was one of the leaders of the Ismaʿīlī movement in which he was converted to the early Ismaʿīlī movement by the dāʿī (q.v.) al-Ḥusayn al-Abwāq. The date 264/877-8 given in this connexion by a much later report may be approximately correct. When al-Ḥusayn died or left the district, Ḥamdān became his successor. He organized the movement throughout the ʿabbāsid and appointed the dāʿīs for the major districts. His main assistant was his brother-in-law ʿAbdān (q.v.), who soon became the leading spirit and conducted the propaganda quite independently. The movement spread rapidly among the peasants, and many of the Bedouin clans and tribes in touch with the ʿabbāsid also became adherents. Various taxes were collected from the converts, culminating in the fifth on all income to be saved for the expected Mahdi. Eventually a kind of communal ownership of goods was introduced and care was taken of the needy in the community. In 778/1370 a fortified dār al-hijrā was built as a place of refuge and congregation. As the Baghdādī government had not since the time of the Zanjī revolt re-established effective control over the region, the movement escaped its notice until the year 786/1381, when some people from al-Kūfā accused it of creating a new religion and permitting warfare against the Muslims. No action was taken. As this, however, was the first Ismaʿīlī movement of which the government took notice, the name ‘Karmaṭi” was later applied to other groups not organized by Ḥamdān Karmat. The doctrine propagated by Ḥamdān and ʿAbdān probably closely resembled that ascribed to the Karmaṭians by al-Nawbaqī. Its central theme was that the appearance of the Mahdi Muḥammad b. Ismaʿīl, the seventh Imam and seventh Apostle of God, was at hand, ending the era of Muḥammad, the sixth Apostle. He would rule the world, establish justice, abolish the law of Islam, and proclaim the hidden truth of the former religions. This truth could already be attained at least partially by the converts on initiation. The doctrine had a distinctly antimonic character. Reports of the Sunnī sources that the followers of Ḥamdān dispensed with the Islamic ritual and law are trustworthy, but not so their allegations that this led to licentiousness and libertinism among them.

This was essentially also the teaching of the leaders of the Ismaʿīlī movement with whom Ḥamdān kept up correspondence. When the later Fātimid Caliph al-Mahdī succeeded to the leadership in Sala-
miyya, he introduced certain doctrinal changes which aroused the apprehension of Hamdān. Abūdān was sent to find out the reason for the change. He learnt that the new leader denied any connexion of Muḥammad b. Ismā‘īl with the movement and claimed the Imāmate for himself. Thereupon Hamdān and Abūdān broke off the propaganda, causing a momentous split in the Īsmā‘īlī movement. This happened about the year 280/899. Hamdān soon afterwards went to Kālahādha and from there disappeared. A report of Ibn Mīlīk that he was killed in Baghūdīb, seems reliable.

AL-HAMDĀNĪ, ABU MUHAMMAD AL-HASAN B. AHMAD B. YA‘QUB B. YUSUF B. DAWŪD B. SULAYMĀN BIL ‘DUMAYNA AL-BAKIL AL-ARHĀBI, often known as Abū ‘Alī Djaämharat al-ansāb, was born in Sān‘a’. In the latter half of the 3rd/9th century, perhaps in the year 280/899 according to a cryptic notice in the recently discovered 10th makhāla of his Sarā‘īr al-khiama (Iklīl, i, ed. al-Hiwālī, Preface p. 62). Having received an excellent education in all branches of learning, he made extensive travels and acquired a detailed knowledge of Arabia, as is shown by his classic description of this peninsula (Ṣifat Djazīrat al-‘arab), which is perhaps not a supplement to the connection unknown work Kūdh al-Masālik wa-l-mamālik (cf. al-Kīfī, Inbāh al-ruwād, i, 283). He visited Trāk, lived for a long time, in Mecca and was in contact with many eminent scholars, such as the older Anbarlī, Zāhidī and Ibn Khālawayh.

The main authority of al-Hamdānī for South-Arabian archaeology and genealogy was Abū Naṣr Mūhammad b. AbūlAllāb b. Sa‘dīd, called al-Yaharī (after his ancestor Dhi Yāhar) and al-Hanbāsī (from his castle in Bayt Ḥanbās near Sān‘a’). Another rich material supplied by this authority, by the records (ṣiqiql) of the tribe of Ḥawlān in Sa‘dā, and by other oral and literary sources was collected in his magnum opus, the encyclopaedia al-Iklīl, “the Crown”. For our knowledge of the South-Arabian tribes the Iklīl plays the same fundamental rôle that the Dhu‘aybah of Ibn al-Kāfī does for the Northern ones. Only four of its ten parts are so far known to exist in manuscript: I, II, VIII, X. The first two books—treating the genealogy of Mālik b. Ḥimyar, vis. al-Hamaysa‘ b. Ḥimyar—are discovered in 1932 in the Berlin Ms. Or. oct. 968, of which a facsimile edition was published in 1943. This ms. gives the text in the recension of Mūhammad, the son of the famous Nashwān b. Sādīd al-Ḥimyarī, made about 600/1200. According to the introduction the redactor made only some minor omissions from the original text. There are, however, several later additions incorporated, among them some marginal notes of later scholars. A second manuscript of book V exists in Cairo. Book VIII, containing descriptions of the old castles of the Yemen, with much poetry inserted, enjoyed great popularity; it is preserved in several MSS. of mediocre quality, so that all editions and translations are unreliable in details. Extracts from this book in a better recension were found also in the Ambrosiana (see Orientalia, N.S., xii, 125-45). Book X finally gives the genealogies of the twin Hamdānī tribes, Ḥāǧīd and Bakīl.

Of the remaining, lost, parts of the Iklīl, book III is said to have treated the merits (faddl) of Kāṭān, books IV-VI the old history of South Arabia (al-sīrat al-badīma, al-wusūţ, al-āławī), until the beginning of Islam, book VII a criticism of false traditions, and book IX finally the Ḥimyaritic inscriptions (masā‘id). Quotations from this book in the commentary on NAShir’s Šimā‘a diṣha show that al-Hamdanī had some knowledge of the musnad writing, but no real understanding of the inscriptions.

Apart from genealogical, historical and topographical material, the Iklīl provides us also with a rich anthology of old Yemeni poetry. At the end of book I there are given three complete kuṣūdā of ‘Abd al-Ḥākīlī b. Abu l-Tālīl al-Shihābi, who is otherwise little known (cf. Şīfa, 38). The work also preserves numerous samples of al-Hamdanī’s own poetry, which was collected in a Diwān of six volumes and commented upon by Ibn Khālawayh (d. 370/980), but is now lost. Al-Hamdanī’s famous kuṣūdā al-Dimigka, is preserved at the end of the Berlin MS. of the Iklīl, II. With this fervent defence of the Banū Kāṭāan against the Banū ‘Adānān, al-Hamdanī engaged himself in the old fatal controversy between northern and southern tribes that had been started about 200 years earlier by Kumayt b. Zayd al-Asadī with his Mudkabha. His engagement in the tribal mujaḥīh, may have been fatal for al-Hamdanī, who was accused by his enemies of blasphemy against the Prophet, as belonging to the Banū Ḥāshim (cf. Iklīl, i, ed. al-Hiwālī, Preface p. 49, the passage from the Matā‘ al-budur of Ibn Abu l-Ridgāl).

Al-Hamdanī spent the greater part of his life in Raydā, where he enjoyed the favour of Abu Dja‘far al-Ḍabbbāk, called Sayyid Hamdān, and wrote his Iklīl in the castle of Talhum. Having moved from there to Sādā, he was involved in political controversies and put in prison by As‘ad b. Abū ‘Uṭir al-Ḥiwālī (d. 332/943) on behalf of the Rasi İman İbrahim al-Șafīr b. Yabyāl al-Hadi in Sādā. In his Kaṣidat al-djir, printed by al-Ḥiwālī in his preface to Iklīl i (pp. 49-56), al-Hamdanī blames As‘adī, while Yabyāl b. Abū Allāh al-Ukaylī, who released him from prison, is praised in the context of Iklīl i. A second imprisonment brought about a strong reaction among the Arabs and led to the battle of Katafā, and eventually to the death of al-Șafīr and his brother Ḥasan. Having been released from prison with the consent of Ibn Ziyād, the ruler of Ḥabīd, al-Hamdanī praised the leaders of the revolt in poems (see Iklīl, i, ed. al-Ḥiwālī, pp. 331 ff.). Hence there are strong reasons to disbelieve the current statement, made by Sā’d al-ṣuṣṭī in his Tābakāt (ed. Cheikho 59) on the authority of the Umeyyad Caliph al-Ḥakam al-Mustanṣir (350-366), that al-Hamdanī died in prison in Sān‘a’ in the year 334/945 (ibid., Preface 48, 59 s.).
AL-HAMDÄN — HAMDANIDS

Only one other book of al-Hamdani, K. al-Djawharatayn al-catiyayn, on the two precious metals gold and silver, has been preserved and is being edited by Toll in Upsala. Of the astrological work Sarkh al-bikma a fragment has recently come to light (v. supra). Of the remaining works attributed to al-Hamdani nothing has been recovered so far; some of these are cited in the Iklil. Their titles are: (1) al-Siyar wa£al-akhbar (= Iklil iii-v), (2) Ayam al-arab, (3) al-Ya'sub (on shooting and hunting), (4) al-Kawal (on medicine), (5) al-Zadi (astronomical tables), (6) al-Talib wa£al-mudairah (mentioned only in the Iklil).

HAMDANIDS, three families of the Banū Hamdān whose tribal rule over Sanā’ passed to his son, Ṭall b. Ḥātim, during whose reign the Mahdī (q.v.) ruler of Zabīd in the Tihamah began his campaigns for territorial conquest and the spread of the apostate religious doctrines instituted by his father, Ṭall b. Mahdī (d. 554/1160). In 554/1160-61 the Mahdī attacked and defeated Hamdāl-Dawla, but was unable to seize Sanā’ from the Hamdānids.

On the death of Hamdāl-Dawla in 566/1171 the Mahdī sought and received the assistance of Ṭall b. Ḥātim, and was declared in the Tihama. The Zurayd, under Ţall b. Ḥātim and his brother, Ṭall b. Shāh, attacked and defeated the Mahdī in 567/1171-72 and was succeeded by his son, Ṭall b. Ḥātim, during whose reign the Mahdī (q.v.) ruler of Zabīd in the Tihamah began his campaigns for territorial conquest and the spread of the apostate religious doctrines instituted by his father, Ṭall b. Mahdī (d. 554/1160). In 564/1170 the Mahdī attacked the Zurayd (q.v.) ruler of Adda by laying siege to the city. The Zurayids, unable to withstand the Mahdī, in 565/1170-72, and received the assistance of Ṭall b. Ḥātim, and the Mahdī's own troops, the two other Hamdānī tribes of the highlands. In a series of encounters during the first part of 569/1173 the Mahdī was driven back to the Tihama by the allies.

HAMDANIDS, three families of the Banu Hamdan whose tribal rule over San'a passed to his son, 'Abd Allah, during whose reign the Mahdiid (q.v.) ruler of Zabid in the Tihama began his campaigns for territorial conquest and the spread of the apostate religious doctrines instituted by his father, 'Abd Allah b. Mahdi (d. 554/1160). In 564/1170-72 the Mahdiid attacked the Zurayid (q.v.) ruler of 'Adan by laying siege to the city. The Zurayids, unable to withstand the Mahdiids alone, requested and received the assistance of 'Abd Allah b. Mahdiid and that of two other Hamdani tribes of the highlands. In a series of encounters during the first part of 569/1173 the Mahdiid was driven back to the Tihama by the allies.

HAMDANIDS, three families of the Banu Hamdan whose tribal rule over San'a passed to his son, 'Abd Allah, during whose reign the Mahdiid (q.v.) ruler of Zabid in the Tihama began his campaigns for territorial conquest and the spread of the apostate religious doctrines instituted by his father, 'Abd Allah b. of Šan`a` by the Ayyúbids in 570/1174-75 the Fátimid rule of the Ḥamdáníds of nearly a century came to an end. (C. L. Geddes)

**HÁMDÁNIDS, Taghlíbí Arab family which, in the 4th/10th century, provided two minor dynasties, which arose, owing to the decadence of the 'Abbásid caliphate, in Mesopotamia and Díyarbákır (Mosul) and in Syria (Aleppo), and whose most distinguished representative was the *amir* of Aleppo, Sayf al-Dawla.**

The first members of the family on whom historical information is available are Ḥámad b. Ḥámdún b. al-Ha�hrí, who appears in 254/868 with other Taghlíbí in an army which was fighting against the Kháridjís of Díyarbákır, but is found in 266/879-80 onwards, and particularly in 272/885-6, among the Kháridjís, whence his nickname of al-Shári. In 279/892-3, at the time when al-Mu`ta`díd assumed power and decided to re-establish the authority of the caliph in Díyarbákır, Ḥámad b. Ḥámdún was in possession of certain places there, including Maridín, and, on the left bank of the Tigrís, Ḥárusmu`aht (on this place see M. Canard, *op. cit.*, 112 and passim). In 282/895, the caliph seized Máridín, which Ḥámad b. Ḥámdún had left; then his troops took Ḥárusmu`aht, which Ḥámad b. Ḥusayn, who had been left to guard the fortress while his father fled, yielded to the caliph's forces, himself going over to the caliph's side. After a vigorous pursuit along both banks of the Tigrís, Ḥámad b. Ḥámdún was taken prisoner, but was freed in 312/925-6. (C. L. Geddes)

The first members of the family on whom historical information is available is Ḥámad b. Ḥámdún b. al-Ha´hrí, who appears in 254/868 with other Taghlíbí in an army which was fighting against the Kháridjís of Díyarbákır, but is found in 266/879-80 onwards, and particularly in 272/885-6, among the Kháridjís, whence his nickname of al-Shári. In 279/892-3, at the time when al-Mu`ta`díd assumed power and decided to re-establish the authority of the caliph in Díyarbákır, Ḥámad b. Ḥámdún was in possession of certain places there, including Maridín, and, on the left bank of the Tigrís, Ḥárusmu`aht (on this place see M. Canard, *op. cit.*, 112 and passim). In 282/895, the caliph seized Máridín, which Ḥámad b. Ḥámdún had left; then his troops took Ḥárusmu`aht, which Ḥámad b. Ḥusayn, who had been left to guard the fortress while his father fled, yielded to the caliph's forces, himself going over to the caliph's side. After a vigorous pursuit along both banks of the Tigrís, Ḥámad b. Ḥámdún was taken prisoner, but was freed in 312/925-6. (C. L. Geddes)

However, Harún b. Gharb, the son of the maternal uncle of the caliph al-Mu`takfi, was ambitious to take the place of the commander-in-chief, the eunuch Mu`hás, who was friendly to the Ḥamándínis. Having obtained the governorship of the Ḥdíjasjí, he dismissed the chief of police, Názús, who played a very
important part in the conspiracy and it was he who installed al-Kahir in the palace and procured al-Mukhtar's abdication; at the same time, keeping his own interests in view, he was compelled to bestow on himself the governorship of a wide area. But there arose a counter-revolt; the new caliph was besieged in his palace and Abu 'l-Haydja died heroically defending al-Kahir to the end. Al-Mukhtar, returned to power, evinced the most profound grief at Abu 'l-Haydja's death.

Abu 'l-Haydja was at this period the most notable member of the Hamdanid family. His great qualities of valour and generosity and his frank and independent spirit commanded respect and were universally esteemed. But he possessed also the spirit of intrigue which was characteristic of the great feudal lords of the time and he was finally the cause of his own undoing. Abû Firas gives him an important place in his biography and praises his powerful sword-strokes. Like Husayn, and probably the whole Kaysi tendencies, which were to re-appear in his son Sayf al-Dawla: Ibn Hawkal mentions that he was responsible for the restoration of the tomb of 'Ali at Kufa (on Abu 'l-Haydja, see M. Canard, op. cit., 347-76, and on his brothers, ibid., 378-81).

Abu 'l-Haydja's two sons were to be the most famous members of the Hamdanid family and, inheriting their father's prestige, were to follow his political example and to make renowned the two emirates, Mosul and Aleppo, which they governed. But Abu 'l-Haydja may be considered as the founder of the emirate of Mosul and of the Hamdanid dynasty. The Hamdanid emirate of Mosul. Al-Hasan b. 'Abd Allah b. Hamdan, the son of Abu 'l-Haydja and the future Nâṣir al-Dawla, had at first some difficulty in making himself amir of Mosul. On his father’s death he inherited only a part of his domains, on the left bank of the Tigris, his claim to Mosul being denied. He regained it in 318/930, however, but was deprived of it again as a result of the intrigues of his uncles, Nâṣr and Sa’id, who left him only the western part of the Diyār Rabi'a. In 322/934 he again became master of Mosul and of the Diyār Rabi'a, but was ousted once again by his uncle Sa’id, who was intriguing against him from Baghdad. He therefore rid himself of him by a villainous murder, then took advantage of his death, and died in the vizier Ibn Muqta. Hassan, who had fled to Armenia, prepared from there the re-conquest of Mosul. He defeated the lieutenant of the caliph and of the rival Taghlibi clan, the Banu Ḥabbab, who had sided with the caliph against him. At the beginning of 324/end of 935, the caliph al-Râdî finally appointed him governor of Mosul and of the three provinces of the Dijâzirâ (Diyār Rabi'a, Diyâr Muḍar and Diyâr Bâke). He nevertheless had to fight, with the help of his younger brother 'All, the future Sayf al-Dawla, in order to wrest Diyâr Bâke from one of his former auxiliaries, a Daylamî, and Diyâr Muḍar from some Kaysî tribes and an officer of the caliph. In 936 he was master of the whole of the Dijâzirâ and henceforward was to be able to give free rein to his ambitions.

The crisis in the caliphate which had forced the caliph al-Râdî to hand over his powers to an amir al-umârâd gave rise to rivalry among all the candidates for this position. Hassan, with the power which the possession of a rich province gave him, desired the possession of a rich province gave him, desired the possession of the caliphate. The crisis in the caliphate which had forced the caliph al-Râdî to hand over his powers to an amir al-umârâd gave rise to rivalry among all the candidates for this position. Hassan, with the power which the possession of a rich province gave him, desired the possession of the caliphate.

The crisis in the caliphate which had forced the caliph al-Râdî to hand over his powers to an amir al-umârâd gave rise to rivalry among all the candidates for this position. Hassan, with the power which the possession of a rich province gave him, desired the possession of the caliphate. But Abu '1-Haydja's death. At one moment Hasan gave his support to another amir al-umârâd, Ibn Râfik, and to the caliph al-Muttaq, who were being threatened by the ambitious Aḥmad al-Barîdî of Başra, but then had him arrested and installed Râlée empire for himself and his brother, after having brought back the caliph to his capital (4 June 942). He had earlier received the title of Nâṣir al-Dawla (Defender of the dynasty), while his brother 'All, who, with his cousin Ḥusayn b. Sa’îd b. Hamdan, had helped him, received that of Sayf al-Dawla (Sword of the dynasty). Nâṣir al-Dawla governed the attenuated Abbasid empire for about a year, but had to give up the position to one of his officers who had led a revolt against him, the Türk Tûzûn, and returned to Mosul. The caliph al-Muttaq quarrelled with Tûzûn and put himself under the protection of the Hamdanid, but the latter, after being defeated by Tûzûn, abandoned the caliph who, after trying to gain the protection of the Ikshid of Egypt, who was master of Syria, returned to Bagdad. Nâṣir al-Dawla then concluded in 943 a pact with Tûzûn which assured him the gouvernorship of the Dijâzirâ. Next he unsuccessfully opposed the Buwayhid Mu’izz al-Dawla when in 334/January 946 the latter took possession of the capital, and concluded an agreement with him in 335/946. He was confirmed in his possessions and the Buwayhid even supported him when his troops revolted. But twice there was conflict between them, in 337/948-9 and in 347/958-9, because of the Hamdanid's refusal to fulfil his financial obligations to the central power as represented by the Buwayhid. In 347 Nâṣir al-Dawla even had to take refuge with his brother Sayf al-Dawla, the master of Aleppo (from 336/948, see below), until the signing of a new treaty which Mu’izz al-Dawla concluded with Sayf al-Dawla, regarding Nâṣir al-Dawla as the subordinate of his brother. Nâṣir al-Dawla was once again driven out of Mosul by Mu’izz al-Dawla, and for the same reasons, in 353/964, but he was able to make a victorious return there with his sons. However, Mu’izz al-Dawla would have dealings only with Abû Taghib, the eldest son of Nâṣir al-Dawla, who was already beginning to follow a policy of his own.

This year 353 marks the decline of the power of Nâṣir al-Dawla, who, now old and in conflict with his sons, was deposed by them and exiled in 356/967 to Adharbaydjan. His penetration into Armenia in 325/936 is the first conflict with his brother Hamdan, who alone had the greater part of the Diyâr Muḍar. At the beginning of his reign, Nâṣir al-Dawla had made two unsuccessful attempts, in 324/935-6 and in 333/944, to extend his domination to Adharbaydjan. His penetration into Armenia in 323/935 when he was forced to leave Mosul (see above) was also only temporary, and it is doubtful whether he was able to make his authority recognized there as Sayf al-Dawla did later. In the Byzantine war Nâṣir al-Dawla played only a part of little importance (on the reign of Nâṣir al-Dawla see M. Canard, op. cit., 377-407, 409-54, 507-39, and art. Nâṣir al-Dawla)

He was succeeded by his son Faḍl Allah Abû Taghib al-Ghaḍanfar. Abû Taghib came into conflict first with his brother Hamdan, who alone had opposed the removal of Nâṣir al-Dawla and who had a certain amount of power at his command, for he held the governorship of Nisibis in the Diyâr Rabi'a, of Mârdîn and of Rañba in the Diyâr Muḍar, and he
HAMDĀNĪDS

had in addition seized Rakka and Rafika after the death of Sayf al-Dawla of Aleppo. In order to fight against Hamdān, Abu 'l-Mutac Dhu 'l-Karnayn made an agreement with Bakhtiyār, who had succeeded Mu'izz al-Dawla at Baghdād, and Hamdān was forced to abandon his possessions and to flee to Baghdād. Bakhtiyār succeeded in procuring his return to Rabba in 359/970; but the war between the two brothers recommenced, resulting in a battle, in which Hamdān mortally wounded another of his brothers, and in further quarrels in the Hamdānī family. The members of which abandoned Abu Ṭāhillī. Hamdān was defeated, however, and again obliged to flee to Baghdād where he was joined at the end of 360/971 by his brother Abu Ṣaḥir Ibrāhīm.

Abū Ṭāhillī did not on the other hand enter into conflict with his cousin at Aleppo, Abu 'l-Ma'sāli Shārif, the successor of Sayf al-Dawla, who, having difficulties in Syria, tacitly accepted the nominal suzerainty of the emirate of Mosul over that of Aleppo which had been given by Abu Ṭāhillī to the caliph al-Mu'izzī, thus continuing the state of affairs which had existed during the time of Nāṣir al-Dawla. Nor did he oppose Abū Ṭāhillī's seizure of the Diyar Bakr and the Diyar Muḍar.

But Abū Ṭāhillī's chief opponent was the Buwayhid Bakhtiyār, master of the caliphate and the representative of the central power to which the Hamdānī had to pay tribute. Hostility between the two was inevitable, especially as the Hamdānī's ambition was to play in Baghdād the rôle which had formerly been played by his father Nāṣir al-Dawla, and also as two of his brothers were there, one of whom especially, Hamdān, was urging Bakhtiyār to drive Abū Ṭāhillī out of Mosul. At first Abū Ṭāhillī and Bakhtiyār followed a policy of alliance, which showed itself in their common attitude towards the Karmāṭīs and the Fāṭīmīds, but in 368/973, prompted by Hamdān, Bakhtiyār undertook the conquest of Mosul and marched on the town. A shrewd move by Abū Ṭāhillī in the direction of Baghdād led Bakhtiyār to negotiate. The terms of the agreement, which contained one clause requiring the Hamdānī to keep Baghdad supplied with wheat, were observed by neither side and hostilities recommenced, ending in a new agreement in 974. Relations between the two were amicably resumed, and Abū Ṭāhillī persuaded Bakhtiyār to grant the laḳāb of Uddat al-Dawla, gave the Buwayhid his support against the rebel Turkish leaders and advanced even as far as Baghdād. But it was due to the intervention of the Buwayhid of Shīrāz, ʿAḍud al-Dawla (the son of Rukn al-Dawla of Rayy), that Bakhtiyār was restored to his throne at Baghdād. In 364/973 Abū Ṭāhillī obtained a new treaty, which freed him from the payment of tribute. When ʿAḍud al-Dawla attempted, in 365/977, to gain for himself Bakhtiyār's position at Baghdād and to send the latter to seek a new fortune in Syria, Abū Ṭāhillī gave his support to Bakhtiyār, who was trying to recapture Baghdād, on condition that his brother Hamdān, who was with Bakhtiyār, was handed over to him; he then had Hamdān put to death. But the troops of Bakhtiyār and Abū Ṭāhillī were defeated in the region of Baghdad by ʿAḍud al-Dawla in 365/978. The Buwayhid seized Mosul and forced Abū Ṭāhillī to flee. He reached Nīsibis, then Ma‘ṣūfārīkīn, then Arzan and Armenia, then Ḥisn Ziyād in the Byzantine territory of Anzītene held by the Byzantine rebel Skleros, hoping to obtain his help by forming an alliance with him. But his hopes were disappointed; he returned towards Amid without encountering any opposition from the Buwayhid troops who were engaged in besieging Ma‘ṣūfārīkīn. After the capture of this town in 368/978, Abū Ṭāhillī no longer felt secure and turned towards Rabba. From there he tried in vain to reach an agreement with ʿAḍud al-Dawla, who was now master of the greater part of the Dijārā, and decided to continue into Syria into Fāṭīmid territory, while the Buwayhid army arrived to occupy the Diyar Muḍar. Avoiding passing through the territory of his cousin at Aleppo, Saʿd al-Dawla, who had acknowledged the suzerainty of ʿAḍud al-Dawla and had been invited by him to enter Damascus, wished to enter Damascus and to obtain from the Fāṭīmid caliph the governorship of this town, which at that time was in the hands of a rebel, al-Kassāmī. But the latter prevented him from entering the town and Abū Ṭāhillī, after some skirmishes, headed southwards and reached Kafir ʿAṣīr on the Lake of Tiberias. He began negotiations with the Fāṭīmid general Faḍl and promised to help him to reconquer Damascus. But Faḍl had undertaken to support Mufarridī b. Daḥfal b. al-Ḍarrāh, the master of Ramla, who was disturbed by the presence and the ambitions of Abū Ṭāhillī. Faḍl, violating his agreements, on the contrary promised Ramla to Abū Ṭāhillī. Finally Abū Ṭāhillī joined forces with the enemies of Mufarridī, the Banū ʿUkayl, and with them embarked on an action against him. Mufarridī then appealed to Faḍl. In the ensuing battle Abū Ṭāhillī was taken prisoner by Mufarridī and put to death (365/979).

Abū Ṭāhillī had had to endure violent Byzantine attacks in 361-2/972, but in the following year his lieutenant took prisoner the Domesticus Melias, who died in captivity. In 974, the Emperor in revenge ravaged Mesopotamia. It appears that about this time Abū Ṭāhillī had played tribute to the Empire. At the time of the revolt of Skleros, after the death of John Tzimisces in 1976, the Byzantine rebel relied on the help of Abū Ṭāhillī, with whom he concluded a pact, and we have seen that in 368/978 he spent some time at Ḥisn Ziyād, the headquarters of Skleros (on the reign of Abū Ṭāhillī see M. Canard, op. cit., 541-77, 838 ff.).

The Hamdānī dynasty of Mosul ended tragically. It had indeed led a rather precarious existence from the time of the arrival at Baghdād of Mu‘izz al-Dawla. Abū Ṭāhillī's sister, Djamila, who had fled with her brother, also met a tragic end. One tradition had it that she took her life after being handed over to ʿAḍud al-Dawla. The other members of the Hamdānī family at Mosul, notably Abū Ṭāhillī's two brothers Abū ʿAbd Allah Ḥusayn and Abū Tahir Ibrāhīm, transferred their allegiance to the Buwayhid. After the death of ʿAḍud al-Dawla, a Kurdish amīr, Bādh, had taken possession of the Diyar Bakr. In order to halt Bādh's attempts to gain the remainder of the Dijārā, the Buwayhid ʿAbd al-Ḥusayn al-Dawla, who had come to the throne in 379/989, authorized the two brothers to return to Mosul. They attempted there to regain power and fought against Bādh with the help of the Banū ʿUkayl. Bādh was killed in a battle against Ḥusayn in the region of Badh. Bādh's successor, his nephew Abū ʿAlī b. Marwān, carried on the struggle against the two brothers and took Ḥusayn prisoner, but released him on the intervention of the Fāṭīmid caliph al-ʿAzīz, who received him in Syria and made him governor of Tyr in 382/997. Another of Abū Ṭāhillī's brothers, Abu l-Muṣṭaṣfī Dhu l-Karnayn, also entered the service of the Fāṭīmid, and became governor of Damascus.

The Hamdānīd emirate of Aleppo. The formation of the Hamdānīd emirate of Aleppo was the work of 'Ali b. Abū Tāhir ībrahīm and his two sons, Abū Taghlib b. Hamdān and Sayf al-Dawla, their half-brother, who was under the protection of the Hamdānīd, and his half-brother, Sayf al-Dawla b. Hamdān, who was under the protection of the Hamdānīd. Sayf al-Dawla had in practice it was territorially and politically more extensive than its northern provinces, with the help of troops and money provided by his brother. He entered Aleppo in Rabi' I 330/944, by arrangement with the Khalīlī people of the region and without any fighting. The Ikhshīd of Manbahj, and formed for himself a court made famous by the poets who were attached to it. He reigned in Aleppo from 336/947 until 356/967. The first period of his reign was marked by successes both within the realm and outside it, but in the later period, from 350/962 onwards, he suffered serious reverses— the temporary occupation of his capital by the Byzantines, the loss of Cilicia, internal disturbances and rebellions, and finally his own illness (hemiplegia). He died at Aleppo in Safar 356/February 967, aged 51. Nevertheless the brilliance which he conferred on the emirate of Aleppo by his military victories and by his cultural influence, and through the poets and the prose-writers of what has been called the "circle of Sayf al-Dawla", has made him one of the most famous of the Hamdānīd rulers.

Encyclopedia of Islam III
recognizing the suzerainty of the Buwayhid ʿAṣṣūd al-Dawla in 368/979 (which gained for him from the caliph the ḫāṣab of Saʿd al-Dawla), he succeeded in recovering the Diyar Mudar, with the exception of Rabba and Rakka, from Abī Tāghlib, now a fugitive. He had appointed Bakdjiūr governor of Ḥims, but he lost no time in entering into conflict with him. Bakdjiūr relied for help on the Fāṭimid, who had promised him the governorship of Damascus and whose plan was to take advantage of the enmity between Bakdjiūr and Saʿd al-Dawla to seize the emirate of Aleppo for himself. In order to fight against Bakdjiūr, who relied on the help of the Byzantines, who, in 371/981-2, had just sent an army to Aleppo to remind the amīr of his obligations under the treaty of 359, which from then on he was obliged to fulfil more or less scrupulously. It was a Byzantine army which, in 373/983, forced Bakdjiūr, who had come to lay siege to Aleppo, to raise the siege, and which also returned ʿHims to Saʿd al-Dawla. The conflict between Bakdjiūr and Saʿd al-Dawla, which began in 370/980, was thus ended. The defeat of Bakdjiūr, driven out of ʿHims, was governor of Damascus for the Fāṭimid caliph ʿAbd al-Azīz, particularly as Saʿd al-Dawla, no longer able to rely on support from the Buwayhids whose power was then in decline, made overtures to the Fāṭimid caliph and recognized his sovereignty in 376/986. But hostilities recommenced when Bakdjiūr, engaged in conflict with the Fāṭimid vizier Ibn Killīs, was obliged to abandon Damascus and install himself at Rakka, whence he marched against Aleppo. He received little support from the Fāṭimid, whereas Saʿd al-Dawla received Byzantine reinforcements, and he was defeated at Nāʿūra to the east of Aleppo in 381/992, captured and executed. But Saʿd al-Dawla quarrelled with the Fāṭimid caliph over the arrest of Bakdjiūr’s children, which was done contrary to a promise that he had given, and if he had not died in Shawwāl 381/December 991, like his father of hlemegia, he would certainly have attacked the Fāṭimid possessions in Syria, as he had haughtily threatened the Fāṭimid ambassador that he would do. Saʿd al-Dawla’s policy had been to manoeuvre among Byzantium, the Buwayhid and the Fāṭimid. He was not absolutely loyal either to the Fāṭimid or to the Emperor, for in 375/985 the Emperor had to restore to him the town of Dālāt, because he was not fulfilling his obligations. Saʿd al-Dawla avenged himself for this intervention, which had led to the capture of Killīs and the bombardment of Apamea and of Kafartāb, by sending Karhūyāḥ against the monastery of Dayr Samān in Ḍiyar Bakr. When he completely dominated Saʿd al-Dawla, he turned against the Fāṭimid governor. The defeated Abu ‘l-Haydja ʿAli and Abu ʿl-Maʿālik Sharīf, were exiled to Cairo; a son of Saʿd al-Dawla, Abu ʿl-Haydja, fled, disguised as a woman, to the court of the emperor Basil. He died in 399/1008. His son Mansūr succeeded him and received investiture from the Fāṭimid caliph with the title of Murtaḍa al-Dawla (the Approved of the dynasty). His reign was marked by an attempt to restore the Ḥamdānids in the person of Abu ʿl-Haydja, the son of Saʿd al-Dawla. At the request of a large faction at Aleppo, his brother-in-law, the Marwānid Mamāhid al-Dawla of the Diyar Bakr, obtained the Emperor’s permission for Abu ʿl-Haydja to leave Constantinople. He reached Meyyāʾ afford, whence he sent a delegation to look at the possibility of an approach to the Emperor. But he was not given the Emperor’s support. Mansūr b. Luʾluʾ enticed over to his side the Killābīs who had joined Abu ʿl-Haydja and obtained in addition Egyptian help, for he was scarcely more than a Fāṭimid governor. The defeated Abu ʿl-Haydja fled towards Malatya and from there returned to Constantinople. The Emperor wished to send him back into Muslim territory but Mansūr intervened to persuade the Emperor to keep him with him. It is probable that he was converted to Christianity and served in the Byzantine army, for there exists his seal with on one side his name in Arabic and on the other the representation of a person who seems to wear his hair in military style and to wear a belt with a legend in Greek: Ῥαγιός Θεώδορος (Saint Theodore Stratiotes?). (See Hali Edhem, Šeâux du Maître de Constantinople, 133, 42, 40, 308). By a curious trick of fate, Mansūr b. Luʾluʾ, after he had been dehroned by Sāliḥ b. Mirdās in 406/1015-6, also took refuge in Byzantine territory and received as a fief the castle of Ṣilīḥ al-Laylūn, near to the frontier; he also made an unsuccessful attempt to return to Aleppo and served in the Byzantine army, for he appears on the side of Romanus Argyrus HAMDĀNIDS second attempt by the same Mangūtekīn in 384/994 was almost successful, for Bourztes, to whom Saʿd al-Dawla and his minister Luʾluʾ, the former chamberlain of Saʿd al-Dawla, appealed for help, was defeated at the Ford of the Orontes, and Aleppo was besieged for about eleven months. But on the one hand the persistence of Luʾluʾ and on the other the arrival of the emperor Basil II in person, sent for from Bulgaria by a Ḥamdānid ambassador, in the spring of 995, forced Mangūtekīn to retreat. The Ḥamdānid amīr and Luʾluʾ humbly prostrated themselves before the emperor in gratitude for this. Later, the Byzantines remained at the siege of Aleppo, and further over the emirate of Aleppo. In 388/998 they even defeated the Byzantines outside Apamea, which remained in Egyptian hands. In 389/999 a new Byzantine campaign, which advanced as far as Beirut, strengthened the defence of Aleppo against the Egyptians by the establishment of a Byzantine garrison at Shāyzar. But in 391/1001 Basil II concluded a peace treaty with the Fāṭimid caliph al-Hakīm, who, on his side, signed a treaty with the emirate of Aleppo. After this the emirate of Aleppo steadily declined. After the beginning of the reign of Saʿd al-Dawla, a large number of Ḥamdānīs ḡudūdams had passed into the service of Egypt. Luʾluʾ aimed to seize entirely the power which he was in fact already wielding, for he completely dominated Saʿd al-Dawla, to whom he had given his daughter in marriage. He therefore had Saʿd al-Dawla assassinated in 392/1002. From then on he held the power, which he shared with his son Mansūr. In 394/1003-4, he rid himself of the members of the Ḥamdānī family: the two sons of Saʿd al-Dawla, Abu ʿl-Ḥasan ʿAli and Abu ʿl-Maʿālik Sharīf, were exiled to Cairo; a son of Saʿd al-Dawla, Abu ʿl-Haydja, fled, disguised as a woman, to the court of the emperor Basil.
at the battle of A'zib in 421/1030 (see Kamal al-Din, Zubdat al-balâb, ed. Dahan, sub anno; cf. M. Canard, op. cit., 709-17 and 859).

Thus ended, after that of the Hamdanids of Mosul, the dynasty of the Hamdanids of Aleppo. Both were of a character uncommon at this time, in that they were Arab dynasties. Both played an important political rôle; they had their period of greatness which was followed by decline. The historian of Mayyâlârî, Ibn al-Azrâk, has given a melancholy account of this (see M. Canard, Sayf al-Dawla. Recueil de textes, 1934, 275-80). The patronage of Nâşir al-Dawla and of Sayf al-Dawla favoured in Mosul and Aleppo a remarkable literary development. The names of Ibn Nûbâta, of Kâshâdîn, of al-Nâmî, al-Sârî, Bâbbâgâ, Abû Fîrâs, of al-Mutanabbi and others will always be associated with the Hamdanid dynasty. The Hamdanids have been praised, by writers impressed by their efforts in the Holy War, by their Arab qualities of courage and generosity and by their devotion to religion and their love for the Arab world. Their chivalry and their love for the Arab world has accorded them. The outstanding study of Freytag, Geschichte der Dynasten der Hamdaniden in Mosul und Aleppo, in ZDMG, x (1885) and xi (1887), although now out of date, remains of importance. See now M. Canard, Histoire de la dynastie des Hamdânides de Jazîrât et de Syrie, i, Algier-Paris 1951, with bibl. in the introd., 15-71. Information on the members of the family is also given in Abû Fîrâs, Dîwân, ed. S. Dahan, Beirut 1944, index. (M. Canard)

Hamdî, Hamd Allah (853/1449-905/1503), Turkish poet, born at Göynûk near Bolu. He was the youngest of the twelve (or seven) sons of the famous Şâyêh Aṭâ Shams al-Dîn [q.r.], who had succeeded Haṭîjî Bayram as the superior of the Bayrâmîyya. Hamdî lost his father at the age of ten. He had an unhappy childhood, which probably inspired him to write his famous mathnâwî Yâsîf we Şâyêhî. In the text, he relates that his lazy, ignorant and quarrelsome brothers ill-treated him and were jealous of him because of the great affection their father Aṭâ Shams al-Dîn showed him. "Joseph reached the extremity of his misfortunes, there is no end to my suffering" (Yâsîf we Şâyêhî, Istanbul, MS Universite T.Y. 675, fols. 11b-12a). Although he has nothing laudatory to say of his brothers, some of them surrounded themselves, and they retained enormous prestige. But they have also had their critics. In their own time, Ibn Ḥâkîm (1190-140 fl., 153-4) did not spare them his criticisms, for he was outspoken in his judgement of their tyrannical administration and their cupidity. Of present day writers, Kûr ‘Allî has also reacted against the unbounded admiration which the Arab world has accorded them.

**HAMDİ BEY, 'OTHMAN** [see 'OTHMAN HAMDİ BEY].

**HAMDUN AL-KASSAR**

Hamdun b. Ahmad b. 'Abd Allah Mubarak. As I myself do". He taught asceticism and also tolerance of others, counselling men to associate with the learned, but to have patience with the ignorant. He advised contentment with little, "Sufficiency will bring you ease without weariness: you weary yourself in seeking praise should lead to pride. To a man who reviled him, Hamdun said, "My brother, if you were to accuse me of all ill-doing, you would never revile me as I myself do".

**HAMİ, or HAMI OĞULLARI,** the sons of Hamid, one of the Muslim principalities in Anatolia in the 8th/14th century. Founded in the region of Uluborslu in Pisidya by Iyâs, the son of the eponym, in 728/1328, it embraced the whole region of the Pisidyan lakes, and then the Pamphylian plain and the mountain passes linking them, thereby constituting a state that was situated on an important road and so controlled one of the principal variants of the South-North route from the Mediterranean to the Mongol Empire. Two branches had their respective centres at Eğirdir [q.v.] and in the region of Antalya and its šâyla Korkuteli, ruled by Yûnas, elder son of Iyâs. The Eğirdir branch, whose tenure was for a time interrupted by the defeat and death of Falak al-Din Dündar, the younger son of Iyâs, at the hands of the governor of Anatolia for the Ilkhanids, Demir-tash, in 724/1324, was revived by İshâk in 728/1328 and by his brother İmâmed, who was ruling in Göl-hîsar in 733/1333 (Ibn Battüta, trans. Gibb, ii, 423).

**HAMI-I ÂMID, AHMED ÂMID, (1090?-1169?), 1747), an Ottoman poet from south-east Anatolia. He was born at Âmid (Diyar-Bakr) and taught by his brother Mehmed, who was ruling in Gaziantep in 728/1328 and by his brother Mehmed, who was ruling in Göl-hîsar in 733/1333 (Ibn Battûta, trans. Gibb, ii, 423).
A prince of this family was in command at Şuhud near Afyon Karahisar in 769/1368. This northern principality was absorbed by the Ottomans in 793/1391. The Antalya branch was exposed to the attacks of the Cypriots who occupied the town from 1361 to 1373 (Mübäriz al-Dîn then retreated to Korkuteli). Annexed by Yıldırım Bâyezid in 794/1392, the southern principality was restored in 805/1402, after the battle of Ankara, by a certain Oğmân, who reconquered all its territories except Antalya, despite his alliance with the Karaman ghullars, and whose defeat and death in 868/1463 marked the end of the dynasty.

T.Y., 2406), 868-82a; Bellûgh, Gûlûst-i riyâdî-i ırfân, Bursa 1302, 454-5 (a copy of this in the author's handwriting is in the 1st. Univ. Lib. no. T.Y. 6195, f. 222a); Âât (Enderûnû), Tavâvî, v, 160; (Abdulkadir Karahan) A. B. M. A. Hamidî Dîvânî (1) İbrahim b. Abî 'l-Sâ'îd al-Hamândî, the second dâ‘î mu‘âlah of the Tâyyîbî Ismâ‘îlîs in the Yaman. According to ‘Umâra, not supported by Tâyyîbî sources, the Sulayhîd Queen al-Sayyida in 526/1132 appointed Sülâyîhîd Queen al-Sayyida in 533/1138, the first dâ‘î mu‘âlah of the Yaman. If the report is reliable, Ibrâhîm may have been elected for his sympathy with the claim of al-Tâyyîbî. After the death of the dâ‘î al-Khâṭîb b. al-Hamandî in 533/1138, the first Tâyyîbî dâ‘î mu‘âlah, Dhu‘ayb b. Mûsâ, chose him as his assistant. After Dhu‘ayb’s death in 546/1153 (Hamândî: 556/1141-2) he became his successor as the highest religious authority in the absence of the Imam. The situation of the Tâyyîbî community was precarious, because it found little protection among the Yamîds rulers. Tâyyîbî sources, the thirteenth describes Balkh, at one time a prosperous place but devastated in 548/1153 by the invasion of the Ghuzz; he apologizes for ending the work ex aorupio because, he says, he has been overwhelmed by the calamities of the time. His work was praised by the poet Anwari (in lines translated by E. G. Browne) and by Nîfâmî-i ‘Arîdî (Câhâr makâlî, tr. Browne, 14, n. 6).

HAMA-MIM b. MANN ALAH b. HĂPÎZ b. ‘AMR, known as AL-MUFTARI. Berber prophet of the beginning of the 4th/10th century, who appeared among the Ghûmârîs Berbers, or, to be more exact, in the tribe of the Madjkasa settled not far from Tetuan. He began to preach his religion in 313/925 and was driven not far from Tanger, in a battle against the Masmuda. 313/925: He appears to have survived him for a period whose length is unknown, but which did not go beyond the end of the 4th/10th century. Just as in the religion of the Barghawâtî [q.v.], this doctrine, about which we have very little information, was in part a garbled version of Islam, with a ‘Kur’ân, in Berber, only two daily prayers, a weekly fast day, a fast of three or ten days in Ramadân, a little given in alms, but no ablation or pilgrimage. Forbidden foods were fish, birds’ eggs, and the heads of any animals. On the other hand the meat of wild animals was allowed, but not that of the wild boar. Breaches of these laws were punished by fines of which Ha-Mim and his relatives reaped the benefit. Lastly, two women played an important rôle in this religion, a paternal aunt of the prophet and a sister of his, both of them sorceresses.

In short, this belief appears to have been a mixture of distorted Islam and Berber beliefs.

HA-MIM — Ḥ-MMAD ʿADJRAD

(R. Le Tournhau)

AL-Ḥ-MMAD, Sp. Ḥ-MMAD, a name commonly given to hot springs and which, in those regions of Spain long occupied by the Muslims, replaced the old Romance terms Caldas (aguas calidas) and Baños (balnearios). This same name was also given, however, to two rivers which are in no sense thermal: one is the river called by the Muslims of Syria the principal or eastern branch of the Ebro; the other is a minor stream of the northern slope of the Sierra Nevada which flows into the river Fardes. The Alhamas which are best known for their history and their baths are four: that of Almería, which according to the Raued al-ʾmirāf had the best medicinal waters of the Peninsula; that of Aragón, known to the Hispano-Romans as Aqība Bihibīlātah; that of Murcia, also Roman, which was reconquered by James I of Aragón, who handed it over to Castile; finally, the best known, that of Granada. It was rich through its celebrated textile factories, well fortified by nature and art, and the summer residence of the kings of Granada. It lies about 25 miles from the capital. The Muslims possessed it till 887/1482, in which year, after a stubborn resistance, it was taken by assault by Diego Ponce de Merlo, the marquis of Cadiz, and Diego Hernández Portocarrero, the governor of Andalusia. The sultan Abu ʾl-Hasan ʿAlī tried three and the summer residence of the kings of Granada, so they reinforced it with numerous troops and the sultan had to give up the attempt. Well-known romances such as "Ay de mi Alhama" sing of this loss which was so severely felt by the Muslims, and the epic assault was commemorated in a fine bas-relief in Toledo cathedral.

A. Huici Miranda

Ḥ-MMAD B. AL-ZIBRIKĀN [see next art.]

Ḥ-MMAD ʿADJRAD (in stricto sensu constructus), Arab satirical poet whose genealogy has not been exactly established; his kunya, Abū ʿUmar, would justify the following: Ḥ-MMAD b. ʿUmar b. Yūnūs (rather than b. Yabhāʾ or Yūnūs b. ʿUmar) b. Kulaib b. ʿAlūfī. Born at the latest at the beginning of the 2nd/8th century, this mawlawī of a clan of the ʿAmīr b. ṣaḥāfā probably owes his by-name (udjarid = completely naked) to the saying of a Bedouin. His biographers agree in declaring that he achieved fame only under the ʿAbbāsids, but they do not fail to point out that al-Walīd II b. Yazīd II (125-6/743-4) had him come to court, with a certain number of other poets, and that he returned to his native land after the death of the Umayyad caliph (R. Blachere, in Milanes Gaudafroy-Debombymes, 110-30, does not quote, however). This is, in any case, the only datable information we possess on his life, which appears to have been quite eventful. Only al-Dījahshiyārī (Wiesteri, 190) represents him as a secretary in the chancellery and notes that he had served under Yabhāʾ b. Muhammad b. ʿSūl at al-Mawṣil and ʿUṣba b. Salm b. ʿUṭayba in Bāḥrān, and it is possible that this activity dates before the year 140/758. Under al-Saffābī he seems to have en-joyed the company of the governor of Kūfah, Muḥammad b. Khālid, and to have been the tutor of the caliph's son, Muḥammad b. Abī ʾl-ʿAbbās; under al-Ḥ-MMAD b. ʿUmar, he was in touch with the emir al-Raḥb b. Yūnūs [q.v.], and the caliph himself is said to have appreciated his satirical verve. According to one tradition, the latter even induced him to accompany, with other dissolute characters, Muḥammad b. Abī ʾl-ʿAbbās to Baṣra on his nomination as governor of the city (147/764-5), for al-Ḥ-MMAD wished to discredit his nephew and to disqualify him for the caliphate. This is once again the only person with whom the poet al-Dījahshiyārī (Death, 230) wonders whether one of his ḥadīdās addressed to Muḥammad was madāʾ or hiḍāʾ? he mourned him at his death, in 150/767-8. But since he had composed for him some amorous verses about an ʿAbbāsid princess, Zaynab, her brother Muḥammad b. Sulaymān had been striving to take revenge. Therefore the poet left Baṣra to take refuge with al-Ḥ-MMAD, who did indeed protect him and even engaged him to satirize his enemy. Some biographers describe his stay in Baghdād, with others of his kind, during the reign of al-Mahdī (125-6/775-85), but the traditions concerning his death diverge widely. According to some, Muḥammad b. Sulaymān, who was three times governor of Baṣra (see Ch. Pellat, Milleu, 287), had him assassinated at al-Ahwāz, where his presence is indeed attested; according to others, he died of sickness between al-Ahwāz and Baṣra, but the date of this event varies considerably according to the sources, and is placed in 155, 161, 167 or 168. The date 161 appears probable because, on the one hand, he died before Baḥshād (d. 167 or 168/784-5), and, on the other, legend tells that the latter, by a strange irony of fate, was buried next to him.

The greater part of Ḥ-MMAD's extant verses are nothing but diatribes against Baḥshād, and the Akgānī is full of anecdotes about the contentsions of the two men. Although the blind poet recognizes the talent of his adversary, certain of whose verses had affected him grievously (Akgānī, Beirut ed., iv, 328; al-Dījahshīrī, Bayān, i, 100; idem, Bayāwūn, iv, 66), criticism is unanimous in considering that the two poets cannot be compared. According to the Akgānī (xiv, 332), the scholars of Baṣra found only about forty verses of merit in the epigrams of Ḥ-MMAD, while they discovered more than a thousand in those of Baḥshād; al-Dījahshīrī, while occasionally appreciating the talent of Ḥ-MMAD (cf. Bayāwūn, i, 239, 240-2), places him well below his adversary (cf. Bayāwūn, iv, 453-4) and even judges him far inferior to Abān al-Labiḥī [q.v.].

Skilled at setting friends at loggerheads, incapable of respecting his own friendships, he let fly at them, even at Muṭīf b. Iyās [q.v.], sallies which were often scurrilous, practised a sordid blackmail, and busied himself in bringing dishonour to his victims in terms which detract from his own character. There is no reason to be surprised that posterity, since the end of the 2nd/8th century, should hold against him the most odious accusations of Manichaeism, which he certainly did not deserve, for he does not seem capable of feeling the slightest religious sentiment; his sandaka lay, in fact, in an attitude of profound religious indifference, of libertinism and of impertinence, which was shared more or less by his habitual companions, amongst whom figured his two namesakes Ḥ-MMAD al-Rāwīya [q.v.] and the grammarian Ḥ-MMAD b. al-Zibrikān (on whom see particularly Bayāwūn,
HAMMAD 'ADJRAD — HAMMADA

iv, 445, 447; Aghdni, index; al-'Askalani, Lisan al-
Miṣdn, ii, 347). Ibn al-Nadim (Fihrist, 473) does not
mention him amongst the 'Asiṣṣa, and G. Vajda holds
conclusively that the accusations of Mani-
Chalism made against the libertines with whom he is
generally mentioned (see Les sincïïïs en pays
d'Islam, in RSO, xvii (1937), 173-229).

From his poetic works, which were certainly
abundant, there survive only a few relatively feeble
verses, mostly satirical. There are some poems, how-
ever, in which he displays a wisdom that is surprising
for him, also some erotic verses which do not lack
freshness and were deemed worthy of being set to
music.

Bibliography: Notices and verses are to be
found in Dāḥîb, Bayân and Ḥayāwān, index; Ibn
Kutayba, Ṣhir, 754-6 and index; idem, Uyun al-ādhar, index; Buṭūrī, Ḥamṣa, 372; Ibn al-Mu'tazz, Ṭabaḥâd, 23-6; Aghdni, xii, 70-98
(Reiset ed., xiv, 304-5); Šāhī, 3-8, 10; Ḥaḍīb Baghdādī, Tabīh Baghdādī, viii, 146; Ṣahīb, Udâb, 14; Ibn Khallīkān, i, 165; Āmīnī, Muṭalâf, 157; 'Askalānī, Lisan al-Miṣdn, iii, 349-50; Marzūbānī, Muṣādain, index; Ibn al-Djawzī, Mun-
ṭasâm; Ṭāhā Ḥusayn, Ḥadīth al-arba'ī, i, 197-
212. (Ch. Pellar)

HAMMĀD AL-RĀWIYA, i.e., "the transmitter," Ibn Abi Laylā, a collector of Arabic poems, especially
the Mu'llāfīydt [q.v.]. He was born at Kūfah in 750/964-5 (the date 95 is a misreading). He was of Iranian stock, his father being a captive from al-Dāy lam, named Sāhūr or Humurous or Maysara. Hammād, like his namesakes and boon-companions Hammād 'Adjrād and Hammād b. al-Zibrākīn, belonged to a
beau of the poets; Ḥamṣa, who at their merry
gatherings used to drink wine and recite verses and
verse in the eyes of the pious suspect of heresy
(sandīka). Hammād was very fond of poetry; many
anecdotes show him in conversation with al-Tirmīzhī
(Aghdni, vi, 95), al-Kumāyti, (Aghdni, xiv, 113),
'Umar b. Abī Rabī'ā (Aghdni, vii, 50), Kūthāyir (Aghdni, vii, 252 ff.), al-Baraḍīdak (Aghdni, vii, 73),
Dīnīr (Aghdni, vii, 36), Dhu 'l-Rumma (Marzūbānī, Muwaṣṣabāh, 177), and other poets. His intimate
knowledge of the poetry, genealogy, history and
lore of the Bedouins won him the favour of the
caliph, especially all-Wādī b. Yazīd, and their
dignitaries. It is uncertain whether he was invited
already by Yazīd b. 'Abd al-Malik; for the story
(Aghdni, vi, 75 ff.) is chronologically inconsistent,
because Yūsuf b. 'Umar was appointed governor of the
East only in 120/738. The downfall of the Umayyads hit him hard. It seems that it went to al-Manṣūr (Aghdni, vi, 80) but felt disappointed
(Aghdni, vi, 82; vii, 223 f.) and returned to Kūfah
where he died in 155/772 (Yaḥkūt) or in 156/773
(Fihrist). Later dates are unwarranted. He was
mourned by Muḥammad b. Kunās in an elegy
(Fihrist, etc.). Amongst his pupils were his rāwī
al-Hayṯyām b. 'Adī (Aghdni, vi, 70, 72), Khalīf
al-Aḥmar (Yaḥkūt, iv, 179), and al-Aṣma'ī who owed
nearly all the poems of Imrā' al-Kays to Hammād.

Hammād was no scholar, but rather a dilettante
who enjoyed poetry as one of the good things in
life and did not care too much about scholarship and
authenticity. He took no interest in the studies of
grammar which were making rapid progress during
his later years. There was in addition the rivalry
between the schools of Baṣra and Kūfah. He was
held in high esteem by Abū 'Amr Ibn al-'Alāʾ [q.v.],
the founder of the Baṣra school (Aghdni, vi, 73), but
was denounced in the next generation. According to

the Baṣra Yūnus b. Ḥabīb, Hammād knew nothing
about grammar, prosody, and correct speech
(Aghdni, vii, 383; Djamāh, 14), whilst his rival,
the Kūfah Mufaddal b. Mulakī in the Dīwān of his
did not deny his vast knowledge, but accused him
of having ruined the tradition of Bedouin poetry
beyond repair by his clever forgeries (Aghdni, vii, 89).

Hammād collected, according to al-Nahāshā, d.
337/948-9 (Ibn Anbārī, Nuzhah al-ahlibā, 48), the
seven long odes, commonly known as the Mu'llāfīydt.
Abū Ḥātim al-Sigīṣānī quotes poems of al-Ḥujay'rā
from the Mu'llāfīydt (q.v.) of Hammād, mainly to blame him for admitting spurious verses
(Ibn al-Haḍjār, Muḥtārāt, 123, 127, 135; cf.
Goldziher, ZDMG, xi, 48 ff.). In the Dīwān of
Abūn b. al-Ṭafâyūl there is a piece (no. 26, ed. 'Laylāy)
which corresponds to the verses copied by Ibn al-
Kalbī from a manuscript which again is called the
"book of Hammād al-Rāwiya". Other traces of
Hammād's literary activities are scarce.

HAMMĀDA (A,) is synonymous with 'plateau'
in the Sahara of the southern Maghrib and Tripoli-
tania, but is used only by some of its Arabic-speaking
inhabitants. The word stands for large areas which
are the outcrops of horizontal beds of secondary
or tertiary limestone or sandstone (or calcareous or
gypso-calcareous crusts of the quaternary era),
and which stand out as a result of the erosion caused
by running water during periods which were less
ardid than the present. The surface of the hammūdas
is almost always rocky and totally devoid of vege-
tation except in small basins where the limestone
has dissolved (dāya; classical addī); it is often
blackened, consolidated and rendered barren by a
"desert patina" due to the exudation of iron salts;
it is sometimes partly covered by a reg formed by
the breaking up of angular stones. The edge of the
hammerdās in the desert of Morocco and the alluvial
formation of their piedmont, the hammūdas, is not
found in Eastern Libya beyond lat. 14° E. (Greenwich) and has not the same meaning
as the term hammūdas in the Sahara region in Southern Algeria, that of Murzūk and the Hammā-
da al-Hamrā, in Southern Tripolitania. The use of
the word hammūda is extended to even very small
hills with calcareous incrustations in the lower
steppes and in the Sahel of Tunisia and even to small plateaus on the Tunisian backbone (hammūda of the Awlād
Ayār, of the Awlād Aouīn, of the Kessera). The term
hammūda is not found in Eastern Libya beyond
lat. 14° E. (Greenwich) and has not the same meaning
in the East, where it is applied to semi-arid plains.
In the Sahara the word hammūda is rivalled and
replaced, on fairly large areas, by ādār (back,
reverse of slope), both in the Tunisio-Tripolitanian
range of plateaus and in the Mauritanian Adrar, or,
less frequently, by the word gālta which was
around the Ahaggar massif are called āssilīī, a Ťuāreg Berber
term; in the south of Morocco kemkem, another word of Berber origin, is the synonym of hammūda; the
great lava plateaus of the Tibesti are called larso by the Tūbī. (J. Despois)
HAMMÄDIDS (BAN B Hammåd) a Central Maghrib dynasty (405-547/1015-1152) collateral with that of the Zirids of Eastern Barbary, taking its name from its founder Hammåd b. Buluggin b. Zir b. Manåd.

The aspirations towards Ifrikiya of the Şanhâdja amirs, the Zirids, lieutenants and vassals of the Fâtîmids in the Maghrib, brought about the split between the Central Maghrib and Ifrikiya proper. Under the second Zirid, al-Mansûr b. Buluggin, his uncle Abu ʿl-Bahâr b. Zir had already tried without success to carve out a kingdom in the Central Maghrib (379-83/989-93). Now al-Mansûr’s successor Bâdîs had to confront a powerful Zanâta wave which broke from Tiaret to Tripoli from 386/996 and at length overwhelmed him (391/1001), thanks mainly to his uncle Hammåd b. Buluggin. In 395/1004-5 he gave Hammåd the task of pacifying the restive West, and undertook never to recall him and to give up to him Asgîr, the Central Maghrib and any town he was able to conquer. Hammåd met with such success that in 398/1007-8 he founded a new town north-east of Msîla with an eye to its serving as his capital, the celebrated Kâfâ (Kâfâ Hammåd/Kâfâ Bani Hammåd/ al-Kâfâ [q.v.]). Hammåd disobeyed Bâdîs’s order to surrender part of the Constantine territory to his heir, and, with his brother İbrâhîm, rebelled (405/1015).

I. Hammåd b. Buluggin (405-19/1015-29). He severed his relations with the Fâtîmids of Cairo and had made with al-Muʿizz b. Bâdîs, who marched against him and besieged the Kâfâ for two years; at the end of this time a reconciliation between the two cousins was brought about (434/1042-3). There is some uncertainty about the date of al-Kâfî’s repudiation of the Fâtîmids and his recognition of the ‘Abbâsids, but it must be around the time of al-Muʿizz (whose break with Cairo was an established fact by 439/1047) since he sent him a body of cavalry which participated in the famous battle of Ḥiydarân (443/1052). But most likely it was after this Hîlîf victory, which put an end to the culture of Kayrawân, that he once more recognized Fâtîmid suzerainty, thus acquiring the honorific appellation of Şarâf ad-Dawla which had formerly been borne by his cousin.

III. Al-Muḥsin b. al-Kâfî (446-7/1054-5). His father’s advice to deal circumspectly with his uncles was unheeded. His violent and tyrannical disposition got the better of him, and led to his assassination, after nine months’ rule, by one of his cousins, who succeeded to his throne.

IV. Buluggin b. Muḥammad b. Hammåd (447-54/1055-62). As the alliance between the Hammådids and the Hîlîlî Ahbâdi grew closer, so the Zirids relied more and more on the Riyâh and the Zughba. Then, when thrown out of Ifrikiya by the Riyâh, it was the turn of the Zughba to put themselves at the disposal of the Hammådids. In 450/1058-9 Buluggin obliged the Biskra chiefs to recognize him and treated the

transferred his allegiance to the ‘Abbâsids of Baghdad; thus the Hammådîd kingdom came into being. Bâdîs laid siege to the Kâfâ and after six months gained a decisive victory in 406/1015; but death overtook him when he seemed about to reduce his uncle to obedience (end of 406/May 1016). His successor al-Muʿizz b. Bâdîs dealt the rebel so severe a repulse that his successor al-Muʿizz b. Bâdîs, who marched against him and besieged the Kâfâ for two years; at the end of this time a reconciliation between the two cousins was brought about (434/1042-3). There is some uncertainty about the date of al-Kâfî’s repudiation of the Fâtîmids and his recognition of the ‘Abbâsids, but it must be around the time of al-Muʿizz (whose break with Cairo was an established fact by 439/1047) since he sent him a body of cavalry which participated in the famous battle of Ḥiydarân (443/1052). Genealogical table of the dynasty

II.—al-Kâfî (419-46/1028-54)

III.—Muḥsin (446-7/1054-5)

IV.—Buluggin (447-54/1055-62)

V.—al-Nâṣir (454-8/1062-89)

VI.—al-Mansûr (481-98/1092-1105)

VII.—Bâdîs (498/1105)

VIII.—al-ʿAzîz (498-515 or 518-1105-21-2 or 1124-5)

IX.—Yahyâ (515 or 518-47/1121-2 or 1124-5 to 1152)

transferred his allegiance to the ‘Abbâsids of Baghdad; thus the Hammådîd kingdom came into being. Bâdîs laid siege to the Kâfâ and after six months gained a decisive victory in 406/1015; but death overtook him when he seemed about to reduce his uncle to obedience (end of 406/May 1016). His successor al-Muʿizz b. Bâdîs dealt the rebel so crushing a blow (468-1017) that he sued for pardon, which was granted him. This peace, consolidated by alliances by marriage, which gave him complete sovereignty over all Central Maghrib, was to be respected by Hammåd until his death (419/1028). It would seem that he had returned to the Fâtîmid allegiance.

II. Al-Kâfî b. Hammåd (419-46/1028-54) successfully checked an adventure of the Maghrâbi amir of Fez, and made him swear allegiance (430/1039-9). In 432/1040-1 he broke the pact his father
and Tebessa) he suffered a defeat comparable in
gravity with that inflicted on al-Mu'izz b. Badls at
Hadjarun. Anarchy and devastation spread through-
out Central Maghrib, which now experienced the
kills that Ifriqiya had suffered for years. The
crushing of the Sanhadjia at Sabba (457/1065)
finally sealed the ascendancy of the Hilalids over all
eastern Barbary, while the Rihay held sway in
Ifriqiya and the Aghbadi in Central Maghrib. Just
as the Zirids had been forced to give up Kayravan
and to retire on Mahdia, so the Hammadids lost their
hold on the Kal'a and fell back on Bougie, named al-
Nasir (484/1090-7). The Zirids installed himself there shortly after 461/1069-9. There
was some indication of a revival of Zirid-Riayid power
when they seized Khurassani Tunis (459-60/1069-70),
and to thwart this al-Na'ir led the Aghbadi in an
attack on Ifriqiya (460/1067-8), took Laribus and
then Kayravan (though this he had to give up), and
he returned to the Kal'a. Al-Na'ir certainly played
some part (though the affair is obscure) in the sale of
the coinage, and it was he who "civilized" the Ham-
madid-Almoravid hostility, with the signing of a
peace, which was destined to last until the end of
Tamim's reign (501/1108), marks the peak of Ham-
adid superiority over their Badisid cousins, over-
whelmed by the Hilalid invasion. Al-Na'ir led a
number of expeditions to the West and made allies
of the heads of an important Zanata tribe, the Banu
Makhukh. On many occasions he had to take
vigorous action against the Zanata when they joined
with the Arabs in acts of brigandage.
VI. Al-Manṣūr (481-98/1088-1105). In spite of
his youth, this son of al-Na'ir and Ballara followed
firmly in his father's footsteps and was the recipient
of Ibn Hamdun's panegyrics. Although the district
was overrun by Arabs, he stayed in the Kal'a until
he left it for Bougie (483/1090-1). Ibn Khalidin
considers that he was the first of his line to issue a
coining, and it was he who "civilized" the Ham-
madid kingdom, hitherto semi-nomadic and totally
lacking in the polish of the Badisids of Kayravan.
On his accession, he instructed Abü Yakn to remove
Balbar, an uncle of his and governor of Constantine,
and rewarded him with the governorship of that city
d and of Bône. In 487/1094, Abu Yakn rebelled and tried
to overthrow Tamim's authority and assume the
throne. He was imprisoned in Algiers, where he
finally died, and assigned the town to one of his
uncles (522/1128). Bône stayed in Hammadid hands
until 543/1148-9. A Hammadid army took the
citadel of Tozeur (the date is uncertain) whose
minister was seized by the Almoravids and was obliged to fall back on the Banu
Makhukh. On many occasions he had to take
vigorous action against the Zanata when they joined
with the Arabs in acts of brigandage.
VII. Al-Ma'mūn (498/1105). This son and successo
of al-Manṣūr was a Caligula whose bloody tyranny
fortunantly endured for less than a year.
VIII. Al-'Azīz (498/1105 to 515 or 518/1121-2 or
514/1124-5). Biographical references are sparse but
there is evidence of an illness, his lifelong love of
peace and reign. He took pleasure in the company
of lawyers. He made peace with the Zanata and
married one of Makhukh's daughters. Nevertheless,
his fleet subdued Djerba (the date is uncertain) and
in 514/1124-5 he laid siege to Tunis and obliged the
Khurāsani Ahmad b. Abü al-'Azīz to offer sub-
mission. About this time he laid on his son the duty
of recovering the Kal'a from Hilalid occupation.
IX. Yahyā (512-538/1121-49) drove the Khurāsani Ahmad b. Abü al-'Azīz from Tunis and deported him to Bougie where he eventu-
ally died, and assigned the town to one of his
uncles (522/1128). Tunis stayed in Hammadid hands
until 543/1148-9. A Hammadid army took the
citadel of Tozeur (the date is uncertain) whose
minister was seized by the Almoravids and was obliged to fall back on the Banu
Makhukh. On many occasions he had to take
vigorous action against the Zanata when they joined
with the Arabs in acts of brigandage.

HAMMĀM or steam bath, often still referred to as "Turkish bath" (and in French as "bain maure"), is a building typical of the Islamic world where archaeological remains witness to its existence as early as the Umayyad period (in addition to references in texts which mention the construction of baths in the first towns founded after the conquest: the bath of 'Amr at Fustāṭ in Ibn Dūjkām, i, 105; the first three baths of Baṣra, in al-Balādhurī, Fatāk, 355) and where it has continued until the present day to occupy a position of primary importance, recognized by the Arab writers themselves (for example mention ḥammāms among a town's ancient claims to pre-eminence, and compile contemporary detailed lists of these buildings in addition to inventories of monuments).

The ritual use of the ḥammām in the performance of the major ablution explains why it has always been considered one of the essential amenities of the Muslim city, gradually assimilated as "a sort of annex of the mosque" (W. Marçais), while at the same time the life of a whole quarter revolved around it. Thus the Muslims gradually forgot the prejudices that had at first surrounded it as being an element which was borrowed from a foreign civilization (as late as the 4th/10th century mention is still found of ḥammāmīt rūmiyya) and whose decoration was for a long time derived from conventions of pre-Islamic times. People went to it for relaxation as well as to fulfill the laws of hygiene or a religious regulation, and the public baths, which were numerous in every town (and reserved on certain days or at certain times for men and at others for women), formed considerable sources of revenue for the private individuals or the authorities who established them. The popularity of the use of the ḥammām had also led to the installation of private baths in the precincts of palaces, where they were larger than the public baths.

Information on the number of baths existing in the Middle Ages in the chief Muslim towns can be found in the early sources, and this information has sometimes been used as a basis for modern estimates of the populations of towns at that period. In fact the value of the details thus provided varies greatly according to whether they are obtained from accurate inventories of monuments or simply from estimates by chroniclers.

To the first category belong for example the data provided by Ibn 'Asakir on Damascus in the 6th/12th century (57 baths inroo mauro: Tāriḥī Di- mağḥ, ed. S. al-Munajjdid, ii/1, Damascus 1954, 162-4) and, a century later, by Ibn Shaddād on the baths of Alepp (80 public baths inroo mauro and 94 extra mauro plus 31 private baths, making a total of 155; Descriptions d'Alexandrie, ed. D. Sourdel, Tarnacs 1953, 130-8) and of Damascus (83 baths inroo mauro and 31 extra mauro, making 176 in all: Description de Damas, ed. S. Dahan, Damascus 1956, 291-302), data which seem reasonable when we consider that about 30 years ago Damascus had 60 baths of various dates, 41 of which were still in use.

On the other hand the contradictory data given by them. Their charges are not governed by a tariff, and in general they seem to be satisfied with what they are given. Moreover their honesty is proverbial, and any shortcoming is severely punished by the amin. Quite recently, they were still sleeping, at night, in small groups in the markets, stores and funduks and making their rounds for the purpose of preventing thefts and giving the alarm in case of fire.

Bibliography: in the text.

(ℋ. HUART-[Ch. PELLAT])
such a writer as Hilal al-Sabi about Baghdad seem much less reliable: for a period extending from the 3rd/9th to the 4th/10th century the figure he gives for a bath. The numbers vary from 60,000 to 1,500 [see Abbâd]. Similarly for Cordova at the end of the 4th/10th century we find figures ranging from 300 baths in the reign of ʿAbd al-Rahmân III (Ibn ʿIdhârî, Bayân, ii, ed. Dozy, 247; Fr. tr. Fagnan, 383) to 600 in the period of al-Mansûr b. ʿAbd al-Mâjkârî, Analectes, i, 355.

The information given by Leo Africanus for Fez in the 10th/16th century seems more reliable (100 baths listed, whereas in 1942 not more than 30 existed), also that given for 11th/17th century Istanbul by Ewliyâ Celebi (61 baths intra muros and 51 extra muros, plus private baths, making a total of about 150), details which can hardly be accused of exaggeration. But we have given these few statistics only as examples to demonstrate the extent of the potential documentation, which would demand careful comparisons between parallel sources of information (historical, literary, et cetera) in order to produce a reliable contribution to social and economic history.

From another aspect there should be mentioned the graphic descriptions of Muslim baths which feature in the accounts of early or later Western travellers, from Chardin or La Boullaye le Gouz for example (on the less well-known account of the latter, see Voyages et observations, Paris 1657, 40-2) to E. W. Lane (Manners and customs of the modern Egyptians, chapter 16; see also the text of N. Diaz de Escovar, De como se construía un baño en tiempo de los árabes, cited by E. Lévi-Provençal), not forgetting the iconographic material provided by some Persian or Turkish miniatures, such as the representation of a hamâmât by an artist of the school of Bihâz (see B. Gray, Persian painting, Geneva 1961).

But even more useful information could be obtained from the juridical works and from the manuals of ḥisâba [q.v.], which provide much detail on the control exercised by the muḥāṭāb over the cleanliness of the buildings as well as over the seemly behaviour of the users and of the bath attendants.

Unfortunately at present there has been no sufficiently detailed study of the number and the use of the hamâmâms which are still functioning in the old quarters of Muslim towns; but in this respect modern records do not mention much what has been done for Damascus, where an archaeological inventory of the buildings of this type, begun in 1931, has very recently been completed by some new observations. The existence of these baths is in fact a proof of the continued vitality—at least among the common people—of habits which have long been traditional in Muslim society and many aspects of which need to be clarified by means of sociological and linguistic studies, in particular the local variations in arrangement and terminology.

The details thus collected could then usefully be compared with those supplied in addition by juridical or literary texts, for example the nomenclature of the various personnel connected with the running of the hamâmât which is found in a writer such as the 4th/10th century Hilâl al-Shâbî [Rūmān dâr al-ḥâlâbât, Bagdad 1964, 19]. In the latter case for instance, a brief research has shown that two members of the staff, the wâkâḥîd ("stoker") and the sâbbâl ("superintendent of the supply of dung-fuel for the furnace") are still called by these names in Damascus (at Fez they are called sâkkhâkîn and ghabbârî, while it appears that there is no longer in use today the term sâbbî al-sundâhî for the superintendent of the changing-room (called gelâsî in Fez and combined with the mawṣûlîm or "proprietor") nor that of kâyûmîn for the lessee of the bath. These posts of the staff, which are named after the technical terms gâmmî ("cupper"), "blood-letter"), also mentioned by Hilâl, seem to have lost their importance in favour of that of mukâyysi or kâyûyîs, the "maseur" (who wields the kîs or bag of tow used to massage the clients), who is probably connected with the hâkkîk ("beater") attested in Cordova in the 4th/10th century and with the dâlîkî, with the same meaning, mentioned for Istanbul by Ewliyâ Celebi.

Thus we have to deal with an extremely rich and changing vocabulary, which reflects the variations which must have existed between the usage peculiar to each region and each period and is often preserved in the abundant literature of proverbs, tales and popular legends which seems always to have surrounded the hamâmât, a favourite centre for local beliefs and superstitions and in particular the favourite haunt of the dîns [q.v.] (see for example the "Força de Karagueuz en dialecte arabe de Damas", published by E. Saussey, Une force de Karagueuz en dialecte arabe de Damas, in BEO, vii-viii (1937-8), 5-37).

It is, however, the architectural aspect of the Islamic bath which would be most worthy of study, so much were buildings of this type governed by the factors of siting (e.g., the necessity for an abundant supply of water) and by the practical exigencies imposed by the solution of difficult and often interesting problems. Not only do the hamâmâms which are identifiable and available for archaeological study today provide, because of the long periods they have occupied the same sites, excellent starting points for the exploration and the reconstruction of the stages in the development of the towns to which they belong; but in addition the older parts of them provide significant illustrations, in compositions which are often original both in plan and in form, of the methods of construction, the tastes in ornament and the technical abilities of their early builders.

For this reason it would be particularly useful to know the stages in the evolution of these buildings, which have not yet been traced with the necessary thoroughness—chiefly because of lack of sufficient numbers of preliminary monographs—but the broad lines of which at least we can already attempt to trace. These have to deal with the first appearances of the hamâmîn in the Umayyad period until the spread of these buildings into the furthest provinces, by the existence of a rigid procedure, which is apparent in the most varied interpretations and which was conditioned by the nature of the operations performed in Muslim baths.

The order in which these operations are performed has remained practically the same everywhere. The clients of the hamâmîn, who have removed their clothes and put on a simple loin-cloth composed of towels knotted together, gradually accustom themselves to an atmosphere which becomes increasingly hot and humid as they proceed towards the centre of the building, where their spell in the sweating-room produces an intense perspiration. They pass into the hands of specially-trained staff, male for men and female for women, who wash them clean with soapy lather, rub them vigorously, massage them, remove their body-hair and shave them. They next proceed either to wash in warm water or to immerse themselves in baths of warm or hot water. Finally a brief period of relaxation in a rest room is intended to restore bodies exhausted by this vigorous treatment.

To provide for this programme, the hamâmîn
consists basically of a certain number of rooms each with its especial function: first an undressing and rest room, generally known as maqālaš or māqālah in the East, māqālah in Egypt and Morocco, and mahrā in Tunisia, which communicates with latrines and may be linked to the central part of the bath by staggered corridors of varying length; then a transition room, without means of heating but whose atmosphere is nevertheless already warmed by its proximity to the heated section and which in winter is used for undressing; and which may be known as “outside” (bāt al-barzd) as in Fez, or “first room” (bāt awlūd) as in Cairo, or more precisely as “intermediate outside” (waṣṣāni barrāni) as in Damascus, or bīt al-barzd in Tunis (adjoining a bīt al-bodūl); next a first heated room, or warm room, which in Damascus is called “intermediate interior” (waṣṣāni ḏawwāni), in Fez “middle” (waṣṣā), and in Tunis usually bīt ez-šāghān; finally a second heated room, the hot room proper or steam bath (lāshīm; ṣarrāba or šīb in Tunis) which may be called simply bārāna as in Cairo, or more expressively “interior”, ḏawwāni at Damascus and ḍāḥlí at Fez. This steam room is generally provided with a certain number of alcoves (called in Damascus māsāyārās), where are found either benches of stone or brickwork (māšatās), used for the attentions given to the bathers by the staff, or pipes bringing supplies of hot or cold water (kānāfiyyas), or stone basins which serve as little swimming pools (māšgās), filled with hot or cold water.

Although in some cases light and air are obtained through vents with adjustable flaps, usually neither windows nor ventilation holes are provided for in the central section, where the efficient retention of heat and steam is ensured by means of thick walls, crowned by vaults or cupolas which are equally thick, with steam-proof linings of marble or of varnished plaster over paved floors, provided with runnels to carry off the water. Light penetrates only through thick pieces of glass, a sort of “bottle-ends” inlaid in the domes, where they often form simple decorative motifs. Furniture is provided only in the changing and rest room, which is the most luxurious, lavishly arranged, with wooden benches, covered with cushions, generally disposed around a pool with a fountain (in Tunis: ḳaṣṣaṣa). The clients’ entrance itself, the only opening through which this tightly closed building communicates with the world outside, is only rarely conceived as an architectural motif to embellish an important façade.

To the collection of rooms accessible to the public, or used by the owner of a private bath (for the two types of building, conceived according to the same model, have never differed from each other except in size or in the degree of richness in their decoration), are joined the indispensable annexes which house the heating system and its services, which are not linked by any passage to the hammām proper but which possess their own exit onto the street, used especially for deliveries of fuel. The furnace room, which in Damascus is called ḳhīṣāna or “reserve” of heat and steam (in Tunis: fōrnād), is separated from the hot room only by a thin partition, pierced with holes through which the steamy air passes: in it a continually stoked furnace maintains the temperature of the cauldrons (in Tunis naḥāsa) of boiling water. From these hot water is circulated in the interior of the bath, where it is complemented by the circulation of cold water, by the system of ventilation from the stove and by the circuit evaporating the waste water, all of which are usually led through earthenware pipes embedded in the walls or beneath the floor. Finally, the supply of water from outside is assured either by pipes, drawing it off from the town system of water supply when one exists, or by the use of an elevating machine, usually worked by a draught animal.

Based on this classical and complete arrangement, there emerged later developments, some successful and some not, which may take the form either of a slightly different arrangement (e.g., the situation of the boiler in the centre of the steam room instead of in an adjacent room separated from it by a partition), or particularly by simplifications involving most often the omission of one or several of the rooms whose purpose was to permit a gradual increase in the temperature. These various modifications correspond to local habits or temporary customs which, in the present state of the documentation, it is still difficult to ascertain precisely.

Among the types of baths in which most information is available, however, are the Umayyad hammāms, succeeded to the latter by the baths of antiquity from which they presumably derive—which explains their sudden appearance in the 2nd/8th century in an already developed form—but not without undergoing transformations profound enough to banish any idea of a mere slavish imitation of their models. We have only to compare the most important remains of baths from this period with earlier buildings to realize, in spite of the striking similarities in the methods of construction (the use of hypocausts and of heating pipes in the walls for example), the originality of the layout, in which we no longer find for example the traditional succession of the apodyterium, the frigidarium, the tepidarium and the calidarium nor their relative proportions.

In fact only the first of these terms can continue to be applied to the changing and rest room of the Umayyad hammām, which more or less retained the functions and appearance of the ancient apodyterium, even to the extent of including in its decoration statues and frescoes with figures imitated from Hellenistic works. But the adjacent unheated room has no longer any feature in common with the frigidarium (even though the frequently used name of “cold room” has led to a certain amount of confusion in this matter), of which it has retained neither the vast dimensions nor, more especially, the appointments (kānāfiyyas), with which was probably made this room the chief element in the antique baths and the centre of the social and sporting activities which took place there. Finally, the two heated rooms also differ from the ancient tepidarium and calidarium or sudatorium in that they have come to fill, in relation to the other sections of the hammām, a place whose importance indicates a change from the customs practised in late antiquity.

This fact was first pointed out by D. Schlumberger, when he published the results of his preliminary investigations of a small private hammām of the Umayyad period, that of the castle of Kašar al-Ḥayr al-Gharbi [q.v.] near Palmyra. But the same adaptation of the antique plan to new requirements by the suppression of the frigidarium and parts of the architectural features henceforward of no use, is seen in the ruins of many other Umayyad sites, the transformation of which was first defined in the researches of J. Sauvaget. In fact not only is it illustrated by the famous baths of Kašar ‘Amrī [q.v.] and of Hammām al-Ṣarākh [q.v.] (the former of which owes its fame to its rich décor of paintings and both of which possess examples of an interesting elaboration of the rest room, adapted in this case to the function of
Fig. 1. Plan of a typical Umayyad hammām: the hammām of 'Abda, where A and B are the undressing rooms, C is the unheated room, D the hot room, E the steam room, F the boiler, and G the service court (cf. J. Sauvaget, Remarques, fig. 7)

reception room for official personages), but it also explains the less well-known buildings, of sometimes doubtful date, the remains of which are still visible in the Syro-Jordanian steppe (at Djabal Says, Khirbat al-Bayda, 'Abda, Ruḥayba and al-Ḥuṣub), and in which there regularly appear, besides the series of three small rooms—unheated, warm and hot—a room reserved for rest or for undressing and another, formerly containing the boiler, which was flanked on

one side by the steam room and on the other by the essential service court (fig. 1).

The only exception to this uniform type is the magnificent hammām of Khirbat al-Mafjar [q.v.], recently discovered in an Umayyad residence in the Jordan valley, which deserves in this connexion a special mention. Its two small interior rooms supplied with steam by an orifice made in the wall of the adjacent furnace room, and the two intermediate rooms of the same dimensions which preceded them, were in fact accompanied by a huge square hall, more than 30 metres long, with interior pillars and a roof of cupolas to which were annexed elaborate latrines and a small room with an exedra decorated with especial care. This vast apodyterium, access to which was through a huge porch, surmounted by a princely statue, which itself served as ante-room to the room with exedra where probably the owner of the bath sat, had been provided with a remarkable ornamentation—a mosaic pavement and painted and sculpted stucco in all its upper section. The presence of a large swimming-pool occupying the whole of the length of the south wall of the room reveals in addition a deliberate adaptation of the frigidarium of antiquity. This arrangement is quite exceptional in an Islamic hammām, and has already been proved to be compatible with the luxurious tastes of the founder of the castle; it must be seen in this setting of costly fantasy in order to understand why (apparently) no later building was inspired by it.

The arrangement of the later mediaeval baths, so far as can be judged from the scattered examples which exist, merely reproduces, with further simplification, that of the classical Umayyad prototypes: four rooms, consisting of an undressing room, two intermediate rooms and a steam room adjacent to the section containing the heating apparatus. This

is the plan to which in particular the Damascus baths of the Ayyubid period conform. These have been the object of especially detailed archaeological studies and can therefore be profitably cited here, although unfortunately there exist no architectural data on the hiatus of four centuries which separates them from the Umayyad buildings or on the Iranian baths of the Saljūq or earlier periods which might perhaps foreshadow some of their features (the brief notes by E. Schroeder, in A. U. Pope, A survey of Persian art, Oxford 1939, 998, concerning the existence of an early hamam at the south of Kirmān are in this respect quite inadequate).

At Damascus, in the 6th/12th century, we first notice the abandoning of the system of hypocausts in favour of a more simple solution, which consists of passing the chimney of the stove beneath the paved floors that are to be heated: hence the rooms of the central part of the hamam are laid out according to the axis of this flue pipe. Next the effect of Mesopotamian influences on the architectural methods is felt in the lavish use of couches and ribbed cupolas. Finally there should be mentioned the clear predominance, in the arrangement of the whole, of the middle or warm room, which may have an elaborate octagonal form and which then forms the centre of the plan of the building (fig. 2).

The modifications which the following periods brought to this scheme involved firstly the displacement of the hot room which increased in decoration and in size, thanks to the multiplication of the masjūras which surrounded it, until, in the 12th/18th century, it predominated over all the other rooms and, in still more recent buildings, became the only room. Before a more than local importance is attributed to this arrangement, a similar evolution (which would have to be linked with a previous change in the habits of the users of the baths) would have to be established in other Syrian towns, in particular in Aleppo. It would also be useful to know whether it appeared in a neighbouring province such as Egypt, particularly in Cairo, where some early hamma.ms with a radiating plan, the majority of which go back to the Manūlī period, have not yet been the subject of sufficiently detailed archaeological research.

In Spain and the Maghrib on the other hand, the buildings appear to belong to a different tradition, which is of Andalusian as well as Umayyad origin. Some very early specimens, including baths of the 5th/11th and 6th/12th centuries at Granada and Tiemcen, thus show a very great simplicity in conception and execution, with no attempt at architectural decoration anywhere except in the changing rooms. Next, in the 7th/13th and 8th/14th centuries, there appears a certain elaboration of the buildings due to the adoption, within axial and rectangular plans, of the types of cold, warm and hot rooms (with the warm room predominating) which were found in the Ayyubid hamma.ms in the East. But the possible connexions between the well-known Manūrid baths (fig. 3) and their Eastern models at varying distances from them have not yet been studied nor even mentioned with the attention which the hypothesis deserves.

The baths built after the Saljūq conquest in Iran, and the baths of Turkey, form a particularly important chapter in the history of the hamma.m, especially noticeable in the remarkable proliferation of buildings of this type in Anatolia and Istanbul. More solidly built than the Šafawid baths, on which in any case studies and surveys are lacking (one rare example is a bath of Rāghān, the plan of which has been published by P. Coste, Monuments modernes de la Perse, Paris 1867, pl. 45), the Turkish hamma.ms have often been cited as works of the utmost technical perfection, conforming to the habitual Muslim arrangement while also inheriting the experience which the Byzantine builders had acquired earlier in this field. The Ottoman period above all saw the erection of many harmoniously arranged buildings, in which the principle of a multiplicity of rooms was abandoned in order to put the emphasis on the changing room and the steam room, which were most frequently built as majestic domed halls. These baths often consisted of two symmetrical groups of buildings which had no communication with each other—since one was reserved for men and one for women— but which were supplied by the same service annexes, on the model of various works of Sinān [q.v.] and of the Kilâşıkê hamam in Istanbul (fig. 4). Bibliography. The references to the Arabic sources have been given in the text; see also al-Hamadhānī, who gives, in ma‰̄ma hul-waniyya, a humoristic description of the behaviour of the attendants of a hamma.m. On the role of baths in Muslim society, particularly in some large towns, see A. Mez, Renaissance, ch. xxi; H. Pérez, La poésie andalouse en arabe classique, Paris 1957, 333, 338-41; E. Leví-Provençal, Hist. Esp. mus., iii, 430-1; R. Mantran, Istanbul dans la seconde moitié du XVIIIe siècle, Paris 1962, 503-5. On the layout and functioning of the bath from Damascus examples, with extremely detailed technical and architectural descriptions, the basic work is M. Ezzochar and Ch. Le Cour, Les bains de Damas, 2 vols., Beirut (PIFD) 1942-5; see also the review by J. Sauvaget, in JA, ccxxiv (1943-5), 372-37, and J. de Maussion de Favières, Note sur les bains de Damas, in B. Ét. Or., xvii (1961-2), 121-31 and 12 pl. For the purely archaeological point of view see K.A.C. Creswell, Early Muslim architecture, Oxford 1935, 235-6 (Kusayr 'Amrah and hamma.m of al-Sarakh); D. Schlumberger, Les fouilles des carrières de l' église St-Elie-et-Sharabi, Paris 1936-7, 47-47 (Ronda), xi (1946), 443-6, xvii (1952), 176-86 (Torres Torres and other places in the Levant), 433-8 (Murcia); K. Klinkhardt, Türkische Bäder, Stuttgart 1927; B. Ünsal, Turkish Islamic architecture, London 1959, 74-6. See further Ildina, KAPoLIA.

(J. Sourdel-Thomine)

In the Maghrib the hamma.m, as well as being a place intended for the major purification of the
Believer and for his bodily hygiene, is a meeting place and a centre of social life. With its entrance near the mosque, of which its acts almost as the antechamber, and sometimes situated in the middle of a saks, it assumes in the Maghribi city the character of a social centre. The hammam is often several centuries old and proudly displays its letters of pedigree; and its double entrance door, painted in green and red, is sometimes surmounted by a marble plaque with an inscription testifying to its early foundation.

Although it is true that the forty or so Turkish baths in Tunis differ in size and in the comforts they offer to their patrons, there is scarcely any variation in the general layout of the building and the way in which it works.

The area reserved for the users consists of two quite distinct parts: the section for dressing and resting and the bath proper, which includes warm and hot rooms, usually three in all, one leading into the next (see above).

The proprietor of the hammam (hammadji) and the attendants formerly came from among the Mzabins from southern Algeria who had settled in Tunis. They formed a guild. In addition to the manager, the personnel consists of: one in charge of the dressing room (harez el-mahras) helped by staff stationed in the rest room (harez el-maksura); one in charge of the linen (harez el-bazaz) assisted by a number of servants and an assistant; and the maid, in charge of the cloths and several masseurs (fayyad) whose services are available on request; one in charge of the heating (franki) with one or two assistants. The name of "master of the bath" (ra’is al-hammam) which is often given to him is a clear indication of the importance of his duties. Formerly the master of the furnace and his assistants were always natives of Ouargla (southern Algeria) and they too belonged to a special guild. They were employed without a contract, receiving each year from the owner a lump sum. The hairdresser and coffee waiter available for the clients do not form part of the staff but are tenants of the hammam. The staff of the women’s baths are all women: the manageress and her deputy are assisted by a number of female attendants (harez). There are no professional masseuses.

The young boy is given himself to the manager, who acts as cashier. When he enters the dressing room he is in charge of the harez el-mahras or the superintendent of the maksura, who gives him a loin-cloth (futa), a bath towel (bozghir) and a pair of pattens (ba’b), He is given also a second towel in which to wrap his clothes. He then goes into the "cold room", he gives his long bath-robe to the harez el-badawl; in charge of the linen, and, wearing only a loin-cloth, is led into the second room (bi’t al-skan). As soon as he has become sufficiently accustomed to the heat, he proceeds to the third room where he waits until he starts to sweat. After sweating abundantly he leaves the arad and returns to the second room for friction with a special glove (hassa), the scouring of his skin and, if he wishes, massage (tansid). The friction-glove is made of a mixture of woolen and goat's hair threads. The friction-glove and the small round "curry-comb" (makhkka, bakaka) made of threads of coarse wool or of hemp tow mounted on a cork disc. The clay (fah) had been bought long before in the saks and perfumed with rose-water, essence of rose geranium or orange-flower water.

Although most town houses contain all that is necessary for a woman's toilet, the Tunisian woman still patronizes the hammam. Nowadays many modern beauty-products replace the traditional lotions taken with the clean linen in the suitcase to the bath; but some of the procedures are repeated from one generation to another: after washing the body and the friction comes the application of fial to the hair, the removal of bodily hair, etc. The session at the bath might be prolonged if the master of the heating did not produce a violent jet of steam, the kaftis, to remind the bathers that it is time to wrap themselves in the towels held out for them by the attendants and to go and rest in the maksura.

These women’s sessions provide the occasion, both in towns and villages, for the young bride to parade herself before her friends in the various items of her trousseau. The proceedings are enlivened with songs, "youyou" and lengthy gossip. Women also take advantage of meetings at the hammam in order to make themselves up and wear all their finery.

In addition to its use for ritual purification [see wudu?] the hammam is considered, in the popular phrase, as a "silent doctor" (at-bibol-bakkah), able by its warm atmosphere, as well as by the abundant perspiration which it produces, to cure all ailments and particularly the various forms of rheumatism.

All the great occasions in life are accompanied by a bath in the hammam. The expectant mother comes there in order to ensure an easier delivery; forty days after the birth, she comes again for purification. The young boy is taken there before his circumcision. The young bride visits it three times during the period of the marriage festivities: hammam ni-asakh, the bath for cleanliness, seven days before the wedding; hammam ni-dhagab, the bath for the application of

HAMMAM AL-SARAKH — HAMPÍ

room at Khirbat al-Mafjar, attributed to al-Walid b. Yazid. Hammam al-Sarakh may then be dated some years or decades earlier; perhaps to the Caliphate of al-Walid b. Abd al-Malik, if Kuşayr Qamran and another closely similar bath at Djarābīd Sayyid (Syria, xx, 246-56) have been rightly so attributed. Bibliography: H. C. Butler, Ancient architecture in Syria: Section A: S. Syria, 77-80; and appendix, xix-xxv; K. A. C. Creswell, Early Muslim architecture, i, 273-84.

(R. W. Hamilton)

HAMMÛDIDS, dynasty which reigned over various towns in Muslim Spain from 407/1016 till 450/1058. Of al-Walid b. Abd al-Malik, the second pretender to the caliphal throne in Shawal 403/1058 on his second succession to the caliphal throne in Shawal 403/1058 on his second succession to the caliphal throne, nothing is known. The ambitious 'Ali b. Hammûd the governor of Cæuta and to his brother-al-Kasîm that of Algeciras, Tangier, and Arzila. The two were genuine Idrīsids [q.v.], their great-grandfather Hammûd being the great-grandson of Idrîs II. 'Ali, who considered himself to be the heir of Hishâm II [q.v.], proclaimed his independence, and on the pretext of liberating Hîghâm (whom he thought to be still alive), decided to make himself master of Cordova. Sulaymân al-Mustâ'în put up almost no resistance and was defeated and made prisoner in Muharram 407/July 1016. The ambitious 'Ali ordered the corpse of Hîghâm II to be disinterred, and on it being proved that he had been murdered, took it upon himself personally to execute Sulaymân as a regicide and had himself recognized as caliph with due form and ceremony. Thus he became the first non-Marvā'nîd to occupy the Cordovan throne since the restoration of the Umayyads on Spanish soil. During the first eight months of his rule he won the approval of his subjects by applying the law strictly to the Berbers, who had become accustomed to immunity. But soon, seeing that Cordovans were beginning to mutter against him as a foreign usurper and to show their sympathy for the Umayyad pretender al-Murtadâ, he forgot his moderation, allowed the Zanata to enjoy their privileges and immunities, and subjected the capital to a reign of terror until he was murdered by three Slav palace slaves. His Zanata partisans called upon his brother-al-Kasîm, who was in Seville as governor, and proclaimed him caliph. The only pretender to dispute the throne was 'Ali b. Hammûd, who was a great-grandson of 'Abd al-Rahmân III, who was proclaimed caliph on 10 Dhu '1-Hijja 408/29 April 1018 by the Slav Pâshâ Khîyârân, lord of Almería, and the Arab Mundhir of Saragossa, but on attacking Granada before making for Cordova he was vanquished and killed. The Cordovans could now enjoy an unexpected tranquillity for three years, thanks to the moderation of al-Kasîm who, surrounded by a bodyguard of Negro mercenaries, won over the Slav chiefs who had upheld al-Murtadâ. This liberal régime could not last. The Berbers of the capital, feeling themselves disregarded, invited Yahyâ, the eldest son of 'Ali b. Hammûd, to cross from Morocco to Mâlaga and march against Cordova. His aged uncle al-Kasîm gave up the struggle and took refuge in Seville. Yahyâ was proclaimed caliph in the Alcázar of Cordova on 22 Rabî’ I 412/14 August 1021. He could maintain himself on the throne for only a year and a half, for his insufferable arrogance alienated the sympathies of the very Berbers who had enthroned him, and he fled to Mâlaga. His uncle al-Kasîm returned from Seville to install himself once more in the capital, but after six months, on 21 Djumâdâ I 414/10 September 1023, the Cordovans, weary of the insolence of the Africans, rebelled and forced him to flee. The Sevillans declined to receive him and when he went to take refuge at Jerez his nephew Yahyâ went from Mâlaga to besiege him. He gave himself up and was imprisoned with his two sons, to be murdered after a few years in prison. Yahyâ reigned at Mâlaga until 427/1035. He had successors at Mâlaga until 449/1057, in which year Bâdsî (see Zirids of Spain), the Berber prince of Granada, entered it and dethroned the last Hammûdîd, Muhammad II al-Mustâ'îf. At Algeciras al-Kasîm’s son Muhammad al-Mahdzî reigned from 440/1048 and his son al-Kasîm al-Wâshîk from 440/1048 to 450/1058. In this latter year Mâlaga was occupied by the Abbâdîds of Seville.

Hâmôn, Moses, chief Jewish physician to Sûleymân I. His father, Joseph Hâmôn, a native of Granada, served as physician at the court of Bâyezîd II and Selîm I. Probably born ca. 1490, Moses Hâmôn became a leading court physician and influential courtier under Sûleymân I. He seems to have allied himself with the powerful court faction headed by Khûrrem Sultân [q.v.], the Sultan’s favourite consort, her daughter Mîhr-î Mâh [q.v.], and the latter’s husband, the Grand Vizier Rûstem Pâshâ [q.v.], who, inter alia, conspired against the heir presumptive, Prince Mustâfâ [q.v.], executed in 1553. Shortly before Hâmôn’s death in 1554, he was dismissed as a result of the intrigues of envious colleagues or the temporary disgrace of Rûstem Pâshâ.

Hâmôn possessed a valuable collection of manuscripts, among them the famous Dioscorides codex of the 6th century A.D., now in Vienna. He wrote an early Turkish treatise on dentistry and was instrumental in the printing of several Hebrew works and of a well-known Persian translation of the Pentateuch. He also played an important part in Jewish communal affairs.

HAMPÍ, the name now commonly given to the ruins of the capital city of the Vidjayanagara [q.v.] empire, on the right bank of the Tungabhadra river 60 km. north-west of Bellary. The name seems to be derived from the prominent temple to Pampâpâti (Kannada h < Old Kann. p) in the bâsrâ area.

The Vidjayanagara empire is of importance for the Muslim world not only as an active Hindû power which defied its Muslim neighbours for over two centuries, but also for the evidence it offers of the progressive synthesis of certain aspects of Hindû and Muslim cultures from the 8th/14th to the 10th/16th centuries; this article is concerned with that
synthesis as expressed in its buildings.

Most of the buildings of Vidjayanagara are characteristically Hindu works in the late Hoysala style; but in some, a distinct Muslim influence is apparent, especially when the building concerned is (presumably) one built for the Muslim community or by a section of it. It is known that the ruler Devaráyá I (1406-22 A.D.) had many Muslim mercenaries in his service: the first of his line to appreciate the advantages of cavalry, he had imported many horses from Arabia and Persia and enlisted trained troopers to ride them; and reference is made also to the 'Turkish' bowmen he attracted by liberal grants of cash and land. The northern gate is of the typical Hindu beam-and-bracket construction, but the remains of the turret and part of the energetic, pointed arches, one square and one octagonal, have arched openings on all their faces and are thus strikingly unlike any other Hindu work in the sub-continent, although the synthesis of the Hindu and Muslim styles appears here in that the roofs are of the stepped pattern which characterizes the temple roof (śikhara). Within the enclosure stands the finest and most complete of the mixed-style buildings, known as the Lotus Pavilion; this is an open pavilion on the ground floor, with massive piers and foliated arches showing a triple recession of planes of the intrados which recalls the style of the Lodí mosques of Dihlí [q.v.]. The upper storey is provided with numerous small arched windows in each face, originally equipped with wooden shutters, and is separated from the ground storey by a deep eaves roof on corbelled brackets very similar in effect to the deep eaves of the Bid gpur buildings. The roof, however, is of the Hindu pyramidical variety; this appears to be a late building (ca. 972/1565).  

Outside the sanāna enclosure is a long oblong building with eleven tall arched openings alternating with walls of blind arches, generally known as the 'elephant stables', but which Havell takes to be the palace called a 'guard-room' by Longhurst and 'Ram Rāḍi's treasury' by Havell; it has also been known as the 'concert hall'. This shows the best use of the structural arch in the Hampi buildings; foliated arches with radiating brick voussoirs supported on slender columns; the roof is incomplete. Its purpose cannot now be known, but it obviously reflects work by Muslim craftsmen.

Other buildings of Muslim style at Hampi include some of the constructions associated with the elaborate irrigation system, the relation of which with the irrigation systems of the Muslim cities of Bídār and Bigidāpur has not yet been ascertained. These include two tombs—the southern gateway, one of the main entrances to the city, shows a tall domed structure supported on four open arched sides, similar to the late Bahnānī and Bārīd Shāhī tombs at Bídār [q.v.]. Within the citadel is a large high-walled enclosure generally referred to as the sanāna; the accounts of travellers to the Vidjayanagara court suggest that the kings did indeed keep their women in seclusion—a practice which was known in early Hinduism but seems to have been most freely adopted by Hindūs as a direct imitation of Muslim practice—but that they were allowed to watch spectacles taking place in the city. The so-called 'watch towers' on the walls of the enclosure appear to have been built for the pleasure of the ladies of the sanāna, a purpose similar to that seen in the Mughal palaces [see būrg, iii, ad fin.]; these towers, one square and one octagonal, have arched openings on all their faces and are thus strikingly unlike any other Hindū work in the sub-continent, although the synthesis of the Hindū and Muslim styles appears here in that the roofs are of the stepped pattern which characterizes the temple roof (śikhara). Within the enclosure stands the finest and most complete of the mixed-style buildings, known as the Lotus Pavilion; this is an open pavilion on the ground floor, with massive piers and foliated arches showing a triple recession of planes of the intrados which recalls the style of the Lodī mosques of Dihlī [q.v.]. The roof, however, is of the Hindu pyramidical variety; this appears to be a late building (ca. 972/1565).  

Outside the sanāna enclosure is a long oblong building with eleven tall arched openings alternating with walls of blind arches, generally known as the 'elephant stables', but which Havell takes to be the palace built by Devarāyá II (1422-46 A.D.) for his Muslim troops. The arched chambers are domed, and the central chamber is surmounted by a square turret, probably originally crowned by a stepped tower of the Hindū pattern, approached by steps from within and therefore providing access to a high place to cry the adghām. A local tradition asserts that this building was later used as a stable for the state elephants, but there seems to be no trace of the occupancy of these animals; further work on the site, including excavation, will be necessary if the thesis that it was the mosque can be supported. A structure in the army commander's enclosure has been identified by Longhurst as Devarāyá's mosque; but this building faces due north (the kibla here being slightly north of west) and the identification may be rejected.

Near the 'elephant stables' is an oblong arced building called a 'guard-room' by Longhurst and 'Rām Rāḍi's treasury' by Havell; it has also been known as the 'concert hall'. This shows the best use of the structural arch in the Hampi buildings; foliated arches with radiating brick voussoirs supported on slender columns; the roof is incomplete. Its purpose cannot now be known, but it obviously reflects work by Muslim craftsmen.

(2) Several villages in southern Morocco, see V. P. Lancere, Repert. alph. des considérations de tribus . . . et des agglomérations de la zone francophone de l’Empire chérifien, Casablanca 1939, 380, 432.

(3) Al-Baṣra (q.v.): the identification is given by al-Bakrid, K. al-Masālik wa’l-mamālik, ii, 110, Tr. fr. M. G. de Sane, Algiers 1912-13, 216.

4) Dar al-Hamara: Marmol, L’Afrique, Fr. tr. Perrot d’Albancourt, Paris 1667, ii, book IV, 200, gives this name to an ancient Roman town situated to the North of the mouth of the Wādī Luκkus, and adds in the table of contents “on the mountain of the Zarhoun” . . . but this mistake has not been made on the map of the “Kingdom of Fez” (between pp. 136 and 137). Marmol identifies this locality, without either proof or reason, with “l’Epticienne de Ptolémée”. Dar al-Hamara has not yet been discovered.

5) Fās: al-Khūrī, in his Aḥrab al-maṣārif, Beirut 1889, records under the word al-hamra6, though without any evidence, “the name of the new town of Fās”. We know of a mosque at Fās with this name, the significance of which remains enigmatic.

(Sidīlmās did not bear the name al-khūrī, but rather al-ṣame‘ā7; see D. J. and J. Menfm, Abbar, cité royale du Tafilalet, in Hesp., i/2 (2nd trim., 1959.) Bibliography: in the article.

(G. Deverdun) AL-HAMRA5, the Alhambra of Granada [see ḠARNAṬA4].

HAMRIN, Djabal, modern name of an isolated western chain of the mountains of the Iranian border, about 500 miles long. Its northern extremity crops up in the Djazira, south of the Djabal Sindjar and the Tigris flows through it at al-ṇāṭa. At Shahrahān it is crossed by the great road from Baghdad to Hamadān and Tehran, at Ahvaz it separates the plains of the ancient Elam, the modern Khūzestān, from those of the ʿAṬṭār, and is finally united with the Iranian plateau in the province of Fārs. This range has had its name repeatedly changed. Its Assyrian appellation is not certain. The Syrians called it Dūkik or ʿArūkh, which appears in Polybius, v, 52 with reference to the campaign of Antiochus III against Molon, as τὸ ᾄροφον ὄρος. Bārmām is the oldest Arabic name, which may be traced to the Syriac Beth Rmnān, i.e., temple of Rimmon, probably an Assyrian sanctuary. The mountains took this name from a village on the eastern bank of the Tigris, where the river flows through the mountains. It lay on the Baghdād-Mawsil road, was inhabited by Jacobites and for a time formed a bishopric with Beth Wāzlī. Ḫudāmā and Yāḵūt give the Syrian name Sāṭiddāmā to the western part of the range in the Djabal; the word means blood-drinker and appears elsewhere as the name of frontier rivers. Later in Ibn Ḥawkal, this western part is called Djabal Shāhū, traces of which name remain in that of the modern village of al-Shāhk. Ḫuṣaqīr and Yāḵūt, following Abū Zayd al-Balkhī, say that there were springs of pitch in the midst of the waters, as indeed is still the case at the place where the Tigris breaks through the Bārmām, and that the centre extended from the centre of Djabal in the west, to the borders of Kermān in the east, where it becomes the hills of Masābdān (Pushi-t-i kūb). The remarkable length of this homogeneous range has given rise to fanciful notions, so that Yāḵūt, for example, speaks of al-djabal al-muṣammad bi ‘l-ard, as comparable with the ocean surrounding the earth. The modern name of Hamrīn appears first in Yāḵūt (iii, 7) under the form Ḫurmīn. It is found also as early as 78/1347 in the great wakīyya inscription of the Madrasa al-Mirdżāniyya (cf. L. Massinon, Mission en Mésopotamie, Inst. Français d’Arch. Or., Cairo 1912, 16, 28). The part west of the Tigris is now called Djabal Mukhīl. A parallel range is called Djabal Mukanṭūr, i.e., colourless, probably a name of the village on the Tigris (Assemeni, Bibl. Orient., ii, 218, and Marāṣid). Such names derived from colours are nowadays fast driving out the ancient names from Arabic nomenclature; even Ḫurmīn is a modern name, the “reddish”, from ʿaḥmar, in spite of the old Syriac ending in -in. A place close to the Tigris bears the ancient, expressive name of Kānūk, which means the “stranded” or “confined”.

In the unpublished Turkish work Dāmmu‘ al-anwār fi manābiḥ al-abbāyir of Saḥf al-Dīn Ṣādu ʿAl-Durūfand al-Nakhsbandi al-Bandānidī of 1677/1666 a tomb of Mājdīj al-Kurdu (d. 677/1277-8) is mentioned as a well-known place of pilgrimage on the Ḫamrīn; it has not yet been identified (see Massinon, op. cit., 60).

HAMULA, name given in some parts of the Arab Middle East to a group of people who claim descent from a common ancestor, usually five to seven generations removed from the living. The word is derived from the Arabic term hamula, to carry, and literally means a “female carrier”. Some writers believe that the reference is to a beast of work and that the word was originally used in this sense to describe the landless, patronymic groups who worked as tenants for landowners. A more plausible explanation is that the reference is to a woman in her capacity of bearing children. E. Peters [see Bibl.] suggests that such reference symbolizes descent from ‘one womb’ and signifies full brother unity and hence a high degree of group cohesion.

The hamula is usually a territorial group whose members cooperate economically and politically. In Arab villages in Palestine during the Ottoman régime each hamula occupied a special quarter (ḥāra) and its members held adjacent plots of common land (mushfa). The members cooperated in agricultural work, exchanged gifts on special occasions and helped each other economically when in need. Politically, the hamula formed a “blood group” whose members paid or received blood compensation (diya) collectively in cases of homicide. Its members were described as ‘those who stand together in one line’ (yāṣaffa ma‘a ba‘dī). They literally ‘stood’ in this way on two major occasions: in a peace-making ceremony (sulha [q.v.]) and in the graveyard when
burying one of their number.

The men of a hamula were also linked together through the sharing of a number of rights and obligations. In the event of dispute, the members of a hamula were bound to protect the honour of hamula women. Through the practice of preferential in-hamula marriage they were further linked together by matrilateral and affinal ties. Children born of such marriage had the same status as both paternal and maternal uncles and cousins (mu'allama, mu'ahwasawalin) and in cases of disputes were not likely to harbour conflicts of loyalties.

In subsequent decades law and order came progressively under the control of the centralized government, and common land was increasingly converted to private property. As a result the hamula lost some of its economic and political functions. Also, stratification cut across hamula boundaries and the principle of in-hamula marriage came into conflict with the principle of equality of status between spouses in marriage (see Kafa'a), and this brought further disruption to the hamula.

However, largely through the enduring ties resulting from in-hamula marriage, from co-residence and from continued cooperation in a number of ways, the hamula has shown a remarkable degree of persistence in the face of drastic social change. Under some circumstances it has assumed new functions in new political and economic situations.

HAMLUN, name for a salt plain in eastern Iran, Afganistán and Balóčistán, usually the drainage area of a river. The etymology of the word, found in Pahlavi as a horm, is disputed, but it is used especially for the lake in Sistán into which the Hilmán River drops. This lake or swamp changes its size and even location according to the season. The usual name for the lake, until recent times, was Zarah or Zirí (compare Avestan srayah "lake"), but this name is now used for the depression in Afganistán south of Sistán into which the Hilmán flows when the water is excessive (Gawd-i Zarah). One may find much information about the lake of Sistán under the name Zarah in the Arabic and Persian geographers.

HAMZA, archaographical sign alif, which is the first letter of the Arabic alphabet, with numerical value one; transcribed ' internally and at the end of words, ignored initially (except in special cases) in the system of tie-points. Definition: unvoiced glottal occlusive. For the Arab grammarians, hamza is a harf sabíh defined as: madj'hara, having as hamzad: aksa l-ḥalk “the farthest part of the throat” (like h) (al-Zamakhsharī, Mu'āṣarat, § 732). For the phonological oppositions of the phoneme hamza, see J. Cantineau, Esquisse, 178; for the incompatibilities, ibid., 201. Hamza madj'hara. Hamza, a priors, should be unvoiced. As a consequence, when he placed it, “with every reserve” it is true, as a voiced sound opposite the unvoiced h (Consonantisme, 280). The symmetry of the system benefited by this, but there is very little probability that hamza was voiced in Arabic. There was simply a mistake on the part of the Arab grammarians, who were unable to distinguish sufficiently the vowel articulated with the hamza and the unvoiced consonantal element which is aksa and which is a part of the common Semitic consonantal system. It was therefore an archaizing edition, makes good the alifs lacking in the text with a superscript upright alif (see ibid., 152-3). Even in current Arabic writing, alifis lacking in the dactyls of some words, for example, in līlah “but” and some demonstrative pronouns (J. Cantineau, Consonantisme, 288). It was therefore part of the common Semitic consonantal system. In Arabic, one modification of hamza which appears
to be unconditioned is the development of initial hamza into kān: the *an*ana of the Tamīm and the Kays (see Musharī', i, 221 end: C. Rubin, Anc. West-Asia, § 2 o, § 3, § 4). They said, for example, ʿudhūn for ʿudhūn "ear". More important modifications affected hamza in the Hijāz where it became very weak.

The Arab grammarians (Sibawayhi, ii, Ch. 417; al-Zāmakahsharī, Mufassal, 658-62) designated all the accidents which can befal hamza as tāhīfī al-hamza. This tāhīfī, literally "weakening", included (i) the simple substitution of a vowel for hamza; (ii) the change of hamza into another articulation; this is the ibdāl of hamza, which is properly a kālīb; (3) the suppression (kādhīf) of hamza. All this has been set out in detail in H. Fleisch, Traité, § 17 to 20, and by J. Cantineau in Cours, 77-84.

(1) The hamza bayna bayna. The 101th question discussed in the Kitāb al-Insāf by Ibn al-Anbārī demonstrates the difficulty which the Arabs found in explaining this; many authors have written of it (references in Traité, § 45 b). The European writers, G. Weil, A. Schaade (references ibid.), were no more successful in achieving a satisfactory explanation and J. Cantineau is not very clear in Cours, 77. The Arabs, as the existence of hamza in their language indicates, were a people who practised "the hard attack" on vowels (see J. Marouzeau, Lexique de la terminologie linguistique, s.v. attaque); that is to say, in the articulation of a vowel, there was first preception (closing) of the vocal cords; then their sudden opening produced the explosive glottal stop, the hamza; then came the vibrations of the vowel; and when the vowel was ended the vocal cords closed. This explains why they needed a hamza to pronounce an initial vowel and why they were unable to pronoun two vowels successively with a simple hiatus; when the first vowel was ended the vocal cords closed into the position for the hard attack on the second.

The hamza bayna bayna, according to the Arab grammarians, was produced inter vocally, when, after articulation of a vowel belonging to a preceding syllable, the following syllable had to be enunciated beginning with a hamza, as follows: -a'a- in sā'āla, -a'ā- in sā'āla, -a'ā- in sā'āla, -a'ā- in sā'āla, -a'ā- in sā'āla, -a'ā- in sā'āla, etc. After the articulation of the first vowel, the vocal cords closed, then opened for the hard attack on the second, but, after the closure of the vocal cords there was no explosive glottal stop: the hamza was reduced to the firm clear interruption established by the closure of the vocal cords. One passed from this closure, characterized by strong articulatory tension (since it begins the first part of the syllable, with increased tension) direct to the vocalic vibrations; this was sufficient to maintain the autonomy of the syllable. But it is apparent that, according to the extent to which the glottal stop was attenuated, many degrees of weakening of the hamza were possible, right up to its absence (hamza bayna bayna).

The Arab grammarians were unable to make this analysis. They lacked a proper notion of the vowel; their haraka is not a har and has no autonomy; they had to proceed by means of the detour of the harf al-madd, of which the haraka formed part. They recognized the weakness of the hamza bayna bayna, near the state of sākin, but still mutakharrir. In the expression of Sibawayhi hamza bayna bayna (ii, 452, l. 10) they saw the indication of an "intermediate" hamza, that is, one placed between two makhrajī (as is made clear in Mufassal, 165, l. 19-20): for (i)u, between the makhrajī of the aṣūf (of which the fathā is a part); for (i)u between the makhrajī of the hamza and the makhrajī of the ya' (sakhima) (of which the kāmā is a part), etc. These explanations remain obscure by reason of the deficiency of the means of analysis at the Arabs' command.

(2) The ibdāl (kālīb) of hamzas. This ibdāl was produced only in the middle of a word or in the conjunction of two different words. In both cases the standardizing activity of the Arab grammarians led to the acceptance of the sequences -i'y- > -rya-, -u'a- > -yatt-. They rejected the phonetic change of hamza into another articulation; this is the ibdāl of hamza, which is properly a kālīb; (3) the suppression (kādhīf) of hamza. All this has been set out in detail in H. Fleisch, Traité, § 17 to 20, and by J. Cantineau in Cours, 77-84.
For the repercussions of the weakness of hamza on the morphological system see J. Cantineau, *Cours, 81-3*, or Traité, § 21. The dissimilation *'ard > 'ard 'I see' may be noted. Dissimilation may also have been at work in *'asāla > 'asāla 'I ask'; *sa-lā* and its unaccomplished may have undergone various influences (see ibid., § 22 b and d).

For the treatment of the pause on hamza see J. Cantineau, *loc. cit., 50-1* or Traité, § 21.

The action of the Arab grammarians in the question of hamza may be summed up as an adherence to the tradition of the Tamim, their efforts at standardization were a reaction against the pronunciation of the Hijādā. As possible, but not obligatory, *ibid* they accepted only *'a* > *ya* and *u* > *wa*; as possible, but not obligatory *bâdî* they accepted cases like ra's > rās, *dâb* > *dâh*, *mus'm* > *muimin*. In the meeting of two *hamzas*, apart from cases like *'a* > *'a* given above, they set up as standard the weakening (*hamza bayna bayna*) of one of the two *hamzas*. But one thing remained outside the scope of their attack: the diversity in writing *hamza*.

**Orthography of hamza.** The very first rudimentary attempts to put the Kur'ān into writing were made according to the local pronunciation of the Hijādā, which subjected *hamza* to all the *tashâf* already described. The Kur'ānic orthography however was surrounded with a holy reverence which forbade any change in the traditional ductus of the words. When the Muslim community and its leaders wished to fill in the inadequacies of this orthography and pass from *scriptorium defectiva* to *scriptorium plena* (see R. Blachère, *Introduction, 4, 71, 78-98*) they had to give a sign to *hamza*, properly pronounced, in contrast to the usage of the Hijādā. They used a point, but of a colour different from that of the vowel points. The system lasted a long time; "it was still the current usage in the fifth-sixth century at the time of al-Dānī" (ibid. 97). The current sign appears to use a little *yayin* instead of the point. Placed over *alif*, the complementary sign indicated for *alif* the glottal occlusive pronunciation (*hamza*). When, by *ibdâl*, this glottal occlusive had become *w* or *y*, entailing *wâd* or *ya* in the ductus of the word, the sign of *hamza* was placed above this; this is the origin of *wâd* and *ya* of *hamza* as *kursî* of *hamza*. Where nothing remained in the spelling to recall the glottal occlusive, the *hamza* was put back in the empty space, so to say, that is, without *kursî*. These are, schematically, the principal lines of the story of writing *hamza*.

It was conditioned by the anxiety to preserve the glottal occlusive *hamza* in an unalterable text which had not made provision for it. But there remain obscurities in the orthography of verbs with *hamza* as 2nd radical, in the accomplished of the forms *sa-lâ*, *sa-lâ*, *sa-lâ*. See Traité, § 16; on the writing of *hamza*, *al-Zadidjadj*, *al-Diurnal*, 277-80; on the usage of the Cairo Vulgate, R. Blachère, *Introduction*, 151-2.

**Difficult cases.** According to Ibn al-Sikkīt (C. Rabin, *Anc. West-Ar., 14 s*), *hamzas* sometimes develops into *k* among the *Tayyï*, e.g., *hin* for *'in* "in". "It is but difficult to say whether we can speak here of a sound change," adds C. Rabin. For *'a* as initial, see Renan, *Histoire des Arabes*, 292 C) quotes the ancient dialect forms *hamâ* (= hadhâ + *alâ*) and *hadhâ-lâlîgh* for *hadhâ-lâlîgh* "Is this he who?" Is there development from *hamza* to *k*? G. Garbini, *Sull' alternanza k* 2 in *semitico* (in *AIUVOn*, sezione linguistica, i (1959), 47-52) on every occasion when he acknowledges an alternation *h* 3 , considers that the *k* must be regarded as primitive and the *hamza* as secondary, thus:

\[ h > k, \]

in accordance with the general tendency of "the laryngeals and the pharyngeals" to weaken.

"Matters are not so simple as that. But one point at contrast to the usage of the Hidjaz. They used a sign to *hamza*, partly pronounced, in relation to the spelling of the *hamzas,. But there remain obscurities in the orthography of verbs with *hamza* as 2nd radical, in the accomplished of the forms *sa-lâ*, *sa-lâ*, *sa-lâ*. For *'a* as initial, see Renan, *Histoire des Arabes*, 292 C) quotes the ancient dialect forms *hamâ* (= hadhâ + *alâ*) and *hadhâ-lâlîgh* for *hadhâ-lâlîgh* "Is this he who?" Is there development from *hamza* to *k*? G. Garbini, *Sull' alternanza k* 2 in *semitico* (in *AIUVOn*, sezione linguistica, i (1959), 47-52) on every occasion when he acknowledges an alternation *h* 3 , considers that the *k* must be regarded as primitive and the *hamza* as secondary, thus:

\[ h > k, \]
Like so many heroes, Hamza passed into the world of legend after his death and became the central figure of a popular romance to which countless later writers made additions or adaptations. These took place in lands which the real Hamza never visited—Ceylon, China, Central Asia and Rum. The explanation suggested by Bahār (Sabā-ghnāsī, i, 284-5) is that the source was a work, no longer extant, entitled Kīsā-i makhzā-i Ḥamza which is mentioned in the Ta‘rīkh-i Sūtān. This deals with the exploits of a Persian Kharidī leader, Hamza b. ‘Abd Allāh, who led an insurrectionary movement against Ḥārūn al-Rashīd and his successors. According to the Ta‘rīkh-i Sūtān, Ḥamza undertook expeditions to Sind, Hind and Sarandib (i.e., India and Ceylon). His boldness appealed to the Persian imagination long after the Kharidī movement had died down and, by identification with the Prophet’s uncle, he became an orthodox Muslim hero in popular literature, acceptable to all.

Before passing to the Romance of Amir Ḥamza, it is necessary to discuss the career of Hamza b. ‘Abd Allāh very briefly. His name is given in the Zayn al-akhbār of Gardīzī as Ḥamza b. ʿAḍhārak, which is spelt in the Arabic sources as Aḍrak or Atrak. ʿṬabarī gives only a brief outline of his life but a more detailed account occurs in the Persian sources. He was a native of Sīstān and the son of a dīkhār, tracing his genealogy to Zav, the son of Tāmhlāb. Since one of the Caliph’s agents had made insulting remarks about his lineage, he rebelled. ʿṬabarī and Ibn al-Aḍīr (whom Gardīzī follows) state that this took place in 179/795-6. In the Ta‘rīkh-i Bayḥaḵ, however, the date is given as 181/797-8, which is accepted by Mme Figuievskaya. Ḥamza successfully defied al-Rashīd and prevented the men of Sīstān from paying the kharāji. Against his growing power, ‘All b. ʿĪsā, the governor of Khurāsān, brought him to court in person to Sīstān in 192/807-8. Although the latter gave him a written promise of safe-conduct, Ḥamza refused to accept it and determined on further resistance. After the death of al-Rashīd, he led expeditions to Sind and Hind and died in 213/828-9.

Gardīzī says, on the other hand, that he was killed in battle in 210/825-6.

There is every indication that the Romance of Amir Ḥamza (called variously Dās’dān-i Amir Ḥamza, Ḥamza-nāma, Kīsā-i Amir Ḥamza, Asmā’-i Ḥamza or Rūmāz-i Ḥamza) was of Persian origin. The action centres around the Sāsānian court at Ctesiphon, and Van Konkel draws an interesting parallel between events in the Romance of Ḥamza and the adventures of Rustam in the Shāh-nāma. Earlier and simpler recensions reveal some traces of archaic phraseology which might easily be as early as the 5th/6th century. It is significant also that none of the Arabic sources makes any reference to the existence of a Romance of Amir Ḥamza before the 11th/17th century. At that time Ibn Taymiyya refers to stories current among the Turcomans of Syria about the mighty feats of Ḥamza (Mīnhādī al-sunnah, Bulāk 1322, iv, 12). In the Persian version the number of sections varies between 69 and 82. At least three different recensions can be recognized from the numerous lithographed editions and manuscripts (see BSOS, xxiv/3 (1959), 473-4). One of these is the archetype of all subsequent versions in various languages. The Romance was ascribed to Djalāl al-Balīgh, but in a manuscript at Dresden the author’s name appears as Shāh Ṣa’īr al-Dīn Muḥammad Abu ʿl-Ma‘ālī. An anonymous poetical version entitled Shābī-bīrān-nāma is mentioned by Dr. Saḥaf (Hamāsā-sarā’i dar Irān, 379). It is in 62 sections and was composed in 1073/1662-3.

There is a considerable difference between the Arabic Sīrat Ḥamza and the Persian Romance. In its most complete form the Arabic version is in ten parts, and many new names and episodes appear. The hero is not the well-known uncle of the Prophet as in the Persian version, but is an entirely different person who is, however, some relative of the Prophet. Copies of the Arabic version at Gotha and Paris are ascribed to Muḥammad Abu ʿl-Ma‘ālī al-Kūfī al-Dahlahwān who may be the same as the author of Ṣayy b. Dīy Yāsūn. To complicate further the vexed question of authorship, a copy of the Arabic version in the Ambrosiana Library at Milan is said to be by Shīhāb al-Dīn Muḥammad al-Dahhān.

From Persia the Romance of Ḥamza spread to India and achieved great popularity at the Mughal court. The story was much embroidered at this period and it became a favourite subject for the Mughal miniatures. The number of copies which, according to Garcin de Tassy, was written by a certain Ashk. The latter mentions a version in fourteen volumes prepared for Maḥmūd of Ghaznī—a statement of dubious authenticity. In the majority of Urdu versions the story has been divided into nineteen dāfārs, each of which has a title of its own. A partial English translation from the Urdu was published at Calcutta by Shāykh ‘Abd al-Ḥaqq Husain in 1832. Translations were also made into Bengali and Tamil.

According to Köprüülü, the Ḥamza cycle became very popular among the Turks. Ewliya Celebi mentions a series of miniatures depicting the combat of Ḥamza with well-known champions and demons. The earliest Ottoman version was made by Ḥamzawi (d. 815/1412-3) in twenty-four volumes. It was in prose, freely interspersed with verses. Copies of Turkish versions are to be found in Vienna (Flügel, ii, 29-30), in Paris (Biblioth AF 352: S 632, 647-9, 654, 656), and in Milan (Ambrosiana, no. 226, 330). In the 10th/16th century, Ağhreminizade Hāşimī wrote, in the popular language of the story-tellers, a poem Er-bi pālād-dīl on the exploits of the son of Ḥamza, which is mentioned by ʿAshīk Celebi.
Among the adaptations and imitations of the Romance in other languages, the Georgian Romance cycle entitled Amiran-Darajianiani is important as one of the first made from the Persian. It is attributed to Mose Khoneli who is said to have lived in the 12th century. A full Georgian translation, however, was not made until the 19th century (Bodleian Library Ms. Wardrop c. 3). Other versions were made in Malay (Hikayat Amir Hamza), and Javanese (Menak) from which the Balinese and Sundanese translations originated.

HAMZA b. 'ALLI b. AHMAD, the founder of the Druze religious doctrine. He was of Persian origin from Zîran and a felt-maker.

Among the Ismâ'îlî followers of the Fâtimid caliph al-Hâkim (q.v.) there had been speculations encouraged by his strange conduct and predictions of earlier authorities that he might be the expected Kâ'im. While the leaders of the official propaganda organization tried to counteract these speculations, al-Hâkim early in 408/summer 1017 began to favour a movement led by al-Hasan al-Akhram proclaiming his divinity. Al-Akhram tried to win over prominent officials by sending them letters and was honoured in public by al-Hâkim. In Ramâdân 408/January-February 1018 he was murdered while riding in the retinue of al-Hâkim. The caliph punished the murderer but cut off entirely his connexion with the movement.

Hamza had participated in the proclamation of al-Hâkim's divinity and the end of the distinction between exoteric and esoteric Islam, but had remained in the background. After al-Akhram's death he resumed his promises. In May 1019 al-Hâkim again showed his favour to the movement. Now Hamza claimed the leadership as the Imân and khâ'im al-zamân and adopted the title Ḥâdi al-wustûdžîbîn. The centre of his activity was the Raydân mosque near the Bâb al-Nâyr outside the walls of Cairo. He met a prominent rival in the Turkish official al-Darazi (q.v.) who, after trying in vain to come to terms with Hamza, acknowledged, independently and attractively, many of Hamza's followers. On 12 Safar 410/June 1019 Hamza sent a delegation to the chief Kâfî in the Old Mosque with a letter demanding his conversion. Three of the men were killed by the mob and riots ensued. Al-Hâkim had the transgressors arrested and executed at various times. The Turkish troops were incensed by this and turned against their countryman al-Darazi, besieging him in his residence (darî). Forty of his followers were killed but he escaped to the palace. The Turks demanded his extradition from al-Hâkim, who put them off to the following day. On their return he informed them that al-Darazi had been killed. Now all the soldiers turned against hamza in the Raydân mosque and besieged him with twelve of his men. Hamza escaped and had to hide a short time but by Rabî' II 410/August 1019 regained al-Hâkim's favour. He now built up a strong missionary organization, attributing cosmic ranks to its leaders. The movement spread rapidly, particularly in Syria. When al-Hâkim disappeared in Shawwâl 411/January 1021, the adherents of the Hâkim-cult were persecuted and Hamza had to hide. In some letters (which appear to be genuine) he promised his followers his triumphant return. According to Yahyâ b. Sa'id he was killed some time after his flight. Babâ b. Din al-Mu'tanâ, who became the leader of the movement, pretended to be in touch with him and still in 430/1040 predicted his near reappearance.

For Hamza's religious doctrine see DURUZ.

HAMZA b. BâD AL-HANAFI AL-KUFI (the spelling Bîd is attested by a verse where this name rhymes with tanbîd; al-Dâhiyân, Bayân, ed. Hârûn, iv, 47), is one of those Arab poets, full of wit and verve,
who among the great men of the day did not take seriously but loaded with riches to gain their eulogies and escape their sarcasms, for they were quick to get the laugh on the slightest scuffles, did not hesitate to use blackmail. Hamza b. BID, who is treated by his biographers with indulgence and sympathy, is said to have succeeded in extracting from the great men whose company he frequented a million dirhams, and this figure does not appear exaggerated, if we are to judge by the sums which the slightest scraps of verse brought him. A childhood friend of BILB b. ABI BURDA (SARK, ABI BURDA) who did not, however, succeed in attaining him at Basra, he lived on familiar terms especially with the Umayyad princes and the sons of the Muham- 
lab b. ABU SUFRA whom he always approached with success, even when he went to see them in prison. The Aghani reproduces several anecdotes which show with what spontaneous audacity he managed, thanks to two or three verses, to provoke the hilarity of his friends and to make them loosen the oil from Kufta to Hulwan whence he brought groups in difficulty to make petitions on their behalf, for his tongue was feared because his predictions or maladictions had a curious tendency to come true. Verses addressed to Sulaymân b. ABD AL-MALIK, foretelling his accession to the throne, could still encourage Harûn al-Rashid, while yet heir presumptive; other anecdotes tell his libertinism (khali* mudîn), it is astonishing that his died in 116/734-5.

Hamza B. BID, b. UMARA b. ISMA', ABU 'UMARA AL-TAYMI AL-KÔF AL-ZAYYAT, one of the "Seven Readers" of the Kur'an. A maudul of the family of 'Urîma b. RIB' AL-TAYMI, he was born in Hulwân in 80/699 and became a merchant; his surname al-Zayyât arises from the fact that he transported oil from Kufta to Hulwan whence he brought cheese and nuts. Having settled at Kufta, he became interested in hadîth and the farâ'id, on which he left a Kitâb al-Farâ'id which was probably collected by his pupils (Fihrist, 44). His fame, however, rests particularly upon his "reading". A pupil, in this field, of al-'AMâgh [g.v.] and of Humrân b. AS'YAN, both of whom followed Ibn Mas'ûd, of 'AS'IIN [g.v.] and of Ibn ABI Laylâ who founded his authority upon 'Ali, he established an independent school which became canonical and was put together in a Kitâb Kita'at al-Hamâ (Fihrist, 44); he was criticized, particularly by Ibn Hânbal and Ibn 'Ayyâsh, perhaps because of their insufficient knowledge of his "reading". Notable among his numerous pupils were Sufyân AL-ThawRî and al-Kâ'ÎT, but those who passed down his "reading" are his immediate disciples, Khalîf b. Hîshâm (150-229/767-843) at Baghdâd and Khalîf b. Hîshâm (d. 220/835) at Kufta. Hamza died in Hulwan in 153/770 where his "reading" was not unknown. Blachère, Introduction au Coran, Paris 1959, index. (Ch. Pellat)

Hamza b. BID - HAMZA AL-HARRANî, ancestor of the Banû Hamza who for several generations held the office of na'bit al-ashraf [see SHAIR] in Damascus, with the result that in the end the family was named Bayt al-Nabî. As early as 330/942 a representative of this house, ISMA'IL b. HUSAYN b. ABD AL-NATTI, was acting as na'bit. Several of his descendants distinguished themselves through their ability and learning. Two sons of 'AÏân al-Din 'ALI b. IBRÂHîM, the sayyid NâSîR al-Dîn MuHAMMAD and the sayyid SHIHAB al-Dîn left their names in the history of Damascus. The former, called al-ZurrâB on the west coast of Sumatra. He lived before Shams al-Dîn of Pasai (d. 1630) who cited his poems and commented on them, and before the doctrine of emanation in seven grades became popular in Indonesia through the influence of Muhammîd b. Fâdil (d. 1620) work al-Tâhfa al-mursala. His lifetime may thus have been the second half of the 10th/16th century. He belonged to the school of mysticism characterized by names like Ibnu al- 'Arabi and 'INâKI. Works: Asrâr al-sa'dîfîn, Shâb'd al-ustâfîn and poems (Rubâ'î) (ed. J. Doorenbos, De geschriften van Hamamah Pansoeri, 1933, uncritical, many poems clearly not by Hamza; see Drewes, TITLV, i, 391), Kitâb al-Muniâh (unpublished, see Voorhoeve, Twee Maleise geschriften, 25). His doctrine: H. Kraemer, Een Javansche prirbon, 1921, 24-44, in Djâd, iv, 29 ff.; A. Johns, in JMBAS, xxxvii/1, (1955), 74. (P. Voorhoeve)
HAMZA AL-HARRANI — HAMZA BEG

in the madrasa al-Hafiyya. He died in 1067/1657. His son ftusayn, born in 1031/1622, became a member of al-Madżlis al-Kabir. At the time of the massacres in 1860 he distinguished himself by protecting numerous Christians; seven years later he held the office of mufti of Syria.

He ranks as one of those scholars whose writings, especially on religion and law, are unusually voluminous. Part of his reputation he owes to his rare virtuosity in calligraphy: he was able to write the fātīha on a grain of rice and to engrave on the stone a signet-ring the names of the warriors who had fallen at Badr. He died in his native Isfahan in 1085/1672.

**Bibliography:** Brockelmann, I., 34, 496; S II, 31, 775; Ibn ʿAsākir, Taʾrīḫ, iii, 25-6; Muḥibbī, ʿArabi wa-ʿl-Adāmi), (cf. Biruni, Ḥaydūn, 1276, 1287, 1292, 1297; Sabāḥ, al-Dawla, in which, as is shown by numerous citations, the author was greatly concerned with finding—often far-fetched—Persian etymologies (for those, e.g., of asfālāb and audji, cf. Biruni, Ifrād al-makāl, 69, and Taʾrīḫ al-mustabarār, 17 [Rasāʿīl al-Biruni, Haydaraḏāb 1368/1949]), and (9) Taʾrīḫ al-ʿadāb wa-ʿl-ḥikāyāt, 1093-1096; cfr. Naṣīrī, ʿAbd al-Muḥsin, Muntahāb al-tawdīrī, li-Dimāḏī, 768-86; M. Kurdʿ All, Khāṭīb al-Shām, ii, 71; Khāṭīb al-Dīn al-Zarkāfī, al-ʿAṣm, viii, 63-4. (N. ELISSÉEFP)

HAMZA AL-ISFAHĀNĪ, (HAMEA B. ALSHANA, [INN] MUʾADDIB), philologist and historian of the 4th/10th century. Born about 280/893, he died after 350/961 (the year in which his Chronology of pre-Islamic and Islamic dynasties (Taʾrīḫ sinī mulāk al-ard wa-ʿl-ānbiyāʾ), a survey of world history which has been studied in the West since the eighteenth century and which was first published in its entirety with a Latin translation by I. M. E. Gottwaldt (St. Petersburg-Leipzig, 1944), is repeated, e.g., Beirut 1961; English trans. of part of the work by U. M. Daudpota, in Journal Cama Or. Inst., xxi (1932), 58-120.)

On poetry, (4) an edition of the Diwan of Abū Nuʿaym, which goes beyond being a mere collection of poems and contains much valuable literary information. Further, (6) a Kūtbī Mādhīṣ al-ʾaṣghār (cf. Ṣaḥāḫī, Thāʾalīb, 293-9) and (7) a Risā, al-ʾaṣghār al-sāfira fi ʿl-nāyār wa-ʿl-mīrāj ṣadāqān (cf. Brūnī, ʿĀṯīr, 31, 52; apparently identical with the work on "Persian Festivals" by All b. Hamza al-Iṣbāḥānī, summarily referred to in connexion with his chapter on the subject by Nuwayri, i, 185).

On lexicography, (8) the partly preserved Muntakhab dhāna (hawṣ al-ʿarbā wal-ʾaḥādīm), written for ʿAḥd al-Dawla, in which, as is shown by numerous citations, the title is an outstanding achievement in the field of cultural history (cf. P. Kraus, ʿĀṯīr, i, 171, 245, and idem, in al-Thālāfī, v (1943), reprinted in Ş. al-Munadiḏīḏ, Muntakāb, Cairo 1955, ii, 177-84).

A quotation dealing with the interpretation of sûra XXXV, i, supposedly from a R. al-Muʿribaʾ an gharaf al-ʾaʾrāf (7) (Kastallam, Irbād, Bālāk 1288, viii, 31) is doubtful. Other titles are mentioned in Fībrīr, 129.

Hamza is described, in particular by al-Kiftī, as a Persian nationalist with strong prejudices against the Arabs. This may well be a true description. We do find him greatly concerned with matters Persian, but he also shows himself fully aware of the importance of the cultural role of the Arabs. His works prove him to be a thorough and, to a degree, original scholar who always looks for the best sources and the most authentic information available, using, for instance, Jewish and Byzantine informants on Jewish and Greek-Roman chronology, who always probes deeply and intelligently, and who reports many unusual and highly interesting matters which give a greater insight into the immense variety and curiosity of Muslim intellectual life in the ninth and tenth centuries. His importance was acknowledged by later Muslim scholars through the wide use they made of his works, in particular, his chronological history and the collection of ʿaffāl proverbs.

HAMZA BEG, Prince of the ʿAk Koyunlu [q.v.] dynasty (the Kitāb-i Diyār-bahīriya mentioned in the Bibli. to that article has now been published by
HAMZA BEG — HAMZA PASHA 157

Hamza Beg (Imam), second imam of Dagestan, leader of the popular religio-political movement which disturbed the northern Caucasus from 1832 to 1859 and which is known as Muridism, from the religious ideology from which it arose. This movement was based on Muslim mystical influences which then coalesced in Bughara, in particular those propagated by the Nakhshbandis [q.v.], but made use of religious dogma for political ends and was closely linked with the practical conception of the Holy War. It was a consequence of the Russian punitive expeditions in the Caucasus and was directed at the same time against the Russians, their allies the Avar khans, and the mountain peoples who had submitted to their domination. After the death of the first imam, Gha'iz Muhammad, or Gha'iz Molla, who was surrounded and killed in the village of Gummi on 17 (29) October 1832 by a Russian detachment, Hamza Beg [q.v.] (called by the Russians Gamzat Bek) became imam of Dagestan. Although Hamza Beg belonged to the family of the Avar khans, being a khan, i.e., the son of the khan by a woman of humble birth, and consequently had no right to the succession, he nevertheless aspired to the khan's throne and made use of the movement for his own ends. On 13 August 1834, he defeated and massacred the Avar khans, on the River Tabor, near their capital Khunzak, which he occupied after driving out the Russians. This act cost him his life: he was assassinated on 19 September 1834 in the main mosque of the town by the brother of the famous Hajiidir Murad [see Murad], nd'ib of Shami [q.v.]. The latter replaced Hamza Beg as imam of Dagestan, and with him Muridism received its definitive form. It was to last until the surrender of the imam Shami on 25 August 1859.

HAMZA HAMD PASHA, Ottoman Grand Vizier, was the son of Sultan Mustafa III and was appointed Vizier under Sultan Mustafa III, was born at Develi Kara Hisar, named Ahmed Agha; born in Istanbul ca. 1110/1698-9 he entered upon his official career in the offices of the Sublime Porte. Owing to the protection of the celebrated Raghib Pasha [q.v.], whose pupil he was in the elaborate prose of the official style, he was nominated mukhtasíd (Secretary to the Grand Vizier) on 19 July 1755, (February 9) 1751, a position he held for many years. On 19 Muharram 1165/25 October 1755 he was appointed *reis* al-kuttab (Minister of Foreign Affairs), and, in addition to other high offices in the years following, three times filled the office of *kethib (Minister of Home Affairs) but only for short periods and without further distinguishing himself. After being appointed vizier in Rabî’ II 1174/September-October 1762 he took the place of the Grand Vizier Râghib Pasha on 9 Ramâdân 1176/24 March 1763, when the latter fell severely ill and on his death (24 Ramâdân/8 April) he succeeded him. But he was not a strong enough man for this position, for, as his biographers say, he was slow in coming to a decision and was too fond of ease and comfort. The only noteworthy event of his period of office was his sending Ahmed Resmi Efendi [q.v. to the court of Frederick II in response to Count Rezin's embassy (cf. Zinken, v, 597 f.). After less than seven months of office he was deposed on 25 Rabî’ II 1177/31 October 1763 and sent to Crete as governor, where he remained, except for a brief interval, till 1183/1769. In this year, on 16 Rabî‘ I, February 6, it is given that he was governor of Buda and Bâbek and died in Mecca in Dhu l-Hijjâda 1183/March-April 1770.

(J. H. MORDTMANN [E. KUHN])

HAMZA MIIRZA, Safavid prince, second son of Muhammad Khânsar (dates ca. 973/1565-6). In 985/1776 Shâh Ismâ‘îl II ordered that Hamza Mirza be put to death at Shîrâz, together with his father and brother, Abû Tâlib, but Ismâ‘îl II was assassinated before the order could be carried out. After the accession of his weak and purblind father, Sultan Muhammad Shah, in Dhu l-Hijjâda 985/February 1758, Hamza Mirza was made heir-apparent at the instance of his mother, Mahd-i ’Ulaya, who, until her murder by the *Beiibak* [q.v.] in 987/1779, was the real power behind the throne; he also had the support of the Turkman-Takkalu *Beiibak* faction, which then dominated the political scene in the capital, Kâzîm. In 985/1781 Hamza Mirza suppressed a revolt staged by the Shamlâl-Ustadîlî faction in *Khurâsân in support of his younger brother, Abbâs Mirza* [see *Abbâs I*], and thereafter he played an increasing part in state affairs. Though endowed with great personal bravery, he was proud, quick-tempered and impulsive, and lacked the maturity of judgement needed to steer a safe course between the rival *Beiibak* factions. In 992/1584-5, when the *amir al-umurâ* of A‘shâr, Amîr Khân Turkman, obstructed his efforts to identify those responsible for his mother’s murder, Hamza Mirza listened to the promptings of the Shamlâl-Ustadîlî faction, and put the Turkman-Takkalu faction to arrange the assassination of Hamza Mirza in the *Sa‘fawî camp near Gardia*. Their tool was Hamza Mirza’s personal barber who, on 24 Dhu l-Hijjâda 994/December 1586, stabbed the prince to death while he was in a drunken stupor.

SHINDAR HAMZA PASHA, Ottoman Grand Vizier, was born at Develi Kara Hisar ca. 1140/1728-9, the son of a landed agha named Mehmeh; he began his career in 1156/1743-4 in the *haicu-khané* (honey-bakery) of the *Kibdr-i humayûn* (Imperial Privy Commissariat), but his gifts soon won him a position among the pages of the *Enderûn* [q.v.].
where he won the favour of Muştafa III. When the latter came to the throne on 16 Safar 1171/30 October 1767 he reinstated him, and was finally driven out of the country by the Porte, in Yedikule (6 October); in consequence of this the disastrous war with Russia broke out, which had been avoided by the peace of Küülük Kurnardja (=q.v.). Hamza Pasha did not live to see the beginning of hostilities; he was suddenly put in order of the Kuran, and a short period of respite which had already been the subject of individual putative to other teachers, notably the teachers of the school of Hâfidz or that of Kürânan, like Mâlik b. Anas, Fudayl b. Jâli, ʿAbd Allâh b. al-Mahbûrâk or Ishaq b. Râhâwayh. They contributed towards the settling of Ḥanbali doctrine at a very early stage, without, however, ending in a very rigorous systematization, and at the same time allowing divergences from the thought of the founder of the school to survive.

Two of the sons of Ibn Ḥanbal played an important rôle in the transmission of his work. The elder of the two, Šâlih (d. 266/879-80), made his career in the service of the ʿAbbasid Caliphate at Kûdi at Šârûs and at Ḳurânan. The younger, ʿAbd Allâh (d. 290/903), in particular put in order the materials of the Musnad, to which he made a certain number of additions and to which his pupil Abû Bakr al-Kâti (b. 368/978-9) put the finishing touches. The additions of al-Kâti are, within the Ḥanbali school, quite often disputed (on the other compilers of Musnad, see Ahmad b. Ḥanbal, the Masʿûl).

Several other eminent traditionists reported the Masʿûl and may be regarded as true disciples of Ibn Ḥanbal. Thus Abû Dâwûd al-Sîjdâstânî (d. 275/888-9), was the author of the K. al-Sunah, and his K. al-Masʿûl (published in Cairo in 1533/1934) is the sole collection of responsum available today. Abû Ḥâtim al-Râzî (d. 277/980-1), who is sometimes compared with al-Ḥârî and with Abû Zubâr al-Râzî, followed the teaching of Ibn Ḥanbal and collected a large number of Musnad certain of which are considered rare; his 'alâda defends, on the basis of the nature of the faith and of the Kurânrân, and equally on the basis of the condemnation of kalâm, the most characteristic ideas of Ḥanbalism.

One name dominates the history of Ḥanbalism during this period; that of Abû Bakr al-Khâlîlî (d. 312/923-4), who was a pupil of Abû Bakr al-Marwazi, knew the Koran by heart, and was instructor of the Caliph al-Mahdî in the mosque of al-Mahdî. In his K. al-Diŷms, he collected and classified the responsum of Ibn Ḥanbal which had already been the subject of individual recensions. This enormous compilation was still used, in the 8th/14th century, by Ibn Taymiyya and Ibn al-Kayyim. Still other works are attributed to Abû Bakr al-Khâlîlî, and enjoyed a great authority, in particular a K. al-Jûmî, a K. al-Sunnah, his K. al-ʿImâm, and a K. al-ʿIblî. In addition Abû Bakr al-Khâlîlî composed the first history of Ḥanbalism which is known to us. His work was finished by Abû al-ʿAzîz b. Diŷarfar (d. 363/973-4), known by the name of Ghabûl al-Khâlîlî (=q.v.).

Two other names are closely connected with the history of Ḥanbalism at the end of the 3rd/9th and at the beginning of the 4th/10th century. The first is Abû Bakr al-Sîjdâstânî (d. 316/928), a son of the traditionist Abû Dâwûd. From him we have a K. al-Masʿûlî (edited by A. Jeffery, Leiden 1937) and a short profession of faith in verse in the best Ḥanbali tradition. Several other works of exegesis or tradition are attributed to him. The second is Abû Muṣâ-mmâd al-Râzî (d. 327/938-9), whose work enjoyed a wide popularity. His K. al-Diŷrî wa ʿl-ʿIblî was considered
one of the most important works which had been written in this discipline. His Tafsir, in the judgment of Ibn Kathir, constituted the work par excellence of traditional exegesis and surpassed in its doctrinal value that of al-Tabari. His K. al-Ulul, on the subject of defects in hadith, demonstrates this tendency to follow the classifications (abid) of fikh. There is further attributed to Abū Maṣummad al-Rāzī a refutation of the Dāhmiyya and an eulogistic biographical biography of Abūd b. Ḥanbal.

The considerable rôle which Ḥanbalism played on the Islamic scene in the religious and political history of the Caliphate is illustrated by the activities of al-Barbahārī (d. 329/940-51) traditionally and jurisconsult, pupil of Abū Bakr al-Marwazi and of Sahh al-Tustari, a vigorous preacher who struggled bitterly against Shi'ism and Mu'tazilism for a reform of the Sunni Caliphate. The excess of his zeal led, in 323/935, to the condemnation of Ḥanbalism by a decree of the caliph al-Kādī. Abū Bakr al-Najdī, a disciple of Abū l-Kāsim al-Khirākī (d. 334/945-6), who left Baghdād to take refuge in Damascus with the advent of the Būyids, is the author of the first manual of Ḥanbalī fikh, the Mukhtasar, which was commented upon in turn by Ibn Ḥāmid (d. 403/1012-3), the kādī Abū Ya'la (d. 458/1066) and the ṭayyib Muwaffak al-Dīn b. Kudāma (d. 620/1223). The Mukhtasar, upon which, according to Yūsuf b. 'Abd al-Ḥādi (d. 909/1503-4), there were almost three hundred commentaries, still remains today an excellent introductory manual to Ḥanbalī doctrine in the sphere of fīrūd. 2. Ḥanbalism under the Būyids (334/945-6). From the moment of the installation of the Būyids in Baghdād Ḥanbalism was an active and numerically strong school which possessed a doctrinal literature comparable to that which the other schools were able to offer. The progress of Imāmī Shī'ism, encouraged by the Būyids, and of Ismā'īlī after the Fātimid conquest of Egypt in 358/969 and the foundation of Cairo, came into conflict with the Ḥanbalī theologians and preachers, who exercised a decisive influence on the beginnings of the Sunnī restoration which began to assert itself from the reign of al-Kādir (381-422/991-1021). Ḥanbalism then took the rôle of a politico-religious opposition party and was in the forefront of the defense of the Caliphate and Sunnism.

From among the numerous representatives of Ḥanbalism whose names have been preserved for us in bio-bibliographical works we shall here cite only those few teachers who appear to us to be, both for their work and their activities, most typical of the vitality and the internal diversity of the school. Abū Bakr al-Najdī (d. 340/954-5) held sessions of popular exhortation at Baghdād in the mosque of al-Mansūr. He compiled the Musnad of Ibn Ḥanbal, and, apart from a treatise on fīrūd, a K. al-Ḥudūdī al-fukahād. 3. Ḥanbalism during the final two centuries (419-656/1028-1260). Abū l-Husayn b. Samʿūn (d. 387/997), through his Hadīth training and his inclination towards Shi'ism, was, as one of those many scholars whom it is difficult to place, with any degree of certainty, within the confines of one school. The kādī Abū l-Husayn (Tabāqāt, ii, 155-6) and Ibn 'Asākir (Ṭabyīn al-musāfār, 200-6) each lay claim to him. Ibn Ṣamʿūn, who commented upon the Mukhtasar of al-Khirākī, held sessions of religious and moral exhortation at Baghdād which acquired a widespread reputation.

His contemporary Ibn Baṭṭa al-Uḫbārī (d. 387/997), educated at Baghdād, retired when nearly forty, after travels to Mecca and Syria, to his native town. We owe to him several important works, in particular a renunciation of legal stratagems (hinay) which were employed in certain schools of fīrūd, and two professions of faith which were subsequently widely used: the Ibnāna bāhiya and the Ibnāna yaghīra. The Ibnāna yaghīra (cf. H. Laoust, Profession de foi d'Ibn Baṭṭa, PEFQ, 105) is primarily designed to be a profession of popular faith addressed more particularly to young people and to the non-Arabs. Its purpose was to lead back to the imitation of the Prophet all those who were tending to waver in their faith because of the proliferation of sects and doctrines.

Ibn Ḥāmid (d. 403/1012-3; Tabāqāt, ii, 171-7), one of the intimate circle of the caliph al-Kādir, was, as much first and foremost a teacher and a mufti. His most famous work is his K. al-Dāhmiyya fi ṭayyib al-fukahād, a renunciation of legal stratagems (fyiyāl) which are also often cited: a K. fi usul al-dīn and a K. fi usul al-fīkh. Ibn Ḥāmid, both by his teaching and his written works, contributed to the education of numerous Ḥanbalīs, whether natives of Baghdād or attracted to the 'ABBĀSID metropolis by the reputation of its learning.

One of his disciples was the kādī Abū Ya'la Ibn al-Farrāšt (d. 458/1066), who made his career at Baghdād in the service of the caliph al-Kādī. The work of the kādī Abū Ya'la, almost totally lost, is known to us through his Aḥāmū sulā'īnya (published Cairo 1356/1938) which would appear to have been copied from the treatise on public law of al-Mawardi (d. 456/1064), unless the two works both stem from a common source. Those of his works which were most frequently used were his commentaries upon al-Kādireh, a treatise on usul al-fīkh (K. al-Mudjiyārād), another on the divergent opinions of legal scholars (K. al-Iḥlālāfī), and finally an important treatise of dogmatic theology, the K. al-Mus'tamad, an abbreviated version of which has survived (ms. at the Zāhiriyā in Damascus). The K. al-Muṣṭamad, constructed in the fashion of contemporary treatises of kalām, devotes considerable space to the theory of the Caliphate. The kādī Abū Ya'la, who was present in 433/1041-2 and in 445/1053-4 at the formal reading of the Kādiriyā, was, as much through his official duties as through his scholarship and his teaching, closely associated with the policy of Sunnī restoration under al-Kādir.

4. Ḥanbalism during the final two centuries (419-656/1028-1260). The attempt of al-Basāṣīrī, in 451/1059, to re-establish Shī'ism in Baghdād had all the characteristics of a desperate and ephemeral action. In 459/1067 the Niẓāmiyya was inaugurated at Baghdād for the teaching of Shāfī'ī fīkh. The Sunnī reconquest of central and southern Syria followed. In
The 467/1074-5 the amir Atslz re-established the 'Abbâsid Mu'ta at Damascus. The political disruption of the first great Saljûqid empire began in 485/1092 with the death of Malik Shâh. A short time afterwards the Crusaders made their appearance in Syria and Palestine, occupying Antioch in 491/1098, Jerusalem in 492 and Tripoli in 503/1109-10. However, the momentum of the movement of Sunnî restoration continued, with the revival of the Caliphate beginning with al-Muqtâfi (530-35/1136-60), and with the constitution, in Syria, of the dynasty of the Zandîs and the Ayyûbîs. This period of two centuries was the golden age of Hanbalism which, however, great its attachment to the traditionalism of its credo, itself also appeared, through the personality of its principal representatives, as a movement of profound diversity.

The šarîf Abû Dja'far al-Ḥâshimi (d. 470/1077-8), a successor in spirit of al-Barbahârî and Ibn Baṭṭa, distinguished himself in particular by the energetic drive he brought to bear in support of the Hanbalî credo/1095-7. However, the restoration of the authority of the Caliphate in the Muntazam and of Sufism in the 5th/11th century, and with the death of Malik Shâh. A short time afterwards the Crusaders made their appearance in Syria and Palestine, occupying Antioch in 491/1098, Jerusalem in 492 and Tripoli in 503/1109-10. However, the momentum of the movement of Sunnî restoration continued, with the revival of the Caliphate beginning with al-Muqtâfi (530-35/1136-60), and with the constitution, in Syria, of the dynasty of the Zandîs and the Ayyûbîs. This period of two centuries was the golden age of Hanbalism which, however, great its attachment to the traditionalism of its credo, itself also appeared, through the personality of its principal representatives, as a movement of profound diversity.

Abu 'l-Khaṭṭāb al-Kalwadhânî (d. 510/1116-7), in his youth he was interested in Mu'tazilism and Shi'ism; in 460/1068 against the teaching of Mu'tazilism at the Niẓâmiyya; in 461 against Ibn 'Aṣâ, who was condemned for his sympathies towards Mu'tazilism or al-Halâlî; in 464 against various forms of corruption; in 465 again against Ibn 'Aṣâ, who was forced to recant in public; finally in 469 against Ibn al-Kusayy, who, in his teaching at the Niẓâmiyya, had taken up again against Hanbalism the old charge of anthropomorphism (ṣâṭbîh). Abu 'l-Khaṭṭāb al-Kalwadhânî (d. 510/1116-7), in his youth he was interested in Mu'tazilism and Shi'ism; in 460/1068 against the teaching of Mu'tazilism at the Niẓâmiyya; in 461 against Ibn 'Aṣâ, who was condemned for his sympathies towards Mu'tazilism or al-Halâlî; in 464 against various forms of corruption; in 465 again against Ibn 'Aṣâ, who was forced to recant in public; finally in 469 against Ibn al-Kusayy, who, in his teaching at the Niẓâmiyya, had taken up again against Hanbalism the old charge of anthropomorphism (ṣâṭbîh).

Abu 'l-Wafâ' Ibn 'Aṣâ (d. 513/1119-20) is not only one of the great scholars of Hanbalism but also one of the most famous Arab prose writers. Several of his works are frequently cited in the literature of the school: two treatises on ṣâḥiḥîf, another, more controversial, on the law of succession, and a short profession of faith in verse, the Dâlîyya, which was still learned by heart in the 8th/14th century and in the 19th century. Ibn 'Aṣâ was the standard guide to follow after the Prophet and his companions. Abu 'l-Wafâ' Ibn 'Aṣâ (d. 513/1119-20) is not only one of the great scholars of Hanbalism but also one of the most famous Arab prose writers. Several of his works are frequently cited in the literature of the school: two treatises on ṣâḥiḥîf, another, more controversial, on the law of succession, and a short profession of faith in verse, the Dâlîyya, which was still learned by heart in the 8th/14th century and in the 19th century. Ibn 'Aṣâ was the standard guide to follow after the Prophet and his companions.

Abu 'l-Farādî Ibn al-Djawzî (d. 597/1200), jurisconsult, traditionist, historian and above all preacher, was intimately connected with the political life of his time. He had, for teachers, Hanbali scholars many of whom were well-known, and owed the first successes of his career to the vizier Ibn Hubayra, during the caliphates of al-Muqtâfi and al-Mustâqîm. The outstanding period of his activity as an official preacher is set in the caliphate of al-Muqtâfi (556-74/1161-91). The advent of al-Nâṣir (575-622/1179-1225) did not immediately put an end to his activities but progressively marked the beginning of his decline. In 590/1194 he was arrested and held for five years under house arrest at Wâṣît; his death followed shortly after his release. His massive work (cf. Dhâhil, i, 158), his voluminous K. al-Fusûr, of which only one volume survives, is a treatise of adâb which was much used by Ibn al-Djawzî. His more technical works, however, should not be forgotten: the K. al-Fuşûl, also known by the name of Rıḍâyat al-mulfî; the K. al-İrshâd fî usûl al-dîn, his main treatise of dogmatic theology; the K. al-Wâdî fî usûl al-fikr, on the methodology of law; finally the K. al-Nâṣirî fî al-ḥarakat al-ṣâhibî, the title of which employed well enough the place that the study of tradition held with this author (G. Makdisi, Ibn 'Aṣâ et la résurgence de l'islam traditionalistes, PIFD, 1962).

In the century which preceded the fall of the Caliphate three names dominate the history of Hanbalism. The first is the vizier Ibn Hubayra (d. 560/1165) who, while still a youth, wandered through the markets of Baghdad with a Sûfî preacher to exhort the population to live according to the dictates of the Kurâ and the Sunna. Ibn Hubayra owed his career to the caliph al-Muqtâfi (in 555/1150) who, in 544/1149-50, appointed him vizier. Al-Mustâqîm (555-66/1160-71) retained him in office, though not without difficulties. In 557 Ibn Hubayra founded, in the quarter of Bâb al-Baqra, a madrasa destined for the purpose of teaching Hanbali tradition and fikr and for the benefit of which he made a waṣf of his valuable personal library. His political programme rested on two aims: the restoration of the Sunna and of the authority of the Caliphate. To succeed in this he tried, on the one hand, to free the Caliphate from Saljûqid control and to spur on Nûr al-Dîn to the conquest of Fâtimid Egypt; on the other hand he endeavoured to band together, around the Hanbali credo and opposed to Shi'ism, all the families of Sunnîs. His K. al-İfâd consists of a commentary upon the Şâhî of al-Buhârî and of Muslim; he included therein a treatise of ṣâḥiḥîf (published Aleppo 1280). The work, read and commented upon in the mosques at the request of the vizier, seems to have enjoyed, at least during his lifetime, a fairly wide-spread popularity (Dhâhil, i, 251-80).

The šarîf 'Abd al-Kâdir al-Djûli (d. 561/1166), the founder of the first great Sîûfî order, that of the Kâdiriya [q.v.]. His doctrinal position is difficult to ascertain, owing to the distortions to which his personality and his ideas were subjected by his principal biographer, al-Shatânawî (d. 713/1313-4), and the legends transmitted by his admirers. The šarîf 'Abd al-Kâdir belonged to Hanbalism not only by education but also by the very nature of his work. The K. al-Ghunya, edited many times, constitutes his principal treatise of dogmatic and moral theology. From the end of this work, he found, ground dogma in the profession of faith, a manual of adâb sharîjîyâ, a précis of the fundamental rules of fikr and elements of heresiography—the whole in the pious and militant tradition of Hanbalism.

Abu 'l-Farâdî Ibn al-Djawzî (d. 597/1200), jurisconsult, traditionist, historian and above all preacher, was intimately connected with the political life of his time. He had, for teachers, Hanbali scholars many of whom were well-known, and owed the first successes of his career to the vizier Ibn Hubayra, during the caliphates of al-Muqtâfi and al-Mustâqîm. The outstanding period of his activity as an official preacher is set in the caliphate of al-Muqtâfi (556-74/1161-91). The advent of al-Nâṣir (575-622/1179-1225) did not immediately put an end to his activities but progressively marked the beginning of his decline. In 590/1194 he was arrested and held for five years under house arrest at Wâṣît; his death followed shortly after his release. His massive work (cf. Dhâhil, i, 416-20) embraces, it might be said, all the types of Islamic literature. Strongly influenced by Ibn 'Aṣâ and by Ābu Nu'aym al-İsfâhânî, he is the historian of the Caliphate in the Muntazam and of Shi'ism in the
Sīfat al-safwa. His Talbis Iblis, directed against the bid'as introduced into Islam by Sufism, falsafa, the sector for the laws in the aggressive tradition of Hanbalism. But his best known works are the eulogistic biographies (mandāšīb) which he devotes to the religious and political personalities of the first centuries of Islam. An uncompromising critic, he also composed refutations of al-Hallāj, Abd al-Ḳādir al-Ḍiālī and the Caliph al-南京市.

In the following fifty years, Hanbalism still had several eminent representatives at Baghdad. Ibn al-Maḥsūṭīya (d. 500/1203), who was interested in the sciences inherited from Greek antiquity and composed a history of Baghdad, energetically defended the policy of Ibn Hubayra in the eulogistic monograph which he devoted to him (Ḍayl, i, 442-6). Muhammad b. Abd Allāh al-Samarrī (d. 600/1203-4), a traditionist whose family had sought refuge in Damascus in 666/1267-8 before the threat of a Mongol invasion. It was at Damascus that Ibn Taymiyya was educated, interested himself not only in Hanbalī literature but in all the Muslim schools, as well in the field of fiqh as in kalām or falsafa. Intimately concerned in the religious and political life of his time, Ibn Taymiyya very soon found himself, because of his polemical zeal, clashing with numerous opponents and was subjected to frequent persecutions. Sent to Cairo in 705/1305-6 he was imprisoned once for almost eighteen months until 707 (25 September 1307). Exiled to Alexandria for seven months, he was freed and taken back to Cairo by al-Malik al-南京市 after the fall of Baybars al-Dāshāhkīr. He returned to Damascus in 712/1312-13. Imprisoned once, in 720/ 1320, in the citadel for a period of about five months for holding, on the question of repudiation (talâh), a doctrine deemed to be heretical, he was imprisoned a second time in 726/1326 for his views on the visitation of tombs (ziyārat al-khāyā), which he denounced as heretical. It was in prison, in the citadel of Damascus, that he died on 20 Đu‘l-Ḳa‘da 728/26 September 1328. As much by his doctrinal works as by his teaching or his personal activities, Ahmad b. Taymiyya left a deep imprint on the history of Hanbalism.

His principal pupil, Ibn Ǧayyim al-Dāshīwāy (d. 751/1350-1; Ḍayl, ii, 447-53), who shared some of his later persecutions, was more a preacher than a polemist and commented on the Mandāšī of al-Anṣārī (3 vols., Cairo 1916). We owe to him also an important treatise on usūl al-fiqh, the Ilām al-mawālik (3 vols., Cairo 1915), a treatise of public law built around a theory of proof, the Ṭurūq fiqh-ismiya (Cairo 1317, and later eds.), and finally a profession of faith in verse, the Niʿmāniyya, principally directed against the Dāshīwāy and the Ittihādiyya (published several times in Cairo since 1902).

Abd al-ʿArabī b. Raḍājī (d. 795/1393), from a family which originated from Baghdad but which had settled in Damascus, was a pupil of Ibn al-Ǧayyim. Jurisconsult and traditionalist, he established himself, by his Ḍayl, as the trustworthy and precise historian of the Hanbalī school. Author of the Kawāʾid (Cairo 1933), deserves to be made the subject of a monograph. To Ibn Raḍājī are owed also several dissertations which endeavour to establish, on points of dogma, and not without a certain rigidity, the so-called position of the Ancients (salaf).

Under the Circassian Mamlūks (784-922/1382-1517) Hanbalism lost some of its importance in Syria and Palestine for reasons that are hard to ascertain, though doubtless its hostility to the school of Ibn ʿArabī and that of the Ittihādiyya, whose influence was increasing, contributes to the explanation of this relative decline. Though greatly weakened, however, Hanbalism did not disappear altogether. Represented by great families of jurisconsults who monopolized, along with the teaching, the official confess and the profits derived therefrom, it was distinguished by several theologians whose importance deserves emphasis. The list of them is found in the Muḥbars al-ḥanābila, the work of the venerable muftī of the Hanbalīs in Damascus, the Ṣayḥ Muhammad Dīmīl al-Shāṭī (published Damascus 1330/1921), which is based on al-Maḥṣūṭī al-Ṣāḥibī, still unpublished, of Muḍīr al-Dīn al-

Syria and Palestine under the Baḥrīyya Mamlūks. It then had as its most celebrated representative Ahmad b. Taymiyya, whose family had sought refuge in Damascus in 666/1267-8 before the threat of a Mongol invasion. It was at Damascus that Ibn Taymiyya was educated, interested himself not only in Hanbalī literature but in all the Muslim schools, as well in the field of fiqh as in kalām or falsafa. Intimately concerned in the religious and political life of his time, Ibn Taymiyya very soon found himself, because of his polemical zeal, clashing with numerous opponents and was subjected to frequent persecutions. Sent to Cairo in 705/1305-6 he was imprisoned once for almost eighteen months until 707 (25 September 1307). Exiled to Alexandria for seven months, he was freed and taken back to Cairo by al-Malik al-南京市 after the fall of Baybars al-Dāshāhkīr. He returned to Damascus in 712/1312-13. Imprisoned once, in 720/1320, in the citadel for a period of about five months for holding, on the question of repudiation (talâh), a doctrine deemed to be heretical, he was imprisoned a second time in 726/1326 for his views on the visitation of tombs (ziyārat al-khāyā), which he denounced as heretical. It was in prison, in the citadel of Damascus, that he died on 20 Đu‘l-Ḳa‘da 728/26 September 1328. As much by his doctrinal works as by his teaching or his personal activities, Ahmad b. Taymiyya left a deep imprint on the history of Hanbalism.

His principal pupil, Ibn Ǧayyim al-Dāshīwāy (d. 751/1350-1; Ḍayl, ii, 447-53), who shared some of his later persecutions, was more a preacher than a polemist and commented on the Mandāšī of al-Anṣārī (3 vols., Cairo 1916). Encyclopaedia of Islam III

1141-2), himself also a preacher and author of a refutation of Ḡarîmus, founded at Damascus the first great Hanbalī madrasa (Ḍayl, i, 198-201).

Two other families of Hanbalī scholars were eminent at Damascus under the Zangīds and the Ayyubīs, in particular that of the Banū Ḡarîmus, natives of Palestine (cf. H. Laoust, Précis de droit d’Ibn Ku- damma, PIFD, 1950). To this last family belonged the Ṣayḥ Abū al-Ḥanālī (d. 600/1203-4), a traditionist of Ṣūfī tendencies hostile to Ḡarîmus and the Ṣayḥ Muwaffāk al-Dīn Ibn Ku-damma (d. 620/1223), to whom we owe a treatise of Hanbali law, the Mughni (12 vols., Cairo 1922-30), which has enjoyed and continues to enjoy a great reputation. The town of Harrān, on the other hand, was also from very early times an active centre of Hanbalism. The most renowned teacher of this school was Maḏīl al-Dīn Ibn Taymiyya (d. 652/1254-5), to whom is owed the Muntakāb (Cairo 1932) and the Muḥbarān (Cairo 1950).

4. Hanbalism under the Mamlūks and the Ottomans. Hanbalism remained very active in
of this author against the cult of saints and certain forms of Şifism (notably that of the İtîhişâyya). After Ibn Taymiyya, Ibn al-Kayyim is also often cited. But other authors, early or late, such as the kâdi Abû Ya‘ûq or al-Hujwîrî, are also used by the Wahhâbî writers.

Within Hanbalism, however, Wahhâbîsm did not gain the unanimous support of the doctors of the law; certain authors did not follow it or were even hostile to it. Such was the case with Ibn Ḥumayd al-Mâkî (d. 1295/1878; Brockelmann, S II, 812), the author of an important law book of Hanbali biographies, al-Suĥûb al-wadîbîa; an edition of this work would be a great contribution to a better understanding of modern and contemporary Islam.

Passionately discussed at the time of its appearance and at other periods of its history, Wahhâbîsm, which had bitter enemies in the Ottoman Empire, in Persia and in different Arab countries, exercised an influence more or less lasting and more or less profound in the Maghrib, India, and the Arabian peninsula. Its influence on the Syro-Egyptian Muslim reform movement made itself particularly felt with Rašîd Ridî (d. 1935) in the period after the first world war. It has sometimes been sought to establish an influence if not of Hanbalism, at least of the Mursad of Ibn Ḥanbal, in the birth of the movement of the İkhwân al-Muslimîn (cf. J. Heyworth-Dunne, Religious and political trends in modern Egypt, 1950, 16).

For the rest, Hanbali fîkh remains operative, in a large measure, in Sa‘ūdî Arabia. Numerous Hanbalî publications have also been brought out, in the course of the last century, not only in Arabia but also in India, Syria and Egypt.

**HANAFIYYA**

The Hanafi madhhab or school of religious law, named after Ābu Ḥanîfâ (q.v.) al-Nâmîn b. Thâbit. It grew out of the main body of the ancient school of Kûta (q.v.) which absorbed the ancient school of Başra, too. As early as the generation following Abû Ḥanîfa (d. 150/767), we find Abû Yusuf [q.v.] (d. 182/795) refer to him as the "prominent lawyer" (Kitâb al-Khârijî, 11), and al-Shâbîrî [q.v.] (d. 188/805) speak of the "followers of Abû Ḥanîfa". Shâhî [q.v.] (d. 204/820) refers repeatedly to the followers of Abû Ḥanîfa as a homogeneous group (Îhâdsî al-ḥadîqî, on the margin of Kitâb al-‘Um, vol. 1, 337, and elsewhere). The transformation of the bulk of the ancient school of Kûta into the school of the Hâfîs was helped by the extensive literary activity of Abû Yusuf and, above all, of al-Shâbîrî whose main works, the Kitâb al-‘Aṣî (edition begun by Shâfîk Shâhâta, Cairo 1954), the Dâ‘îl al-‘abîr (ed. Abu ‘l-Wafî al-Afghânî,
marks the transition to a more logical and systematic arrangement of the subject-matter within each chapter; it was followed by the Bodâ'î al-dâ'îrî of al-Kâsînî (d. 587/1191), which has a strictly systematic arrangement. These older works were, however, ousted by later handbooks and their commentaries in a process common to all schools of Islamic law.

One of the most important of these is the Hudâyâ of al-Marghûnîn [q.v.] (d. 593/1196; English transl. by Charles Hamilton, London 1792, reprinted Lahore 1957); it acquired numerous commentaries, and in the fourth Fatih (5th/11th century) produced a synopsis of it which he called Ishâ'î al-rûsûyâ. Another member of the literary family deriving from the Hudâyâ is the Dîmîm al-rumûs of al-Kuhûrîn (d. 950/1543) which enjoyed great authority in Transoxiana. The second important later work is the Kanz al-dâ'îrî of Abu l-Barâkât al-Nasâfî [q.v.] (d. 710/1310), again with numerous commentaries, e.g., the Tabyîn al-dâ'îrî of al-Zaylâî (d. 743/1343), and particularly the Bahâ' al-dâ'îrî of Ibn Nudaym [q.v.] (d. 970/1563). The same Ibn Nudaym wrote the Kitâb al-Ãûzû ân 'l-nâzir, a treatise on the systematic arrangement of positive law. In the Ottoman Empire, the Durur al-bukhâm of Mullah Khusraw (d. 885/1478), a commentary on his own 'Ugar al-akbâm, gained particular authority. Based on Kudrî's Muhkâmât, the Muhkâmât of al-Buladî (d. 685/1284), the Kanz al-dâ'îrî, and the Wâjây al-rûsûyâ is the Mutâlû 'l-abhur of Ibrahim al-Halâbî [q.v.] (d. 956/1549); this work soon became the authoritative handbook of the Hanafi school in the Ottoman Empire. The two most popular commentaries on it are the Madîma' al-anhar of Shâykh-zâde (d. 1078/1667), and the Durr al-muntakd of al-Hâshâfî (d. 1088/1777). This same al-Hâshâfî is the author of the Durr al-mughârîr, on which Ibn 'Abîdîn (d. 1252/1836) wrote a commentary called Râdî al-Muhtâr, a highly esteemed work which pays particular attention to the problems of the contemporary world. The latest great expositor of the Hanafi doctrine in the traditional style is the Hukûk illnessâyî ve tislâtahats fikhsyeye hamusu by Ömer Nasuhi Bilmen, muftî of Istanbul, 6 vols., first ed. Istanbul 1900-2 (Publications of the University of Istanbul, no. 402, of the Faculty of Law, no. 112 of the professorship of international law). These works are an attempt to codify the traditional Hanafi doctrine in India, after the Hudâyâ, is the so-called Fatâwâ al-'Âlamgîriyya [q.v.], not a collection of fatwâs but an enormous compilation of extracts from the authoritative works of the school, made by order of the Mu'âshar emperors Awrangzîb 'Âlamgîr (1067/1658-1118/1707). Parts of it were translated into English by N. B. E. Ballis and by Mohamed Ullah Ihsan ibn S. Judah.

Among the more important collections of Hanafi fatwâs are those of Burhân al-Dîn Ibn Mâza (d. about 570/1174), called Dâhîrât al-fatwâs, of Kâdî Khâm [q.v.] (d. 592/1196), of Sirîdî al-Dîn al-Sadîjî (end of the 6th/12th century), who also is the author of a very popular treatise on the law of inheritance, of al-Bazzâzî al-Kârdârî (d. 627/1234), of Abu 'Ishaq al-Âdà'î [q.v.] (d. 982/1574), and of al-Ankârî (d. 1092/1683).

Famous Hanafi works on usûl are the Kanz al-usâlûs of al-Pazdâlî (d. 482/1090), the Kitâb al-usâlûs of Shams al-'Âlimma al-Sarakshî [q.v.] (d. 483/1090), a commentary on the Kâfî of al-Ãûzî al-Shâhîd, in Turkey and the Mu'tahîdîn, an important intellectual center (above), the Mantar al-anwar of Abu l-Barâkât al-Nasâfî (see above), the Tawfîq of Ubayd Allah b. Mas'ud al-Muňâbbî, known as Šadr al-Shârî'â al-Thânî (d. 747/1346), on which the Shâfî author al-Tâfattâzî [q.v.] (d. 792/1391) wrote a commentary called Ta'lisb,
the Ta'khir of Ibn al-Humam (d. 861/1457), with its commentary called Ta'khir, by Ibn Amir al-Hadidi (d. 879/1474), and the Mirak al-anwil by Mullá Khan al-Nawari (d. 882/1477). (On the work of Ibn al-Humam, see R. Brunschvig, Théorie générale de la capacité chez les Hanafites médinaux, in Revue Intern. des Droits de l'Antiquité, ii (1949), 157-72.)

In British India, from 1772 onwards, Islamic law, as it was administered locally fell under the influence of English legal thought, and an independent legal system, substantially different from Islamic law according to Hanafi (and, for the Shi'a minority, according to Shi'i doctrine), came into being. This is properly called Anglo-Muhammadan law (see q. v.—India and Pakistan). There are numerous handbooks of Anglo-Muhammadan law, the most elementary but the most scholarly of which is A. A. A. Fynee, Outlines of Muhammadan Law, 3rd ed., London 1964, completed by his Cases in the Muhammadan Law of India and Pakistan, Oxford 1965.

For the Ottoman Empire, the actual legal system and the administration of justice at the end of the 18th century are described in I. Mouradgea d'Ohsson, Tableau général de l'Empire ottoman, Paris 1797-1820 in 3 vols., 1788-1824 in 7 vols. Then, in 1877, Ottoman Turkey enacted a codification of the law of contracts and obligations and of civil procedure, according to Hanafi doctrine, as the Ottoman Civil Code, or the Medjelle (q.v.). Traditional Islamic law cannot be adequately expressed in the form of a code, and the Medjelle, having been undertaken under the influence of European ideas, is not an Islamic but a secular code, however often modern lawyers may have ventured to debate (d. 884/1476) the works of some of the Hanafi doctrine. It also contains certain modifications of the strict doctrine of Islamic law, mostly by way of omission. But through the intermediary of the Medjelle, the Hanafi form of Islamic law has deeply influenced the "civil law" of several countries in the Near East. In Egypt, about the same time, Muhammad Kadri Pasha put the Hanafi law of family and inheritance, of property, and of usuk into the form of codes, but these efforts, only the first of which was officially sponsored, were never enacted as codes.

The only Western accounts of the strict Hanafi doctrine of Islamic law are L. Blasi, Istituzioni di diritto musulmano, Città di Castello 1914, and G. Bergsträsser's Grundzüge des islamischen Rechts, ed. J. Schacht, now replaced by J. Schacht, Introduction to Islamic Law, Oxford 1966; E. A. A. Hanefiller: J. Schacht, The Origins of Muhammadan Jurisprudence, part I, chapter 2 (on the emergence of the Hanafi school), part IV, chapter 4 (on the reasoning of the early Hanafi authorities); idem, An Introduction to Islamic Law, chapter 9 (on the consolidation of the Hanafi school), chapter 13 (on the Hanafi school in the Ottoman Empire), chapter 14 (on the Hanafi school in Mughal India and on Anglo-Muhammadan Law), and chap. 15 (on the influence of the Hanafi school on the civil laws of the Near East).—On the spread of the Hanafi madhad, see A. Mes, Die Renaissance des Islam, Heidelberg 1922, 202-6 (Eng. tr., 210-5); Ahmad Taymur Pasha, Naframidhikya fi hustad al-madhadh al-arba'a, Cairo 1344, 8 ff.—On authoritative Hanafi works, see N. P. Aghnides, Mohammedan theories of finance, with a bibliography, New York 1916, 161 f., 173 ff., 177 ff. (reprinted Lahore 1961); J. H. Harington, Remarks upon the authorities of Mosulman law, in Asianic Researches: or Transactions of the Society Instituted in Bengal, x (Calcutta 1808), 475-512 (on Hanafi works used in India).

(W. Heffening—J. Schacht)
when Ibn Ziyad sent the fraddi Shurayli with assurances that Hani* was still alive. It is also asserted that Abraham was neither a Jew nor a Christian (III, 67/60; cf. Ibn Sa'd, i, 128; ii, 287). The form ta'famm" is used to mean “the adoption of Islam” (Kamil, 526, poem by Djark; LA, x, 404; cf. Tabari, i, 288). These ideas were sometimes employed in the elaboration of Sufi doctrines. Al-Hasan spoke of himself as “the least of the community of Muhammad” (Mas-siagon, A'zbab 3, 161; and Al-Antaki and Al-Bisti spoke of the basic form of monotheism as al-hanifyya (Massiagon, Passion, 607; Essai 8, 282; etc.). The general Islamic usage underlies the question in Kamil, 244, “What is a hanif? ala 'l-fitra ... ?” (cf. Deyr al-Basrī, 177). In the verses quoted by Yakkit, ii, 51, and other authors, which contrast the hanif with the Christian priest and Jewish rabbi, the word almost certainly means Muslim; and the same may be true of the verse of Sayyid al-Shahid Mu'amim b. 'Afril, (quoted by Ibn Khallikan-De Slane, iv, 338). Most usage. This name presumably belongs to the years immediately following the hizira, especially after the break with the Jews. The technical use of muslim and islam is said not to be before the end of 2 A.H. (R. Bell, Introduction to the Qur'an, Edinburgh 1953, 108), and may be later.

2. Later Islamic usage. The apologetic position associated with the Kur'anic conception of hanif is maintained. Hanif is occasionally used as the equivalent of muslim (Ibn Hisham, 293, 995; cf. 571). More frequent is the use of hanifyya for the 'religion of Abraham' or for Islam (Ibn Hisham, 143, 147; Ibn Sa'd, i, 128; ii, 287). The form tabarrum is said not to be before the end of 2 A.H. (R. Bell, Introduction to the Qur'an, Edinburgh 1953, 108), and may be later.

2. Later Islamic usage. The apologetic position associated with the Kur'anic conception of hanif is maintained. Hanif is occasionally used as the equivalent of muslim (Ibn Hisham, 293, 995; cf. 571). More frequent is the use of hanifyya for the 'religion of Abraham' or for Islam (Ibn Hisham, 143, 147; Ibn Sa'd, i, 128; ii, 287). The form tabarrum is said not to be before the end of 2 A.H. (R. Bell, Introduction to the Qur'an, Edinburgh 1953, 108), and may be later.

2. Later Islamic usage. The apologetic position associated with the Kur'anic conception of hanif is maintained. Hanif is occasionally used as the equivalent of muslim (Ibn Hisham, 293, 995; cf. 571). Bell, Introduction to the Qur'an, Edinburgh 1953, 108), and may be later.

3. Christian usage. The word hanifyya is more frequently used for Muslim by Christian writers than by Muslims (JSS, ii (1957), 360, n. 4; in Euchtychus, Burhan, 1, the rendering "Muslims" is almost certain). The word occurs in a letter written about 590/1194 by a Spanish Christian king to the Almohad ruler (quoted by Ibn Khallikan-De Slane, iv, 58). Most revealing, however, is a passage in the Khamis, a poem by Ibn Sa'd, ii, 595) is Islam, and that al-Sidib al-muhtanifin who observes his prayers (salat) (poem by a Naqdi pagan, Djark 1, 404; cf. Khamisat, iv, 198) is a Muslim. Another possible interpretation of the last two passages is considered below.

3. Christian usage. The word hanifyya is more frequently used for Muslim by Christian writers than by Muslims (JSS, ii (1957), 360, n. 4; in Euchtychus, Burhan, 1, the rendering "Muslims" is almost certain). The word occurs in a letter written about 590/1194 by a Spanish Christian king to the Almohad ruler (quoted by Ibn Khallikan-De Slane, iv, 58). ed in the interests of anti-Islamic polemic, but it has ample justification in earlier Syriac usages. It was probably because of Christian polemics that the Muslims in the main abandoned the word.

4. Pre-Islamic usage and religious practice. The fact that Muhammad was able to regard himself and the Muslims as following Abraham the hanif shows that there was no organized religious body in the early 6th century A.D. known as the hanifiyya. Since the whole conception, however, had a bearing in pre-Islamic history; that is, they tried to find corroborations of the Kur'anic conception of hanif. Their statements on such matters must therefore not be accepted without careful scrutiny. Thus, when men are said to have set out to seek "the hanifiyya, the religion of Abraham" (Ibn Hishām, 143, 147), it may be true that they set out on a religious quest, but it is practically certain that they did not use that phrase. The primary question, which has been much discussed by modern scholars, is whether there is any conclusive evidence that hanif was used before the revelation of the Kur'ān for a religious ascetic, Christian or otherwise. The suggestion of Ibn Hishām (152) that takāmmul and tahannuth are the same is an example of the attempt to find corroborations of the Kur'ānic conception of hanif, for takāmmul almost certainly is derived from Hebrew or in the sense of "pagan", since it is derived solely from the Arabic root or is derived from Hebrew or is used in the sense of "pagan", since it is therefore historically valueless.

5. Etymology. Suggestions that hanif is formed from the Arabic root or is derived from Hebrew or is etymology of "heathen" coming first. In some Aramaean circles, however, the primary meaning of "heathen" or "pagan" was overshadowed by secondary connotations, such as "of Hellenistic culture", so that the word could be applied to philosophically-minded persons. The movements and individuals exist, but any assertion that some one is a hanif (in the Islamic sense) is the work of a later Muslim apologist, or one under Islamic influence like Thabit b. Kurra, and is therefore historically valueless.

Bibliography: in the article. Earlier literature is summarized in Faris and Glidden, op. cit. (W. Montgomery Watt)

HANDA B. LUDJAYM, ancient Arab tribe, part of Bakr b. Wā'il [q.v.] on a level with Thālab and Ḥḍjīr. The chief subdivisions were al-Dūl (or al-Dūl), ʿAdi, ʿAmir, ʿSuḥaym. They were partly nomadic, partly agricultural (date-palms and cereals), and also partly pagan, partly Christian. The town of al-Hadīj, capital of al-Yamama, belonged chiefly to them, and they took the town of Ḥadīj from Dhu Karb. Other localities mentioned as belonging to them (and as chiefly occupied by them) include: the wādī of al-ʿIrād, al-ʿAwkā, Faysḥān, al-Kirs, Ḥurrān, al-Manṣūf (a fortified town), Ṭalaʿ b. ʿAtā, al-Thāq (or al-Nakb), ʿUdāb, Ḥūṭal. The Hanifa are said to have moved from al-Hijjār to al-Yamama after the termination of an older culture there [see Tays]. Their separation from the rest of Bakr apparently took place towards the end of the war of Basūs [q.v.], and they were absent from the battle of Dhu Kār [q.v.]. This absence may be connected with the fact that they recognized the suzerainty of the Lakhmids of al-Ḥira and were employed in conducting Persian caravans from the Yemen to ʿIrāk. In extending their influence over the region between al-Yamama and ʿIrāk they came into conflict with Tamīm, to whom they were subject. About 600 A.D. their leader about 600 A.D., Kāṭāda b. Maslama, was succeeded by Ḥawdha b. ʿAll, apparently a Christian, who on one occasion was well received at the Persian court and given a crown, in reward for his services in conducting caravans. With the decline of the Persian empire after 628, Ḥawdha began negotiations with Muhammad, but had not become a Muslim before his
death in 630. Thumama b. Uthal, who may have been Hawdha's successor, is said to have become a Muslim after being captured in a raid. He was leader of the royal Muslims of Hanifa in the wars of the ridda, when a large section of the tribe revolted against Medina under Musaylima [q.v.].

HANSI — BANU HANZALA B. MALIK

tr. Elliot and Dowson, History of India . . , ii, 140),
capturing it at his second . Two years later, however, the Dihl rādī Mahīpāl recaptured Ḥānsī, and it was strengthened by him and subsequent builders. Towards the end of the next century it was enlarged and further strengthened by Prithvi Rājī as a bulwark against the Ghūrī forces; but, after the defeat of the Ḥūnhī forces at Tarāwīrī by Muḥammad b. Sām, Ḥānsī also surrendered (588/1192). At the end of that year a Āwāhnī army invaded Ḥārīyānā, compelling the Muslim governor Nuṣrat al-Ḍīn to take refuge in the fort; but they were overcome by ʿUṯb b. ʿAḍīny Arābī (details incorrect in Wolseley Haig, Cambridge history of India, iii, 42, cf. Ḥodīvhā, Ṣawīdī, ed. Ḥaqqī, s.f., 181/1325). Within a few months, Ṭuba b. Ṭibālī made it the headquarters of Muslim power in India; the Muslim hold on Ḥānsī thereafter remained secure.

Ḥānsī frequently figures in the chronicles of the Dīhlī sultānate both as an important brain (for its strategic importance see Ḥārīyānā, of which it was the principal town) and as an imāmāt of numerous officials: doubtless a convenient one for the sultan to have at his disposal, for it was far enough from Dīhlī to make appointment—or banishment—to it a reality, but it was sufficiently close to the power of arms at the capital to prevent a rebel from easily asserting his independence. For example, it was the imāmāt of Ḥājīyāth al-Ḍīn Balbān [see Dīhlī Sultānate] in about 640/1242, to which he was banished in 650/1252-3 after the conspiracy against him; when he had gathered some local support there he was sent further, to Ṣawīrā, and Ḥānsī was nominally given to an infant son of the king but in practice was occupied by one of Balbān's opponents (Mihndājī Iṣārī Dijujīnī, Ṣabābūtāt-i Nāṣīrī, ed. Bb. Ind. 202; Eng. tr. Raverty, ii, 140); other princes bad held this imāmāt previously, for example Abu ʿl-ʿAṯār Muḥāmnūd, the son of Iltīmāṣ, who died in 626/1229, held Ḥānsī before 623/1226 (Ṭubabūlāt-i Nāṣīrī, 180) and there built the ṣāyidūn, for some time, for Ḥānsī in disorder until the British established direct rule over the region in 1818.

Monuments.—The old fort has already been mentioned; it was dismantled after the mutiny of 1857, but the gate of the Durbar and the arms at the capital that at Aḥsān pur. remain. The dargāḥ of Sayyīd Shāḥ Nūmān Allāḥ, who accompanied Muḥammad b. Sām in 588/1192 and was killed at the conquest of Ḥānsī, stands in the fort; Hindu materials were freely used in its construction, and if the date 588 in the inscription of the attached mosque is correct it must be the oldest mosque in India (some doubt; cf. Ḥorovitz, op. cit., 19). On the west of the town stand the mosque and tomb of Ḥūndūt, whose tomb was burnt alive by the king. Another important battle was on the “day of Kahbarah”, a few years later, when B. ʿĀmir b. Ṣaḥāṣa [q.v.] annoyed because Laktū b. Zūrārā had given hospitality to the killer of their chief, attacked a caravan of Ḥānsī and made some prisoners and took booty. An attempt by Laktū to revenge this defeat led to the more disastrous defeat
at Shi’b Djabala. Hanzala were part of the forces of Tamim on the second "day of Kulab", when they successfully repulsed an attack. Among the first of the tribe to become a Muslim was al-Akra' b. Habis [g.v.] of Dārim. It was among Tamim that the prophetess Sada'ith appeared in the "wars of the ridāda"; among those supporting her was Mālik b. Nuwayra (Yarbūt), who was put to death by Khālid b. al-Walid. To Hanzala belonged Ansām b. Mukharrama, mother of Abū Dā' īli [g.v.]. After the conquests many of the tribe settled in Baṣra and elsewhere in the Ḥijāz (cf. al-Diyāzī, [g.v.]); Sayyība [g.v.] became clients (Pellat, *Mīliu Bawirien*, 37, 41). Some Khāriḍī leaders came from Hanzala, notably Urwa b. Udayya who led the opposition to 'All at Ṣifīf and was executed in Baṣra about 58/676; also his brother, Abū Bālīl Mirdās (killed 61/681).

**HANZALA B. ṢAFWĀN**

One of the people of the Interval (*fatra* [q.v.]), regarded as a prophet sent to the Ashāb al-Rass [q.v.], who maltreated and killed him before being destroyed themselves. The formation of the legend apparently began in the 9th century (cf. al-Dīabhī, *Tarāb*, ed. Pellat, index) but Ibn Kūṭayba does not mention Hanzala among the prophets of the fatra, and the Maṣūdī, in the *Muruqji* (i, 123, 125, 195), devotes only a few lines to him. Later on, the necessity felt by the exegetists to explain the Qur'anic expression Ashāb al-Rass (XXV, 40/58, L, 12) brought about a widespread development of the legend, which finally attributed to Hanzala the role played by Khalid b. Sinan *[q.v.*] in the removal or destruction of the fabulous bird called *'ansūh* [q.v.], which was ravaging the Ashāb al-Rass (al-Ḳāzwait, *Aṣdhīd*, ed. Wūstendfeld, 367).

Furthermore, the verse (XXII, 44/45): "how many stone-built wells, how many powerful palaces ['Adid'īb, al-Rass (al-Kazwinī, ed. Wiistenfeld, 367)."

**HANZALA B. ṢAFWĀN**

The disturbances which resulted in the fall of the Umayyads had their repercussions in the Maghrib. A usurper, 'Abd al-Raḥmān b. Ḥabīb al-Ṣafīrī, who was descended from Ḥubīb b. Naṭifī, returned from Spain, raised a revolt at Tunis, and called on Hanzala to hand over Khayrāwīn to him; because of religious scruples, the latter offered no resistance and left the capital (Pīrūmād I 127/February 745) to return to the East.

(R. Basset*)

**HĀRA,** "Quarter" or "ward of a town" [see *MAḌĪNA, MAḤALLA."

**HARĀFISH, HARĀFISHA** [see *HARFUSH."

**HARAKA WA-SUKUN** "motion and rest", a technical expression used, on the one hand, in philosophy and theology, and, on the other, in grammar.

I.—**Philosophy and Theology**

I.—The *Fādalīfa* take the Greek theories for their base. Thus al-Kindī exactly reproduces Aristotle’s thought when he writes, like him linking time and motion, that time is a duration...
number of motion). Furthermore, al-Kindi knows the famous formula: time is the number of motion; he identifies it with the preceding one (li-anina l-samand innamand hawwadadd al-’araka, an-nih annahu muadda tuwadduhu l-’araka). There is no motion without body and time; these three realities are simultaneous in existence. Motion presupposes something moveable that is a body; if there is neither motion nor time there is nothing that goes from . . .

Furthermore, al-Kindi knows the famous formula: time is the number of motion; he identifies it with the preceding one (li-anina l-samand innamand hawwawadd al-’araka, an-nih annahu muadda tuwadduhu l-’araka). There is no motion without body and time; these three realities are simultaneous in existence. Motion presupposes something moveable that is a body; if there is neither motion nor time there is nothing that goes from . . .

“Nature is the principle (ibtidat) of motion, and of rest after motion”. Al-Kindi defines the efficient cause thus: “the principle of motion of a thing of which it is the cause”. Nature is thus the way the efficient cause (al-’ibtidat) moves a body; if there is neither simultaneous in existence. Motion presupposes something moveable that is a body; if there is neither motion nor time there is nothing that goes from . . .

As for the efficient physical cause, it causes to exist the being (masdar al-tafrrik), realties, that which gives existence is the principle of existence. Such is the opinion of Ibn Sina; on the other hand, the notion of existence leads to rest after motion”. Al-Kindi defines the efficient cause thus: “the principle of motion of a thing of which it is the cause”. Nature is thus the way the efficient cause (al-’ibtidat) moves a body; if there is neither simultaneous in existence. Motion presupposes something moveable that is a body; if there is neither motion nor time there is nothing that goes from . . .

Thus al-Kindi defines the efficient cause thus: “the principle of motion of a thing of which it is the cause”. Nature is thus the way the efficient cause (al-’ibtidat) moves a body; if there is neither simultaneous in existence. Motion presupposes something moveable that is a body; if there is neither motion nor time there is nothing that goes from . . .

Thus al-Kindi defines the efficient cause thus: “the principle of motion of a thing of which it is the cause”. Nature is thus the way the efficient cause (al-’ibtidat) moves a body; if there is neither simultaneous in existence. Motion presupposes something moveable that is a body; if there is neither motion nor time there is nothing that goes from . . .

Since the gradual motion is a gradual transition of that which necessarily exists potentially with respect to its arrival at that place. But the orientation necessarily precedes the arrival; as long as the orientation exists actually, the arrival exists potentially. The orientation is, then, a first fulfilment for this body, which necessarily exists potentially with respect to its second fulfilment, that is to say, with respect to its arrival”. This passage shows that in the definition of time as the “measure” of motion confusion is caused by forgetting that time is not a number that counts but a number that is counted. It is this confusion that causes a vicious circle. Besides, tawaddul is not enough; it is potential motion, but not yet a real motion, the actuality of a potentiality. Al-Kindi’s tawaddul, because of its root meaning and the shade of meaning of the maqsadar of the Vth form, more accurately renders the reality.

Thus it is pointed out that quantitative (min kum ida kam akhar) motion affects both matter and form, and that rarefaction (talakhalkul) and condensation (talakhatyul) growth (numa) and shrinking (huzul), becoming fat (siman) and becoming thin (hursul) must be distinguished. Change of position is distinguished from movement on the spot (wadidyaya), in the motion of rotation (’ala ’l-tawaddul); “each part of the moveable object leaves each one of the places of its position—in a case where there is a position—, but the whole remains attached to its position. We add “in a case where there is a position”, in order to include in the definition of motion the encompassing Sphere (which, properly speaking, has no position)” (al-Tahhännawi).

The theory of motion is linked, as it is for the Greeks, with the organization of the cosmos. The circular motion of the celestial spheres, the most perfect motion, is eternal because its limit coincides with its origin, and there exists no time outside it; time cannot preexist the motion of the encompassing Sphere. The motion of the spheres determines the various motions in the time of the beings of the sublunary world, in particular that of the elements upwards (al-’araka al-s’ida) or downwards (al-kubah). The composition of the elements is considered as motion: a change in the manner of being of that which is not compound (al-takrib al-’araka, wa-in lam yakun ham lam yakun takrib) (al-Kindi). A distinction is also drawn between essential (dhalityya) motion, which moves a body without the intervention of the motion of another, and accidental
motion, like that of a man who is on a ship under way; and between natural motion and forced motion (şıq, al-harakah al-basiyya), in which the motive force is given to the body or to the object moved (al-mutahārika); this applies to artificial motions. A being can receive the principle of its motion from another (min ḥayrīhi: God, Nature), but have it in itself and move with a natural motion. Forced motion occurs when its principle remains external to the body: “When the principle of motion in a body comes from outside (min khādiri), min ḥayrīhi . . . , that which results from this motion is an artificial (ṣināda) principle of the same type as the art” (Shafīʾ, Ilāhiyyāt, 282). Motion is simple or compound. Simple (ḥaṣīta) motion is voluntary (bi-l-irda) —that of the stars, or involuntary—that of physical nature, that is to say, of the elements. Compound (muqākkabā) motion stems from animal (al-ḵuwās al-ḥayawndīyya) or non-animal force. In the latter case, we have vegetative (nabīsyya) motion; in the former, voluntary or animal (ṭaḥṣīyya basīyya) motion, if it is accompanied by localization in the same place. The initial force is taken into consideration only in the case of unnatural motions, that is, in their continuity. Most interesting too is this other problem: the point of departure at which the body is at rest and from which it is set in motion partakes at the same time of rest and motion; but then we cannot clearly distinguish between motion and rest; the object at rest, at the time when it is at rest, begins to tend (ṣahrī) towards motion. These speculations border on what we call dynamics, continuity and integration of motion. Unfortunately the solution offered is purely verbal and is expressed by rhetorical juggling which cannot be translated: al-harakah kawn awsal fi mahān ṭalūn, wa-l-suhkān kawn ṭalīr fi mahān awsal, that is to say that motion consists in being in a second place from the first, or this leads onwards, and that rest consists in being in the first place of origin at a second time. That is as it may, this rhetorical form meets as best it can the demands of the dialectic of motion (cf. al-Tahānāwī).

Rest is presented at the limit of motion as a second fulfilment, following the pattern of the immutability proper to that which is perfect. There is also a type of rest closer to the inertia of matter, from which motion emerges. The Rhādī idea is the one of an agent that acts “goes back to a cause which is the principle of a change (ṭaḥṣīr) following a state of stability (ṭabīl) and rest (ṣuhīn); this is what is called motion” (Tafṣīr, ii, 491). The commentator does not exactly follow Aristotle, who makes of the agent a principle of both change and stopping (Metaphys. 1013 a 29 and 1013 b 24). The idea of a rest before motion is clearly expressed by the Ilāhīwān al-Ṣafā. The body is not moveable because of its corporeity (disīmiyya), even though the Spheres exist only with their motion. The mover of the body is another substance, the soul (i, 228). The act of the universal soul is to impart to them their revolutions (iḍārāt), and to end this to keep at rest (tasbih) the individual centre of each of them. The soul is alive by itself. Thus motion is life. In certain bodies it is essential, as in fire; when its motion ceases and it is at rest, it is extinguished. Elsewhere it is accidental, as in water, air and earth, which continue to exist if their motion stops. Motion is a form which the soul puts into the body after having given it its shape (gabd). Rest is the absence (ṣadom) of this form; it is better suited (awlā) to the body than motion, since the body has dimensions and cannot be moved in all these directions at once. Its motion in one of these directions suits it no better than motion in another. It is itself a spiritual form which penetrates all parts of the body and withdraws from them instantaneously; in the same way light penetrates a translucent body in one instant. But once the motion of the body has penetrated it completely in one instant, it spreads little by little after the fashion of heat.
or in another. But this restriction (harf), which
consists in speaking of a motion or a rest of
what fundamentally defines them, the relation of
antecedent and posteriority, leads to
denying both motion and rest. Thus Abu l-Hujhayl
postulates, for the first moment when creatures
come into being, a situation intermediate (wādāṣa) be-
tween motion and rest. It is from similar problems
that Leibnitz's metaphysics sprang, in the West, as
the foundation of modern dynamics.

3.—Kurar và Tafsir.—The Kurān exhibits
no use of karas and sufūn that lend themselves to
a commentary on the physical reality of motion and
rest. The ingenuity of the commentators makes
up for this. Thus Faqîr al-Dîn al-Râzî, on XL, 61
("God has made for you the night that you may rest
in it"), writes: "Motions produce fatigue, because
they necessarily develop heat and dryness which
give rise to a disturbing irritation". Furthermore,
the great number of motions disperses the animal
physiology of the mouth during the emission of the
sounds to which they refer, notwithstanding the
legendary part in their creation attributed to Abu

The karas are deficient by their nature: as
regards their content, as we have just seen, they are
part of another, as regards their existence they cannot
maintain themselves by themselves, but need the sup-
port of a harf såbih or one acting as if it were såbih;
and their place on this support, fî l-muraba "accord-
ing to rank" (that is, in accordance with the natural
order), is "after the harf" (ibid., 32-7). But the latter
also needs the harf to exist. When there is a
karaha after the harf, it is a harf muṭaharrik, it
possesses its karaha; in iskān the harf is bereft of
its natural appurtenance. It can manage without this
if it can rely on the karaha of a preceding harf
muṭaharrik. But, without a karaha either after or
before it (which would be the case of the first con-
sonant in an initial group), iskān, for the Arab
grammarians, is inconceivable in the Arabic language.
Thus there is a necessary association between harf
and karaha. Thus the karaha continues to be conceived
within syllabism. This may be called "implicit
syllabism" (as in the case of the Canaanite alphabet),
in contrast to the "explicit syllabism" of Akkadian
cuneiform and the Ethiopic script.

The diphthongs exist in Arabic: aw and ay (see
H. Fleisch, Traité, § 7), but it has no name in Arabic
grammatical nomenclature, extensive though this is.
Nowhere else is it discussed. Now in Arab phono-
etical theory it comes in here quite naturally, as Ibn
Djinni shows (ibid., 21-30) that, in the manner in
which the harf såbih, alif, awd, yd, may come after a
karaha. Every harf såbih, whether muṭaharrik or såbih
(including waw muṭaharika and yd muṭaharika),
can come after any karaha. But it is not so with these
two bu'af. There are impossible cases: these are alif after kasra.
There are cases of difficulty or repugnance which
demand a corrective; these are waw after kasra or yd
after damma, that is, w, u; in the first case the
waw is made by kâb into yd, and in the second, the
ya is made by kâb into waw, that is, y, i, as in
misân, and w > i, as in mükin. But waw or yd after "the weak", the harf muṭaharrik
that presents no difficulty for the language. This is
the case of the diphthongs aw and ay, which ought to
have deserved special attention, but, from the Arab
viewpoint, it was simply that waw and yd came after
fatha and remained unchanged—though this was in
contradiction with the theory of the karaha as a part
of the harf al-madd, its awd, which announces and
requires its completion, and Ibn Djinni's efforts were
directed to demonstrating that this theory held good.
Some authors reserved the name of harf al-lin for
the harf al-madd in this position; but this has re-
mained a special usage.

The name karaha cannot be dissociated from its
sub-divisions, fatha, kasra, damma. These latter terms
are purely Arabic, and have some relation to the
physiology of the mouth during the emission of the
sounds to which they refer, notwithstanding the
legendary part in their creation attributed to Abu
'l-Aswad al-Du'all (al-Sīrafi, Akhbdr al-nahwiyyin, 16, lines 8-10). As regards the term haraka "movement", i.e., the movement of the articulate organs, this only spread through a certain connected sound to which the term was transferred, a very simple observation might have led to the idea; and this would naturally lead to its opposite suḥān, "rest, quiescence". In our view, all these terms, haraka, suḥān, faṭha, kasra, damma, represent an Arab creation, expressing one of the first insights of the Arabs as they pondered over their language. Thus, it is only the moments of the grammar of the Arabs and there is no need to seek the origin of the concept of haraka in the philosophy and the musical science of the Greeks, as M. Bravmann seeks to do (Materialien, 12).

The signs representing the harakas and the suḥān belong to the supplementary elements added to the Kur'ānic script without affecting the ductus of the word, and constitute what is known as the scriptio plurim. Gradually (the 190s-200s). To denote the harakas a dot was used at first, above the harf for faṭha, below for kasra, and in the middle for damma, with two points in the case of tanwīn, not in black like the ductus of the word, but coloured, usually red, in order to distinguish them and to change nothing of the true body of the word (al-Dānī, K. al-nuṣūb, 134, line 1). R. Blachère (ibid., 93-6) describes this insertion of vowel-points, in which at first only the vocals of īrāb were indicated, the vocals of inflexion, which were especially important since they determined the function of the word in the sentence. He says nothing about suḥān. As al-Dānī reports (ibid., 137, lines 5-7) it was first marked by a little red horizontal line (dīrārā) above the harf. Other signs were subsequently employed before the current little circle came into use (see Wright, Ar.Gr., ii, 13C).

A particular case of suḥān is the gīzām, quiescence of the final harf of the mudārīn, which is then al-maḏdiqūn, the apocopated.

(H. Fleisch)

**HARAM (plur. aḥrām, aḥrāmā'), and in the popular dialect of Egypt, thvrām, the latter also used as a singular), a word of doubtful origin - pyramid. In Muslim literature, al-maḏforāt, which in the Malākid chapter on pyramids and Cheops, or sometimes also of Mycerinos, west of Dīzā (Giza). They have been mentioned and described times without number by the geographers, but as a rule their accounts have little value as original documents. The most important sources are collected in al-Maḏforāt, a work on pyramids in an Arabic manuscript. On this point, it is improbable for reasons already set forth by De Sacy that this Caliph could have undertaken this task himself, especially when we remember how brief his stay in Egypt was. We also know that the pyramids had already been broken into in ancient times. Nevertheless, it may be presumed that it was about that time that further progress into the interior of the Pyramid of Cheops was made for the first time in the Muslim period and that the tomb-chamber, of which we have numerous more or less clear accounts, was gradually reached. The belief generally current that rich treasures were concealed there was no doubt a stimulus to this work. In later times we learn of an unsuccessful attempt by al-Mallik al-Sa'dī to destroy the Little Pyramid (509/1169-7). Karakūq had previously by Saladin's orders removed a series of the smaller pyramids of Dīzā to use the stone to build walls and bridges at Dīzā (cf. also Khītāt, ii, 131). Furthermore, in all the stories about these colossal constructions, whose original significance was the object of the most fantastic speculations, the kernel of fact is enveloped in fairy-tales such as are associated with no other ancient monuments in Egypt. Some of them even go back to Herodotus, like the story of the woman, the spirit of the pyramid of Mycerinos, who destroys the reason of any one approximating it by her beauty and her smile; this is apparently a survival of the story of Rhodopis, the traditional builder of this pyramid (Wiedemann, 485 ff.). Herodotus likewise already mentions subterranean canals connecting the Nile and the pyramids (ibid., 466). In other cases, as Maspero has shown, distinct recollections of Old Egyptian ideas have survived; for example, in the description of the guardians of the western and eastern pyramids, there is reflected the impression made on later ages by the monuments of the period of the Pharaohs. But it is legends from the sphere of Coptic-gnostic ideas that have become most strongly associated with these buildings. The two great pyramids there became the tombs of the prophets Hermes and Agathodaimon, and with this was combined the tradition that they were built to conceal treasures and prevent the wisdom of the first generations of mankind from being destroyed by the inundation of the deluge prophesied by the astrologers. Another tradition is that which is associated with the legendary figure of Shaddāb b. 'Aḍ (p.q.v.).

(General Bibliography: M. Flessner)
after Mecca and Medina the acknowledged third holiest Muslim sanctuary, is located in the south-eastern part of the present Old (i.e., walled) City of Jerusalem. It is presumed to have been a Haram (a sacred enclosure) from the earliest times, and the significance of the Haram has been complicated by two factors: first, the contrast between an extreme paucity of early sources (written or archaeological) and a systematic explanation of the Haram's significance in the fata"u or holy guidebooks of the late Mamluk period; and, second, the lack of any complete archaeological survey of the area and the extreme paucity of more comprehensive information in Islamic sources.

A first group comprises monuments attached to the Haram, some of the later gates were entrances to institutions which bordered it. A second group commemorates Prophets whose lives were associated with Jerusalem: Abraham, Joseph, Jacob, Jesus. Finally there is a large number of sanctuaries on the Haram took several centuries and the number of gates, and monuments were obliterated during the Crusades. For earlier times we possess only lists (Ibn al-Fakih, al-Mukaddas, Ibn 'Abd Rabbih) of monuments. It seems, however, that the growth of individual small sanctuaries on the Haram took several centuries and that it was not before the Fatimid period that the whole area had acquired its full complement of religious associations and of monumental expressions of these associations. The reasons for this are to be found primarily in the peculiarities of the history of Muslim Jerusalem. The former Temple area became first of all the site of the Muslim congregational sanctuary, and its present shape in Umayyad times, although based on Herodian plans, Second, as the character and shape of the city changed, emphases on more or less significant gates shifted as well, but certain names of gates (Hitta, Nabî, Assâbî, etc.) had acquired a permanent religious value and shifted from one place to the other. Third, while all early gates were entrances to the Haram, some of the later ones (bâb al-Kaṭṭānantî, for instance) were entrances from the Haram to institutions which bordered it.

Approximately in its centre the Haram is a large trapezoidal platform (southern end: 281 metres; northern end: 310 metres; eastern end: 462 metres; western end: 491 metres), whose eastern border and parts of the southern one coincide with the walls of the present city. Its size remained constant throughout the Muslim Middle Ages, since an inscription to that effect (Max van Berchem, no. 163, with important commentaries) still exists and was seen as early as the 4th/10th century. This platform is totally artificial; its northern side was cut out of the natural rock, while its southern end was raised over rocks and valleys, including, in the southeastern corner, the Tyropoeon valley, now 28-50 metres below the surface. The underground parts of the Haram include 37 cisterns and, at the southern end, a vast complex known as Solomon’s Stables consisting of vaults on thick piers and the so-called Double Gate (mârâgha), this list is already found in Mudiir al-Din in the 9th/15th century and can be assumed to represent the last stage of major developments on the Haram, i.e., the Mamluk period. For earlier times, especially before the Crusades, the question of the gates is far less significant than the subject of numerous controversies (summary and bibliography in O. Grabar, A new inscription from the Haram, in Studies . . . in honour of Professor K. A. C. Creswell, London 1965). All problems concerning the gates have not yet been solved but the following points can be justified. First, from the Mamluk period onwards, only northern and western gates were open, but in Fatimid times southern ones were still used and both these and the Golden Gate (now blocked); South: Single, Double, and Triple Gates; West: bâb al-Mughârûba (on top of an older gate known as bâb al-Nâbi), bâb al-Silsila, bâb al-Muta-wâfâda, bâb al-Hadîd, bâb al-Nâzîr, bâb al-Sarây, bâb al-Qawânînî, etc. It is, however, certain that it was not before the Fatimid period that the whole area had acquired its full complement of religious associations and of monumental expressions of these associations. The reasons for this are to be found primarily in the peculiarities of the history of Muslim Jerusalem. The former Temple area became first of all the site of the Muslim congregational
mosque in the city, then that of the monumental Dome of the Rock expressing Umayyad power and ambitions, and only later a complete ensemble with prestigious Mamluk and Ottoman usage, to Jerusalem and Makkah, occasionally, in both terms (yazidii [q.v.]), canonic for Mecca only, the second one being more significant is proved by the vast literature which grew around it and by the facts that it contains the first masterpiece of Islamic architecture and that princes and laymen over many centuries lavished money and efforts on its beautification.

Bibliography: A full bibliography will be found in the articles AL-KUDS and KUBBAT AL-SAKHEIRA. In addition to references in the text, the most important guides to the problems of the Haram are Muğlis al-Din, Ta'rikh al-Kuds wa 'l-Kudsiyoon, 2 vols., Cairo 1283 (partial translation by H. Sauvage, Histoire de Jérusalem et d'Hébron, Paris 1876), and the second volume of Max van Berchem's Matériaux pour un Corpus Inscriptionum Arabicarum: Jérusalem, Cairo 1925.

(O. Grabar)

AL-HARAMAYN, the two holy places, usually referring to Mecca and Medina, occasionally, in both Muslim religious meanings and with some exception in the gdh/isth century were by popular usage rather than by full agreement on the unified holiness of the area. Still to-day a confusion exists between the Haram area as merely the "mosque" of the city of Jerusalem and the Haram as the unique place of a number of holy events. In spite of these confusions and of the complicated history of the area, the depth of its religious and symbolic significance is proved by the vast literature which around it and by the facts that it contains the first masterpiece of Islamic architecture and that princes and laymen over many centuries lavished money and efforts on its beautification.

Sauvage, Histoire de Jérusalem et d'Hébron, Paris 1876), and the second volume of Max van Berchem's Matériaux pour un Corpus Inscriptionum Arabicarum: Jérusalem, Cairo 1925.

(O. Grabar)
HARAR, capital of Ethiopia's largest province, an important commercial centre, and one of the main Muslim cities in East Africa. Since the governorship of Ras Makonnen, Emperor Hayla Sellasse's father, Harar has played an increasingly important part in the life of Eastern Ethiopia and is at present the seat of the Imperial Military Academy and an agricultural college. Its famous market, favourable climate (with an annual mean temperature of 20°C), and history, together with its picturesque setting as a medieval walled city, have made Harar one of the principal tourist attractions of modern Ethiopia. Its cosmopolitan population, estimated at some 60,000, consists of Gallas, Somalians, Monophonic Amharas, Levantines, and Europeans, but somewhat less than half can be described as genuine Hararis and speakers of the indigenous Semitic language. The principal name associated with the study of the history, Islamization, and language of Harar is that of Enrico Cerulli.

The history of Harar is very largely identical with that of Islam in Ethiopia in general and has as such been discussed under AL-HARASI.

At a later period the Walasma sultans transferred their capital to Harar, possibly to extricate themselves from the pressure exerted by their generals who drew support from the Danakil [see DANAKIL] and Somalis [q.v.]. Chief among those forceful military commanders was Ahmad ibn Ibrahim (nicknamed Grañ [see Ahmad Grañ] 'the lefthanded'), who soon became the effective master of all the newly conquered Muslim possessions in Ethiopia and assumed the title of Imam. In the middle of the 11th/12th century a new Muslim state was established as the independent Emirate of Harar which continued until Menelik's conquests at the end of the 19th century when, in 1887, Harar was incorporated in the Christian Ethiopian Empire.

The Kadiriyya is the foremost Islamic order in East Africa and is particularly strong in the Harar region. In madghab, the people of Harar belong overwhelmingly to the Shafi\x27ite rite.

Harari (or Adare\xa0h\xa0a) is the Semitic language spoken in the town of Harar.

AL-HARASI [see KASR].

AL-HARASI (Harsus\i; in their own speech: Hars\hsrb (Hars\hsry)) a bilingual, nomadic Arabic tribe of 400 or fewer arms-bearing males, Shaf\i Sunnis in religion and Hin\\nh\v in regional political faction; identified as to dir\a with the barren steppe called Diiddat al-Harasis—below the south-east corner of al-Rim\al, "the Sands" (al-Rub\a; al-Kh\a\i [q.v.])—but usually ranging in the area of seaward-trending, forge-filled wadis towards the coasts of al-Ba\a\âir and the southern al-Djana\a (q.v.). Their eponymous tribal area, called by them and by al-Mahru [q.v.], extends east and west from the (inland) terminal basins of Wadi Muk\hsin and Wadi Ti\a\ra (q.v.—the latter in Haras\i and Mahru: ba-W\d\i\db\x20Œreh—to Sayh\a al-\ubaym\a (a smaller portion of the south-east Arabian steppe desert) and the rough north-south strip of al-H\hsf\ or al-H\\nh\x20Œif. From Ramlat al-Salama (a marginal district of "The Sands") it extends south across the small, læg\a\i\n\g\d\' mm\a\i\i\s\a\h\x20Œif and its terminal sand-district, a-Ba\hs\ht, to the group of wadis which, through Sayh\a al-D\j\\nh\a\kiz\x20Œir, enter Gubb\a\t\x20Œikirah of the Arabian Sea. (Of these the chief, north-east to south-west, are: Hayt\a (Hatt\a), Ar\b\nib, G\hsd\x20Œan (or the eastern G\hsd\x20Œan), W\\nh\o\f, and south of al-D\j\\nh\a\kiz\x20Œir, \"Ayn\a—"the upper portion of which, among multilingual southern Arabs, goes under variations, some of them with \hsrb, of the Djun\a\y\b (and Ba\hs\x20Œad\a\l) toponym ba-Rik\x20Œit, "the r\a\x20Œik (arak tree")).

The Haras\i country is touched to the north-east by a motor track from east coastal Ra\a\x20Œak\x20Œm, and is crossed from south-west to north-east by a motor track from southern coastal Salal\a (q.v.); Mahri, etc.: Ts\o\la\l\o\l; but Shahr\x20Œi-Karawi: Ts\o\l\i\l\i\l. The two joining and continuing north through the Say\a or steppe of al-Dur\a to \"I\b\r\i\n\g\d\' and al-Buraymi (q.v.—without a single permanent water source (except potential k\a\i\a\m\a\n\a\i\s\s\a\h\x20Œed and usually capped by oil explorers), al-Harasis at times, even in summer, pasture their animals without watering, while themselves subsisting on milk (\hsrb\x20Œa, yad\h\x20Œa\a)—see AL-DANHA\x20Œ).""

Bertram Thomas (Alarms and excursions—note typographical error on p. 183: "Haras\i") was much attracted by the intelligence and friendly spirit of those from the tribe who aided him as guides and linguistic informants. To this association is owed the first Western study of Haras\i speech. Like the other southern tribal tongues from old South Semitic which have long outlived the related Ancient South Arabian, this one deserves further investigation. For the oft-occurring b\s\l\l of Mahri and Haras\i (= Ar. ba\s\l, "lord or owner of; having, characterized by," located at a certain place) Haras\i has b\s\l\l (Cf. Bathari: ba\s\l\l, with \a\x20Œyn, and Shahr\x20Œi-Karawi: ba\s\l\l, with reduction to ka\s\l\l, with ka\s\l\l (beside occas. Shahr\x20Œi-Karawi: b\s\l\l). For fem., Ar. ba\s\l\l, Haras\i and Mahri have b\s\l\l, contra Bathari ba\s\l\l, Shahr\x20Œi-Karawi ba\s\l\l. For Ar. \d\h\s\i\l\h (rabb\a), Haras\i has a\-b\l\l, contra Mahri a-b\l\l, both doubly determined by definite article and by possessive pronoun.

Haras\i, with considerable speech variation between individuals, appears to be more deeply influenced by Arabic than the others of the "four strange tongues" of the tribes down-country (from \hsrb)—which is what Hadara, with \h, means, having despite Thomas nothing to do with Hadoram, with \hsrb, of Genesis, x, 27. Yet Haras\i staunchly retains many old and interesting vocabularies, which at the same time make it, if it be only a branch of Mahri, a quite distinctive one.

The tribe has these main sections (names in Arabic): (1) Bayt \a\k\s\l\l, (2) Bayt Mutiya\a, (3) Bayt \a\f\r\i\i, (4) Bayt Kakh\a\r\h\i\h, and (5) Bayt Barah\a, besides, as one of the largest groups, Bayt \hsrb\x20Œa, which is either a section or a subsection of (1) or of (2). The shykhal authority rests in (1), the principal leader (Haras\i muk\a\d\x20Œam, pl. mukad\a\d\x20Œam) in 1962 being Shahri b. \a\s\i (Haras\i...
the villagers of Shāhīdāns [q.v.].

Harat was a great trading centre strategically located on trade routes from the Mediterranean Sea to India or to China. The city was noted for its textiles during the "Abbāsid Caliphate, according to many references in the geographers. Harat also had many learned sons as one may see in al-Sam'ānī s.v. al-Harawī. The city is described by al-İṣṭaḥkīrī (263), and Ibn Hawkal (437) as having four gates, a strong inner citadel and extensive suburbs. There is much information in the Arabic and Persian geographers about the city from the 4th/10th century onwards. According to the account of Ham al-ṬāBH Mustawfi (152) Harat flourished especially under the Ghurid dynasty in the 6th/12th century. The great mosque of Harat was built by Ghiyāth al-Dīn al-Dīn the Ghurid in 598/1201. During the Ghaznavid and early Ghurid periods of the 9th/11th century the heretical sect of the Karāmiyya was strong in Harat, but Ghiyāth al-Dīn, after first supporting them, later turned to the Shī'ī rites of Ismā'īliyya.

Harat was captured by the Mongols in 618/1222 and the pillage and slaughter is described by Sayf al-Harawī (66-72, see bibl.). The city was destroyed a second time and remained in ruins from 639/1242 to about 634/1236, but people returned to the city, including some who had been captured by the Mongols, and much of the city was rebuilt. In 643/ 1244 a local prince Shams al-Dīn Kurī (or Kart) was named ruler of Harat by the Mongol governor of Khurāsān and in 653/1255 he was confirmed in his rule by the founder of the Il-Khan dynasty Hūlūgū. Shams al-Dīn founded a new dynasty and his successors, especially Fakhr al-Dīn al-Dīn, built many mosques and other buildings. The members of this dynasty were great patrons of literature and the arts. The history of the dynasty is given by Spuler (below).

The village of Gāzīrgāh, over two km northeast of Harat, contained a shrine which was enlarged and embellished under the Timurids. The tomb of the poet and mystic Khwāja ʿAbd al-ʿĀla Muḥammad Taḥmāsp (d. 48/1058), was first rebuilt by Shah Rukh about 829/1425, and other famous men were buried in the shrine area. In 913/1507 Harat was occupied by the Ozbekhs but after much fighting the city was taken by Shah Ismāʿīl al-Dīn the Timurids in 916/1510 and the Shāhī Khurramkhan assumed the governorship of the area. At the death of Shah Ismāʿīl the Ozbekhs again took Harat and held it until Shah Taḥmāsp retook it in 934/1528. Several times later for brief periods the Ozbekhs held the city but the Šafawīs ruled it most of the time until the revolt of the Abbāsid Afghans in 1720/1725. Several Šafawī expeditions to retake the city failed, and the Afghans remained in possession of the city until 1145/1732 when they submitted to Nādir Shāh. Another revolt of the Afghans was suppressed by Nādir Shāh in 1732. In 1160/1747 the nephew of Nādir Shāh, one of the Khil Inān al-Dīn, revolted in Harat but after Nādir's death in that year Harat fell under Afghan rule.
In 1837 the Persians laid siege to Harat but failed to take it. In 1856 they captured the city but were forced to evacuate it the next year as a result of a peace treaty in Paris between Great Britain and Persia. Since that time the city has been part of Afghanistan, the capital of a province.

The histories of Harat, both those preserved and those lost, are listed in Sayf al-Harawi (pp. vii-x; see below) and in Togan (442, Bibliografya). The present city has a population of ca. 100,000. The climate is mild, and in summer there is a west wind of "one hundred and twenty days".

On the pre-Islamic city see J. Markwart, A catalogue of the pre-Islamic capitals of Eranshahr, Rome 1931, 11 and 46.

For Harat under the Kūrt dynasty see B. Spuler, Mongolischer Kontinent, 1516-1526; The Timurid age in Harat is described by W. Barthold, Harat under Hūsein Baqāqara, trans. by W. Hinz (Leipzig 1938); Eng. tr. by V. and T. Minorsky in Four Studies on the History of Central Asia, iii, Leiden 1962, 1-72. For a plan of the city in Timurid times with photos of buildings see Z. V. Togan's article, Harat, in IA. For a description of the city and surroundings in the 9th/15th century see A. M. Belenitskii, Istoriya topografii Gerata XV v., in Aligher Nauoi, ed. A. K. Barovkov, Moscow 1946, 175-202.

HARĀZ, a mountain complex and district in the Yemen, situated between the Wādī Surdūd and the Wādī Shāhām, with the Tihāma districts of Liṣān and the Banū Sa'd to the west and Ḥaymat al-Khārijiyya (q.v.) to the east. Apparently composed of rocks of the trap series (basalt) and of granite, it has the shape of an irregular star with Diabal Shībām or Harāz (2930 m.) at the centre. A northern projection consists of Diabal Banī Ṭayhir (2450 m.), Diabal Ḥuṣayn (2400 m.), Diabal Banī Lam (2400 m.), and Diabal Muhārība. To the west lie Diabal Masār (2800 m.) and Diabal ʿAbīn (2000 m.), to the south Diabal Lahāb (2400 m.), and to the southwest Diabal Hādād. Between Diabal Ḥaṣābān and Diabal Masār is the Wādī Shāhām, a tributary of the Wādī Surdūd, and between Diabal ʿAbīn and Diabal
Lahab the Wadi Birar or Ḥiḥām, whose steep course is followed by a branch of the Ṭarth al-Shibām between Ḥudayda and Ṣanʿāʾ ([q.v.], though it is not suitable for motor traffic. The massif is very steep and precipitous at its edges but the area on top, between 2200 and 2500 m., has the character of undulating hill land, split up by innumerable valleys and gullies and with the aforementioned peaks rising in isolation out of it. All of the upper reaches is inhabited and there are countless villages and castles, even to within a short distance of the summits of the mountains. The chief town of the district is Ṣanʿāʾ with 200-300 houses, lying at the northern east of Djabal Shibām and formerly the residence of the Kāṭimmaḵām of Ḥarāz, Ḥayma and Djabal ʿĀiniz (southeast of Ḥarāz). Manāḵa had become the main trading centre of Ḥarāz by Niebuhr’s day, having supplied al-Mawṣa on Djabal Lahab, which is noted by Hamdānī as the sūk of the area. Five miles west of Manāḵa lies al-ʿAttāra (1900 m.) where the Dāy of Yām (Nadārjan) [q.v.] uses to reside. Other peaks and gullies of the same name) in the Muslim period. At the beginning of the last century the Wahhabis succeeded only after

The climate of the district is unusually wet and subject to sudden temperature changes. Frequent rain storms associated with south-westerly winds and a mist, known locally, combine to make this one of the most fertile parts of Arabia with very varied flora and fauna. Agricultural activity is intense. After a belt of thorn bushes and myrrh trees, coffee cultivation begins at 1300 m. near Usil and continues to 2200 m., mainly on the western slopes. It is carried out on a fantastic system of terracing which covers almost all parts of the mountain slopes, often extending for 2000 feet or more without a break, irrigation being provided by a network of canals and cisterns. Above the coffee belt, khl is extensively grown and, in the vicinity of permanent water sources, there flourish many types of fruits, including pears, peaches, apricots, plums, figs and grapes, even bananas. Wheat, barley, and leguminous crops are also found. The broken terrain of the mountains, however, provides little opportunity for rearing live stock other than sheep and goats. Outlets for trade in these commodities are found in Ṣanʿāʾ, and also in the Ḥarāz through various markets, notably Ḥajdalya, Sūk al-Khamīs, Sūk al-Rabū, Sūk al-Ṭiḥayyan and Sūk al-Dijummuʾ. The inhabitants of Ḥarāz stand in marked contrast to those of the Ṣanʿāʾ in physical characteristics, religion, customs and practices. Most tribes are Ṣaʿdīs and but the divided nature of the mountain encourages the appearance of numerous sects. Thus there are Dāwūds among the Banū Mukkāṭil and on Djabal Ṣaʿfān, Sulaymāṁs on Djabal Ḍamārība, other Ismāʿils in Ḥawzan, Lahab and al-ʿAttāra. In Manāḵa there are Yāʾkābīs, while a few Ṣaʿdīs, more typical of the Ṣanʿāʾ, are to be found on Djabal Ṣaʿfān. There used to be many Jews also, particularly in Manāḵa, Ḥaḍra and Ḥawzan. In Manāḵa they owned land and virtually controlled the coffee trade. Tribal divisions are equally numerous, almost every valley forming the boundary between two tribes. Hamdānī described Ḥarāz and Ḥawzan as two Himyarite stocks. In the former there were also Ḥanṭalā, Luʾf and Nashū of the Banū Ḥamdān. According to Glaser (1885) the district was divided as follows: 1. Banū ʿArrāf on Ṣaʿfān; 2. Ṣaʿfān proper; 3. Masāʾr; 4. al-Maghārība; 5. Banū Ismāʾil northwestern of Masāʾr, 6. Ḥaṣābān; 7. Ḥawzan; 8. Thulūth east of Lahāb, 9. Lahāb; 10. Banū Muṣrūṭ; 11. al-Ŷaʿsīb south of Manāḵa; and 12. al-ʿUkwun between Manāḵa and Ḥayma.

The history of the district in ancient times is hardly known, though CIV 343 briefly alludes to Ḥarāz (Ḥawzan). Hamdānī’s description of the Mihlīḥār Ḥarāz agrees substantially with what we know today. He mentions its fertility, that it produced corn, honey and sesame (wars), and that its dialect was midway between good and bad Arabic. His data on the merchants of Ḥarāz is of great interest, especially in so far as they provided the means for trade in these commodities, and of bitter struggles between them and the Yemena. HARB, war.

i. — Legal Aspect

Harb may mean either fighting (kidah) in the material sense or a "state of war" between two or more groups; both meanings were implied in the legal order of pre-Islamic Arabia. Owing to lack of organized authority, war became the basis of inter-tribal relationship. Peace reigned only when agreed upon between two or more tribes. Moreover, war fulfilled such purposes as vendetta and retaliation. The desert, adapted to distant raids and without natural frontiers, rendered the Arabs habituated to warfare and fighting became a function of society.

Islam, prohibiting the shedding of blood by one Muslim against another, prohibited all kinds of war (harb) except a holy war (djihdd [q.v.]). Only a war having an ultimate religious purpose, that is, to enforce the sacred law (shari'a) or to check transgression against it, was lawful. No other form was legal without the Islamic state.

Thus, Islam prohibited the inter-tribal warfare of the Arabs, because such wars were regarded as too ungodly and brutal, motivated by earthly interests, and permitted only a war which fulfilled a religious purpose. Thus, only one kind of war—the djihdd—invoiced for the purpose of expanding or consolidating the area of the validity of Islamic law.

As in the jus feudale, harb must be declared and prosecuted in accordance with certain prescribed rules. In the first place harb, in the sense of fighting, must be distinguished from such duties as prayer or fasting, defined as individual duties; harb is a collective duty (lard al-kifdya), binding on the community as a whole. Since a permanent state of war existed between the Islamic state (dar al-Islam) and other countries (dar al-barb), Muslims were permanently in a state of hostilities with non-Muslims. But in fulfilling the collective duty of war not all Muslims were under an obligation to fight; only a few were called upon to fulfill the duty on behalf of the community. If no one fulfilled the duty at all, the whole community was liable to punishment. Only when Islam was threatened by a sudden attack did the duty become obligatory on all, including women, children and slaves.

As a collective duty war was a state instrument. Thus, only the imam (or his deputies in the provinces) was charged with the duty of prosecuting the war. In order to be lawful war was not only declared by the imam, but he was also charged with calling the believers to battle. Since in legal theory a state of war was always in existence (except when a peace treaty was still binding), the declaration of war by the imam merely meant that the circumstances in which the believer can fulfill the duty of kidah had arisen. Calling the believers to battle was merely to summon to the duty of fighting those who were under an obligation to take up arms. However, Nor was the prosecution of war lawful unless preceded by an invitation addressed to the enemy to accept Islam. Since harb meant in theory the litigation between belief in Allah and His prophet and misbelief, the unbelievers were first offered Islam before fighting took place. Followers of the recognized revealed religions were given the choice between Islam, submitting to Muslim rule and payment of the jizya, and continuing in their faith. An invitation should be forwarded to the enemy, and only refusal to accept it rendered fighting lawful. This rule was based on the Kur'anic communication: "We never punish until we have first sent an apostle" (XVII, 18); and a hadith in which the Prophet said: "I have been ordered to fight the polytheists until they say there is no god but Allah; if they say it, they are secured in their blood and property." (Bukhari, Sahih, ii, 236.) The jurists differed as to whether the invitation should be renewed if war broke out again with an enemy. The Malik and Hanafi jurists maintained that renewal of the invitation was commendable (mandah); the Shafi'i jurists held that the imam to make a choice, depending on the merit of the situation; and the Hanballi jurists insisted that only those who had not received an invitation should be notified.

In the prosecution of war, the Muslim warriors were under an obligation to refrain from unnecessary shedding of blood or the destruction of property. Non-combatants, such as women, children, monks, the aged, blind and insane, unless they helped in the war, were excluded from molestation. If combatants were captured, they were liable to be killed or enslaved without property to be taken. However, the detailed rules concerning the treatment of enemy persons and property varied in accordance with the various schools of law (see corpus juris of each school of law under such headings as djihdd, siyar or qanums).

Hostilities came to an end either by Islam's victory over the enemy, agreement to submit to Muslim rule at the expense of paying the jizya in the case of dhimmis, or peace with the enemy for a limited period, if the imam decided that fighting was harmful to Islam. Such peace was of a limited duration, not exceeding ten years, until the imam could resume the war. The imam should not terminate the fighting if the number of Muslim warriors was not less than half the number of enemy warriors (Sira VIII, 66-7), until victory was attained.

We shall not provide here a history of wars nor even a study of the place of war in the life of Muslim societies. We shall merely give some notes on the art of war itself, which may be supplemented by the articles DAR AL-HARB (on the concept of the theoretical state of war between Islam and all neighbors), THAB (on the early Muslim land wars), and HIB (on sieges operations), in addition to other more specialized articles which will be mentioned in their place. In addition we shall not encroach on the period of fire-arms for which reference should be made to the article BAKR.

The theoretical literature on the art of war continues, despite a certain evolution in practice, the traditions of the early Arabs, the Greeks and above all the Sassanids. Translations of Greek, Persian and even (indirectly) Indian works had been made before the Fihrist, and there survives one part of the translation of the Tactica of Aelianus, the author of classical antiquity who also in Byzantium was the most consulted on these matters. But, in general, we have to deal with more popular traditions, accounts of the actions of early Arab heroes, of victorious generals and of the first caliphs, and especially of Alexander and of the great rulers of Persian history. These materials are incorporated in works of al-adab such as the 'Uyân al-akhbâr of Ibn Kutayba or al-Jâl al-farîd of Ibn 'Abd Rabbih, and the later encyclopaedias; and they are found more particularly in the literary genre of the Mirrors for Princes [see SIYASÂ] such as, for example, the Sirâdat al-mulik of al-Turûqî which, among many other instructive anecdotes for princes, include some concerning the conduct of armies and of war operations. The experience of later generations however is also added, and it is this which, though without any rupture with tradition, is the more direct inspiration for the works written under the influence of the reigning military aristocracies, in Central Asia. during the period of the Crusades, and later under the Mamlûks, from which last period a great number survive, written for the major part from the point of view of military exercises [lists in L. Mercier, La parure des armes, Fr. tr., 1924, 423-59; H. Ritter, in ISL., xvii (1929), 116-54, and George T. Scanlon, A Muslim manual of war, 1961, 6-20]. We shall mention here only the earliest which have survived: the Ghaza- wîd and Sharî'î Khâlîf al-Harîb wa'l-ghâlîî's published by I. and M. Shâfi'î in IC, 1957 (the military section of the treatise, belonging to the genre Mirror for Princes, entitled Ad-dal al-mulûk by Fâlîh-i Mudâbbîr. Mubârâkhîh, beginning of the 7th/13th century), and the Tadhkira fi 'l-hiyal al-harbiyya of 'All al-Harawi, ed. and Fr. tr. J. Sourdell-Thomine, in BEO, xvii (1962) (to be compared with a paragraph of the Traité d'Armurerie . . . pour Salladin, ed. and Fr. tr. O. Cahen, in BEO, xii (1948), 23-4, 145s); also the Tâbîrî and al-Tâdhrî of Sinâ'î al-Aksârî (in which are found the extracts from Aelianus), ed. and German tr. Wüstenfeld, Das Heerwesen der Muhammedaner, in Abb. d. K. Ges. d. Wiss. Göttingen, xxvi (1880), and the Tafsîrî al-kirîb fi tâdhrî l-harîbîr of 'Umar b. Ibrahim al-Awsî al-Ansârî, ed. and Eng. tr. George T. Scanlon in the recent work cited above. There is also some information in the Muhaddîma of Ibn Khaḍrûn and in the jurists such as al-Mawardi or al-Hasan b. 'Abbâd al-Asbâbit (Athâr al-wa'ad fi tartsî l-dawâl, beginning of the 8th/14th century), even in ordinary fîh (cf. the example given by M. Tabî in the Cahiers de Tunisie, iv (1956)). Naturally a history of war would begin primarily with the coming (which has never been done from this angle) of the chronicles and even of the popular romances of chivalry, which abound in accounts of battles, of varying precision and reliability. Finally there should be remembered the useful and instructive collection by Ibn Khâlid of the Taktikon of Leo VI and the Strategikon of Kekaumenos (beginning of the 10th and middle of the 11th century A.D. respectively).

In theory, war is justified only when it is for the faith, the djihâd, and ordinary war, harb, between Muslims is condemned, whereas the efforts made by rulers to represent their adversary as having at least in some respect contravened the commandments of the faith or infringed orthodoxy. However Ibn Khâlid, as a sociologist, considers war to have been an integral part of human society from the tribal state onwards—though he adds that according to the Law the Holy War and the suppression of revolts are the only form of war justified.

Except in cases of a formal djihâd against unbelievers, no regular and legally valid "declaration of war" is provided for but quite often two adversaries send each other challenges, announcing that the only solution possible between them is the sword, showing the judgement of Allah. Nor is there legally a state of war for any except the combatants, and although of course "civilians" may be pillaged, taken prisoner, etc., it can also happen, even in the djihâd, to the great scandal of the strict Muslims, that trading caravans pass unmolested between the armies, indifferent to the quarrels of the rulers (see, e.g., Ibn Djubayr, Rihla, 281).

Nowhere more than in these works is one conscious of the connexion between war and policy and of the fact that the success of the first depends in large part on the quality of the second. The Prince is therefore recommended to seek to gain the goodwill of his subjects, and more particularly of his troops, by his conduct towards them and especially by paying them regularly and well—which presupposes a sound financial situation; when troops are reviewed he must of course inform himself of their condition, or verify this personally. In addition, he must keep himself informed on the general situation of the enemy state, or the state which is virtually so, its material resources and the state of its morale, in order when possible to make contact with dissident elements, especially within the army itself. Hence the necessity of maintaining a system of espionage [see PIASÂ] in which use may be made of the entourage of ambassadors (who must be changed frequently to avoid the danger of their forming friendships in the enemy country), and also of merchants and pilgrims, real or pretended ("All al-Harawi was recommended to have his men 'arrange acquaintances with certain men who can do the same, it is necessary to have a system of counter-espionage, especially within the army, while avoiding taking measures against men who have received letters from the enemy so long as they have not actually succumbed to temptation. It is advisable the all same to make them renew their oath of loyalty. All this produced an atmosphere of petty and almost puerile ruses and of general suspicion which was typical of the warfare
and even of the whole of "political" life of that time.

To this information there is added, in the case of the whole of "political" life of that time.

To this information there is added, in the case of the whole of "political" life of that time.

To this information there is added, in the case of the whole of "political" life of that time.

In the actual military operations morale is important. It is encouraged at first by gifts and promises on the hopes of bounty, and is renewed before battle is joined by accounts of the exploits of ancestors and, in the case of dīḥād, pious exhortations —the equivalent of those heard for example by the Christian enemies who followed the Cross.

Obviously the military teaching and practices of the classical Muslim armies have little in common with the raids and single combat of pre- and proto-Islamic times (on which see ḍayṣ and ḍaww). The specialists, as with fīdā, distinguish the ṣūrāt and ṣurā. The ṣūrāt are primarily the theoretical division of the army into five elements (ḥamās): the centre or heart (baḥl), the right wing (maymāna), and the left wing (mayṣara), the vanguard (muḥādāma) and the rear-guard (ṣāha), which, mutatis mutandis, apply when the army is on the march or in camp as well as in battle. The ṣurā are the operations by the irregulars, who do not form part of the army proper but who may play a part in the preliminaries and on the fringes of the battle.

When the campaign has been decided upon, the necessary forces are mustered, the arms are distributed (other than the individual weapons always carried by the soldiers) and the command is allotted, if the Prince is not leading the army himself. Women and children (who, among the nomads, go with the fighters and encourage them, risking capture in the case of defeat) are excluded from the regular armies of organized states. The baggage may be either at the head or the rear of the marching column. The route should have been studied with regard to the nature of the terrain, the provision of supplies and the enemy's movements; unless the safety of the situation is certain, the country must be explored from all sides by scouts and small reconnaissance parties and scouting off, by the enemy on his side has taken similar precautions, an attempt must be made to manoeuvre, so that as the battle develops the desired disposition may be achieved. Astrologers are often consulted on the most propitious time to give battle and some orders for the manoeuvre of one section for the benefit of the others or take from one group reinforcements for others. In principle each ḍamās forms a continuous line, although it may sometimes be divided into little groups, ḍarād (squadrons) plur. ḍarād (an innovation which is said to have been introduced, in imitation of Byzantine practice, by Marwân II). There are usually three ranks. The first consists of the archers and cross-bowmen, the second of infantry, protected by their shields and armed with lances or swords, the third of the heavy cavalry (light cavalry were normally found only among the irregulars). In the centre the leader's standard should be seen unfurled; battles have been lost because its fall had been taken as a signal of defeat. The battle consists basically of a cavalry charge, which may be repeated about three times if the enemy line has not been broken before this. The rôle of the infantry and archers consists of breaking from a distance, and then from close at hand, the enemy assault, which, however, may lead rapidly to the retreat of the enemy cavalry, producing disorder in the enemy ranks. In the case of great numerical or other inferiority, the lines may be replaced by a formation in solid squares to withstand the shock of attack. A charge is not usually made simultaneously in the centre and on the flanks, although there may be an attack from one section of the enemy at one point and from another elsewhere; as a result one part of the army may be defeated while another is victorious, and there have been cases when each side has thought itself to be victorious or to be vanquished. In general, however, one of the two cavalry detachments which have been victorious in their sectors proceeds before the other to fall upon the other sections of the enemy army. In fact the great danger is that as soon as victory seems certain they hurl themselves on the enemy's baggage etc. to seize booty and from then on are incapable of offering resistance if the enemy unexpectedly returns to the attack.

Frequently attempts are made to organize ambushes, either by taking advantage of a mountain pass on the route of the enemy army or by trying through manoeuvres during the course of the battle itself to lure the enemy into positions prepared in advance. This preparation of ambushes was often combined with cavalry action in the tactics of simulated flight, in which the Turks in particular excelled. Whereas the Arabs, although much lighter and more rapid than the Crusaders must have been (relying as they did on massive shock tactics), generally attacked in a single line, the Turks attacked, shooting as they went, in such a formation as to shower the enemy with arrows from all directions; they did not persist in an effort to break the enemy lines, but, having made contact, attempted to draw them in pursuit, thus disorganizing their lines, and then to make a sudden turn, with the eventual help of fresh forces who had been placed in ambush. It is strange that the successful semi-nomad peoples who had owed their success partly to these tactics, once they became more settled and in possession of empires whose armies were of the more traditional and heavier type, one by one forgot their primitive method of fighting and were beaten by newcomers who still practised it.

During the battle, the leader replaces as far as possible the soldiers' mounts which have been killed.
and arms which have been lost or rendered useless. Fikr debates, but in general disapproves of, the killing of non-combatants, women, children, old men and also men of religion. During sieges in particular, but occasionally also in battles in open country, individuals or groups may obtain amdn [q.v.] even from an ordinary individual. It is a great misfortune if the defeat is such as to prevent the burial of those killed, who are often left by the enemy lying where they are after having been robbed. But in general the aim is less to kill and capture and, once the battle has been fought and won, the enemy camp is pillaged [see GHANIMA]. In principle the Prince reserves for himself the legal fifth, but more often the pillage was completely unorganized, and during it the troops observed neither the basic rules concerning the sharing of booty nor indeed any discipline at all. In particular, each one seized for himself all the male and female prisoners he could capture and later either sold them as slaves (causing a fall in prices if they were numerous) or kept them for himself. The peasants, whenever possible, robbed the fugitives belonging to either side.

Once victory has been gained, the conqueror or his vizier sends letters of victory (usually faith) which as the centuries progress become increasingly the occasion for stylistic exercises by the heads of the armies [q.v.] (see, e.g., the correspondence written by the Al-Kalam of Saladin and the letters on the capture of Jerusalem). These "communications" naturally exaggerate the strength of the enemy and the importance of the victory won, and minimize the losses. In the case of war against infidels and heretics, a special report is submitted to the caliph, who sends congratulations and awards honours. The victorious general may also be awarded honours by his prince; and if it is the prince himself who has conducted the war, he provides celebrations, games, banquets and donatives, although these were neither regular nor obligatory.

The prisoners who were the Prince's share were employed by him on heavy work for which he would have had difficulty in finding native labour (the building of fortresses, etc.). For the wealthy prisoners of course a ransom (fadd) was expected, and often received, less to kill than to have the prince's pay limit set for the enemy prince. There might also take place an exchange of prisoners if there was a peace treaty or a truce. Finally—but especially in the case of war against infidels—money was given or bequeathed by devout persons to be used for the freeing of Muslim prisoners (and correspondingly on the other side for the ransoming of Christian prisoners). When, in a town for example, civilians were captured who might not be Muslims, they were ransomed by their co-religionists, and the documents of the Geniza [q.v.] for example have preserved letters concerning the ransoming of Jews. The ransom of an ordinary prisoner naturally corresponded roughly with the price of a slave.

Muslim law does not appear to have concerned itself with the condition of prisoners as such while in Islamic territory; it did on the other hand consider the way in which Muslims who had fallen into the hands of unbelievers in foreign lands should behave in order to safeguard their faith (Erwin Graef, Religione und rechtliche Vorstellung uber Kriegsgefangenen in Islam und Christentum, in W7, viii (1963), 89-139).

A war, especially if there was no siege, rarely lasted for long, and there were seldom more than a few thousand actual fighting troops engaged, even though the total army of the state in question consisted of more than this. This was because it was difficult to obtain food supplies while on a campaign. Furthermore, because of the climate, it was not possible in general to plan a campaign in winter and, after the officers had become farmers or tax-collectors, it was no longer possible to detain them on a campaign during the time of the harvest; in any case they were reluctant to remain under arms for more than a few weeks, their ordinary means being insufficient to support themselves. Fikr also disliked the absence from their family. Very often the war is decided in a single battle, which may be followed by several sieges of strongholds.

War is often ended by a peace in the form of a capitulation or a treaty negotiated after an exchange of embassies; on other occasions, especially in wars with infidels, the peace is limited to a truce of a set time and over a limited area; often also the war can cease without there being any official peace.

The above remarks do not apply indifferently to all periods, to all peoples (the exception of the Turks has already been pointed out), or to all places. The semi-heavy cavalry, which at first played only an insignificant rôle, increased in importance from the 8th/9th century onwards. The tactics of classical warfare are impossible in mountain fighting, in which cavalry can play only a minor part, and in which the ruses practised by nomads in open country; to the terror inspired by their appearance, their distant and unknown origin, their exceptional readiness to

The resounding victories of the Mongols raise the question whether they possessed a clear technical superiority over their adversaries. The matter has not been sufficiently studied, and it seems that this was not so. Their successes appear to have been due to their discipline; to the speed of their movements and to the art of concealing them; to the excellence of their system of espionage and intelligence; to the combined use on a large scale of traditional siege weapons, transported by means of prisoners, and of the ruses practiced by nomads in open country; to the terror inspired by their appearance, their distant and unknown origin, their exceptional readiness to
The army's departure from Cairo to the nearby place of assembly was called tābūrīa. The Sultan and amīrs went there one after the other, each heading his jihād (see below). Usually this procedure lasted from morning till noon. Only very rarely did it take several days (for two typical instances of such departure see Ibn al-Furāt, ix, 14, 133; Bada'i', v, 37).

The expeditionary force was called tādirīd (pl. tādjārīd). When the Sultan himself went to battle he was always the commander of the tādirīd. Otherwise it was the highest ranking amīr taking part, i.e., the amīr who, by his high rank and office, was entitled to precede the Sultan in the army and conduct all ceremonies. The usual title of this commander, up to about the middle of the 9th-/10th-century, was muṣḥadām al-asqar (or al-asāhirī). Very rarely he was called muṣḥadām al-dîyāy (or al-dîyāq). Sometimes his title was abbreviated to muṣḥadām (g.v.). In campaigns entailing sea voyages, two commanders were sometimes appointed, one on sea (muṣḥadām al-ṣasqar fi l-bahr) and one on land (muṣḥadām al-ṣasqar fi l-harr). In religious functions accompanying the army, see kādī al-ṣāskar.

The place of the army's assembly. With the exception of the first few years of their rule the Mamluks always assembled their campaigning armies near Cairo. Sultan al-Ṣāliḥ Naṣr al-Dīn Ayyūb (657/1250-649/1259) built in 676/1278 the town of al-Ṣāliḥiyya, in the north-eastern part of Lower Egypt, with a double purpose: to serve as a resting place for the incoming armies after their crossing of the Sinai desert and as a point of concentration for the outgoing armies before starting their organized march into Syria. The second of these functions was discarded by the Mamluks shortly after their coming to power. Sultan Kūtūz, on his march to 'Ayn Djalūt, was probably the last to use it for this purpose (Subb, i, 338-4, 373n-17, 384n-19, 382n-16, 411n-6, 429n-14; al-Nahshīj ad-ṣaddīq, xx, 282; Ḫīlah, i, 184n-4, 232n-11). Therefore the Mamluks used to assemble their armies near Cairo. At first the place of assembly was Masjīd al-Tibr (frequently distorted into al-Tūbīn), but from the end of the 7th/13th century onwards it was al-Raysūnīya (g.v.) which served in the same capacity (the pilgrims' Caravan would also use this place). The Sultan at al-Raysūnīya. The focal point of the army's camp at al-Raysūnīya was, quite naturally, the Sultan's tent. It was placed at the end of the row of the amīrs' tents, which were arranged according to the principle that the less important ones came first, while the more important ones came last (Zähirl, Ṭūdūb, 156-7) (see māzaya, muddawara). The system of guarding the Sultan's tent was according to the Mamluk source, very similar to that employed in the Cairo citadel, especially the guarding inside the tent (Ṣubb, iv, 48-49a, 56n-11; Dāru al-siyāb, 255n-1; Ḫīlah, ii, 210n-11; Ḫaswa'dī, 680n-11). The whole of the Sultan's cortège was called al-riḥāb al-ṣarīf (or al-salāḥīn).

The army in the field did not carry with it any special structures for performing the daily prayers. This might imply that when in the field the army prayed under the open sky, i.e. just open sky, which seems to have been that of Baybars I, who, in 661/1263-3, ordered the making of a tent-mosque (dījāmī al-ṣība), which had to be pitched on the right of the Royal tent. This mosque had mihrāb and a māqṣūra in it (Ibn 'Abd al-Ẓāhir, ed. Sadequ, pp. 89-90; British Museum, MS Add. 23,331, fols. 71b-1). In all probability Baybars followed here, as in other...
matters, the example of the Mongols. Of their employment of tent-churches we are informed by William of Rubruck (Long 1900, xxxix, xxxi, 29). Berke Khan, the ruler of the Golden Horde and Baybars' ally, had tent mosques (masjid 'khâmil), where the five daily prayers were performed (Yunûdî, ii, 365s). Ibn Batûtâ (ii, 380 = Gibb, ii, 482) saw these mosques in the Golden Horde at a much later date. For the strict performance of the prayers by soldiers on campaign, as a habit, under Baybars I, see Ibn Abd al-Zahir, fol. 639a-18.

From al-Raydâniyya to Damascus (or Aleppo). The army always departed from al-Raydâniyya in separate groups, and entered the Syrian capital in the same way (arâslân, afwâdjan, 'âld dafa'âli). Thus the expeditionary force stretched over a long distance during its advance. On some occasions we are told that the left wing (al-maysara), the right wing (al-maysara), and the centre (al-bâl) of the Egyptian army entered Damascus on three successive days (al-Nâhâj al-sâlid), xx, 222s. Ibn al-Dawâdûrâ, Kans al-duwar (ed. Römer), ix, 32is-1a. Only further evidence will show whether the Mamlûk army always was advanced in the same formations which it used in the field of battle.

One of the most common measures of protection taken by the advancing army was the sending out of special scouts (baghdâfi) in various directions.

The military expedition was accompanied by a very large camel caravan, which carried its baggage (thâbâl, pl. athâbâl). Each Mamlûk participating in a campaign received at least one camel. Sometimes the Mamlûk received two camels, while the non-Mamlûk soldiers of the balqa (g.v.) received 3 camels per two men (see D. Alyon, in JESHO, i (1958), 270-1). Sultan Barkûk gave his Mamlûks 7,000 camels and 5,000 horses when he planned in 796/1394 his expedition against Timûrlâng (Ibn al-Furât, 380-1s; Nûdâjmî, v, 562s). In the biggest baghdidas 800 to 1,000 camels were needed to carry the light armament alone (Ibn al-Furât, 371s-111. Ibn Kâdî Shubba), fol. 994s-1s. Mules were very rarely employed for carrying the baggage. They were used in 691/1292 by the Sultan's army in the region of Aleppo because most of the camels died in an epidemic (Baybars al-Mâlîki, 542s). The employment of wheeled vehicles (tâqâlî), mainly for carrying siege machines, was also extremely rare.

Though the advancing army was always accompanied by numerous physicians, surgeons, chemists and great quantities of drugs (see, e.g., Shibh, iv, 49s-1), it would appear that its numerical strength was often reduced as a result of maladies which attacked its members during the march (this is quite apart from epidemics, which always took a heavy toll of the Mamlûks, and particularly of the younger ones amongst them; see D. Alyon, in JRASt, 1946, 62-73). The sources do not inform us how and where the sick were treated. The weak and those who lagged behind were often sent back to Egypt.

The Mamlûk sources furnish rich and reliable information on the time-table of the army along its main route of advance from Cairo to Damascus. A detailed list of the stations along this route see W. Popper, Egypt and Syria under the Circassian Sultans, 47, 48-9. This information is not spread, however, evenly over the whole Mamlûk period, for the sources mention the time-table only when the Sultan himself headed the military expedition. Data on regions lying outside the line Cairo-Aleppo, viz., the Delta area, Central and Upper Egypt and the Hijâz is sparse.

The march from Cairo to Aleppo took 30 to 40 days; from Cairo to Damascus 20 to 25 days; from Cairo to Gaza 7 to 10 days; from Gaza to Damascus 3 to 4 days; from Damascus to Hims 2 to 3 days; from Hámâ to Aleppo 2 to 3 days. The above figures sometimes include the resting days in the intermediate stations and sometimes not. The average lengths of rests in the main stations were: in Gaza—3 to 5 days; in Bâyân—2 to 3 days; in Damascus—5 to 7 days; in Hámâ—2 to 3 days. The length of the resting time and the length of time needed to cover the distance between Hims and Hámâ has not been established.

A fundamental aspect of the Mamlûk military expedition was that, at least for most of the period, there was, in effect, no fixed ratio of officers to men. True, according to rule, the Âmir of a Thousand had to have under his command a thousand balqa soldiers and an unspecified number of Âmiris of Forty and Âmiris of Ten, while the mukaddâm balqa had to command forty balqa soldiers during a campaign (see D. Alyon, in BSOAS, xv (1953), 450-1). It is not clear how far this was in fact applied in the early Mamlûk period, when the balqa was still strong and numerous. But for most of the period the balqa was in steady decline, and under the Circassians had stopped going to battle almost completely. When the balqa did go to war, their numbers never exceeded a few hundred. The very name mukaddâm balqa, which was frequent in the Babri period, disappears altogether under the Circassians (see BSOAS, xv, 448 ff. and Balâka). This implies that the above-mentioned proportion between the simple soldiers and their superiors in the campaign had only paper value.

As for the Royal Mamlûks (al-mamâlik al-sultânîyya, see BSOAS, xv, 204 ff), who constituted the backbone of the army, and who bore the brunt of the fighting, we do not know even the theoretical ratio of their officers and men in the campaign. It is stated that during the cadastral survey (al-rawâk al-Nâsîrî) of 715/1315 the number of the Royal Mamlûks was 2,000 and the number of their commanders (mukaddâm al-mamâlik al-sultânîyya) was 40. But we do not know whether the same proportion existed before or after that year, and especially whether it had ever existed in its ideal form.

In the present state of our knowledge there is only one formation participating in battle which can be adequately described. This formation, which was called tulb (pl. atlâb), and which is mentioned most frequently in the sources, was of a very loose character and the number of soldiers included in it might vary considerably. The formation which went out to war under the command of an âmir constituted a tulb. At the same time, all the Royal Mamlûks taking part in a campaign, whose number far exceeded that of the soldiers of all the other atlâb put together, formed only one tulb (for further details see tulb).

Secrecy and military ruses. Little or no attempt was made to hide or disguise the preparations for a Mamlûk campaign. The hoisting of the war-flags, the mustering of the Documentation, and the departure of the expeditionary force gave ample warning to the enemy of the impending attack. Since the Mamlûks hardly ever used the sea-route in order to transport their armies or equipment to Syria, they had to confine themselves to a single land-route from Cairo to Gaza, a fact which greatly facilitated the enemy's task of watching their movements. In Syria the situation, though somewhat better, was not fundamentally different. Though there were two
routes from Gaza to Damascus, the one following the coast, then turning right through the valley of Esdraelon to Baysan, and the other passing through Karak in Transjordan, it was the first route which he mainly used, because it was far better than the second. Besides, the supplies prepared along the army’s route of advance long before its departure, without any attempt of disguise, told the enemy from exactly what quarter to expect the attack.

One can find, however, some instances of attempts to mislead the enemy. Once, when Baybars I set out at the head of a group of horsemen, he forbade his men to buy food and fodder in order to conceal their identity (Șulâk, i, 598). Sultan Taṣar (824/1421) was considered one of the greatest experts among the Mamlûk Sultans in the employment of ruses. When he set out against his rival amirs in Syria he did not hoist the nafāfa (Nudjm, vi, 490-8). He also cut all communications between Egypt and Syria. These acts, which are called “the concealment of news” (la‘muyyad al-akhlâq) (Nudjm, vi, 494-5; Ibn al-Furâṭ, ix, 724; Nudjm (Cairo), viii, 152-3), are praised by the historian, who says that in this respect Taṣar followed the example of the early Mamlûk Sultans (Nudjm, vi, 494-6). There are other instances of cutting the communications between various parts of the realm in order to disguise the army’s movements.

Other ruses employed by the Mamlûk Sultans are recounted. Sultan Barsâbî distributed the nafāfa al-safâr to make Șarâ Yulûk believe that he (i.e., Barsâbî) intended to attack him. Fearing, however, that he would not be able to get his money back, he distributed the nafāfa to the amirs only and not to the Royal banners (Nudjm, vi, 685-7). Sultan al-Mu‘âyyad Șahyûk employed many ruses against the amir Nawruz al-Ḥâfiz (Nudjm, vi, 336-7). One of these was lighting many fires in the camp which he had already left, thus making Nawruz believe that his adversary was still there together with his army (ibid., 1474). In their battles against the Mongols, soldiers of the Mamlûk army sometimes wore sarābdîkî hats in order to mislead their enemy about their identity. Armenian soldiers in the Mongol camp also wore the same head-gear so as to pass as Mongols (Sulûk, I, 511411, 7831415; ibid. (Quatremer’s translation), ii, 235; Ibn ʿAbd al-Zahir, fol. 780-; Bolton, 3rd cent. S.V.; L. A. Mayer, Mamlûk Costume, index, s.v. sarābdî). When these did occur they were severely punished. The deserters usually came back secretly and in hiding, until the Sultan’s wrath subsided, but it did happen that they entered Cairo openly and impudently demanded additional pay. The Sultan never succeeded in sending them back to the front which they deserted (Nudjm, vii, 4874-9; Hawâldîn, 602413, 6274-31: Badâ‘în, iii, 88-141, 89-2, 2276-18-5, 2529-16, 2543-16, 2551-3, 2691-16, iv, 116-8, 437-5, v, 68-11-1). One of the main reasons for the Mamlûk’s failure to maintain their hold over Cyprus was that the garrison stationed there frequently returned to Cairo, in utter disregard of the orders of the Sultan, whose attempts to send them back usually ended in complete failure (Nudjm, vii, 724-1; Hawâldîn, 43575, 4485-16, 4544). A legal release from a campaign was called dûstâr. This term, very frequent in the Ayyûbid period, gradually died out in the period of the Mamlûks.

The battle order in the field. The arrangement of the main bodies when they faced each other, was that the left wing was always the centre. It included the choicest men to buy food and fodder in order to conceal their identity. Sometimes the members of the expedition, having gathered at the place of assembly, set out for the field of battle without waiting for the order to move (Nudjm, vi, 253-16, vii, 266-4). When a certain expedition did go to war with determination and without being prodded, the historian considers it to be “a very great thing” (shay‘a fasim ila l-rûyya) (Nudjm, vii, 408). A unique case of real enthusiasm for war which seized the whole Mamlûk army in the Circuitian period was the expedition against Cyprus in 892/1426 (Nudjm, vii, 600).

Another form of desertion was the return of big sections of the expeditionary force, or even the whole of it, from the battlefield or from one of the stations en route to Cairo without the Sultan’s permission. This phenomenon became common from the start of the long series of battles between the Mamlûks and the Turkoman chieftain Shâh Swâr and his Ottoman allies during the reign of Sultan Râhîbî, but the first signs of it had already appeared at an earlier date (Ibn Khânîr, v, 683-16). The number of soldiers returning to Cairo against orders was particularly great when the campaign was long and hard. Scarcity of food and fodder and high prices forced many of them to sell their horses, arms and field-dresses (on the field-dress of the mamlûk, see L. A. Mayer, Mamlûk Costume, 19-20) and return home. The Sultan’s anger was of no avail, for “his only choice was to keep silent”. The deserters usually came back secretly and in hiding, until the Sultan’s wrath subsided, but it did happen that they entered Cairo openly and impudently demanded additional pay. The Sultan never succeeded in sending them back to the front which they deserted (Nudjm, vii, 4874-9; Hawâldîn, 602413, 6274-31: Badâ‘în, iii, 88-141-1, 89-2, 2276-18-5, 2529-16, 2543-16, 2551-3, 2691-16, iv, 116-8, 437-5, v, 68-11-1). One of the main reasons for the Mamlûk’s failure to maintain their hold over Cyprus was that the garrison stationed there frequently returned to Cairo, in utter disregard of the orders of the Sultan, whose attempts to send them back usually ended in complete failure (Nudjm, vii, 724-1; Hawâldîn, 43575, 4485-16, 4544). A legal release from a campaign was called dûstâr. This term, very frequent in the Ayyûbid period, gradually died out in the period of the Mamlûks.

A legal release from a campaign was called dûstâr. This term, very frequent in the Ayyûbid period, gradually died out in the period of the Mamlûks.
same spot (Manhal, i, 154b2). On the Royal Banners see also Ibn Khaldun, Mukaddima (ed. Quatremère), ii, 46 - tr. Rosenthal, ii, 52.

Close by the two wings were placed the auxiliary forces (the Bedouin horsemen near one wing, and the Turcoman horsemen near the other). Occasionally infantriesmen (msdāt, radjīdīla) were posted in front of the battle-array described above (Ibn Tyās, iv, 445, 451, v, 8). The use of infantry seems to have increased in the later years of Mamlūk rule (see Ibn Tūlūn, ed. R. Hartmann; al-Margūrī, Ha’uddiyy al-furūsīyya [Cairo], vii, 46-53). This may have been the result of the growing use of fire-arms. The infantriesmen employed in the field of battle were mainly recruited from amongst the peasants and semi-nomads of Diābal Nābulus and other parts of Syria (Zettersteen, Beiträge, 81; Nuddīm [Cairo], vii, 303s; Sulāk, i, 308s; ii, 93s; Ibn al-Furūt, vii, 41, 169s; Ha’uddīth, 701-1s; Badā‘īs, iii, 54s; iv, 408s, 445s, 511s, 451s-16; v, 84s, 63s).

Sometimes the battle-array was rather more elaborate. Amir Minṭāsh, in his fight against Barkūk, arranged his army thus: kalb, maymana, maysara, and two additional wings (djandāhn). In addition, he posted at the rear of both the maymana and maysara a reserve unit or rearguard (radif). Barkūk could not do the same, because his army was too small (Nuddīm, v, 493a13). In 607/1210 the army of Sultan Farādī, which numbered 5,000 horsemen and 6,000 infantriesmen, was arranged in his battle against Amir Tānām between Ramla and Gaza in the following manner: right wing, left wing and ‘centre within a centre within a centre’ (kalb fī kalb fī kalb); each of these formations had its own rearguard (radif) (Nuddīm, vi, 351s-13). In 830/1427 al-Mu’ayyad Shāykh, who was stated to have been a great military reformer and an expert in warfare and in the arrangement of troops in the field of battle (nea-bāna imāṣmā fī . . . mārizat ta’biyat al-‘asādīr) paraded his army in battle array by Tall al-Sūlān (near Aleppo). He decided not to leave the arrangement of the tulfūs of the amirs to anybody else, but to do it himself. He arranged them not according to the order in which the amirs used to sit in the Sultan’s presence during official ceremonies, but according to their offices or functions (fāsiqūn, marāhīl, Lībī, MS QD, fol. 15s; QD, fol. 11s). See also Manhal, iii, 168s; Badā‘īs, ii, 84s; JAS, 1949, 142; SBOAS, xv, 454s-5.) This would seem to imply that the order of the amirs’ tulfūs in the battlefield was then normally an exact copy of the order of their sitting at official ceremonies. In 642/1243 the amir ʿAbdāl-Ḥādī al-Timrāzī arrayed Sultan Diākānī’s army against amir Kurkūmās as follows: maymana, maysara, kalb, djandāhn. This battle array was called ta’biyat al-mudjīannah (Nuddīm, vii, 46s). A vanguard place before the centre was called dijīlās al-kalb (Abu ʿl-Fīdā‘ī, iv, 154s). Occasionally the centre itself seems to have been divided into several sections, including wings, as may be deduced from the expression dijālīd al-kalb al-ayyās (Nuddīm, C, vii, 303s-16).

The sources furnish very little information about the armies occupied by the armies of the various Egyptian amirs and the governors of the various provinces within the left and right wings and the centre. Concerning the amiy of the province of Ḥamāt, it is explicitly stated that it had customarily been placed at the hand of the right wing since the days of Salādin (Sulāk, i, 201s; Abu ʿl-Fīdā‘ī, iv, 241s-16).

The actual fighting. A recurrent phenomenon in the main battles fought out between the Mamlūk and their adversaries was that the wings were usually defeated first, sometimes at the very start of the fighting, whereas the centre held out much longer. Very shortly after the opening of the fighting, the whole elaborate array would be greatly upset, for a wing of one of the opposing armies would soon crumble under the impact of the enemy’s onslaught, and its soldiers take to flight, while the victorious wing on the opposite side would pursue it at full speed. It is noteworthy that even the side that was ultimately defeated succeeded quite often, during the initial stages of the fighting, in routing one of the enemy’s wings and pursuing it. Both the pursued and the pursuing wings would get very far away from the main scene of the battle, and thus would be kept in complete ignorance of the progress of the fighting (this occurs in the battle of Gaza against the Franks in 642/1244 (Sibt, 494s-16) in the battle of al-Nāṣīr Yūsuf against Aybak in 648/1251 (Makhn, 53s; Sulāk, i, 324). This was also the case in the battle of Battle of Ayn Diālūt and in the battle of Barkūk against his rivals at Shākhb in 792/1390 (Ibn al-Furūt, ix, 18s; Ibn Kādī Shubba, fol. 598s-11; Manhal, fol. 47v-14). It happened more than once that the pursuing wing, on returning to the field of battle, discovered that the army to which it belonged had already been utterly routed.

The great field battles which the Mamlūk fought were usually short, and only rarely lasted more than one day. One of their most protracted battles was against Timurlang, but this was a combination of a field battle and a siege of the town of Damascus, and sieges were usually very long in the Middle Ages. In those very few cases when the battle continued into the next day, fighting would stop during the intervening night. The Mamlūk never fought a night battle against a foreign enemy.

One of the classical tactics employed by the Turkish and Mongol tribes in the field of battle was, as is well known, the encirclement of the enemy, and his annihilation within the tightening ring. The making of a ring (halba) around the opponent is mentioned very frequently in the furūṣīyya (q.v.) training-books composed during the Mamlūk period, and very rarely in actual military exercises. The same tactics were also very common in hunting (darb halbaqat), especially those very few cases when the battle continued into the very next day. In 701/1302 the Mamlūk quelled a great rising by the Bedouins in Upper Egypt by encircling them in a “halba like the hunting halba”-al-Manṣūrī, fol. 231a-232a). Another possible explanation is that the Mamlūk art of war might have gradually diverged from that of their Turco-Mongol nomad brethren under the influence both of sedentary
living and of Muslim military precedent. The same might be true, though to a lesser degree, of the Mongol armies of Iran. As is well known, hunting was one of the main means of training for real war of the nomads of the steppe. In the reign of Daybars I the use of bahtat payd is mentioned much more frequently than in the reigns of later sultans. This might indicate the deterioration of nomad war usages amongst the Mamluks with the passing of time (for Mamluk military training see D. Ayalon, Notes on the Furtunyya exercises and games in the Mamluk Sultanate, in Sources for the History of the Arabs, ed. T. Scallon, A Muslim Manual of War, Cairo 1961).

Of the practices employed in Mamluk battles, the two following are worthy of note.

(a) In the battle of Abulustayn (675/April 1277) the Mongols disembowled from their horses and fought "to the death" (Nahawand, 424; Ibn Khârîth, xii, 271-2; Nadîm, C, vii, 168). This kind of warfare seems to have been quite common with the Mongols (for its repeated use in their war against the Jûrâbârshah see Sibî' ibn al-Djawral, 443a444). The Mamluks do not seem to have used it at all. In the early Muslim period, however, this practice is often mentioned in the sources as having been employed in critical or desperate conditions (see, e.g., Dinawari, al-Àfîqî, al-tawil, 288; Ibn Sa'd, Taba'âtî, iii, 934; Tâbarî, i, 16441; iii, 835a-54; Ibn Khâlid, 'Tabarî, iii, 338).

(b) Authors of Mamluk military treatises mention the employment of a tremendous noise as a means of frightening the enemy, and indeed the Mamluks did use this method quite frequently, and with considerable success. According to Mamluk sources it was particularly successful in the siege of Acre (690/1291). During the final assault on the town the Mamluks used a huge quantity of drums (kâdîq) carried on the backs of 300 camels, which produced a terrible thunder, so that "the world turned upside down". The Bedouin adversaries of the Mamluks were particularly sensitive to the use of drums (Duwal al-Islâm, ii, 1475; Ibn Khârîth, xiii, 321; Nadîm (Cairo), vii, 614; Sulîk, i, 705; i, 102; Ibn al-Furat, viii, 1228).

When the Mamluks were forced to fight their major battles on Egyptian soil, they usually preferred the plains to the desert. The Mamluks were allowed to march their main forces to the plain in the middle of the desert. On several occasions the boundary between the Sinai desert and Egypt proper, which was called "the head (or the beginning) of the sand" (ra's al-rami or awwal al-rami) was recommended as more suitable for the defender, on the ground that the attacker would be exhausted immediately after crossing the desert. Both Barkûk, when he fought Mû'addî and Yalbugha al-Nâsîrî, and Tûmanî, when he fought the Ottomans, rejected the suggestion, and chose the vicinity of Cairo instead (Nadîm, v, 409; 411; Ibn Kâdî Shubba, fol. 38b; Ibn al-Furat, vii, 124; i, 804; Nadîm, v, 1256; iv, 139). Apparently the fact that Sultan Ayyub b. Ansâr al-Nâsîr Yusuf al-'ABBâsî (648/February 1251) soon after the last-named had crossed the desert, thus removing for ever the Ayyûbid menace to Mamluk rule, did not induce his successors to follow in his footsteps. The Kerchief of Safe Conduct. When one of the rival parties wanted to negotiate a truce, a peace or a surrender, an envoy or envoys would be sent to the enemy's camp carrying a special cloak or kerchief called "the kerchief of safe conduct" (mandîl al-àmîn). This kerchief, the colour of which is not specified, was usually worn round the neck, or put on the head (it was rarely tied round the waist or held in the hand). Such a kerchief could also be sent by the victorious side as a sign of acceptance of the offer of negotiations (Suluk, vi, 613; ibid., vi, 603). But while both of them criticize the figures pertaining to the sizes of the armies, only Ibn Taghribirdi includes in his criticism the figures of those killed in action. The same author, who states on several occasions that the numbers quoted in the sources of those carried off by the plague are extremely exaggerated, adds on one of these occasions that the same is true of those killed in earlier battles (al-wâhâdî al-muta'âdîm, amma), where the sources spoke of one hundred thousand persons, or less, down to one thousand or even to one hundred, slain in a single battle. Our historian argues that even when the number of the slain does not exceed one thousand, their bodies are scattered over a wide area, and in order to count them one has to engage many thousands of those who remained alive, and even then it would take a long time to establish the exact number of the dead. Then he adds: "And we have not seen and we have not heard that any king had ever appointed anybody to count the numbers of those killed in any battle conducted between himself and his enemy, unless the number of the slain was one thousand or less. As for those killed in the battles of Hûlûkû, Ghabân and Timur, the establishment of their exact numbers is impossible, for no one believes in these numbers is nothing but a madman". Then our chronicler concludes that he mentioned the battles of these three Khânâns specifically only because they lived nearer his own time, but he meant any battle which took place either in the Muslim period or before it (Hawâlâdî, 35718; 511). For the author's view of the exaggerations of the historian concerning the sizes of expeditionary forces, etc., see Nadîm, vi, 603; and also Nadîm (Cairo), viii, 1345; vii, 294.

In spite of the quite numerous great battles of the Bahârî period and the constant expeditions against the Bedouins in the Circassian period, Mamluk sources do not furnish very rich information about the numbers of the wounded are scant. Very meagre are the data about the prisoners of war. The figures quoted by the Mamluk historians (for its repeated use in their war against the Khâns in the 9th/15th century were, in most cases, slight, if their exact numbers is the very few Muslim historians who question the veracity of figures mentioned in the historical sources. But while both of them criticize the figures pertaining to the sizes of the armies, only Ibn Taghribirdi includes in his criticism the figures of those killed in action. The same author, who states on several occasions that the numbers quoted in the sources of those carried off by the plague are extremely exaggerated, adds on one of these occasions that the same is true of those killed in earlier battles (al-wâhâdî al-muta'âdîm, amma), where the sources spoke of one hundred thousand persons, or less, down to one thousand or even to one hundred, slain in a single battle. Then he adds: "And we have not seen and we have not heard that any king had ever appointed anybody to count the numbers of those killed in any battle conducted between himself and his enemy, unless the number of the slain was one thousand or less. As for those killed in the battles of Hûlûkû, Ghabân and Timur, the establishment of their exact numbers is impossible, for no one believes in these numbers is nothing but a madman". Then our chronicler concludes that he mentioned the battles of these three Khânâns specifically only because they lived nearer his own time, but he meant any battle which took place either in the Muslim period or before it (Hawâlâdî, 35718; 511). For the author's view of the exaggerations of the historian concerning the sizes of expeditionary forces, etc., see Nadîm, vi, 603; and also Nadîm (Cairo), viii, 1345; vii, 294. For his carelessness in quoting the numbers of Mamluks cf. ibid., vi, 687-10.

In spite of the quite numerous great battles of the Bahârî period and the constant expeditions against the Bedouins in the Circassian period, Mamluk sources do not furnish very rich information about the numbers of the wounded are scant. Very meagre are the data about the prisoners of war. The casualties suffered by the Mamluks in the 9th/15th century were, in most cases, slight, if their encounters with Timur at the opening of this century and with the Turkoman Shâh Suwar and the Ottomans in its closing decades are excepted. The small number of casualties resulted from the lack of real fighting in this period, a fact which, amongst other causes,
greatly contributed to the accelerated decline of the Mamluk army. Two statements by Ibn Taghribirdi, the greatest authority on Circassian Mamluk military society, about the intimate connexion between the scarcity of fighting, the lightness of casualties and the degeneration of the army, are of great importance (the author, who died in 874/1470, knew only of the very first battles against Shah Shuwar). In his first statement he says that the Mamluks of his time “are a people who eat unearned bread”, for they owe everything they now have to the feats of the Mamluks of past generations. There were no real wars in the 9th century A.H. after the war against Timur. The battles fought during the reigns of Al-Nâṣir Farâqî, Al-Mu'ayyad Shâykh and Al-'Azîz Yûsuf were only substitutes for war. The greatest battle of the century was that of Shaḵbab (792/1390), yet the number of those killed on both sides was under 50. After Shaḵbab there were battles in which not a single soldier lost his life (Nudûm, vi, 608). In his second statement, which he makes on summing up Sultan Kalaün’s rule, our author says that had Kalaün’s only positive act been the good upbringing he gave his Mamluks, this alone would have justified his claim to greatness. Their good behaviour and discipline were in complete contrast to those of the Mamluks of his own time. This should be coupled with the fact that, except for the war with Timur, there was no real war in the 12th century. The biggest military operation of that century was the conquest of Cyprus, but even this operation did not constitute a real battle, for the Cypriots surrendered to a small contingent, before the main body of the Mamluk army reached the battlefield. The rest of the Mamluk naval campaigns were no more than “sea voyages there and back” (safar fi ‘l-bahร� wa-aydb, wa-aydb). This, according to Ibn Taghribirdi, is in glaring contrast to the big and constant battles and to the fighting fervour which marked the period between the reigns of Salâh al-Dîn and al-Ashraf Khâllî. It is remarkable, he adds, that the Mamluk soldiers of earlier generations were modest and shy, in spite of their victories and achievements. They effaced themselves in the presence of the great and of the veterans, and did not despise those who occupied lower positions than themselves. The Mamluks of his own time were, in contrast, holding “their buttocks in the water and their nose in the sky (ist fi ‘l-mâ‘ wa-anf fi ‘l-samā‘)”. None of them is capable of holding the horse’s rein properly. They are experts in overcoming the weak and the powerless. Their ghişâd is the humiliation of their commander. Their gharâmûn are the looting of the hay and the dried clover (“Nudûm” [Cairo], vii, 328-329). On the breakdown of the discipline of the Mamlûks under the Circassians, see BSOAS, xv, 206-13. There is a marked tendency in the Circassian period to idealize the Bahri period, but this tendency is by no means without solid foundation).

The dead soldier’s inheritance. The death of a soldier during a campaign often caused serious complications. One of the greatest difficulties was to obtain reliable testimony concerning the deceased. The law made before the death of the deceased fellow-soldiers was not considered good enough. In the meantime the deceased’s property would be squandered. In order to safeguard the interests of the deceased’s legal heirs, Sultan Baybars I decreed in Sha‘bân 663/ May 1265, with the approval of the Chief Kâdî, that every field commander would appoint a certain number of upright and devout persons, who would be authorized to testify to the dead soldier’s last will. This decree had a welcome from the army. Earlier, in Râjîb 662/April 1264, Baybars promulgated another decree safeguarding the interests of the deceased soldier’s orphans. This one does not seem to have been confined to soldiers participating in a campaign (Suluk, i, 512-17, 535-61; Kalaün, ii, 206-12, 19-22).

The return of the victorious army to the capital. The announcement of a victory in the capital was accompanied by the playing of bands and particularly the beating of drums in the Cairo citadel and at the gates of the houses of the Amirs of a Thousand. This way of announcing the victory was called dukht al-bahร�’îr (or al-hâsît, etc.). Sometimes the drums would not stop beating for seven days running. The town was decorated for many days. The decoration usually included the construction of wooden “towers” (hilâd) in the streets, the repainting of the city’s gates and the drawing of gilt coats of arms (rumûk, sing. rank) on them. The returning army used to march through Cairo (shaḵkha al-Kâhir) in a magnificent procession. Shackled prisoners, severed heads, torn, broken and reversed banners, clefts and sometimes also reversed drums formed part of the procession. The chief commanders of the expeditionary force received sumptuous robes of honour (khiṣâs, sing. khiṣâ) and other gifts.

The behaviour of the Mamluk army during a defeat. The behaviour of an army in a defeat or during a retreat is one of the best criteria for judging its efficiency and morale. Judged by this criterion alone, the Mamluk army would not have justified its great reputation. That it would be easily dispirited as a result of a military setback in the years of its decline is to be expected. The extraordinary thing is that, as far as one can judge from a single important instance, its behaviour was not fundamentally different when it was at, or near, the peak of its power. The only major defeat suffered by this army in the Bahri period was in the first battle against Ilkhan Ghazan (699/1299). The retreat soon turned into a panic flight. Even the grand amirs abandoned the soldiers under their command and fled for their lives. In order to facilitate their flight the soldiers threw away their helmets and wore kerchiefs instead. Many of them took off their field-dresses and left their swords to hiding in the woods. There was nothing to hide from the wrath of the mob. Others tried to disguise their identity by cutting their beards. Both the Egyptian and Syrian armies withdrew to Egypt. Their soldiers reached Cairo in tiny isolated groups or even singly (muṭal‘arḫin farrā‘a?), most of them half-naked and horseless. According to one historian the number of those killed in the actual fighting was quite small; many found their death during the flight. It took several months to re-organize and re-equip the army, but Sultan al-Nâṣir Muhammad rose to the occasion in spite of his youth. The maintenance and reorganization of such huge armies could be carried out in Egypt because of the great prosperity of that country in that time, as explicitly stated by the sources (Nudûm [Cairo], vii, 122-13, 124, 1-15; 128-9; Al-Nâṣîr al-sâdîd in Patrologia Orientalis, xiv, 637-83, 670-71; Zetterstênén, Beiträge, 606-61, 80-81; Ibn al-Dawâdârî, ix, 17-18, 37-40).

In the battle against Timurlang (Diwâmâdī I 803/ January 1401) the Mamlûk defeat was not severe, and therefore the retreat was very orderly at the beginning; but as soon as the amirs learnt of Sultan Farâqî’s defeat, they also departed hastily without taking leave, and each of them reached Egypt with not more than one or two Mamlûks.
A most striking proof of the deterioration of the Mamluk army's discipline early in the 9th/10th century is afforded by its attitude immediately after Sultan Barsbāy raised the siege of the fortress of Àmid in 836/1433. Failing to capture it, Sultan Barsbāy decided to make a treaty with its defender, Karā Yuluk, and return to Egypt. The besieging army remained intact throughout the long siege, and suffered only few losses. There was, of course, no question of any defeat. Yet as soon as the news of the treaty reached the camp, the whole army did not bother to wait for the order of retreat, but turned its back on the fort and started a headlong stampede towards Egypt. In this chaotic flight each made his own way, and the huge army soon disintegrated into tiny groups which rushed towards Egypt in different ways, unbecknown to one another. The āmiris fled in one direction, whereas their Mamlûks, together with their fulûbs, ran away in another. The Sultan himself was left with a few followers, and was exposed during the whole night to great danger. The contemporary historian believes that Karā Yuluk could have inflicted heavy losses on the retreating army had he possessed sufficient courage to pursue it (Nudjûm, vi, 206–9).

In the numerous defeats which the Mamlûk army suffered at later dates all its retreats were most disorderly. The soldiers returned home hungry, naked and barefoot. Some of them came back on foot, others riding donkeys and yet others riding camels (see e.g., Baddâyî, ii, 112-4; iii, 124, 345-14; v, 72-4; 128-11). Battles within Mamlûk military society. Whereas the Mamlûks fought against their external enemies with considerable zeal and determination, at least until the early decades of Circassian rule, their internal battles were in most cases conducted with little determination and ferocity, and in a rather leisurely manner. The number of casualties was usually very small. The expression "insignificant fighting" (ḥāštî ḥayyim) is very frequent in connexion with this kind of warfare. It was almost impossible to foresee the results of these battles, for the two rival camps were always in a fluctuating state, with Mamlûks constantly going over from one side to the other. When the scales were definitely tipped in favour of one rival, it often happened that most of the Mamlûks of the losing side would go over en bloc to the winning side (see e.g., Nakdî, xiv, 579-80; Manhâl, iv, fol. 216a-11; Nudjûm, vi, 35-6). Even in the battles between Barkûk and his rivals, which were much fiercer than the ordinary Mamlûk skirmishes, and later in the battles which these rivals conducted among themselves, there was a constant flow of Mamlûks from one camp to the other. Because of this flow and because the combatants on both sides were more or less the same dress, the supporters of one rival had sometimes to bear distinguishing marks (see e.g., Ibn al-Furâṭ, vii, 170-11). Only the battles between Sultan Faradî and his Circassians were distinguished by their particular ferocity (seeJAOS, ix (1939), 141-6).

The Cairo citadel (fral'at al-diabal) occupied a most central place in the Mamlûk internal strife. In spite of its being strongly fortified, its sieges usually were of short duration, for it passed from hand to hand without much struggle. Sieges which lasted seven days were quite rare (Sulûk, i, 800-3; Hawâdîth, 17911-11, 333-1; Ibn al-Furâṭ, vii, 147, 181-11; Baddâyî'ii, iii, 455-3). The longest siege of the citadel under the Mamlûks lasted 37 days (Baddâyî'ii, iii, 561-563).

The Madrasat al-Sultan Hasan, which is situated opposite the citadel, always played an important rôle in these sieges.

Though inter-Mamlûk fighting caused considerable damage to the civilian population, many inhabitants of the capital enjoyed witnessing it in the same way that they enjoyed witnessing the spectacle of the mahmal procession. Sometimes the spectators suffered heavier casualties than the Mamlûks (Hawâdîth, 17111-11; Nudjûm, vii, 405, 417-18). It was only very rarely that the Mamlûk rival factions called the Egyptian Bedouins to help them against each other. When in 902/1497 they did call them, the Mamlûks fought the Mamlûks, while the Bedouins fought the Bedouins (Baddâyî', iii, 356-11, 357l5-58). A few years later, in 906/1501, the Mamlûk factions again contemplated calling the Bedouins for help, but then discarded the idea on the grounds that such a step was too humiliating (Baddâyî', iii, 450-11). As for the Bedouins, they showed little enthusiasm for a trial of arms with the Mamlûks, as long as they were not attacked by them. Once Barkûk asked the Bedouins to help him against his rivals, but they excused themselves, saying that they were not able to fight the Mamlûks (Ibn al-Furâṭ, ix, 72111-11).

(D. Ayalon)

IV. OTTOMAN EMPIRE.

A major field campaign was performed for enterprise involving the Ottomans in a long and complicated process of preparation. News from abroad—espionage reports, in fact—had an obvious relevance to operations in the field and the Ottomans strove to be well informed about the international scene (e.g., through Ragusa: cf. N. H. Biegen in Belleten, xxvii (1963), 237-55; on Jewish spies in the Ottoman service see A. Arce, Espionage y última aventura de José Nasi . . ., in Seferad, xiii (1953), 257-86). Routes followed in earlier wars sometimes came under renewed consideration at a later date—Meşemmed II would seem to have studied some of the campaigns of Bayazîd I and Murâd II as a guide to his own action (cf. H. Inalcik, in X. Isanis Taba'ti Bir Kongres Təblîleri, Istanbul 1957, 220). Moreover, advice about the best routes available might also be sought from soldiers and officials well acquainted with a particular theatre of war (cf. Hurmuzaki, Documente, îfi, 521).

The great campaigns stood in close relation to a number of geographical zones. In time of war against Persia, Erzurum (reached from Istanbul either along the sea route to Trebizond or overland) was a base area of vast importance for the Ottoman armies. So, too, the region of Diyarbekir, Van and Mosul, with Aleppo as a rear base—fortress towns which also fulfilled a similar rôle in relation to 'îrak, when that land was the theatre of war. Against Russia the Ottomans made much use of the sea routes from Istanbul to the Crimea and to the fortresses located on the rivers flowing into the Black Sea—e.g., Azov and Yeni Kale (Don and the Strait of Kertch) (cf. Ruschuk and Kilburn (Doner and Bug), Akkerman (Dnestre) and Killya, Ismail, Tulcea, Braïla, Silistra and Rouschuk (Danube), to all of which must be added the fortresses guarding Moldavia (e.g., Bender, Iasi, Kaminiec and Khotin). As for campaigns on the middle Danube, here the main line of advance was from Istanbul through Edirne, Plovdiv, Sofia and Nish towards Belgrade, beyond which the
Danube itself and the Tisza offered access into the Hungarian lands, the Sava and the Drava into the regions of Herzegovina, Dalmatia and Bosnia. The greatest number of these obligations was taken as a base area for operations directed against Greece and Albania (cf., on communications in the Ottoman Empire, the works of Jireček and Taeuschner). The vast extent of the empire, the great distances to be overcome meant that full mobilization was, in general, a slow and laborious affair. It was the custom to send out in December orders calling the sipáhs, e.g., the "feudal" horsemen in the provinces, to a campaign envisaged for the following year (cf. Huruzmuzki, Documente, ii/i, 521; J. Cuspinianus, De Turcorum origini, 635-v; I. Dujčev, Avosi, 43; Sutton, ed. A. N. Kurat, 35-7, 90-1, 153-3). Marsigli (Stato militare, ii, 106) indicates how, for a campaign in Europe, the troops from Asia Minor and the Arab lands passed over into the Balkans at Istanbul and Gallipoli or straight to Salonika from the ports of Syria and Egypt, the various contingents joining the main line of march thereafter at Philippopolis (Filibe [q.v.]), Sofia and Nish. Of the troops from Europe the Bosnians made for Eszék, the Albanians for Nish, the men of Transylvania for Pest via Szolnok and the Wallachians, Moldavians and Krim Tatars for Belgrante via Temesvár (Marsigli, op. cit., ii, 106). It was seldom possible, in time of conflict with Austria or Persia, to concentrate the imperial forces in the actual theatre of war until the summer was far advanced, with the result that major field operations often had to be compressed into the months of August, September and October. The diminution, in the late summer, of natural sources of fodder in the area of operations tended to restrict the length of the campaign season, since the Ottomans took with them to war—and therefore had to feed—a large number of transport animals (cf. de Warnery, Remarques, 37-8). With the onset of winter (often harsh in the Balkans and as a rule severe in Armenia and the adjacent regions) the time for withdrawal to winter-quarters was almost at hand.

The preparations for a new campaign included the bringing together of vast supplies of war material. Orders would go out to the cannon foundries (Top-khané) at Istanbul and elsewhere for the casting of new guns and to the mines of the empire for supplies of iron, e.g., cramps, shovels, scythes, sickles, anvil, bellows, iron, lead, horse-shoes, nails, slow-match, linseed-oil, resin, pitch, cauldrons, camel-hair and horse-hair, ropes, cord and cables, cotton-wool, sacks, sheep-skins, grease, tallow, waggon-jacks, etc. (cf. art. Barúd, 1063; also J. Grzegorzewski, in Archivum Naumoue, vi (1912), passim; Gökhilgin, Yurükler, 169). Austrian accounts of material captured from the Ottomans during the long war of 1094/1683-1100/1699 embrace a wide range of articles and equipment, e.g., fire-arms and other weapons taken from the Ottomans and, in addition, list the amounts of captured gun-powder, sulphur and saltpetre (essential items that the Porte drew both from inside the empire and from foreign sources: cf. the references in Barúd iv (1063) and ĝiýva ii).

Of the first importance also was the obligation to make available adequate supplies of food for the troops in the field. The Ottomans, on campaign, led a frugal and sober life, a little bread (or biscuit), mutton and rice (pilav), dried beef, onions and the like formed their diet. It was well known that the main ingredients of their diet. This temperate approach to eating and drinking tended, as some of the Western sources indicate, to make the Ottoman soldier more resistant to disease and of greater endurance than his Christian foe (cf. Menavino, in Sansovino, Historia Universale, 731; Georgievitz, Epitome, 52-3; A. Arvieux, Mémoires, iv, 518; de Courmenin, Voiage, 261; de Warnery, Remarques, 23). The central government, therefore, took elaborate measures to meet the need for supplies and provisions. Large herds of cattle and flocks of sheep accompanied the Ottomans to war as sustenance for the troops in the field (cf. Magni, Turchia, i, 290). On the local population dwelling close to the line of advance would fall the burden—against payment, however—of bringing to the troops on the march grain and victuals of various kinds (cf. de Lassé, Historia Turchica, 48-9; Spandugino, in Sathas, Documents Indiatis, ix, 230-1; de Courmenin, Voiage, 255-6). At times, indeed, when a major campaign was in view, an edict might be issued, forbidding the export of supplies from a given area (cf. Huruzmuzki, Documente, ii/i, 525). The government—with the armed forces in mind—promoted the cultivation of rice in the Balkan lands, e.g., along the rivers Maritsa and Vardar (cf. Fišika iv, 907).

A great campaign meant the gathering together of vast numbers of transport animals, waggons and carts. Oxen and buffalo (some of them bred under government control, e.g., in Cilicia: cf. Ewliya Celebi, Seyyed-ı nâmâ, iii, 40) hauled the large guns, while camels (drawn from Asia Minor and the Fertile Crescent), mules and draught horses ("bârgir"), levied from the lands along the lower Danube acted as beasts of burden. The sipáhs, i.e., the "feudal" warriors, and also the "Altı béliük", or mounted regiments of the imperial household, came to war with their own horses, more swift and more light in physique than the heavier "bârgir". It was, in addition, the custom, for purposes of transport, to requisition waggons and animals, together with personal labour service, from the rural population on or near the line of march (cf. Menavino, in Sansovino, Historia Universale, 435; also (for Peterwardein, 1716) Mon. Hung. Hist., Scriptores, xxvii, 583). These inventories from the Ottomans and, in addition, list the amounts of captured gun-powder, sulphur and saltpetre (essential items that the Porte drew both from inside the empire and from foreign sources: cf. the references in Barúd iv (1063) and ĝiýva ii).
later the Janissaries and, in succession after them, the other corps and regiments of the central government moved to the camp, where the Grand Vizier, as Serdar, or commander-in-chief, now joined them, having formal leave of the Sultan (cf. I. Dujˇev, Avowi, 215; Galland, Journal, i, 177 ff.; de la Croix, Mémoires, i, 266 ff., 295 ff.; Kéralio, Histoire, i, 52 ff., ii, 73 ff., 82 ff., 88 ff.; de Warnery, Remarques, 21 ff.; Montecuculi-Crisse, iii, 289; d’Onisso, Tableau général, vii, 387 ff.; Hammer-Purgstall, Staatsverfassung, i, 403 ff.).

Much depended on the line of march, at least within the confines of the empire, as smooth and as practicable as possible. Orders would be sent to the authorities in the provinces, bidding them repair the relevant routes in order to facilitate the passage of waggons and guns. Piles of stones and wooden stakes served to mark out the actual line of advance that the troops had to follow (cf. Trésor politique, iii, 861; I. Dujˇev, Avowi, 69, 264; Magni, Turchia, i, 288; Auer, ed. Lukinich, 501; I. Barbier, op. cit., 22, 27, 28). The crossing of rivers (e.g., in Europe, the Sava, the Drava, the Danube or the Tisza) was a problem of particular importance. Supplies of tools, chains, timber, cables, nails, etc. had to be assembled for the building of great pontoon bridges. Sometimes pre-fabricated parts of the structure would be carried to the designated site in boats or on waggons and carts. Moreover, to ensure that the work went ahead with despatch, orders might be issued requisitioning the services of local skilled craftsmen, e.g., carpenters and smiths (cf. Barovius, De robus Ungariciis, 134-5; Szamoskózy, Történelmi Maradványai, 147-8; Hurnuzaki, Documente, i1/1, 521, 525, 543; Auer, ed. Lukinich, 80; Magni, Turchia, 391-3; de la Croix, Mémoires, 295-300; Mohar, in Mužeckotörténeti Értesítő, viii/4, 259-63).

The Ottomans, in the time of their splendour, observed a strict discipline on the march. Even the slightest damage to orchards, gardens and cultivated fields along the route was visited with severe punishment (cf. Menavino, in Sansovino, Historia Universale, 735; Georgiev, Épitome, 53-4; Chesneau, Voyage, 108-9). Such discipline seems, however, to have been far less strong when the camp was in decline (cf. de Warnery, Remarques, 89). Written commands transmitted from the serdar, through the Çavuş-şâhi and his subordinates, to the various corps and regiments made known the order of march, the chief elements of which—in the actual theatre of war—included an advanced screen of baggage and reconnaissance horsemen (e.g., akınıllar and Tatars), a vanguard of picked cavalry under the Carhındaş-şâhi, a main force embracing the Janissaries, the Allı bılık, the specialist troops (e.g., armourers, artilleryists, etc.), together with the mass of the “feudal” sipahi on either flank, and a rearguard covering the baggage and supplies (cf. de Promontorio-de Campis, ed. Babinger, 49, 61; Ordo Portae, ed. Şerif Baštav, 8-11; Marsigli, op. cit., i, 112-7; Hammer-Purgstall, Staatsverfassung, i, 493 ff.).

The main care was taken on changing site to the next began in the small hours of the morning. It was now that the personnel entrusted with the choice and delimitation of a new site went forward, under suitable escort and with tents, baggage and equipment, to fulfil their duties. Access to pasture for the animals and to water for beasts and men alike was a factor of much importance in the selection of the next site. Experience from earlier campaigns, expert local advice and careful reconnaissance meant of course that the choice could often be made, in principle at least, well before the actual moment of need. With the forward movement of the various corps and regiments set out in succession, marching until about the hour of noon, when the new camp, in normal circumstances, would be at hand. The centre of the encampment was reserved for the tents of the Sultan, the Grand Vizier and the high dignitaries of the Porte. Around them would lie the Janissaries, the Allı bılık, the artilleryists with their cannon—in short, the troops belonging to the imperial household. The main nucleus stood the Beşlerbegs, the Sandjak bęgs and the sipahi of the provinces, each corps having its own quarters. Much colourful detail can be gleaned about such encampments from the European sources—e.g., on the lanterns used for marching in the hours of darkness, the water-carrier (sabbdlı) with his buffalo skins, the “baraques” of the artisans and craftsmen (each with a small pennant above it, pointing to a particular trade or occupation), the enclosure where stray animals waited for their owners to reclaim them or the canvas barriers erected around the quarters of the Sultan and painted to look like walls. The deepest impressions left on the Christian mind would seem to have come, however, from the frugal and sober habits of the Ottoman soldier, the absence of drunkenness, the wonderful silence prevailing in such encampments and from the care taken to maintain a high standard of personal and public cleanliness amongst the troops (e.g., regular visits to the barber, frequent washing of clothes, lavish provision of latrines both within the quarters of each individual unit and within the camp as a whole)—all of which stood in marked and favourable contrast to the practices normal in the armies of Christendom (cf. Spandugino, in Sathas, Documenti Inéditi, ix, 230; Trésor politique, iii, 856 ff.; de Courmenin, Voyage, 258-9; de la Croix, Mémoires, i, 289 ff., 301 ff.; Galland, Journal, i, 113 ff.; ii, 113 ff.; d’Arvieux, Mémoires, iv, 516 ff.; Magni, Turchia, i, 288 ff., 301 ff., 336-7, 348-9; Guilleragues, Ambassades, 335 ff.; Benaglia, Relations, 101 ff.; Marsigli, op. cit., i, 81, ii, 561 ff.; de La Motraye, Voyages, ii, 5 ff.; Villars, ed. Vogüé, i, 777 ff.; de Tasso, Opera, 135 ff.). The latter is often mentioned, too, of the position and circumstance of Ottoman warfare—e.g., of the uniform and equipment of the Janissaries, of the respect accorded to meritorious conduct in the field (the granting of aigrettes, of honorific robes and of gratifications in cash) or of the brilliant-hued pennants used to distinguish one from the other the various regiments and corps and also the personal retinues of the great dignitaries (cf. Trésor politique, iii, 841, 843, 855; de Germigny, in L’Illustré Orbisandale, i, 1003 Hurnuzaki, Documente, Supl. I, 1, 86-7; Benaglia, Relations, 234; Magni, Turchia, i, 339; Brue, Journal, 24, 27, 58-9; Perry, View of the Levant, 42).

An assessment of Ottoman tactics in the field demands some degree of caution. The rôle, in warfare, of the Janissaries, the Allı bılık and the specialist corps of the imperial household was a most important one, but it can be given too much emphasis. The main weight of the Ottoman forces—and this fact determined in large measure their system of tactics—was to be found in the sipahi, the “feudal” warriors from the provinces, who far outnumbered the troops of the central government. On the battle-field, subject of course to variations imposed by the terrain, the normal order consisted of a firm centre embracing the Janissaries and other élite elements
with trenches, cannon and waggons as protection (in short, a “Wagenburg” arrangement) and on each side a powerful wing of sipahis horsemen. The tactics appropriate to such forces aligned in such an order are not hard to define: harassment of the foe, skirmishes, sudden thrusts, feigned retreats, infiltration toward the flank and rear of the opposing troops and at last a general onset of horsemen, with the foe, should all go well, overrun and cut down in flight and relentless pursuit. To considerations of this kind must be added factors of a strategic nature: the size of the forces (much greater than those of the Ottomans during the 18th centuries), for instance, and the incompetency of the Ottoman generals, the tactics of the sipahis, the skill of the Ottomans with the sabre, the use of smoke signals to launch an attack, the wild rush of the Janissaries towards the foe and on the unwieldiness of the Ottoman guns (cf. Villars, ed. Vogüé, i, 367, 368; Vauban, ii, 283; Eugen, Feldziege, ii, 157 ff.; Röder von Diersburg, ii, 107 ff.; Poniatowski, Remarques, 104-5; de Warnery, Remarques, 24, 60 ff., 77-78, 114; Kéralio, Histoire, i, 113 ff.; Smitt, Suworow, 162 ff.; Criste, Kriege, 273 ff.).

The resultant picture—even when all allowances have been made—is of a war machine outmoded beyond hope of renovation. Soldiers of such great reputation as Lorraine and Villars and authors of genuine insight like de Warnery and Kéralio underline the basic defects of Ottoman warfare—inefficiency in the high command, lack of an efficient artillery, ignorance of tactics and of the art of manoeuvre (cf. Villars, ed. Vogüé, i, 79-80, 368, 380; de Warnery, Remarques, 114; Kéralio, Histoire, i, 114-5). Reform on European lines had in fact become for the Ottomans a most urgent and unavoidable need. The last word on their traditional style of warfare can be left to Maurice de Saxe, who wrote that neither valour, nor number, nor wealth was lacking to them—but order, discipline and “la manière de combattre” (Rivieres, i, 87).

The conduct of war in the early centuries of Islamic Persia was based essentially on the military heritage of earlier Persian empires, but it also contained elements from the Arab desert tradition of warfare and the Turkish steppe tradition of raiding. We first hear of Persian military methods in the Islamic period from the accounts of the Arab conquest of al-'Irāq and Persia under Abū Bakr and 'Umar. The mailed cavalryman, armed with sword, lance, mace or bow, was characteristic of the Sāsānīd army, and the deployment and tactics of such cavalrymen must have been similar to the type of army, and the deployment and tactics of such

Rustum's troops (allegedly numbering 120,000, of whom a large proportion must have been infantry conscripts and camp followers) advanced on the first day of battle in thirteen ranks, each behind the other, and rained arrows on the Arabs. Being without adequate protective clothing or helmets, the latter suffered considerably, but nevertheless stood firm and were able to advance and use their lances and swords at close quarters (Ṭabar, in Sir W. Muir, *The Caliphate, its rise, decline and fall*, Edinburgh 1915, 104 ff., and R. Levy, *The social structure of Islam*, Cambridge 1954). With the decline of direct Caliphal authority in Persia and the rise of virtually independent dynasties (sc. in the 3rd/9th century and after), two trends of military significance may be noted. Firstly, the emphasis on the cavalry arm increased with the popularity in armies of Turkish military slaves (ğulîms [q.v.]), for these were primarily cavalrymen, using the weapon of the steppes, the bow. Secondly, multi-national, professional armies became the norm, and the supreme commander or ruler had a problem in wielding together for action the disparate elements composing his forces. According to Niẓām al-Mulk, Maḥmūd of Ghazna drew advantage from this diversity. He kept the various nationalities, Turks, Indians, Khurāsānīs, Arabs, etc., in their ethnic groups, and encamped thus when the army was on the march; on the battlefield, the spirit of emulation spurred them all on to prodigies of valour (Ṣiyāsāt-nāma, ch. xxiv). But on more than one occasion, the Great Saldījūk had difficulty in holding their forces together on the battlefield. In 465/1073, for instance, Malik Shāh had to defend his throne against his uncle Kawurd, the representative of conservative Turkmen feeling. In a battle outside Hamadān, Malik Shāh’s own Turkish troops turned against the Kurdish and Arab contingents of his army, because these last had played the decisive rôle in crumpling and routing Kawurd’s right wing and had thus outraged the feelings of Turkish solidarity amongst the Sultan’s own Turks (Bundarlī, *Zubdat al-nasra*, 48). However, where the ruler or commander had at his disposal a force of dependable ğulîms, these could be moved along the front for mutual reinforcement and watching (cf. Bayhaḵī, Taḫīt-i Maṣū‘ī, cited in C. E. Bosworth, *Ghaznavid military organisation*, in *Isl., xxxvi/1-2* (1960), 47).

The Arab raiders, like the Turkmen marauders from the steppes in later centuries, had travelled with a minimum of baggage. But in a settled land like Persia, the large-scale movement of troops was bound to be a complicated affair. The reduction of fortresses and walled towns demanded siege machinery; if agriculture was to flourish and the taxable capacity of the land to be maintained, an army could not expect to live off the countryside, so supplies had to be taken along; and such non-combatant bodies as the court and harem and the adwāns of the administration frequently accompanied the army on its campaigns. When in 420/1029 Maḥmūd of Ghazna marched against the Buyids of Ray and Diḫbal, he brought far more baggage than is mentioned as wearing oiled cotton coats (hârâqīs yā nīrâbâṣīn) (Bayhaḵī, 134, 534). Thus when an army was campaigning outside its normal sphere of action, local conditions had to be provided for if the army was to function at optimum efficiency; the sources often note the effect of the damp climate of the Caspian coast region in rusting weapons, and the Turkish archers of Ibn Rāq’s general Baykând were in 326/938 routed in Khūzestān by the Bûyûd Muʿīzz al-Dawla because continuous rain had ruined their bowstrings (Ibn al-ʿAthīr, viii, 254-5). The plundering of the countryside by a passing army was an age-old custom in Persia (cf. Christensen, *L’Iram sous les Sassanides*, 213, on the scorched-earth tactics of Sāsānid troops). Certain troops and commanders acquired particularly bad reputations for their plunderings and excesses against the civilian populations, such as the Daylamlās of Mâdarwâdī b. Ziyâr (Masʿūdī, Muʿāqīsī, 22-24), and the Turkmen—many of them fresh from the Kipčâk steppes and still pagan—of the Khârîzim-Shâh ʿAlâʾ al-Dîn Muḥammad. A Ghaznavid commander in Khūrāsān cut down all the pistachio-nut trees in the Bayhaḵ oasis and sent some of the trunks off to Ghazna, where they were fuel (Taḵīt-i Bayhaḵ, 273). Other commanders had good reputations among which they kept over their soldiers whilst on the march, e.g., Yaḵūb b. Layth (Muʿāqīsī, viii, 46 ff.). It was recognised that violent behaviour was morally indefensible and contrary to the Šahrīfī, but it was sometimes excused on the grounds of necessity (see the apologia of Sulaymān b. Kutalmīş for his ravaging of the region of Aleppo in 477/1084-5, in Ibn al-ʿAthīr, x, 90). Not infrequently the civilian population of a whole region might be evacuated in face of an advancing army, as is said to have been done by ʿAlâʾ al-Dîn Muḥammad in the Sîr Dârîy valley when the Mongols were approaching (ibid., xii, 179).

The commander of an advancing army had to plan his strategy with regard to such considerations as the availability of supplies, the manœuvrability of his communications and the type of terrain and natural conditions which he would have to face when giving battle. In a land of hydraulic constructions like Persia, it was often possible to divert rivers and irrigation channels to flood the land in face of an approaching enemy. In 456/1064 Kutalmīş b. Arslān Ṣarīḵ rebelled against Alp Arslān; he shut himself up in Ray and made the roads thither impassable by diverting water over the salt flats and
into the wilāyāt (Ibn al-Athir, x, 23-4). But the locus classicus for this tactic was Khwarizm, where an army advancing north-westwards along the Oxus could be halted by the flooding of the very complex irrigation system of that region (for examples from the 6th/12th century, see Barthold, Turkestän, 154, 325, 337, 339, 349). On the other hand, such a decision to flood territory might affect both sides. When the Ghurid 'Alāʾ al-Dīn Ḥusayn faced Sandījar at Nāb in the Hari Rūd valley in 547/1152, he decided to flood his own rear to prevent his soldiers yielding; this manoeuvre recouped upon him disastrously, for the Turkish troops in the Ghurid army deserted to the Sālджūqs, and the Ghurids were pushed back into the flooded lands and swamps (Džuzdžani, Taḥbālī-n Naṣīrī, tr. Raverty, 358-60).

When the army halted and prepared for battle, guards were posted and scouts sent out to investigate the terrain and the enemy positions (Fakhr-i Mudabbir, Aḏāb al-mušaṭḥ, ch. xx; on this work, see Bibliography). According to this author, the Ārid or head of the military branch of the administration then inspected the whole of the army, from the officers downwards, their weapons and their mounts, and passed them as fit for battle. Commanders exhorted their troops, often promising special rewards for outstanding feats of bravery (cf. Bosworth, in Isl., xxxvi/i-2, 69-70, 74). If the enemy were infidels, religious enthusiasm could be roused, and Fakhr-i Mudabbir has a section on the lāṣkhar-i ṣalāk “those who support the soldiers by their prayers and intercessions” (ch. xxxiv). During Alp Arslan’s Anatolian campaign of 493/1071, the Caliph al-Ḳāʾīm composed special prayers for the Muslim forces; copies were sent to the mḥāṭīkh attached to the Salджūq army and the prayers were read out before the battle of Malāṣqūrd (Mantsktir) (Ḥusayn, Aḏḥīr al-dawla al-Salʤūqīyya, 47-8; Cahen, La campagne de Mantsktir d’après les sources musulmanes, in Byzantion, ix (1934), 633). The armies which campaigned against the Greeks and Georgians in eastern Anatolia and the Caucasus usually included religious elements, to be equated here with the gūlāṣīs [q.v.], who not only exhorted the faithful ghdzis [q.v.,] but who might themselves join in the fray. For the Turkish troops in the Ghurid army advancing north-westwards along the Oxus, attached to the army of Khwāna the Amir Khwāna the Amir--Ala al-Dīn Muḥammad at Dmawar. Both sides employed this formation and, like Mḥmūd of Ghazna, Sandījar placed a protective screen of elephants before his lines. Mḥsūd b. Mḥmūd took the centre himself, placing the Amir Karāča Sāḵḵī and Kfīl on his left and the Amir Yūrünkūḵ Bzāḏār and Yūsuf Cāfūḵ on his right. Facing him, Sandījar held his own centre on the ground (as at al-Kūnīn, 762), but Džalāl al-Dīn stood firm, and the two armies disengaged when night fell (Džuzdžani, tr. 268-70; for details, see vIl). It was possible in battle, however, for one wing of each army to push back the opposing wing so that a circular formation resulted. This occurred during the first engagement of the Khāridzm-Shāh Aṭṣūz and other commanders were on the right. Mḥsūd’s army was defeated by a tactic frequently practised on such occasions and reminiscent of the classic enveloping movement employed with such success by Hannibal against the Romans at Cannae: Karāḵa Sāḵḵī drove into Sandījar’s centre, but Toghrūl and Aṭṣūz dropped back from the wings and enveloped and annihilated Karāḵa’s forces (Ibn al-Athir, x, 476). It was possible in battle, however, for one wing of each army to push back the opposing wing so that a circular formation resulted. This occurred during the first engagement of the Khāridzm-Shāh Aṭṣūz al-Dīn Mḥmūd and his son Džalāl al-Dīn with the Mongol Džeti. The only way out of this impasse for the Mongols was for the Mḥmūd’s army to turn and run, retreat the enemy (as at al-Kūnīn, 762), but Džalāl al-Dīn stood firm, and the two armies disengaged when night fell (Džuzdžani, tr. 268-70; other examples of this pattern of battle in Djwainy-Boyle, 351-2, 360).

The use of elephants to form a screen before the front ranks of the taʾbīya was especially favoured by such dynasties as the Ghaznavids, Sālджūqs and Ghurids (for details, see vIl), but other means might be used to protect the front line. At the battle of HARB
Bazimdja near Baghdad in 549/1154 between the Caliph al-Muktafi and a Turkish army under the Amir Mascud... fought on foot (Husayni, 80). The Ghurids of central Afghanistan were, like the Daylamids, a race of mountaineers and were famed as infantrymen. Džaždži Ć mentions a peculiar tactic of theirs, the use of the kara, a protective screen of cowhide padded with cotton; this was placed over the shoulders and formed a defence for advancing soldiers (Tabakdž-i Nāṣīrī, tr. 352-3; according to Raverty, the kara was used in Afghanistan until the introduction of firearms).

Since Persia is a land of predominantly landlocked rivers, few of which are in any case perennial, amphibious operations are only rarely mentioned in the sources. The Oxus was unsuitable for large-scale navigation, and armies attacking Khārizm marched along its banks rather than sailed down it. Only on the edge of the Persian world, in the Indus valley, do we hear of extensive river warfare. In 428/1037 Mahmud of Ghazna led an expedition against the pagan DJats of the lower Indus region, employing 4,200 ships armed with spikes and carrying fighting men. When battle was joined, the Muslim troops rammed the DJats' ships and hurled nafīt at them; soldiers waiting on the river banks then finished off the undrowned survivors (Gardizī, Zayn al-ašbāh, ed. Nazim, Berlin 1928, 88-9; M. Nāṣīm, The life and times of Sulaimān  Māhūm  Ghana, Cambridge 1931, 121-2).

The conventions of warfare included the ones that quarter, amān, should be freely given and that prisoners-of-war should not be slaughtered or ill-treated (Adāb al-mulūk, ch. xxiv). The sources usually therefore mention breaches of these conventions, as in Kirmān during the time of the Saldjuks of Ghazna, Shāh b. Toghrī Shāh (d. 572/1176-7), when inexperienced soldiers and ghulāms of his killed captives from an invading army (Muḥammad b. Ibrāhīm, a 1200 of mamlukīs and were found in 406). It was not, however, regarded as unethical to masquerade in the characteristic dress of the enemy; it is recorded that the Khārizm-Shāh ‘Ali’ al-Din Muhammad was fond of the tactic of donning in battle the distinguishing garb of the enemy in order to confuse him (Diuwaiy-Boyle, 352).

During the Indian campaigns, Sebiiktigin is said to have used a technique of successive attacks. He separated his ghulāms, who were armed with clubs and maces, into groups of 500 men, and each group attacked in turn, falling back to allow another group to move up ('Utbī-Manīnī, Yāmīnī, i, 85-6).

Whilst the flexibility of cavalry made it very useful in open conditions, where the opposing forces might be spread over a wide front, infantry often came into its own in broken or precipitous terrain or where the fighting was close and confused. The Daylamids were famed as tough infantrymen, and at times their impetuousness as a raiding-point. Under the Ghurids, a 700 of mamlukīs and were found in 406). It was not, however, regarded as unethical to masquerade in the characteristic dress of the enemy; it is recorded that the Khārizm-Shāh ‘Ali’ al-Din Muhammad was fond of the tactic of donning in battle the distinguishing garb of the enemy in order to confuse him (Diuwaiy-Boyle, 352).

After the battle, the victorious army divided up the captured booty [see Ghana]. In the absence of the ruler himself, the Ārid often supervised this procedure, taking out the ruler's fifth and those items specifically reserved for him, such as precious metals, weapons and elephants. The remainder was then divided out amongst the fighting personnel. Though not, according to the Adāb al-mulūk, ch. xxxii, amongst the camp following (cf. Bosworth in Isl., xxxvi/1-2, 62, 74).

The Mongol invaders and Timurids brought into the Persian world fresh military ways. During the period of their dominance (cf. the 7th-9th/13th-15th centuries), the older techniques of warfare, based essentially on slow-moving, heavily-armed professional armies, were temporarily eclipsed; they re-emerged under the Sāfawids and their successors, but were then revolutionised by the introduction of firearms. The Mongol armies were composed almost...
wholly of cavalrymen, with the bow as their basic weapon; these armies have therefore been cited by military historians as showing that cavalry need not be restricted to earlier times in the classical and Near Eastern worlds. The Mongol army, in earlier conquerors and commanders. Spies would be sent out, and before the Manchurian campaign of 1211 and the Khārīzīmīnian one of 616/1219, Čingiz obtained information on local conditions from traders and others familiar with those lands. According to Sāyfī Ḥarawī, Čingiz had maps of Afghanistan prepared for himself, and Ibn ʿArabshāh likewise mentions Čimūr’s interest in maps. By such means as these, Čingiz learnt about the topography of Sīstān and Ghazāra (Martin, op. cit., 90-76) to send the minimum force necessary with his son Čaghatay to Afghanistan and eastern Iran 994-1040, Edinburgh 1963, 241 ff., and there exists a study of the battle of Andānsan, based on Bayhaḵ’s account, by B. N. Zakhōder in Rusiyyī ʿIstūrīlīsī Ẓūnārī, 1943, Turkish tr. in Bleyl, xi (1954), 581-7. There is a general survey of the art of war in Persia up to the coming of the Sālīdūkhs by Spuler in his Iran in früh-islamischer Zeit, 494-9; in his bibliography (Nos. 365 and 366) are cited two general works on the military history of Persia, Dī, Kūzānī, Tārīḵ-i niṣāmīyā-yi Irān, Tehran 1310/1932, and Gh. H. Muktādār, Tārīḵ-i niṣāmī-yi Irān, Tehran 1319/1940. The Mongols as soldiers have attracted rather more attention; see Spuler, Die Mongolen in Iran, 413-6, and D. Martin, The Mongol army, in J.R.A.S., 1943, 46-85 (the same author’s article Činghiz Khan’s first invasion of the Chin empire, in Ibid., 182-216, illustrates Mongol strategy and tactics but in a non-Persian context). Quatremère’s notes to his Histoire des Mongols de la Perse, I, Paris 1836, still contain valuable material on the art of war in this period. Of the Persian Mirrors for Princes, chs. xx and xii of the Kaḏāb-nāma of Ka’y Rā’ūs are relevant, but of outstanding value is the Āḏāb al-muṣāḥa wa ḵafṣāyat al-maḥāl or Āḏāb al-karb wa lḡāḏāya of Fakhr-i Mubābīr Mubāhārāshāh, written under Sultan Iltuṣnay of Delhi in the early 713/1313 century. The greater part of it deals specifically with the art of war, and its information seems to be based primarily on Ghaznavid and Ghūrid practice (see on it I. M. Shafi, Fresh light on the Ghaznavids, in I.C., xii (1938), 189-234, and Bosworth, Early sources for the history of the first four Ghaznavid Sultans 977-1044, in I.Q., vii (1963), 16; Č. Čeben has used material from it for his appendix on the weapons of the Ghūrids in Un traité d’armurerie composé pour Saladin, in BÉt.Ori., xii (1947-8), 160-2.

(C. E. Bosworth)

VI. — INDIA

1. General.—The army in India (for its composition, organisation, training and parts, see Laghūt) was distributed in various places of a ruler’s dominions according to their strategic importance, in order to avoid difficulties of transport; for example, the north-west frontier provinces, where there was the continual threat of Mughul raids, were always well provided with experienced troops under able and loyal commanders during the Dīlī sultanate period. The main army was concentrated in the capital, or

greatest trust stationed on the extremities of the two wings (Bābūr-nāma, tr. Beveridge, 154-5). The army of the Turksmen At with some of the army was divided in the Turko-Mongol fashion into three divisions of a centre (called by the Mongol term mankalay “forehead”, “front”), a left wing (soul) and a right wing (sagh) (Minoreskij, A civil and military review in Fars in 881/1476, in B.S.O.S., x (1939-42), 154 ff.).

With the advent of the Šafawīs, artillery and firearms came into prominence and were said to have revolutionised the art of war; for a consideration of military techniques in this later period see Bārūdī, The Šafawīs.

Biography: (in addition to the references given in the text): There has been little systematic study of the military history of mediaeval Persia. Some of the strategic and tactical aspects of the Ghaznavid-Sālīdūk fighting are considered in Bosworth, The Ghaznavids: their empire in Afghanistan and eastern Iran 994-1040, Stirling 1922, 48-9; in his JRAS, 1943, 46-85 (the same author’s article Chinghiz Khan’s first invasion of the Chin empire, in Ibid., 182-216, illustrates Mongol strategy and tactics but in a non-Persian context). Quatremère’s notes to his Histoire des Mongols de la Perse, i, Paris 1836, still contain valuable material on the art of war in this period. Of the Persian Mirrors for Princes, chs. xx and xii of the Kādāb-nāma of Ka’y Rā’ū’s are relevant, but of outstanding value is the Āḏāb al-muṣāḥa wa ḵafṣāyat al-maḥāl or Āḏāb al-karb wa lḡāḏāya of Fakhr-i Mubābīr Mubāhārāshāh, written under Sultan Iltuṣnay of Delhi in the early 713/1313 century. The greater part of it deals specifically with the art of war, and its information seems to be based primarily on Ghaznavid and Ghūrid practice (see on it I. M. Shafi, Fresh light on the Ghaznavids, in I.C., xii (1938), 189-234, and Bosworth, Early sources for the history of the first four Ghaznavid Sultans 977-1044, in I.Q., vii (1963), 16; Č. Čeben has used material from it for his appendix on the weapons of the Ghūrids in Un traité d’armurerie composé pour Saladin, in BÉt.Ori., xii (1947-8), 160-2.

(C. E. Bosworth)
in a city or camp where the ruler was residing, with detachments and garrisons at many provincial headquarters under the command of khodras [q.v.].

The garrison system, which the Indian sultans seem to have inherited from the 'Abbasids through the Ghaznavids, was always well maintained, many rulers attaching great importance to keeping old forts in good repair and building others as the dominions were enlarged, modifying them for artillery as this became available [see युद्ध]. When the need for war arose, the first attempts to meet the situation would be made by local troops; if these were inadequate, reinforcements would be called for from neighbouring areas before aid was requested from the capital. The forces at the capital (haqsh-i kalb) had as their main component the cavalry, well accoutred and mounted on Arab or Turkoman horses; and this branch was of course fully mobile and could easily be sent to a distant part of the dominions. The other fighting branches, however, the elephants and the infantry, were less mobile; elephants were maintained especially in the capital, since possession of them was a royal prerogative and no sultan would permit them to be concentrated in a town away from the capital, where they might be used against him in the event of rebellion. The infantry (pâyak) maintained in the capital were employed as bodyguards and for local defence; Diyâ' al-Din Barani comments on their skill with the bow, and mentions that the best pâyaks came from Bengal. Obviously they were not readily transportable on distant campaigns, although on major expeditions they could march with the baggage train, for which they would provide a continual escort; but a class of infantry (pâyak ba asp) is mentioned which seems to have been provided with horses maintained by the government. On remote campaigns infantry could be drawn from standing local troops, locally conscripted, or provided by feudal rulers; and local arrangements were similarly necessary to facilitate the passage of the army on its line of march.

2.—The army on the march. Armies would commence the march at an auspicious moment fixed by the astrologers, and before leaving, rulers, commanders and troops would visit saints and shrines for protection and blessing—indeed, holy men were called as such. The army would be led by an advance party, including the scouts, standard bearers and musicians—importance was given to the spectacular side, cf. Amir Khusraw, Khasâ'în al-fiûsh, 'Alîga'h 1297, 101-2; Shams-i Sirâdî 'Affî, Ta'rîkh-i Firûz Shâhî, Bibli. Ind., 1890, 269-70—and officers of the commissariat who would ensure that adequate stores were available along the route. The army was divided, in the accompanying party, on major expeditions by the 'ulama and the karam—a practice continued by the Mughals, in Humâyûn's time the Mughal camp assuming the dimensions of a city under canvas moving from place to place, while by the time of Awrangzîb the march had become very cumbrous, with its heavy artillery, baggage train, the imperial treasure on several hundred camels, the imperial archives, fresh water for the court (Ganges water was favoured) as well as transport and boats—often, in deeper water, to break the force of the current to supply grain as well as transport and boats—often, indeed, also to join the marching army or to supply some member of their family for that purpose. Grain was also brought to the army, on the march or on the battlefield, by corn-merchants (bandjârîs), often nomads, who were encouraged by good prices (Diyâ' al-Din Barani, Ta'rîkh-i Firûz Shâhî, Bibli. Ind., 1892, 304 ff.); it was often provided by the local population on payment—the kodwâl of the imperial camp ensured that grain was available at reasonable rates—or, in the last resort, was obtained by plunder; but since this alienated the local population, who might flee, in which case supplies would of course fail, this was seldom resorted to. In any case, compensation would later be paid for stores taken or for land or crops damaged, the rate being assessed by the local amin (called also munshî, munshîf in the Sûfî period); cf. 'Abbasî Sarâwânî, Tahâ-yi 'Abhar Shâhî, B.M. Or. 164, 73 v.

Although rapidity of movement sometimes permitted little halting—forced marches were not unknown—the army on the march generally encamped at night. The site was when possible carefully chosen, as adequate water, forage and firewood had to be available, and for preference a locality defended by river or hill was selected. The fighting arms were naturally well-nigh always employed, and the local arrangements were in accordance with their order of battle (see below), the sultan's personal party was in the middle of the camp, and behind were the armours, transport and camp-followers. If the camp was in the vicinity of the enemy's forces, and hence in danger of attack by skirmingish parties or patrols, it would be defended by a ditch and parapet, certainly from Khâlidî times (cf. Barani, op. cit., 301); in Tarbh's campaign against Mahmûd Tughluf from the 7th/13th century, see Fakhr al-Din Mubarak, Afd al-muluk wa 'Išâyat al-mamlûk, India Office MS 647, f. 87 v.; in the battle between Humâyûn and Sultan Bahâdur of Gujûrât in 1642/1655 gun-carriages were so used by both sides); and a little later, in the time of Shîr Shâh Sûr, the parapets were formed of sand-bags. The same defences were applied to the last
camping-ground, i.e., the camp at the battlefield, with such additional protection as the exigencies of the campaign seemed to call for. This was certainly continued until late in the Mughal period, for in the campaign of Dāhāndār Shāh's son ʿIzz al-Dīn against Farrukhsīyār in 1722/1722 we read of his throwing up a parapet about 2 m. high inside a wide ditch around his camp, on which he mounted guns and mortars (Khāfi Kāhn, Muntakhab al-lubāb, Bibl. Ind., 1869, ii, 699).

3. The camping-ground. In addition to the requirements of the encamped army (see above) the actual terrain of combat was selected with great care: the presence of a hill or some other natural defence at the rear or on the flanks would relieve the commander from making extensive arrangements for the protection of that quarter. The ideal ground had, in addition to these natural defences, an extensive plain of hard or smooth ground—stony ground was when possible avoided as it damaged the horses' hoofs—free from dust, sand or mire, neither too near nor too remote from habitation, and with an independent water-supply. The battle-field itself might be further defended by entrenchment, abatis or stockade, as in the case of the camp; in later periods such defence might be provided also for individual pieces of artillery.

These requisites seem to have been sought at all periods of the Muslim power in India. Timūr thoughtfully added (Tāṣuk, 191) that the sun should not be in front of the battle-ground, lest the eyes of the troops be dazzled.

4. Order of battle.—The general order of filing an army in the field—vanguard, right wing, left wing, centre and rear—persisted in Muslim India with little variation, but with bewildering changes of terminology, from the days of the Ghaznawids; the composition of the various elements was, however, never firmly established, and at different times places were found for elephants or for artillery in one or more of these traditional elements. The main arm in terms of which all dispositions were conceived was invariably the cavalry.

In advance of the vanguard were the scouts and skirmishers (tašya, muḥaddama-i ʿīn, yashk in Sultanate times under Timūr and Bābur hadval; under the later Mughals muḥaddamat al-dīyaṣṣ, manbala and ṣalāf were used besides tašya), light squadrons trained to reconnoitre the roads and the enemy's positions and to bring back quick information; they were instructed not to move in a body yet to maintain touch with one another, not to engage the enemy unless they were attacked, and to retreat with caution lest their withdrawal be interpreted as flight and thus cause a general stampede (Addā al-mulāḥ, fols. 8a v.-86 v.). They might be divided into left and right sections (Kārīval-i dast-i ṣaf, kārīval-i dast-i ṣaf), as with Timūr.

The vanguard proper was called muḥaddama under the Dīlū sultans, ḫāṣval under Timūr and the Mughals. With Timūr the ḫāṣval had its own van, the ḫāṣval-i ḫāṣval, the main body being the ḫāṣval-i ḥarīval, and from the ḫāṣval-i ḥarīval Timūr added to this a vanguard reserve, ṣarḥ-i ḫāṣval.

The wings (dīnād < Ar. dīnād) were in Sultanate times called māṣara (left) and māṣmāna (right), each divisible into left and right sections; under Timūr the right and left wings were called baranghar and dīnāhar respectively, with the possibility of much subdivision: e.g., for the right wing the ḥarīval-i baranghar (van of the right wing), ṣaṣpāval-i baranghar (left section of the right wing), and ṣaṣpāval-i baranghar (right section of the right wing), and so similarly for the left wing. Bābur's army was disposed in much the same way, the terms yamin-i baranghar and yasār-i baranghar being used for the right and left sides of the right wing (corresponding terms also for the left wing); each wing had in addition a flanking party (tuḥṣuma, tuḥṣuma) of light cavalry to encircle the enemy's flank and take him in the rear; and each wing had its own reserve (taṣaf).

The centre was known in Sultanate times as ḥalb, with its two sections, dast-i ṣaf-i ḥalb and dast-i ṣaf-i ḥalb, to left and right respectively; it was followed by the rearguard, ṣukka or ḥalī. In Timūr's accounts the centre is kūl or gōl, the rearguard ʿṣab; Bābur uses similar terms, though the later Mughals sometimes reverted to the earlier terms, and used in addition tandīval or ṣaṣhūl for the rearguard. The term šalīmāsh is used in the accounts of Akbar's campaigns for units filed between vanguard and centre, but apparently sometimes posted on the flanks of the centre just clear of the rear of the right and left wings, or in front of them; in such cases their function must have been similar to that of the tuḥṣuma.

At all times the centre was where the ruler or his deputy took his station, accompanied by the ʿulāmā', physicians, astrologers, etc., and the personal bodyguard; and this was the usual station for the elephants, certainly at least the ceremonial elephants carrying the standards and the ḍhatra and those carrying bands of musicians. Wives or favourite children not infrequently accompanied the royal commander in the taqva of his elephant, although Awrangzīb deprecated this practice, declaring that unnecessary persons round the commander hindered efficient leadership and organization. The chain of command was passed from the commander to all branches of the army through adjutants (taqūli, yasāwal, šabdwal, ṣabdwal), who were also responsible for ensuring that proper battle array and battle discipline were maintained; the orders might be communicated through flag signals, drum-beat or trumpet-blast, as well as by couriers.

The composition of reserve divisions of the army varied greatly throughout the Muslim period, except perhaps for the rearguard, which at all times comprised the kitchens, armouries, wardrobes, treasury, spare animals, prisoners, wounded, and a fighting contingent for the defence of the centre from any attack from behind. For the rest, at least a few general principles can be enumerated. In Sultanate times there were three ways of drawing up: infantry, cavalry or elephants could form the front line, according to the exigencies of the situation. When the infantry led, four lines of foot-soldiers, their accoutrements somewhat different for each line, were arrayed with wide gaps left in their ranks so that the cavalry behind them could observe the situation, and charge or retreat through them. A mobile cavalry force was kept on the right wing, a company of māṣānīn and ʿarrādas [g.v., see also ʿūlān] were placed on the right of the centre, archers and naphtha-throwers on the left of the centre. These conventional dispositions were in fact no impediment to the battle-situation, as there was also a conventional and disciplined order of the use of these auxiliary forces (see below, Strategy and tactics).

When the cavalry led, their front rank was drawn up similarly to the method described above for the
front line of infantry; the foot-soldiers would then form the second line, and, as was the case also when the infantry led, the elephants would for the most part be stationed in the centre, although selected beasts might be deployed to support either flank.

The third possible order was when the elephants led, followed immediately by the cavalry, as in Ghiyāḥ b. Dīn Tuglugh's battle against the usurper Khusrav Khān in 750/1350 (Amīr Khusrav, Tuglugh-nāma, Hidayādārāb 1352/1935, 92-3); or when they were placed in front of each wing, as in 'Allā' b. Dīn Khuldūb's battle against the Mongols at Kūk in 699/1299. The usual place of the elephants, however, was in the centre protecting the king. They were armoured with iron sheets, and carried ḥa'edās in the form of armoured turrets in which sat archers, naphtha-throwers and operators of projectile engines—an Indian device adopted by the Persians which goes back in time to the 4th or 3rd century B.C. (cf. Sarvā Daman Singh, Ancient Indian warfare, London 1965, 82 ff.) and persisted certainly into Mughal times, cf. Barbosa, Travels, tr. and ed. M. L. Dames, Hakluyt Socy. London 1918, i, 178.

It is less easy to determine the manner of drawing up under the Mughals. Artillery became increasingly important, and often occupied the first line of the vanguard on heavy carts chained or roped together, so that they might serve also as a barrier to a sudden enemy onslaught; between the carts goblins and mantlets formed a protection for the supporting matchlockmen; and in front of them an entrenchment might be formed. Lighter pieces of ordnance followed, swivel-guns (sanbūrak, shurtardzd) on camels, and small cannon (gaḍāndzd, khuda) in the ḥa'edās of elephants. The cavalry followed. In the vanguard there were also mortarmen (di'andzd), grenadiers (ra'andzd) and rocketmen (lubbadandzd). Artillery might be stationed also in the front rank of the two wings and of the centre, with elephants also in front of each body of troops.

The size of the various branches of the field force is also difficult to ascertain in most periods; but in a Mughal account of a force of 40,000 cavalry the vanguard is said to have 8,000, the centre 12,000, the two wings 11,000 between them, the reserves 4,500, and the rearguard 4,500. If, say, 40 elephants were available for a particular campaign, seven were placed in front of the vanguard, fifteen in front of the centre, six in front of each of the two reserves, two in front of each wing, and two in the rearguard.

The field force was under the command of the ruler or his deputy—a prince of the royal blood, or the waṣṭr, or some other favoured noble—who as sar-i lākhor took command of the centre also. In the army of the Dīnī sultānate, the vanguard was commanded by the muḥaddaḍm or sar-i lākhar-i muḥaddaḍm, and the left and right wings by the sar-i faṣq-i maysara and sar-i faṣq-i maymāna respectively. The ruler's special cavalry contingent in the right and left wings of the centre (the khāṣṣa-i khāl) was commanded by the sar-i ḥaḍār, with its two divisions under a sar-i ḥaḍār-i maysara and sar-i ḥaḍār-i maymāna respectively (Yahyā b. Aḥmād, Tuglugh-nāma, 245, 562; Sarvā Daman Singh, Ancient Indian warfare, 62). These officers were mostly in command of the cavalry; the terms for commanders of infantry are uncertain, although the saḥm al-ḥaṣām, nāʿīb saḥm al-ḥaṣām and shīmla al-ḥaṣām all seem to be concerned particularly with infantry (Yahyā b. Aḥmād, ibid.; Baranī, op. cit., 30). The horses were under the supervision of an ḥāṣar bāḥ, the elephants under a ḡaḥnasūr, the camels under a ḡaḥna-yi nafar (Baranī, op. cit., 24), while the armours were in charge of the sar-i saḥbādār. The Mughal terms seem less stereotyped, and the force commanders are often called by their offices in the static army establishment [see ḠAṢHAK] with its decimal organization. In the time of Akbar the mansābādār [q.v.] were deputed to various commands, and in his multiracial army a Rāḍjpūt section would be commanded by a Rāḍjpūt mansābādār, the Afghan section by an Afghan mansābādār, etc. The horses were under the supervision of an āḥlabegī, the artillery and other fire-arms under a fawdūr, and the other arms under a mukaddam. Under the—standards, under a dārōgga-yi burkhāna.

5. Strategy and tactics.—The following account does not include the tactics of siegework, for which see Yisār.

Before a battle took place an appreciation of the situation was made by the ruler, the sar-i lākhor, generals of wide experience, and officials of the dinān-i 'ārād, and the campaign was carefully planned. This war council was usual in the Sultanate period (e.g., Amīr Khusrav, Tuglugh-nāma, 48, 84; Ḥaḍīmī, Futūḥ al-salāfīn, ed. Mahdis Husain, Agra 1938, 254), and was considered equally valuable by Timūr (Tāsūk, 5 ff.) and by the Mughals (e.g., Nīzām al-Dīn Aḥmad, Tābākṣīt, Akbarī, Bibl. Ind., 1935, iii, 25 ff.); Abu 'l-Fadl 'Allāmī, Akbar-nāma, Bibl. Ind., 1886, ii, 48, 482). An impassioned oration by the ruler or commander-in-chief to his subordinates was often a feature of such an andāman, and this was extended into a direct appeal to the soliderly by Shīr Shāh, Akbar and the later Mughals, usually on the eve of battle but on occasions during its course.

A battle was usually begun in the morning and would be suspended in the evening, although the defenders endeavoured to delay engagement as long as possible so that they could retreat under cover of darkness if necessary. The commencement was signalled by drum-beat and by the war-horns blown by tāwāshes, and engagement would begin to the accompaniment of war-cries; secret passwords were also in use to establish identities in the event of hand-to-hand fighting.

In the usual pattern of the assault, in the Sultanate period, battle was first joined by the vanguard (cf. Baranī, op. cit., 260), followed by the movement of the right wing and the centre, then with the left wing and finally the left wing. A force would aim to create panic among its opponents first by an incessant rain of arrows, from cavalry, infantry, and from the ḡu'edās of the elephants; these included poisoned and incendiary arrows. Manjīnās carried in the ḡu'edās were similarly used to discharge large stones and naphtha-containers at the enemy. An early elephant-charge was also employed with the intention of spreading panic, after which the other arms would engage. The chief target was always the enemy centre where their commander would be stationed. In the event of the vanguard or a wing suffering a reverse it would receive reinforcements from reserves or from other wings—but with caution, lest the enemy seeing a wing being reinforced by troops moving from the centre should conclude that the centre also was broken.

Timūr's keen tactical insight is reflected in a long and detailed statement of the principles of field engagement in different situations in the Tāsūk (Bombay ed., 191-207), emphasizing the need for continual appreciations of the situation throughout the course of a battle. He advocates delaying the attack until the enemy has begun the aggression, then—with a force of between 9000 and 12,000—
moving first the vanguard against them, followed by the van of the right wing in support, closely followed by the second corps of the right wing, and then the first corps of the left wing; if the assault from none of these units resulted in victory, further action—presumably by the centre—was to await Timūr's order as commander. A more complicated order of attack is given for field forces of from 12,000 to 40,000.

Timūr's descendants profited from his scientific approach to warfare, and his principles were generally maintained, although of course the pattern of battles changed considerably after the introduction of artillery. Thus at the battle of Khanuwā, near Āgra, in 933/1527, the battle was commenced by the fire of small-calibre matchlocks and culverins from the right wing of Bābūr's army under Muṣṭafā Rūmī, after which the heavy artillery of the centre, under the mīr dādik Ūstad 'Allūd Kūlū, opened fire swiftly at the ironclad elephants of the enemy; when the artillery battle was well underway Bābūr ordered the charge of his flanking parties (tulghuma), the heavy artillery was moved forward, and the cavalry moved around the advanced light artillery (Bābūr-nāma, ed. Beveridge, 568-9). Generally, however, the heavy artillery was unable to move up after the cavalry had advanced beyond the forward entrenchments, and in the event of a retreat the guns could hardly be saved: they had to be spiked and abandoned. In Akbar's reign the guns were given greater mobility by being mounted on individual gun-carriages, instead of being manhandled from carts as before, drawn by bullocks and often pushed into position from behind by elephants. This increased mobility is seen, for example, in the battle of Dharmat, near Ugdāiyan, of 1068/1658 between Awarangzīb and Mahārdājī Djaswant Singh, which began with the usual long-range fire of rockets and cannons; the Rādjiwīlās, in spite of the casualties caused by Awarangzīb's forward guns, wheeled and attacked this artillery and temporarily silenced it, but the gunners managed to recover, and mounted their guns on high ground where it was less prone to attack and could more easily bombard the enemy's centre. The artillery barrage might, however, be withheld, as in the battle of Sāmogāf late the same year when Darā Shikōh was misled by the silence of Awarangzīb's heavy ordnance and launched a premature attack; at last Awarangzīb's heavy guns replied, causing appalling carnage.

The cavalry was still a paramount arm even after the great improvement in small arms and artillery—often handled by European mercenaries—in the 17th century. After the initial softening-up by fire, the cavalry would attack, discharging arrows as they did so, eventually coming to close quarters and fighting with the sword (the principal weapon of the Mughal cavalryman) or lance (the favoured weapon of Rādjiwīlā cavalry). The cavalry appear not to have used firearms from horseback until the Durānīs [g.v.] troops did so in the late 18th/19th century. In the thick of battle Indian horsemen, especially the Rādjiwīlās, would often dismount, bind themselves together by their shirt-tails, and fight to the death with maces, clubs, axes and daggers [for the weapons in use see sīlān, India].

The fiercest fighting took place around the elephant of the rival commander, who considered it dishonourable to retreat if merely wounded by arrows. The death or disappearance of the leader usually meant the loss of the campaign; thus in the battle of Tukārō 3, the battle of Tukarō 3, the Mughal right wing counterattacked strongly, and Darā lost the day after the hawda of his elephant had been struck by a rocket and he mounted a horse instead: his troops saw the empty hawda and believed their commander to have fallen. The importance attached by both sides to the death of the commander is shown earlier in the suppression of Kishlū Khān's revolt by Muḥammad b. Tughlūk in 728/1328: Muḥammad placed one Shaykh ʿImād al-Dīn, who resembled him in appearance, in the centre, and in the event that the Mughals despised this form of warfare and did not employ it. Also despised by the Mughals, and never carried

These tactics were suited in particular to the plains of northern India, and the northern powers—the rulers of the Dīhil sultanate and the imperial Mughals alike—found it difficult in devising others suitable to the swamps of Bengal or the broken ravines of the Deccan. The Marāthās under Śivādē and his successors had brought guerilla warfare to a fine art, and on many occasions used it to harass the armies of the Mughals and of the Deccan sultanates. The qualities of Marāthā warfare were appreciated by Malīk ʿAnbar [q.v.], who organized a corps of guerilla fighters for the Nīpām Shāhī [q.v.] sultanate. It was long before the rulers of Muslim India realized the potentialities of naval warfare, although individual men-of-war were certainly commissioned as escorts for the pilgrim traffic by sea; after the Mughal conquest of Gudjaṟāt and the Konkan coast, however, they came to appreciate the possibilities of sea and land cooperation, as in some battles fought along these coasts, and eventually the hereditary admirals of Dijāndīra [see Ṛabdī] were appointed as admirals of the Mughal fleet. For the navies of Muslim powers in India, and their naval strategy and tactics, see bāriyya, India (in Supplement).

6. Tricks and stratagems.—One device to deceive the enemy as to the strength of the attacking army was the simulated arrival of fresh reinforcements: squadrons of the army would be sent away under cover of night to return in the morning, beating drums and flying colours as though they were a new army approaching; similarly, Muḥammad b. Tughlūk is reported as sending 1000 men to receive a mere force of 100 joining his army. A simulated flight often won an advantage, as in Frīrū Shāh Tughlūk's battle against Shams al-Dīn Iyās Shāh of Bengal in 754/1353 near Lakhnawī: the Bengali forces, thinking Frīrū to be in full retreat, emerged from their stronghold in pursuit, and in consequence suffered a severe reverse (5Aff. p. 9, cit., 114). But the device was a familiar one, and mistakes arose: thus in the battle of Tukārō [g.v.; see also Dāwūd Khān Karabārī] in 982/1574, Dāwūd put to flight Akbar's vanguard, slāmāz, and centre, but did not follow up, thinking their flight to be a ruse; but the Mughal right wing counterattacked strongly, and Dāwūd lost the day. This simulated flight was often the occasion for ambushes (kamin) by a detachment of the army drawn up in a carefully chosen position near the rear-guard; although the kamin might be posted for other purposes, for surprise marauding raids on the enemy or his line of communications, or merely to keep fresh in case of being needed at any point for reinforcement. The Mughal armies, however, despised this form of warfare and did not employ it. Also despised by the Mughals, and never carried
out with much enthusiasm even in Sultanate times, was the night attack (shab-khun), which Abu 'l-Fa<jl prescribed the division of the camp into four groups for the purpose: foot-soldiers, well accoutred, were to guard all entrances, the right wing and centre remained alert in their proper positions with lights extinguished, or lighted in different places to mislead the invaders, while a fourth group left the camp in order to guard and patrol the approaches. The attackers would have blocked the roads to the camp, and might cry out deliberately that such-and-such a general had been captured or killed, in order to spread despondency among those encamped.

Not indeed part of the army in the field, although vital to its commanders, were the spies—from whom their intelligence was valued at all stages of the campaign. See further pýsós.

Bibliography: In addition to the references in the text, see S. Sabahuddin, Conduct of strategy and tactics of war during the Muslim rule in India, in IC, xx (1946), 154-6, 291-6, 345-52; xxi (1947), 7-15, 123-4: extended treatment with constant reference to and quotation of campaigns. Almost all the Indian historical chronicles give descriptions of battles in detail; for these see Bibliographies to articles on the major Indian dynasties, especially Dhlí Sultána and Mugháls, also Storey, 92-157, 433-780. For the Mughal period see especially W. Irvine, The army of the Indian Moguls, London 1903, and references quoted there; also Abdul Aziz, The mansabdari system and the Mughal army, Lahore 1946. Some useful information on ḥarb in the Dhlí Sultanate period, as well as information on the Sultanate army and its administration, in I. H. Qureshi, The administration of the Sultanate of Delhi, Lahore 1942 (Karachi 1958), ch. VII 'The Army'.

HABR b. UMAYYA b. 'ABD SHAMS, the father of Abû Sufyân and father-in-law of Abû Lahb [qa.v.], one of the leading figures of Mecca in his day. He is said to have been the first to use Arabic writing, and one of the first to renounce the wine. A companion of 'Abd al-Mu'talib, he succeeded him as war-leader, and led the clan of 'Abd Shams and, according to some traditions, all Kuraysh in the so-called sacrilegious war [see FIDJAR]. After his death the leadership is said to have passed to the Banî Hâshim. The story of his contest of merits and subsequent quarrel with 'Abd al-Mu'talib is no doubt a projection backwards of the later conflict between the houses of Umayya and Hâshim.

HARB, spear [see 'ANAZA, yâlî, kadîb, bi'lî].

HARBA', a ruined city in 'Irâq, pre-Muslim (and possibly Babylonian) in origin, and situated southwest of Balad on the west bank of the Ṣuṭâṭ which is a former bed of the river Tigris: 34° 3' N., 44° 10' E. It was known to the Sâsânis and their Arab successors in 'Irâq, as also to the Arab geographers—Ya'qûbî, Masûdî, Yûkî—and to Tabârî. The crossing of the Tigris by troops of the Khârîjî leader Shâhîb in 976/65, operating against al-Hâshimî, was near this spot. The city at that period or later was known for its textile and (probably) pottery manufacture. A great irrigation or river-reclamation work was carried out here by the caliph al-Mustanîr in 629/1232, and the existing Dûjlâyî channel, and the great four-arch Harbî brîdge, 24 m. long and 12 m. broad, (from which the place is now called Dîlar Harbî) survive from this enterprise. The 90-metre-long inscription on the bridge gives details of the construction, and heaps praise on its builder. The remains are rendered conspicuous by the cupola of the tomb of a Shâykh (or Sayyid) Sa'd, which is visible from far off.

HARBI [see AMAN, Dâr al-harb, Musta'mîn].

HARBIYYA, (< Ar. harbiyya) the Ottoman and Turkish war college. Ottoman reforms in the 12th/18th century included some innovations in military training, notably the opening of the Hendeşhâne by the Comte de Bounéval in 1734 and the opening of the Mûhendîshkâmîe-i Berîr-i Hûmâyûn in 1791-95. A number of military training centres for Maḥmut II's new army were set up in various parts of Istanbul in the 1830's, including the Alay Mektebi Harbîyesi (Rami, 1832), the Mektebi Harbîyesi (Atâ'î, 1832), the Mektebi Harbîyesi Nâzîrî, at Iâzîm in 1834, the Topkâhpâhî-i 'Amire Mektebi, and the Mektebi Harbîyesi-i Şâhîne (Selimiye barracks, Iâzîm, 1835). In 1846, these were centralized in a single Mektebi Harbîye-i Pangâltî quarter of Istanbul, which drew most of its students from a network of military secondary schools founded during the same period in Istanbul and other towns, mainly in the European parts of the empire. The Harbîye emphasized mathematics and foreign languages (at first French, from the 1880's also German) in addition to technical military subjects. In 1848, the two-year course was supplemented with a second two-year course for general staff officers, extended to three years in 1881. Colmar von der Goltz-Pasha, inspector of imperial military schools from 1884 to 1885, added participation in manoeuvres and later to classroom instruction. In 1909, the Harbîye's teaching staff consisted of nine Germans, eight Turks, and two Armenians. From 1909, staff officers were trained in a separate military staff college (Erkân-ı Harbîye Mektebi) located at Yıldız Palace, to which lieutenants and captains were competitively admitted after a regular tour of troop service. With
the outbreak of the First World War, the staff and students of both schools were transferred to active service, and the schools therefore ceased to function; their reopening after the armistice was impeded by the successive requisitioning by the Allied authorities of suitable buildings. A temporary military school was opened under the aegis of Muştafa Kemâl at Djebedî near Ankara in 1920. In 1923 the Harbiye reopened at Pangaltı, and in 1936 (now renamed Harp Okulu) it was transferred to a new building in the government quarter of Ankara. The staff college reopened as Akademî Erkân [Harp Akademisi] at Bayezîd in 1923, and as Harb Akademisi back at Yıldız in 1927. Between 1847 and 1945, the Harbiye graduated 32,759 lieutenants, the yearly average rising from about 25 to about 100 in the 1870's, and over 500 at the turn of the century, and from 114 under the early Republic to nearly 1,000 in the 1940's. Between 1851 and 1930, a total of 607 of these graduated from the staff course or staff college as staff captains. Even during the Ottoman period most of the officers were Turks—a majority of them from Istanbul and the European provinces; the proportion of Syrians and Iraqis among the staff officers, for example, was about 6% before 1900 and 14% between 1900 and 1914.

The fou ding of the Harbiye was one of the first durable Ottoman measures of Westernizing reform, preceded by that of the Mûkiye [q.v.] by twenty-five years, and almost from the start, its students and graduates have been in the forefront of political change. The Ittihat ve Terakki [q.v.] Djemîyêeti was secretly founded in 1889 at the separate military medical college, but in 1897 a special court martial held a mass trial of Harbiye students for subversive activities, of whom 78 were deported to Libya. In 1920, 250 Harbiye students made their way from Salonica on 17 April 1909, under the command of Mahmûd Shewket Pasha, but it is important because of the use of the word hadd, “limit.” The LA contains a long article on harf (x, 385/ix, 41a). It retains as the primary meaning of harf: al-taraf wa-l-djinîb, “the extremity, the side”, whence it derives the name harf for the letters of the alphabet. Ibn Hîghâm al-Anşârî, in the Sharh of his Shûdhâr el-dhahab (Cairo 1951/1371) indicates only (p. 14, l. 13): taraf al-djinîb. With regard to the ancient Semitic languages, Arabic harf “extremity, side” is related to Syriac harpû and herpû “edge, point” (Payne Smith, Thesaurus syriacus, s.v.). In Hebrew, the relation is more remote: herpû “invective, reviling”, which can be explained by “stinging, sharp words” (see Koehler-Baumgartner, Lexicon, under ḫ r f.).

The Kitâb of Sîbawayh begins with the broad tripartite division: “isms, fîl, harf, the last meaning what is neither ism nor fîl.” This division came to the Arabs from Aristotelian logic (see ṣīl’l). Fr. Pratorius (in ZDMG, lxiii (1909), 504-5) has related harf to the term hûros which is used in Aristotelian logic. M. Bravmann (Materialien, s-g) accepted this and rejected the criticism of J. Weiss (in ZDMG, lxiv (1910), 349-82). Hûros, too, signified “limit”, thence, among its derived meanings, “determination of the meaning of a word”, whence, “definition”. In Arabic, hadd, “limit, definition”, has followed the same path; as for harf, it has three derived meanings: (1) “word”, (2) “letter of the alphabet”, (3) the designation of the third term in the broad tripartite division.

It is difficult fully to clear up the processes by which these meanings are derived; for if, on the one hand, there was Greek influence on the development of meanings of an Arabic term (harf), the primary meaning of which corresponded with that of the Greek term (hûros), the Arab world, on the other hand, offered for the possibilities of semantic derivation a completely different milieu of thought. The following is a possible explanation: from harf, “extremity, side” (LA), “limit” (Ibn Djinnî), might have derived the meaning of “word” (recorded in Lane’s Lexicon, s.v.). Then, in a very simple analysis of the phonic components of the word, it was enough for the first specialists on the Arabic language to pronounce a word slowly in order to divide it into what we call syllables and where they found “limits”, i.e., hûros. The short vowel gave them no difficulty, since for them it had no autonomy but was a sort of accident of the stable element [see HAKA WA-SUKÔN]. The harf of the hûros al-hîdaj was taking shape. Finally, in that which was neither ism nor fîl, it was easy to notice that many of these units, and some of the most common of them, had only one harf: one has only to think of ṣâl the very common conjunction, fa-, bi- “in”, li- (conj. and prep.), the interrogative
The Dic. of Tech. Terms (i, 320-4) mentions 18 separate meanings of the term *hurf*. Two (2 and 3) concern the usage of the *ahl al-dirfr* (see *DzAFr*).

Three refer to the script: nos. 1, 4, 5; no. 1 is useful to recall: *mušdjama* — *muhlama* [see *huruf al-

The others (apart from the last one) repeat phonetic divisions: they are to be found, as far as they are worth mentioning (except no. 6), under *huruf al-

The last one refers to *hurf* — *asaṣyya* — *saṣa̱n* [see *huruf*]. No. 6: *muṣnas* — *sāmati*; comprises two groups: *al-madd wa l-a'in*, and the other *huruf*, *mutharraka* or *sahīn* respectively. This division is useful, for it can provide the means of expressing 'vowel' and 'consonant' in Arabic. The first term is already ancient: in fact al-muṣawwaḍīl occurs in the *Fihrist* of Ibn al-

Naṣirī (compiled in 377/987, 16, line 12, to designate the vowels of the Arabic alphabet. After these 18 divi-

The Arab grammarians tried to find a precise definition of *hurf*, the third term in the division given in the *Kust of Sībawayhi, and in its comprehen-

This presentation has the advantage of following a natural order in the analysis of the primary linguistic datum: the sentence. But it reduces heavily the extent of Greek influence: it takes it back to the suggestion of a point of departure, the choice of a word (huruf) meaning, like the Greek *hóros*, "limit".

The two hurufs: min and furū. The grammarians tried to find a precise definition of *huruf*, the third term in the division given in the *Kust of Sībawayhi, and in its comprehen-

HARFÚSH (A.; sometimes also Kهاfosh), "va-gabond, ne'er-do-well", often used in the sense of "tuffians, rascals, scamps"; plural haráfush, haráfusha.

From the 7th/i3th to the 10th/i6th century the term appears in chronicles and other works dealing with the Mamluk domains of Egypt and Syria. The last author to make relatively frequent use of the term seems to be the chronicler Ibn Iyás (d. 930/1524), who bears the title sultan al-hardfish.

After the transfer of the Protectorate capital from Gabond, ne'er-do-well", often, used in the sense of seer do. Albutuf fi ta*rikh bant al-Ma'luf, Baabda 1907-8, 155, 159, 213, 217, 228, 231; A. N. (K. S. Salibi)

The haráfush represent the lowest element in the strata of Mamlûk society, forming groups in the urban centres of Cairo and Damascus and, at least temporarily, also in Homs, Hama, and Aleppo. Made up of professional beggars, able-bodied as well as infirm, street-entertainers, and the unemployed, the haráfush seem to have developed a guild-like organization headed by a šaykh who bore the title sultan al-hardfish. Often attacked by the orthodox writers for their barbarous speech and dress as well as for their heretical religious tendencies, the haráfush were despised and feared group given to robbing and plundering on occasion. To pacify and control this unruly but organized element, the sultan and the chief amirs gave them alms and, in times of famine, numbers of haráfush were assigned to the more affluent amirs and to wealthy merchants and other non-governmental figures, who then became responsible for feeding them.

The development of the organization of the group (called a ḍā'īya by some contemporary writers) is seen in the rise of the office of the sultan al-hardfish, which first appears in the late 8th/i4th century and persists until the end of the Mamlûk rule. The "sultan", who was the head of the guild-like organization, was responsible to the state for the discipline of his followers. Ibn Iyás (Die Chronik des Ibn Iyás, Bibliotheca Islamica, Band 5, 1923) mentions the sultan al-hardfish along with the heads of artisan guilds who accompanied the last Mamlûk sultan in the ceremonial procession on his departure for Syria to fight the Ottoman Turks.

During the Ottoman period the term disappears and is replaced by ḍūṣaydi as a general term for "vagabond, beggar". However, in a notice regarding the head of the artisan guilds in Damascus, the šaykh al-masha'ikha, in the 11th/i7th century, we are told that he was "formerly known as sultan al-hardfish, then he was called, out of respect, šaykh al-masha'ikha" (al-Muḥibbi, Khulqat al-athar, i, 144). From the 10th/i6th century until it fell into disuse at the end of the 19th century, the title of šaykh al-masha'ikha was handed down in the Damascene family of the Bani 'Aǧlān.

The connexion between the lowly haráfush or the one hand the respectable guild organizations on the other is not clear. Nor is the connexion with Sufism—its folk manifestations—easily explicable. The clearest indication of a relationship of the latter sort is in the figure of a popular saint known as 'Ubayd al-Harraf or al-Hurayfîsh (d. 801/1399) whose work of pious devotions al-Raʿi al-fā'il is still printed, most recently in 1949 (cf. Brockelmann, S., 119). In a verse cited by al-Sakhawî (al-Tîr al-maslûb, 349), 'Ubayd wrote that the haráfush, although poor, subsisting on a morsel and in rags, having no fixed abode, will be forgiven their sins because they are neither liars nor hypocrites.

Undoubtedly the haráfush represent one of those urban groups in the Muslim world that appeared periodically under different names, made up of impoverished, uprooted former artisans and peasants as well as professional beggars, who robbed and looted as well as begged for a livelihood, and who, in different periods, managed to live as elements in the government—at times with the sultan, at others with the amirs. They should be compared—for differences as well as similarities—with the earlier 'ayyûrûn [q.v.] and aḥdhîq [q.v.], as well as with the later zwar.

A single literary reference to this group occurs in the Alif layla in the story of "The Harfush and the Cook" (cf. Habicht, Tausend und eine Nacht, iv, 138-40, translated in Payne, Tales from the Arabic, i, 9; R. Burton, A Thousand and One Nights' entertainment, Suppl. i, 4).

Bibliography: For a discussion of the word itself cf. TA, iv, 297 (hr n f g) and ibid., 305 (hr f g); Dozy, i, 374; Quatremère, Histoire des Sultans Mamlouks, i, b, 195-7. Additional material, both on the term and on the history of the group will be found in the article by W. M. Brinner, The significance of the Harfush and their "Sultan", in JESHO, vi (1965), 190-215. A study by Ira M. Lapidus, The Muslim city in Mamlûk times (in the press), adds further citations and discussion of the haráfush. (W. M. Brinner)

HARGEISA, administrative headquarters and capital of the former British Somaliland Protectorate, now of the northern region of the Somali Republic, lying in 9°35' N. lat. and 44°04' E. long. With a population of some 35,000 Somali and lying in territory normally grazed by the Habar Awal clan, the town is of recent formation. It has developed from the cultivating tarîba community (of the Ka-Diriya) established by Shaykh Madjar (Habar Awal, Hüseyin Abokor, Rêh Hoğh, 1242-1336/1825-1918) in the second half of the nineteenth century. Under the Shaykh, who enjoyed a considerable reputation for piety and for his miraculous works, the lower classes were uplifted and prospered, attracting members of many different Somali clans. The main crop was sorghum, which straddled the caravan routes from Harar and the Ogaden was well-placed to be an important trading centre. Swayne, who visited the tarîba at the end of the nineteenth century, describes it as comprising a few hundred mud and wattle huts surrounded by a high mat fence enclosing a square mile or two of cultivated fields and subject to attack from surrounding Somali and Ethiopian raiders. During their rule on the coast, the Egyptians gave the Shaykh arms; and under the British he at first received a stipend. Later, after his death, and the development of Hargeisa as an administrative centre, especially when the town became the capital of the Protectorate, the tarîba declined and is no longer the tightly-knit administrative unit which it was formerly. Shaykh Madjar is buried beside the stone house given him by Lord Delamere in recognition of the Shaykh's kindness on a hunting expedition and his shrine is frequently visited, especially by women in search of blessing. The Shaykh's staunch support of British interests was recognized by the appointment of the local Kàgl from amongst his descendants.

After the transfer of the Protectorate capital from
Berbera, Hargeisa began to assume its present character. As befits the main centre of trade in the interior of northern Somaliland it now boasts a modern hospital, some cinemas, a power station and broadcasting service, an aerodrome and most of the appurtenances of modern government. A local government council was opened in 1953, and a legislative council in 1957. The latter merged with the Somali legislative assembly at Magadhe during the Protecorate and U.N. Trust Territory of Somalia joined to form the independent Somali Republic on 1 July 1960.

**HARGHA,** the Arabic form of the Berber name of the tribe to which Ibn Tumart [q.v.] belonged, the Arghen (the prosthetic *ha* is general in Arabic transcriptions of the names of Berber tribes, and the suffix a[<a] in the plural has been substituted for the -m of the Berber plural). The original home of this tribe is not known with any certainty. H. Basset and H. Terrasse (*Sanctuaires et forteresses almohades*, in *Hespéris*, 1944, 19) identify the Hargha with the Gheghaya (Arghen, who are also referred to by historians as belonging to the confederation of the Hargha. But E. Lévi-Provençal (*Doc. indé. d'histoire almohade*, Paris 1928, 55, n. 2) and R. Montagne (*Les Berbères et le Mahkhem*, 64) consider on the contrary that the latter were natives of the Anti-Atlas, southeast of Taroudant, where some of the Arghen still exist, surrounded by other tribes bearing the names of particular elements of the confederation of the Hargha, as given by al-Baydhaq. A little above Tinmel there still exists a village with the name Arghan, whose inhabitants maintain that their ancestors came from Sūs (E. Doutté, *En tribu*, 120-1). It is therefore possible that one fraction of the Arghen, whose original home was in the Anti-Atlas, may have settled on the northern slopes of the Great Atlas. E. Lévi-Provençal (*Six fragments indéits*, 8) records among the Hargha a ribāḥ (rebba) which Ibn Tumart had built, and gives its name as Iglīz (Iglīz in al-Baydhaq); now, among the Gheghaya (see E. Laoust, *Contribution à une étude de la toponymie du Haut Atlas, in REI*, 1944, 117) there still exists a village named Iglīz which must be the same one; at the foot of the mountain a number of grottoes had been excavated, and one of them which the Almohads had venerated was called in Arabic al-drūr al-mukaddas because Ibn Tumart was accustomed to retreat there to pray and meditate. (It is perhaps not by chance that ‘Abd al-Mu’mīn gave the name Iglīz to the obdiscal town which he founded to the north of Almoravid Marrākush, the modern Gilīz).

Before the appearance of Ibn Tumart, the Hargha were a branch of the main confederation of the Maḥrūdī [q.v.], from among whom seven fractions in all had achieved the mahkham iratably after his return to the Atlas—the Hargha, Hīntātā, Tinnel[el], Gedniwa, Genfis, Urīka and Hazraga (Ibn Khaldūn, *Ibar*, Bulāk, vi, 225; H. Basset and H. Terrasse, *op. cit.*, 16-9).

After the recognition of Ibn Tumart by the Hargha, the Almoravids tried to seize the Mahdī while he was in Iglīz, by taking the tribe from the rear, but their attempt failed (518/1122): after a second attempt by the Almoravids against Iglīz (517/1123), Ibn Tumart finally abandoned his ribāḥ in order to settle at Tinnel[el] [q.v.] which he made the capital and bastion of his movement (518/1124). Thenceforward, Iglīz was no more than a sanctuary and place of pilgrimage which the Almohad caliphs visited from time to time, until the day when the Mahdī was officially repudiated by Idrīs al-Maghārin, the ninth Almohad caliph (620/1220-629/1230).

The Hargha comprised one of the least powerful fractions, but Ibn Tumart had endeavoured to bring them into prominence. On the one hand he had incorporated with them the members of the tribes who came from the Anti-Atlas (see R. Montagne, *op. cit.*, 64), on the other hand he had attached several of his principal companions, especially ‘Abd al-Mu’mīn [q.v.], Abū ‘Abd Allāh b. Muṣiṣūn al-Baṣhrī and others to them; but the Hargha, fearing to be dispossessed of their rights as relatives and heirs of Ibn Tumart, were utterly opposed to all such adoptions, and from the times of the Mahdī’s death tried to reject them. The members of his family, led by his two brothers, did not indeed approve of the nomination of ‘Abd al-Mu’mīn as caliph; on being condemned to live under surveillance in Marrākush they escaped and tried to rebel, but failed and were executed. In this way the part played by the Hargha in the history of the Almohads came to an end, and they sank back into obscurity.

**HARI RŪD,** the river of Harāt, which flows for almost 350 miles from the Dai Zangī mountains, running west of the Kūh-i-Babā range in central Afghanistan to the oasis of Marw. The river flows south of Harāt, and some thirty miles west of the city it changes direction and flows north. For about sixty miles it forms the boundary between Iran and Afghanistan before flowing into the Soviet Union. It irrigates the Taghād oasis and then is lost in the sands. In the early spring the river is swift and deep at Harāt but in the late autumn it is low and passable.

**HARIB,** a district of South Arabia on the wādī of the same name and lying immediately to the west of Baybānī [q.v.]. The Wādī Harib rises under the name of Wādī ‘Ayn in Bīlād Al-Djārābī in the highlands of Murād [q.v.] and runs northeastwards for about 30 miles through rugged and barren hills to disappear into the desert of Ramlat Sabatayn. About halfway along its course it is joined from the east by the Wādī Mablakah and widens into a broad silt plain. Some ten miles further north it unites
with the Wadi Mukbal which runs almost parallel to it a short distance to the west. Finally, just before its entry into the desert, it receives, also from the west, the Wadi Ablah, which is separated from the main area of Harib by the Karan mountains and an isolated spur thereof, Djabal Hasafs. At present the boundary between the Yemen and Bayhan traverses Harib so that the upper reaches of Wadi 'Ayn and the plain at its confluence with Wadi Mablaqah belong to Bayhan, while Wadi Harib proper lies in the Yemen, coming under the jurisdiction of the Governor of Marib [q.v.]. It is interesting to note in this context that at some time in antiquity Harib may have constituted the westernmost region of Kataban [q.v.], for across the gap between Djabal Karan and Djabal Hasafs there is found an ancient stone wall, al-Kayd, whose defence-works are directed westwards. Just west of Harib lie the lands of Muradh which may have been independent or belonged to Saba' [q.v.] before being incorporated into Kataban. In the 6th century A.D. Harib became part of Hadramawt [q.v.].

At present the chief town of the district is Darb 'AI 'All which is situated within the Yemen between Wadi Mukbal and Wadi Harib. Landberg described it as inhabited by about 250 asgrim, drawn from four families, who own most of the land of Harib. The most important was the AI 'Ali b. Talib, the family of the Amir of Harib. There were also resident there several families of merchants and artisans (harrun, pl. hurun), each with its own hereditary profession. About five miles further north, at the confluence of the two wadin, lies Darb Bū Tuḥayt, which belongs to the AI Abū Tuḥayf who claim descent from the Hālij [q.v.]. The Banū 'Abd (of Muradh) occupy parts of the wadin, including the town of Darb 'AI 'Amr in Wadi 'Ayn and the hills of Djabal Karan. On the latter is the tomb of a saint, Abū 'Amir Uways b. al-Murādī al-Karani, a contemporary of the Prophet. The village of al-Saḥa, near Darb 'AI 'Amr, also belongs to a clan of Banū 'Abd, the AI Ghuraym, who are noted locksmiths. Some members of this clan emigrated to San'a' [q.v.] and practised their profession there. Hamdānī also gives the inhabitants of Harib as the Murādī tribes of Rabī, Khalaf and 'Udhra. The AI Rabī, who are masakhīn, still lead a nomadic life in Harib, Bayhan, and also in al-Djabal al-Qānī. It is interesting to note in this area of northern Arabia, many of the towns are occupied by ra'iyya or dependent classes, while their patrons live outside the towns in tents.

The identification of Harib with Pliny's Caripeta can no longer be regarded as sound. Nevertheless the area is covered with evidence of ancient occupation in the form of ruined towns and the remains of irrigational systems. A particularly important site is found 3 km. south of Harib, just across the frontier from Darb 'AI 'All and north of the isolated Djabal Kār b. Ubayd. It was briefly visited by an American archaeological mission in 1951, though not excavated, and is reported as having several buildings still largely intact and many inscriptions. According to tradition it was named after one al-Zarir b. Sā'āq, who once ruled there, and inhabited by smiths who were ra'iyya of the Hāmirītes. There may be some truth in this tradition since we have abundant evidence of the existence of an iron-smelting industry in the general area. Landberg also mentions a site called Timnā, with associated ruins, in the plain of al-Djurra on Wadi Ablah, which he supposed to have been the ancient capital of Kataban, but it has now been demonstrated that the latter actually lies elsewhere [see BAYHAN]. There are also reports of a ruin field called Ḥadjar Harīm north of Darb Bū Tuḥayf but little information is available on it.

Although the main caravan route from Bayhan to Marib by-passes Harib to the north, there is an alternative road from Wadi Bayhan which takes advantage of an impressive stepped pass leading through the mountains into Wadi Mablaqah. Traditionally cut by a certain Bārgāh, it is called MBLQT in a Katabanian inscription at the pass, which records that it was built by a mukarrab of Kataban, Yada' al-Dibuyb b. Shār, who probably took over the site the road runs past Darb 'AI 'All and through the wall, al-Kayd, whereafter there is a choice of three mountain roads into the Wadi al-Djūba.

Several other places with the name of Harib or BRB are known from Hamdānī and the inscriptions.

HARIM — HARIR 209

(S. Owy)

HARIM (also *haramgah, sandlama*, etc.), a term applied to those parts of a house to which access is forbidden, and hence more particularly to the women's quarters. In ancient Arabia women seem to have enjoyed some measure of personal freedom, though the use of the veil was not unknown, especially in towns. It became commoner after the advent of Islam, with the adoption, on the one hand of a stricter code of sexual morality, on the other of a more urban way of life. The provisions of the Korān on the veiling and seclusion of women (XXXIII, 53-9) were elaborated and made severer by jurists and commentators, and used to justify a system that owed more to the earlier city civilizations of the Middle East than to Islam. In the great houses, in the cities of the Islamic Empire, the free Arab lady, so familiar to us from early poetry disappears. While the lower and middle classes seem generally to have practiced a form of monogamy, the wealthier classes maintained elaborate gynaecae, in which, besides their legal quota of wives, there were establishments of concubines, attendants, eunuchs and guards. So normal did this become in medieval Muslim society that the Muslim traveler is shocked when they visit other societies in which women enjoy greater social freedom. The system survived into comparatively modern times, and has not entirely died out even at the present day. In its Turkish form, *harem*, the word has passed into many European languages.

On the psychology of harems we refer, see E. F. Gautier, *Mœurs et coutumes des Musulmans*, Paris 1934, 56 ff.

See further *łabd* (on slavery); *żains* (on sexual life); *żilas* (on the veil); *żlaim, żlaiś* (on eunuchs); *żayná* (on slave singing-girls); *żmar' (on women in general); *żikār* (on marriage); *żarā' (on the palace, including the imperial harem).

(En.)

HARIR, silk. The etymology of the word is obscure; its synonyms *ibrism* and *bazz*, as well as *dıbāj*, which more particularly denotes silk brocade, are Persian loanwords; *bazz*, properly speaking a mixture of silk and wool, but sometimes also used for silk, is etymologically isolated in Arabic, and perhaps connected with *bazz*. *Harir* occurs in the Korān, sūras XXII, 23 = XXXV, 33, and LXXVI, 12, where it is said that the raiment of the people of Paradise will be silk. A group of traditions which, together with others, express an ascetic tendency in early Islam, forbids the use of silk to men but allows it to women. The prohibition is often expressed in the form that he who wears silk in this world, shall not wear it in the next. (Another version forbids it to men only if it is worn for ostentation. On the other hand, the wearing of silk is occasionally not recommended even for women.) The use of silk in garments by men is allowed only as appliqué work, as a border not more than two fingers broad, etc. When the Prophet was presented with a silken robe, he wore it once during the ritual prayer, but then expressed strong repugnance for it. The traditions declare that the use of silk for upholstery is like its use for clothing, and they explicitly forbid its use in the harem. On the other hand, the Prophet allowed that a red silk robe be used even in the harem, however, may use silk garments, and the Prophet allowed their use to 'Abd al-Raḥmān b. Āwfi and al-Zubayr b. al-'Awwām, who complained of lice. A contrary tendency is attested by traditions according to which some ancient authorities used to wear silk, and by counter-traditions which threaten those who regard silk and *bazz* as allowed, with punishment. On the details of the traditions, see A. J. Wensinck, *Handbook*, s. v. clothes; the same, *Concordance*, s. v. *harir*. As a result of these traditions, all schools of religious law forbid to men the wearing of garments made completely of silk next to the skin, and they differ on many questions of detail which do not fall exactly under this close definition. The Şafi'is and the Hanbalis, in addition, forbid sitting or leaning on silks (as a.b. and the hanbalis, etc.), or using it as hangings on walls, except for the Ka'ba, but they allow the wearing of garments made partly of silk if its quantity is not greater than that of the other material. The Mālikis forbid the use of silk garments even to sufferers from itch, lice, etc.; they also forbid sitting on silk but allow its use for hangings. The Ḥanafis permit lying or sleeping on silk, also the use of silk cushions and of silk prayer mats; according to Abū ʿAbdārān (against the muqāddar
of the school) it is permitted to wear outer garments of silk provided they do not touch the body. All these prohibitions apply to men only. If a man performs the ritual prayer in a garment of silk, he commits a sin but his prayer does not become invalid. Different from the question of wearing silk garments is the question of wearing silk material in order to fulfil the minimum requirement of covering one's "nakedness" (*awra), particularly during the ritual prayer; in this last case, if one must choose between silk and material which has become ritually unclean, the use of silk is generally preferred. The unlawful use of silk at a wedding-dinner party (wulima) cancels the religious obligation of accepting a personal invitation to it [see *wulima]. The works of *fikح treat of the rules regarding the use of silk either in a special section on clothing or in the chapters on ritual prayer and/or on the wulima; the doctrines of the four sunni schools of religious law are conveniently set out in 'Abd al-Rahān al-Dżaffār, K. al-śul 'alā 'l-mahbāh al-arba'a, ii (bism al-muˈsamā'īt), 2nd ed., Cairo 1933, 12 ff. See also Juynboll, Handleiding 4, 157; Guidi and Sanitlana, Sommario del diritto malechita, i, 57 ff., ii, 63; A. Querry, Droit musulman, i, 60 f. (for the Şahīfs, the Mālikīs, and the "Twelver" Šīfs respectively).

Circumstances beyond our control have obliged us to refer the reader to the Supplement for articles on the silk trade and industry in mediaeval Islam and post-Mongol Persia. What follows here is divided into four sections:

i. A brief general survey of the silk industry and trade, especially with Europe, from the point of view of the European economic historian;

ii. A detailed examination of the Ottoman silk industry;

iii. A survey of the silk industry in the Arab lands;

iv. A contribution by an art historian, reviewing the products of the Islamic silk industry particularly as they are represented in the museum collections of the Western world.

For some information on silk cultivation and the mediaeval silk trade, see *fīlāra, tīdāra, tītā. (Ed.)

i. — SURVEY OF THE TRADE AND INDUSTRY

In the mediaeval and early modern period silk ranked among the three or four most important commodities of intercontinental trade. At least until the beginning of the 15th century silk and silk textiles were the most important exports from Muslim countries. Within this long period the most striking fact is the gradual transfer of silk culture from east to west. While Muslim demand and technique remained static in the centuries following the Mongol invasions, silk weaving and the breeding of silkworms were steadily spreading in Europe.

The growth of the European silk industry influenced Muslim production in two ways, negatively by increasing the competition in the highly specialized field of silk weaving, positively by raising the demand for raw silk. The mechanization of European sericulture and the increase in the 15th century was the final blow to the traditional Muslim crafts; it is clear, however, that this was not a completely new point of departure, but the result of a development that had begun several centuries before.

It is at present impossible to point to any decisive moment in this long development. In the 7th/13th century the near monopoly of the Muslim weavers on the European market had first been broken by the weavers of Lucca. In the 9th/15th century Italian silk fabrics were the chief export article to the Levant, and at the time of the Portuguese discoveries they had reached the Central Asian and Indian markets. In the factories of the Levant they were met by a counter-current of Muslim silk fabrics on their way to Europe, but this counter-current grew steadily weaker. What once had constituted the bulk of Muslim exports to Europe had, by the middle of the 11th/17th century, become limited to a few specialized qualities. It was not a question of quantity and price only. As early as 979/1571 a Venetian traveller in Persia noted that the finish of the Persian smooth stuffs and damask was inferior to the Italian. Around 1753/1740 an English merchant (J. Hanway) stated that Persia in good years would be a promising market for "rich silks, gold and silver lace, velvets and other rich manufactures". Even at that time it might seem like carrying coals to Newcastle, but a century later the German expert, Blau, found that the Persian weavers were working for the home market only, their products being too coarse to be exported. In 1889 some 15% of the total imports into Persia were English, Austrian, French and Russian silk fabrics (Curzon).

The towns which were admired by the mediaeval and early modern travellers for their flourishing silk industry, Yazd, Kāshān, Iṣfahān, Damascus and others, maintained their traditional crafts into the present century. Without statistical data it is impossible to decide when they passed from stagnation to decline. It is interesting to note, however, that the movement towards the west took place within Islam as well as from Islam to Europe. In Bursa, conveniently situated both in relation to the caravan routes from Persia and to the important market constituted by the Ottoman court, silk weaving expanded spectacularly in the 9th/15th century and maintained its prosperity at least to the end of the 12th/18th century. The prosperity of the silk industry in Izmir and on Chios belongs to an even later date and reached its highest level at the end of the 12th/18th century, when the fabrics of Izmir competed successfully with local products in the market of Bursa. In this case, at least, decline did not begin until before the industrialization of European production.

These developments in the weaving industry necessarily influenced the localization of sericulture. Until ca. 900/1500 the Caspian provinces, Māzandārān, Gīlān, and Śīrwān, were by far the most important districts from the point of view of international trade. The production of other regions, such as Syria or Kūhrāsān, was mostly manufactured locally. The earliest reasonably reliable estimates of the production of raw silk in Persia date from the first half of the 11th/17th century, when the firm rule and active commercial policy of 'Abbās I [96] had brought the sericulture of the Caspian provinces to a peak of prosperity. The often quoted estimate of Olearius from 1047/1637, who put the average "harvest" at 20,000 bales (roughly 2,000 tons), was, however, considerably higher than the contemporary estimates of Dutch and English merchants, who presumably had a better knowledge of local conditions. Though the estimates which were sent to the Dutch and English East India Companies vary, 1,000 tons would probably be a realistic figure for the annual production of raw silk in Persia at the death of 'Abbās I. Two-thirds of the annual production was exported to Europe, and the most important district
was Gflan, which alone accounted for half the total production.

The 12th/13th century was to all appearances a prosperous one for the Persian producers and for their middlemen, the Armenian merchants. This prosperity came to a sudden end with the political break-down of the early 12th/18th century. Around 1153/1740, according to Hanway, the production of Gflan had fallen to ca. 160 tons annually, while the breeding of silkworms had come to a complete stop in Shıhwan.

Prosperity in the second half of the 12th/18th century brought renewed prosperity to Gflan, which from this time on completely overshadowed the other Persian silk-producing regions. The highest production figures in the whole history of Gflan were probably reached shortly after the middle of the 19th century, when the mechanization of the European silk industry and better means of access to the Caspian provinces brought the demand to unprecedented heights. As late as 1850 Blau estimated the annual production of Gflan at 350-420 tons; in 1864 it was more than 1,000 tons. This was the peak, however. The same year disease (pebrine) appeared among the silkworms, probably (as in France) the result of unlimited expansion without change of technique.

Persian sericulture never recovered fully from this blow. At the very moment when heavy investments were necessary to exterminate the pebrine and to mechanize silk-winding, prices of raw silk took a downward turn, partly as a result of the long depression in Europe, partly because of Japanese competition. After 1890 conditions improved to some extent, but the highest production figure reached before 1914 was ca. 550 tons.

Syrian silk appears among the European imports from Syria in the middle ages, but primarily it was manufactured locally, particularly in Damascus. It was probably during the wars between the Ottoman Empire and Persia in the late 10th/16th and early 11th/17th centuries that it first came into prominence as a substitute for the Persian raw silk. The French specialized in the silk of Lebanon, while the other nations seem to have preferred the qualities from northern Syria.

With the advent of some expansion, mostly in Lebanon, the Syrian production of raw silk was much smaller than the production of Persia until the last decades of the 19th century. The earliest reliable statistics show an annual average of ca. 110 tons between 1861 and 1870. The Syrian silkworms were hit by disease like those of Persia, but the consequences were less serious. The more intimate connections with Europe and a considerable import of French capital facilitated a rapid change of technique. The pebrine was exterminated within a few years and the mechanization of silk-winding got under way. Before the first world war the production of Syria and Lebanon equalled that of Persia.

The prosperity of the sericulture of western Anatolia dates from the beginning of the 11th/17th century. Before the 19th century it produced mainly for the silkweavers of Izmir, Chios and Bursa, but as early as 1837 steam-power was used in the winding of silk in Bursa. This is probably the main reason why this region was able to expand far beyond the older producers of Persia and Syria in the late 13th/19th century. On the eve of the first world war production had reached 1000 tons annually [see Bursa].

With a total of a little more than 2000 tons annually around 1914 the Muslim countries accounted for less than 10% of the world production of raw silk. The war caused a serious decline and recovery was delayed by the low prices of raw silk during the depression and later by the introduction of artificial fibres. At present the economic importance of sericulture in the Muslim countries is negligible. Including exported fresh cocoons the production amounted in 1962 to ca. 320 tons of raw silk, or little more than 1% of the world production.

—THE OTTOMAN EMPIRE

The word for "silk" in Ottoman Turkish is ipeh, in Kipchak Turkish işe; in Eastern Turkish the word lorku, lorgu means silk or silk stuff; the word aşığı, found in the inscription of Kültegin (5/5) means rich silk stuff, valuable goods (see Mahmûd Kâshghalî, *Dvdn Lughât el-Turk*, s.v.); in old Ottoman the expression a hundâş is occasionally found for silk stuff.

Aydın, so that silk for local needs was apparently produced here. A document of the reign of Mehmed II shows that silk was produced in the Tokat-Âmesa region in the 16th/17th century (see R. Anhegger and H. Inalcik, Kânûnîname-i sûltânî, Ankara 1956, p. 41, no. 31). The 9th/11th century registers of the kâbûd of Bursa contain no indication that silk was then made there or that Anatolian silk was used. The silk production and export of the Morea, on the other hand, had been famous since Byzantine times (see F. Thiriet, Régies des délibérations du Sénat de Venise concernant le commerce avec l’Orient, ii, Paris 1955, docs. 671, 672, 1971, 2022; iii, Paris 1956, docs. 2448, 2508). Although the silk of the Morea was not so esteemed as that of Persia, a kâbûd’s record shows that it was coming to Bursa in 906/1500 (Bursa Seire Tarihi, no. 18/17). Silk produced in Albania was exported to Bursa and to Europe in the 11th/12th century (see H. Inalcik, Sâret-i defteri Sancak-i Arwani, Ankara 1954, 126; F. Dalsar, Bursa’dâ sęhekili, Istanbul 1960, 207; and, in a defter-i defteri of the reign of Selim I, Başvekâlet Arşivi, tapu no. 80, Defter-i resmi-i hari-i wilâyet-i Mora).

All the same, in both the Selçuk and the Ottoman periods, the raw material for international trade and for local silk manufacture in Anatolia came mainly from the districts south of the Caspian Sea. In the time of the İkhâns, the Persian silk caravans followed the Şükâr-i Şahrb, which led via Sultâniyye, Erzurum, Erzindjan and Sivas to Konya; two minor routes branched off at Sivas for Constantinople (Z. V. Togan, in İkt. Fak. Mecm., xv (1954), 45). With the establishment of the Ottoman state, some of these caravans began to come by these routes to Bursa, instead of continuing to Constantinople or Foça; yet even in the 8th/14th century a shorter route, Erzurum—Erzindjan—Tokat—Amasya—Bursa, had surpassed them in importance, and the old sea-route from Trebizond to Constantinople, formerly very active, thenceforward declined. At Bursa, now a Muslim city, Persian merchants could easily and safely establish direct contacts with Italian merchants. Orkhan granted trading concessions to the Genoese and built a bezasâin at Bursa; later references in waâf registers to this bezasâin indicate its continued importance for the Ottoman trade.

It may justly be claimed that the Ottomans consciously followed a policy of making their new capital a principal entrepôt for Persian silk, of gaining control of the silk-routes, and, in the 10th/ 11th century, of occupying the Persian centres of silk-production. The factors prompting this policy were the rich revenues which silk brought to the Treasury, the great demand for silk stuffs in the palace and among the wealthy classes, and the increasing dependence of the fortunes of the industry on such a policy (see H. Inalcik, Türkiye’nin ihtisâdî tarihi, Belleten, xvi/60 (1951), 664-75; the acquisition of silk and silk-stuffs was also regarded as a means of amassing wealth (see H. Inalcik, 25. âsr Türkiye ihtisâdî ve şâmilâr tarihi kaynakları, in İkt. Fak. Mecm., xv (1953-4), 55-66).

As early as the reign of Bayezid I, Ottoman conquest expanded over the silk-routes, in the north towards Amasya, Tokat and Erzindjan, and in the south towards Malatya. When the attempts in the 10th/11th century to control Tabriz and to establish close relations with Gilân and Şirvan were being considered, the economic motive must not be overlooked; from the time of the submission of Amir Dâvidi (Muğâfûr Sultan) to Sâlemdin I in 940/1533, the Ottomans regarded the rulers of Gilân as their vassals (Ferdûn, Münghâdî, ii, 163).

The Persian silk exported to Anatolia came principally from Mâzândarân, Gilân and Şirwân. The products of the first two districts were collected first at Sultâniyye and, in later years mainly at Tabriz; as early as 741/1340, the tâmâhâ [q.v.] on silk at Tabriz amounted to 300,000 dinârs (‘Abd Allâh al-Mâzândarânî, Resâlât-ye Falakîyyât, ed. W. Hinz, Wiesbaden 1952, p. 59). Here the silk was bought by the great merchants and the caravans were assembled; these caravans reached Erzurum by the middle valley of the Aras, known as Çukûr-i Şâ‘ûd (or Şâ‘ûn). The caravans of silk from Shirwân and Gandja reached Erzurum via Shamkhab and Tiflis. The caravans bound for Aleppo, also an international silk-market, went via Tabriz, Van, Bîdîl and Diyarbakr, or along the valley of the Euphrates via Erzindjan and Kemâlk. The sea-route from Trebizond was also used (Dalsar, op. cit., p. 195, doc. 81, of 1016/1607). From the 8th/14th century onwards, Bursa began to rival Aleppo as a destination for Persian silk-caravans (the statement of W. H. Eyd, ii, 673, that the Ottomans obstructed the silk-routes is baseless). The caravans depended largely on the supply of horses and camels by the Türkmen nomads; at the end of the 9th/15th century a horse was hired for the journey Tabriz-Bursa-Tabriz at 400 akâbûs (about 9 ducats). Several caravans came to Bursa each year; an average caravan consisted of 300-400 beasts and carried 200 âles of silk (a âles consisted of 400 gr—according to another note—550 lid)es; the lid of silk was 120 dirhams, so that one âles was the equivalent of ca. 154 Kg.; a caravan of 919/1513 brought 400 âles of silk (Dalsar, p. 168, doc. 41). The Persian silk-merchants resident at Bursa in the 9th/15th century were mainly from Tabriz, Gilân, Çukûr-i Şâ‘ûn and Şirwân (on them see İkt. Fak. Mecm., xv (1953-4), 62-64). At this period Armenian merchants were in the minority. Most of the silk brought to Bursa was the highly-prized fine silk of Astârâbâd (sella straviu). The kâbûd’s registers of Bursa contain records that silk was sold there on behalf of the Aşık-Koyunlu ruler Ya‘kûb and the Şafawid şâns Ismâ‘îl, Ta‘ânîsî and ‘Abdâbâs (Dalsar, docs. 40, 64, 67, 240). Of these merchants, called in- discriminate by the Ottomans, some were certainly Âdâlbî Turks; the records distinguish the ‘resident’ (mutamakkîn) from the ‘travelling’ (saffâr) merchants.

Government regulations provided that the silk must be unloaded at the bezasâin (R. Anhegger and H. Inalcik, Kânûnîname-i sûltânî, p. 41, no. 31). There the silk was weighed on a scales (midân) set aside for it (in the 11th/12th century the midân at Bursa was in the Âğâm kânîn, later called the Koça kânîn, see Ewîyâ Celebi, Seyyâhîname, ii, 19). The dues on it were collected, and the owner was given a teqâhidî ‘charging the weight of the silk and certifying that the dues had been paid: these details were also entered in the midân defter. In the 11th/17th century, on every waâzûn (waâzem), that is 30 lid (450 gr.), of silk a midân resmi or teqâhidî resmi of 52 akâbes each was collected from seller and buyer (see H. Inalcik, in Belleten, xxv/139 (1960), 46). Mehemmed I introduced another midân resmi on the frontier at Tokat. This second tax annoyed the Persians, and in 877/1472 Uzun Hasan took and sacked Tokat. Silk in transit through Uzun Hasan’s realm paid fairly high dues at Erzindjan and Kârput or (on the other route) at Diyarbakr and Mardin (W. Hinz, Das Steuerwesen Ostanatoliens im 23. und 26. Jahrhundert, in ZDMG, c (1950), 197). The Ottomans later
established another mizān at Erzurum (on measures to counter-act tax-avoidance see below, p. 214). Whatever its destination, all imported silk had to be brought to the Bursa mizān. Sales were carried out in the bezāzīsān, after the mizān resmi had been paid, by brokers (dellāl) under the control of the sim̱ār [q.v.]. The broker took a fixed due (dellāliyye) (see Anhegger and Inalcik, op. cit., 41-3; for a kāmān controlling brokers, op. cit., 57-9; for their malpractices, Dalsar, op. cit., pp. 935-5, 224, 285). The activities of the sim̱ār were supervised by the sultan’s kādīya kethbūsāli in Bursa, who took charge of the revenues raised. Silk-merchants could not leave the kḥān before obtaining the permission of its supervisor and the sim̱ār’s attestation that the dues had been paid. The following table gives the amounts for which at various dates the three-year farm of the Bursa kārīs mizānī was leased:

The silk trade developed considerably during the reign of Bāyazīd II, who built at Bursa two great kūltān khanās, those popularly known as the Kōza khanā (or ʿAdjem khanā) and the Pirîn khanā. Under Selīm, there was a great regression; only towards the end of the reign of Śūleymān I do the figures for the silk-trade approach again those of the reign of Bāyazīd II. For comparison it may be noted that the silk mizān mukhdar asl of Aleppo under Selīm II amounted only to 400,000 akbēs. It has been calculated that in 978/1570 the total annual silk production of Persia was 22,000 yūks, of which 3,000 were exported to Turkey (P. Masson, Hist. du commerce français dans le Levant au XVIIe siècle, Paris 1897, 416). In about 950/1500, the Bursa silk industry needed a daily supply of 5 fardellos (1250 Bursa silk merchants of Bursa would gather at the bezb dzi-

The wars with Persia in the 10th/16th century seriously affected the silk trade and had profound repercussions upon the economies and finances of the two countries. The first stage begins with Selīm I’s imposition, as a weapon of war, of a commercial blockade. His intention was to prevent the Persians from acquiring war materials, silver and iron, and, by forbidding the trade in silk, to reduce the Shāh’s income from dues (bāḏī), one of his main sources of revenue (see Sa’d al-Dīn, ii, 257). But the blockade had no effect, since most of the merchants began to use the routes through Aleppo and Iskandarūn. Therewith Selīm resorted to more violent measures: Arab, Persian or Ottoman merchants with stocks of Persian goods had their goods confiscated (letter to the sultan of Egypt, in Ferīdūn, i, 425). The silks and cloths of all the Persians at Bursa were confiscated and listed, and the merchants themselves were transported to Rumeli and Istanbul (921/1515; see Dalsar, p. 198, doc. 86). The import and sale of Persian silk was forbidden. Anyone proved to have sold silk was fined its value (Dalsar, pp. 195-208, docs. 83-118). When Śūleymān came to the throne he released the merchants, and restored their goods or paid them compensation. Nevertheless the ban on the import and trade in silk by Persian merchants was maintained for a time. This blockade had important effects: firstly, it increased the state control of the sale and distribution of silk; the scarcity and high price of silk obliged many merchants and weavers to go out of business; instead of the Persian and Adhari Turkish merchants, known collectively as ʿAdjem, Armenians began to gain control of the
trade; and finally the government encouraged the production of silk within the Ottoman empire—it is at this period that silk from Albania and Rumeli is mentioned on the Bursa market. Nevertheless when the silk-routes were re-opened under Süleyman, the industry again became dependent on Persian silk and there was a new expansion in the trade and manufacture of silk. Yet in this reign too, during the wars with Persia (for example in 953/1546), the Ottoman government imposed restrictions on the movement of gold and silver currency into Persia: the consequent shortage of silk harmed the Bursa silk industry and led to a fall in the state-revenue derived from it (Dalsar, p. 171, doc. 48; p. 173, docs. 50-1; p. 219, doc. 149). In the ensuing period of peace the silk trade flourished again, and we find Şah Tahmâsî himself employing an agent in 983/1575 to buy cloth for him at Bursa from the proceeds of six yiiks of silk (Dalsar, p. 181, doc. 62). But in the long period of war from 986/1578 to 1049/1659, silk became an important political weapon for each side. As early as 987/1579 the Ottoman state revenue from the trade had been halved (Dalsar, p. 173), and the Ottomans again imposed a strict control on the export of gold and silver. In 994/1586 the shortage of silk had left three-quarters of the looms of Bursa idle, and the quality of the fabrics produced had begun to decline (Dalsar, p. 335, doc. 273). The peace of 998/1590 extended Ottoman sovereignty over the silk-producing regions of Gandja and Shirvân north of the river Kur (qq.v.). Next year the ruler of Gîlân, Ahmad, attempted to exchange Persian for Ottoman protection, but was later obliged to flee to Ottoman territory (Ferîdûn, ii, 162-4; Selânîklî, 250-2). One of the terms of peace was that the Şah should send to the Ottoman government 200 yiiks of silk annually, later reduced to 100 yiiks (Ferîdûn, i, 172). The restrictions on the export of gold and silver caused an acute shortage of currency in Persia (CSP Col., East Indies. China and Japan 1617-1721, London 1870, doc. 446). Before Şah 'Abbâs [q.v.] launched his counter-attack in 1012/1603, he sought means (no doubt at the suggestion of the Sherley brothers) to export Persian silk direct to Europe, via the Indian Ocean; the English would thus escape the obstructions to their own caravan-trade, and the Şah would deprive his enemy of a rich source of revenue. In 1019/1609 he sent an embassy to Lisbon and exported 200 yiiks of silk by sea, hoping to prove that this route was cheaper. When the attempt to make an agreement with Spain failed, the Şah turned to England, and in 1026/1617 Sir Thomas Roe opened negotiations with the Şah. Of the 3.4 million gold pieces which Persian silk cost annually, England undertook to pay two-thirds in goods and one third in coin (see H. Inalçık, Türkiye‘nin ilkîsîdatı vaesi- yeti, 666). In order to maintain control of it, the Şah made the silk trade a state monopoly and forbade the export of silk to Turkey. The Ottomans and Venice—the two states most affected—watched these developments with anxiety. In 1026/1619 and 1031/1622 consignments of Persian silk were indeed sent to England by sea. The English were hoping also to establish another export route via Russia; this prompted the Ottomans to make threats to England (op. cit., 669-70). After the Ottoman-Persian peace of 1027/1618, Persian silk was again exported to Aleppo, Bursa and Focâ. Şâh 'Abbâs’s policy was not followed by his successor, who abolished the state monopoly of silk; and the use of the Indian Ocean route did not develop, mainly because England was reluctant to provide the gold and silver currency required for it. Nevertheless in 1043/1633 the Venetians were concerned at learning that English merchants were buying large quantities of silk at Bandar Abbâs (CSP, Venetian, xxiii, doc. 101). In 1075/1665 the French too were attempting to divert the Persian silk-trade through the Persian Gulf and Surat (P. Masson, op. cit., 326-7).

During the period 986/1578 to 1027/1628 some tendencies which had begun earlier became more apparent. Firstly, silk production within Turkey increased, the earliest records of silk-production at Bursa dating from 998/1587 (Dalsar, p. 386, docs. 290-301). In the second half of the nth/i7th century the import of cheaper silk-stuffs from Europe led to a decline in local silk-weaving
and that it became more profitable to produce raw silk for sale to Europe. This suggestion seems to be incorrect, the change not occurring until the 19th century, but that same time Europe imported 8,000,000 m. machines, 5,000,000 m., could no longer compete with the products woven at Damascus, Aleppo, Istanbul and Chios to suit Turkish taste, and imports from Europe remained at the earlier limited level. Even so late as 1202/1788, the value of all kinds of silk imports from France did not exceed 400,000 gold pounds. The silk-stuffs most appreciated in Turkey came from Venice (Masson, op. cit. ii, 446). Bursa and the surrounding region encompassed all other areas. In the 12th/18th century the demand in Europe for Bursa silk led to the danger that the Turkish weaving industry would be deprived of raw material, so that the government set limits to the quantity exported. According to a regulation (nişanname) of 1806, a quota of Bursa silk was set aside for sale at a fixed price to the tradesmen of Istanbul; the rest could be sold, when the Sultan had authorized it, to Europe (Dalsar, pp. 393-394, doc. 308). The annual demand of European merchants for Bursa silk was 21,750 okes (ca. 27,900 kgs.). Since they were ready to pay 29-30 kurush for 350 dirhams instead of the fixed price (nahr) of 21.5 kurush at Bursa or 23.5 at Istanbul, illegal sales could not be prevented.

In the 19th century, as the weaving industry declined with the spinning mills (see below), the production of raw silk expanded greatly. In order to assure the production of silk to the quality which the mechanized European industry demanded, from 1830 onwards the government published instruction manuals entitled Ta’limname-i harir (e.g., the Ta’limname-i harir, Istanbul 1269, written in Armenian by Khā ṣadīja Agob and translated into Turkish by him and Djeved). From 1838 onwards special steam-machines (Fr. filature, Turkish mandilb) were installed at Bursa for the extraction of silk from the cocoon; there were 3,000 of them by 1836, at which date it was estimated that there were, installed in the houses, 8,000,000 m. machines, 5,000,000 m., operated by pedal. According to Sandison’s Report on the trade of Brussa for the year 1846 (PRO, FO 78, 701), in that year 215,000 oks of silk (ca. 267,600 kgs.) were produced in Bursa; he writes also “Brusa silk and cotton stuffs are always falling more into disuse”. It is noticeable indeed that raw silk was increasingly being exported to Europe. In 1853 some four million kgs. of coarse silk were raised in the demand for raw silk in the West which accompanied the expansion of the silk industry there and the consequent rise in price had its effect upon the increase of silk production in Turkey. As early as the mid-11th/17th century, Bursa was famous for silk production (Ewliya Čelebi, Seyahatname-i, ii, 35). In 1091/1680 G. Wheler noted (A journey in Greece, London 1682, 209) that the plain of Bursa was covered with mulberry Orchards and that much silk was produced in the whole area between Bilecik, İzmid and Bandırma. Velvet was woven at Bilecik in 982/1574 (T. Dağlıoğlu, Osmanlı asırı Bursa, Bursa 1940, p. 83, doc. 115). Bursa silk was exported to the industrial centres of Aleppo, Damascus, Diyarbakr, Tokat and Istanbul (Dalsar, 387-9); Amsaya, an old centre of silk-weaving, later became important for silk manufacture for the exportation of a Swiss who established a spinning-mill here see G. Perrot, Souvenirs d’un voyage en Asie Mineure, Paris 1867, 449-51). In about 1040/1630, ʿAlāʾibīyya and Alasheqir are also mentioned as producing silk. That silk production continued in the Morea in the Ottoman period has been noted above: in the 12th/18th century raw silk was exported to Western Europe from the Morea (Masson, op. cit. ii, 626) and from the neighbourhood of Salonica (for the silk of Zagora see Akseray, Turkey to Europe in 1881 had originated in Persia, the Caucasus region and Turkey.

THE SILK-WEAVING INDUSTRY

A silk-weaving industry existed in Anatolia, before the period of the Ottomans, under the Seljūqs. Among the ‘gifts’ (multamasād) sent from Anatolia to Rashid al-Dīn [q.v.] as vizier of the Il-khanid sultans, were 2,000 rolls of kamkābī (T. kemkābī) and 10,000 cubits of velvet from Erizān and 4,000 rolls of kemkābī from other cities of Anatolia (Z. V. Togan, in İktisat Fakültesi Mecmua, xv (1934), 42, n. 5). The silk exported from the Il-khanid ruler in 657/1258 there figure nahr and kemkābī-i Anfāšī (i.e., of Antalya) see (see Akseray, Muṣūmarat al-akbāb, ed. O. Turan, Ankara 1944, 61). A few silk fabrics woven in Seljūq Anatolia are to be found in museum collections (a fragment bearing the name of ʿAlāʾ al-Dīn Kaykābūd I is in the Musée des Tissus at Lyons, see E. Diez and O. Arslanapa, Türk sanats, Istanbul 1956, 259-60). Favourite types of material imported from Seldjuk Anatolia were naktb, sarḫābī-i Rāmī, various types of Rāmī dībī, Ṣuğlertexti and ʿAlṭābī garments, gold Iskandarānī brocades and kūnsı handkerchiefs (Ibn Bīrūnī, El-Estamirī n-lʿ-awlādīyye . . ., facs. of MS Aya Sofya 2985, Ankara 1956, 32, 49, 56, 155, 438). Al-ʿUmari (ca. 730/1330) says of Akhr, adjacent to the Ottoman principality, that “its silk is quite equal to Byzantine (Rāmī) brocade and cloth of Constantinople. Most of it is exported” (R. B. Serjeant, Material for a history of Islamic textiles up to the Mongol conquest, in Ars Islamica, xv-xvi (1951), 59). In the cenānname which he wrote for the Ottoman ruler Emir Süleymān (early 9th/15th century), Ahmad-i Dāʾī lists the following types of material: embroidered ḍubba-i Ṣuğlertext from which robes of honour [see KHIL A] were made for sovereigns, cloth of various types: ḍubba, ṭawāfi, ḍubba-i ḍubba, ʿAlṭābī of ʿAḍām (for this see R. B. Serjeant, op. cit., in Ars Isl., x (1943), 99, and A. U. Pope, A survey of Persian art, ii, London and New York 1937, 1956, n. 1), ḍubba, ḍubba, ḍubba, ḍubba of Iskandarānī for making ḍubbas (R. B. Serjeant, in Ars Isl., xii-xiii (1948), 100-6; Ṣalāde-yi Faltuhyya, ed. W. Hinz, Wiesbaden 1939, 14-5, 243-247, sündas (for
this green brocade made in Yazd, see Serjeant, op. cit., 87, 94, khāṣṣ al-khāṣṣ-i Kirrīmī (for khāṣṣ al-
khāṣṣ see T. Oz, doc. 3); Istanbul 1946, 62, khardj-e Shāmī and crimson wool of Yazd.

It is a point worthy of note that the silk industry of the Ottoman Empire developed in cities lying on the caravan-routes from Persia, i.e., Erzindjan, Tokat, Amasya and Bursa, on the one route, and Mardin, Marāš and Aleppo on the other. The silk industry of Istanbul was introduced from Bursa. As early as the end of the 8th/14th century, Bursa, the Ottoman capital, possessed an industry in silk fabrics, whose products were exported to Europe and to Eastern countries (H. Inalcık, Bursa . . . 50-1). This industry gradually expanded. At Bursa, Persian merchants who had brought in supplies of raw silk exchanged them mostly for European woollens and for Bursa silk fabrics. Under the names Bursa humāğh or Rāmī abmīqā, lāfīa, wālī, khamkha and khalīfa were imported into Įziran Hasān’s territories; and we have noticed the record of Šīḥ Shāhīmāch buying fabrics in Bursa. When Şehīn Isrā’īl seized Şīḥu’s treasury, he found in it 91 vestments of Bursa fabric (T. Öz, Tūrk kumaş ve kadiferleri, i, Istanbul 1946, 42). For the trade in Bursa fabrics in the bazaars of Tabrīz, see A narrative of Italian travels in Persia, ed. M. Grey, London (Hakluyt Soc.) 1873, 173. Bursa fabrics were prized also in Italy (G. R. B. Richards, op. cit., 88, 156). The customs’ registers for Kūstānai, Akkerman and Kefe of the end of the 9th/15th century show that Bursa fabrics were then being exported to Northern Europe; Russian merchants had bought silk and taffeta in Bursa in 981/1574 (Dalsar, docs. 36, 76); the kings of Poland had Turkish silk-stuffs bought for them at Bursa (Dağlı-
ğlu, doc. 46; Dalsar, docs. 73, 190; A. Refik, Osmanlı asrın İstanbul hayatı, Istanbul 1935, 108); and Turkish silk fabrics were used in Sweden for the making of ecclesiastical vestments (T. Öz, loc. cit.; A. J. B. Wace apud T. Öz, introd., p. 3). All the same, the products of the Bursa industry were mostly con-
sumed locally: the Bursa registers of the effects of deceased persons (tereke defterleri) show clearly that the rich used great quantities of silk fabrics for clothes and for house-furnished: from brocade and velvet were made khamkha (g.v.), doleleri (a kind of under-shirt), kardjh (skirts), kardjeh (shawls), lorgāfs and kerchiefs (see līrās), and pillows, bedspreads and cushions (see mafrūghār). Brocades and velvets also provided a means, like precious metals and stones, of accumulating wealth. The Palace bought extensive supplies of silk-stuffs from Bursa: the fabrics needed for clothing the personnel of the palace and for ceremonial occasions (made up by the palace tailors, who in 1018/1609 numbered 319) were ordered by the Chief Tailor (Terzi-bashi) and bought by the khāṣṣ khādījī emini at Bursa from private firms (R. Anhegger and H. Inalcık, Kānumāme-i sulāñi . . ., 35-6; Inalcık, Bursa . . . 64; Dalsar, pp. 226-33, doc. 160; T. Öz, Tūrk kumaş ve kadiferleri, i, Istanbul 1946, and ii, Istanbul 1953; idem, Turkish textiles and velvets, Ankara 1950 (with many illus-
trations of garments); the register of contents of the Inner Treasury (Enderūn khāmīsī), dated Şebānābād
910/January 1505, reproduced in Topkapı Sarayi Mülkvesi arşiv bilavası, ii, Istanbul 1940, no. 21; other sources on the ceremonial garments worn on special occasions are the tereke registers, the inām registers, and the Sūr-nāmes, especially the record of the wedding of Khađīja Sulān in 1085/1674: A. Bädd, Riyād-i belde-i Edirne, Edirne, MS Selimiye 2311, ii, 270-9; Sūr-nāme-i Wehbi, Istanbul, MS Ahmed III 3593). The cost of the various fabrics bought for the Palace in 954-5/1547-8 amounted to 12,000 gold pieces (Istanbul, MS Tarih Vesikalari, i/7 (1942), 30). The silk-weaving industry of Istanbul developed during the 10th/16th century; the num-
ber of looms producing various kinds of brocade (called serāser, şahkīneh, serbāf) rose from a hundred to 318 in 978/1570, at which date a firman was issued ordering their reduction to the former number; at an inspection made in 983/1577, 268 looms making the silver brocade serāser were found, and it was ordered that their number be reduced to 100 and that the others turn to making ordinary serenkh brocade (A. Refik, op. cit., 108, 116-8). According to Ewliyā Celebi (i, 613-8) there were in Istanbul (in about 1805/1840) 105 sellers of satin, 16 sellers of brocade, 70 weavers of velvet, 100 makers of velvet and serenkh pillows, 100 weavers of dāryāy, 5 makers of hūtās, 17 makers of sashes and 400 makers of bath-towels (peştemāl); silk fabrics were sold in the BezzāzĪstān-i Dīdīt, Chios fabrics at Ghalata. At Istanbul many new types of fabric, known as Istanbulbārī, began to be manufactured (T. Öz, op. cit., ii, 4, 44). In the first half of the 10th/16th century a silk factory attached to the palace was established at Istanbul: it is referred to as the Khāṣṣa Kārkhāne or the Kārkhāne-i ʿAmire (Dalsar, docs. 22, 23; T. Öz, op. cit., i, 47, with a plan); it employed kem harbāyā under the Kemhābd-Ībāl and ghasās under the Ghasās-Ībāl. According to the registers of the palace craftsmen (ehl-i bīr: see T. Öz, op. cit., ii, 21; H. Uzuncaşarlı, Osmanlı devletinin saray teşkilati, Ankara 1944, 453; R. M. Morie, Türk nahāb sani’si (arastırma araştırması) 1953), in 964/1557 145 weavers were employed, in 1047/1637 32, and in 1098/1687 only four; in the middle of the 12th/18th century, however, the number had risen to eight ghasās and three kem harbāyā. Of 268 silk looms functioning on the open market in Istanbul in 983/1577, 88 were run by slaves attached to the Palace (for slaves sent to Bursa in 936/1530 to be attached to master-craftsmen and learn the art of weaving various fabrics, see Dalsar, doc. 245). In 1171/1758, 40 pillow-making workshops, one silk-
spinner’s workshop and one guild-room were set up in Uskūdar as a wakf for the Ayzaman Dīmānī (T. Öz, i, 44). In the first half of the 19th century, there were 5000 weavers in Uskūdar, later left unemployed as a result of the competition of the products of Western mechanized industry (C. Hamlin, Among the Turks, New York 1878, 59). In 1843 the State founded a modern silk-factory at Hereke, but the Ottoman silk industry remained in general a field for private enter-
prise.

The numerous types of silk fabrics are classified in the ištābā regulation for Bursa (Tarih Vesikalari, i/7, 28-31) into three main groups: velvets (katife), brocades (khamkha) and satins (lāfīa, allās), the first being fabrics with a nap, the second those with a
design woven in, and the third smooth, light and brightly-coloured fabrics. The various types had different names according to the number of threads in the warp, the use of gold or silver threads, the degree of twisting of the threads, and the patterns woven in. (There is as yet no systematic classification of the very numerous types of Turkish fabrics; see, meanwhile, T. Öz, Türk kumaş ve kadijeleri, i-i, Istanbul 1946-51; A. J. B. Wace, The dating of Turkish selects, in Burlington Magazine, lxiv (1954); Brief guide to Turkish woven fabrics, Victoria and Albert Museum no. 3, London 1950; 2000 years of silk weaving, New York 1944; Nurettin Yatman, Türk kumasları, Ankara 1950; O. Ş. Uludag, Bursa kumasları, in Belleten, i3-4 (1937), 753-60. The principal collection of Turkish silk fabrics is in the museum of Topkapı Sarayı, Istanbul; others are in the Victoria and Albert Museum, London, the Benaki Museum, Athens, the Mevlana Müzesi, Konya, the Royal Scottish Museum, Edinburgh, the Etografía Müzesi, Ankara, and in the Kenan Öcal collection of the Ministry of Economics, Ankara.)

Specialists have reached the conclusion that in the fields of colour and design Ottoman Turkish fabrics blended diverse influences to create a characteristic style, and that this style had a profound influence in the Near East, in the Mediterranean countries, and in Western Europe (see A. J. B. Wace, apud T. Öz, i, 2-5, and idem, Turkish woven fabrics, 5-16). In this style are to be detected the influences not only of Persia, Byzantium and Italy, but also the Uygur tradition of Central Asia which was especially prevalent in Anatolia in the period of the Il-khâns (the "three circles", "tiger stripes" and Buddhist sun medallions commonly used in Ottoman designs are found also in Uygur pictures, op. cit., 10; for the dîbî-i Turkî sent to Harûn al-Rashîd and the changes in Persian textiles under the Seldûqs and the Il-khâns see P. Ackerman, in A. U. Pope, A survey of Persian art, iii, London and New York 1937, 2043-4, 2071, 2195); but there were peculiarities of style characteristic of the various Ottoman silk-weaving cities, such as the type connected with the name of Hâddiîlî Ali at Bursa in about 890/1485. In the 9th/15th century the great majority of the weavers at Bursa were local Muslim Turks. In 906/1501 an Italian weaver resident at Bursa, M. C. Cavieze, is mentioned, and in 920/1514 Selim 1 transported the best craftsmen from Tabriz to Istanbul (Ferîdûn, i, 405). In the 11th/17th century the number of Greek weavers at Bursa began to increase. The brocades of Europe, Kefe and Chios were imitated at Bursa.

Organization of the Industry

Those employed in the silk industry were organized into various hîrefet, trade guilds. The entrepreneurs were in two main groups, the khâmfîlis (dealers in raw silk) and the dôkmuçîlis (weavers). The khâmfîlis merchants would buy raw silk at the bezaasîtanî and have it spun by doldûfîlis into warp threads (masduda) and woof threads (pud). The warp threads, called masdûl because they were more tightly twisted, varied in the number of strands according to the type of fabric to be woven, from 1,800 ( tôpo) to 8,500 (gûnsîtanî kemkû); the doldûfîlis or tirkîm bûkûfûsî who performed the spinning worked for the khâmdîlis but constituted a separate hîrefet. The khâmdîlis then had the warp and woof threads dyed, by the boya-dîlis (sabbâgbûs). The following list of stock and tools recorded in the effects of a deceased boya-dîfî (Bursa, Şerîye sicilleri A6/6, of 893/1488) throws light on the technique of dyeing: vegetable dye, red dye, indigo, Hindi indigo, ala indigo, valonia, alum, cauldrons, ladies, trays, sieves, troughs, mallets, work-benches. The dyed silk was sold by the kâmîdîlis to the dôkmuçîlis (weavers), who were organized into different hîrefet: hâfitîlis, kemkâmîlis, wâledîlis, futâmîlis. For each type of fabric a distinct type of loom was used, with the appropriate number of teeth (a loom was valued at 3,000 akses, i.e., some 60 gold pieces, in about 893/1488).

The most numerous and influential hîrefet at Bursa was the kâmîdîlis, whose products were world famous; as an example, the organization of their hîrefet may be summarized in the following terms (ustiddâl, master-craftsmen) was limited; these chose from among themselves a council of control known as the 'Six' (Altflar: for the election see Dalsar, pp. 318, 330, 397-8), who were, in descending order, the şeyh, the kahyâ (hakkûdû), the yîgît-basghî, the ishdî-basghî, and two ahli-khibûra; the kahût would confirm this election, as being to an official body, and register the result. The principal duties of this council were to secure that regulations concerning quality and prices of manufactured goods were carried out; to carry out the examinations for promotion from apprentice (şâkîrd) to journeyman (kalfa) and from journeyman to master, and to issue licences (tidâsa); to investigate and settle disputes and malpractices in the guild; to represent the guild in dealings with the government, and most of all to prevent competition and underhand practices in the employment of workmen and in the buying of stocks. In the carrying out of these duties the kahyâ usually acted as the principal officer, the yigît-basghî, with his assistant the ishdî-basghî, would investigate complaints and make a report to the ahli-khibûra, on the basis of which they made the final decision (see Kânînâmîne-i ishtislî-i Bursa, p. 28). The şeyh was the spiritual head of the guild and presided at ceremonies. The guild co-operated closely with the government, and if there was any resistance to the decision of the Altflar the latter could call upon the local state officers to enforce it (Dalsar, pp. 111-7). The regulations of the guild were confirmed by the Sultan, so becoming an ishtislî kânînin; as such, their application became the responsibility of the kahût (see the Kânînâmîne cited, pp. 28-31). The shayk was the one who dyed the silk was under the control of the mîstên emini, the official of the guild; he was finished, of the mubasîs (see ibid.). The woven fabric was inspected for its dimensions by the tamgâha (dâmgha) emini, who stamped it, a tamgâha resmi being levied on each top (roll) of fabric.

The weaving was in general carried out on looms set up in private houses. According to the terhec disfîleri of the 9th/15th century, large numbers of slaves were used in the industry, being bought specifically for the purpose and employed on the principle of muskâta (g.v.) (see H. Inalcik, in Iktisat Fakültesi Mecmuası, xv (1953-4), 57-9). At the same time there were quite big 'factories' (hârkhâne): in Istanbul, 400 peşammâmâlis were working in a single large hârkhîne near Khrîr-çeşme (Ewliya Celebi, i, 616-17. Hämmer, ii, 222); and in about 995/1587 there is a record of several 'big businessmen' in Bursa owning from 20 to 60 looms (Dalsar, doc. 273). Women, as well as men, were found among the masters and the workpeople (Dalsar, p. 320). The workpeople were divided into three main groups: kula, şâkîrd and egîrs (Dalsar, doc. 241), the last being the true employees, whose daily wage was calculated on the basis of the number of dîrisîw woven (Dalsar, doc. 242). The şâkîrd were the young apprentices
The Ottoman silk industry, under the pressure of economic factors, progressively expanded in output but declined in quality—a tendency already visible at the end of the 9th/10th century (see Kânanmâne-i iktisâb-i Bursa, 28-31). The widespread demand among the common people for cheaper goods forced the relaxation of the old guild standards of quality and the toleration of a more loosely woven guşistânı kemâlât, deemed suitable to their needs (ibid., 29). The establishment of new looms by untrained workers (called hâkim-desîl) without the authorization of the guild and the consequent increase in the number of looms working provoked violent resistance on the part of guild-members from the 11th/17th century onwards (Dalsar, docs. 3, 4, 21, 236-8, 240-1, 260), and the intervention of the authorities on behalf of the guilds was fruitless. A decline in quality resulted also from the occasional shortages of silk and of the crimson dye gum-lac (T. yok); the number of threads in the warp was reduced and poor dyes were used (in the 9th/15th century the warp was composed of 4500-5000 threads, in the 11th/17th century of only 2400; for the dyes used see N. Baylav, Türkiye'nin boya bitkileri, ..., in Türk Sanats Tarihi, i, Istanbul (Güzel Sanatlar Akademisi) 1963, 732-44). At the same time cotton or linen threads were increasingly used in the woof. The fall in quality was encouraged also by the import from Europe of lower-grade, cheap and showy materials, which induced the Turkish weavers to compete with them. From the 11th/17th century onwards there was increasing demand for silk-stuffs from Venice and Chios which copied the Ottoman designs. 

Bibliography: in the article. (H. İnalci)<br>iii.—The Arab Lands in the Post-Mongol Period.<br>The Mongol invasion of the Muslim world resulted in the displacement of many trades and the transfer of artisans, especially those engaged in the silk industry; yet only about one-tenth of Arab territory, including Baghâd and Mawsîl, was adversely affected by the Mongols. Moreover, even those once prosperous centres with thriving silk trades, supposedly destroyed by the Mongols, were reported half a century later by Marco Polo to have maintained or recovered their prosperity. Pedro Teixeira, like Marco Polo, was impressed by the flourishing silk industry in Baghâd and Mawsîl. The making of silk was almost confined to Syria and Tunisia, where the climate is especially suited to the breeding of silkworms and the growth of mulberry trees. Algeria and Morocco were also silk producing countries but on a limited scale. There was a mahkalât [silk] factory in Tîllûnân and a Jewish controlled industry in Fâs. The Arabs in North Africa introduced silk into Sicily and Spain and from there it was introduced into the Rhône Valley and Milan. Other Arab countries tried unsuccessfully to make silk; they managed, however, to maintain tirâş [sericulture] factories dependent upon imported raw silk. The tirâş factory in Cairo goes back to Fātimid times and functioned throughout the Mamlûk period. European travellers who visited Egypt in Ottoman times noted a silk industry making Syrian raw material. Muhammad AHI Pasha planted three million mulberry trees, which grew well, but the climate was not suitable for the breeding of the silkworm. Syrian silk deserves a more detailed study. Ottoman registers for Syria-Palestine compiled in the 10th/16th century show extensive silk cultivation and manufacture; there is similar evidence of silk exports. Alessandra and Damascus were not only famous for the manufacture of good locally reared silk, but were also great centres for trading in a lower-grade silk imported from Persia. European factors residing in Syria competed for raw silk, Syrian and Persian, to barter it for woollen cloth. Muslim merchants managed to strike hard bargains with the Europeans, forcing them to barter their woollens for large amounts of raw silk, the balance being paid by Europeans in cash-producing commodities such as dyes. Thus woollens were subsidiary to silk in Syria, while the contrary was true in Europe. Russian activities in north-western Persia cut off Persian silk from Syrian markets. Syrian locally-produced silk partly filled the gap, perhaps at the expense of local industry. The price of raw silk rose sharply, thus encouraging greater production in Syria. Volney noted the great number of new mulberry trees along the Syrian coast. Increasing in the nineteenth century, the production of raw silk fell later as a result of the competition of Far Eastern silk and artificial silk.

The silk industry in the Arab countries produced textiles for home consumption only. There seems to have been no appreciable foreign market for textiles, because many countries maintained their own industries. Descriptions of Arab dress in Ottoman times show that silk textiles were more commonly used than woollens, but less than linen or cotton.

The Arabs, for whom, with their nomadic origins, wool was the most important raw material for textiles, were also familiar with silk from the earliest times. Although the Prophet forbade the wearing of silk clothing as a luxury, because it threatened to lead to effeminacy, silk weaving flourished greatly in the Islamic world, and Islamic silk mills dominated world trade from the 9th to the 14th century A.D. The words Atlas (German for satin), damask (Damascus) and muslin (Mosul) are taken from Arabic, and taffeta from Persian. The development of the textile arts in Islam was linked with their last phases in the ancient world whose territories were occupied by the Arabs—those of the ancient
Orient in the time of the Sāsānids in Iran and Mesopotamia, and those of the late Greek and Byzantine civilizations in Syria, Egypt and Asia Minor. In the Carta Cornutiana, a document relating to the founding of a village church near Tivoli, not far from Rome, written in 471 A.D., the excellence of Persian textiles was praised, just as it had been by Herodotus and Xenophon. Under the Sasanid rulers Shapur II (310-379) and Kawadh I (488-531), Syrian weavers were transported to Persia. In the rock tomb of King Khusraw II (590-628) in Tāk-i-Bīstān, clothing woven of Iranian silk is represented. It is probable that in Alexandria, later in Cairo and Tyre, in Damascus and Ctesiphon, and later still in Baghdad, Rayy and many other places, the first Caliphs encouraged a new and fruitful development of silk mills and made possible the founding of new silk factories in the conquered territories from India and Turkestan in the east to Sicily and Spain in the west. Iran's key position under the Achaemenids and the Sāsānids, between Eastern Asia and Europe, was maintained by the Islamic peoples, and extended and strengthened by their expansion on the trade routes by land and sea. The costly raw material, the silk itself, was at first imported from its land of origin, China. Under the Byzantine Emperor Justinian (527-65) monks brought silk worm chrysalises to Byzantium in their pilgrims' staffs. At that time the breeding of silk worms was also started in the countries of the Near East, which gradually became independent of imports. Just as in Byzantium State factories for silk weaving had been set up in the gynaeceums, employing almost exclusively women, so too the caliphs and other Islamic rulers created court and state factories, the products of which were known as tīrāz [q.v.]. They are known particularly on account of the robes bestowed by the rulers upon those they wished to honour [see gušša], which were woven in these factories, generally of linen but sometimes also of silk; these often bore an inscription (figs. a and b), usually worked in silk, giving the name of the ruler, the place, the manager of the factory and the year of production. Many remains of such garments, with inscriptions, have come to light in Egyptian tombs, giving proof of how numerous the weaving mills were at that time (Pis. IIa, VIa). A particularly magnificent example is a robe of honour bestowed by the Būyid ruler depicting lions beside a tree of life, found their way, as coverings for relics, into the treasuries of Western churches, as at Rome, Aix, Sens (Pl. Ia) and Nancy. They are in fact early Islamic pictures, executed on a background of Sāsānīd silk, depicting the lion-hunts of the Persian Shahinshah (Berlin, formerly State Museums), and splendid fragments of these have also found their way into European church treasuries such as those of Passau (Pl. IVa), Trier, Cologne (St. Kunibert) (Pl. Ib), Milan (St. Ambrose) and Prague (Cathedral Treasury). There is one such piece with an Arabic inscription, another from Rayy in which the Kings are portrayed on horseback beside the trees of life and above the lions. Silk weaving flourished particularly in early and mid-mediaeval times in Rayy, where among other things double cloth was made, with different designs on the two sides (Pl. IVb, c). These were sometimes used as palls. There was a considerable exchange of ideas and inspiration between the Byzantine and Islamic weaving industries, just as had existed between Iran and Byzantium in Sāsānīd times. One group of Byzantine silk mills, which must be considered as the forerunners of the damask mills, was decisively influenced by the geometric style of stucco decorations at Sāmarrā, which led to the arabesque. These pseudo-damasks, as they are called, are now claimed by Sigrid Müller-Christensen, with some justification, to be Islamic work. The abstract leaf design of the arabesque became increasingly dominant in Islamic
textile ornamentation, and finally asserted itself completely at the same time as cursive Kufic was replaced. Chinese weavers brought new influences to bear in almost all the Islamic countries. Under the Mongol dynasties in Iran and Turkestan, Chinese motifs such as the Fonghoang, the Dragon, the Ky-lin and others were introduced into Islamic textile designs, even in places such as Egypt and Asia Minor where the Mongols did not penetrate. Chinese damasks encouraged a great flowering of damask weaving in Mamluk Egypt and in dynasties; this is clear from findings in many tombs, among which have been found a remarkably large number of pieces of material bearing inscriptions of the Mamluk Sultan Muhammad Nāṣir (Pi. VIc, e). In 1243/1244 this Sultan received from the embassy of a Mongol Khān 700 lengths of silk, in some of which his name was woven. A gold brocade of this kind is preserved in the vestments collection of the Marienkirche in Danzig.

In Andalusia, there were important silk mills from the time of the Umayyad dynasty, as can be seen from a fīrāda fabric bearing the name of Ḥīḍām II, after the model of the Egyptian fabrics. Attempts were made to imitate Baghādād silk textiles, and in at least one case a fabric which was certainly manufactured in Spain was given an Arabic inscription, which, for the sake of advertisement, falsely claimed that it was of Baghādād manufacture. The silk woven in Arabia was considered comparable with Persian textiles. As a result of the discoveries of silk garments in the tombs of Spanish princes in the Cistercian monastery of Las Huelgas near Burgos (Pl. VIIb), which are mainly of Spanish-Moorish silk material, our knowledge of Spanish-Moorish silk weaving has been extended and deepened. In Granada too, where the Alhambra style (Pl. VIIc) was taken over in the textile arts also, and in Murcia, Malaga and other places there were silk mills. In Sicily, at the court of Palermo, Byzantine factories were supplanted by Arab, which continued there even after the conquest by the Normans and under the rule of the Hohenstaufen (Pl. VIIa). The German coronation robe in Vienna bears impressive witness to the high standing of their silk weaving and embroidery.

As early as the end of the 7th/13th century, Marco Polo noticed that there were flourishing silk mills in the parts of Asia Minor, such as Konya, which were under the dominion of the Turks (Pl. VI d). In the Ottoman period, flowers such as carnations, tulips and hyacinths enriched the plant designs. Īskūdar velvet was prized throughout the then known world (Pl. VII d, e).

Islamic silk weaving and embroidery reached its highest fulfilment in Persia with the coming of the Šafawids. The chief factories were now in Tabriz, Ḵazvin and Isfahān. There were many exchanges of inspiration between textile designs (including those of knotted carpets) and china mosaic work and the flourishing art of miniature painting. The pictorial silk and velvet materials are unique. In Sānādī Iran the mythical big-game hunt of the Shāhānshāh had been depicted in the tombs of Ṭāq-e-Bīslānkān, on silver dishes, and on silk materials as well. Now it was figures from the Alexander legend, King Kuhsraw and the beautiful Shīrīn, the poor poet Madīnīn and the unattainable Princess Leylā, who found their place in the pictures woven in costly silk and velvet brocades. The names of artists, such as Šāh Muhammad Mīrzā al-Din and, above all, Ghīyāth al-Din, are known to us from their signatures (Pl. VIIia).

Of the silk textiles of the Near East had made their way into occidental church treasures, where they were used as wrappings for relics or as vestments, they now came to the courts of European princes; a delegation (1635-1639) led by Olearius was sent by Duke Frederick III of Holstein Gottorp to Shah Šaff (1629-1642) in Isfahān, and the velvet brocades which were among the presents Olearius brought back for his sovereign were used as tapestries in the Rosenborg Castle, in Copenhagen. Apart from the Spanish princes and the Kings of Sicily, whose cemeteries were sometimes of silk of Arab manufacture, it seems that European princes only occasionally used Arab silks for clothing; those who did included Canegrande VII della Scala (d. 1329) in Verona, the confidant of the Emperor Henry VI, and Duke Rudolf IV of Habsburg (1339-65) (Pl. Va). The inspiration given to European textile art by Arab silk materials, particularly apparent at first in Italy and in Spain, spread throughout Europe even in Italian, Spanish, French, German and Dutch paintings, which all reveal the influence of Islamic silk textiles in the garments of the people represented.

AL-HARIRI (sometimes Ibn al-Harîrî in Yağkût), Abû Muhammâd al-Kâsim b. ‘Ali b. Muhammâd b. ‘Uqâmân b. AL-HARûRî AL-BAŠRî, Arabic poet and philologist known principally for his makâmât. Born in 446/1054, probably to a landed family living at al-Mâshân, near Basra, where he spent his childhood, he commenced his studies at Basra; his biographers agree that he studied under al-Fâlîd al-Dîn al-IIsfahânî, that is chief of intelligence [see BARID, KHABAR], sîdyb al-khabar, b. Muhammad al-‘Easâbânî, but the latter is mentioned only in the works of Abu ‘1-Fath al-Iskandari. According to al-Harîrî himself (apud Yağkût, Udbâbî, xvi, 262-3) or his son (apud Ibn Khallîkân, i, 429), Abû Zayd al-Sarudî was a real person and may even on his appearance in Basra have inspired the first makâma of al-Harîrî, al-Harîmîyya, which is the 48th of the collection; however, his hero may perhaps be only identical with a Bohemian called Abû Zayd al-Sarudî, recalls Abu ‘1-‘Ufîdî al-Iskandarî. According to al-Harîrî himself (apud Yağkût, Udbâbî, xvi, 262-3) or his son (apud Ibn Khallîkân, i, 429), Abû Zayd al-Sarudî was a real person and may even on his appearance in Basra have inspired the first makâma of al-Harîrî, al-Harîmîyya, which is the 48th of the collection; however, his hero may perhaps be only identical with a Bohemian called Abû Zayd al-Sarudî. The dating 

The reasons for this extraordinary success, which gave rise to countless imitations in Arabic, in Persian, and even in Hebrew and in Syria [see MAKÂMA], are somewhat difficult to understand and must be accounted for by the decline of literary taste. Indeed, the makâmât of al-Harîrî are no more than a pale reflection of those of al-Hamadhânî; it is not merely the number of the sessions which shows the constant concern with imitation (for at the end of the 5th/11th century there survived probably only the 50 sessions of Bâdî al-Zamân, of the 400 which he wrote); this concern moreover is quite superficial, for al-Harîrî, by confining himself to relating the meetings of al-Harîrî b. Hammân and Abû Zayd al-Sarudî, restricts the scope of the sessions and, neglecting depth, puts all his effort into form. What he had in great measure certainly is an unequalled mastery of the Arabic language and a perfect command of its inexhaustible vocabulary; verbal exuberance leads to acrobatics which the followers of al-Harîrî, who regarded him as the most perfect representative of the genre, delighted in, whereas he merely set the style. The makâmât first known in the West through partial translations: in 1656, Latin tr. of the first makâmât by Golius (following on a new edition of Erpenius’s grammar); in 1731, edition of the first makâmât by Schultens, who in 1731 and 1740 translated six of them; in 1737, Reiske published the tr. of no. 26. The first extended tr. (extracts from 17 makâmât) is that of Venture de Paradis: made in between 1742 and 1757, it was begun in 495/1040, which seems to confirm the existence of Abû Zayd al-Sarudî, for he might have been driven from Sarudî when the town was taken by the Crusaders in 494/1000 [see SARUDJ] and have taken refuge in Basra. Al-Harîrî, whose duties brought him into contact with various high dignitaries of Baghâdâd, might have been encouraged in his enterprise by the future vizier of al-Mustarshid (517/1122-1128), Ibn Şâdakî [q.v.], to whom he dedicated his makâmât, at any rate if the dedication on the autograph manuscript that Ibn Khallîkân happened to see in Cairo in 656/1258 is to be believed; one must then, it seems, reject the version attested by the son of al-Harîrî, who wanted to curry favour with Anûshirrân b. Khâlid [q.v.], that it was dedicated to this latter, the minister only from 517/1122. The date of completion, 495-538/1040-1116, which sometimes laborious—is not known with certainty, but from 502/1108 the Andalusian Yûsuf b. ‘Ali al-Kûdî, who had studied them under the author, made them known in Spain and explained them some years later to Ibn Khâyr al-Igdiîli [q.v.]; from the beginning of the 6th/11th century they were part of the curriculum of literary Andalusians (see for example al-Rû’aynî, Barnâmâdî, Damascus 1962, 32, 33, 44, 51, 60, 79). They were already classics in the lifetime of the author, who died on 6 Ra’dâb 516/10 September 1122, and he himself boasts of having personally authorized 700 copies (Yağkût, Udbâbî, xvi, 267); they never afterwards ceased to be popular with the literary public, in spite of the criticisms of various detractors, such as Dîyû al-Dîn Ibn al-Atîr and the author of the Fâhîrî: (al-)Shumaym al-Hillî [q.v.] himself, who claimed to be able to surpass all literary works, admits that despite several attempts he did not succeed in writing makâmât better than those of al-Harîrî, which decided him to write a commentary, one of the twenty which are known and of which the most famous and the most complete is that of al-Sharîjî (d. 639/1242 [q.v.]).

His letters (nasâdîl) have been selected in his *Kharîda*, and Yakût has included in a few his biography of al-Harîrî; two among these in which all the contents contain a sin and a sha*î* respectively (hence their names of sinîyya and sha*î*yya) are typical examples of the opposite ends of al-Harîrî's taste for mere virtuosity without content.

He is also the author of a *Divân*, which has not survived, and of a didactic *urdjâna* on grammar, the *Mulhat al-urvb*, written at the prompting of Ibn al-ţîmîdî and accompanied by a commentary, of which Yakût gives some idea.

**Bibliography:** Yakût, *Udâdîl*, xvi, 261-93 = *Isâdîl* vi, 179-84; Ibn Khallîkân, i, 419 ff.; 'Imad al-Dîn al-İsľâhâni has preserved some in his *Kharîda*, and Yakût has included in a few his biography of al-Harîrî; two among these in which all the contents contain a sin and a sha*î* respectively (hence their names of sinîyya and sha*î*yya) are typical examples of the opposite ends of al-Harîrî's taste for mere virtuosity without content.

The information that we possess in respect of his life deserves no credence, and the poem that is the cause of his renown is in itself so suspect that Tâhâ ʻUsayn considers it to be totally apocryphal (cf. also al-Ḥâjîb, *Bayânîn*, iii, 49, on the questions of other verses). This *sîdâra* in *khâfrîf* metre and with *dârî* rhyme (with an *sâfî* in one verse in *-dâ*), is said by legendary tradition to have been improvised (though it has none of the signs of improvisation) in the following circumstances: after the king of al-Hira al-Mundhir b. Mâ‘ al-Sâmî had restored peace between the tribes of Bakr [*q.v.*] and Taghîbî [*q.v.*] which the war of al-Basîs [*q.v.*] had broken, hostages from the two tribes were compelled to remain with the sovereign; the war of al-Basîs being concluded, the sovereignty of Amr b. Hind [*q.v.*], which had suffered dying by accident, their tribe asked for recompense from the Bakr, who refused, and then complained to the king; it was then that al-Ḥâjîb, who had the task of pleading the case for the tribe against the Taghîbî (whose spokesman was ʻAmr b. Kûlîhûm [*q.v.*]), recited his poem in the *magâlis* of the king, who had ordered hangings to be set up to keep him apart from the poet, since the latter had been reduced to barbarity (barâsâr); overcome by al-Ḥâjîb’s talent, ʻAmr b. Hind is said to have had the hangings drawn up, one after another, and to have treated the poet with singular marks of esteem, although in general he inclined towards the Taghîbî.

The political aim of this *mu*îlalâba is undeniable; the section reserved for nasâdîl and descriptions is cut short, while the plea on behalf of the Bakr is more highly developed and is accompanied by criticisms of the Taghîbî who are invited to put an end to their recriminations. The poem, an eloquent fragment, would be of documentary interest if it could be regarded as authentic.

**Bibliography:** it is possible that the lines attributed to al-Ḥâjîb were put together by Sukkarî from the works of the Banu Yashkur (cf. Fîhrîs, *al-Hamaddîn*, *choix de maqâmad*, Paris 1957, 42-7. (D. S. Margoliouth-[Ch. Pellat])

al-Ḥârîth b. Dîjabâla, A.D. 529-569, the most famous of all the kings of Ghassân [*q.v.*] in the military annals of Arabia, and in the history of Byzantium and of Monophysitism in the sixth century.

As the phylarch and ally of Byzantium he led his mounted contingent against the Persians and their Arab allies, the Lakhmids, in the wars of Justinian’s reign and distinguished himself in two of its military operations: the battle of Callinicum, A.D. 537, and the Assyrian campaign, A.D. 541. At Yawm Hallîma [*q.v.*] in A.D. 554 he triumphed decisively over the Lakhmîd Mundhir.

As a believer in the One Nature of Christ, he vowed to remain with the sovereign; during the Assyrian campaign, A.D. 541. At Yawm Halima [*q.v.*], he was repudiated by Ibn al-Tîlîmîdî and accompanied by a commentary, of which Yakût gives some idea.

al-Ḥârîth b. Hîllîza al-Ŷâskurî, a pre-Islamic Arab poet to whom is attributed principally a *basîda* which mediaeval critics regarded as the seventh of the *mu*îlalâba [*q.v.*]. The information that we possess in respect of his life deserves no credence, and the poem that is the cause of his renown is in itself so suspect that Tâhâ ʻUsayn considers it to be totally apocryphal (cf. also al-Ḥâjîb, *Bayânîn*, iii, 49, on the questions of other verses). This *sîdâra* in *khâfrîf* metre and with *dârî* rhyme (with an *sâfî* in one verse in *-dâ*), is said by legendary tradition to have been improvised (though it has none of the signs of improvisation) in the following circumstances: after the king of al-Hira al-Mundhir b. Mâ‘ al-Sâmî had restored peace between the tribes of Bakr [*q.v.*] and Taghîbî [*q.v.*] which the war of al-Basîs [*q.v.*] had broken, hostages from the two tribes were compelled to remain with the sovereign; the war of al-Basîs being concluded, the sovereignty of Amr b. Hind [*q.v.*], which had suffered dying by accident, their tribe asked for recompense from the Bakr, who refused, and then complained to the king; it was then that al-Ḥâjîb, who had the task of pleading the case for the tribe against the Taghîbî (whose spokesman was ʻAmr b. Kûlîhûm [*q.v.*]), recited his poem in the *magâlis* of the king, who had ordered hangings to be set up to keep him apart from the poet, since the latter had been reduced to barbarity (barâsâr); overcome by al-Ḥâjîb’s talent, ʻAmr b. Hind is said to have had the hangings drawn up, one after another, and to have treated the poet with singular marks of esteem, although in general he inclined towards the Taghîbî.

The political aim of this *mu*îlalâba is undeniable; the section reserved for nasâdîl and descriptions is cut short, while the plea on behalf of the Bakr is more highly developed and is accompanied by criticisms of the Taghîbî who are invited to put an end to their recriminations. The poem, an eloquent fragment, would be of documentary interest if it could be regarded as authentic.

**Bibliography:** it is possible that the lines attributed to al-Ḥâjîb were put together by Sukkarî from the works of the Banu Yashkur (cf. Fîhrîs, *al-Hamaddîn*, *choix de maqâmad*, Paris 1957, 42-7. (D. S. Margoliouth-[Ch. Pellat])

al-Ḥârîth b. Dîjabâla, A.D. 529-569, the most famous of all the kings of Ghassân [*q.v.*] in the military annals of Arabia, and in the history of Byzantium and of Monophysitism in the sixth century.

As the phylarch and ally of Byzantium he led his mounted contingent against the Persians and their Arab allies, the Lakhmîds, in the wars of Justinian’s reign and distinguished himself in two of its military operations: the battle of Callinicum, A.D. 537, and the Assyrian campaign, A.D. 541. At Yawm Hallîma [*q.v.*] in A.D. 554 he triumphed decisively over the Lakhmîd Mundhir.

As a believer in the One Nature of Christ, he vowed to remain with the sovereign; during the Assyrian campaign, A.D. 541. At Yawm Halima [*q.v.*], he was repudiated by Ibn al-Tîlîmîdî and accompanied by a commentary, of which Yakût gives some idea.

(Ch. Pellat)

Banu 'l-Harith b. ka'b, usually called Bahrari, an Arab tribe belonging to the Yemeni group. Their genealogy is: al-Harith b. ka'b b. 'Amr b. 'Ula b. 'Asim b. MADbudi (Maliq).

They lived in the district of Nadirjan [50], and were neighbours of the Baljarith. The following places amongst others belonged to them: al-'Arsh, al-'Adh, Bait al-Dhuhbah, Dhu 'l-Marrat, al-Furut (pl. Afrat, between Nadirjan and the Djawd, Hadura (Khadura), 'Ayyana, al-Khashaqa (between Hadzah and Tihama), Kurrah, Sabab, Sam al-Sudan or Sawbdan, Minan or Maynan, Shatib Ziyad (belonging to the clan Ziyad); wadies: 'Aynah Dibal, al-Bahrja, al-Djafr, al-Hasr, Hitm, al-Kawakab, Khatma (Khitma, a well in the sand), Khulayka, al-Malabaht, Mawa, al-Shallil (belonging to the clan D'ar), Shisah, Yamadat; mountains: Tukhtum.

Sections of the Bahrari lived also in Raydat al-Say'ar in Hadramawt, in the town of Rada (inhabited by the 'Ans and Khawlan), in the villages al-Šama and Hadakan, which belonged to the Bakil, and in al-Faladja near Damascus.

In the Dižilitiya a section of the Bahrari worshipped the idol Yaghuth. Another section professed Christianity. The 'Abd al-Madān b. al-Dayyān, a prominent family of the Bahrari, built a large church, Dayr Nādiran, also called the Ka'bah of Nādiran (according to many authorities, a tent composed of 300 pieces of hide).

Historical. The idol Yaghuth was the cause of a battle between the Bahrari and the Murra, who claimed Yaghuth for themselves, at al-Razm (in the south of Nadirjan, in the land of the Murra) on the same day as the battle of Badr (17, 19 or 21 Ramaḍān of the year 2). The Bahrari, allied with the Hamdān, inflicted a severe defeat on the Murra, and Yaghuth remained in their possession. On the "second day of Kulab" (in the Dhahna) the Bahrari (under Nu'mān b. 'Ansāfa) fought against the Tihama, the Dayyan, the Sai'd-Murra, and the Bahrari (under Kays b. 'Aṣim). On the side of the Bahrari were Hamdān, Kinda, Kud'a and other tribes, in all about 8000 strong, divided into four divisions, with four leaders, who all bore the name Yaghuth and were under the supreme command of 'Abd Yaghuth b. Šalāt. In this battle the Bahrari were defeated. The chiefs of the allied armies fell and 'Abd Yaghuth was wounded. Of other battles of the Bahrari we may mention that of Hijra (in Tihama) against the Daws, in which the Bahrari were again defeated, and that of Bait al-Dhahāb.

We find the Bahrari already in possession of Nadirjan when the 'Azd, with whom they had many disputes, left the Yemen under 'Amr b. 'Amir Mūsā b. 'Abd al-Malik, who summoned the Bahrari of Nadirjan to arrive at a treaty. When Muhammad's call had gone out through all Arabia, the Christians among the Bahrari (in about 6/630) sent a deputation to the Prophet in Medina, which consisted mainly of ecclesiastics, including a bishop, Abuga'ibah. They arranged an interview with the Prophet at a place near Medina, where they were to undergo a trial by the ordeal called mubdha'ta (ceremony of objuration). But when they were convinced of Muhammad's mission and feared a defeat, they begged the Prophet to cancel the arrangement. The Prophet agreed on condition that they paid tribute. In Rabii' I of the year 10/632 Muhammad sent Khaibāl b. Wālī with 480 men to the Bahrari to demand that they should adopt Islam. Those who were Heathen and a number of the Christians submitted and Khaibāl remained among them to instruct them in the Kur'an and the institutions of Islam. After some time Khaibāl returned with a deputation of the Bahrari (among them two members of the Christian family of 'Abd al-Madān) to the Prophet. Muhammad dismissed the deputation and appointed one of them, Kays b. al-Husayn, amir of the Bahrari. Then in 11/633 the false prophet al-Awasad al-Ansī [q.v.], appeared the Bahrari, influenced by his emissaries, followed him. They drove out the governor of Nadirjan (Amr b. Hāzm) and the al-Awasad entered the town in triumph. The Muslims remained faithful to Islam under Abū Bakr, and the Christians renewed the treaty.

[Owing to circumstances beyond their control, the Editors are unable to supply, as they had planned to do, a revised text of this article. For the convenience of readers they re-print the article which appeared in the first edition. A new article, if it were, is hoped, will be included in the Supplement]
Allah al- Kasri [q.v.], succeeded by vigorous action in recapitulating Balgh and compelled al-Harith to cross the Oxus. Al-Harith, aided by the forces of the local leaders, laid siege to Tirmidh, but failed to conquer the city and was compelled to retreat to the fortress of Tabushkân in Turkhastân. A force sent by Asad under the command of Djuday al-Kirmâni besieged the fortress; the adherents of al-Harith insisted on leaving and surrendered to the besieging force. Some of them were decapitated; the women were sold as slaves (118/736).

Al-Harith with his force joined the Khabkân of the Turgesh [q.v.]. He fought valiantly on the Khabkán's side in the encounter of Kharistân and defended his retreat when his army was defeated (119/737). Al-Harith assisted the Khabkân in the preparations for a new expedition and received from the Khabkân 5000 horses. The Khabkân was, however, murdered and the power of the Turgesh collapsed. Asad died in 120/738.

The new governor, Naṣr b. Sayyâr, marched in 122/740 with an army against Shâsh, which served as a base for the forces of al-Harith. There was an encounter between the troops of Naṣr and al-Harith but the battle between the forces of Shâsh and the army of Naṣr was prevented by an agreement between them, by which the ruler of Shâsh would deport al-Harith to Farab. The assumption of the city and was compelled to retreat to the fortress of Shâsh (118/736).

The Khakan was, however, murdered and the power of the Turgesh collapsed. Asad died in 120/738.

The new governor, Naṣr b. Sayyâr, marched in 122/740 with an army against Shâsh, which served as a base for the forces of al-Harith. There was an encounter between the troops of Naṣr and al-Harith but the battle between the forces of Shâsh and the army of Naṣr was prevented by an agreement between them, by which the ruler of Shâsh would deport al-Harith to Farab. The assumption of the city and was compelled to retreat to the fortress of Shâsh (118/736).

Naṣr apprehended that the dangerous rebel might incite the Turkish rulers to lead a new expedition against him. These fears would seem to be reasonable in view of the instability of the central government after the death of Hishám, the tensions between the Muqarrab and the Yemenis in Khurásân, as well as the dissatisfaction of the native rulers with the power of Shâsh. This explains why Naṣr pleaded with the Caliph, Yazid b. al-Walîd, to pardon al-Harith. The letter of safe-conduct granted to al-Harith by the Caliph promised to return the confiscated property of the adherents of al-Harith and to act according to the ordinances of “The Book and the Sunna”.

When al-Harith came back to Marw in 127/745 he reiterated his request to act in accordance with the ordinances of “The Book and the Sunna”. He justified his struggle against the administration and his secession from the community by the statement that “the few who obey God are many and the many who disobey God are few”. He was welcomed by Naṣr and the people of Marw; his son Muhammad and his daughter al-Allâ, who were detained, were released. Naṣr offered to appoint him as governor of a district, but he refused. He divided the gifts given to him by Naṣr among his adherents. He demanded of Naṣr that he should appoint as officials only decent and righteous people.

Shortly after his arrival, al-Harith was joined by 3000 Tanûmls who gave him the oath of allegiance. He encamped outside Marw, and instructed Djahm b. Saqwân [q.v.] to read his “sûra”, setting himself up against Naṣr. Djuday al-Kirmâni joined al-Harith for a short time. However they fell out, their forces clashed and al-Harith was killed in 128/746.

Al-Harith is mentioned as a Murjî‘î. His secretary was Djahm b. Saqwân. In his political activity he followed in the steps of Abu ‘l-Sâyâdâ, who fought for the rights of the mawâlî; some of the companions of Abu ‘l-Sâyâdâ fought on the side of al-Harith. Al-Harith and his followers are the only group in early Islam which seceded from the community and aided the unbelievers against their brethren with the aim of establishing a government acting according to the ordinances of the Qur’ân and the Sunna. In the force of al-Harith are mentioned “abi al-basîr” people of a religious conviction, whom al-Harith used to consult. When al-Harith returned he came back with his šâhid. The black flags raised by al-Harith seem to have been an imitation of the sunna of the Prophet. A special feature of this peculiar group was the habit of appealing to the enemy during the battle to join them by using moral and religious arguments. Al-Harith seems to have had a feeling of inferiority, as he apparently lived an ascetic life and wanted to establish a just government resembling that of the Prophet and the first Caliphs. He demanded that the principle of election of the Sheikr [q.v.] should be followed. A satirical verse recited after his death claims that he hoped to be a Caliph: “The son of a saddle [Ibn Sard] hopes to be a Caliph: How remote are the means of the Caliphate from a saddle”.

HARITHA B. BADR AL-GHUĐANI, poet and notable of the Tamûni clan of the Banû Ghudâna, at Baṣra. Born probably soon before the Hidjarâ, he appears while still young to have been a follower of the poetess Sâdîqi [q.v.] and then, having settled in Baṣra, he fought at the battle of the Camel [see al-Djâmâlî] against ‘Ali, but afterwards joined his cause; however, as soon as Ziyâd arrived in ‘Irâk in 45/665 he became a fervent supporter of the new governor, who finally entered him on the tribal pay-roll of the Kuraysh to increase his emoluments. Some satirical verses of the poet whom Ziyâd matched against him, Anas b. Abî Unâs, reveal that at some point he was nominated ûmîl of Surrak, in Ahwâz, but it was chiefly during the disturbances which followed the death of Yazid I that he played some part in politics, although this is not made very clear in the sources which allude to it; however, he seems to have taken part in the struggle against the Khârijûs who were threatening Baṣra, and to have met his death by drowning during a campaign, in 64/668 or 66/668 (I. Goldzïher, Muh. St., ii, 158, wrongly gives the date 50).

Hâriţa is a picturesque figure of the first half of the nîth century. Though well known for his eloquence, wisdom and knowledge of historical traditions and genealogy, the reputation that he has left behind is principally that of an inveterate drinker, whose foibles Ziyâd tolerated, whilst his sons were not averse from keeping him company. He may be regarded as one of the first baccic poets of the Muslim period, but almost nothing of his work survives; some gnomic verses of his are still quoted, and also a funeral oration for Ziyâd, part of which has been preserved (see al-Djâbiş, Hayyâwân, vii, 159;
HARITHA B. BADR AL-GHADANI — HARKARN

HARIYANA, name given to the tract of country in the Indian Punjab to the north-west of Dillh, surrounding the towns of Hānṣāl [q.v.] and Ḥiṣār Fīruzā [q.v.]. In the present Hārīyana district and extending east and south of the Rohtā [q.v.] district; it lies south of the Ghaggar stream—which partly coincides with the ancient Saraswati river which once joined the Indus [see SİNDH], but little more than a monsoon drainage channel whose waters are lost in the Rādжаśtān sands—and is traversed by Fīrūz Shāh Tughlūk's West Dīmāna canal [for the history of this see references s.v. ΓΑΜΜΑ]. The name seems to mean "green tract", although the region is now semi-desert (for the modern condition see Regional Geography, London 1954, p. 154-6). A popular etymology connects the name with a legendary king called Hari Cand.

The region was of some strategic importance to the rulers of Dillh, as it lay on the more southerly route to that city from Khurāsān via Mūltān and the southern Pāndjāb (the northern approach to Dillh being through Sirhind [q.v.]). According to a Sanskrit inscription of the time of Ghiyāth al-Ďīn Balban, "Hārīyānaka" was ruled first by the Tomars, then by the Cahāns, then by the "Saka" kings Sāhavadāna (Shihāb al-Ďīn, i.q. Mu‘īz al-Ďīn Muhammad b. Sām), Ṣuduvadāna (Kūfī al-Ďīn Aybak); at this time the Sanskrit character Șa was generally pronounced in north India as kha, etc., down to Gaya-saddar. It passed naturally to the Mughals after their conquest of the conquered districts to the Sīkh in 1797-8 and a Bhattī chief was at one time appointed nāsīm of Ḥiṣār; but neither he nor subsequent governors of Hānṣāl and Ḥiṣār could stem Amar Singh's Sīkh forces, and the whole district fell into Sīkh hands until the Mughal-Sikh treaty of Dījind, in 1781, restored Hārīyana to the Mughal empire, Fāṭehābād and Sīrās to the Bhattīs, and assigned the remainder of the conquered districts to the Sīkhs. In 1797-8 the English adventurer George Thomas overran Hārīyana and established his capital at Hānṣāl; he was eventually overcome by Bourquin for Sīndhia, and in 1803 Hārīyana passed into Marāṭhā hands; in 1803 it was ceded to Sīndhia to the British government.

The district is well known for cattle breeding, and Sūnā cattle are much prized in India.

HARKARN, b. MATHURĀDĀS, a Kaśībōh [q.v.] of Mūltān, known chiefly for his collection of letters (inşāb), entitled Irshād al-ṭalābīn but popularly called Inşāb-i Harkarn. Nothing is known about his early life or the teachers from whom he learnt Persia, the court language of the day. He was employed for some time as a secretary (mushāq) by Iṭībār Shāh khwānīdās-sardī, most probably a Hindu convert to Islam and an influential eunuch, who was from very early years a confidant and retainer of the Mughal emperor Diwāṅghūr [q.v.]. It is not exactly known when Harkarn entered the service of Iṭībār Shāh. In 1032/1622 Iṭībār Shāh was appointed governor of Āgra, where Harkarn got the chance to display his literary talents as an official secretary, as he had spent a lifetime in the exercise of that profession (cf. preamble to his Inşāb). After the death of Iṭībār Shāh, later called Muntāz Shāh, Harkarn left Āgra and while in Mathurā, probably on a pilgrimage, he compiled his Inşāb between 1034/1625 and 1040/1631 (cf. Ethē, 205x). Divided into seven bābd (sections) it contains model letters of appointment of state officials, besides various kinds of other official documents (ed. with English translation by Francis Balfour under the title Zahr, 914; Aghdnt, xxi, 20-44, and index; Ibn Durayd, Firdāshī, 160; Ibn ‘Abd Rabbīb, ‘Iltif, 1331/1913 ed., iv, 322-3; Ibn Ḥāḍjar, Isbāba, no. 1937; Ibn Abī ‘l-Hadīd, Shārkh Nāhūl al-balagha, i, 304-3; 385-4; H. Lammens, in RSO, iv, 120-1; idem, Ceylonvadās, Beirut 1935; passim; C. A. Nallina, Letteratura, 146 (Fr. tr., 224-5); Ch. Pellet, Mīsān, 154-6. (H. Lammens-Ch. Pellet)

HARKARN — AL-HARRA

1831; lith. Lahore 1869, 1871). The Inshār of Harkarn was used by the British in India, during the days of the East India Company, as a model for diplomatic correspondence with the native princes and potentates. It was also extensively used in maktabs (primary schools) and madrasas in India to give a good grounding to students in Persian letter-writing. With the discontinuance of Persian as the court language this book fell into disuse.

HARRA, a basalt desert, "a district covered with black broken stones, which looks as if it had been burned by fire". Such harras, which owe their origin to subterranean volcanoes which have repeatedly covered the undulating desert with a bed of lava, are found particularly in the east of Hawrān and stretch from there to Medina. Al-Samhūl, Khuldsat al-wafa bi-akhbār ddr al-Mustafīd, Mecca ed., 1316, 38 gives a detailed description of a great earthquake at Medina which began on 5 Jumādā II 654/26 June 1256 and lasted several days (see also Wüstenfeld, Geschichte von Madynia). There is perhaps, as Wetzstein suggested, an allusion to these fearful stony wastes in Jeremiah xvi 6 (Dmnd). Yākūt, ii, 247 ff., details no less than 29 of these harras with their names (see ZDMG, xxli (1868), 385-6). An accurate map, with an index of names to the whole territory in which harras are found, is published in the Zeitschr. des Deutsch. Palästinaevers, xiii, in the narrative of A. Stübel's journey to Direk al-Tufil and Hawrān (1882). The same author has also discussed the supposed origin of such deserts of stones in Die Vulkanberge von Ecuador after v. Oppenheim, Vom Mittelemeer zum Pers. Golf, i, 90, note 5 (where also, i, 89 ff., bibliographical references are given). See also v. Oppenheim in Petermanns Mitteil., 1896 (Zur Routenakte ihrer Reise von Damaskus nach Baṣra in dem Jahre 1893); Doughty, Travels in Arabia Deserta, Cambridge 1888, 24, 419 f. and index; D. G. Hogarth, The penetrated of Arabia, London 1904, 4, 81, 168 f., 259, 284, 339; H. Lammens, Le berceau de VIslam, Rome 1914, 72. (Ed.)

AL-HARRA. Of all the harras dealt with in the preceding article, the one that stretches through the gardens of Medina on the northeastern side of the town, known as the Harrat Wākīm, became, thanks to a famous battle in 63/668, al-Harra par excellence.

The situation in Medina was seriously disturbed some time after the accession to the throne of Muʿāwiyah's son Yazid. It led to a rebellion provoked by the indignation felt by men of piety at Yazid's scandalous mode of life. Yazid's conduct and the conviction that it was impossible to obey an imām of such a type. Beneath the religious aspects of the movement, economic motives may have been concealed. For it is certainly possible that the interests of a great part of the local elements had been upset or threatened in a general way by Muʿāwiyah's fiscal reforms, which compelled the provinces to contribute towards the expenses of the State, and, in particular, by the reorganization of the system of pensions, which Muʿāwiyah had proposed to establish upon the basic principle that pensions must be the reward for services, especially military, rendered to the government (cf. Lammens, Le califat de Yazid Ier, 408-413); in the Holy Cities there was a group of individuals and families, their exact number difficult to define, who, under this principle, could no longer be on the pay-roll in their capacity as heirs of the first beneficiaries of pensions.

The governor of Medina, ʿUṯmān b. Muḥammad b. Abī Sufyān, appointed by Yazid (end of 62/668 or beginning of 63/669), was too young and inexperienced to control the situation (al-Ṭabarī, ii, 402). The caliph proposed (al-Balāḏūrī, 31) that a Medinese delegation should be sent to him in the hope of being reconciled with the malcontents by means of his generosity, but the delegates, though loaded with gifts and bounties, on their return to the Hijāz incited their fellow-citizens to revolt by their accounts of the caliph's scandalous mode of life.

Alarmed by the situation in the Hijāz, Yazid once again tried the method of conciliation: he sent, first to Medina, then to Mecca, a mission headed by al-Nuʿmān b. Baṣhir [q.v.], but it did not succeed in restoring calm. The Medinese malcontents found an opportunity to come out in open revolt when a mausil arrived to supervise the harvests from the lands (sawāfi) belonging to the caliph. A scene then took place in the chief mosque (beginning of 63/668) that is reminiscent of pre-Islamic customs: the rebels took off their sandals, turbans and burnous which had been used in the court-yard of Medina and which, on the other hand, lays stress on the Ansār. Yazid, they were dissatisfied with this choice, which gave predominance to the Ansār, they also nominated 'Abd Allāh b. Muṭṭī al-Adawī as commander of the group of the Medinans and Maʿṣūd, and Maʿṣūd b. Simān al-Aḥsāʾī commander of the non-Kurayshī Muḥājjirūn. (It should be noted here that the Tālibīs and the ʿAbbāsīs had refrained from joining the dissidents and continued to hold aloof when the revolt broke out.) Wellhausen observes, we think justly, that in this great revolt the Ansār did not fight for themselves as a separate party. Lammens, on the other hand, lays stress on the Ansār, the character of the movement itself and even if the Tālibīs were in majority in Medina and included the most active agitators there, the presence of groups of Kurayshī and non-Kurayshī Muḥājjirūn, exerting such pressure that it was decided to give them their own chiefs, contradicts his opinion.

After the scene in the mosque, the attitude of the rebels towards the Umayyads became so aggressive that the latter, with their maʿṣūdās, adherents and servants, gathered together inside the precincts of Marwān's houses (dār) outside the town and appealed to the caliph for immediate aid. Though disguised by their lack of initiative (for in fact they numbered about a thousand men), Yazid decided to send an army to the Hijāz; but the principal objective was to subdue Ibn al-Zubayr, since it was thought that a military demonstration would suffice to bring the Medinese to heel. The choice of a general presented difficulties. 'Amr b. Saʿīd al-Asḥāḏ [q.v.], a former governor of Medina, refused the mission since he was unwilling to shed the blood "of Kurayshī", and 'Ubayd Allāh b. Ziyād [q.v.] certainly had no desire, after the slaughter of the 'Alīds at Karbala', to undertake a second equally odious campaign. Yazid then approached ʿUṯmān b. ʿUṯmān b. Merri [q.v.], an old soldier who was deeply devoted to the Umayyads and who did not strive in matters of discipline. Since
he was of great age and his infirmities had grown worse during the preparations for the expeditionary force. Muslim set off in a litter.

Although the exact numerical strength of his army cannot be given (estimates vary from 4,000 to 12,000 men), it is at least possible to say that it had been very well equipped, in anticipation of a difficult and detested campaign; each soldier received a bonus of 100 dinars, in addition to his ordinary full pay.

On the news of Muslim's advance, the rebels tightened their siege of the där; finally the Umayyads were forced to make a sortie. This sortie would not give any assistance to the Syrian army; they met Muslim at Wādī l-Kūrā; a number of them continued their journey towards Syria, but the greater part, with Marwān at their head, joined the expeditionary force.

Reaching the oasis of Medina, Muslim went to pitch his camp on the härta. The Medinees had had time to dig and fortify a trench, on the vulnerable side of the town (or to repair the one dug by the Prophet in 5/627), and it was there that a severe battle took place when the three days' respite allowed by Muslim for negotiation had elapsed and when a final appeal for unity had failed. The offer of two annual payments made by Muslim in the caliph's name, and the promise of a marked reduction in the price of corn (al-Bayyāqī, 65, etc.) provide further, and specific, proof that economic motives also had led the Medinees to revolt. Muslim controlled his troops' movements from the top of a platform (hursū) or stretcher (saris), but it seems that when the Medineese cavalry charged and reached their tent he mounted his horse and took an active part in the battle, at least during the critical moments (al-Tābari, ii, 414-6). At first, the battle went in favour of the rebels, but it ended in the defeat of the Medinees when Marwān obtained permission from the Banū Ḥāritha to pass through them with their quarter of a detachment of cavalry and took the defenders of the trench from the rear. The Medinees fled "like ostriches"; the Kurāyshīs were the first to take to flight and seek refuge in Mecca. Ibn Ḥaṣanla resisted bravely and fell with his eight sons (or most of them) and a handful of men as resolute as himself. Pursuing the fugitives into the town, the Syrians abandoned themselves to an appalling pillage which continued for three days and which drove out, after swearing that they would recognize themselves to be the slaves of the caliph, who was thus free to sell them and their possessions alike. Some individuals who refused to submit to this demand or who stipulated as a condition for their bay'a that Yazid should undertake to follow the Kurān and the Sunna of the Prophet (according to one account, also that of Abū Bakr and 'Umar) were executed. Among those whom Muslim did not spare was his old friend Maṣ'īl b. Sinān, leader of the Muḥājirūn during the revolt (but he had sworn that, if he met him, he would kill him). One of the caliph 'Uṯmān's sons, who was suspected of having wanted to play a double game, had his beard torn out.

For the pre-Islamic history of Harrān reference may be made to A. Mez's monograph (Die Stadt Harran bis zum Einfall der Araber, Strassburg 1892) and Weis-

HARRAN

bach's article in Pauly-Wissowa, s.v. xo$dcv (pp. 2009-21). Harran was peacefully occupied by the Arabs during the Caliphate of 'Umar in 19/640. At that time it was named Haran in Arabic. The town was built on the bank of the river Dîyâr Muşlar. According to Balâdhûrî, who gives a full account of the conquest of the Dîjâzra, Harran capitulated to 'Iyâdh ibn Ghânam (Balâdhûrî, Fûsûk, 174). Ibn Abî Usaybi'â states that the Umayyad Caliph 'Umar II transferred a school of medicine from Alexandria to Harran ("Uyûn al-andalû fi tabâbût al-âlîbî", ed. Müller, Cairo 1882, i, 170). Mayyâd ibn Mâdin Harrân in his Hâjmâ' of Harran is mentioned in the capital of the Umayyad Empire. Though information about his building activities is meagre, we may presume that the first mosque of Harran was constructed during his reign (see below). Ya'sûbî mentions that Marwân built his palace in a place called dobbâb al-bayyân and spent some 10 million dirhems on it (Ta'ârikh, ii, 405). Mez tried to identify the Citadel with Marwân's palace (op. cit., 11), but D. S. Rice refuted his theory (see D. S. Rice, Medieval Harran, in Anatolian Studies, ii (1952), 38). When the 'Abbâsids occupied Iran and the larger part of Mesopotamia, it was from Harran that Marwân set out at the head of an army of 14,000 to meet the 'Abbâsîd army. After his defeat the palace at Harran was looted and destroyed (Tabari, iii, 45).

During the 'Abbâsîd period Harrân is not mentioned until Hârûn al-Rashîd's time, when he constructed a canal from the river Dîjûlbâb to Harrân to assure the water supply of the city. Then in 213/828 the Caliph al-Ma'mûn passed through the town during his campaign against the Byzantines. It was at that time that al-Ma'mûn offered the heathen inhabitants the choice between the adoption of Islam, or of any one of the tolerated religions, or extermination. They claimed to be Sâbi'ans, which was one of the accepted religions, and that saved them from extermination (Ibn al-Nadîm al-Bâghdâdî, al-Fihrist, translated in Chwolson, Die Sabier und der Sabismus, St. Petersburg 1836, ii, 14-17). Harrân played an important part in the cultural field during the early 'Abbâsîd period. The town was the home of one of the most important schools of translators, and under the guidance of Thabit b. Qurra (q.v.) Sâbi'ân scholars translated Greek literature, as well as the works of the Saba'ïc mathematicians and astronomy into Arabic. The famous astronomer al-Battâni (q.v.), Albântenius in Latin, was a native of Harran and worked there. Harrân was also a Hânbal stronghold (Muhammad Dâmil al-Shâti, Mukhtâsar Tabâbût al-Ifandîâl, Damascus 1339/1920, 48). The Sâbi'ans did not enjoy religious freedom for very long; their persecution started in the early 5th/11th century, and the last Sâbi'ân temple was destroyed at that time.

Harrân subsequently came under the suzerainty of a nomad petty dynasty, the Numayrids (q.v.). The dynasty was founded by a certain Wâthibbâb (380-410/990-1019) (Rice, op. cit., 56-7, and 74-84). There is an inscription on the south-east gateway of the Citadel, which gives the name of Manî', the third Numayrid ruler. The inscription gives the date 451/1059, which means that he must have been the lord of Harrân by that time. He maintained the position until his death in 456/1063 (Rice, op. cit., 53 and 55). The Numayrids recognized the suzerainty of the Fatimid caliphs, who ruled over Harrân and the region until 474/1081. In that year the 'Ukayyîd Shârâf al-Dawla, an ally of the Sâbi'â'ât, occupied Harrân. Yahyâ b. al-Shâ'îrî was appointed governor of the city, but two years later the Harrânians rebelled against him and expelled the Sâbi'â'ât. The rebellion was quickly and cruelly suppressed. After the Crusaders occupied Edessa they cut off the water supply from Harrân in 1104 (Rice, in Anatolian Studies, ii (1952), 38). 'Ummâd al-Dîn Zangî founded the Zangid dynasty in Mosul and attached Harrân to his principality in 521/1127. Harrân flourished and was beautified by Nur al-Dîn, who took possession of the city in 544/1149, and later by Saladin. It became customary at about that time to appoint two governors of Harrân, one for the city and another for the citadel. By the end of the 6th/12th century, Muhammad al-Dîn Abâ Sa'id Gûkûbî was the lord of Harrân, having received the city as a fief in 557/1161 (Ibn al-Athir, xi, 37). It was in Gûkûbî's time, in 1184, that the famous Spanish-Arab traveller, Ibn Qûbays, visited Harran and gave a detailed account of its mosques and bazaars (see below). Muhammad al-Dîn recognized the suzerainty of Saladin. It was Saladin who enlarged and re-decorated the Great Mosque of the city. The enlargement was necessary since the number of Muslims had greatly increased. Later, in 587/1191, Saladin offered Harrân to his brother, al-Malîk al-'Adîl, who rebuilt the citadel (Ibn Shaddâd, al-A'zîbî fî mû'arrâ' al-Shâm wa 'l-dawrîs wa 'l-dajâsra, Bodleian Library MS, tr. in Rice, op. cit., 45). There were two great earthquakes in Harrân during the 6th/12th century, the first in 508/1114 and the second, the stronger, in 552/1161. Between 509 and 565/1103 and 1228-9, Hâdîbî 'Ali was governor of Harrân for the Ayyûbîd Sultan al-Malîk al-Asghaf (Ibn Shaddâd, Rice's tr., op. cit., 42). In 653/1237 the Khârizmians, fleeing from the Mongols, occupied the town of Harrân, and afterwards the citadel. Three years later, in 658/1220, the town and the citadel were re-taken by the Ayyûbîd al-Malîk al-Nâşir. Ayyûbîd rule in Harrân, and Harrân's history as a city, however, soon came to an end. Shortly after the Mongols appeared before its gates, first the city, and shortly afterwards the citadel, surrendered peacefully to them. Abu 'l-Kâsim, the grandson of the famous Shaykh Hayâtî, whose shrine still stands outside the city walls to the west (see below), negotiated with Hulagu over the surrender of the citadel (D. S. Rice, A Muslim shrine ..., 477). After the Mamlûk victory over the Mongols in 703/1303, the Dîjâzra, including Harrân, came under Mamlûk rule. The town, however, was never rebuilt. The citadel, it seems, fulfilled an important function in 715/1315, as is attested by an inscription on its south-west tower (see below). Today the whole town is in ruins, inhabited only by nomad Beduins who live in mud-brick bee-hive huts.

ii. — ARCHITECTURE

The town, which was oblong in shape, was surrounded by a stone wall surmounted by intermediate towers and intersected by eight gates (Pl. IX, nos. 5-12). The perimeter of the town is given in a manuscript as 7612 cubits, that is 3943 metres (Rice, in Anatolian Studies, ii (1952), 38). The ruins of Harrân in modern times were mentioned and its plan shown
HARRAN 229

for the first time by E. Sachau (Reise in Syrien und Mesopotamien, Leipzig 1883, 223) and a quick survey was carried out by C. Feurres in 1911 (Nordmesopotamische Baudenkmäler, Leipzig 1911, Tafeln 72-77). Our knowledge of the town and its monuments, however, is mainly derived from the full survey of the town carried out by Seton Lloyd and W. C. Brice in July 1950 (Harran, in Anatolian Studies, i (1951), 77-111, plan of the site on p. 85), and from the excavations of the late D. S. Rice. The following main monuments and ruins have been recorded: (a) the Great Mosque, or Djami al-Firdawis (no. 1 on Pl. IX); (b) the Citadel (no. 2); (c) a basilican church near the north-east corner of the site (not marked on the plate); (d) a large mound, south of the mosque, ca. 28 m. high (no. 3); (e) the Mausoleum of Shaykh Hayat (no. 4); and (f) traces of eight gates in the city wall (nos. 5-12), of which the Aleppo gate (no. 12) is particularly interesting as it has been fairly well preserved.

Rice worked at Harran in 1951-52, 1956 and 1959. In that year he traced the history of the Citadel, which can be dated to the 7th/8th century (see D. S. Rice, Mediaeval Harrân: Studies on its topography and monuments I, in Anatolian Studies, ii (1952), 36-84; idem, Unique Dog sculptures of Mediaeval Islam, in The Illustrated London News, cxxxi, 20 September 1952, 466-67). He carried out a two-week season in 1952 and a three-week season in 1956, on both occasions working in the Great Mosque (see From Sin to Saladin: Excavations in Harran’s Great Mosque . . ., in The Illustrated London News, cxxxi, September 1957, 466-9: also Seton Lloyd, Seeking the Temple of Sin, Moon-God of Harran, and light on the strange Saban sect through 1400 years, in The Illustrated London News, cxxxi, 21 February 1953, 288; the Director’s report in Anatolian Studies, vii (1957), 6); and a final excavation between 15 July and 7 September 1959. In that year the work in the Great Mosque was completed and the plan of the mosque established, a deep sounding having been made on the high mound south of the mosque (cf. Director’s report in Anatolian Studies, x (1960), 8).

(a) The Citadel (Pl. IX, no. 2) was mentioned for the first time by Mukaddasi in the 4th/10th century. Ibn Djugayr, who visited Harran in 1580/1184, describes it as a very strong fortress with a moat around it paved with stones (Ribl, ed. de Goeje, Leyden 1907, 257). Ibn Shaddâd remarked that the Citadel was called al-Mudawwar “the round one” (cf. Rice, in Anatolian Studies, ii, 37). Hâmid Allâh Mustawfî called it Kalât nadim, “the star citadel”, and gave its perimeter as 1350 paces and the height of the walls as 30 ells (cf. Nushat al-kuhbat, ed. G. Le Strange, London 1915, 103). Nearly all Arabic sources mention that there was a Sûrân temple inside the Citadel. The Citadel is in the southeast corner of the town. It is an irregular rectangle with an eleven-sided tower on three of its four corners. There must have been a fourth tower, but that has been destroyed. Lloyd and Brice gave the Citadel’s dimensions as 130 x 90 metres (Anatolian Studies, i, 97). It had three storied and about 150 chambers, some of them with brick vaulting. Lloyd and Brice recognized four building periods in the Citadel. They presumed that the first period elements, forming the nucleus of the structure, must have been erected well before Islam; the second and third periods they dated to Islamic times; and the fourth period they considered to be Crusader, by reason of an ornamental archway behind the west tower (op. cit., 79, 101, and 104). The Crusaders, however, never occupied Harran. Of the three surviving towers, the one in the West corner is the best preserved (Pl. Xa). There are two solid towers forming an entrance in the south-eastern side of the enclosure. That gateway deserves special attention, as Rice exposed it in 1952. The entrance has a horse-shoe arch springing from two moulded imposts decorated with guilloche patterns. Below the impost are two pairs of dogs in relief on either side, represented with their heads facing backwards and with collars on their necks (Rice, in Anatolian Studies, ii, fig. vii, 64). At the time of the survey Rice found fragments of a Kufic inscription giving the name of Mannî, the third ruler of the Numayrid dynasty, and the date of construction 451/1059. From the Kufic inscription and the glazed pottery excavated in the gateway, Rice concluded that this part of the Citadel dated from the 11th/12th century (Rice, in Anatolian Studies, ii, 42 f.; idem, in The Illustrated London News, ccxxi, September 1952, 466-7). The walls and towers represent the second building phase in its structural history as recognized and mentioned by Lloyd and Brice. The third phase of building can be explained by Ibn Shaddâd’s account, which states that the Citadel was rebuilt by al-Malik al-Adîd, to whom the town of Harran and the Citadel were given by his brother Saladin in 587/1193 (Rice, in Anatolian Studies, ii, 45). There is a second, undated, inscription on the wall of the south-western tower, which is Mamlûk in character. It refers to a restoration of the Citadel. Rice attributes it to al-Malik al-Nâṣîr, who sent an expedition to Malatya in 715/1315 (Rice, in Anatolian Studies, ii, fig. 1, pp. 46-7). That must have been the latest phase in the history of the Citadel. Finally, Rice mentioned that there were no pre-Islamic structures visible in the Citadel. Further excavations are required to establish its earlier history.

(b) The Great Mosque or Djamiâ‘ al-Firdaws (no. 1 on Plate IX and Plate Xa). Ibn Djugayr, who visited Harran in 580/1184, gave a detailed description of the Great Mosque and praised its beauty. He mentioned that it had a great courtyard, in which there was a domed structure, that there were three more domes in the building, and that the sanctuary had five aisles and 19 doors opening into it—nine doors on either side and ten on the 15th under a big central arch (Ribl, 245). The plan of the mosque was first drawn by Feurres in 1906 (Nordmesopotamische Baudenkmäler, Leipzig 1911, Tafel 73), and later by Creswell in 1919 and 1930 (plan published in Early Muslim architecture, i, fig. 489). The earliest history of the mosque is not known, as the historians are silent on the subject. Though there are no reports that Marwan II, when he made Harran his capital, erected a congregational mosque there, we may presume that he did so. The great square minaret in the northern part of its building, still preserved up to 26 m., is regarded as dating from the Umayyad period (Plate Xb). Creswell assumes that after 215/830, when the Caliph al-Ma’mûn forced the pagan inhabitants to choose between the adoption of Islam or any one of the tolerated religions, many of them became Muslims, and therefore the number of Muslims greatly increased. Therefore, the Congregational Mosque of Marwân II may have been enlarged (Creswell, op. cit., i, 409). There is no reference to such work, but it is known from an inscription that Nûr al-Dîn restored, embellished and enlarged the
mosque.

Rice's excavations in 1952, 1956 and 1959 established a plan of the mosque which differed from that of Creswell. (The new plan of the Great Mosque is to be published shortly in Creswell's new edition of Early Muslim Architecture, i.e. a monograph on the Great Mosque is under preparation by R. H. Pinder-Wilson, D. Strong and R. W. Hamilton.) The mosque is a square enclosure measuring 103 × 103 m. It had three entrances, one on each side except the kibla wall. There was a large court-yard surrounded by porticoes, one on the north side, one on the west, and two on the east. There were nineteen openings into the sanctuary, the central one being under a great arch, just as described by Ibn Djubayr. The ornamentation of this great arch betrays an Ayyubid origin. A capital near the east wall has an inscription giving the date of the completion of Nur al-Din's work as 570/1174 (Rice, in The Illustrated London News, ccxxi, September 1957, p. 467, fig. 13.) There were four aisles in the sanctuary (not five as mentioned by Ibn Djubayr), formed by three arches. The first arcade was formed by single columns, although its central arch was supported by two pairs of columns. The pavement of the first aisle is different from that of the other three, which, as Rice concluded, may indicate an addition of Nur al-Din (Rice, op. cit., 467). The arches of the facade of the sanctuary were supported by pilasters to which columns were attached. Inside the sanctuary the arcades differed from one another. The first arcade had double columns resting on rectangular bases; the second arcade was formed by single columns, although its central arch was supported by two pairs of columns. The third arcade, next to the kibla wall, was rather complicated, having pilasters alternating with pairs of columns, which may indicate a different building period. Rice has already suggested that there are indications that the mosque may once have contained only two aisles (Rice, op. cit., 468). The mihrab was semicircular, and was situated some 5 metres to the east of the axis of the building. There was also a flat-mikhrab on the kibla wall, west of the semicircular mihrab (Rice, op. cit., 468). The best preserved parts of the mosque are the eastern facade of the mosque and the square minaret which was attached to the Northern section of the building (Plate Xb). In each of the three entrances Rice found basalt slabs dating from the time of the Sassanids (6th century B.C.), incorporating relief figures, one of which represents the Moon-God Sin, the second one the Sun-God, Shamash, while the third figure has not yet been identified (Rice, op. cit., 468). Rice's excavations not only established the plan of the Great Mosque but also confirmed that the larger part of the building is visible to-day dates from the Ayyubid period.

The mausoleum of Shaykh Hayyân (no. 4 on Plate IX). This small mausoleum is outside the city walls to the east, close to the north-western corner of the town. According to Christian tradition, this was either the grave of Terah, Abraham's father (B. P. Badger, The Nestorians and their Rituals, London 1852, i, 342), or the ruins of St. John's church (Mez, op. cit., 15, and Rice, A Muslim Shrine . . . . 436). When Ibn Djubayr visited the place there was a small mosque there and the dwelling place of the Shaykh. In the published work of Ibn Djubayr the Shayh's name is given as Abu 'l-Baraka Hayyân b. 'Abd al-'Aziz (Ribla, 244). Rice studied and photographed the small enclosure and described it as consisting of a small mosque and a mausoleum or siyâra of the Shaykh. It is a domed building dating from the Ayyubid period. The building has been restored several times and there are some later additions (Rice, op. cit., 436). There is an inscription on the east wall of the building, first incorrectly interpreted and published by M. van Berchem. The correct interpretation, however, is provided by Rice. The inscription states that the shrine was erected by Shaykh Umar, son of Shaykh Hayyân, and gives the date as Dju màdá II 592/ May 1196 (Rice, op. cit., 437-8, Pl. IV). Rice points out that the Shaykh's name is missing from the manuscript of Ibn Djubayr, and that the name Hayyân was incorrectly inserted by the editor (Rice, op. cit., 439-40). This small building is used to-day as a mosque.

(d) The city gates (nos. 5-12 on Plate IX). Ibn Shaddâd enumerates eight city gates, starting in the south and proceeding clockwise: Báb al-Ra'qqa (no. 10 on Plate IX), Báb al-Kabîr (no. 11), Báb al-Niyyâr ("the Gate of the Fires"), Báb Yazid, Báb al-Faddân, Báb al-Šaghîr, Báb al-Sîrî, and Báb al-Mâ'sî (Rice, Medieval Harran, in The Illustrated London News, ccxxi, 1952, 467). The best preserved gate is the one north of the Great Mosque but also confirmed that the larger part of the building which is visible to-day dates from the Ayyubid period.

(e) The bazaars. Very little is known about the bazaars of Harrân. Ibn Djubayr mentions them, saying that they were very well arranged, that they were roofed, and that at every point where four roads met there was a great dome. He also states that the Djâmis Masqûd adjoins the markets (Ribla, 245). Ibn Djubayr's last sentence gives some clue to the whereabouts of the bazaars, though they are also visible on Strzygowski's photographs (Amida, Heidelberg 1910, figs. 269, 281). To obtain further knowledge of the bazaars and of some other monuments of Harrân, or to find the Sâbian temple, which must have been very close to the Great Mosque, the continuation of Rice's excavations is essential. HARRÁNIANS [see Šâbî'â].
HARRAR [see HÂRAK].
HARSUSI [see Hârsâs].
HÂRTÂN [pl. HÂRÂTÎN], the name given, in north-west Africa, to certain elements of the population of the oases in the Saharan zone. From the ethnic point of view, they seem to have arisen from inter-breeding, perhaps at some very remote period, between white invaders and the indigenous negroid inhabitants (calling to mind the enigmatic Bâfîr in Mauritania). But the ethnic type of the Hârtân is markedly different from that of the Negros; those from Southern Morocco are sometimes even of a mongolid type. Rather than being a distinct race, they constitute, in the eyes of the other native inhabitants, above all a kind of caste, formed of men theoretically free but of an inferior status, ranking between the abdrâr "free men" and the abîd "slaves, captives": peasants.

A sedentary population, they cultivate the palm-groves on behalf of the landlords to whom they are "attached". In Mauritania, however, the nomads

share. It was therefore a matter of course that the grateful Harun should bestow the right to govern on Yahya b. al-Aghlab, who thus became one of the two sons of al-Faḍl and Dja'far, remained in power for about 27 years. Their downfall in Muḥarram 187/January 803 marked, more or less, the end of the importance of the viziers as initiators of policies and not merely heads of the administration. Political necessity drew al-Raḥid to rely more and more on his maqādil and eunuchs, who were entirely dependent on the Caliph and the Abbasids. They, in fact, proved to be equal to their task in many decisive moments (Tabari, iii, 678, 682, 705, 716, etc.) and played an important rôle in controlling other political groupings.

Despite the glorious picture of the golden age, Harun’s reign was, in fact, a long sequence of political disturbances flaring up in the eastern parts as well as in the western parts of the empire. Syria, a province inhabited by unruly tribes with Umayyad sympathies, never ceased to be the bitter enemy of the Abbāsids. Frequent fights between the two rival factions, the Yamān and the Muṣṣarīf, eventually developed into a war with the Abbāsīd army, because governors used to take sides with one faction against the other. The feud continued with brief intervals until 180/796, when the situation became so serious that al-Raḥid had to send Dja'far b. Yahya, who succeeded in quietening the situation and dispersing the tribes. Al-Raḥid’s move to al-Raṣkā [q.v.] at about this time was partly due to the disturbances in Syria (Tabari, iii, 706). As to the Egyptian risings of 172/788 and 178/794-5, they were mainly due to maladministration and arbitrary taxation, as Egypt had to subsidise the Abbāsīd army fighting in Ifriqiya. But Harṭama b. Aʿyān was able to restore peace to Egypt. Instability in Ifriqiya started after the death of the competent governor Yazid b. Hāṭim al-Muhallabī [q.v.] in 170/786, and successive governors failed to restore order. Harṭama b. Aʿyān [q.v.] was able to subdue ʿAbd Allāh b. al-Djārīd’s rebellion in ʿAyārwānī in 178/794-5, but disturbances flared up again in 180/797 and al-Raḥid consented to bestow the governorship of Ifriqiya on Ibrahim b. al-Aghlab [q.v.] only in return for an annual payment of 40,000 dinars. The province, however, suffered heavily in Spain with the establishment of the Umayyad dynasty (158/775) and in al-Maḥrib with the foundation of the Idrisid dynasty (172/788), which was aggravated in Ifriqiya by the foundation of the Aḥlabīd [q.v.] dynasty (184/800), alleviated in the last case however by financial benefits to the central treasury.

Finally the Yemen was a place of unrest owing to the local risings due to the incompetence of the successive governors. The disturbances continued even in the western parts of the empire. Syria, a province inhabited by unruly tribes with Umayyad sympathies, never ceased to be the bitter enemy of the Abbāsids. The latter broke out in Sistan when Hamza occupied Harat in 179/795 and extended his authority to Kirmān and, in 180/796, al-Raḥid was unable to prevent the rebellion of the Sadīgīdīs, who were entirely dependant on the Caliph and his maqādil and eunuchs, who were entirely dependent on the Caliph and the Abbasids. They, in fact, proved to be equal to their task in many decisive moments (Tabari, iii, 678, 682, 705, 716, etc.) and played an important rôle in controlling other political groupings.

trative unit called al-'Awasim [q.v.] with a centre in Mambid. In 181/797, al-Rashid profited by the Byzantine internal troubles as well as their conflict with the Bulgarians, and took the formation of al-Šaṣafī, while a division of his army penetrated as far as Ancyra. The empire Irene (better known in Muslim sources as Ughusta [i.e., Augusta]), then already the real ruler of the Byzantine State (797-802), demanded a peace treaty which al-Rashid first refused and subsequently accepted because of the Kaḫar menace. But when Nicephorus ascended the throne in 802, hostilities were renewed and al-Rashid himself led the Muslim army in 187/803 and 190/806. In the second expedition al-Rashid met with considerable success, taking Heraclea and Tyana. Nicephorus, threatened by the Bulgarians from the east, had to accept a very humiliating peace-treaty by which he had to pay personal poll tax on behalf of himself and his son.

Having chosen 'Irāk as their residence, the 'Abbasids had lost interest in the Mediterranean fleet. Al-Rashid was the first 'Abbasid Caliph to pay attention to naval power. Successful raids on Cyprus in 190/805 and Rhodes in 192/807 had no lasting effect. It might seem surprising that by the end of al-Rashid's reign the situation on the frontiers was virtually unchanged; the campaigns were, in fact, bedevilled by many problems such as difficulties of supply and the harshness of the weather. Encouraged by the weakness of the central government in Armenia, where a slow process of Arab colonization was in progress, the Khazars made occasional raids on Muslim territories. Only the efforts of Yazīd b. Mazyad al-Shaybānī and Khuza'ayma b. Khāzīm succeeded in controlling the situation. An exchange of embassies and gifts is alleged to have taken place between Hārūn al-Rashid and Charlemagne, which resulted in giving Charlemagne rights of protection over Jerusalem. Nothing has yet been found in Arabic sources to substantiate this allegation, and although they may have had political interests in common, there seems to be no truth in it.

The later period of al-Rashid's reign reveals a certain lack of competence in him as a ruler. Some of his decisions, such as the covenant of the Ka'bā (186/802), make him at least partly responsible for the subsequent disintegration of the empire and the civil war and the disintegration of the empire. Mahan's misrule and contented himself with the success of the early 'Abbasids, but this can hardly have been the right approach. Economically, the commercial activities, which reached as far as China, made al-Rashid's name known to the whole world of the time, and increased the splendour of his court, which was a centre of art and culture.

Bibliography: The chief source is Tabarî, iii, 599-704; Ibn al-Athīr gives a summarized version of Tabarî's chronicles in his Al-mu'tafl al-kamil, vi, 65-152; Other sources are Yaḥṣūbī, ii, 497-524; Balādhurī, Fattāh, ed. al-Munajjīd, 1956 (index); Dākhīyārī, Cairo 1938, 177-288; Maṣūdī, Murādī, vi, 287-414; Iṣfahānī, Maḥātī, ed. Nadīf, 1934, 308-356; and Fragmenta Historiorum Arabiorum, ed. de Goeje, 1871, 278-80, 290-319. Information will be found in other later histories, and also in al-Dhahabī's Taʾrīh al-ʾIslām, MS. British Museum Add. 23738, with incomplete chronological sequence, fols. 36 a, 36b, 40a-70a; some local histories are useful in this respect such as al-Azaḫrī's Aḥbāb Maḥkā, 1850; Taʾrīkh-i Sistān, ed. Malik al-Shuʿarāʾ Bahār, Tehran 1314 (where the author's sympathies are strongly against the central regime); al-Nārshakhābī's Taʾrīh-i Bukhārā, Tehran 1339; Maḏrāzī's Rāʾīf, ed. 1935; and Kumān's Taʾrīh-i Kūm, ed. 1946. AL-HĀRŪNIYYA (in modern Turkish Hârûniyye) was in the Middle Ages a fortress town of the marches of the Dizira (al-thughur al-dizariyya) between Marash and 'Ayn Zarba, to the east of the middle
Djayhan (Ceyhan). It owes its name to Harun al-Rashid who founded it in 183/799 when he was organizing the defense of the frontiers, and fortified it, according to Ya'qūb, with two ramparts and iron gates. Ibn Ḥawkal stresses its prosperity and the valour shown by its inhabitants in their battles against the Byzantines, but he mentions that at the time when he was writing it had been captured by the Byzantines. It was finally conquered and destroyed on 23 Shawwal 348/27 December 959 by Leo Phocas, who took 1500 prisoners; rebuilt by Sayf al-Dawla, it was again ravaged by Seljuk Turks and annexed to the kingdom of Little Armenia. Ḥarūnīya is now a nahiya merkhis of the  baise of Bahe, in the mūḍy已 of Adana; pop. (1960), 4507.

Bibliography: Ibn Ḥawkal, tr. Kramers-Wiet, II, 179 and index; Ṣayyid, s.v.; Le Strange, 2:89-9; Vasiliev, Byzance et les Arabes, i, 95; M. Canard, Ch'âmndnâsî, 279, 799; I.A, s.v., Ḥarūnīya (addenda by Besim Darkot).

There was another place with the same name in Ṣirāk, not far from Daulâl; according to Ṣayyid, it had an old bridge, built by a Khosroes, of stones clamped together with lead.

Bibliography: Ṣayyid, s.v.; Le Strange, 62. (T. H. Weir)

ḤARŪRĀ (ḤARAWWĀ, according to Ṣayyid, ii, 246, but wrongly), a locality, village or district (kāra) near al-Kūf. During the pre-Islamic period and in the first century of Islam at least, Ḥarūrā stood on the banks of the Euphrates or one of its canals, for a line of al-ʿAshā (al-Ṭabarî, ii, 730) speaks of “ṣalāt Ḥarūrā”, but in the 3rd/9th century it was described as being in the desert (ṣabār) by the traditionist Ibn Dīnār al-Ḥamdânî (d. 283/896; see Ibn ʿAbī l-Ḥadīd, i, 275); the hydrographic system of the region had thus probably undergone a transformation.

Of no importance from the point of view of commerce or agriculture, Ḥarūrā owes its fame to an individual only had revealed their opposition at Ḥarūrā and in the first century of Islam at least, Ḥarūrā was a “shaft tfarūra”, but in the 3rd/9th century “al-ṣūrā al-Abd-twīla” and in the 1st/5th century or at the beginning of the 9th/15th, and the Ḥarūrā al-Kāshfi was ‘l-bayān, written before 1070/1659 by an Ḥāfiz theologian of ʿUmān, al-Kalhātî (see Brockelmann, S II, 568). While al-Ṭabarî says they were taken from a Kitâb al-Nabhrâa, probably the work of one ʿAbd Allâh b. Yazdī al-Fāzârî (1st-2nd/7th-8th centuries), al-Kalhātî is silent as to his sources; however, M. Kafafi, who has given a résumé, states that they go back to an ancient period. A comparison of the pages of al-Ṭabarî and the résumé of those of al-Kalhātî shows that the two authors have not drawn upon the same source; however, the subject-matter is substantially the same.

Evidently preoccupied with the secession of the Ḥarūrīs, ʿAll sent to Ḥarūrā, to parley on his behalf, his cousin ʿAbd Allâh b. ʿAbd-Allâh b. ʿAbd-Allâh, and then also went there himself to discuss the matter with the dissidents. The arguments which the Ḥarūrīs used in these discussions have not been reproduced in al-Ṭabarî or in the other Sunni sources or those favourable to ʿAll, while the arguments of the latter and of Ibn ʿAbd-Allâb are included. The rebels’ argument was, briefly, as follows: “When we had shed the blood of ʿUmayr, we were in the right path, because he had made innovations (abdâd); so, too, when we shed the blood of Talha, al-Zubayr and their adherents on the Day of the Camel [see AL-DJAMAL] because they were rebels; and also when these innovators of Muʿawwâya and ʿAmr, because they were rebels and transgressors against the Book of God and the Sunna of the Prophet. Has a command come down from heaven compelling ʿAll to change his attitude? No. He must therefore persevere in the line of conduct followed at the start, continue the war and refuse arbitration.” Ibn ʿAbd-Allâb vainly reminded his opponents of the verses in the Korâne (IV, 39/35, V, 1-5-2) on the nomination of arbitrators in certain cases; the Ḥarūrīs replied that any question for which a decision (ḥukm) on the part of God existed could not be submitted to arbitration; God had laid down the ruling to be followed in the case of a band of rebels (fīa bâqūya), for He said (XLIX, g): “If two parties of Believers fight against each other fight in the way of Allah, until one of them persists in rebellion against the other, fight against that party which is rebelling (al-latî tabghî) until it bows before Allâh’s command”. Are not Muʿawwâya, ʿAmr and their supporters a fīa bâqūya? And the Ḥarūrīs add that God said (VIII, 40/39): “Fight them, till there is no sedition (fitna) and the religion of God’s entirety”. Has Muʿawwâya returned to obedience to God? The answer could only be negative. Therefore Allâh had already made
236

HARORA' — HAROT WA-MAROT

known His hukm for a similar case and it must be
applied; it must be regarded as one of His hudud
[see HADD], like the hudud regarding the fornicator
and the robber. Men have no choice in a question on
which God has given His judgement (la hukm* ittd
li'lldh). In their discussions, the Harurls resorted to
still other arguments and other verses of the Korean
to justify then- secession, but those summarized
above were the most difficult to refute. Ibn cAbbas
was compelled to recognize their validity (even the
Sunn! sources and those that favour CA1! state that
he failed in his task); as for CA1I, he persuaded the
dissidents to abandon their secession, though how
he succeeded in doing so is not very clear. The
arguments that he put forward (and which differ
materially in the various sources) do not seem
sufficiently compelling to win over adversaries so
stubborn in their convictions. Must we then accept
the statement of al-Fazari in his K. al-Nahrawdn
that he promised to resume the war against Mucawiya
and backed up his promise with the firmest assurances? A sentence slipped into some sources: "we
shall levy taxes, we shall fatten the mules, then we
shall march towards them" (al-Baladhuri, 523V.;
cf. al-Jabari, i, 3353; Mubarrad, 558, etc.) suggests
that CA1I made concessions; even Jaha Husayn recognizes that there was a misunderstanding at that time.
In any case it is certain that when, some time after
his return to al-Kufa, CA11 clearly stated his intention
to respect the Siffin agreement, the Harurls, who
had returned to the town with him, became incensed.
It was as a result of this statement by CA11 that the
dissidents secretly held meetings, raising the question
whether to remain in a country where. injustice
ruled was compatible with the duties owed to God;
those who held that it was necessary to leave it went
away into hiding, invited the dissidents in al-Basra
to follow suit and gathered together at al-Nahrawan,
thus seceding for the second time. It is possible that,
at the beginning of the Kharidjl movement, a distinction was made between al-Muhakkima al-uld —
the first to have cried out at Siffin la Tiukm0 ilia li
'lldh, al-Ifaruriyya = those who had been present
at the gathering at Harura* but who, on returning to
c
Ali's ranks, did not feel obliged to enter into open
rebellion (while perhaps remaining attached to their
idea that the Siffin agreement was a sin for which
repentance must be shown), and al-Khawdridi —
those who left al-Kufa and al-Basra in order to
break every link with CA1I; but this is merely a hypothesis to justify these different terms, for it is to be
noted that the last two terms were used indiscriminately in the sources (in fact of a much later date).
At Harura5, or nearby, two battles took place, one
in 67/686, in which al-Mukhtar [q.v.] was defeated by
the army of Muscab [q.v.], the other on 9 Shawwal
315/8 December 927 when the Sadjid Yusuf b. Abi
'1-Sadi, fighting for the caliph al-Muktadir against
the Karmati sovereign of Bahrayn Abu Tahir
Sulayman, al-Djannabi, was defeated and captured
(it should, however, be observed that most of the
sources do not mention Harura3 in connexion with
this battle, merely saying that it took place outside
al-Kufa, or at the gates of that town).

(L. VECCIA VAGLIERI)
HARCT WA-MARtfT. In one of Its admonitions
to the unbelieving Jews of Medina, the !Kur5an (II,
102/96) expresses itself thus (from A. J. Arberry's
translation): "[the children of Israel] follow what the
Satans recited over Solomon's Kingdom. Solomon
disbelieved not, but the Satans disbelieved, teaching
the people sorcery, and that which was sent down
upon Babylon's two angels Harut and Marut; they
taught not any man, without they said, "We are
but a temptation; do not disbelieve ...""<. The
Kur3anic narrative, linked somewhat artificially with
Solomon, whose relations with demons are wellknown [see SULAYMAN], thus reflects a legend concerning the fallen angels who made themselves
masters of the arts forbidden to men. The exegetic
tradition relating to this passage can explain how
the angels had come to that place from heaven. The
sight of men's sins had impelled the angels to make
derogatory remarks about mankind. When God


challenged them to do better if placed under the same conditions, they accepted a test, for which Hārūt and Mārūt were chosen. Having come down to the earth the immediate grave of idolatry, fornication, murder and the drinking of wine, they almost immediately were captivated by a wondrously beautiful woman. Being caught unawares at the very moment when she was granting them her favours, they killed the man who had witnessed their misconduct. God caused them to be watched while doing so by their brothers who had returned to earth earlier and who, consequently, could only say "Indeed Thou wast right". Left to choose between punishment in the world and the eternal pains of hell, the two guilty angels preferred to expiate their offence here below; they were then imprisoned and hung by the feet in a well in Babylon where they have been in torment ever since. In the final analysis, this theme derives from the account in Genesis, VI, 1-4 concerning the loves of the "sons of Elōhîm" and the daughters of men, expanded in the apochryphal books where there appears the supplementary theme of the fallen angels, masters of magic (Jubilees, V, 6; Enoch, Chaps. VI-VIII, etc.; allusion in the New Testament, 2nd Epistle of Peter, II, 4 and Epistle of Jude, 6); in the midrash Abkir, an Agadic Jewish work of a late period, but rich in traditions left aside by the great rabbinical texts, the guilty angels bear the names of Shemhazai, ʿUzza and ʿAzzaʾel. According to its version of the legend, which also recurs in more than one Muslim text, the angels who had fallen into sin lost the use of the ineffable Name of God which would have allowed them to return to heaven; the woman whom they had lusted after, having learned this Name from them, made use of it to escape from them and to make her way to heaven where, as a reward for her virtuous resistance, God changed her into a star. On this point, an astrological motif is grafted onto the legend, for the names given to this woman, Anāḥíd, Bidukht, Zuhra—in the Jewish version Naʾsamah—seem, with the possible exception of the last, to be firmly connected with the planet Venus. As regards the names Hārūt and Mārūt, it is hardly possible to discover any etymology (contrary to the opinion of A. J. Wensinck in EJ) other than Haurvatāt and Amuratūt, "integrity" and "immortality", two of the "archangels" (Amēsha Spenta) of Zoroastranism; it is still not clear how the synthesis of the Iranian features and the Jewish legend of the fallen angels took place, nor how the hypothetical version which had substituted Iranian names for the Semitic names of the heroes of the story came into Arabia as early as the beginning of the 7th century A.D.; yet traces of it have been found in the Manichaean texts. We can therefore conclude without being over-rash that the immediate source of the allusion in the Kurʾān and of certain elements in the later Muslim legend is to be found in the syncretistic beliefs developed on the fringe of the main Jewish, Christian and Māzdaean religions. Variations on the Kurʾānic theme which we have not touched upon here in detail have been severely criticised by more than one theologian: see al-Bāḍū wa ʾl-ʿaʾraʾith, i, 14 ff.; Fakhr al-Dīn al-Rāzī, Maḏāfīt al-ghayb, ii, Cairo 1354/1935, 244; Ibn Kāhir, al-Bīdāya wa ʾl-nihāya, i, 37-8.

have been recorded in al-Hasa, some of them being used only as fodder [see TAMR]. Another item of economic importance for which the area has long been famous is the local breed of tall, white donkeys, which once were widely exported, in particular to Egypt and 'Irak. Dietary changes and the introduction of wheeled transport brought about a foreseeable decline in the economic importance of both dates and donkeys. On the other hand, the increased cash wages due largely to the development of the oil industry in Saudi Arabia's Eastern Province have given rise to a new form of light industry, as well as some other greater variety in agricultural produce. The manufacture of textiles to make the locally worn cloak (biğṭ) has long enjoyed a well-deserved reputation and is still an important part of the economic picture of al-Hasa.

History. The detailed study of the history of al-Hasa, particularly with regard to the earlier periods, is yet to be undertaken. It has been suggested that the region called At-Tamr, an antiquity might be the same as present-day al-Hasa, but no other references in old sources can be connected with the oasis. The area was certainly known as al-Hasa (or al-Ahsa') during the time of the Prophet. The majority of the people of the area accepted Islam at an early date, although they rebelled against the central power a number of times. Most notable among these rebellions was that of the Karmatis [q.v.], who, when they brought the Black Stone from Mecca, kept it in this area for about twenty years.

In mediaeval Arabic sources al-Hasa is said to be a fortress in al-Bahrayn [q.v.] not far from al-Hażarj, the ancient capital of the district. This fortress was founded by the famous Karmati leader Abū 'Abd Allāh al-Dāmmābī [q.v.] in 314/926 near a locality then called al-Hasa. He called the fortress al-Mu'miniyya, but both fortress and settlement continued to be known by the old name. In 443/1051, the area was visited and described by the Persian Nasir-i-Khusraw, whose account of the Karmati government is founded by the famous Karmati leader Abu Tahir al-Hāmidī. He called the fortress al-Mu'miniyya, which was certainly the same as present-day al-Hasa, particularly with regard to the earlier periods, is yet to be undertaken. It has been suggested that the region called At-Tamr, an antiquity might be the same as present-day al-Hasa, but no other references in old sources can be connected with the oasis. The area was certainly known as al-Hasa (or al-Ahsa') during the time of the Prophet. The majority of the people of the area accepted Islam at an early date, although they rebelled against the central power a number of times. Most notable among these rebellions was that of the Karmatis [q.v.], who, when they brought the Black Stone from Mecca, kept it in this area for about twenty years.

Remains of 'Abhābī pottery in the oasis suggest that the area has already densely populated during early Islamic times. It does not seem likely, however, that the Portuguese and the Persians, who ruled or occupied the island of al-Bahrayn in the 10th/16th and 11th/17th centuries respectively, extended their rule to the oasis. In later times, and by reason of its geographical location as well as its resources, the oasis was coveted by the Wahhabis [q.v.] from Nadjd in 1255/1839. The Turks occupied the oasis in 1289/1872 and made the area a sandiqah of the wilayet of Baṣra. During the Turkish occupation, al-Hasa was the administrative centre of the sandiqah and the residence of the Mutaṣarrifīīī Pāshā. The Turks were finally expelled from al-Hasa by 'Abd al-'Azīz Ibn Sa'īd in 1913.

The rule by Egyptians, Turks, and Wahhabis until 1332/1913 was not a secure one. Two powerful Bedouin tribes of eastern Arabia, the Banū Khālid and the 'Udīnān, continuously raidied the villages of al-Hasa and endangered the trade routes. The area was finally pacified under the rule of the present dynasty. From 1913 until 1952 al-Hasa continued to be the administrative centre of the entire area of eastern Saudi Arabia, which was then called the al-Hasa Province. The name of the oasis was also used to designate the oil concession (The Hasa Concession) obtained from Ibn Sa'ūd by Frank Holmes in the 1930s, which covered the lands lying between the sands of al-Dahmā to the west and the Gulf to the east, and between 'Irāq and Kuwait to the north and a line running due west from the base of the Kaṭar peninsula to the south.

In 1952 the capital of the province was moved from al-Hasa to the town of al-Dammām [q.v.] on the Gulf coast, and the province itself changed its name from al-Hasa Province to the Eastern Province. The amirate of al-Hasa has jurisdiction over only the oasis area and reports to the provincial government in al-Dammām. In the 1960's the Saudi Arabian Government undertook elaborate agricultural extension work in the oasis, including sand stabilization, drainage, and the establishment of experimental farms.

past and was stained by no dishonour; the slightest stain on the other hand was exploited. Thus, the hasab, according to the pre-Islamic conception of it, necessitated not only the existence of ancestors but the doing honour to them by performing memorable deeds of prowess or displaying outstanding virtues, in particular exemplary generosity. The memory of the great deeds performed in the past by members of the tribe was passed down from father to son to form a collective hasab of which all which could boast; the valour of the group was measured so to speak by the total of these exploits and virtues, which provided for all a model to imitate, an ideal moral standard to attain and a patrimony to safeguard; it was in fact a sort of tribal sunna.

In contrast to nasab, hasab could be acquired also by an individual by means of virtuous acts or brave exploits. Thus, the hasab was a person who either possessed a noble ancestry or had acquired nobility personally, without necessarily requiring an outstanding nasab, whereas the nasab had to be equipped with both nasab and hasab.

The appearance of Islam did not entirely banish these ideas, which remained very much alive among the Arab tribes (and even among the fuwakha, who had to know a woman's hasab in order to assess her mahr [see SADAK]), but the earlier ideas were in fact modified by the tendency to egalitarianism and by the preponderant place accorded to the Faith. The Kur'an makes no reference to them, but hadith, where it is authentic, reveals an abrupt change in conception which the numerous philological works and commentaries enable us to understand. While forbidding attacks on genealogies, the Prophet proclaimed: "Learn enough genealogy to know your and that of your predecessors imposed by family relationships" (here, asdab seems to be related to the etymological meaning of the root ksb "to count", that is "to know what you are worth collectively"), but there are also attributed to him the hadiths: hasab al-rajul khulukh "a man's hasab is his moral qualities" and: hasab al-rajul nasab thabawshy...it is the cleanness of his two garments", which some interpret as a sign of wealth. In fact one hadith announces unexpectedly: al-hasab al-mal tu't-haram al-takwa "hasab is wealth and generosity is religious piety". Thus the excellence of ancestors would be replaced by wealth, and the generosity which procures hasab by religion; there is nothing surprising in the fact that any Believer could acquire a nobility which formerly had been reserved for those with ancestors, and that hasab would not in theory be considered as an Islamic quality, but it is most extraordinary that wealth should take its place. The matter should not be exaggerated however, and the following commentary by Ibn al-Sikkit (in L.A, s.v. hasab) would serve to show the hadith in its true perspective, if it did not deviate from Islamic moral standards by taking no account of transient circumstances: "A man may possess hasab and generosity (haram) even if he has no ancestors of nobility (zharaui), whereas zharaui and glory (madid) exist only through the ancestors: the Prophet thus substituted wealth (mad) for the nobility of the individual (nasab) or of his ancestors, which means that the poor man with hasab is neither respected nor esteemed, whereas the rich man who is without it is respected".

**HASAN, AL-MALIK AL-NASIR NASIR AL-DIN ABU 'L-MA'ALI, 15th Mamluk Sultan of Egypt, in the line known to contemporary chroniclers as Daqdad al-Turk. He was the most prominent of eight sons of the Sultan al-Malik al-Nasir Muhammad b. Kalånn who ruled in turn during the years 741/1340-763/1362 and who are frequently designated in European documents of the period as "Hasan and his brothers" (e.g., BSOAS, xxviii (1965), 492: "Nasser Hassan et son frater"), see Zambur, Manuvi, i, 103, 106, and Wiet, in Mém. Inst. Egypte, xix, genealogical tree p. 279). Owing to the sustained attempt at dynastic succession Hasan was very young (11 years) at his first accession to the Sultanate on 14 Ramadân 748/18 December 1347, and did not in fact rule during his first reign, which lasted for just under four years (until 17 March 1351). As happened frequently under the Mamluks, de facto power was divided among rival factions of amirs surviving from the period of a deceased sultan (hararis, see Ayalon, in BSOAS, xv (1953), 217 ff.), a struggle in this case coloured by the rise to a significant position of the Circassian elements, who had been favoured by his brother and predecessor al-Malik al-Mu'ayyafu(r, and who towards the end of the 8th/14th century were to emerge as the rulers of Mamluks Egypt and Syria [see Čerkes ii and BURDJÔUVA]. Nine months after attaining his majority Hasan is reported to have abdicated (Nudjâm, v, 91), owing to the pressure of the amirs Taz and Minkail. These arranged the succession of Hasan's brother Su'il, who was three years older and who, under the regnal name al-Malik al-Sâlih, managed to stay on the throne for about three years, until his deposition on 2 Shawâlw 755/20 October 1354; he remained imprisoned until his death seven years later. Instrumental in this act and in the immediate restoration of Hasan were the amirs Sarghitmish and Shaykhûn, the Alâbak al-Adâbîr [q.v.] and first bearer of the title al-Amir al-Kabîr [q.v.]. It was owing to the latter's intercession with Hasan that the amir Taz, instead of being condemned to death for his insurrection, was merely rusticated to Syria and the governorship of Aleppo. Soon after his second accession Hasan's position was weakened by the murder of Shaykhûn during a quarrel with a fellow mamlik. Further, and possibly as a result of this act, Sarghitmish acquired more power than pleased the Sultan and had to be incarcerated in Alexandria where he later died. Finally Hasan's second and last reign was brought to an end by one of his own ambitious mamlikâs, Yalbuqâh, who murdered the Sultan in the Citadel while he, having got word of the conspiracy, was Arranging an escape to Syria in bedouin dress, on 12 Dîumâd I 763/9 March 1362.

The periods of rule of Sultan Hasan are thus conspicuous neither for their length nor for evidence of his political competence. The major event of his first reign, whose cause can hardly be laid at the
door of the Sultan but whose repercussions must have made government in Egypt and Syria more difficult than usual, was the plague of 749/1348 (see 750/1350). The devastation of the Mamlûk dominions and decimation of their population which followed in its wake are described in some detail by the chronicler Ibn Taghrîbrîdî (Nugîjâm, v. 62-76). Of Hasan's foreign relations, however, there is documentary evidence sufficient to indicate sustained activity: with the Byzantine Empire (M. Canard, in AIEO, iii [1937]), the Sultan purchased weapons in Mt. Sinai (Ernst, Diplomatarium, Docs. XIII, XIV, XV), and with the Republic of Venice (Thomas-Predelli, Diplomatia, ii, Docs. XII, XIII, XLVII). Yet another trace of his reign is the madrasa of Sultan Hasan in Cairo, construction of which was begun in 757/1356 (Nugîjâm, v. 158).

(J. WANSBROUGH)

MAWLAY AL-HASAN, ABÛ 'ALI, sultan of Morocco from 12 September 1873 to 9 June 1894. He was the son of Sayyîd Muhammad b. 'Abd al-Râjkâm whom, at the age of 37, he succeeded without dispute. Soon after his accession, however, revolts broke out at several places: Azâmûr, against the local governor; Mknès, where an uncle rose as pretender to the throne; Fez, where the tanners rebelled in order to obtain the abolition of a local tax. The sultan repressed these risings quickly and without excessive cruelty. He passed a great part of his reign on expeditions aimed at maintaining the suzerainty over many Berber tribes. It was while returning from such a long campaign, which had taken him as far as Tâflîlât, that he died in the Tâdla region. His death remained secret until the army had arrived at Rabat, where his young son 'Abd al-'Azîz [q.v.] was proclaimed sultan.

Like his father and his grandfather Mâlûây al-Hasan understood the pressing necessity to modernize Morocco and thought that the first sector to be reformed was that of the army. He therefore created permanent and regular units, in which sundry renegades served, and invited foreign instructors, above all French and English, from 1877 onwards. Moreover, several groups of infantry were sent to Gibraltar to be trained with English troops. The sultan bought arms in Europe and installed a cartridge factory at Marrâkûsh and an arsenal at Fez, the Makina. He even established the nucleus of a national fleet. He occupied himself also with the technical training of the Moroccans and sent several to Europe, envisaging the modernization of certain Moroccan industries.

But relations with the European powers, more and more attracted by Morocco, absorbed a great part of his activity. He received a growing number of embassies, and it was on his initiative and that of Great Britain, that the first international conference concerned with Morocco was held at Madrid from 19 May to 3 July 1880. This conference dealt with the "protection" rights of the European powers in the Sharifian Empire. Pious and conservative in his internal policies, Mâlûây al-Hasan thus, without fully realizing the implications of his initiative, enmeshed Morocco in an international process which was to end in the Protectorate of 1912.

(R. LE TOURNAU)

HSAN, amir of the Cóbdâũd (g.v.) dynasty.

AL-HASAN b. 'ALI b. ABî ŢâLÎB, son of 'Ali and Fâtîma (g.v.), claimant to the caliphate until he renounced the office in favour of Muṣ'îsîya b. Abî Sufîyân, and, in the eyes of the Shî'is, the second imâm.

Early years. — He was born in 3624-5 (the month is uncertain; mid-Ramaḍân?) and given the name al-Hasan by Muḥammad, while his father wanted to call him Harb; he lived with the Prophet for only seven years, but was nevertheless able later to recollect some of his phrases and actions (for example that Muḥammad threw back into the heap of sadâba dates one which he had already put into his mouth, for he was unwilling to eat anything from the sadâba). Tradition, including also that preserved in Sunni collections, relates, as evidence of the love that Muḥammad felt for his grandchildren, not only the phrases he is said to have used concerning them, but also charming anecdotes that testify to his affection (e.g., Muḥammad descended from the minbar during one of his discourses in order to pick up al-Hasan who had stumbled over his long tunic and fallen down; "Alas", he said, "your riches and your children are a seduction"; he allowed his grandchildren to climb on his back while he was prostrating himself in prayer, etc.). More important for the deductions drawn from them by the Shî'is are certain phrases attributed to the Prophet (e.g., "They will be the sayyîds of the young in Paradise", a hadîth whose veracity was contested by Marwân b. al-Ḥakâm; see Ibn Abî l-Ḥadîd, iv, 5), and above all the fact that he took them, with their father and mother, under cover of his mantle and declared that they were People of the House free from all impurity [see AHL AL-KISÂ and FATIMA]. After their grandfather's death (which was followed soon by that of their mother), al-Hasan and his brother played no part in the important events of the caliphates and took up the cause of Ubâd Bakk, 'Umar and 'Uḥmân. They lived, says one source, in a state of obedience to their father; in fact, even if they followed him in some of his demonstrations of opposition to 'Uḥmân, they took an entirely passive part (in any case they were still very young). Their names are mentioned on the occasion of the siege of Ummân's house by Marwân b. al-Ḥakâm, for 'Ali, according to several traditions, sent
them to carry water to the caliph, who was dying of thirst, and ordered them to... by the Muslim community; from a letter of Muawiya, we may deduce that he represented the matter as being possible.

His caliphrate.—After the murder of 'Ali, 'Ubayd Allah b. 'Abbâs [q.v.] invited the people to nominate him as caliph ('Ali had not dared to give advice on the question of the succession), and al-Hasan made a speech, reported in many texts, for the purpose of praising the merits of his family and his father, and, finally, of himself, by insisting on the fact that he had lived in intimacy with the Prophet. Kays b. Sa'd b. 'Ubâda al-Ansâri was the first to do homage to him; however, he tried to impose a condition, that the bay'a should be "on the Book of God, the Sunna of the Prophet and the war (bittâj) against those who declared licit that which is illicit (al-mubîllân)", but al-Hasan succeeded in avoiding this condition. He was at war with al-Mu'awiyah during the campaign against Mu'awiyah, he took part in the battle of Siffin [q.v.].

The conditions of the agreement concerning al-Hasan's abdication.—On the matter of the conditions of the agreement, there are in the sources certain variants which it is impossible to correct and reconcile. According to some accounts, Mu'awiyah gave carte blanche (but in respect of what?) to al-Hasan, who later regretted not having asked for more. The compensation in money was the sum of one million dinars (annual appanage ? in addition to the single payment of 5 million to be taken from the treasury of Kufa?) and the revenue from a district in Persia (Dârbâdîr? Fasa? al-Ahwaz?), which al-Hasan was never able to collect since the people of Basra were hostile, maintaining that it was a dependency of their own. Some traditions add other conditions which, however, must be suspected of having been interpolated later, in order to reduce the criticism of al-Hasan, and it is possible that he had raised certain problems and held firm in regard to his own point of view. These are the conditions: power was to be restored to al-Hasan after his death, he was to be given an advance-guard of 12,000 men to meet him, under the command of 'Ubayd Allah b. 'Abbâs, whom he instructed to consult Kays b. Sa'd and Sa'd b. Kays al-Hamdân. His aim may have been to remove from his side this Kays, who represented the party for war to the death, because he was already intending to negotiate with his adversary; al-Tabarî at least says so expressly (i, r. f.). Then he too began to advance (two or three months after the election). At the Sâbab of al-Madâ'în he halted and made a speech which disturbed his followers, who probably foresaw that they were already surrounded by the army, and sent him reinforcements [see al-Dînawarî]; later, during the campaign against Mu'awiyah, he took part in the battle of Siffin [q.v.].
ible in the future, but without giving any undertak-
ing on his part); according to another source, Mu'āwiyah
pledged himself not to designate a successor, the choice
being referred to a committee (ṣūrah) (but if so Mu'āwiyah
did not and could not contemplate his son's succession); again,
Mu'āwiyah promised to follow "the Book of God, the Summa of the Prophet
and the conduct of the righteous caliphs" (but such a condition
was a delusion that 'Ali's party gave to it, it implied the condemnation of 'Uṯmān's policy;
could Mu'āwiyah accept that?); a general amnesty
was to be granted; two million dirhams were to be paid
to al-Ḥusayn (this condition to show that al-
Ḥasan had also thought of his brother?); preference
would be given to the Ḥāshimis ('Alids and 'Abbās-
ids) over the Banū 'Abd al-Ḡams (Umayyads) in
the granting of pensions (aš'ād) and awards (an
admisssible condition?).

During his halt at al-Āl̄hunīyya, face to face with
al-Ḥasan's advance guard, Mu'āwiyah informed
'Ubayd Allāh b.'Abbās that al-Ḥasan had asked him
to make peace, but he was not believed; he then negoti-
tated in secret with 'Ubayd Allāh through the inter-
medialy of a third party and offered him a million
dirhams if he would join him, and this 'Ubayd Allāh
didn't, unknown to his troops. This defection was
to lead to a split in the ranks of the advance guard;
it seems that 8,000 men followed the example of their
general. Kays b. Sa'd then took command of the 4,000
who had not left him and invited them to
choose between obedience to a misguided imām
(Mu'āwiyah) and war under the command of a leader
(himself) who was not an imām (a speech handed
down with certain variants); it seems that the sol-
diers preferred to fight, but soon the situation
changed, with the result that Kays consented to lay
down his arms. From Maskin, where he had gone,
Mu'āwiyah went on to Kūfah; al-Ḥasan rejoined him
and declared officially in the mosque that he had
renounced the caliphate.

Al-Ḥasan's abdication naturally provoked certain
reactions: Ḥuǧrī b. 'Adī (q.v.) told him that he would
rather have heard that he had died before that day;
the same Ḥuǧrī, another adherent, accused him of
having humiliated the Muslims; others suggested
that he should review his decision; some years later,
the Shi'is, gathering together, showed their dis-
approval of the fact that al-Ḥasan had not asked for
sufficient guarantees, for he had not secured an
undertaking in writing from Mu'āwiyah that the
latter would leave him the caliphate after his death.
Mu'āwiyah took various measures to prevent future
insurrections: some of the tribes that were devoted
to the 'Alids he transferred from Kūfah, replacing
them by others from Syria, Baṣra and Mesopotamia
(al-Ṭabarī, i, 1920).

What were the motives that led al-Ḥasan to abdi-
cate? We can accept those specified in the sources—
love of peace, distaste for politics and its dissensions,
the desire to avoid widespread bloodshed—but it is
also probable that he was aware that his cause was
lost; it is true that 'Allābally emptiyed the State
treasury (every week, it is said!) to share out the
contents, he must have been short of money; more-
over, defections had been frequent in the last years
of his father's caliphate and had even increased during
his own; thus he could not rely on soldiers who had
little desire to fight. The consequences of the abdi-
cation weighed heavily on the 'Alids who later
claimed the throne. In the polemics against them, the
argument that they had lost all claim on account of
al-Ḥasan's renunciation was not easy to rebut; a
hadīth (al-Bukhārī, ii, 169, Fr. tr. 238 f.) purported
to show al-Ḥasan's lack of resistance as a great merit:
Muḥammad is alleged to have said "This my son is
a lord by means of whom God will one day reunite
two great factions of Muslims".

After the abdication.—During the journey
back to Medina, at al-Kāṭībīyya, al-Ḥasan received
a letter from Mu'āwiyah asking him to take part in
the campaign against a Kharidī, Ibn al-Ḥassāb
al-Ṭāī, who had just started a revolt. Al-Ḥasan
replied that he had given up fighting against him in
order to bring peace to the people, and that he
would not fight at his side. Having settled in
 Medina, al-Ḥasan lived quietly, at least in appearance,
without engaging in politics; as before, he went from
one marriage to another, so earning for himself the
title of al-Muḏālah "the Divorcier". He had 60 or 70 or
90 wives and 300 or 400 concubines. This life of
sensual pleasures does not appear, however, to have
aroused much censure. In 49/669-70 (other dates:
50, 48, 58, 59), he died of a somewhat prolonged
illness, or else from poisoning, attributed by many
of the sources to one of his wives, by name al-Diḏa',
dughter of al-Aš'āḥ; Mu'āwiyah is said to have
suborned her with the promise of a large sum of
money and of marrying her to Yazid; but it should
be noted that al-Ḥasan was in no way anxious to
reveal his suspicions to his brother al-Ḥusayn, for
fear that vengeance for his death might be taken
against some innocent person; the Yemenī chief
al-Aš'āḥ was regarded by the Shi'is as a traitor, in
the pay of Mu'āwiyah, and it is quite possible that the
hated fett for him had been transferred to his
daughter. Al-Ḥasan had expressed the wish to be
buried beside his grandfather Muḥammad, but
Marwān b. al-Ḥakam and 'Aš'īṣa together agreed
to prevent al-Ḥusayn from carrying out this request
(another version: 'Aš'īṣa consented, but Marwān
was obdurate; Uṣd. 14 f.). They were on the point
of taking up arms, but al-Ḥasan had stated that, in
the event of opposition, he could be buried in the
Balq, and Abū Hurayra convinced al-Ḥusayn that
the best course would be to take this solution. As
we do not know the exact dates of the campaign
to which they refer the abdication or of the official
ceremony at Kūfah, the length of al-Ḥasan's caliphate
cannot be determined; the sources, confronted with
the same difficulty, give different periods—five months
and ten days, six months and a few days, eight months
and ten days.

Al-Ḥasan's physical and moral attributes.—This grandson
of Muḥammad resembles the one who resembled him most closely. According to Abū
'1-Faradj al-Īsfahānī, he had a defect of speech in-
ward (halīm), and Abu Hurayra convinced al-Ḥusayn that
the title of halīm), and Abu Hurayra convinced al-Ḥusayn that
the title of the first year's pilgrimage (halīm), and Abu Hurayra convinced al-Ḥusayn that
the title of halīm), and Abu Hurayra convinced al-Ḥusayn that
the title of halīm), and Abu Hurayra convinced al-Ḥusayn that
the title of halīm), and Abu Hurayra convinced al-Ḥusayn that
the title of halīm), and Abu Hurayra convinced al-Ḥusayn that
their lines (the differentiation of the lines starting with a later imam); thus the questions relating to impeccability, infallibility, etc. do not concern him personally.

The abdication of al-Hasan, so much criticized in his own time by many of his supporters, thus did not invalidate his position as imam; his conduct was justified as springing from his pious detachment from mundane matters. The gap left by the lack of extraordinary qualities was filled, in the Shi'ite texts, by accounts of his miracles, among which were the following; all agree that the last of his miracles was the raising of the sanctuary of Mecca into the air; he made his daughter a gift of the palace to the south of Baghdad, called al-Kasr al-Ilasani, which he owned and which was one of the principal characters of the Persian religious dramas (ta'ziya).

Before the creation of the world, the sending of light (ta'ziya). entered into Adam's loins and thereafter into the loins and self and al-Husayn, al-Hasan shared their prerogatives: creation as images of light thousands of years during

The Shi'i further maintain that al-Hasan's miracles is limited to sixteen. The Shi'i's further maintain that Mu'awiya tried to poison al-Hasan 70 times, but he revived a dead man, etc. After consulting other sources differing from our own, Donaldson summarizes other accounts also, but he is mistaken when he says that the number of al-Hasan's miracles is limited to sixteen. with the order, he forbade the celebration in Baghdad both
regard for the property of foreign merchants. His
administration there proved to be so successful that Baha? al-Dawla now entrusted
him with the administration of 'Irāk, which at that
time was racked by widespread disturbances (392/
1002); and despite setbacks in his struggle against
the lord of Qawm al-Suṣ, Ibn Wāṣif, and the Kurdish
prince Badr b. Ḥasanawayh (with whom he was later
reconciled), he retained this province until his death,
which took place unexpectedly in 401/1011, at the
age of 49 or 51. Though disagreeing about his birth,
the authors are unanimous in praising the impartial
energy of his administration, which restored order
and a sound financial system; for the sake of public
order, he forbade the celebration in Baghdad of two
different festivals which took place unexpectedly in 401/1011, at the
time he himself lived at the Caliph's court,

**AL-ḤASAN B. ZAYD B. MUḤAMMAD B. ISMĀ’IL B. AL-ḤASAN B. ZAYD,** a descendant of the preceding, founder of an ʿAlid dynasty in Tabaṣrīstān (q.v.). The high-handed rule of the ʿĀlīrids on the one hand and, on the other, the settlement of ʿAlid elements in the region led to a rising in favour of al-Ḥasan b. Zayd, al-ḍāʾir al-saghrī, in 250/864. Al-Ḥasan, who was living at Rayy, was proclaimed sovereign by a section of the population of Tabaṣrīstān and received the allegiance of Wāḥṣūdān b. Diṣṭān of Daylam (q.v.). He succeeded in defeating the ʿĀlīrids and seizing the towns of Āmul and Sāriya, while Diṣṭān II took Rayy, which he had to abandon in 253/867 before the threat of the army sent by al-Muʿtaẓim and commanded by Moḥammad b. Diṣṭān of Daylam. But he was able to return to Tabaristan till 316/928. Al-Ḥasan b. Zayd, who was living at Rayy, was called to Istanbul on 17 Rabi 1, 942/15 October 1535 by Khayr al-Dīn, who set him free and made him a eunuch and his confidant. While his master was in the train of Timūr, and was an ancestor of the historian Muḥammad b. Māṣūmī, who recorded his descent from the saint on an inscription on the Buland Darwaza of Fathpur Sikri. A variant tradition, however, collected by Cunningham (see Bibliography), makes one Kandahār saint of Bābā Wali and a Gūḍjar saint of Ḥasan ʿAbdal. The shrine of Bābā Wali stands high on a hill, and the spring at its base is enclosed by a Sikh gurdwārā, a tank copanied with mulberry-trees and filled with fish, and several tombs in ruins (one shown in Annual Report ASI 1929-30, Pl. I b), one of which is said to be that of a saint of the Khalsa. There are also references to the presence of the tomb of "Lalla Rokh" —the last poem in Moore's romance was recited by the disguised prince at Ḥasan ʿAbdal; but the historicity of the lady referred to is in doubt.

Historically Ḥasan ʿAbdal is of interest as having been a popular camping ground of the Mughal emperors on their way to and from Kashmir; from the ʿAfn-i Akbarī (tr. Blochmann, i, 446) it is apparent that the town bore the name Ḥasan ʿAbdal in Akbar's time, and that Akbar visited the tomb of Ḥakīm Abu'l-Fath there (= the tomb mentioned above as illustrated in ARASI, obviously a "Baghaddād October" and hence stylistically in the mid-10th/16th century tradition). Opposite the shrine and on the far side of its stream are the remains of a Mughal garden with parterres and fountains, and of a bath; the site is thus a pleasant prospect.

**HASNAD B., a small town about 40 km. east of Ṭāfik, Pākistān, 33°48' N., 72°44' E., which forms a part of the ruins around the ancient Taxila. It is known as the site of a spring which has attracted legends of sanctity from Buddhist, Hindu, Muslim and Sikh sources, and in its form of the sacred tank of the Serpent King Elīpatra was described by the Chinese pilgrim Hiuen Tsang in the 7th century A.D.**

It is now known by Muslims as the spring of Bābā Wali, and by the Sikhs as that of Pandjābī Ṣāhib (Pandjābī ṣāhib 'group of five (sc. fingers)', i.e., 'hand'), from the shape of a mark on a rock from underneath which the water flows. Sikh popular tradition ascribes the mark to the hand of their founder Guru Nānak, although the story is acknowledged by many including some devout Sikhs, to be an invention of the 12th/18th century; certainly there was no shrine of Sikh worship at Ḥasan ʿAbdal before the time of Randjīt Singh.

The 'Bābā Wali' mentioned seems to be the saint ʿHasan of Kandahār, called Abdāl, who came into India in the train of Timūr, and was an ancestor of the historian Muḥammad b. Māṣūmī, author of the Taʾrīkh-i Maʿṣūmī, who recorded his descent from the saint on an inscription on the Buland Darwaza of Fathpur Sikri. A variant tradition, however, collected by Cunningham (see Bibliography), makes one Kandahār saint of Bābā Wali and a Gūḍjar saint of Ḥasan ʿAbdal. Subsequently, Hasan led a victorious expedition against the Kabyle chief of Kuko in 355/967. It is noteworthy that the defeat was not a mere victory, but a decisive blow to the Kabyle chief, forcing him to retreat, and he returned to Tlemcen. However, the exact details of the battle and its consequences are not available in the sources.

In 359/970, Al-Hasan al-Asham probably regained command after the Fatimid conquest of Tlemcen, but this is doubtful. He gave up his duties and fought against the Ikhshidid governor. He fell into disfavor with the government and was again in command of the Karmatis and defeated by the Fatimid troops under the command of the son of al-Muizz, who had fled from Baghdad and seized Damascus. A Fatimid general Dja'far, holding collective power, and defeated by the Fatimid troops under the command of the Karmatis allied to Alptekin, after the death of their father in 254/868. The death of Hasan's brother, Muhammad, in the lifetime of their father gave rise to intrigues against him and his brother or cousin Dja'far, who, according to Ibn al-Dawadari, succeeded al-Asham in the command of the Karmatis and allied to Alptekin, after his death.

Al-Asham has sometimes been considered as the principal promotor of the change in the attitude of the Karmatis towards the Fatimids.

**HASAN AL-A’SHAR, ABU MUHAMMAD HASAN** (a very important work). (M. CANARD)

According to the Twelver Shi’i traditions, Hasan al-Ashami, born at al-Ashami, died at Ramla in 366/August 977. But the other sources make al-Ashami die at Ramla in Rajab 366/March 977, a few days after he arrived, already sick, in this town. If, as is probable, al-Ashami died in 366, there may have arisen a confusion between him and his brother or cousin Dja’far, who, according to Ibn al-Dawadari, succeeded al-Ashami in the command of the Karmatis and allied to Alptekin, after his death.

According to the Twelver Shi’i traditions, Hasan al-Ashami was nominated Imām by his father, the tenth Imām, soon after the death of the previously nominated Imām, his brother Muḥammad Abū Dja’far, and a few months before the death of their father in 254/868. The death of Hasan’s brother, Muḥammad, in the lifetime of their father gave rise
to sectarian dissent, on the ground that the tenth Imam was the last Imam, and owing to the claims of Dja'far to the Imamat.

The eleventh Imam fell ill on 1 Rabii I 260/25 December 873 and died seven days later. He was buried in his house beside his father. His Bâb was 'Ughmân b. Sa'id. Early Shi'i authorities (al-Kullînî, Usâl, 326; al-Mufid, al-Irkâd, 365) say that during the week of his illness, the caliph al-Mu'tamid sent his doctors and servants to attend the Imam, and that a considerable number of 'Alid and 'Abbâsid notables visited him. Later Shi'i sources accuse al-Mu'tamid of poisoning him.

At the death of the eleventh Imam, further dissension arose among the Shi'a on the question of his posternity [see MUHAMMAD AL-KA'IM]. Some believed that he left a child named Muhammad; other denied that he left a child; others regarded his childless death as a proof that he had borne a male child, and that a considerable number of 'Alid and 'Abbâsid authorities (al-Kulînî, Birûr al-anwdr, Tehran 1302, xii, 154-79. See also al-Mufid, Kitâb al-Irkâd, Tehran 1308, 365-8; Nawbahî, Firaq al-Shia, ed. Ritter, 78-89; Ibn Khallîkân (De Slane trans.), i, 390-1; Ibn al-Abbî, vii, 189; al-Khatîb, Ta'rîkh Baghdad, vii, 366; Ibn Tûlûn, Al-'Imma al-ihdâ'ashar, ed. Sâlih al-Dîn al-Munadjîdî, Beirut 1958, 113; Ibn al-'Imad, Shadhârat, ii, 141 ff.; Abu 'l-Mahâsin, Nû'djâm ( Cairo ed.), iii, 32.

In addition to the sources mentioned in the article, reference may also be made to Abbâs Iybâl, Khânâmân-i Nawbahî, Tehran 1311 solar, index; D. M. Donaldson, The Shi'ite Religion, London 1933, 217-25; and J. N. Hollister, The Shia in India, London 1933, 90-2.

(H. J. Elias)

HASAN BABA, dey of Algiers from the beginning of 1682 till 22 July 1683. He first exercised the functions of corsair-captain (ra'î) at Algiers; in this capacity he took part in the revolt of 1671 which replaced the powers of the agbas by that of the deys. Son-in-law of the first dey, Hâdîdî Muhammad Tîbî who was also a corsair, he already played an important part in the days of this timid old man. Thus, when Hâdîdî Muhammad fled to Tripoli on receiving news that a French fleet was coming to attack Algiers, Hasan Baba had no difficulty in seizing power (beginning of 1682). He engaged in a brief campaign to repulse the Moroccan troops threatening Tlemcen, but hurried back to Algiers, towards which Duquesnes's fleet was sailing. The fleet arrived there on 29 July, bombarding the town from 26 August to 12 September. During this time the dey exercised a rigid authority over the town.

Having on this occasion gained nothing, Duquesnes returned in 1683 and began to bombard the city afresh on 26 June. This time the dey agreed to negotiate and to hand over hostages, among whom was a ra'î whom he regarded as his rival, Hâdîdî Husayn nicknamed Mezzomorto. The latter succeeded in procuring his release by Duquesnes on 23 July and led the other corsairs to make an attack on Hasan Baba, who was murdered the same day.

(R. Le Tourneau)

HASAN AL-BAŞRî, Abu Sa'id b. Abi 'l-Hasan Yasâr al-BAŞRî (21/642-210/728), famous preacher of the Umayyad period in Basra, belonging to the class of the "successors" (labî'în). His father, whose name was originally Pêrûz, was made prisoner at the taking of Maysan in Irak, and is said to have been brought to Basra, where he was purchased by a certain man whose identity cannot be definitely established, and married Hasan's mother, Khayra. According to tradition, Hasan was born in Medina in 21/642 (for a critique of this tradition see Schaeder, op. cit. in bibl., 42-8). He grew up in Wâdi 'l-Kûrâ and, one year after the Battle of Siffin, went to Basra. As a young man he took part in the campaigns of conquest in eastern Iran (14/636 and the following years). Thereafter he lived in Basra until his death in 210/728. His fame rests on the sincerity and uprightness of his religious personality, which already made a deep impression on his contemporaries (Ritter, 14 ff., 33, n. 5), and above all on his famous sermons and pronouncements in which he not only warned his fellow citizens against committing sins, but commanded them to consider and to regulate their whole life sub specie aeternitatis, as he did himself. These sermons, of which only fragments have been preserved, are among the best surviving specimens of early Arabic prose. Their vivid images and striking antitheses place them in the class of great rhetoric. It was not without reason that anthologists such as Djahîs and Mubarrad quoted them together with the famous speeches of the political leaders of the Umayyad period as models of style, and many of his sermons have even found their way into the great dictionaries. Two famous examples are: hâdîthâ hâdîhi 'l-bulûba sa'immâh sari'su 'l-udsâr "Re-polish these hearts (the seats of religious feeling), for they very quickly grow rusty!" (Ritter 34, mistranslated); ida'il 'l-dunya ka 'l-hanârarti ta'djâsu 'alayhâ wâli ta'muruhî! "Make this world into a bridge over which you cross but on which you do not build!" (Mubarrad, Kâmî, ed. Wright, 158). It is natural that there is a place in the work of hortatory literature in which some of Hasan's sayings are not quoted. His political judgements of the earlier caliphs are not, as is usually the case, confessions of allegiance to a political party, but arise from his religious principles. He criticized fearlessly the rulers of his time, the governors of 'Irâq. When he went so far as to criticize the founding of Wâsit by Hâdîdîdî in 86/705, he incurred the displeasure of the governor and had to go into hiding until Hâdîdîdî's death (Schaeder, 55-63; Ritter, 53-5). Nevertheless Hasan disapproved of those who took part in attempts to remove by rebellion the evil governors (taghîyr al-munahar). When the followers of the rebel Ibn Ash'ârî (81/700) ordered him to join them, he explained that the violent actions of tyrants were a punishment sent by God which could not be opposed by the sword but must be endured with patience (Schaeder, 56-7; Ritter, 51). In his sermons he constantly warned against worldly attitudes and attachment to earthly possessions: men are already on the way to death and those who are already dead are only waiting for the others to follow (Ritter, 20). He was suspicious of those who amassed riches. He rejected a suitor for his daughter's hand who was famous for
his wealth simply because of his riches (Ritter, 25), and it did not occur to him ... least three (Nuruosmaniye 3106, Tarih Kurumu 517, Konya) have continuations to 1039 (=Solakzade, p. 749, see below), which was being distributed free: "If I concern, by the term mundfib, could have everything that lies between the two ... mundfik (Ritter, 42-4). He considered that the sinner was fully responsible for his actions. His own sayings were circulated as husnuwa and he did not protest (Ritter, 25-6). Hasan called the worldling, whose mundfik, 2

HASAN AL-BASRI — IIASAN BEY-ZADE

judged sins strictly (tashdld al-mu^dsi) and considered him, because of his riches (man^u^fik), which does not contain something concerning Hasan and hardly a work on ethics, exhortation, mysticism or adab which does not cite one of Hasan's sayings. The following may be mentioned: Ibn Sa'd, Tabakat, vil/1, 114 ff.; Fihrist, 183; Ibn al-Murtada, Tabakat al-Mu'tasias, ed. Susanna Wüscher Häfli, Is., 21, ff.; Ibn Katoiyba, U'tyan al-akhdar, Cairo 1925, index, which does not contain something concerning Hasan and hardly a work on ethics, exhortation, mysticism or adab which does not cite one of Hasan's sayings. The following may be mentioned: Ibn Sa'd, Tabakat, vil/1, 114 ff.; Fihrist, 183; Ibn al-Murtada, Tabakat al-Mu'tasias, ed. Susanna Wüscher Häfli, Is. 21, ff.; Ibn Katoiyba, U'tyan al-akhdar, Cairo 1925, index, which does not contain something concerning Hasan and hardly a work on ethics, exhortation, mysticism or adab which does not cite one of Hasan's sayings. The following may be mentioned: Ibn Sa'd, Tabakat, vil/1, 114 ff.; Fihrist, 183; Ibn al-Murtada, Tabakat al-Mu'tasias, ed. and two (Vienna 1049, Köpörü) to 1045/1636 (= Solakzade, 763). The work served as a main source for Pöntw (see Ta'rikh, i, 5 etc.), Kâtip Celebi (see Fa'iqiye, i, xi etc.) and Na'imi (perhaps indirectly), through Şahrî al-Makar-zade, see Ta'rikh, i, 10, and Na'imi); while Solakzade (q.v.) frequently follows it so slavishly that he reproduces verbatim Hasan Bey-zade's autobiographical references: thus at Ta'rikh, 610 and 635, for example, یک‌AUT یک‌SURAT and bu fażi refer to Hasan Bey-zade (Na'imi, e.g., at i, 309, occasionally does the same). It is not possible to be sure if a complete edition of the work is required or whether its essential information is in fact already available through these published texts.

Hasan Bey-zade is the author also of Usul al-bisham fi niyâm al-'ilam (MS: Istanbul, Belediye O.49), dedicated to Celebi 'Ali Paşa (Grand Vizier 1029-30/1620-21); it is a collection of maxims of government, abridged from the Rawd al-akhrâr and subsequently becoming an official in various commercial courts. While so employed he wrote for the newspapers Takwim-i Tîjânâ and Diwân-ı Hâsadî. In 1867 he became president of the first majlis of the Commercial Court, but after a more digression by those who spoke. The session over

HASAN BÜZURG, founder of the Dîlâyîrîd (q.v.) dynasty, ambassador of the Ottoman Empire, Bursa, niece of Mehemmed Tahir, Usul al-mâliîsî, i, 46; Babinger, 174; IA, a.v. Hasan-beyzade (by Orhan F. Köprülü); M. Cavid Baysun, Reis-ü kütûb Kûşkân Hasan Bey, in Ta'rikh Dergisi, i, 3-4, 100, n. 8 and Tarih Dergisi, ii, 17; Brockelmann, II, 429, itself based on the Rabî' al-abrâr of al-Zamakhshari. A medîmna in the possession of Prof. Cavid Baysun (for details see Tarîh Dergisi, i, 3-4, 100, n. 8 and TM, x, 322-3) contains some poems composed by Hasan Bey-zade (who used, besides his personal name Ahmed, the names Abd al-Hamîd and Hamîdî), as three fawwâdî (one incomplete) which he wrote for the capture of Kanigh (1000/1600). In the Public Record Office in London are preserved two letters informing Queen Elizabeth of this victory, one from the Sultan (SP 102/4, partial trans. in B. Lewis, Istanbul and the civilisation of the Ottoman Empire, Norman Okt. 1963, 166-8), the other from the Grand Vizier (SP 102/6): these were probably composed by Hasan Bey-zade.

Biographical: Bursa Mehmed, Usul al-mâliîsî, i, 46; Babinger, 174; IA, a.v. Hasan-beyzade (by Orhan F. Köprülü); M. Cavid Baysun, Reis-ü kütûb Kûşkân Hasan Bey, in Ta'rikh Dergisi, i, 3-4 (1952), 97-102; idem, Hasan-beyzade Ahmed Paşa, in TM, x (1953), 321-40. (J. H. MORDTMANN-[V. L. MENAGK])

HASAN FEHMÎ, Ottoman statesman, was born near Batum, the son of HâdidjI-oghlu Sherif Molla and grandson of one Mehmed Agha. After primary education there he went to Istanbul, where he studied Arabic, Persian, and French with private tutors, as well as law. He began government service as an employee of the Translation Bureau in 1858, subsequently becoming an official in various commercial courts. While he employed for the newspapers Ta'bir-î Tijânat and Diwân-î Hâsadî. In 1868 he became president of the first majlis of the Commercial Court, but was dismissed, probably in late 1871, during the Grand Vizierate of Mahmud Nedim Paşa (q.v.). For some years thereafter he practised law privately.

Upon the institution of the constitutional regime by Midhat Paşa (q.v.) and Abd al-Hamîd II (q.v.), Hasan Fehmi, then chief clerk of the Translation Bureau, was elected a deputy by the Istanbul electors on the fourth ballot, on 1 March 1877. When the chamber met on 21 March, it elected him one of the four secretaries for the first session. On the closing day of that session, 28 June 1877, Hasan Fehmi made the major speech, pointing with pride to the chamber's free discussion and to its beneficial actions, even though in his view it had not accomplished all it should have done.

Chosen again on 12 November 1877 as an Istanbul deputy for the second session of the parliament, Hasan Fehmi became president of the chamber by election on the third ballot, taking office on 31 December. As president he was more moderate and courteous than had been his predecessor Ahmed Wefik Paşa (q.v.) in the first session, but allowed more digression by those who spoke. The session over which he presided, prorogued by the sultan on 14 February 1878, passed no bills, but effectively criticized the ministry. Hasan did not, like Ahmed Wefik, assume the role of government spokesman. After the chamber's dissolution Hasan Fehmi continued as vice-president of a special chamber committee, even though the sultan presided, to aid refugees from the Russo-Turkish war.

In 1878 Hasan Fehmi was appointed Minister of Public Works. While occupying this office he taught commercial law and international law in Istanbul. He was also for a time director of the civil list (Khariste-i Khâsî nâzîrî). His lectures on law were published in summary form in a book entitled Tâfâhid-i bukâhid-i dawâî, but after a jornal submitted to 'Abd al-Hamîd II the book was suppressed and he was reprimanded. In 1881 Hasan Fehmi attained

the rank of vizier, and became Minister of Justice.
In the first months of 1885 he was sent on a special diplomatic mission to London to negotiate the
wall of Aydln, and in 1892 (Rusumdt emini),
the rank of vizier, and became Minister of Justice.

Hasan Fehmi retained the reputation of being untainted by the regime, and after the revolution of 1908 was regarded by some affection by the Young Turks as an "Old Young Turk" and a living link between the first and the second constitutional periods. During the two years following the revolution he was twice Minister of Justice and once President of the Council of State in various cabinets,
and became a member of the Senate. He died in 1910 in his house at Edirne Kapd and was buried in the family cemetery at Fith on Agha Vokuslu. His wife was the daughter of Abd al-Halim Ghalib Pasha.

Hasan Fehmi Efendi, known as Ağaşehirî, an Ottoman Sheykh al-Islâm. The son of Othman Efendi of Iğlun, he was born in 1210/1795-6, and held various appointments in the teaching branch of the "Ilmiyye" [q.v.] profession. In 1275/1858-9, on the death of Yahyâ Efendi [q.v.], he was appointed to the office of Ders Wekili, with the duty of teaching and preaching on behalf of the Sheykh al-Islâm. Djewdet, who had reason to be hostile to Hasan Fehmi, indic- ated that the appointment was made for want of any one better, and says that he was known among the students as hadâbi—the liar (Tesdikr 13-20, ed. Cavid Baysev, Ankara 1950, 60; according to A. Abd al-Rahmân Sheref, he earned this sobriquet by not fulfilling the promises he made to the influential people whom he approached). His position became much stronger after the accession of Sultan Abd al-'Azîz, whose preceptor he was. In 1863 he accompanied the Sultan to Egypt, where he is said to have had learned conversations with the Azhari Shaykh Ibrahim b. 'Allî al-Sakkât [q.v.]. In 1867 he became Kâdfasker of Anatolia, then of Rumelia, and in April 1868 was appointed, for the first time, as Sheykh al-Islâm. This was a time when the modernization of the apparatus of government was reducing the jurisdiction and power of the office of the Sheykh al-Islâm; the creation in particular of new administrative bodies dealing with law and education meant a curtailment of his authority in matters previously regarded as his exclusive concern. [see also MAGHĀM-KHAT]. Hasan Fehmi tried to resist these encroaches- ments. The first object of his counter-attack was the committee which, under the chairmanship of Ahmad Djewdet [q.v.] and the authority of the Djinâm-i Akhâm-i Âlîyye, was preparing a new Ottoman civil code, the famous Medeni hukuk [q.v.]. Djewdet and his committee had successfully resisted the pressure of the extreme Westernizers, egged on by the French ambassador Bourée, for a French-style code, and were preparing a modern statement of Halâfi Muslim law. They were able to get their way, on the other side, of the 'ulamâ, led by the Sheykh al-Islâm, who saw in the preparation of this code under the department of justice a usurpation of the functions and prerogatives of his own office. Hasan Fehmi offered various objections to the work; in 1870 he procured the removal of Djewdet to other duties and the transfer of the Medjelle committee, under a new chair- man, to the jurisdiction of his own office. Djewdet was unwilling to authorise the removal of the feud between him and Hasan Fehmi continued (Ebu'lulâ Mardin, Medeni hukuk cephesinden Ahmet Cevedet Paşa, Istanbul 1946, 64, 70, 78-80, 82, 84, 88 f., 91 ff., 98-9, 106, citing Djewdet’s own account of these matters from his unpublished memoranda).

Another objective was the newly opened Dâr al-Funûn, designed by the Ministry of Education to grow into a university and serve as the corner-stone of a modern educational system. Hasan Fehmi was not present at the ceremonial opening in 1879; there is good reason to believe that he was instrumental in bringing about the closing of the Dâr al-Funûn in the following year. There is some evidence that one of the circumstances leading to this closure was a public lecture given by Djîmân-Î Dîn-Î Âffûnî, which was reported to the Sheykh al-Islâm as being heretical and blasphemous (Osman Kesikgözlû, Cemalddin Âfûnî, in İdikyiyi Faksulû Dergisi, 1962, 92-6, where other Turkish sources are cited; M. Z. Pakaln, Son sadrasamlar . . , iv, Istanbul 1944, 136 ff.; Osman Ergin, Türkiyede maarif tarihi, ii, Istanbul 1940, 460 ff.; Mehemd Âli Âyn, Dâr al-Funûn ta'vîzî, Istanbul 1927 (not seen); E. G. Browne, The Persian Revolution of 1905-9, Cambridge 1910, 7; R. H. Davison, Reform in the Ottoman Empire 1858-1876, Princeton N.J., 1963, 271).

Hasan Fehmi was dismissed from office in September 1871, ten days after the death of his protector the Grand Vizier Âli Paşa [q.v.], and two weeks after the return of Djewdet as chairman of the Medjelle committee and a member of the Council of State. He returned to office for a second term as Sheykh al-Islâm in July 1874, and remained until May 1876. He lost no time in resuming his quarrel with Djewdet, whom he blamed for the transfer of the committee from the bâb-i fethû, under his own jurisdic- tion, to the Sublime Porte (Mardin, op. cit., 114 ff., 123 f.). The work on the Medjelle proceeded, however, and by now the Sheykh al-Islâm was even willing to attend the first prize-giving ceremony of the Galatasaray school in 1875 (Mahmûd Djewad, Ma'narsî-Î Umâmiyye Neşäret-i ta'vîzî-i teşâbîd ve idâhî-lî, Istanbul 1938, 152). The last eight and a half months of his tenure of office coincided with the second Grand Vizierate of Mahmud Nedim Paşa [q.v.], and ended with his fall. The riots of 10 May 1876 were directed especially against the Grand Vizier and the Sheykh al-Islâm, the rioters demand- ing the dismissal of both. Hasan Fehmi’s unpopularity was no doubt due in part to his association with a very unpopular minister. There is also some evidence that he was personally unpopular among the ulema, as well as among the administrative and theological students (see for example Mehemd Memdûh, Murîd-i gûvanî, İzmir 1328, 64-5, where he is accused of giving advancement only to his own followers, and of appointing unqualified persons).

Prof. Davison (Reform . . . , 325) hazards the guess that his unpopularity among the students may have been due to the influence of Djîmân-Î Dîn-Î Âffûnî, against whom he is said to have acted in 1870.
The hostility of Djewdet, better grounded and more potent, will no doubt have had some influence on the events between 1550 and 1555. The Sa'did profited from this alliance to seize Tlemcen (9 June 1550). Hasan Pasha reacted at once, retook Tlemcen, and even pursued the Moroccan troops as far as the Moulouya. This was the beginning of a Moroccan policy which the Turks were long to pursue.

The beylerbey was recalled to Turkey in September 1551 as the result of many intrigues. He was once again sent to Algiers in June 1557 to replace Şâlib Paşa, who had died the year before.

Relations were again strained between the Sa'dids and the Turks, for the Moroccans had retaken Tlemcen. Hasan Paşa rapidly ejected them and even entered Morocco, but for fear of having his lines of communication cut by the Spaniards he did not push on as far as Fes. At the same time he sent to Morocco some Turks, pretending to be deserters, who succeeding in assassinating the Sa'did ruler on 23 October 1557. He then turned against the Spaniards, whom he heavily defeated on 26 August 1558. In 1559 he wished to strengthen the Turkish hold on Kabylia and inflicted a serious defeat upon his enemies in September 1559. After this he tried to enrol the Kabyles in his service against the Moroccans. The outraged Janissaries seized the beylerbey and sent him in chains to Istanbul (September 1561).

Quickly vindicated, Hasan Paşa returned to Algiers a year later. He at once made serious preparations against the Spaniards of Oran. The seizure of Mers el-Kebir lasted two months (3 April–7 June 1563), but failed, as a consequence of the arrival of a relieving fleet. In the following year Hasan Paşa received orders to prepare his fleet for the Ottoman attack on Malta, and he took part in this in July 1565. Although the siege failed, the Algerians and their commander served with distinction.

The Ottoman archival sources provide some supplementary details on Hasan Paşa's career. Upon his recall from Algiers in 1551, he was appointed sandjak-beg of Manisa, but held office for only a short time: he was retired, with a dirîsh, in 962/1554 (Başbakanlık Arşivi, Mühimme register no. 1, p. 212, no. 1326, of 15 Muḥarram 962). The text of the firman ordering him to participate in the attack on Malta is preserved (Mühimme, xvi, p. 560, no. 1326, of 12 Shawwāl 962). As beylerbey he followed his father's policy of hostility to the French, and was hence accused of piratical activities against French ships (Mühimme, vi, p. 637, doc. 1398). After his second recall from Algiers in 1567, he played a part in the battle of Lepanto [q.v.]: he was ordered to command part of the fleet sent from Istanbul to the Archipelago (Mühimme, xii, p. 244, doc. 510), and during the battle fought in the centre, with the Kapudan Paşa, Mühiddinhisâde Selim Paşa. On 2 December 1571 he was again appointed beylerbey of Algiers (Mühimme, xvi, p. 313, doc. 555) but did not go to his post (Mühimme, x, p. 99, doc. 157, of 23 Sha'bān 979/12 January 1572), probably because he was already ailing. He died in 1572, and was buried beside his father at Beshāhān. His elder son Muhâmed commanded a ship at Lepanto; the younger, Mêhmed, was a mutasferri (Mühimme, xxv, p. 93, doc. 1050, of 3 Dhu 'l-Hijjâd 981).

of troops in Rumeli, he died at Doghan Koprusi in of Budin. While he was supervising the movement jealously of the to Hasan Pasha's dismissal as Kapudan (12 Rabi fortified Ozi bek Giray as Khan of the Crimea (1037/1627-8). In which he had founded in the Gedik Pasha and buried by a ii, 132: [see SARAY]. Upon his appointment as Kapudan Mustafa procured him appoint- ment in the Palace service successively as Matbahh (and intermittently of adjacent provinces also) from 1126/1713 to 1136/1723, and father and predecessor of Ahmad Pasha [q.v.], founded the line of Mamlik rulers of 'Irak which lasted till 1247/1831. A Georgian by origin and son of an officer of Murad IV, he was born about 1068/1657, educated in the Saray schools, and advanced rapidly to the governorships of Konya, Aleppo, Urga, and Djftarbakr. In 'Irak he showed exceptional gifts of character by his piety, firmness and justice, and, as yearly (at times monthly) expeditions, successfully imposed discipline on the unruly Arab and Kurdish tribes, secured a high (if never flawless) standard of law and order, and demanded justice and honesty from his subordinates. The Ottoman declaration of war on Persia in 1136/1723 involved Hasan Pasha in important military operations and a large-scale invasion of enemy territory in the winter of that year. He died at Kermanshah before the spring, and his posthumous title of "conqueror of Hamadan" was strictly earned not by him but by his son Ahmad: but his own lengthy tenure of the Pashalk was rightly judged as outstandingly successful.

HASAN PASHA (see DZIRA'AÎLI GHZTT HASAN PASHA, KâRYA HASAN PASHA, KÀDEM HASAN PASHA, TURKOLLÎ, HAKÌ'IF HASAN PASHA, YEMENÎ HASAN PASHA, YEMENIÎ HOJASAN PASHA). DâMAD HASAN PASHA, (?-1125/1713), Ottoman Grand Vizier. The sources refer to him sometimes as "Morali", i.e., "from the Morea" and sometimes as "Enişte", i.e., "brother-in-law" (of the sultan, in this instance). He became a dokâdar and then, in 1093/1683-4, rose to the rank of sâldâdar. On the accession to the throne of Suleyman II in 1190/1775, Mehmed, son of Ahmad, was made Grand vizier of Egypt (with the status of vizier)—an appointment that he held until 1101/1689-90, when, according to the Sâdî-î 'Othmandî, he became mutasarrîf of Brusa and Nicomedia (Izmid). Hasan Pasha, in 1102/1690-1, received the hand of Khadija Sultan, a daughter of Mehmed IV. After serving for some time as Bâqâder mûhâefî he was sent, in 1105/1693-4, to govern the island of Sâkîe (Chios). The war of the "Sacra Lega" (Austria, Venice, Poland) against the Ottoman Empire was still in progress (1684-99). Hasan Pasha, in 1106/1694, had to meet at Chios the assault of a Venetian naval force sailing under the command of Antonio Zeno and consisting of about one hundred vessels, great and small, with more than eight thousand troops on board. Effective resistance was not possible and Hasan Pasha, after a brief siege, surrendered the island to the Venetians, the Muslim garrison and the Muslim population on Chios being allowed to depart, with their arms and baggage, for Çehmne on the mainland of Asia Minor. As a punishment for this reverse Hasan Pasha suffered a brief incarceration, after which he became governor of Kef (Kaffa) in the Crimea (Nusretâname, i/1, 27). He was raised, in 1106/1695, to the rank of fifth and then of second vizier (Nusretâname, i/2, 27), 1125/1713), Osmanh tarihi, iv/i, 146. (V. J. PARRY)
SEYYID QASAN PASHA, Ottoman Grand Vizier under the sultan Mustafa I; a native of a village in the district of Shab (Shabin) in Bursa province, he entered the Janissary Ojlaq, in 1146/1733-4. He attained the rank of wazir (lieutenant-general), took part in the Persian campaigns and in mid-Rabi‘I 1151/29 June–8 July 1738, during the war against Austria, he was promoted to be Agha of the Janissaries. This was one of the first coups in a general rising against the Salljufis.

In 1152/26 December 1739 for his bravery in this war, he was appointed Governor of Vojvodina. In 1159/24 May 1747, during the war with Austria, which had been going on intermittently since the Peace of Belgrade (1739), he returned to Iran, where he was accompanied by an account of the accession of Sultan Muhammad Shah. He accompanied the Shah on most of his expeditions, and was an eye-witness of events from that date until 1770. He was also the best authority for the reign of Shah Tahmasp I, where he is chiefly remembered as the author of a twelve-volume general history entitled Ahsan al-amrādīkh (the best authority for the reign of Shah Tahmasp I, where he is chiefly remembered as the author of a twelve-volume general history entitled Ahsan al-amrādīkh (Baroda 1931) the text of Vol. xi, covering the period 900-985/1494-1577, and (Baroda 1934) an abridged translation of this volume (see Storey, i, 306-9). He was an eye-witness of events from that date until 1770, in which year he brought his chronicle to a close with an account of the accession of Sultan Muhammad Shah.

HASAN-I RÜMLÜ, grandson of the kâlimbâbh chief Amir Sulût Rûmlû, the governor of Kâzûn and Sândjî Bulâg, who died in 946/1539-40. Hasan Rûmlû was born at Kûmm in 937/1530-1, and was trained in the Şafwî army as a kârî.

Hasan-i Rûmlû is chiefly remembered as the author of a twelve-volume general history entitled Ahsan al-amrâdîkh (Baroda 1931) the text of Vol. xi, covering the period 900-985/1494-1577, and (Baroda 1934) an abridged translation of this volume (see Storey, i, 306-9). He was an eye-witness of events from that date until 1770, in which year he brought his chronicle to a close with an account of the accession of Sultan Muhammad Shah.

power by the Isma'ïls, which emphasized seizing fortresses and assassinating key opponents and had wide success after Malikshah's death (485/1092); the Sâmilîs and the Ispâbab debated the possibility of his own rule. After Nizâr and his sons broke with the Fatimid Egyptian government in 487/1094 in support of the claims of Nizâr to the imâmât. Meanwhile Hasan, as leader in Rûdbâr, was taking a number of strongholds there and making them as self-sufficient as possible. After 498/1104, under Muhammad b. Malikshah, the Saljûq forces recovered many fortresses, including the headquarters of Ibn 'Atâ'î's son near Isfahân; Hasan was forced to provide a financial stronghold, resisting persistent Saljûq assaults. In 511/1118 a major siege of Alamût broke up only on Muhammad's death. By this time, Hasan seems to have been recognized as chief throughout the Nizârî movement. His remaining years, till 518/1124, were mostly peaceful and devoted to consolidating into a cohesive (but territorially very scattered) state such of the Nizârî movement as had been retained.

Hasan led a retired and ascetic life and imposed a puritanical regimen on Rûdbâr. He executed both his sons, one for alleged murder, the other for drunkenness. He was learned in the philosophical disciplines and wrote cogently. We have a portion of his autobiography, an abridgement of a treatise of his on theology, and possibly other writings. He expounded in Persian an intensely logical form of the Shi'î doctrine of 'âdîd, that one must accept absolute authority in religious faith; this form of the doctrine became central to the Nizârî teaching of the time and greatly affected al-Ghazâlî.

Neither in the intellectual nor in the political sphere do we know how far Hasan was an originator, how far simply the most successful exemplar of the new ways used by the Nizârîs. Among later Nizârîs, Hasan came to be looked on as the chief figure of the "daw'a di'âdîd", the reformed Isma'îlî movement dating from the break with the Egyptian government. He was the bu'dîsâ, the living proof of the vanished imâm after Nizâr's death, and the authorized link with the line of imâms who subsequently appeared in Alamût. He was called sayyid-nâd, "our master", and his tomb became a shrine. Outsiders ascribed to him the organization of the Isma'îlîs and their agents. After his death the organization and training of the fidâ'îs, dedicated assassins, who later may have formed a special corps.

What we have of Hasan's writings, in addition to brief citations and perhaps summaries in later Nizârî works, is preserved in al-Šâhrahstânî and in Raqîd al-Dîn, Diwâni' al-lavâdîrî, and Dâuwaynî (who is less full); the latter two give primary data on his life. For discussion and bibliography, see Marshall G. S. Hodgson, The Order of Assassins: the struggle of the early Nizârî Isma'îls against the Islamic world (The Hague 1955). For an uncritical Islamic world evaluation, see Jawad al-Muscatî, Hasan bin Sabbath (2nd. ed.: Isma'îlia Association Pakistan, Karachi 1953 or 1958).

Al-Utrush came to Tabaristan in the reign of the 'Alid al-Dâ'î al-Kâbir al-Hasan b. Zayd [see al-Hasan b. Zayd b. Muhammad]; his brother and successor al-Kâ'im b. 'I-Hâjî Muhammad b. Zayd, distrusting him, he endeavoured to found a kingdom of his own in the east, under the support of the governor of Nâysâbûr Muhammad b. 'Abd Allâh al-Khudištânî, who took Djurdjân from al-Kâ'im. But tale-bearers cast suspicion on al-Utrush and al-Khudištânî threw him into prison in Nâysâbûr or Djurdjân and had him scourged, which injured his bearing and to this he owes his epithet "the dear". On his release he returned to al-Kâ'im Muhammad and in 287 or 288 or (according to Abu 'l-Faraq al-Ispâbab) 289 or 307/1092-309 to 1110, he recurred with the Sâmilîs and al-Khudištânî, who took Diurdjân from al-Kâ'im. But equally general was the pressure by the Zaydîyya [q.v.]

The friendship of the Djastânîs, which dated from the time they and al-Utrush were with al-Kâ'im, was as flâj as their attitude to Isalâm, which their ancestor Marzâbân had adopted only a century earlier. Several joint undertakings thus came to nothing; al-Utrush recognized the necessity of first of all securing a following of his own, and through them the followers of the Djastânîs. He conducted Islamic missions and 'Alid propaganda from Hawsam among the not yet converted tribes on the coast of the Caspian Sea and in Gilân and also built mosques.

The Sâmilîs Ahmad b. Isma'îl in 298/910 sent Muhammad b. Sa'ûdî to Tabaristan with orders to prevent the foundation of the new state; but a Khurâsân army superior in numbers and still more so in equipment was completely defeated by the Daylamîs under al-Utrush at Shâlûs in Diûmâdî 1/307/1013; many fugitives were driven into the sea; a detachment led by Abu 'l-Wâsî Khâlîfa b. Nûh escaped to the fortress of Shâlûs, surrendered to al-Utrush on a promise of pardon, but was shortly afterwards massacred by his general and son-in-law Muhammad b. Harûn, who had quired with the Sâmilîs, supported him. Al-Utrush received a welcome from Djastân of Daylam (or his son Wasûbân; cf. Vasmer, in Islamica, iii, 165 ff.). The friendship of the Djastânîs, which dated from the time they and al-Utrush were with al-Kâ'im, was as flâj as their attitude to Isalâm, which their ancestor Marzâbân had adopted only a century earlier. Abū Ṭūlūb was the great-grand-nephew of the Imām al-Naṣīṣ Abū Ṭūlūb (see Būlā), who, born in 340/951, has given us the most important account of al-Utrūsh, based on the stories of eyewitnesses, such as his father.

Al-Bīrūnī, permeated by the ancient Persian traditions, blames Ḥasan al-Utrūsh for destroying the family organization of the Kadhkhudah, established by the mythical Faridūn (al-Abūr al-bâhôtâ, yea, text 224, tr. 210; cf. Barthold, Turkestan, 214, and idem, Sozien, i, Moskau 1966, 276).

IIASAN AL-UTRUSH — HASANAK 355

brought by the notables upon the dying al-Utrush to designate this same al-Ḥasan as his successor, and even to send an army against Tus.

Abū Ṭūlūb owed his rise not only to the skilful way in which he took advantage of the political discord on the Caspian Sea but also to his unusual intellectual ability. He was also a poet (cf. Brit. Mus. MS, Suppl. 1329, iv, and specimens in the Ifdīda, see Bibl.), but he particularly cultivated dogmatix, tradition and law (cf. also Ibn al-Nadīm, Fīris, 185, lines 1, 3423; al-Nadīm, Muqaddas, 119, lines 7). He seems to be a native of the UAE area (see Bibl.); he differs from the Yemeni practice in the ritual of burial and minor points of the law of inheritance; he also recognized the validity of the formula of repudiation when pronounced three times in succession as equivalent to three separate repudiations, by which he aroused the opposition of the Twelve Shi'a, who were numerous in the north; one of his sons, Abū ʾl-Ḥasan ʿĀli, was actually joined them; and he himself used their form of washing the feet, of course combined with the general Shi'a refusal to recognize the rubbing of the covered foot as a substitute for washing; he also showed himself less strict against members of other faiths, which is intelligible in view of his political and missionary aims. A particular Zaydi sect, the Naṣirīyya, was called after him, which had been predominant in the Yemen, by the Imām al-Mahdī Abū ʿAbd Allāh Muḥammad, son of the above mentioned al-Ḥasan b. al-Kāsim.

The latter, known as al-Dāʾī al-Ṣaḥīḥ, succeeded al-Utrūsh and was able to conquer Naysābūr in 306/918 through Laylā b. Nuṣādī, an old general of his predecessor, and even to send an army against Tūs. But he was killed in 316/928 when going from Rayy to the relief of ʿAbd Allah Muḥammad, son of the above mentioned al-Ḥasan b. al-Kāsim. Abu Jalīb was the great-grand-nephew of the Asasīb and the descendant of the family organization of the Kadhkhudah, established by the mythical Faridūn (al-Abūr al-bāhôtâ, yea, text 224, tr. 210; cf. Barthold, Turkestan, 214, and idem, Sozien, i, Moskau 1966, 276).

(R. LE TOURNEAU)

HASANI (pl. HASANlYUN), the name of the 'Alid [q.v.] sharifs descended from al-Hasan, son of 'Ali and Fatima. Hasani is thus contrasted with Hasami, the name of the descendants of their second son. In Morocco, the surname of Hasani is particularly reserved to those sharifs descended from Muhammad al-Nafs al-Zakiyya, son of 'Abd Allâh al-Kâmîl [q.v.] in order to distinguish them from their Idrisid [q.v.] cousins. The Hasani family have played a considerable part in the history of the Maghrib from the Western Sahara, not only by reason of their number but also in giving birth to two great Sharifian dynasties; that of the Sa'dids [q.v.] in the roth/16th and 17th/18th centuries and that of the 'Alawids [q.v.], which has been reigning in Morocco from the middle of the 17th/18th century to the present day (the 'Alawids are also known under the names of Filâlids or Sigîljimâsîs and the Sa'dîs under that of Zaydâns).

The date and reason for the establishment of the Hasans in southern Morocco are not precisely known, and it is hardly possible to verify the legends handed down to us in the abundant literature. The Arabic writers, however, are agreed in fixing the arrival of the first sharifs at Sigîljimâsî [q.v.] towards the end of the 7th/13th century, either brought back from Arabia by pilgrims or as a result of the journey of a special delegation which sought them at Yanbas, a little port in the Hûdjâz. The inhabitants of the oases of the Tafilalet (capital: Sigîljimâsî) welcomed them in the hope of ensuring for themselves good date-harvests in the future. The first of these sharifs bore the same name as his ancestor al-Hasan. He is now known by the surname of al-Dâhil, that is, the first to enter. A first cousin of this personage, Zaydân, appears to have been summoned about the same time and for the same reasons by the tribes of the oases of the Wâdi Dra. It has been suggested that these 'Alids may have come to Morocco with the Ma'âlî tribes [q.v.], who at that time were establishing their rule over the Moroccan oases south of the Atlas, where the sharifs would have played their traditional part as bringers of good luck and judges in the quarrels of these nomads from Arabia. This hypothesis is attractive but has not yet been verified. Several Arab authors have questioned the direct lineal descent from Muhammad al-Nafs al-Zakiyya, and even the Sharifian origin of the first Sa'dîs, but today the genealogy of all the Hasans, though perhaps not always unquestionable, is in fact not questioned. The genealogical table published here is complementary to that given for the 'Alids, and therefore does not go back earlier than the common grandfather of the Sa'dîs and the 'Alawids.

1) banished from Morocco from 19 August 1953 until 16 November 1955, his place being taken by his uncle ʿArafā b. al-Ḥasan.

Encyclopaedia of Islam, III
HASANWAYH, name of one of the Kurdish chieftains (and of the dynasty descended from him) who, in the 4th/10th century, succeeded in founding and maintaining in Western Iran and Upper Mesopotamia more or less autonomous and lasting principalities.

Hasanwayh b. Husayn (Abu 'l-Fawaris) belonged to a branch of the Kurdish tribe of the Barzikâni, other groups of which were led by several of his relatives (Ibn al-Âjîl, viii, 528-9). The death of two uncles (349/960 and 350/961) and the use of force against the latter's son (whom he assisted in fighting the Kurds) enabled him to increase his influence over the Kurds of these areas. This emboldened him to resist with force the governor of the province of Hamadân, Shams al-Dawla; in 349/960, his position was taken by that of the family, and things might have gone badly for him if the expedition against him organized by Rukn al-Dawla's wasir, Ibn al 'Amîd, had not been interrupted by the latter's death. The dead man's son and successor, Abu 'l-Fath Ibn al-'Amîd, negotiated with him, and in return for tribute of 50,000 dinârs and considerable numbers of animals, granted him financial autonomy, with the right to collect taxes in his province (Safr 360/December 970). He became reconciled with Sahîlân, who was himself semi-independent, and allied himself with him by marriage. In the struggle between the Bûyid 'Izz al-Dîn Bakhtîyârî [q.v.] and his cousin 'Aqîd al-Dawla [q.v.] he contrived, while promising his aid to the former in view of his connexion with the Bûyid of the Dîjbâl, Fâkhîr al-Dawla, to confine this to sending him his sons 'Abd al-Razzâk and Badr and postponing his own arrival until Bakhtîyârî was beaten and put to death. Several unpublished letters written by Abu 'l-Shawk al-Sâhîbî [see Rasûl, i, 51], Paris MS, fols. 55 v., 56 a., 94r., 97r.; Leiden MS, fols. 129r., 200 v.) in the name of Bakhtîyârî or of the caliph al-Tâhâ, bear witness to these negotiations. Meanwhile, Hasanwayh seems to have managed to make his peace with 'Aqîd al-Dawla, who at least took no measures against him; he died in 365/978 in his fortress of Sarmadî (south of Bistun).

Dissension broke out among his numerous sons. In the struggle in which Fâkhîr al-Dawla set himself up against his brothers 'Aqîd al-Dawla and Mu'ayyid al-Dawla of Rayy, several Hasanwayhids including 'Abd al-Razzâk were on the side of the first, while others including Badr supported 'Aqîd al-Dawla. The defeat of Fâkhîr al-Dawla involved his Kurdish allies, Sarmadî was taken from one of them, Bakhtîyârî was dead, and in the end all the sons of Hasanwayh were put to death except Badr (Abu 'l-Nâdîm) who, with the title of 'adîb, was installed as general leader of the Barzikâni Kurds in the name of Mu'ayyid al-Dawla, heir to the possessions of Fâkhîr (370/980). These facts are substantiated by a letter of 'Abd al-'Azîz b. Yusûf (C. Cahen, Une correspondance buyûdîe indîse, in Studi orientalissici ... Leoni Della Vida, i, 87).

Abu 'l-Nâdîm (later Nâşîr al-Dawla) is considered by the historians to be a prince worthy of all praise. Though a faithful vassal of Mu'ayyid al-Dawla, whom, for example, he assisted in fighting the Ziyârîd Kâbûs [q.v.], he was equally loyal to Fâkhîr al-Dawla once more, when the latter had peacefully succeeded Mu'ayyid al-Dawla after 'Aqîd al-Dawla and Mu'ayyid al-Dawla had died. In the quarrels between the various claimants to the succession of Fâkhîr al-Dawla he successfully supported Fâkhîr al-Dawla against Shahrâb al-Dawla, suppressed the revolt of a Barzikâni chieftain near Kûmm, and on Fâkhîr al-Dawla's death appears as a counsellor to the government of the young heir and his mother, whom he assisted for example in repelling the claims of Mahmûd of Qazwân ('Utbi, trans. Reynold, 424).

He came meanwhile to a good understanding with the new Bûyid in Baghchashmîn, Bahâ' al-Dawla, through whose efforts he was enabled to increase his influence and security. In 398/998 the lahâb mentioned above took refuge in the territories of Sâbûr-Khârâst, Dinawar, Nihâwand, Asadâbâd, Barûdîrî, and several districts of Ahwâz, as well as Karmân, Huîlân and Shahrâzûr from time to time. Abu Shudî Rûshwarî, who regards the Barzikânî as "the worst tribe on earth for brigandage", hymns his skill, energy and justice, which enabled him to impose on them a respect for order, to conduct a sensible financial administration, to develop the mountain roads and the markets (including, at Hamadân, a market for the sale of his own produce), to foster religion, and to secure by large gifts the safety and welfare of the pilgrimage which crossed his territory; several surviving coins show that he struck his own coinage (some new coins of his have been published by G. C. Miles in Mém. de la mission arch. en Iran, xxxvi, 145-7).

The last period of his principality brought him several trials nevertheless. In the quarrels in which the Bûyids or their dignitaries opposed each other, the assistance or hospitality which he gave to some involved him in the anger of others. The Hasanwayhids had immemorially been rivals of the Shâhdâhân Khurâsân, their western neighbours (towards Karmân and Huîlân) and of the most influential family among them, that of the Annâzîds [q.v.]; Badr had expelled from his territory Abu 'l-Fath ibn 'Annâz, who had taken refuge among some 'Ukaylî [q.v.] Bedouins in Upper Mesopotamia; in 397/1006-7 there were hostilities from this quarter. Again, Badr had alienated his eldest son, Hilâl, and preferred a younger; at one moment victorious with the help given him by the vassal ruler of Shahrâzûr, Hilâl was finally vanquished by an army sent by Bahâ' al-Dawla; but through this affair Ibn 'Annâz, with Abu 'l-Badâ' had been obliged to reconcile himself, had improved his position. More generally, the Kurdish subjects and neighbours of Badr ceased to respect him, and it was in fighting a minor group that Badr met his death in 405/1014.

This was the end of the family. It is true that in the previous year Bahâ' al-Dawla had died and Tâhir (Zâhir), a son of Hilâl, had again taken Shahrâzûr; and Hilâl, being freed, arrived to take his father's place. But after a few months they were conquered and put to death by the son of Abu 'l-Fath ibn 'Annâz, Abu'l-Shâh [see 'Annâzîds], whose power in the Dîjbâl was henceforth to replace that of the Hasanwayhids. There remained in the hands of the family, which had been stripped of all other possessions, only its stronghold of Sarmadî, where the last heir died in 439/1047, at the moment when a new conqueror was entering the country, the Saljûq Türk İbrahim İnâl.

Bibliography: Apart from the occasional sources given in the article, all the information derives from the history of Hilâl al-Sâhîbî, as it has been transmitted to us (apart from the brief extract
given by Ibn Ḥazm as Nawfal) were a multitude of tribes (ḥuṣūn ḡirmata), all going back to Nawfal's grandsons Ḥāshid and Baklī, "the two tribes of Hamdān (ḥabīl Ḥamdan)". This scheme places Yām (ṣūra) among the branches of Ḥāshid and Arāb among the branches of Baklī. At present the tribe of Yām lives north of the confederation and is regarded as a separate entity, while the tribe of Arāb lives to the south and is more closely associated with Ḥāshid than with its reputed ancestors of Baklī.

Another version, recorded by al-Suwaydī, gives Baklī as a descendent rather than brother of Ḥāshid (Baklī b. Diwawī). It has the tribe of Ḥāshid in the place of the tribe of Arāb. This version is less plausible, as it makes every branch of Baklī also a branch of Ḥāshid; it probably reflects the common tendency to regard Baklī as the junior partner in the alliance, a tendency also illustrated by the assigning to Baklī of second place in the joint name.

For centuries men, families, and larger groups have moved back and forth between Ḥāshid and Baklī without百年 by. Thus Baklī and Ḥāshid are both descended from Ḥāshid, their lines bifurcating from Ḥāshid's son Dīğshām al-Awsat (Ḥāshid's father was Dīğshām al-Abār).

Over the centuries Ḥāshid and Baklī, in a manner not uncharacteristic of brothers, have often fought with each other, just as they did in Sabean times. Almost always, however, they have both stoutly resisted the imposition of outside authority. As Zaydis they have been inclined to be on good terms with the Zaydī Imāms, who have kept strongholds such as Shāhāra in the country of Ḥāshid, but even under the Imāms they have shown a spirit of independence rather than subervience. The Imāms have frequently chosen members of the confederation as provincial governors. When the Turks were in the Yaman, they had little success in extending their jurisdiction into the territory of Ḥāshid and Baklī.

Sources used by the British Admiralty in 1916 are townsmen and villagers, engaged in agriculture and the raising of horses and sheep and to some extent in trade. The nomadic elements range northwards and eastwards, penetrating into al-Djawf (al-Djawf Ibn Nasir), where the influence of the confederation at about 50,000, making it probably the strongest military force in the region. The paramount chiefs, coming from the Ḥimrān of Ḥāshid, also enjoyed a degree of ascendancy over Baklī.

On the role of these tribes in the events following the revolution of September 1962 see YAMAN.

The majority of the members of the confederation are townspeople and villagers, engaged in agriculture and the raising of horses and sheep and to some extent in trade. The nomadic elements range northwards and eastwards, penetrating into al-Djawf (al-Djawf Ibn Nasir), where the influence of the confederation is not inconsiderable. Descendants of the Prophet (Sayyids) are held in high esteem by these Zaydis, especially in the land of Ḥāshid, where at Ḥūf they have one of their main centres in the Yaman.

Bibliography: In addition to the works cited under the article in EI, see J. Ryckmans, L'institution monarchique en Arabie méridionale avant l'Islam, Louvain 1951; Ibn Ḥazm, Dijama'at ansāb al-'arab, ed. E. Lévi-Provençal, Cairo 1948; al-Malik al-Aṣḥāf ʿUmar b. Yūsuf, Taʾrif al-ʿāṣib
After these imitative experiments Ahmed Hashim
sifcdya, that is, the provision of food and water for
age, he held the offices or functions of rifída and
rika, that is, the provision of food and water for
the pilgrims. For the first he collected contributions
in money or kind from the chief men of Mecca. One
year when food was scarce in Mecca, he brought
baked cakes or loaves from Syria, and crumbled
(hagama) these to make broth (tharid) for the pil-
grims; after this he was known as Hashim, though
his proper name was Abú. To improve the water
supply he dug several wells. He is credited with the in-
vention of Persian izdifs, that is, the weaving
of Persian izdifs.

Ahmed Hashim possessed an extremely sensitive,
infinity restless and constantly changing tempera-
ment. His great affections and friendships would
change to deep hatreds overnight and then he would
forgive and forget everything in turn. According to
the reports of his close friends (among others
Y. K. Kaoosmanoğlu and A. Ş. Hisar, see Bibliography),
in spite of his brilliant intelligence, poetical genius and
wide culture, he suffered from a strong feeling of
inferiority. He was an extremely sensitive person;
he thought that his physique was intolerable ugly,
that he was awkward and unsociable and unattractive
to women. He was convinced that Fate had been unkind
to him. He always felt lonely and unloved in the world.
He never recovered from the circumstances of his
childhood and from the feeling of being "strange and
different" in the early years of his youth. This made
him at times cruel and cutting. He lived as a bachelor
and married just before his death the woman who
had looked after him, so that "he could have a
mourning widow after him".

Ahmed Hāshim began to write his first poems at
Galatasaray when he was fifteen. In these early
poems there is a distant echo of the "Indian School"
ofāsid poetry in the style of Sheykh Shālib. But
he is more truly himself following in the steps of the
Tanzimat poet Abū-al-Ḥāṣib Hāmid in the choice of
morbidly sad and melancholy subjects and of Djināb
Shehāb al-Dīn in the vague symbolic imagery.
In this period his style and language follow more
closely the taste of Djināb Shehāb al-Dīn and particu-
larly Tewfik Fikret in the choice of the Arabo-
Persian sophisticated vocabulary and in the weav-
ing of Persian jmāfs. After these imitative experiments Ahmed Hāshim
did not write for a few years but read extensively the French impressionists and particularly the symbolists, whom he found close to his nature and his approach of poetry. Baudelaire, Verlaine, Rimbaud, Henri de Régnier, Mallarmé, Samain and the Belgian Verhaeren were his favourites.

In 1909 a group of young poets and writers who thought that the Thorrent-i Fünun movement was now outmoded, set up a short-lived new literary group: the Fegür-i Ali (“Dawn of the Future!”). Although Ahmed Hashim joined this new circle, because many of his friends were members, he himself was already a distinguished independent personality in Turkish poetry. Liberating himself completely from the influence of the Thorrent-i Fünun poets and not caring much for a group movement, he concentrated on developing modern Turkish symbolism, the theory of which he elaborately expounded in various articles and particularly in the preface to Piyâle. “Unlike prose, poetry is not to be understood but to felt... meaning and clarity are not the aims of the poet... Poetry, like the words of prophets, should be open to diverse interpretations”.

Ahmed Hâşim’s works underline his desire to escape from surface representation and invest his art with a deeper level of consciousness. For him the Universe exists in and through the mind and conception of the poet. There is no internal and external world, no division into subject and object, all is apprehensible by the poet in search of beauty in a transcendentality existing deeper than mere appearances.

In his poetry, he sought to convey by his acute perception of all the senses and dreams his own communication with and interpretation of that mystic reality.

For him the unity of music and poetry was a means to this deeper communication and his verse is freer and more plant in both form and rhythm than that of the earlier modernists. His poetic technique shows a rejection of the straight comparison and plainly-worked simile and a preference for symbolic imagery inspired by his growing interpretation of that ‘deeper reality’ in general symbolical conceptions.

Some of his poetry seems obscure as a result of his development of an essentially personal range of symbols with which the reader must be acquainted in order to reach a deeper level of understanding. He did not wish to be more ‘explicit’. This symbolic technique called upon the deeper imagination of both reader and poet and freely created more associations and nuances which would be stifled by a more concrete and surface technique. Ahmed Hâşim deliberately attempted to evolve a poetry whose language, of rhythm and symbol, with its own word-values and phrase-orders, defied logical analysis yet liberated and stimulated the mind to a deeper level of consciousness.

In the limited subject-matter and vocabulary of Ahmed Hâşim, dawn, twilight, evening, night, darkness, the moon, moonlight, lakes, ponds, deserts, roses, caryatids, storks, nightingales, melancholy, hopeless love, distant and unknown lands and death are ever-recurring themes and motifs. His poems are generally short. He ignored all movements and changes in Turkish language and literature and remained faithful to ārâd until the very end, as he considered the syllabic metre (heğje wezni) “only fit for folk poems”. He lived through wars and revolutions, but his poetry remained completely unaffected by these. However, the language reform movement did eventually influence him and his last quatrains are written in every-day Turkish without the sophisticated Arabo-Persian vocabulary and without Persian izâfes. Unlike Dînâb Şehâb al-Dîn, whose experiments in simple (ısdâ) Turkish were mainly unsuccessful, Ahmed Hâşim’s were among his best. And judging by them, it is safe to say that he would have grown to surpass his early work had he lived longer.

Except for a few articles, Ahmed Hâşim’s prose consists mainly of short essays on casual themes, as he was sometimes a columnnist in various dailies. His style is condensated, colourful and pithy, often tinged with cutting irony.

Ahmed Hâşim is the author of (1) Göl sa’âlîleri, Istanbul 1921 (contains poems previously published in the then leading literary review Dergâh), (2) Piyâle, Istanbul 1926, 1928 (contains his early poems, the Şir-i Kamer series and the famous introduction which was first published in Dergâh as a kind of manifesto, (3) Gürubâb-hânâ-i Lâkâhân, Istanbul 1928 (contains essays first published in the newspaper âshâm), (4) Bîa göre, Istanbul 1960 (part of his essays published in the newspaper İhâm, (5) Frankfurt Seyahatnamesi, Istanbul 1933, 1947 (travel impressions), (6) Ahmed Haşım’ın şiirleri, Istanbul 1933 (collected verse published after his death by the Semih Lutfi Kitabevi).

(Ahmed Hâşim)

AL-ḤÂSHİM (Shaykh Muhammad b. Ahmad b. al-Ḥâshîmi b. ʿAbd al-Rahmân b. Ḥasan al-Tilmâsî), theologist and šâfi of Sharîf descent, born 1222-24 (619/621) in the vilayet of Bitlis in the department of Oran, Algeria) where his father, a small land-owner, held the office of judge (kâdi). After his father’s death, Muhammad went to Tlemcen, where he followed various occupations: farm-worker, tailor, seller of drugs and spices. He attended regularly the mosques and madrasas to gain instruction in the religious disciplines and joined the mystic order (tarîka) of the Darkâwa (q.v.) “famed particularly for the learning of its members” (E. Doutré). His spiritual director (murhîd), Muhammad b. Yallas, had been the disciple in turn of the Shaykh Muhammad al-Ḥabîrī (d. 1900) and Ibn al-Ḥabîb al-Bûzîdî (d. 1909); then, on the latter’s death, he attached himself to the Shaykh Ahmad al-ʿAlawî (Ben ʿAlwa) of Mostaganem. In 1911, Muhammad al-Ḥâshîmi set off with his master for the East. After a stay of two years at Adana (Turkey), he settled at Damascus, where he completed his theological education under different ‘ulamā‘: Badr al-Dîn al-Ḥasanî, Yûsuf Nabhâni, Abu ʾl-Khâyr al-Mîdânî, etc. Shortly after the death of his master Ibn Yallas (1928), he received from the Shaykh al-ʿAlawi the office of khâṣîf of the ʿAlawîyya-Darkâwîyya-Shadhiliyya tarîba in the countries of the Near East.
From then on he devoted himself exclusively to the teaching of theology (tawhid) and mysticism (tasawwuf). His lectures at the Umayyad Mosque and in a number of madrasas (Shamiyya, Nuriyya) were very well attended; he founded zawiyas in Damascus and in the surrounding villages, at Hims, Hamāt and Halab as well as in Transjordan and Palestine. On his death at Damascus at the age of 80 (12 Raqiāyah 1381/19 December 1661), he left behind him several thousand disciples and the reputation of a renewer (muqaddid) of religion. The quality of his teaching and the virtue and wisdom which he disseminated caused him to be known as "the Shaikh of his time".

His written works consist of ten or so treatises or opuscules on tawhid and tasawwuf. (1) In tawhid, he professes an Ash'arism enriched by the addition of Avicennan ideas (the distinction of the necessary, of the possible and of the impossible and the grasping of these three categories by the intelligence in order to recognize the divine qualities, the attributes of the Prophet and the limits of the created world) and by the developments of the theological school of North Africa in particular of the Imam al-Sanusi (the doctor and safi of Tlemcen, d. 895/1490). The basic idea is that knowledge (ilm, ma'rifah) and more especially the knowledge of tawhid is an individual obligation upon the believer; it not only protects him from the error of denying (khufr) or of "associating" (shirk), but it illuminates him with a certainty (yaqīm) which is of divine origin. For the benefit of readers with varying intellectual capacities, al-Hāshimi wrote a brief "Sunni profession of faith" in prose, which he turned into verse in order to make it more easily memorized (tahdīd at-ta'lim wa mā na'mah), then a short commentary on this text (Sharh tayyib al-diwan bi sharh 'Abd al-Hādī bi al-tasawwuf, Damascus 1347/1947), Rasīlāt al-bahīth al-dājmīs... bi mā yata'allakah bi 'l-san'aw wa 'l-Sāri (Damascus 1374/1955) and Rasīlāt al-bahīth al-fasāl fi bayān al-murād min wasyiyah al-hakim (Damascus, 1376/1957), a short theologico-mystic commentary on the allegory of the swords which, taken separately, are easily broken and if joined together form a solid support. (2) In tasawwuf, several treatises written in reply to the theoretical or practical questions of his pupils have not yet been printed. The only works at present available are the Sharh Shajrinda tashrifī ("Commentary on the Chess-board of the Gnostics"), an explanation of a curious diagram attributed to Muhyī al-Dīn Ibn 'Arabī, in which human destiny and the mystic's progress towards God, together with the perils and the grace which attend them, are illustrated by the hundred squares of a chess-board (Damascus 1357/1938, reprinted 1964) and al-Hill al-madīnāt al-tashrifī, a technical glossary of Sufism by Ibn 'Abī Khālid (q.v.).

Bibliography: the essential work on the 'Alawiyya branch of the Darāwsha is M. Lings, A Moslem saint of the twentieth century, London 1961, devoted to the Shaykh Ahmad al-'Alawi and describing the essential aspects of the mystic method of training (wird, dhikr, ḥalawā) used also in the Syrian tarīkh (the author makes occasional references to al-Hāshimī). Notices on al-Hāshimi are found in the following works, written by two of his disciples: Sa'id al-Kurdi, al-Dājmī, Damascus 1388/1949, 142-6, and 'Abd al-Karim ibn 'Abī Ḥabīb an al-tasawwuf, Aleppo 1384/1964, 355 ff. (J.-L. Michon)

HĀSHIMIDS (AL-HAWASHIM), the dynasty of Ḥasanīd Шarīfs who ruled Mecca almost without interruption from the 4th/10th century until 1343/1924. After the First World War the dynasty provided kings for Syria and Iraq, which later became republics, and gave its name to the Hashemite Kingdom of Jordan (see following article). The eponym of the dynasty was Hāshim b. 'Abd Manaf (q.v.), the great-grandfather of the Prophet.

The majority of the Shī'ī recognize as their Imāms descendants of 'Ali's martyred younger son al-Husayn. Descendants of the elder son al-Ḥasan found their opportunity to wield temporal as well as spiritual power during the chaotic period following the Karmatī occupation of Mecca.

The Ḥashimī line of Meccan Шarīfs was descended from Mūsā I al-Djawn ("The Black"), a great-grandson of al-Ḥasan and a younger brother of Muhammad al-Nafs al-Zakīyya. One of Mūsā's sons, Ibrāhīm, was the ancestor of the Ulghādīyīds (q.v.) of Ya'mama, and the other, 'Abd Allāh al-Shaykh al-Sāliḥ (also called al-Riḍā), was the sire of the Meccan Шarīfs. From 'Abd Allāh's son Mūsā II sprang three of the main branches of the dynasty—the Mūsawīds, the Hawaišīm, and the Katādīds. From Sulaymān, another son of Mūsā II, came the fourth main branch, the Sulaymānīs (strictly speaking, therefore, all four branches were Mūsawīs).

The Shijfaṭī lasted nearly a millennium, with the Mūsawīds, Sulaymānīs, and Hawaišīm reigning for well over two centuries and the Katādīds for the remaining seven centuries and a quarter.

The first of the line to make himself master of Mecca was the Mūsawī Dīja'far b. Muhammad of the fourth generation after Mūsā II. Dīja'far is said to have supplanted a representative of Egypt at an uncertain date, probably in the early years of the second half of the 4th/10th century. Dīja'far's success may have been connected with the rising power of the Fātimīds. Early in the 5th/11th century the Mūsawīds under Abu 'l-Putnī al-Ḥasan failed in an attempt to bring the Caliphate back to Mecca, and their authority was later challenged by the Sulaymānīs, who developed a base for their power farther south on the Red Sea coast (see 'Aṣfī). Neither the Mūsawīs nor the Sulaymānīs got an enduring grip on the Shī'ī. In the second half of the 5th/11th century they gave way to the Hawaišīm (so called here to distinguish them from the larger entity of the Ḥashimīds), whose eponym was a descendant of Mūsā II named Hāšim.

In or about 977/1201 (the correspondence of dates in EI1, i, 552 is inexact), one of the greatest of the long line of Шarīfs, Katādī b. Idrīs, swept down from his stronghold of Yānba' and drove the Hawaišīm out of Mecca. Katādī was in the tenth or twelfth generation after Mūsā II, and all the Meccan Шarīfs who succeeded him bore the name of his ancestor.

In the mid-7th/13th century Mūsāmād Abū Numayyā I, the eighth Katādī, first mounted the throne as a partner of his father al-Ḥasan. Nearly two centuries then elapsed before the accession of Mūsāmād Abū Numayyā II, son of Barakāt II (q.v.).

The descendants of Abū Numayyā II in time split into three principal clans which often contained with
one another for sovereignty over Mecca. The first clan to establish itself was Dhawu cAbd Allah (the Abadila), named after a grandson of Abū Numayy II, but it soon yielded to Dhawu Zayd, named after a great-grandson. The third clan, Dhawu Barakāt, named after a son of Abū Numayy II, shared dominance with Dhawu Zayd from 1082/1672 until Dhawu cAbd Allāh regained power under Muhammad b. 'Abd al-Mu'in b. 'Awn in 1243/1827. Muhammad and the seven rulers among his descend- dants, the last of the Muhārīrūn, may be named collectively as Ḥālid b. Sa'd of the Katadids. The picture is further complicated by the fact that many Sharifs reigned more than once (Sa'd b. Sa'd of Dhawu Zayd, for example, reigned five times between 1099/1688 and 1129/1717, and his father had reigned four times before him). The reign of at least one Sharīf lasted less than a day. Very often two or more Sharifs shared the rule as partners (zhurād).

The total number of Hāshimīd Sharifs is too great to devise a complete list of the Hāshimīd Sharifs of Mecca. The sources for their history, though ample, contain gaps and contradictions. A general idea of the course of their succession can be obtained from the genealogical tables in Snouck Hurgronje and al-Sibā'ī. The picture is further complicated by the fact that many Sharifs reigned more than once (Sa'd b. Sa'd of Dhawu Zayd, for example, reigned five times between 1099/1688 and 1129/1717, and his father had reigned four times before him). The reign of at least one Sharīf lasted less than a day. Very often two or more Sharifs shared the rule as partners (zhurād).

The total number of Hāshimīd Sharifs who held office as Sharīf of Mecca between Dī'āfar b. Muḥammad and al-Husayn b. 'Ali appears to have been just short of a hundred. Of them less than twenty belonged to the first three branches and slightly more than eighty to the fourth, the Katadīdīs.

Not only was the rule of the Hāshimīds disturbed by frequent internecine struggles, but it was often interfered with and on a few occasions briefly suppressed by Muslim sovereigns outside al-Hijāz, beginning with the Fatimids and the Abbasids and ending with the Ottomans and Al Su'ud. In the Middle Ages the Sharifs almost invariably recognized one or another of these sovereigns as their overlord. Given the tremendous internal and external pressures on the Sharīfīs and the shirks for independence, it is impossible to devise a complete list of the Hāshimīd Sharifs of Mecca. The sources for their history, though ample, contain gaps and contradictions.

The death of Faysal ushered in a period of drift. The youngest son, Zayd, was born there. The Congress refused to accept the mandate system. Faysal, after accepting the crown of Syria from the Congress in March 1920, somewhat reluctantly acceded to armed resistance to the French and was forced to flee from Syria when the French defeated the Arab forces in July 1920. Husayn, however, addressed him only as "King of the Hijāz."

At the end of the war, Faysal, the third son, was pre-eminent. As commander of the Northern Arab Army, he was the commander of Allied Forces in Syria and Transjordan. As representative of the Hijāz at the Peace Conference, he negotiated with the Great Powers. Faysal proved unequal to the task of mediating the opposing aims of the Allies and the notables of Syria and Palestine, who formed themselves into the Syrian General Congress in 1919. The Congress refused to accept the mandate system. Faysal, after accepting the crown of Syria from the Congress in March 1920, somewhat reluctantly acceded to armed resistance to the French and was forced to flee from Syria when the French defeated the Arab forces in July 1920. Husayn, King of the Hijāz, still dreamed of being king of Arabia. He was unsuccessful, however, in his efforts to persuade the British to support him against 'Abd al-'Azīz Al Su'ūd. Nevertheless, he would not seek an accommodation with the Wahhābī leader, despite the military superiority which the Najdī forces had demonstrated in 1919. Husayn, doubtless seeking support in the contest, adopted the title of Caliph in 1924. Su'ūdī military force prevailed, and Husayn fled from the Hijāz in October 1924, leaving 'Ali as king. The latter followed his father when Ibn Su'ūd completed the conquest of the Hijāz in December 1925. Husayn, who spent his remaining years in Cyprus, died in 'Ammān on 4 June 1931. 'Ali lived in Bagdad until his death on 13 February 1935.

Faysal [q.v.], with British backing, became king of 'Irāk on 25 August 1921. He worked diligently to form the kingdom. His ambitious reforms brought him into a unity and to create viable relations with the mandatory power. His activities culminated in the Anglo-Iraqi Treaty of 1930 and the admission of 'Irāk to the League of Nations on 3 October 1932. With 'Irāk independence achieved, Faysal sought to create a union of 'Irāk with Syria, but he failed to win the approval of the dominant political coalition in Syria.

The death of Faysal ushered in a period of drift.
The reign of the young king Ghazi [q.v.] (8 September 1933 to 4 April 1939) was marked by tribal rising, military coup, rapid succession of cabinets, and increasing agitation against the British connexion. The course of affairs during the reign of Faysal II was set by 'Abd al-Illah, who was regent during the minority of the king (4 April 1939-2 May 1953). The Regent’s policy of furthering Pan-Arab aspirations under 'Irak leadership through cooperation with Great Britain passed its first hurdle when the government of Rashid 'Ali al-Khláwi was suppressed by the British in May 1941. In 1942-3, the 'Irak govern-
ment initiated talks for the purpose of creating a federation of 'Irak, Syria, Transjordan, Palestine, and Lebanon (the “Fertile Crescent”). The result, however, was the Arab League, which under Egyptian leadership thereafter blocked 'Irak hopes. After 1945, 'Irak committed itself firmly to Great Britain and the western powers. Egypt took the lead in opposing the 'Irak foreign policy, and when 'Irak signed the Baghdad Pact with Turkey, Iran, Pakistan and Great Britain (24 February-12 October 1955), Egyptian and Syrian displeasure became intense. 'Abd al-Illah and Faysal II were killed in the military coup of 14 July 1958.

'Abd Allah, the second of Husayn’s sons, who had been the most eminent before 1918 and the first to embrace Pan-Arabism, moved to Transjordan in late 1920 with the avowed aim of restoring Faysal in Saudi Arabia, Egypt, Syria, and Lebanon. When the King included Arab Palestine in the Hashimite Kingdom of Jordan in 1950, Egypt directed an attempt to expel Jordan from the Arab League. (The new name had been adopted in May 1946, but was not used by any other government until 1950.) The King’s outspoken British orientation and the existence of the British-commanded Arab Legion facilitated the continuous stream of extreme nationalist propaganda which the opponents of his policies directed against him. On 20 July 1951 'Abd Alláh was assassinated.

King Talál (20 July 1950-11 August 1952) was incapacitated throughout most of his reign, and his younger brother Náif acted as regent until 5 Sep-
tember 1951. The state of Talál’s health was such that Parliament deposed him and the throne passed to his son Husayn, who did not reach his majority until 2 May 1953. The kingdom was shaken by the problem of incorporating western Jordan at the time when the “positive neutralism” of republican Egypt was exciting the younger generation and opposition politicians throughout the Arab world. King Husayn adopted a nationalist course which culminated in the removal of General John B. Glubb from the command of the Arab Legion and the termination of the Anglo-Jordanian Treaty in 1956-7. The King, however, soon broke with his Egyptian-oriented colleagues and accepted American financial assistance. With Husayn now the object of Egyptian hostility, Jordan and 'Irak joined together in the Arab Federation in response to the formation of the United Arab Republic in 1958. The Federation came to an end with the extinction of the Hashimite kingdom in 'Irak.

K. Hitti, ed. James Kritzeck and R. Bayly Winder, London and New York 1959; ibid., *The Amor of Moscati and Cahen, who sees in the Abbasid preaching was of an ex-
tiated family of the Prophet, towards profounder is-
ams and separately organized followings, had not
of the Prophet into different branches, with different
sectarian significance, and when the split of the house
paganda and movement in Khurasan, and thus of
the Abbasids was the most active and best
supporters. From early
Abbasid claim to the Caliphate,
which it was rescued only by modern scholarship.

ally to the
Abbasids themselves, and the sectarian
notation of the term was lost in an oblivion from
which it was rescued only by modern scholarship.

**AL-HÂSHIMIYYA**, a term commonly applied in the
2nd-3rd/9th-10th centuries to members of the ‘Abbâs-
sid house and occasionally to their followers and
supporters. From early ‘Abbâsid times it was under-
stood to denote the descendants of Hâshîm b. Abd Manâf [q.v.], the common ancestor of the Prophet,
Abbas and thus, through
kinsman and rightful successor of the Prophet (Naw-
bahtl, 43). From this time onwards the political and
messianic aspirations which found expression in
Shî’ism are focused on the descendants of ‘Ali and
more especially of Fâtimâ rather than on the Banû Hâshîm as such; it may be noted that already in the
surviving Hâshîmîyyât of Kumayt [q.v.], with their
sometimes almost messianic overtones (e.g., ed. Horo-
witz, Leiden 1904, 154, 3), the poet restricts his praises to the Prophet, ‘Ali, and the ‘Alîds. In ‘Abbâ-
sid times the name ‘Hâshîmîyya’ was applied to the
family of the Prophet in general, but more specif-
ally to the ‘Abbâsid themselves, and the sectarian
notation of the term was lost in an oblivion from
which it was rescued only by modern scholarship.

This confusion as to the location of al-Hashimiyya
was applied in Umayyad times to a religio-political
faction—those who believed that the Imamate had
been transferred to Muhammad b. al-Hanafiyya and Abu Hashim as such; it may be noted that already in the
Hâshîmîyya preaching has been the
subject of some disagreement. As the followers of an ‘Abbâsid pretender, the group may be described as
of Shî’ite origin—but at a time when this term had not yet acquired its later and more definitively
sectarian significance, and when the split of the house of the Prophet into different branches, with different
sects, had become a significant fact. The group has had
yet taken place. The view of Van Vloten and Well-
hausens, that the ‘Abbâsid preaching was of an ex-
tremist character [see q.v.], has been followed by
some scholars, but rejected by others, notably Moscati and Cahen, who sees in the ‘Abbâsid move-
ment an urge, focused around the still undifferenti-
ted family of the Prophet, towards profounder is-
ulation and the ending of racial domination. Of this
family, the ‘Abbâsids were the most active and best
organized, and were therefore able effectively to
mobilize the support and goodwill which the family
could command. According to the ‘Abbâsid victory there was some—perhaps deliberate—ambiguity in
the use of the terms Hâshîmîyya and Hâshîmîyyân. Statements attributed to al-Sa’īfî and al-Ma’nsûr
as for example in the inaugural khâbâa at Kûfâ and
in the correspondence with the ‘Alîd Muhammad b.
Abd Allah al-Nafs al-Zakiyya [q.v.]=already put
forward a specifically ‘Abbâsid claim to the Caliphate,
in reply to the ‘Alîd’s assertion that no one had
more than the Hâshîm blood than he [Tabarti, iii, 29 ff., 209 ff.].

The third ‘Alâbîd Caliph, al-Mahdî [q.v.], is said to
have abandoned the claim to the Imamate derived from
Muhammad b. al-Hanafiyya and Abî Hâshîm,
and to have basied the claim of the dynasty on their
descent from al-‘Abbâs b. ‘Abd al-Mu’talib as the
kinsman and rightful successor of the Prophet (Naw-
bâghtl, 43). From this time onwards the political and
messianic aspirations which found expression in
Shî’ism are focused on the descendants of ‘Ali and
more especially of Fâtimâ rather than on the Banû Hâshîm as such; it may be noted that already in the
surviving Hâshîmîyyât of Kumayt [q.v.], with their
sometimes almost messianic overtones (e.g., ed. Horo-
witz, Leiden 1904, 154, 3), the poet restricts his praises to the Prophet, ‘Ali, and the ‘Alîds. In ‘Abbâ-
sid times the name ‘Hâshîmîyya’ was applied to the
family of the Prophet in general, but more specif-
ically to the ‘Abbâsid themselves, and the sectarian
notation of the term was lost in an oblivion from
which it was rescued only by modern scholarship.

ally to the
Abbasids themselves, and the sectarian
notation of the term was lost in an oblivion from
which it was rescued only by modern scholarship.

**AL-HÂSHIMIYYA**, name of the administrative capital of the ‘Abbâsids before the building of
Baghdîd, referring not to a single place but to
ever the Caliph chose to establish his residence. The
confusion as to the location of al-Hâshîmîyya stems from the existence of more than one place of
that name, as each in turn was occupied for a period as
the official residence of the ‘Abbâsid Caliph. The
founder of the dynasty, al-Sa’īfî (d. 132/754), after
leaving al-Kûfâ, settled at a site opposite Kasr Ibn Hubayra [q.v.], where he built a city and named it al-
Hâshîmîyya (situated midway between al-Kûfâ and
Baghdîd; cf. Yakot, iv, 946—confuses with Madinat b.
the Caliph had begun construction at Kasr Ibn Hubay-
ra itself, but he abandoned this location when the
populace, in preference to al-Hashimiyya, persisted in referring to the town by the name of its founder, the last Umayyad governor of Ṭrāṣ, ʿUmar b. ʿUmar b. ʿAbd al-ʿAzīz, whose burial site was built on the city on the Euphrates near al-Ḵufa, but was forced to abandon this site by order of the Umayyad Caliph Marwān II (presumably Madīnat Ḥabūlayla, which Ṭabarī and Yāḵṭūš confuse with Kašr Ibn Ḥabūlayla; cf. Annales, ii, 80, 183; Muʿāšar, i, 680, ii, 208; iv, 123, 946; Baḥāḏhirū, Futūḥ, 287). In 134/754, al-Saffāḥ moved once again and established his capital on the Euphrates near al-Kūfa, but he died in 136/754 before completing it (Futūḥ, 287; Yaʾqūbi, ii, 429-30; Bulūḏ, 237; Ibn Kūṭayba, K. al-Maʿāḏirī, 185; Dināwārī, Abū Ḧabīr, 372-3; Ibn Rustaḥ, BGA, vii, 199; Ṭabarī, iii/1, 80, 87; Maʿṣūdī, Tanbīḥ, 339; K. al-ʿUyīn in Fragmenta Historicorum Arabrorum, i, 211). The authorities report that al-_MEMBERSH, who now became Caliph, established his residence at a new location in the general vicinity of al-Ḵufa which, according to al-Ṭabarī, was adjacent to Madīnat Ibn Ḥabūlayla (Yaʾqūbi, ii, 450; al-Ṭabarī, iii/1, 271, 272, 319). This site is not to be confused with Kašr Ibn Ḥabūlayla, which, as previously noted, was situated midway between al-Ḵufa and Baghdād. These accounts seem to suggest that the centre of al-.Flāṣūr’s administration was the city near al-Ḵufa which was first built and later abandoned by the governor of Marwān II. There were, therefore, no less than four ‘Abbaṣiḍ capitals: the three capitals of al-Saffāḥ at Kašr Ibn Ḥabūlayla, at the site opposite that town, and at al-Anbār, and also the capital of al-_MEMBERSH at Madīnat Ibn Ḥabūlayla. The proclivity of the ‘Abbaṣiḍ Caliphs for this constant moving is still unexplained; but it does suggest that they were searching for a site which could satisfy certain particular needs. Following a riot in the court of his palace, al-Flāṣūr began the journey which led to the founding of Baghdād. In 146/763, the administrative agencies of the government were moved to the new location signifying the formal transfer of the capital (al-Ṭabarī, iii/1, 129-33, sub anno 141/758, 271, 418 ff. also gives dates 136, 7; Khattīb, Cairo ed., i, 67 = Paris ed., 2; Muʿāšar, i, 680). Lassner, Some speculative thoughts on the search for an ‘Abbaṣiḍ capital, in MW, iv (1965), 135-7; see also Kašr Ibn Ḥabūlayla (J. Lassner)

HASHISH is a narcotic product of Cannabis sativa L., hemp. When cultivated under certain favourable climatic and soil conditions, especially in India and neighbouring areas, the plant is more active physiologically; it is there called C. Indica Lam. Both of these “varieties” are morphologically alike. It is a dioecious plant; the dried flowering tops of the pistillate plants contain a resin whose chief constituent is cannabinol. Cannabis also comes from hemp by its tannate is used as a hypnotic, narcotic, and sedative used in hysteria, acute mania, nervous insomnia, and in menopausal nervous disturbances.

The Indian hemp was known as a useful plant in early historic times. In the earliest scientific literature, the ancient Mesopotamian lexical lists, there is evidence that Cannabis was used both in the manufacture of cloth and as a drug. In Sumerian, it is AZAL.LA and in Akkadian asulū. These terms are cognate to the Syriac ʿasal “to spin.” In the list, it is equated with gurussu from garaḵa “to roll, to twist.” Thus, the Persian word for hemp, gorgariṇḏ, is related to the late Assyrian gurgurangu. Another equivalent in the list is ₵amī niṣāṭu “herb of grief.” An interesting equivalent is the Sumerian GÁN.Z1.GU.NU where GÁN is probably habbū “robber,” and Z1 is napīṣtu “soul.” GUN.NU is “to twist, to weave.” The entire meaning, therefore, of the Sumerian word is “plant + a narcotic + weaving,” or hemp for weaving. In Babylonian medicine, it was used externally with other ingredients for the stomach, swellings, and loss of control of the lower limbs. Internally, it was used for depression of the spirits and renal calculi.

Towards the end of the eighth or first half of the seventh century B.C., the word qunubu or qunubu is mentioned in a Sargonid text. The cognates, Arabic ḥanīb and Persian hanāb, often refer to the hemp seed and its narcotic properties. The Greek (Wellmann, Dioscorides, III, 148) ḥanībāt and Latin Cannabis also are related.

In ancient Egypt, hemp is noted as a drug in the Berlin and Ebers papyri, internally, by smoking, and in a salve. It was called šmt (von Deines, Grapow, VI, 493). According to Laufer, the Persian bāng is a narcotic prepared from the hemp seed. Bang is cognate to the Sanskrit bhaṅga and Avestan bang “narcotic,” Arabic bāndj, Portuguese bango and French bange. Bāndj, in the old Arabic literature, was often used for henbane as a substitute for hemp, thus creating confusion; the two were often used together in prescriptions.

In ancient China, from 1200-500 B.C., when the Kh Ya was compiled, the hemp plant, ma, was known. In the biography of the physician Hoa-tho the narcotic properties of hemp are demonstrated in its use in surgery. Soubeiran gives the modern name as ma-iau, after Tatarinov.

Herodotus (fifth century B.C.) relates the use of hemp by the Scythians as a means of cleansing their bodies. The hemp is thrown on red-hot stones in an enclosed space. The odour is inhaled until intoxication; then they dance and sing. Galen discusses the use of hemp in his case of hysteria. Some-
bīs was Djabir b. Ḥayyān (2nd/8th century). It is found as bandī in his Kitāb al-Sumūm (47b, 132b) where it is used for narcotic purposes in the form of agar ("secret"). It is smoked alone or with tobacco. In Turkey a preparation from hemp called esrar ("secret") is smoked with tobacco. It is also chewed there.

In Syria, much hemp is grown. There are many dens in Damascus where hashish and opium are smoked. Addiction also occurs among the Uzbeks and Tatars.

In India, where hemp smoking is popular, it has been shown that moderate use causes no moral injury. On the other hand, excessive consumption is physically and mentally injurious and deteriorates moral weakness and depravity. The drug is smuggled today into Egypt from Syria and Lebanon. A United Nations Commission on Narcotic Drugs declared in 1950 that 60,000,000 square metres were under Indian hemp cultivation with an annual production in Syria and Lebanon alone of 300 tons.

Hashish—Hashishiyya, a name given in mediaeval times to the followers in Syria of the Nizārī branch of the Ismā‘īlī sect. The name was carried from Syria to Europe by the Crusaders, and occurs in a variety of forms in the Western literature of the Crusades, as well as in Greek and Hebrew texts. In the form ‘assassin’ it eventually found its way into French and English usage, with corresponding forms in Italian, Spanish and other languages. At first the word seems to have been used in the sense of devotee.
or zealot, thus corresponding to *fatim* [q.v.]. As early as the 12th century Provencal ... to survive the next copyist, the only possible position for a permanent annotation was within the text itself, and

In confirmation of this he was able to 

amply confirmed by new texts that have come to 

already used by Dante ('lo perfido assassin . . .', 

Inferno, xix, 49-50), and is explained by his com-

mentator Francesco da Buti, in the second half of 

the 14th century, as 'one who kills another for money'.

During the 17th and 18th centuries the name assassin—and the sect that first bore it—received a good deal of attention from European scholars, who produced a number of theories, mostly fantastic, to explain its origin and significance. The mystery was finally solved by Silvestre de Sacy in his Mémoire sur la dynastie des Assassins et sur l'origine de leur nom, read to the Institut in 1809 and published in the Mémoires de l'Institut Royal, iv (1818), 1-85 (= Mémoires d'histoire et de littérature orientales, Paris 1818, 322-403). Using Arabic manuscript sources, notably the chronicle of Abû Shâma, he examines and rejects previous explanations, and shows that the word assassin is connected with the Arabic hashishi [q.v.]. He suggests that the variant forms Assasiani, Assissini, Heyssisini etc. in the Crusading sources come from alternative Arabic forms hashšši, hashšši, and ḥashšši (pl. ḥashššiyin or ḥashššiyyn) and ḥashšši (pl. ḥashššim). In confirmation of this he was able to produce several Arabic texts in which the sectaries are called ḥashšši, but none in which they are called ḥashšši. Since then, the form ḥashšši has been amply confirmed by new texts that have come to light—but there is still, as far as is known, no text in which the sectaries are called ḥashšši. It would therefore seem that this part of S. de Sacy's explanation must be abandoned, and all the European variants derived from the Arabic ḥashšši.

This revision raises again the question of the nature of the sect itself, and the problem of the origin of the name hashšši or its Arabic equivalent hashšši. This is local to Syria (cf. Houtsma, Recueil, i, 195; Ibn Muyassar, Annales, 68) and probably abusive. It was never used by contemporary Muslims or any other non-Syrian Ismā'īlīs; even in Syria it was not used by the Ismā'īlīs themselves (except in a polemic tract issued by the Fātimid Caliph al-Amīr against his Nīzarī opponents —A. A. A. Fyzzye, al-Hīdāyat u l-imsīrīya, London-Bombay 1958, 33), and only occasionally even by non-Ismā'īlī writers. Thus Maqrizi, in a fairly lengthy discussion of the origins and use of hashšši, mentions a Persian mulkid (probably an Ismā'īlī) who came to Cairo at about the end of the 8th century A.H. and prepared and sold his own mixture of hashšši—but does not call the Ismā'īlīs hashššiyin, or mention any special connexion between the sect and the drug (Khitāt, Bālāk, ii, 126-9). Hashšši would thus appear to have been a local Syrian epithet for the Ismā'īlīs, probably a term of contempt —a criticism of their behaviour rather than a description of their practices.

(B. Lewis)

**HĀSHIYA**, pl. hāwšištī, meaning (1) the margin (of pages in [fi, 'ādā, bi-] which notes could be written), then (2) the marginal note itself or "note" in general, and, finally, (3) gloss, used in the sing., undoubtably may well be the survival of modesty, in titles of independent works, at times of some length, dealing with comments on subjects treated by earlier authors. This last usage is comparatively late; none of the ca. 150 titles listed in Brockelmann, S III, 892-4, antedates the 8th/14th century. Although it was used as a book title all over the Muslim world, hāšhiya enjoyed particular favour among scholars of the eastern region.

Hāwšštī, in the second meaning, appears loosely used in titles of books no later than the 5th/11th century, the presumable date of the hāwšštī of a certain Ibn Masrāf on Aristotle's De sensu (Ibn al- Ḥastrān, Bustān al-šabāb); in the case of hāwšštī maqālld al-šālim (Brockelmann, S I, 820), the attribution of both title and work to Ibn Sīnā is dubious. The use of hāšhiya in the sense of marginal note must, however, have been much earlier. The practical use of itself of the margins of pages for annotations was, of course, not an invention of Islamic times, but, with the general increase in book production, it achieved there the status of a scholarly custom.

Since, in the manuscript age, nothing not firmly anchored in the text could be expected to survive the next copyist, the only possible position for a permanent annotation was within the text itself, and

et deliciis, immo nugis plena, ostendit, et hec eterna-

liter pro tali opere eos habere contendit" (Monumenta Germaniae historica, xxi, Hanover 1856, 179). This story, which offers an explanation of the earliest accounts of hashšši dreams, is repeated with variants by later writers. It is, however, almost certainly a popular tale, perhaps even a result rather than a cause of the name hashššiyya. The use and effects of hashšši were known at the time, and were no secret; the use of the drug by the sectaries, with or without secret gardens, is attested neither by Ismā'īlī nor by serious Sunnī authors. Even the name hashššiyya is local to Syria (cf. Houtsma, Recueil, i, 195; Ibn Muyassar, Annales, 68) and probably abusive. It was never used by contemporaries of the Persian or any other non-Syrian Ismā'īlīs; even in Syria it was not used by the Ismā'īlīs themselves (except in a polemic tract issued by the Fātimid Caliph al-Amīr against his Nīzarī opponents —A. A. A. Fyzzye, al-Hīdāyat u l-imsīrīya, London-Bombay 1958, 33), and only occasionally even by non-Ismā'īlī writers. Thus Maqrizi, in a fairly lengthy discussion of the origins and use of hashšši, mentions a Persian mulkid (probably an Ismā'īlī) who came to Cairo at about the end of the 8th century A.H. and prepared and sold his own mixture of hashšši—but does not call the Ismā'īlīs hashššiyin, or mention any special connexion between the sect and the drug (Khitāt, Bulāk, ii, 126-9). Hashšši would thus appear to have been a local Syrian epithet for the Ismā'īlīs, probably a term of contempt —a criticism of their behaviour rather than a description of their practices.
the practice of inserting notes immediately after passages to be annotated was not infrequently followed; such notes were introduced by a number of different terms, among them, if rarely, ḥāṣhiya. The margins were used to note down textual corrections, variant readings, lexicographical explanations (sometimes in another language), additional information and references, criticisms of the author’s views, and the like, with certain marks often, but by no means regularly, used to indicate the passage of the text to which a given ḥāṣhiya referred. It also was very unusual to fill the margins with material that had no direct relation to any particular passage of the text. This could include extensive remarks, quotations, and even occasionally entire commentaries or other complete works. The custom of using margins for other works carried over into printing and was expanded there.

In the 7th/8th century, the Ṣaḥīḥ Ibn Djamʿa expressed his opinion on marginal notes in these terms (Taḏḥīrat al-sāmi), Ḥydarābād 1353, 286-97: “There is nothing wrong with writing important notes (ḥaṣāşık, ṣawdāʾ, ṣanbihād) in the margins of a book one owns . . . . Only important notes that pertain to the contents of the book in question should be given, such as notes that call attention to difficult or doubtful passages, allusions, mistakes, and the like, and when these are alien to the contents should not be allowed to deface the book, nor should there be so many marginal notes that it becomes disfigured or the student is at a loss to find out where they belong.”

HĀŠIYA, the entourage of a ruler [see qāṣīn]

HĀŠMET (7-1182/1768), Ottoman poet, born in Istanbul. His father was the kādī’s nephew ʿAbbas Efendi. Ḥashmet became a mādīrīs, but, because of his satires, was exiled in 1175/1761, first to Bursa and later to Rhodes, where he died. In his youth he had been under the protection of the Grand Vizier ʿAbduʾr-Raḥmān, himself a poet, and dedicated some works to him. His scattered poems were collected while he was in exile in Bursa by one of his admirers, Saʿd b. Babikr, and even with the general meaning of “scholars of little worth, particularly traditionists; this term is sometimes associated with ḡwāḍh and ḡwḥbār, and even with raṣāʾ, “the scum of the populace” (Ibn Kutayba, Muḥkālīfī, 96; tr. Lecomte, 90), and used by some Sunnis of extremist traditionists or those whose researches are of very little value. Fairly close to Nābīta [q.v.] and Muṭṭaqa [q.v.], Ḥashmet was a peerless swordsman and archer. The romantic epigrams which he exchanged with the contemporary poetess Fītnāt [q.v.] are famous.

Works: (I) Dīwān. This work (Būlāq 1842), besides two long poems in Arabic recounting the “beautiful names” of God and Muhammad, these poems are for the most part nāsires to the works of well-known poets, but are, nonetheless, very musical and contain some original images. The tarkīb-i bend expressing his grief at the death of his father is notable for its simple, sincere tone. (II) Inīsāb al-muṣāḥaḥa or Ḥaṣmi[nāme], a prose work, printed as a supplement to the Dīwān, in which Ḥashmet recounts a dream which he had on the night of the accession of Muṣṭafā III. All the rulers of the world come to the new sultan and ask for a job, each according to the specialty of his own country: the Russian to be chief furrier, the Englishman to be overseer of the powder-magazine, the Dutchman to be head gardener, the Frenchman to have charge of the wardrobe, and so on. (III) Sūnamе or Woldēnamе, a prose work describing in a lively and colourful way the celebrations on the occasion of the birth of a daughter to Muṣṭafā III (simplified version in Latin transcription by Reşad Ekrem Koçu, Istanbul n.d.). (IV) Sanād al-ḥuwa’ārī, a risāla written against those who condemn poetry and poets from the high point of view. In this work, which consists of four sections and a conclusion, Ḥashmet claims that poetry has a divine origin, that there are passages in both the Khurāsān and ḥadīth, and that Muḥammad, his Companions and Muslim rulers have all attributed great value to poetry and poets. (V) Ṣebēkāndnīmeh, a short risāla explaining the material and spiritual effects of the ḡhādāt. (VI) Although the works of Ḥashmet are often considered to be chief, his researches mention that Ḥashmet was writing a lexicographical work entitled Durratayn and containing Arabic compound words, no such work has been found.

HĀŠIM [see niyaʾimā].

HĀŠH [see maw].

HĀSHWIYYA (Hashawwiy, Hushawwiy, or Aḥ al-Ḥasw), a contemptuous term derived from ḡaww (“farce” and hence “prolix and useless discourse”) and containing Arabic compound words, no contemporary instance of the ḡawwīyya for well-known traditionists such as Sūfīyān al-Thawrī or Malik b. Anas, whom he classes among the Ḥāṣbīyya for well-known traditionists such as Ṣaḥbūnīyya, Ḥiṣaḥbūnīyya, or Ḥaṣbūnīyya, and containing Arabic compound words, no contemporary instance of the ḡawwīyya for well-known traditionists such as Sufyān al-Thawrī or Malik b. Anas, whom he classes among the Ḥāṣbīyya [q.v.].

The Muṭṭaqa resided the name of Ḥashwiyā to the majority of the Ashkūb al-Ḥadīth, because, although without the unquestioning acceptance of the Ḥashwiyā proper and often with the reservation “without comment” (bilā ḵayfā), they yet admitted some anthropomorphic expressions.

HĀṢĪB [see ILM AL-ḤIṢĀB].

HĀŠIK (Hasek), a town in the Mahra country [q.v.], east of Miḥrāt [q.v.] in 17° 21′ N. Lat. and 55° 23′ E. Long, at the foot of the high range of Nūs (Lūs), the ʿAṯīyūn of the Periplus Māris Erythræi. Before the town lies the “bay of herbs” (Dūn al-Ḥāṣik), the bay of Ḥāṣik (Raʾs Ḥāṣik), also called Ḥaṣik or Ḥaṣik. Its fortifications were of a particular importance for the ridge lying opposite (Khāryan and Maryān in Idrīsī). Idrīsī describes Ḥāṣik as a small fortified town four days
east of Mirbat, with many inhabitants, who are fishermen. Ibn Ba'thātā landed here on his way through to 'Umān and found the houses built of fishbones covered with seaweed. In Ibn Ba'thātā's and Idrīsī's time there was great intercourse between Ḥasik and the island of Soḵṭrā [q.v.] to the south. The frankenassic which was produced in the Mahra country was exported through Ḥasik. The town is now quite ruined. It is called Sūk Ḥasik and is inhabited by the Kara and other tribes of the frankenassic country.

Opposite Ḥasik, according to Miles about 20 miles from the coast, lies the "seven isles of Zenobia" (the ḫatā ṣirāṣ, al-Σ名义οβιο in the Pseudo-persians), the Kharyān and Maryān group of Idrīsī, called the Dīzārʾīr Ibn Khalīfān, after a prominent Mahri family, by the Arabs of the south coast. The most westerly of the islands and the one nearest the coast bears the name Ḥasikl or Ḥasikiyyā, i.e., the island belonging to Ḥasik (the Portuguese, who visited this island in 1588, called it Ilheuque). Like the most easterly of the islands, Kībliyyā, it is covered by a large number of peaked hills mainly composed of red and streaked granite and inhabited by pelicans and diving birds. Hulton, who visited the islands in 1816, found only one of them, Hallaniyya, inhabited. He found that the language resembled that of Soḵṭrā. The huts in which the few inhabitants lived consisted of loose stones above which were laid fishbones covered with seaweed. They belonged to the Bāy (Banū) Diyanā (Dīnābī = Σ名义οβιο of the Pseudo-persians), the same tribe as lived on the coast between Ḥasik and Raʾs al-Hadd. Their ancestors are said to have migrated hither several centuries ago, after being driven from Ḥasik and Mīrbaṭ as a result of feuds with their neighbours. Ptolemy and Pliny called the people of these islands Ḥaξrīrāt or Ascieae, a name doubtless connected with Ḥasik, although the ancients connected this name with Ḥaξξίν "wineskin".

**ḤASSAN B. MALIK, grandson of the Caliph Yazid I, his father being the brother of Maysūn, the famous wife of Muʿawiyah (it has been thought, erroneously, that he was the uncle of Yazid I, because he is often referred to simply as Ibn Bahdal). This relationship, the nobility of his clan (the Banū Ḥāṣīna b. Ḏimāb) and the power of the Kalb tribe earned for him under Muʿawiyah and Yazid the governorships of Palestine and of Jordan. Before this, he had fought at Ṣīfīn in the ranks of the Syrian army, in command of the Kūfāʾ of Damascus (Naṣr b. Muʿāwiyah, waṣīt Šīfīn, ed. Hārūn, 233). It was he who accompanied the young Yazid when he arrived at Damascus to assume the caliphate, and he continued to exert a strong influence over his royal cousin, who had become also his brother-in-law. On the death of Muʿawiyah II, the son and successor of Yazid I, there arose a crisis (64/684) in which Ibn Bahdal played an important part by supporting the claims to power of the two young half-brothers of Muʿawiyah II, Khālid and ʿAbd Allāh. Having entrusted Palestine to a chief of the Dīṣḫām, Rawb b. Zīnab, Ibn Bahdal betook himself to the Ḡnūd of Jordan and then to Dābiyya in order to follow events from closer at hand. The situation at this time was favourable to the anti-caliph ʿAbd Allāh b. al-Zubayr, for al-Dāḥik b. Kayṣ b. Fihr [q.v.], the governors of Ḥimṣ and Kinnasrīn, and the rival of Ibn Bahdal who had driven Rawb out of Palestine had either secretly or openly taken his side. But the cunning ʿUbayd Allāh b. Ziyād [q.v.] arrived from Ṣīrāk and changed the course of events through his intrigues (at least so Ibn Tanūkhī asserts, but the account of Ibn al-Ṣāʿdī, which seems to be the most objective). In fact ʿUbayd Allāh persuaded Marwān b. al-Hakam [q.v.], already on his way to Mecca to offer homage there to Ibn al-Zubayr, to retrace his steps, and to go to Palmyra, where he next set himself up as a candidate (on the later manoeuvres of ʿUbayd Allāh at Damascus, see al-Ḍaḥhāk b. Kayṣ al-Ṣīḥārī where, at p. 95, l. 50, for Kuraysh read Kays). Three parties were formed: the supporters of Ibn Bahdal, those of Ibn al-Zubayr, an! the neutrals, who did not mind whether the caliphate remained with the Umayyads or fell into the hands of anyone else; Marwān, it seems, had little confidence in his success. While al-Dāḥik was still at Damascus, Ḥassān attempted to bring the situation to a head: he ceased to be read out in the Great Mosque a message in which he extolled the claims of the Umayyads and accused Ibn al-Zubayr of unworthy behaviour and hypocrisy. This resulted in an upheaval, which is known as the "Day of Ẓiyārūn". Finally, it was decided to invite the Umayyads and the Syrian leaders to a conference at Dābiyya in order to reach an agreement (ʿUbayd Allāh, not being one of the ʾaṣlīf of Syria, was excluded from it). Owing to his prestige Ibn Bahdal presided, but he did not succeed in getting his candidate appointed. After 40 days of discussion Marwān
b. al-Ḥakam was proclaimed caliph. Before Ibn Bahdal would recognize him, he had stipulated that the young Khalid should succeed after Marwān and that his tribe should receive important privileges and his own family retain certain prerogatives which it had enjoyed under the Sufyānids. From then on his influence declined steadily. Before his death Marwān obliged him to recognize ʿAbd al-Malik as his successor. In the revolt of ʿAmr al-ʿAshšād [q.v.], Ḥassān supported ʿAbd al-Malik and found himself among the Umayyads witnessing the assassination of the latter. Finding himself in a most precarious situation, he heard of no better course of action. The Kalbī chief who had, at one juncture, been the arbiter of the destinies of the Umayyad dynasty. The probable date of his death is given as 69/688-9 (al-Dhahabī, Taʾrīkh, MS Bodl., fol. 58 v.; Ibn Kaḥīr, Biddya, vii, 313).

HASSĀN b. ṬHĀBĪT b. al-MUNIR b. ḤARĀM, of the Khazārajī tribe of Ḥaṭṭāḥī (later Medīnā), traditionally known as the “poet laureate” of the Prophet, is more correctly the most prominent of several poets who were associated with the rise of Islam, and one who already had an established reputation in the Dāhilīyya. When
Muhammad arrived at Medina, Hassan was of mature age (though probably not yet 60—which is the age of his death, which is variously given as 40/659 or before that year, 50/669 or 54/673. As the last we hear of Hassan is some time before ‘All’s assassination, a date around 40/659 is the most likely.

It is not certain exactly when Hassan embraced Islam, although it is stated that his brother Aws was one of the earliest converts and was assigned as the Immigrant Uthmân b. Affân as his “brother” and guest in Medina, a fact which probably partly accounts for the Umayyad sympathies with which Hassan is credited, and which are represented by (or—in the case of spurious poems—reflected in) the comparatively large number of elegies on Uthmân (8 out of 32) ascribed to Hassan in the Diwàn and elsewhere. However, Hassan himself had an urgency of his own, was rich and kept such company as Kays b. al-Khathîm [q.v.] the Aâfî poet and Sallâm b. Mishkâm, chief of the Banû ’l-Nadr.

In the year 5/627 Hassan figures in the story of the slander against ‘A’ishâ, when he is said to have been punished for taking part in the slander, to have been attacked and wounded by Sa’dân b. al-Mu’aytîl [q.v.], and then reconciled by the prophet and given Sîrin, an Egyptian slave girl, and other gifts. However, the story (and Hassan’s supposed prominent part, which is assigned by certain authorities, including Ibn Hîshâm, to ‘Abd Allâh b. Ubâyî [q.v.] rather than to Hassan) received excessive attention from later generations, and should be viewed both as a whole and in detail against the background of friction between the newcomers and the Medinese themselves, both in Medina and in the course of the campaign against the Banû ’l-Mu’aytân when the story originated. For an examination of the controversial details see W. ‘Arafat, A controversial incident in the life of Hassan b. Thâbit, in BSAS, xv (1955).

It was then, or soon after the siege of Medina, that the Muslims, and particularly the Medinese among them, realized the need for the systematic support of poets, and Hassan’s contribution was especially welcome. For better effect, advice and the necessary data were given by Abû Bakr. Once he joined the Muslim community, Hassan employed his talents on behalf of Islam, though he took no part in fighting, probably because of advanced age, rather than cowardice as is most frequently suggested. In any case, even before Islam, Hassan’s role as a poet predominates.

In 9/630, the “Year of Delegations”, Hassan is said to have had occasion to recite poetry on behalf of the Prophet in the presence of the important Tamâm delegation. Prominence is usually given to this visit, the purpose of which, however, is not certain; and the suggestion that the delegates were converted on hearing Hassan’s poem is doubtful. The fact that three different sets of poems are found, each of which is claimed to be the one which served the occasion, is indicative both of the doubtful character of such poetry and of the high esteem in which Hassan was held.

Little is heard of Hassan himself afterwards, except when ‘Umar sought his expert opinion on a poem by al-Ḥuṣayn b. ‘Abd Allâh the slanderer al-Zibîrîn b. Badr; or when he is occasionally heard reciting his own poetry. On one occasion, some time later in his life, he came reluctantly out of retirement to support his less able son ‘Abd al-Rahmân in a battle of slander against al-Najjâjî [q.v.]. Otherwise he was growing old, happy and waxing sentimental when reminiscing on his visits to the Ghassânids, but sad and repro­batory when contrasting the dignified carousing he had known at the princely court of the Ghassânids with the unrestrained enjoyment of newly found luxury by his own son and his boon-companions.

In the revolt against Uthmân, Hassan, Ka‘b b. Mâlik, al-Nu‘mân b. Bashîr [q.v.] and others were vociferous in support of the righteous Imam and (according to Tabâri, i, 2971) even tried to dissuade the rebels from their intention. After Uthmân’s death they went to Mu‘âywiya, who gave Hassan and Ka‘b a present of money each and later rewarded al-Nu‘mân b. Bashîr with a governorship.

Hassan had one daughter, who on one occasion displayed a talent for poetry, and by Sîrin, according to most sources, one son, ‘Abd al-Rahmân, who was as provocative as his father but shared neither Hassan’s ability as a poet nor his longevity.

Hassan’s Diwân in the recension of Ibn Ḥabîb [q.v.] contains 228 poems on different subjects, the Sîna 29 more, while other poems and single lines are found elsewhere ascribed to him. Nevertheless at an early period doubts were cast on the authenticity of this poetry generally or on specific poems or lines; recently a detailed study of the poetry ascribed to Hassan was made by the author of this article with a view to establishing, on internal as well as external evidence, the authenticity or otherwise of each poem. This study indicated that some 60-70% of this poetry may be spurious. The poetry in the Diwân presents such a variety of spirit and style, is so full of contradictions and anomalies and contains such a high proportion of inferior verse, that the poems could not have been the work of a single author nor all of them by a poet of high repute.

This spurious poetry should be viewed in the light of the eventful century following the rise of Islam in which the events involved the same tribes who had taken part in the early struggle. Earlier verse was forgotten or overwhelmed, replaced or supplemented by new poetry. Verse naturally accompanied tribal, sectarian or factional disputes; but was written also to other persons, including some of Hassan’s contemporaries. The long poems of boasting can be seen on other poems, parts of poems, single lines or whole poems and parts of poems are also ascribed to Ibn Hishâm and other authorities to Hassan’s son or to other persons, including some of Hassan’s contemporaries. The long poems of boasting can be seen on internal evidence to be by descendants of the Anṣâr and reflect the inferior status to which they were reduced after the Battle of al-Harra in 63/682.

Although only briefly, the spurious character of such poetry was noted by early critics, and Ibn Iṣ̄bāk was the subject of severe censure by Ibn Sallâm and Ibn al-Nadîm, for including in his Sîra spurious poetry ascribed to Hassan and others, although Ibn Iṣ̄bāk himself pleaded good faith and lack of the appropriate critical experience. His editor Ibn Hishâm omitted or rejected on expert authority a large number of such poems, branding some outright as forgeries, and others as doubtful.
In the case of Hassan, Ibn Hisham rejected 15 out of 78 poems which appear in the Sira, of which total 29 are not in Ibn Habbab's recension of the Diwan, while against 19 poems, see W. Arafat, Early critics of the authenticity of the poetry of the Sira, in BSOAS, xxi (1958). The main reason for ascribing to Hassan a larger proportion of such poetry is Hassan's higher reputation, already recognized at the advent of Islam.

HAYAT, the name given by the Turks to the Sanjak of Alexandretta, at the time of the crisis of 1936-9. For the history of the area see Antakya and Iskandarun.

HATIF, invisible being whose cry rends the night, transmitting a message; a prophetical voice which announces in an oracular style a future happening. Already in the Bible this voice is confused with that of the prophet (Ezekiel, XXI, 2, 7; Amos, VII, 16). The voice of Muhammad's call, mysterious voices were proclaiming his coming. These were the voices of "one who was calling" (munaddi) or "who was shouting" (sabt): Aghdn, xv, 76; in the legend of Magdhn, hatif is the equivalent of munaddi and of sabt: ibid., i, 169; ii, 4; i, 174; a third equivalent, tali, is found in al-Tabari, iii4, 2337). It is also the voice coming from an idol (Ibn Sa'd, i, 110; iv, 110) or from the entrails of a calf sacrificed before an idol (al-Tabari, i, 1144 f.; Ibn Hisham, 134; Ibn Sa'd, i, 105, or the voice of a mysterious horseman (ibid.). It is a hatif which brought the poet Abu l-Dhaw'ayb the news of the approaching death of the Prophet (Ibn al-Athir, Usd al-qaba, Cairo 1285/1869, v, 188).

According to al-Dhahib, this voice usually announces the death of a great person; "nomads and semi-nomads," he says, "scarcely conceal their belief in the hatif; on the contrary, they are amazed that anybody can dispute its value" (K. al-Hayawan, Cairo 1323-5/1905-7, vi, 62 and cf. 64). A passage of al-Mas'udi, Mi'udi, iii, 323, admirably describes the psychological genesis of this phenomenon: "The particular characteristic of the hatif," he says, "is to produce an audible voice without possessing any attributes of speech; the opinions on the subject of the hatif and the dyms: some say that this phenomenon, mentioned by the Arabs and used by them to announce news, finds its origin in the solitude of the deserts, the isolation of valleys, the journey across vast spaces infested by ghuls [g.v.] and the swamps filled with wild animals. For, when man ventures into these places alone, he thinks; and when he thinks he becomes fearful and cowardly; in this state he is inclined to false ideas and harmful illusions, created by the black bile, which make him imagine events and people, and to believe the impossible, in a similar way to someone who is the victim of an obsession. . . . The basis of this phenomenon lies in a wrong way of thinking in which man creates in his imagination what he reports about the activity of the hatif and the dyms." This phenomenological explanation does not remove all its mystery from the hatif, and the question put by al-Dhahib to the man who claimed to know everything, was much repeated: "Let me know [about the origin] of the verses [pronounced by the] hatif and about the news which is spread during the night" (K. al-Tarb wa l-tadawir, ed. Pellat, Paris 1955, 42).

In modern Arabic the word hatif has been adopted as the equivalent of telephone.

Bibliography: In addition to the authors mentioned above, see I. Goldziber, Abhandlungen zur ar. Philologie, Leiden 1896-99, i, 212. In Cairo and Damascus there exist two written works, still in manuscript, which discuss the subject: Abu Bakr b. Ubayy b. Abl-Tunayd (d. 281/894), K. al-Hawdtif (see Brockelmann, S, i, 247); Abu Bakr b. Di'iya', al-Kharatifi (d. 327/938), Hawdtif (see ibid.). The word is also found in the title of a work by Husayn b. kuhdun (Brockelmann, S, i, 350). (T. Fakh)

HATIF AHMAD, sayyid of the line of Husayn; his family, natives of Urdubad (Adharbaydian), in the time of the Safawids settled in Isfahan, where he was the most notable poet under the dynasties of the Afsharls and the Zand. He divided his time between his native town, Kumm and Kashan. He was a man of erudition and a physician, and had a knowledge of Arabic, in which language he wrote some poems; in Persian he was the author of an important collection consisting of ba'isdas, ghazals, rubais and other short works, in which the influence of Sa'di and Khajawi can be discerned. He owes his fame mainly to a tarjiband (strophic poem) as remarkable for its finesse and profundity of thought as for its style, which subject being the uniqueness of God; it is one of the masterpieces of mystical poetry. He died in Kumm in 1198/1783.

HATIM, 'Abd Allāh, Persian poet, son of Dīmān's sister, born in Khurāsān in the district of Dālān, a dependency of Herāt, died in 927/1521. He wrote a Tāṣʿīr-nāma, an epic known also as Zafar-nāma (lith. Lucknow 1856), on the subject of Timūr's conquests. He had planned to write a Khamsa, a collection of five long poems, but this work he was unable to complete; of it we possess a Ṣirān and Farkhād, a charming Layli and Majnūn (ed. W. Jones, Calcutta 1786) and a Haft manṣūr on the model of the Haft payār of Niẓāmī. He was influenced by this poet (though not by his artifices and obscure allusions) and also by Amir Khurāb. He eschewed the eulogies and panegyrics traditionally placed at the head of long poems; but at the beginning of Layli and Majnūn he proclaimed his Shi'ism and his devotion to the poet Kāsim al-Anwārī. At the behest of the king, he composed a poem on that sovereign's achievements, but he wrote only about a thousand lines of verse of this work.

Bibliography: On the Zafar-nāma: C. A. Storey, i/3, no. 358; on the Ismāʿīlī-nāma, ibid., no. 372. Hātim al-ʿAhdal [see al-ʿAhdal].

Hātim al-Tātī b. ‘Abd Allāh b. Saʿd, Abū Saffānā or Abū ʿAṭar, poet, who lived in the second half of the 6th century A.D., traditionally the most cultivated of the pre-Islamic poets, always victorious in his undertakings, magnificent in the conquest and proclamation of his generosity and hospitality. According to legend, his mother Ghanīya (var. ‘Ināhā, etc.) was so generous that her brothers had to obtain a declaration that she was incapable of managing her affairs; from his youth the extravagances in which Hātim indulged provoked the anger of his grandfather, his guardian since the premature death of his father, so that he left him. In the Ḍawwāl books there are a number of traditions giving instances of his generosity, and it is even said that after his death he used to entertain travellers who asked for hospitality; he would rise from his tomb, slaughter a camel, and his son ʿAdī would be ordered in a dream to replace the dead animal. This tomb was probably on a hill ('Uwārid, see Yāḥi‘ī, iv, 740) at Tungha, in Wādī Ḥānī (cf. Yāḥi‘ī, i, 880) where he had lived. Four stone figures stood on either side of his tomb (cf. Ḍawwāl, No. xiv; Lane, The Thousand and one nights, 2, 295 ff.), young girls with their hair loose, representing mourners. Also seen to be near the tomb were the remains of the great cooking pots which Hātim used to prepare meals for his guests. According to Païgrave (Narrative, i, 199), the tomb was still known in the district (cf. R. Basset, Notes sur les Mille et une nuits, iii, in Revue des Trad. pop., 1897, 116–59).

As a poet, Hātim has left mostly verses in praise of liberality and altruism, but the ʿAdīnī bearing his name is probably largely apocryphal and also may originally have been much larger (cf. Fārābī, 152, which speaks of 200 ʿadbīn). His wife Māwīya also inspired some of his poems.

The figure of Hātim quickly became very popular in adāb literature, and there are scarcely any works which do not include stories of his proverbial generosity. However, no Arabic writer has made him the principal character of a literary work, although in the eastern parts of the Muslim world he has become a much loved romantic figure.

In Persian, he is the hero of a romance, Kīṣa-i Ḥātim Ṭātī (or Kīṣa-i ʿAṭar Ṭātī) (transl. D. Forbes (London 1830) from a version which differs appreciably from the Calcutta editions (ed. G. J. Atkinson, 1818 and ed. 1827); the Haft insāf-ʾī Ḥātim Ṭātī forms a sequel to these. A shorter sketch of the life and deeds of Hātim has been given by Husayn Wā’īz Kāshīf (d. 1504/5) in Kīṣa-yi ʿAṭār-i Ḥātim Ṭātī (or Rūzā-yi Ḥātim-i-yiyya, ed. C. Schefel, in Christ. persan, i, 173 ff.). The Dīvān-i Ḥātim Ṭātī (Istanbul 1959) is a Turkish version of the romance. A Turkoman version was published in Kāzān in 1876. Various editions of a translation of the Kīṣa-i Ḥātim in Urdu under the title of Ardiyān mahfil are mentioned in the India Office Catalogue, i/4, 135 ff. (cf. García de Tassis, Hist. de la litt. hindoue et hindoustanee, 4, 556 ff.;
HAUSa NAME OF A PEOPLE, NOW PROMINENTLY MOSLEM, DWELLING MAINLY IN THE NORTHERN REGION OF NIGERIA.

1. ORIGINS AND HISTORY.

Our sources for the early history of the Hausa are limited to the oral traditions of the folklore and to three chronicles, written at a late date, but purporting to go back to the tenth century A.D. and certainly themselves ultimately dependent upon this oral tradition. They are: "The Kano Chronicle" (Palmer, Sudanese records, ii, 305 f.); "The Hausa Chronicle" (Mischlich and Lippert, Beiträge zur Geschichte der Haussa-Staaten, Berlin 1903); and the "Song of Bagauda" (Hiskett, in S. O. A. S. xxvii/3 (1964) and xxviii/1 and 2 (1965). In addition we have the traditional account of the history of Katsina which was recorded by F. de F. Daniel earlier in the present century and is preserved in an undated and unpublished work under the title of A History of Katsina.

It seems probable that the early autochthons of Hausaland were a negro people who lived by a hunting economy and who at a certain point in their history became mixed with immigrants of probable Hamitic origin. This mixing took place in the Sudan, where there is evidence that in earlier times the negro stock lived as far north as the northern edge of the Sahara. Discoveries of arrow heads and agricultural implements suggest that what is now the territory of nomads was once the habitat of sedentary negro agriculturalists akin to the Hausa.

Hausa legends of origin are confused. Some name Biram as the ancestor of the Hausa Bakwai—the Seven Hausa States. Others, particularly the well-known Daura legend of the snake-killer, most conveniently available in Hodgkin's Nigerian perspectives (London 1960, 54 ff.), attribute the origin of the Seven to Bawo, son of Abuayzid, alias Bayajidda, the "King of Baghdad" and husband to the daughter of the king of Bornu. This legend of the incoming immigrants from the north is repeated elsewhere in the Sudanese cycle of myths of origin, as for instance in the henna legend of Bornu. The fact which emerges is that at a point which is generally taken to be the 4th/5th century, but which may have been considerably earlier, the autochthonous negro population of Hausaland bordering on the southern Sahara became host to and was subsequently frequently dominated by strangers from the north. These strangers appear not to have been negroid. They were also not in the first instance Moslem, although the Kano Chronicle hints that they may have already been influenced by monotheism. Certainly the cult of the autochthons was alien to them and it was not until several generations had elapsed that they became absorbed into it.

The causes of these immigrations are still to be clearly defined. They may, however, be sought in the political and religious upheavals of the North African littoral during the early Christian era and the "Song of Bagauda"—a Kano tradition—attributes what was probably the last major wave in the tenth century to famine further north.

As for the autochthons upon whom these immigrations impinged, they are remembered for us in the Barbushe legend of the Kano Chronicle and in popular legend. These were a pagan people, ruled by a hunter-priest-king who practised seclusion and divination and who appears to have presided over a cult of idol worship based on animism. The "Song of Bagauda" portrays these people as living in small open autonomous village and clan groups scattered over the country-side. Later, warrior chiefs and early Sudanese condottieri—the incoming immigrants already mentioned, or their descendants—found "an easy prey" and the small open settlements became subjected to the walled city states which the invaders began to build:

"The people were living widely dispersed over the open country, not subject to any authority. There was no chief, no protecting town wall. Tunbi together with Washa saw an easy prey And they joined forces, conquering the people of Kano. The elders said: let a chieftaincy be established. They appointed Bagauda, the protector." (S. O. A. S., xxviii/1 (1965), 115.)

By the beginning of the 8th/9th century the immigrants appear to have become seduced by the surrounding paganism, for we find that the chief Tsamia has "discovered the secret of the god" and a modus vivendi is apparent in which the rulers give a measure of official recognition to the indigenous cult. During the reign of Yaji (750-87/1349-85) Mandingo missionaries arrived in Kano and under their tutelage the chief introduced the Islamic rites of slaughter and prayer. The Mandingo also caused a mosque to be built. Clearly however, a strong anti-Islamic faction remained. Islam prevailed, but paganism, neither then nor later, was by any means extinguished. The arrival of the Mandingoes may be regarded as the first definite stage in the Islamization of the Hausa. It is significant that they arrived in the 8th/9th century. It was in 725/1325 that Mansa Musa made his famous pilgrimage and it is probable that we have here an aspect of the Islamic expansion which took place under this ruler. It may well be that the Mandingoes were merchants as well as missionaries and that they came in search of the gold of the Sudan.
The arrival in Hausaland of the famous North African divine, cAbd al-Karim al-Maghili, during the reign of Mohamma Rimfa (867-904/1463-99) marks a further stage in the establishment of Islam. In particular, he appears to have introduced the Shari'a and certain elements of Islamic constitutional theory to the Hausa, thus providing an ideological focus around which subsequent constitutional development could coalesce. Traditionally, al-Maghili also personifies the introduction of Islamic mysticism into the Western Sudan.

It is in this early period that are confined almost entirely to Kano, but it is probable that the pattern was similar over the rest of Hausaland. In Katsina, according to Daniel, Islam was received by the people but rejected by the court (in contrast to Kano where the opposite was the case). However, this is subject to the caveat that it may reflect the later rivalry between Kano and Katsina for precedence in Islam, together possible with echoes of the rivalry between Habe and Fulani. The kingdom of Gobir is known to have existed from the first half of the 8th/14th century, although our informant, Ibn Ba'ttûta, tells us only that it was pagan. Kano, Katsina, Zaria and Zamfara are listed by Leo Africanus in the 9th/15th century. By the 11th/12th century the Turkish traveller Ewiyâ Celebi is speaking specifically of the seven Hausa tribes. It appears that an early formative influence upon Hausa political institutions was that of Mali, for the Mandingo missionaries were employed by the Kano chief. As we know from the accounts of the Saharan travellers, the medieval kingdoms of the Sahara developed largely under Mamûk influences and there is evidence in the surviving ceremonial of the Hausa courts that these influences extended to Hausaland. Certainly by 831/1421 the rulers of Kano were using chain mail, iron helmets and isfâli (Ar. lâbi) —the North African quilted horse armour. By 844/1440 they were employing eunuchs and a feudal system based on slave settlements was fully established. In the 9th/15th century a further development also becomes apparent, for influences from Bornu begin to appear in Hausaland. Bornu and Kanem had of course been in contact with North Africa and Egypt from the time of Moham- medicine al-Biruni (879-950) marks a represented in some measure simply an additional channel for incoming Islamic influences. However, the Bornu kings had already established a specific constitutional framework and its influence in Hausaland is to be seen, for instance, in the wide-spread adoption of Bornu titles. The results which flowed from these circumstances have been aptly described by M. G. Smith (Historical and cultural conditions of political corruption among the Hausa, in Comparative studies in society and history, vi/2 (1964): "Thus political centralization, tributary links with Bornu, commercial development and the adoption of Islam by the rulers went hand in hand. Simultaneously the chiefs became kings, free of traditional norms and political restraints", while among the people Islam, the institution of slavery and the hardening feudal structure of society produced moral alienation into peasants, a trading class, an Islamic learned class, throne slaves and a ruling aristocracy.

Throughout this period Islam advanced slowly, but with the powerful pressures of trade and a superior culture behind it. At the same time, pre-existing African institutions continued to be fully effective, and, as we can see from the evidence of Islamic and pagan names in the king lists of the Hausa Chronicle (probably the most useful evidence that this otherwise suspect document provides), the dispute between paganism and Islam continued to characterize this history of the Hausa states. By the end of the 12th/18th century the pattern was one of a number of independent principalities with territorial boundaries broadly defined in the course of previous centuries, but still constantly in dispute. The rulers of these states paid lip-service to Islam and to the Shari'a and each was supported by a hierarchy of malams reputedly learned in Islam, whose function was to give an air of legality to the sarks' rule. In part however, it appears that these governments were discrete and contradictory and very much individual whim. Islam both constitutionally and in ritual observance was but casually observed and was involved in an accommodation with pre-existing African custom and belief, of which the Hausa malams were the principal agents.

It was in protest against this situation that, in 1804, Shaihu Usman dan Fodio ('Uğmân b. Fûdî) launched the dîkâ'd. This dîkâ'd was the violent culmination of an intellectual argument which had been developing over the preceding centuries and which changed its emphasis, but by no means ceased when the dîkâ'd was successfully concluded. When Shaihu Usman dan Fodio and his followers mainly Fulani, but with not insignificant contingents of Hausa peasantry attached had a war, they set up a system of government which is usually thought of as a loose feudal empire. The son of the Shaihu, Sultan Muhammd Bello, ruled from Sokoto over what had been the eastern half of the old kingdom of Gobir, while from Gwando 'Abd Allah Muhammad, the brother of the Shaihu, ruled what had previously been Zamfara and part of Kebbi. For the rest, the former Habe kingdoms were parcelled out among the Shaihu's flag-holders who ruled under varying feudal obligations to Sokoto. Some Habe escaped the Fulani and preserved substantial rump kingdoms further north.

The structure of this Fulani polity was not fortuitous. It was an attempt to actualize in the Sudan the medieval Islamic constitutional theory of the central "imamate" delegating authority to provincial governors and commanders. In theory, at any rate, the entire Bornu and the states beyond represented in some measure simply an additional channel for incoming Islamic influences. However, the Bornu kings had already established a specific constitutional framework and its influence in Hausaland is to be seen, for instance, in the wide-spread adoption of Bornu titles. The results which flowed from these circumstances have been aptly described by M. G. Smith (Historical and cultural conditions of political corruption among the Hausa, in Comparative studies in society and history, vi/2 (1964): "Thus political centralization, tributary links with Bornu, commercial development and the adoption of Islam by the rulers went hand in hand. Simultaneously the chiefs became kings, free of traditional norms and political restraints", while among the people Islam, the institution of slavery and the hardening feudal structure of society produced moral alienation into peasants, a trading class, an Islamic learned class, throne slaves and a ruling aristocracy. Throughout this period Islam advanced slowly, but with the powerful pressures of trade and a superior culture behind it. At the same time, pre-existing African institutions continued to be fully effective, and, as we can see from the evidence of Islamic and pagan names in the king lists of the Hausa Chronicle (probably the most useful evidence
but certainly mistaken interpretations of Lugard and certain—though by no means all—of his early administrative work.

At the beginning of the present century the British took over administrative responsibility for what was formerly the Fulani emirates, and to them they added Bornu. These became the Northern Provinces and subsequently the Northern Region of the Protectorate of Nigeria. They were governed by what has become known as "Indirect Rule". This is frequently thought of as the brain-child of Lugard. In fact, it is largely on the personalities and zeal of individual administrative officers. The progress of Northern Nigeria to self-government took place over the following half century. It was characterized by the rapid extension of Islam in the measure that the Pax Britannica achieved security and facilitated communications. Modern means of mass communication have greatly accelerated this process since the Second World War.

The existence of substantial and relatively well-trained indigenous Civil Service cadres made possible the smooth transfer of power when self-government became complete on 1 October 1960. The form of government adopted by Northern Nigeria was democratic and secular, although, as is to be expected, Islamic institutions and attitudes inform all political and social activities, and probably the greatest cohesive factor in Hausa society remains a devotion to the Islamic way of life.

Hausa institutions: slavery.

Slavery has been one of the most important of the institutions influencing the development of Hausa society. There are two aspects: the slave trade; domestic slavery.

The slave trade from the Sudan was ancient. It seems probable that the Romans traded in slaves from the countries south of the Sahara and that the Arabs, Berbers and other Saharans simply took over a trade which already existed. By the 9th/10th century Hausaland had become involved in the complex of the trans-Saharan slave trade, which focused at points along the southern edge of the Sahara. There was a southern and a northern area of activity. The slaves were harvested from the Plateau and from the forest and riverain country in the course of war, raiding and kidnapping. It was native Sudanese who conducted these activities and it is not clear how much or how often these practices penetrated into these sub-Saharan areas until relatively late times.

A proportion of the slaves were brought to Kano and other Saharan "ports" and from here they passed into the coastal cowry exchange area as part of an expanding tide of lateral trade. But despite this lateral movement it appears that the Arabs did not penetrate in person into the northern transit area, where Arab and African peoples, Nupe, Yoruba and others acquired Islam and the Hausa tongue and where exotic influences and techniques introduced across the Sahara met and mingled with the indigenous techniques of the Sudan.

In short, slavery, if not universal, has been a universal evil force in Hausaland and it is probable that the heritage of attitudes and loyalties which it has left behind remains one of the strongest bonds of Hausa society.

Trade.

In Hausaland trade was closely related to the constitutional and historical developments which we have already described. The early indigenous settlements must have lived by hunting and some farming and probably had little trade. According to the Kano Chronicle there was, in these early days, no market.

The visit of the merchants from Mali may have been exploratory, but by the middle of the 9th/10th century commercial activity had become established, associated with the increasing influence of Bornu in Hausaland. In the reign of Dauda (824-41/1421-38) a Bornu nobleman settled in Kano and is credited with the founding of the first market. Slaves, imported to the south appears suddenly to have become wholesale. The camel was introduced into Kano at this time. Touareg came to Hausaland, drawn certainly by trade, and merchants from Gwanja found their way to Katsina. There are also references about this time to trade with Zaria and Nupe and the pattern which emerges is that of fatauci—the long distance trade of the Hausa—extending northwards into the Sahara and southwards and then laterally to encompass Nupe and Ashanti and, in the east, Bornu.

By the 11th/12th century the trans-Saharan trade had diminished somewhat, although the extent of this decline has been over-stated. However, there is evidence that it was compensated for by an increase in the lateral trade. The Kano Chronicle tells us that cowries first came to Hausaland between 811/1408 and 1143/1731. Doubt has been thrown on this statement, as part of an assumption that the Saharan cowry exchange area must have reached Hausaland at an earlier date. This is still an open question, but it is certainly arguable that cowries did in fact come to Hausaland only at this late date, borne up from the coastal cowry exchange area as part of an expanding tide of lateral trade. But despite this lateral
trade, the Saharan traffic passing via Hausaland remained significant and Montell (De Saint-Louis a Tripoli par le lac Tichad, Paris 1895) has described the annual salt caravans which were still plying the Saharan routes into Hausaland at the close of the nineteenth century.

Internal trade—*kasuwanci*—centres round the institution of the market, which takes place once or twice a week and is organized on a trade and craft basis. As in other Islamic markets, each trade has its own quarter and all are communally responsible for the proper running of the market, under a market head. Market dues are payable and Usamunu dan Fodio lists such imposts—considered by him illegal—as *fassuwae* (a tax on butchers) and *agaama* (on cottons and other market goods). Clapperton and Barth give further details. The market is supported by *fatauci*; and other market goods). Clapperton and Earth give further details. The market is supported by *fatauci*;

In addition, the market has great social and psychological significance and, as M. G. Smith has pointed out, despite Islam, the institution still rests upon the sanctions and approval of the pre-Islamic spirits.

The *bori* cult.

In so far as it can be translated, the word *bori* means "the spirits of the possession cult" and this possession cult appears to represent the pre-Islamic religion of the Hausa. It has flourished on into Islam and is still practised both by Muslim Hausa and by the non-Muslim Maguazawa. The Hausa conceives of a whole spirit world which can best be visualized as parallel to the human world, but inhabited by the *bori*. Unlike the supernatural worlds of Islam and Christianity, this spirit world is in no way transcendent. It is imminent in man's immediate surroundings and is fraught with dangers for humans unfortunate or foolish enough to trespass upon it.

The spirits are of two kinds: those of the city and those of the "bush." The first are largely exotic and contain many Islamic importations; the second probably represent the original nature spirits of African popular belief. At some point Allâh became involved in the cult, but as a rather remote and shadowy deity who resembles the Sky God of the southern peoples of West Africa. Most of the spirits are proper 'ramons, such as *Kali* who gives rheumatism and Mai-Askâ the Barber, who causes baldness and rashes. Malam Alhaji, clearly an Islamic borrowing, is normally benign, a kind of "Father *bori*" who carries off old people. The *bori* live in their own city, *Jan Kasa*, popularly thought to be situated somewhere in the Sahara.

The spirits are responsible for all diseases and the cure depends on discovering the spirit responsible and then on correct placation. They must also be consulted and placated in all such important events as marriage; child-birth; building a house; setting up a market and so on. The adepts of the *bori* cult are the *masu bori*, who become possessed or are "mounted" by the particular spirits with whom they are identified. Each spirit has a peculiar sacrifice by which he or she is conjured up. Thus one has a lame hen; another a white hen and yet another a speckled hen and so on.

There are periodic *bori* dances in the course of which possession takes place. There is often also a permanent *gidan tafi*—a "temple" at which offerings can be made.

Islam has clearly become involved in the *bori* cult, in that many *bori* spirits now bear Muslim names. Also the Islamic *definition* have taken their place among the *bori* spirits, as have also the ogre-like figures of the pagan ancestors. The synthesis between Islam and the *bori* cult and the persistence with which nominally Muslim Hausa continue to consult the *masu bori* are main targets for the disapproval of the Muslim moralists.

(M. Hiskett)

ii.—Language.

The Hausa language is spoken as a mother-tongue by some twelve to fifteen million people, both of the northern and of the southern stock, living mostly in the Northern Region of Nigeria and in the adjacent Republic of Niger, but also in small colonies of settlers and traders in most of the large towns and ports of Africa north of the Congo from Cameroon to Tripoli and from Dakar to Port Sudan. In Northern Nigeria it constitutes the majority language and is used as a second language to English in the legislature the law courts and for government business, and as the language of instruction in most of the primary schools. It is now written for official and scholastic purposes in the Roman script (with the addition of three special letters), but the older Arabic script (known as *ajami*) is still extensively used for private correspondence and religious tracts. There is a government controlled agency, the Hausa Language Board, which seeks to arbitrate on matters of spelling punctuation and new vocabulary. Hausa is also spoken as a second, or third, language by several million more people in Northern Nigeria, notably Nupe, Kanuri and Birom, and it is used as a lingua franca or trade language over a large part of West Africa.

Compared with some other African languages it shows remarkably little dialectal variation, the principal dialects being those of Kano, Katsina and Sokoto. Standard written Hausa is based on the
HAUSA dialect of Kano, the largest Hausa speaking town and the provenance of most Hausa traders in foreign parts.

Hausa belongs to the Chadic group of the Hamitic, or, as it is now often called, Afro-Asiatic, family of languages, being the only language of the group that is spoken by more than a few hundred thousand speakers. Structurally it is extremely reminiscent of some Indo-European languages, both in its clause structure and word order and in the use it makes of grammatical categories such as dative and subjunctive. Its sound system, however, is in some ways peculiar, especially in the use it makes of glottalization to give distinctions of meaning. All the four basic consonants, P, T, K, and S, occur in voiceless, voiced and glottalized varieties, and most of these can be either palatalized or labiovelarized as well, at least in the older dialects of Katsina and Sokoto. Medially, however, these latter distinctions are generally speaking allophonic. Basically it has only two vowels, A and /U/, but the pronunciation of these varies considerably according to phonetic environment (in the case of /U/, also from dialect to dialect), and developed from them by the addition of H or the semivocalic Y and W are the long vowel and diphthongal sounds aa, ai, ai, si, uu (the last four as in Arabic and aa as with fatha plus alif), and also, in syllables of a restricted pattern, ee and oo. Various forms of consonant-vowel and vowel-consonant harmony operate in the syllable (including the spreading of glottality beyond the domain of the initiating consonant, as with the emphatic consonants in Arabic), and there is also both complete and partial (umlaut) vowel harmony in successive syllables of both single words and closely connected word groups, also many instances of vowel ablaut, both grammatical and dialectal. The syllable is always of CV, CVV, or CVC structure, the first C including the glottal stop (comparable with Arabic hamza, but not written in the Roman orthography, except where it occurs medially, mainly in Arabic loanwords), and the typical word is a disyllable. The fact that no word begins with a vowel effectively prevents such interverbal elisions and crises as are typical of many African languages, in all but the most rapid speech, while giving to Hausa speech a rather staccato quality. Syllables have one of two significant tones, 'high' and 'low', this alternance serving to distinguish both lexical items and grammatical forms. Falling tones also occur in some special cases. Tone is minimally distinctive in many pairs of words, but the fact that neither it nor vowel length is indicated in the standard orthography often makes the elucidation of a Hausa text rather difficult for one who is not deeply read in the language. There is normally a progressive downshift in the clause, which may be arrested, however, by a succession of high-toned syllables; but this downshift may be reversed by interrogative and other special intonations. Unlike the case with many African tone languages, both lexical and grammatical tones are relatively invariant, and there are no 'displaced tones' or 'tonal perturbation'. Stress (the secondary feature, generally linked to tone and vowel length and rarely in itself discriminatory. Ideophones and interjections tend to fall outside the normal pitch range, having either exceptionally high or exceptionally low tones.

Morphologically and syntactically, almost all Hausa words can be divided into the following categories: nouns, verbs, ideophones and particles. The first two normally consist of a root or base, simple or extended to a maximum of four syllables, and a termination, in most cases purely vocalic. Ideophones and particles cannot be so analysed and many of these have consonantal endings, the final consonant, however, having a restricted range corresponding to the range of only consonants within words of all classes. Prefixes and suffixes are few, mainly the feminine suffix -(i)yaal-(u)waa, the 'ethnic' prefix ba- (e.g. Ba-haush-ke 'a Hausa man'), fem. Ba-haush-yyaa, pl. Haus-aa-waa), and a ma- prefix, which, as in Arabic, is employed to form verbal derivative nouns. Perhaps the most striking feature of the language is the contrast between the morphology of the verb and that of the noun. The former is organized in a homogeneous, all-embracing, system of seven 'grades' (these having varied, often rather subtle, semantic correlates) each grade occurring in from one to four distinct forms, depending on purely syntactic criteria, and making a total of twelve forms in all. Any of these twelve forms may further be pluralized or intensified in meaning by a reduplication of (the first syllable of) the root. Morphologically these verbal forms differ from one another only in their termination and/or their tone pattern; there are none of the affixes that are common—and functionally comparable—in other African languages. The tense (better described as an aspect) system is expressed outside the verb proper by means of various forms of subject pronoun (in several persons and tenses distinguishable only in spoken, not in written, Hausa), whose presence (like that of the subject prefixes in Bantu languages) is normally obligatory in all but the imperative. Conversely the noun presents a complex and heterogeneous system of inflexion, employing all morphological devices from simple tonal or terminal vowel change (as with verbs) to infixation, suffission, reduplication, or a combination of two or more of these. The main function of such inflexion is to indicate plurality: there are at least eight classes of noun plural, with three or more subclasses in each, and the choice between each of these is determined by a whole complex of criteria in the singular form: tone pattern, radical structure phonology, terminal vowel and even sometimes etymology and meaning. Many nouns have two or more different plural forms in use even in the same locality, whilst many other nouns have none. There is also a great variety of nominal forms derived from verbal roots, but these do not as a rule pluralize. Etymologically unrelated verbs and nouns not infrequently have phonically identical bases, but these very rarely share a common form, i.e., termination plus tone pattern, the verbal forms, which are grammatically determined, taking priority over the nominal.

In common with other Hamitic languages, Hausa has a system of three genders, masculine, feminine and plural, the last being, in cases where there is sex reference in the singular, notionally as well as grammatically common. The masculine-feminine dichotomy cuts right across the singular-plural class system, there being both masculine and feminine nouns in almost all the eight classes (contrast Arabic). But the nouns of these classes are feminine and the others almost all masculine, and names of animals, as in French, are as a rule, assigned exclusively to one or other gender (except for domestic animals, which usually have distinct words for the two sexes). But there is a class of adjectival nouns which exhibit all three forms (except that, where the masc. form ends in -aa, this form is common to the feminine), these concording with the gender of the noun they qualify or refer to.
Gender concords also operate in the preverbal tense-marking, and other forms of personal pronoun (with prosody) and in the genitive copula (agreeing with the head noun) and in the identity particle equivalent to '(it) is', where the system of agreement is very complex. A curious feature of the language is that, where the male and female of a species are designated by different words, the plural form of the latter is common in meaning. Thus 'hens' poultry, 'mothers' parents and 'daughters' children; exceptions are 'men' and 'women', and 'stallions', not 'mares', signifying horses.

Tenses are relatively few in number, by African standards, but their usages, especially in combination with one another and with the many conjunctional particles, are as complex as anything in French or Latin. In the indicative tenses there is a partial distinction between those used in general and those used in relative constructions, the latter including not only relative clauses proper, but also certain types of question and of emphatic statement. This binary system is very similar to that of Fula and some other quite unrelated languages, as is also the usage of the subjunctive. There are fewer negative tenses than affirmative ones, and these are common to both systems. Other modes of the verbal notion, such as incepcion, continuance, repetition, priority, isolated occurrence etc., are conveyed by means of a set of auxiliary verbs. Word order is more flexible than in English, various types of inversion and front-shifting being common, and subtle shades of meaning can be conveyed by the insertion in the clause of special particles similar to those of Ancient Greek and Modern German. Various forms of ellipsis, often involving suppression of the verb, are also common, both in spoken and written Hausa, these giving the language at times a very terse and almost 'telegraphic' quality. It has a wealth of proverbs, idioms and stylistic variants and is capable of rendering almost any Western thought or idiom. Much poetry is written in the language, this being characterized by dialectal forms and other special conventions. The poetry is written in the same language as the prose.

Hausa possesses a very large vocabulary, of mixed origin. Most of its basic verbal roots (some three thousand in number) are of indigenous origin (though a number of these show a remarkable phonic resemblance to Germanic verbs of similar meaning), as are its numerous ideophones. But, as is to be expected of a traders' and a Muslim's language, many of its nouns are palpably loanwords from other languages. These include a great number of Arabic words, not only in the specialized spheres of religion, literacy, politics, justice, war, trade, crops, dress, horse equipment etc., but also words for such general concepts as 'affair, plan, discussion, argument, skill, just, generous, treacherous, brave, etc.' There are also at least a hundred Arabic verbs in everyday use, covering such general notions as 'understand, agree, promise, test, destroy', these being mostly taken over the first or second form, but adapted, like the Arabic nouns, into the Hausa phonological and morphological systems (Hausa glottalized consonants, for example, substituting for the emphatic ones of Arabic, and Arabic loan nouns invariably having regular Hausa plural forms). Arabic loans represent a number of different historical layers, routes and media of borrowing, sometimes everyday and learned forms of the same Arabic word co-occurring in the language (e.g., lafihi and aibuu 'fault, blemish'). It is interesting to note that many Arabic words have been taken into Hausa that have not been taken into Swahili, and vice versa. One or two more literary constructions, e.g. the 'cognate accusative', would also appear to have been borrowed from Arabic. Recently, since the European occupation of West Africa, however, the language has become swamped by loanwords from English and French, in their respective areas (these again being assimilated to native models), and borrowing from Arabic appears to have substantially ceased.

iii. — HAUSA LITERATURE

Hausa literature falls into three main categories, or perhaps it is better to speak of poetry, traditions and a subsequent process of synthesis which is currently in progress. But for convenience we shall pursue our discussion under the following heads: (a) the folk literature; (b) the literature of Islam; (c) modern literature.

(a) The folk literature. This is in fact an oral literature at the ultimate provenance of which we can only guess. It is highly improbable that it was ever recorded in writing before the commissioning of such work by European enquirers. As in all folk literature, the term "folk" does not mean "simple", and whatever aspect we study—provenance, interpretation or classification—we are aware of a complex convolution of ideas, motives and themes around which it is impossible to draw precise boundaries of time, type or origin.

The tales may conveniently be classified as tales about animals, tales about people and historical tales, though clearly such a classification is arbitrary and there are constant blurred edges where the division is not precise.

The concept behind the animal stories, probably the earliest chronological stratum of this folklore, is that all the animals once lived together in amity, but the tricks of the spider and the thefts and deceits of the hyena sowed discord and forced them
apart. The lion was king before man overcame him with his poisoned arrow—thus the Hausa proverb Dan Adam abin isare—"Man is a thing to be feared". In these stories the characters of the animals are stereotyped. The spider is a slick trickster, the hyena a cunning but gullible thief usually caught out by her vanity. The he-goat is the most intelligent of the animals, the jackal the most learned, and so on. The plots are elementary and have little regard for cause and effect, or for natural laws. The audience expects that the animals have their well-known characters. What delights is to see these expectations fulfilled. The animal characters function at the same level of intelligence and motivation as humans. When man figures in these stories his rôle is that of a being on terms of equality with the animal world except when his superior skills enable him to triumph. This notion of man's immanence in the world of nature is to be contrasted with the developing concept of his transcendence over and apartness from the animals, which appears in the more complex stories about people. We therefore suppose that these animal stories form an early stratum which has its roots certainly in a pre-monotheistic and not improbably in a pre-social era.

The tales about people appear to reflect the increasing complexity of man's relationship to his environment and the development of his own social self-awareness. Creation and cosmology myths now become common. Typically, giant pagan ancestors of the Barbashe type (Palmer, The Kano Chronicle, in Sudanese Memoirs, iii, Lagos 1928, 97 ff.) meet, wrestle, and leap so high in the sky that their fighting causes the sound of thunder. More subtly, the woman with many mouths appears, and stories of the "Pandora's Box" type offer their explanations of good and evil. Possibly such stories as that of the man who married the monkey woman, and the women who grew spider's eyes mark an awareness of group differentiation and incipient tribalism.

Of particular importance in these stories is the character of Auta, the "Baby of the Family", who is at first simply the enviable character blessed with luck, but who subsequently becomes the hero and dramatist in later history.

The historical stories seem to be an extension of the cosmology and creation myths, for the Barbashe-type ogres who figure in them are certainly associated with the first confrontation between the autochthons and the early immigrants. The subsequent growth of city states we find represented in this literature, and the development of his own social self-awareness.

The sources for these tales are many. Predictably, the Arabian Nights figure in this folk literature in instances too numerous to list. Suffice it to record Aladdin, Ali Baba, the Isle of Women among other familiar characters and themes from the Nights. The tales of the Nights also may be attributed tales of bawdy humour in which jealous husbands are cuckolded and foolish lovers are discomfited. But such robust humour is ubiquitous and, of great antiquity, and it would be unwarranted to conclude that the Nights were necessarily the direct or the sole source.

The style of these tales tends to short staccato sentences where grammatical structures are simple and literary conceits few. On the other hand idiom is vivid and varied, as is to be expected in tales meant to be told. There are few Arabic loan words, and those that do occur are either basic Islamic terms or thoroughly naturalized. Many stories begin with some such conventional opening as Ga la nan, or Shi ke nan, or Hungerus kan husa. In these folk tales Hausa humour is catholic and at times broad. Fun is poked at the pompous. The slave is also a frequent butt for ridicule. But on the whole the Hausa are amused less by simple incongruity and more by the spectacle of human gullibility, by him who is the victim of his own gullibility, by him who is hoist by his own petard.

(b) The literature of the Islamic period.

This literature, written initially in the ajami script, is almost entirely in verse. Also, apart from a few contemporary compositions, it is religious. Popular tradition has it that poetry in Hausa was first composed and written down by 'Usayn b. Fudî (Usmanu dan Fodio). So far, nothing leads us to dispute this tradition and we therefore accept that Hausa first started to be used in formal composition at the end of the 18th or in the early 19th century.

There are four main categories of this verse: (i) Begen Annabi—eulogy of the Prophet Muhammad; (ii) Wa'azi (Arabic wa'az)—the threat of eternal punishment and the promise of divine reward; (iii) Tawhid (Arabic tawhîd)—Muslim theology, the "oneness of the unity"; (iv) Fikha (Arabic fikha)—Muslim law. The first is primarily devotional. The remaining three had a twofold purpose. Firstly, that of the evangelical Fulani, to reach the common people with a message of salvation. Secondly, in the post-djihād era, the purpose of the propagandist, to uphold the Muslim hierarchy by the sanctions of Islam. These two purposes provide us with the very raison d'être of such a literature in Hausa rather than in Arabic.

Our present evidence strongly indicates that the poetry grew out of the religious and theological
tensions associated with the Fulani *djihād*, its immediate prelude and its aftermath. It is to be regarded as an extension of the theological and devotional writings in Arabic, which had a much earlier origin. To some extent it reflects the inadequacy of Arabic literacy in the Sudan at a point when the intellectual battles of the day could no longer be confined within the circle of those fully literate in Arabic. An important consequence was to make Hausa no longer purely a vernacular, but to give it a status as a language of learning of the second rank, as we see clearly from the testimony of Baba (Mary Smith, *Baba of Kano*, London 1964, 132).

Of the four categories, *Begen Annabi* is certainly the most pleasing by Western standards, since it attempts to express the emotions of personal religious experience in terms of human devotion. Its imagery is closely influenced by detail from the sīra literature, from the infancy legends of Muḥammad, and by incidents from *Kwar'ām* and *badīgh*. The most impressive example—moving and sincere—is a *takhīms* by Ḥāfiz b. Ḫūmān on an original by the Shaihu. Unfortunately, it is still unpublished.

*Wā'asī* at its best can be fine apocalyptic ranting, full of the fiery colour and sulphurous imagery of the mediaeval Muslim hell, and its counterpart of lust and fleshy delights in Paradise. A memorable example of this is the *Wakar jan mari*—‘The song of the red leg irons’ also attributed to Ḥāfiz b. Ḫūmān, and as yet unpublished.

*Tauhīdī* is the most intellectual of Hausa writing. The unpublished work *Ku san sammuwar Jalla* is an example of high quality. This presents the arguments for God’s existence, His unity, omnipotence and so on, in Hausa verse, but with extensive use of Arabic philosophic terms in various degrees of naturalization. It will be clear that such an exercise requires considerable command of the original Arabic disciplines and is the product of a high order of intellect.

*Fikihu* is aesthetically unattractive, but certainly not without interest to the European reader, for it is a rich source of information on pre-Islamic custom. To the Muslim it is of paramount importance, for upon this and upon *tauhīdī* depend his chances of salvation. Correspondingly, those who can write this verse hold the salvation of the masses in their hands and their authority in the Muslim hierarchy is thus considerable.

These categories of learned poetry are the main channel whereby the esoteric Arabic vocabulary, known initially only to an élite, passed through the process of naturalization into common speech. A high proportion of this vocabulary has not yet reached the vernacular, but the poetry remains popular and by a process of constant enquiry and the scholia of the *malāms* [*q.v.*] the borrowing of this class of learned Arabic words into Hausa is still proceeding.

In addition to these learned categories there is popular poetry such as *yabu*—‘praise song’; *sambo*—‘satire’, and the incantations of the *bori* practitioners. These categories are not normally written and therefore belong to the oral literature.

The learned poetry is metric and the metres conform to the classical Arabic metres, although it appears that certain minor variants are allowed to the Hausa poet which would be improper to his Arab counterpart. Among the most popular metres are *al-tawīl*, *al-kāmil*, and *al-wafīr*. Tone plays no part in the metrical system. 

The popular poetry is also metric, and while it does not conform to the Classical Arabic metres it appears to have been influenced by them. Certainly, to all intents and purposes it too is quantitative, but it may be that remnants of an earlier qualitative—that is a tonal—system have survived marginally in some of this poetry. This, however, has yet to be convincingly demonstrated.

(c) *Modern literature.* By this we mean works printed in *boko* (Roman characters), the great bulk of which has been produced over the course of the last fifty years. To some extent it is an artificial development, having been initially the production of missionaries, European administrators and the Western education system. Subsequently it was nurtured by Departments of Education and such quasi-government organizations as the Northern Regional Literature Agency. Its dissemination has been closely linked to the growth of government sponsored education. It has been written, in the main, by men who have passed through the primary and secondary schools created or supported by the Administration. But as more Northern Nigerians began to feel at home in both the world of Islamic Africa and the world of the secular West, so a synthesis became apparent in which the two earlier traditions were drawn together to emerge in a new form of literature influenced by, but certainly not slavishly copying, Western and African patterns.

Our purpose is best served by a brief analysis of certain outstanding examples of this literature, for it is still not yet sufficiently extensive to allow of further general conclusions. *Shaiku Umar* (Sir Abubakar Tafawa Balewa, Zaria 1955) is the story of a boy and his widowed mother who fall foul of the slave raiders. It has a carefully constructed plot in which a series of incidents and blows of fate arbitrate the lives of these people, who are shown as the helpless victims of their own social and political institutions. It is a story of great human sympathy, of charity and social concern and is at first sight far removed from our traditional *genes*. Yet the institutions which support the plot are those of traditional Muslim learning, slavery, the life of the Sarki’s court and Hausa kinship custom. Indeed it portrays the Islamic life of the Western Sudan at its dramatic *fin de siècle*, immediately prior to the beginning of the European Administrations. Even the hyena, that ancient rascal of a remote indigenous traditions, enters the story at one point to intervene drastically in the hero’s life.

*Gandoki* of Alhaji Bello (first printed Zaria 1934 and subsequent undated editions) is a very different tale. Here the plot is rudimentary and without chronologic discipline. It starts with a vivid picture of experiences in the fighting which took place against Lugard’s columns at the turn of the century, and the central character is a roistering pagan-slaying boastful warrior who clearly has the blood of the Nagwamatse in his veins. Then suddenly the story moves into the fantasy world of jinns and ogres and the hero moves through a series of marvellous adventures in which the author’s debt to the *Arabian Nights* is evident. Yet despite the clearly Islamic influences, both literary and moral—for Gandoki is a devout Muslim—it is clear that the ogres and pagan enemies whom he slays or enslaves have stepped out of the Barbushie cycle, for they are the giant elephant hunters and bohey-men of the cosmology and early history myths. Once again our traditions have converged, but to produce a very different though equally entertaining result.

*Magana āri ce* of Alhaji Abubakar Imam (fifth
HAUSA — HAWALA

Edition, Zaria 1960) is justly famous. This, a much larger work than the previous two, is a series of short stories based largely on the animal cycle but borrowing such exotic themes as "The Pied Piper," which it then presents delightfully in an African setting, and numerous themes from the Nights. The whole is connected by the parrot who is both narrator and hero, in that he has to invent his tales in order to prevent the young prince from rushing headstrong to his doom at the hands of the jealous vizier. The parallel with the Nights is obvious, but the parrot is also the spider stinker of the animal tales and certainly reminiscent of Abü Zayd, the witty, unscrupulous, improvising rawi of the Makâmât. The work is a mine of information on Hausa custom, is immensely rich in linguistic material and is unquestionably a classic of Hausa literature. Perhaps more overtly than our two previous examples it combines the three traditions which we have described and illustrates their leavens at work.

Clearly Hausa literature is now at a point where past tradition and recent intellectual experience provide the materials for important and exciting new developments. One such is represented by the recent works of Malam Shu'ailu Makarfi, Zamanin nan namu (Zaria 1959) and falau na Kyallu (Zaria 1960). These are full length plays on such moral and social themes as juvenile delinquency, mercenary mothers and prostitutes, written in the latest idiom of the Kano streets and market-place, full of English and other neologisms, but interspersed with uncouth asides and moralizing (in verse) by a mai shela or 'herald' who performs a function very similar to that of the chorus in a Greek tragedy.

Bibliography: (a) In addition to works mentioned in the text, Labarun Hausawa da makawnansu, Zaria 1932, i-ii; Edgar, Lilafi na tatunyoyi ya Hausa, Lagos 1924, i-iii; Shôn, Magana Hausa, ed. Robinson, London 1906. (b) The only collections of learned poetry at present available are Robinson's Specimens of Hausa literature, Cambridge 1896, a rather haphazard collection in an archaic orthography and indifferent translation; also Wâokin Hausa, Zaria 1957, Hausa texts transcribed into Roman script, a better selection than Robinson but marred by certain errors and misspelled manuscripts; M. Hiskett, The 'Song of Bagauda': a Hausa king list and homily in verse—i, in BSOAS, xxvii (1964), an edited Hausa text, with English translation in BSOAS, xxviii (1965). For a discussion of the significance of the poetry, M. Hiskett, The historical background to the naturalisation of Arabic loan words in Hausa, in ALS, vi (1965); for metre Greenberg, Hausa verse prosody, in JAOS, lxix (1949); M. Hiskett, The 'Song of Bagauda'—III, in BSOAS, xxviii (1965). (c) No critical work on modern Hausa literature has yet been written. Catalogues of NOLRA and their successors, Gaskiya Press, Zaria give lists of titles of Hausa novels, etc., which are currently available.

See further Nigeria.

HAWALA, literally "drafts," "bill," is the cession, i.e., the payment of a debt through the transfer of a claim. If A has a debt to B and a claim against C, he can settle his debt by transferring his claim against C to the benefit of B. In this case A is the transferor (al-muhîl), B the creditor (al-muhadd) who accepts the cession, C is the cessionary (al-muhîl 'alayhi). It would however be incorrect to consider the hawala merely from the viewpoint of a cession: it is first of all a means of payment to release the muhîl from a debt, therefore, besides the task of the cession it fulfills that of the declaration and assignment as well (R. Grasshoff, Die Wechselrecht der Araber, Eine rechtsvergleichende Studie über die Herkunft des Wechsels, Berlin 1899, 60). It is not identical with the suftadfa [q.v.]; this is on the contrary a pure transaction of issuing a bill, a special form of the hawala, "distinguished by the fact that the muhâdîl 'alayhi is absent at the conclusion of the contract between the muhîl and the muhaddîl" (Grasshoff, op. cit., 64). According to the fikih it is the following prerequisites which are necessary to validate the transfer: the transferor and his creditor must conclude a contract, the transferred debt must be a fixed obligation and the transferor's debt must be in agreement with that of the cessionary in kind, manner and conditions of payment.

The hawala occurs rather often in Arabic papyri, usually in the form of "written obligation" (dhukr bâbî); cf. A. Grohmann, Arabic papyri in the Egyptian Library, l, Cairo 1934, no. 48, and p. 116; ii, Cairo 1936, no. 102, and p. 118; A. Dietrich, Arabische Papyri aus der Hamburger Staats- und Universitäts-Bibliothek (= Abhandlungen für die Kunde des Morgenlandes, xxii/3), Leipzig 1937, no. 44. The cessionary may be represented through an agent (wâkil), as in the Papyrus no. 134 (for it see p. 84) in A. Dietrich, Arabische Briefe aus der Hamburger Staats- und Universitats-Bibliothek, Hamburg 1955.

The word hawala entered Europe through the commerce of the Italian Levant in the form awalât to indicate the guaranty of a draft. In modern Arabic hawâl means draft, cheque or assignment.

(A. Dietrich)

HAWALA, as a financial term, assignment; in Islamic finance, an assignment on a muhâdîl [q.v.] effected by order of the ruler in favour of a third party. The term is applied both to the mandate for the payment and to the sum paid. It is already established in these senses in 'Abbasid finance (see F. Lekkengaard, Islamic taxation in the classic period, Copenhagen 1950, 63-s). In the 'Abbasid empire, hawala was widely used in both state and private finances to avoid the dangers and delays inherent in the transport of cash. The mandates were known as suftadfa [q.v.] or suftad [q.v.]. Thus we know that the tax-collectors (ummîl), even in the hands of the Arab state or the sakk [q.v.]. Thus we know that the tax-collectors (ummîl) of cash. The mandates were known as suftadafa. In the encashment of the suftadfa and in all matters relating to hawala, the primary rôle was played by the giababî [q.v.] (see R. Grasshoff, Die Suftafa und Hawala der Araber, Göttingen 1899; W. J. Fischel, Jews in the economic and political life of mediaval Islam, Royal Asiatic Soc. Monographs, vol. xxii, London 1937, 3-35).

Hawala appears in wide use in Saladin finance (H.
practice with regard to muḥāfaẓa'ā and hawāla (Dustūr al-ḵābī, 297-8). According to Nakhjawānī, assignations were made on the tāmghāt [see TAMGHA] in the provinces (cf. Diāmī al-tawāṣṣalī). Later Khaṣṣāf Ghiyāth al-Dīn and Mawllānā Shams al-Dīn laid down the principle that these revenues should be collected by muḥābaṣīl [q.v.] of the diwān, and that allowances should again be paid directly from the treasury. But these reforms also lapsed (on the later history of muḥāfaẓa'ā and hawāla in Iran, see Taḥqīqāt al-mutālik, ed. V. Minorsky, London 1916, 79).

In the Ottoman empire, as in other Islamic states, muḥāfaẓa'ā and hawāla were the basis of the financial system. The rich material preserved in the Ottoman archives makes it possible to establish the system in detail and to shed light on obscure points in its earlier history (particularly important are the muḥābaṣīl defterleri and the māliyye āẖām defterleri in the Bașvekālet Arşıvi Umum Mūdūrlūğū). The main source of revenue which was exploited by muḥāfaẓa'ā and on which assignations were made was the ḥāwāsy-i hūmāyūn [see ḥāās], which came under the administration of the defterdār. In general payments were made at the place where the revenue was collected through assignations on the tax-farmer. The system was favoured by such factors as the difficulty of transporting cash and the slowness with which revenue accumulated from the taxation of commercial transactions, particularly in the towns. Thanks to entries made in the muḥābaṣīl registers of the central government, the defterdār was in a position to exercise close control over the administration of these revenues in distant provinces. Another group of revenues — including the ʿaḏār, which were payable in kind — was assigned to the military as ismār [q.v.]. The timar system collected these revenues directly. However, in the case of Ghiyāth Khan’s reforms, this system of enfeoffment must be seen as a departure from the hawāla principle. Revenues in this category were no longer the subject of hawāla transactions; in the Ottoman system they constituted an entirely distinct branch of the administration under the nīzhāḏī [q.v.].

The ʿamīl (tax-farmer), who took on a muḥāfaẓa’ā for a given term (usually three years), made payments in accordance with the assignations of the central government, to those in whose favour they were drafted. The payments were always made with the cognizance of the emīn [q.v.] and ḵāḍī, the government’s supervisory agents, and entered in their registers. The payments were always in cash. The ḵāḍī gave the tax-farmer a budgijet which stated the amount of the payment, to whom it was made, by what order, on what date, and from which muḥāfaẓa’ā. A copy was entered in the ḵāḍī’s register. The budgijet would then be submitted in the accounting which took place when each instalment of the muḥāfaẓa’ā fell due. If on the other hand the payment was not made, a muṭlāb stating the reason for this was given to the bearer of the assignation. The ḵāḍīs’ registers are among our most valuable sources for hawāla transactions.

The mandate for the hawāla is a kūhm of the sultan. It specifies how much is to be paid, to whom, and from what source. Hawāla orders are of three main types: (1) orders made out directly in favour of claimants, used for the payment of allowances (sāliyān, ṣulāf, masāwī'īb) to the military in the provinces; (2) assignments placed at the disposal of an emīn to cover purchases made in connexion with provincial public works or for the palace (see R. An-
The various *mubâzhâ'at* in a region tended to be ear-marked for particular claimants, and their claims regularly met from the same source. It was for this reason that the central financial administration was organized into departments with such names as *Anadolu mubâzhâ'ât*, *ma'den mubâzhâ'ât*, *Nusret-i mubâzhâ'ât*, etc. Belgrade z. sem. Sprachwissensch.; *(cf. al-Tha'labâ, Tabari, Tafsir, *fatwâd-yi Abu'l-Su'ud)*.

In the 12th/13th century onwards, we find the revenues of tax-farms being transferred to the central treasury by bill of exchange (*polîče*) through the services of *sarrâfs* established in the main towns. *Hawâlî* nevertheless continued to be used. It lost its importance when tax-farming (*mubâ'â'at*) was abolished after the declaration of the Tanzimât in 1839. The Tanzimât introduced a policy of fiscal centralization. State officials appointed to the provinces with extensive powers collected revenue directly. After paying salaries and meeting other local expenses locally, the *mubâ'â'ât* sent the balance to the central treasury (see H. İnalci, *Tanzimat'in in uygulanmasi ve sosyal tepkileri*, Belleten, xxviii/112 (1964), 639).

In *hâshâ'd*, *hawâlî* was the subject of a separate *kiûlâd*. In the *fatâwâd* collections of the Ottoman *muftîs*, the *hâshâ'd* al-*hawâlî* sometimes includes *fatâwâd* on *hawâlî* transactions involving the state, as well as those relating to transactions between private individuals, or between individuals and *waqfs* (see *Fatâwâ-yi Abu'l-Su'ûd*, Topkapı Sarayi MS Ahmed III 786, ff. 251-2; *Fatâwâ-yi Yahyâ Efendi*, MS Ahmed III 298, ff. 141-3).

In Ottoman Turkish, *hawâlî* has the further sense of a tower placed at a vantage-point; *hawâlâ* were sometimes built for blockading purposes near castles which were likely to put up a long resistance. This method was used in the blockade of Bursa in the early 8th/14th century. Mehmed II contemplated using Rûmâl Hîjârî as a *hawâlâ* to blockade Constantinople if resistance continued. Ottoman *hâwâlîs* have left traces in Balkan toponymy. One such *hâwâlî* is that built by Mehmed II near Belgrade, now known locally as *Avâla* (H. İnalci, *Hawâlî*, apostile. The word is borrowed from Ethiopic, in which language *hawârîyâd* has the same meaning (see Nöldeke, *Bestrâäge z. sem. Sprachwissensch.*, 48). The suggested derivations from Arabic, attributing to it the meaning “one who wears white clothing” etc., are incorrect. Tradition delights to endow the earliest Islamic pioneers with foreign bynames which were familiar to the “people of the Book”. Abû Bakr is called al-Şiddîk, *Umâr al-Şâbâb*, al-Zubây r. b. 'Awwâm al-Hawâri. Moreover, the collective term al-*Hawârîyûn* occurs, denoting twelve persons who at the time of the second “Akbâb” are said to have been named by Muhammad (or those present) as *mâlîks* of the inhabitants of Medina “to be the sureties for their people, just as the apostles were sureties for *Isâ* b. Mu'min, and as *muftî* (Muhammad) am surety for my people”. Christian influence is also found elsewhere in the account of the “second ‘Akbâb’”, where the total number of those present is put at 70 or 72, apparently on the analogy of the account in the Gospels of the 70 or 72 apostles (Luke, X, 1, 17). Of these 12 *Hawârîyûn*, nine are said to have belonged to the *Khaḍājâd* and three to the *Aws*. Their names were said to be: — Sa'd b. 'Ubâda, Asâd b. Zurra, Sa'd b. al-Râbi', Sa'd b. Abî Khayya'ah, Munâhir b. 'Amr, 'Abd Allâh b. Rawâhî, al-Bârî b. Ma'dur, Abu 'l-Haythâm b. al-Tâziyîhâr, Isa b. Hûdâyî, 'Abd Allâh b. 'Ubayd a. b. Şînî, 'Abd Allâh b. 'Râfî b. Mâlik. According to another version, however, the *Hawârîyûn* belonged exclusively to the tribe of Quraysh and were: — Abû Bakr, 'Umar, 'Uthmân, 'Ali, Ḥamza, 'Ijâ'afar, Abû 'Ubayda b. al-'Ijârâh, 'Uthmân b. Maz'ûn, 'Abd al-Rahmân b. 'Awf, Sa'd b. Abî Wâkâs, 'Abd Allâh b. al-Zubây r. b. 'Awwâm al-Ansârî, etc. (cf. Al-Tha'labâ, Kâmûs al-anbâ'în, Caen, 1920, x, 344). These accounts again make it clear to what extent the rivalry between Anşar [q.v.] and Muhâdîrûn [q.v.] has influenced tradition.

The tradition concerning these twelve Muslim apostles has perhaps, like so many others, arisen as a deduction from a statement in the *Kûrâ* (III, 45, LVXVI, 14): *Jesus* says “Who are my Anşar for God’s sake?” And the *Hawârîyûn* answer “We are the Anşar of God”, etc. The parallel with Muhammad’s own position is here clear enough, and it is evident that, alongside of the Muslim Anşar, the need was felt for Muslim *Hawârîyûn*.

On the subject of the disciples of Jesus statements will be found in various Muslim writers, for the most part deriving from passages in the Gospels; see *Isâ* and Mâ'da. The *Bibliography: in addition to the references in the text, A. J. Jeffery, *Foreign words...*, 155-6; *Tâbarî, Tafsîr*, old ed., iii, 197-200, new ed., iv, 442-8. (A. J. Wensinck)

**HAWÂSHî** [see *Hâshîyâ*].

**HAWAZÎN**, a large North Arabian tribe or group of tribes. The genealogy is given as: Hawazîn b. Mansûr b. ʔukrima b. ʔašâla b. Kay b. ʔaylān [see *yâlān*, *adnân*, *al-ʔârâb* (* Diaszirat*), vi]. Properly speaking Hawazîn includes the tribes of ʔâmîr b. ʔâsâ-sâ (q.v.) and ʔâsâ (q.v.), but the term is sometimes restricted to what is more correctly ʔâdîr Hawazîn, “the rear of Hawazîn”, comprising ʔâshāwî b. Bakr, ʔâsâr b. Mušâwîya b. Bakr, ʔâsâr b. ʔâsâwîya b. Bakr and Sa'd b. Bakr [q.v.] among the places reckoned to belong to Hawazîn were: Amlâb, ʔâsâd al-Mašâhîl, al-Dâdâr, al-Dâbân, and Fayf al-Rîh; the wadis ʔâstâs, Liyya, Turâba, ʔaṭâya (so also ʔâsâr, but variants), Abû Ḥâfîdân and the waters ʔûh-l-Hulyâfâ y. ʔiyyân and the mount al-Muḍâjâyi. Before Islam, Hawazîn along with ʔâshâwî b. Bakr worshipped the idol Dîhâr at ʔukâz; the ʔâdîr came from a family of ʔâsâr of Hawazîn.

**Early history.** For a time Hawazîn paid tribute to ʔaṭâfān (under ʔuzâhîr b. ʔîdāshîmâa of ʔâbîs, but they became independent on ʔuzâhîr’s death. Hostility continued, however, and there were many battles, sometimes between most of ʔaṭâfân on the one side and most of Hawazîn (often in alliance with Sulaymîn) on the other, sometimes between individual tribes, such as Fażâra and ʔâshāwî. Hawazîn was also bitterly hostile to Quraysh, against whom it had fought the wars of the Figîdär. The underlying cause was the trade rivalry between Mecca and al-Ţâhîr, since the inhabitants of the latter town, ʔâshāwî were either part of Hawazîn or in close alliance. One war began with a quarrel between an ally of Quraysh (belonging to ʔinân) and a man of Hawazîn. The second and more famous war of the Figîdär arose from the killing of ʔurwâ al-Ralîhî (of ʔilâb of ʔâmîr b. ʔašâ-sâ) by ʔâbrâd b. Kay [client of ʔāhr b. Umâyya of Quraysh]. Though Quraysh had to retire to Mecca on several occasions, they seem to have had the best of the fighting in the end. Peace was made
with Hawazin, but al-Ta'if passed into the control of the section of Thakif known as the Ahlaf, who were subordinate to Mecca.

Relations with Muhammad. In general Muhammad had good relations with 4Amir b. Sa'asa'a. A small section of Sa'd b. Bakr (to which he tried his wet-nurse Halima [q.v.] had belonged) became Muslims at an early date, though others fought against him at Hunayn. Otherwise he had little contact with Hawazin till after his triumphant entry into Medina in 8/630. While still settling the affairs of Mecca, he heard that Mālik b. 4Awf (of Naṣr) was concentrating a force of Hawazin and Thakif only a day or two's march away and was thus threatening both Mecca and the Muslims. Because of the old enmity between Kuraysh and Hawazin 2000 Meccans joined Muhammad when he marched to meet this threat. The battle took place at Hunayn, and, while Thakif took refuge in al-Ta'if, Hawazin was routed and lost all their possessions. Muhammad treated Mālik b. 4Awf very generously, however, restoring his wife and children, making a gift of camels, and recognizing him as chief of Hawazin. The tribe had to make a payment of sī'āya, presumably for the restoration of the captured women and children. Mālik then helped Muhammad against his former allies of Thakif.

3Hawazin; History. During the Ridda, Hawazin are said to have suspended the payment of sadaka presumably for the restoration of the captured women and children. Muhammad is called the precursor ( hopes of life, will join him near the basin. So far as one can judge, this idea is not found in the Qur'an, but it comes from the Meccans who had been in early Islam. The typical Turkish ablution tank is an octagonal reservoir covered by an octagonal pavilion resting on columns and arches, with wide eaves and a low dome. The present octagonal tank covered by a square pavilion in the sahn, but sometimes outside the mosque. It is hardly possible to assign a definite place to the reservoir among the eschatological sites. According to a canonical tradition (Tirmidhi, Kitāb al-sunnah, s.v. al-sā'af, p. 105; Ṭabarī, Ta'rif, xxx, 176 ff.; the articles of the creeds in Wensinck, The Muslim Creed, index, s.v. Basin; al-Ghazālī, Ihyā', Cairo 1302, iv, 476.)—Neither Ghazālī, in al-Durrā al-fā'īlīn, nor the author of the Kitāb al-baydā' mentions the basin. In the Ihyā' it comes between the intercession and the descriptions of Hell and Paradise, without there being any connexion with the one or the other. This uncertainty, which connects the basin sometimes with Paradise, sometimes with the trials at the Last Judgment, has given rise to the idea of two basins.

Basin; M Fu'ād 4Abd al-Bākī, Miftāh kunuz al-sunnah, s.v. al-sā'af, p. 105; Ṭabarī, Ta'rif, xxx, 176 ff.; the articles of the creeds in Wensinck, The Muslim Creed, index, s.v. Basin; al-Ghazālī, Ihyā', Cairo 1302, iv, 476. (A. J. WENSINCK)
open, and are generally square or rectangular in plan. Simultaneously with ablution tanks, fountain-cisterns were also developed in Islamic architecture, at first in mosques, and then also in palaces and gardens. The earliest extant example of such a cistern appears to be the one underneath the westernmost domed edifice in the sahn of the Great Mosque of Damascus. It was octagonal with a little parapet all round, and a jet—probably in imitation of the phiale which sometimes stood in the atria of the Byzantine churches—in the middle. The octagonal cistern in the sahn of the Great Mosque of Harrân was, in all probability, a fountain-cistern, as was that in the sahn of the Great Mosque of Sámarra (234/784-848) and of the Mosque of Ibn Tlülün, the latter being described by Ibn Dükňmâk as a great basin of marble, 4 cubits in diameter, with a jet of water in the centre, over which was a gilt dome on ten marble columns, and round which were sixteen marble columns with a marble pavement. This was later rebuilt by Ladjîln. Once thus developed, the fountain-cistern is often found in mosques of later dates along with the ablution tank—generally separate, but sometimes combined in one.

This cistern was, however, particularly developed in Iran and under its influence in India. A pool of water set in a plantation was popular not only in the pre-Islamic lay-out of gardens in Irân, but was also a frequent motif in the ornamentation of pottery and metalwork. In the rapid expansion of the Islamic period, this theme of plants and water combines the octagon and the cross, the octagon being a fountain-cistern at the shrine of Ni.mat Allah Mahán in the midst of the pool was a fountain of gold, with images, which one ascended by five steps; in the midst which Abu Ibrahim used to visit occasionally. To this group also a frequent motif in the ornamentation of the Islamic period, this theme of plants and water combines the octagon and the cross, the octagon beautiful tank at the shrine of Ni.mat Allah Mahán combines the octagon and the cross, the octagon serving as fountain at the intersection of the cross, the arms of which have diagonally cut corners to parallel this octagon. More elaborate and very characteristic are the ogee pools, often polygonal. In the big tanks, the water is usually still and the cistern is by preference filled to the very brim. But running water also had its place, trickling or leaping through the channels, according to the terrain, or dropping in musical cascades, and there were numerous fountains, some five hundred, for example, in the Hazar Djarîb. In India, the design of the tanks was copied almost exactly, but more often with multiple and varied jets in the middle. The best examples of such tanks are to be noticed in the garden of the Tâdi Mahall (second quarter of the 11th/12th century) in Ægra and in the Shahmâr Bâgh (1047/1637-8) in Lahorë.

There are other forms of the fountain-cistern, not in the open, but in pleasure-houses. We hear in the Thousand and One Nights of a pool in a wonderful domed building decorated with "all kinds of pictures in gold and ultramarine, and it had four doors, to which one ascended by five steps; in the midst of it was a pool, to which one descended by steps of gold, those steps being set with minerals. In the midst of the pool was a fountain of gold, with images, large and small, from the mouths of which the water issued; and when the images produced various sounds at the issuing of the water, it seemed to the hearer that he was in paradise". To this group belongs the recently discovered Saldjûk Hawîd- khâna at Rayy—a small vaulted building with a pool inside, octagonal in plan, and sunk below the ground level.

Large cisterns, especially for drinking water, fed by the nearest wâdi or river or by rain-water, were also built by Muslim rulers. Of these, two kinds may be distinguished: open and covered or monumental. Several of the open variety have now been re-excavated in Tunisia. The two largest, built by Abu Ibrâhîm Aḥmad between 246/860-3, are about a kilometre from the north gate of Kayrawân and receive the water of the wâdi Marjî al-Lî when it is in flood. They are polygonal, one being composed of seventeen straight sides and the other of forty-eight sides, with a round buttress at each corner internally and externally, and, in addition, an intermediate buttress externally, and a vertical wall at each end. The cistern of Rub el-Hizb, apparently of the 6th/12th century, and that of the fortress of Saûne, in Syria, of the Crusading period, belong to this type.

HAWD, usual spelling Hount (hau = a horsetrough, made of leather mounted on a wooden frame), name of the natural depression situated in south-eastern Mauritania in the angle of the Senegal and Niger basins. It is bounded on the north by an escarpment, Dhar Tichitt (sahr tiglid), stretching from Tichitt to Aratane and marking the limit of the Adal plateaux. In the north-east the escarpment which curves round above Oualata and Dhar Ouallata = dahar Wa'd and Nebem, forms the boundary of the table-land of Djouf (Djaf). The western boundary of the Hodh is much less clearly marked; after a point facing towards Bassokinou and Nara it takes in Timbedra and then turns back towards Tichitt through Alouen el Atrous (Uyûn al-‘Atrak).

The Hodh thus consists of a plateau and, below the escarpment, a plain which in turn is divided into two regions, in the south a region of grazing lands and wells, Labiar (al-Beûr), and in the North the Aouker which has been overrun by sand.

Its climate is midway between that of the Sahara and that of the Sahel. There are three distinct seasons: the rainy season lasts from July to September, the hot dry season from March to July, the dry cool season from October to March. The abundant rainfall gives the grazing land a savannah vegetation which attracts both caravans and herds.

History.—As a result of its situation on the edge of the desert, the Hodh has been a disputed region throughout its long history. According to certain traditions the Fulani of Macina originated there. The kingdom of Awadghost (which included the northern Hodh) is said to have been established by the Lamto and Ghana Berbers. It was conquered by the negro Soninke sovereigns of Ghana (990), whose capital, Koumbi Saleh, is in the Hodh. The Almoravids of Yahyâ b. ‘Umar are said to have captured Awadghost in 1054 and Ghana in 1076.

The death of Abû Bakr b. ‘Umar (480/1087) seems to have allowed Ghana to recover her independence, but the sovereign’s authority can hardly have extended beyond the Aouker and the Bassokinou. In 1203, Soumangourou Kanté, king of the Soso, seized Ghana. The pagan garrison routed the Muslim Soninke at Oualata (1224). In 1240, Sounjâlata Keïta destroyed the city of Ghana.

Arab invasions occurred in the Sahara towards the end of the 8th/14th century, at a time when the berberization of the population was becoming increasingly intensive. The Soninke towns of Chéou and Birou became, in Berber, Tighit and Iwaltale (Oualata). The Maqūl Arabs, especially the Massaï branch, supplied the Berbers with condottieri who were the chief figures of the wars of that period. The Hodh is situated at the extreme limit of the range of the Arab tribes coming from the north who, after being checked by the Senegal, turned their course eastwards. It was therefore to some extent only the

Arab invasions occurred in the Sahara towards the end of the 8th/14th century, at a time when the berberization of the population was becoming increasingly intensive. The Soninke towns of Chéou and Birou became, in Berber, Tighit and Iwaltale (Oualata). The Maqûl Arabs, especially the Massaï branch, supplied the Berbers with condottieri who were the chief figures of the wars of that period. The Hodh is situated at the extreme limit of the range of the Arab tribes coming from the north who, after being checked by the Senegal, turned their course eastwards. It was therefore to some extent only the
fringe of the Arab invasion that penetrated to this region.

At the beginning of the 9th/10th century, the Awlad Dâwûd b. Muhammad dominated the Hodh. At the beginning of the following century they were replaced by their kinsmen the Awlad Dâwûd b. ʿArrûk who, falling back on the Niger, in the middle of the 11th/17th century gave way to the Awlad Muhammad—Awlad Mbârek, who had been compelled to move westwards under pressure from the Trâra and the Brâkna. At the beginning of the 19th century the Awlad Nâsîr drove back the Awlad Mbârek to the East.

Only in about 1850 was the political supremacy of the ʿHaṣṣân Arabs replaced by that of the Maḥdûf, almost pure Berbers though Arabic-speaking, who succeeded in imposing themselves as a result of their alliance with al-Ḥâfīdī ʿUmar and his Toucoulouers, who captured Nîorî (1850).

After 1890, French penetration made itself felt. Nîorî was occupied on 1 January 1891. Two years later, Archinard conquered Macina and the Nara region. The final occupation of the Hodh was carried out by Colonel Roulet who, starting from Timbuctu, entered Oualata without firing a shot.

In the matter of the religious confraterities, the Kâdirîyya jârîka was propagated in the 12th/18th century, while in the 19th century the Tîjâniyya, under the influence of al-Ḥâfîdī ʿUmar, was more influential. But what was to be of considerable importance in this region was the “differentiated Tîjânîmism” introduced by a shârif of the Touat, Muhammad wûd Ahmad wûd ʿAbd Allâh (or al-Shârif al-Aḥâdîr) and his successor Shaykh Hamalla, whose father was shârif of Tichitt and whose mother was a Toucouluer, and who had brought together a powerful contingent of Moorish tribes linked for administrative purposes to the districts of Nîorî, Kûfûs, Timbedra, Nara and Nema. The Hamallists were the instigators of the incidents of Kâdî (1930) and Nîorî-Assaba (1940).

In 1940, almost all the tribes had been penetrated by Hamallist propaganda, which preached an actively bellicose Islam and, with its xenophobic attitude, gathered all the dissidents of eastern Mauritania and western Sudan. A numerous maraîchery, the Awlad Tenouajîb, members of whom were recorded in Kayes, Yélimâné, Nîorî, Kûfûs and Tamchakett, had shown itself hostile to this propaganda, preserving instead a strict Kâdirî orthodoxy.

On the occasion of the 1940 armistice the Hamallists thought the moment had come to suppress their Tenouajîb rivals and seize their possessions. But, after their violent attempt, thirty-three of the assailants, among whom was the eldest son of Shaykh Hamalla, were condemned to death and shot in Yélimâné. Shaykh Hamalla was deported, first to Algeria and later to France, where he died during the German occupation.

If Marty could regard Nîorî as the Mecca of the Sudan, it is certain that the Hodh was in practice the principal starting point for Islam in the direction of the negro countries. It remains a place of importance and of the negro countries. It remains a place of importance.

In 1940, almost all the tribes had been penetrated by Hamallist propaganda, which preached an actively bellicose Islam and, with its xenophobic attitude, gathered all the dissidents of eastern Mauritania and western Sudan. ...
The establishment of the texts has enabled us to find a common source, Andalusian or eastern, it is hardly permissible to speak of a parallel development. But this could arise merely from a greater popularity of the 

bukala

poems which used to be sung at Tlemcen. Other poems are more prosaic, but they all faithfully reflect some local popular inspiration. We must adhere to this conclusion so long as no convincing proof of their Andalusian or eastern origin is put forward.

Swing games accompanied by songs are widely found throughout the Maghrib. They are attested notably at Tangier, Rabat-Salé and at Fez. But the term bufrala [q.v.] is reserved for the songs sung at Tlemcen and in the Algérois (Algiers and Bida). S. Bencheneb considers that “the bufrala of Algiers, Bida or else where is independent of that of Tlemcen”, but there does not seem to us to be any convincing argument to prove this independence. If the two types have had a common source, Andalusian or eastern, it is hardly permissible to speak of a parallel development. But if, as is the case in the present state of our knowledge, the two variants of the same melody are structurally so similar, it is not sung, it is clear that the structure of several of its poems would permit them to be adapted to the verse of the bufrala. There should nevertheless be mentioned the greater thematic and linguistic richness of the bufrala. This similarity cannot, however, lead to any serious conclusion concerning the origin of the two genres, and we can merely state again that they both belong to a popular literature which developed parallel with works in literary language throughout the whole of the Arabic-speaking area.

We have collected 83 poems, 62 of which are of Tlemcen origin, 13 of which are of Algiers and 8 of Bida. It must be noted that several of these poems are sung indifferently at Tlemcen, Bida or Algiers with variants which are not always due to the use of a different dialect. These 83 poems are divided thus: (a) 12 distichs, of which 8 are from Algiers; (b) 15 tercets, of which 13 are monorhymed and 2 rhyming ABB with internal rhymes; 8 of these are from Algiers; (c) 34 quatrains of which 23 are monorhymes and 9 rhyme ABB; expressions which divide variously into quatrain, tercets and distichs; (d) 11 poems of 7 verses, some of which are monorhymes, 3 rhyming AAAAB and 7 AAAAA; (e) 8 poems of 6 verses which consist of: 5 poems made up of two monorhymed tercets, 1 of three distichs with different rhymes, 2 made up of one monorhymed quatrains and one distich; (f) 5 poems of 7 verses which divide variously into quatrains, tercets and distichs; (g) 1 poem of 8 verses made up of two monorhymed quatrains. We have included in this list 3 poems which are in reality variants. The study of the arrangement of the internal rhymes shows that they are much less numerous than in the bufrala and are arranged in a less contrived fashion. It is rather a case of seeking for musical assonances able to sustain the melody of the bufrala.

The poems of Tlemcen are more varied than those of the bufrala of Algiers; whereas the latter is almost entirely devoted to love and the description of the gardens where swing games are played, the bufrala of Tlemcen has the following themes: (a) Poems devoted to Tlemcen, its surroundings or to certain of its districts. It should be noted that the bufrala of Algiers has nothing similar except for one poem devoted to Sidi Ferruch. (b) Religious themes: sometimes about the Prophet, his daughter Fatima, sometimes celebrating the Tlemcen saints. In this connexion there should be mentioned a definite sympathy for the great figures of Shi‘ism which is found also in several bufrala poems. Here too the Algerian bufrala has no theme of similar inspiration. (c) Themes of love: these preponderate as much at Tlemcen as in the Algérois. They sing of the lover and the happiness or the torment he gives. The bufrala of Tlemcen includes in addition descriptions of the attributes of beauty, the attributes of women and the attributes of the mouth of a young man. (d) Themes concerning different aspects of social life at Tlemcen: the life of a young woman, her relations with her mother and her mother-in-law, an account of the attributes of the members of the family, etc.

The literary quality of these poems is very uneven. Some are excellently constructed from the point of view of the sentiments expressed and in the choice of expressions and images. The use of floral themes in the description of girls is often a very happy one. Themes of grief or nostalgic sadness are particularly suitable to the melody of the bufrala. Other poems are more prosaic, but they all faithfully reflect some aspect of life at Tlemcen and, especially, of the spirit of its inhabitants. In spite of the upheavals which social life in Algeria has undergone, the bufrala is still...
popular, although the young women of today take rather less interest in this genre which delighted so many of their forerunners.

We have been unable to collect any information on the melody of the hawfi; we have however had it written down in musical notation. Evidence, already unreliable enough in the matter of the texts, is here completely lacking, and it is all the more regrettable since a scientific approach to the problems of popular poetry, and often of classical poetry also, is impossible without the recognition of the primary role which the melody plays in it; the problems of structure themselves cannot be solved without a full appreciation of it. Nor can the question of the origins be approached until an exhaustive recession has been made of the various Maghribi compositions in dialect.

HAWF, snake-charmer or itinerant mountebank, from hāyya, snake. The plural is hawd (so Lane) or more generally hāyyūn. In Egypt certain members of the Gipsy tribes (see nārî) act in this capacity. The fellâhin often have recourse to them, particularly when afflicted with various forms of skin-disease (karfa) or eczema (kūba). The general procedure of these quacks is to recite some rimegrole over a glass containing olive-oil and the white of an egg, and then to spit into it. The slimy mixture is then applied as an ointment. Certain members of the dervish fraternities, such as the Rifa'iyya and liwā', also play their part in the folk-medicine of the Nile Valley as snake-charmers and viper-enchanters. The reason why their services are requisite is because of the popular belief that skin-diseases are due to the viper blowing its poison into the body, and these men claim to possess the necessary authority to counteract the poisonous weapon.

**Bibliography:** *Abd al-Rahman Isma'il, Tibb al-rałaha, Cairo 1310-1312, i, 80 ff., ii, 31; Eng. tr. by J. Walker, *Folk-Medicine in Modern Egypt*, London 1935; MW, July 1933, 289. See also KURAY. (J. Walker)

HAWF, "pertaining to air". Al-Khallî said and repeated: *al-ālif al-layyina, al-wdw, al-ya?* are *hawd?yya*, that is to say *fi l-hawd* "in the air [exhaled]" (*Le Monde Oriental, xiv (1920), 44-5). For Sibawhayhi (ii, 454, l. 21 f.), *al-ālif is al-hawf al-hawf al-hawf*, to be understood, according to the *Sharh al-Šifâyya* (ii, 261, l. 14, 264, l. 4), as *dwf* "which has some [exhaled] air". These expressions, *hawdyya and hawf*, might be thought to be synonymous, but there is a nuance.

Al-Khallî (ibid., 44, l. 17-8) expresses himself thus on the subject of the *huruf* mentioned above: "they are *fi l-hawf*, in the air [exhaled], they have therefore no region of articulation (kawysi) to which they might be assigned, unless it is the *gloaf, the hollow of the chest". Therefore, without *makhradi*, either in the throat or mouth, these *huruf* are *fi l-hawf*: the air is so to speak their place of existence. Sibawhayhi grants them a *makhradi* (see J. Cantineau, *Cours, 19-20* or H. Fleisch, *TraitÉ, § 44b, d, g*; but he insisted on the amplitude (*ittisâd*) of this *makhradi* which makes them precisely *huruf al-lin* [see *huruf al-lin*], genesis of the *huruf*). The widest is that of the *alif* and it offers its fullest width *al-lin al-lin* "for the air of the sawf* (Sibawhayhi, ii, 454, l. 22). He is therefore considering the abundance of the air passing with the *sawf* within the full width (*ittisâd*) of the *makhradi*; he attributes this name al-hawf to *alif* as being the most eminent, leaving *waaw* and *ya?, with less extensive *makhradi*, under their appellation layyina.

**Bibliography:** in the text; see also HAMZA (hamsa madhâra) and *huruf al-hawf*. For a general discussion of the phonetics of Arabic see MAKSADDI AL-BURUF. (H. Fleisch)

HAWZA, also known by the diminutive HUWAYZA, town situated in the swamp country east of the Tigris between Wâsîf and al-Brâja. It apparently also lent its name to the surrounding area. The original town was supposedly founded by Shîhpûr II, and was later rebuilt in Islamic times by one Duwayhi b. *Affî b. al-Asadî during the reign of the Caliph al-†â'î (363/974-381/991). Thus the town is not mentioned by any of the early geographers. The population included many Nabataeans, presumably bearers of the original Aramaic culture which survives in that region until today. According to Mustawfi it was one of the most flourishing cities of Khûzîstân (8th/14th century). The surrounding land was fertile, and corn, cotton, and sugar cane grew abundantly there.

HAWRING [see BAYZARA].

HAWRA, a town in Hadhramawt under the eastern wall of Wâdî al-Kasr, just north of the town situated in the swamp country east of the town. The surrounding land was fertile, and corn, cotton, and sugar cane grew abundantly there.

**Bibliography:** Vâlhût, i, 678, ii, 371 ff.; Hamd Allâh Mustawfi, *Nuṣha, 108-9 (trans.) = 110-11 (text); Le Strange, 241. (J. Lassner)

HAWRING [see BAYZARA].
HAWRA — HAWRAN

HAWRA [see AL-DHI'AB].

HAWRÂN, AVROMAN, a mountainous region of southern Syria bounded west by Sanandajî (Senna) on the western border of Irân. It extends for approximately 50 km. south-east from a point 46° 30' E., 35° 30' N., to the river Sirwan. The Hawrami mountain (Avroman Dag, 2626 m.) forms a northern extension of the Shâhô range, from which it is separated by the Sirwan. Parallel to both ranges, east of the river, is the Kû (or Kûh-i) Sâlân (2597 m.). The chief products of the area are various orchard fruits, walnuts, gall-apples and mastic.

The population is a branch of the Gurân [q.v.] and numbers perhaps 10,000 persons, still distinguished from the surrounding Kurds. The members of the Bagzada family trace their descent, in the first instance, back through three centuries. Many take the title Sân, i.e., Sulân. The principal tribal division is between the Hawrâmân-i Lûhûn, south-west of the main range, and Hawrâmân-i Tağhî to the north and east. The latter is further divided into Tağhî proper of the Hasan-Sânî family (with Shâr-i Hawrâmân as its chief village), Dizî of the Bahrâm-Bâgî, and in the east Raqîz of the Mustafa-Sâm. The leading village of Lûhûn is Nâwsûdâ. Others are Pâwa, the home of a divergent dialect, lying on the western flank of mount Shâhô, and Hâjdîjî, the easternmost village of Lûhûn on the Sirwan; the inhabitants of both these are known throughout the Near East as wandering pedlars.

At the beginning of the present century all branches of the Bagzîdî family extended their sway over a number of non-Hawrânî villages (notably Biyârâ and Tawêlâ, both in Êrêk and seats of Nakhshbandî Shaykhs), bringing their total holdings to over seventy villages. Since 1350/1931 most of them have been dispossessed by the Persian authorities and exiled.

In 1915 three parchments, dating from 88 B.C., and 22-1 B.C., respectively, were discovered in the area. These 'Avroman Documents', written in Greek and Parthian, relate to the ownership of local vineyards.

HAWRÂN, region of southern Syria bounded to the east by the volcanic massif of the Diabál al-Durûz, to the north by the plateau of the Ladjâ, and the Damascus plain, to the west by the Diawán [q.v.], and to the south by the Yarmûk, a region which corresponds roughly to the administrative area of Idân, of the same name and which extends for about 100 kilometres from north to south and 75 from east to west. The term Hawrân was applied formerly to the whole of the basaltic region which separates Syria from Transjordania and thus included the Diabál al-Durûz and the Ladjâ. The low plateau (an average of 600 metres above sea-level) which forms the "heart" of the Hawrân (known as Nûkra, "hollow"), and the slopes of the mountain as well are covered with arable land produced by the decomposed volcanic rocks; within the Hawrân, permanent affluents rising on the side of the massif, together with the relatively frequent rainfall, allows the growing of cereals.

Hawrân has been inhabited from a very early date. Its small towns and villages are mentioned in the Tel el-Amarna letters and in Deuteronomy (III, 4-5), but the region at that time was generally known as Baghân. Occupied by the Hebrews during the second half of the second millennium B.C., its possession was disputed by the kingdoms of Israel and Damascus; it was finally devastated and conquered by the Assyrians, who remained masters of it for a century (732-610 B.C.). During the following centuries, Achaemenid domination assured Hawrân a long period of peace, during which towns developed and the country became extensively Arabized. The Hellenistic and Roman periods were less settled: at the time of the decline of the Seleucid empire a number of small autochthonous states grew up around the Hawrân which became the scene of their battles. It was mainly the Nabataeans, of Arab origin, who infiltrated into the Hawrân and settled permanently in the south, at Busra and Salkhād, while the Idumeans were entrusted by the Romans with maintaining order in the areas of Trachonitis (Ladjâ), Auranitis (Diabál Hawrân) and Batanea (the plain of Hawrân). It was in 106 A.D. that the Romans annexed Hawrân, the southern part of which became part of the new province of Arabia, while the rest, which was first attached to the province of Syria, later also became gradually attached to Arabia.

The Roman period was characterized by the development of towns and large villages, inhabited mainly by Aramaeans and Jews, and by the increasing infiltration of Arab elements, Nabataean and Saatîtic. This infiltration continued to increase during the Byzantine period, when new groups, sometimes from southern Arabia, penetrated into Hawrân and the neighbouring steppes, gaining control of the edges of the desert. Some took service with the Byzantines. These, the Qassânîs, supplanted the Banû Sâlîh in about the 4th century A.D. They were semi-nomads who made in Hawrân permanent encampments, the most famous of which was that of al-Dîjâbiya [q.v.]. The country then became profoundly arabized, while at the same time Christianity spread.

Hawrân was finally conquered by the Muslims in Rajab 13/September 634 after the battle of the Yarmûk which halted the Byzantine counter-offensive. Its population seems to have supported the Umayyads and, after their fall, rose under the leadership of a certain Habib b. Mûsâ in a revolt which was suppressed by 'Abd Allâh b. 'Ali [q.v.], the uncle of the 'Abbâsîd caliph.

During the 'Abbâsîd period Hawrân suffered particularly from the incursions of the Carmathian bands [see Kârmatî]. Then, in the period of the Crusades, the country was the scene of battles and many raids by the Crusaders who came periodically to pillage the area, attempting to seize its main fortresses, or crossed it on their way to attack Damascus. But Hawrân also suffered from the activities of Zaûgî [q.v.], when he was attempting to take Damascus. It was in 614/1217 that the Crusaders made their last appearance in Hawrân. Soon afterwards, in 624/1224, the north of the country was ravaged by the Kîrûzârians who had been sum-
moned by the Ayyubid rulers, and then, in 658/1260, the Monégas appeared there, before their defeat by the Mamluks at ʿAyn Ḍalālīt [q.v.].

In the 6th-7th-8th centuries, Hawrân was divided into the two districts of Hawrân proper, corresponding to the Auranitis of antiquity, and of al-Bathaniyya, corresponding to Batanaea, both of them belonging to the province of Damascus. It was then a prosperous region, with numerous villages, with a large production of cereals, and with a partly Christian population.

During the Mamluk period the region was composed of the two wilāyas of Hawrân, with its capital at Busrā, and al-Bathaniyya, capital Adhribiyya, together with the niyaba of Salqīn whose powerful fortress was commanded by an amir of high rank. To it there was probably added a district corresponding to the Lādābī, with its capital at Zūr. At this time the country was crossed by the barid [q.v.] route from Damascus to Ghazāla, while the pilgrim caravans set off from Busrā. But the region was, in the 8th/14th century, troubled by the infiltration of nomad groups belonging to the Banū Rabīʿa who gradually settled there.

The Ottoman period saw the penetration of a further nomad group belonging to the Banū Rabīʿa, that of the ʿAnaza, who drove towards the west the nomads who had arrived earlier and penetrated into the settled area, spreading disorder and insecurity. The inhabitants of the villages were forced to pay a "brotherhood tax" and there arose between the rival groups, particularly at the beginning of the 19th century, battles to which the paška of Damascus had to put a stop. In the 12th/18th century the pilgrim route was moved further to the west, the pilgrims no longer assembling at Buṣrā but at al-Muzayrib, while the camel fair was held in Tabāk.

The 18th and 19th centuries witnessed also the settlement in the Diabal Hawrân of the Druzes who had originally been dwelling in southern Lebanon. During the 18th century these mountain people drove the original inhabitants down onto the plain and their presence formed a new element of unrest. While to the south lies the Faḍlī sultanate, the land extends southeastwards to the Faḍlī sultanate [q.v.], which cuts it off from the sea. North of the Hawashībi tribe and sultanate. The land of the tribe, north of Aden in the western British Protectorate of South Arabia, is a rough quadrilateral with one of the shorter sides abutting on the Yaman, whence to the south lies the Faḍlī sultanate [q.v.], which cuts it off from the sea. North of the Hawashībi tribe and sultanate. The land of the tribe, north of Aden in the western British Protectorate of South Arabia, is a rough quadrilateral with one of the shorter sides abutting on the Yaman, whence to the south lies the Faḍlī sultanate [q.v.], which cuts it off from the sea. North of the Hawashībi tribe and sultanate. The land of the tribe, north of Aden in the western British Protectorate of South Arabia, is a rough quadrilateral with one of the shorter sides abutting on the Yaman, whence to the south lies the Faḍlī sultanate [q.v.], which cuts it off from the sea.

During the 19th century, the Ottomans incorporated Hawrân in a larger province which, in addition to the Diabal Hawrân and Nukra, comprised, Ḍiyāyūr, Ḍiwān, ʿAqiṭa and the Baḥkā. This new province served as a base for expeditions intended to subdue the Druzes, and it was at this time that colonies of Circassians were introduced into the country. Though unable to pacify the country entirely, the Ottomans nevertheless restored security in the plain, where the nomads ceased to demand from certain villages the payment of the brotherhood tax. The construction in 1904 of the Ḍiyājkī railway [q.v.], put an end to the gathering of pilgrims at al-Muzayrib and to the annual fair there. This railway played a strategic rôle in the 1914-18 war, particularly during the retreat of the Turkish army in September 1918.

Occupied by the troops of the amir Faysal for nearly two years, Hawrân revolted in July 1920 when French troops entered Damascus. Another insurrection, by the Druzes in 1925, was suppressed with more difficulty. Nevertheless the Druze and Hawrân region experienced under the French mandate a period of relative security and prosperity during which the settled population was protected from the demands of their nomad neighbours.

In the state of Syria, Hawrân, restored to its usual limits, formed a land having its capital at Adhrīṣa and made up of two biʾāt—Adhrīṣa and Azra. Its population in 1933 was 83,000, 77,000 of them dwelling in 110 villages, some of which, such as Adhrīṣa, Nawā, Buṣrā and Azra, are in fact small towns. The population is heterogeneous: together with the Druzes, living mainly on the mountain, and the Sunni Muslims, Hawrân peasants, there are found Circassian nomads in the process of becoming settled, and some Orthodox or Catholic Christians, generally grouped on the edge of the mountain.

Hawrân is now a busy and prosperous region. It is the "granary of Syria", it is crossed by the road and railway which link Damascus and Jordan, and it is frequented by the nomads who come there after the harvest to exchange wool and butter for the various commodities they need.

(D. SOURDELL)

HAWASHĪBI (pl. Hawashībi), a South Arabian tribe and sultanate. The land of the tribe, north of Aden in the western British Protectorate of South Arabia, is a rough quadrilateral with one of the shorter sides abutting on the Yaman, whence to the south lies the Faḍlī sultanate [q.v.], which cuts it off from the sea. North of the Hawashībi tribe and sultanate are the ʿAmīrī and ʿAlawi states [qq.v.], while to the south lies the ʿAbdallī state [q.v.] of Labdī with its dependent ʿSubayī tribe [q.v.]. The Hawashībi sultanate is of strategic importance for its command of the main route from Aden to Taʾizz in the southern Yemen and its control of the upper reaches of Wādi Tuban, the principal source of water for Labdī. The capital, al-Musaymir, is less than 100 km. from Aden and about 80 from Taʾizz. On the right bank of Tuban, it consists of little more than the sultan's rude stone palace and a cluster of huts. The Hawashībi tribe may number some 10,000 souls.

The Hawashībi are identified by al-Hamdānī (4th/10th century) as a branch of the Ḥimyarī living on Diabal Ṣābir (not far west of their present home) with the Sakṣikī and the Rakib, all under a Hawashībi chief. The implication in EI that the modern tribe is of "pure Ḥimyarite descent" is not, however, accurate, as among its members today a strong African strain is evident.

Although the Hawashībi concluded their first agreement with the British in 1255/1839, they did not sign a protectorate treaty until 1913/1895. The Anglo-Ottoman convention of 1932/1941 defined
inter alia the boundary between the Hawshabi territory and the Yemen, but the collapse of the Ottoman Empire introduced a new situation, and in recent years both the Mutawakkilite Kingdom of the Yemen and the Yemen Arab Republic have claimed the Hawshabi territory as part of "occupied south Yemen". The Hawashib have at times clashed with their stronger neighbour Labţ; at other times they have recognized the suzerainty of the ' Abdall ruler (see, for example, the text of the pledge of allegiance in 1321/1899 in al-' Abdall, pp. 177-9, with the names of many 'Abdall). In 1398/1968 the Hawshabi sultan, Faysal b. Surţ, joined the Federation of South Arabia.

(G. REntz)

HAWTA, enclave, enclosure, is the name given in southern Arabia to a territory generally placed under the protection of a saint which thus is considered sacred. The term belongs to classical Arabic and in fact means "precaution". Nevertheless, inherent in the root ḥ-w-t is the technical meaning given to this word by the Arabs in the south: it does in fact express the action of surrounding, of encircling, but also that of defending, of guarding and, by extension, of preserving; whence the substantive hawta: a red and black twisted cord which a woman wears round her hips to protect her from the evil eye (LA, s.v. ḥ-w-t).

There exist many hawtas in southern Arabia. W. Thesiger found several while travelling from Salala to the Ḥadramatwāt across the interior. He particularly mentions one at Mughshin, on the edge of al-Rub‘ al-Khali, to the north-east of Zufar (Arabian Sands, 97). The most important hawta of Arabia is probably that of 'Ināţ, to the south-east of Tarim: it contains the remains of the famous Sayyid Muhšī b. Sālim, of the family of the Sayyids who, having had no success in his politico-religious offices, had to leave his native region and found another hawta elsewhere.

Thus a hawta may be considered as halfway between the haram, a place where a holy power manifests itself, and the ḥāraṯ [q.v.], a territory under the protection of a powerful overlord. The hawta, which contains no relic when it is created, possesses one finally when its patron dies.

Once the security of an area declared hawta is admitted and assured, merchants, peasants and others arrive and settle there, by agreement with the founder, who then bears the title of munsib, dignitary, and who is accorded certain politico-religious privileges known as ḥāţa. Under his authority, the hawta may become a meeting place for the tribes, a market, a centre of commerce where religion and commerce often flourish side by side.

Bibliography: W. Thesiger, Arabian Sands, London 1959; R. B. Serjeant, Haram and Hawtah, the sacred enclave in Arabia, in Mélanges Tāhā Husayn, Cairo 1962, 41-58. (J. ChElmód)

AL-HAWTA, the name of a number of towns in Arabia, the more important of which will be cited here. The tribe in the southern part of the peninsula contain the shrines of famous saints (see the article immediately preceding). Ḥawṭat al-Ḳaţn, under the south wall of Wadli Ḥadramatwāt some 20 km. west of Shibbām, belongs to the Ku‘aytī sultanate of Shīhr and al-Mukalla, the paramount state of the eastern British Protectorate of South Arabia, and the palace there has served as the residence of the Ku‘aytī governor of the Shibbām province. Bent has described the structure: "Like a fairy palace of the Arabian Nights, white as a wedding cake, and with as many battlements and pinnacles, with its windows painted red . . . behind it rise the steep red rocks of the encircling mountains!". Some of the inhabitants of the town are members of Yāfī, the Ku‘aytī sultan’s tribe.

The town of al-Ḥawta in the upper basin of Wādī Muyafa‘, also in the eastern Protectorate, is not far
north of 'Azzān, the capital of the Wābirid sultanate of Bal-Hāf, within whose domains it falls. Landberg's information on this town of al-Hawta is digested in ET², ii, 295-6. In the Lower 'Awlawi sultanate, a state of the western Protectorsate, the village of al-Hawta lies on the coast near the mouth of Wādī Awbar and the inland town of Awbar, the capital of the sultanate. The seat of the 'Abdallāh sultan of Labādī [q.v.], the premier chief in the western Protectorsate, is the large town of al-Hawta al-Djafārīyya, which takes its name from the shrine of the 'Abdallāh Musārīm al-Djafārī, whose 'iyārā is celebrated in the month of Rajāb.

The tribe of Tamīlm [q.v.] has been established in central Naḟjd since pre-Islamic times. One of its centres is the valley called by al-Hamdānī (4th/10th century) Baṃn al-Fāk, and now known as Wādī Sūdāry, northwest of al-Riyyād. The valley runs down the eastern slope of Twayyā and empties into al-Ąṭk [q.v.]. Among the settlements of Tamīlm there al-Hamdānī lists al-Hāṭ, which is probably identical with the modern al-Hawta (Hawatf Sūdāry) in the middle section of the valley, between al-Rawḍa and al-Djarnābīyya. The population of al-Hawta does not, however, hail exclusively from Tamīlm, as there are elements of Banū Zayd and Banū Khālīd present. Tamīlm has another centre south of al-Riyyād in the region of 'Uλiyya where Wādī 'l-Hawta also runs down the eastern slope of Twayyā. Wādī 'l-Hawta, which lies just south of it. In the middle section of Wādī 'l-Hawta is al-Harīk or Harīk Naʿām (Naʿām is the name given by al-Hamdānī to the valley). Farther down, the valley makes a sharp turn and runs northwards under the name of Wādī 'l-Sawt (mentioned by al-Hamdam) to empty into the Nadjīn. This turn is al-Hawta itself, also called Hāwta Banī Tamīlm, a group of oases of which the main ones are al-Hilla and al-Hilwa. Other Arabs live side by side with Tamīlm. Close ties link the people of Tamīlm in the two Hawtās.

In neither of the Hawtās of Naḍīd is there any indication of the existence of a shrine. The men of Tamīlm in these parts are noted for their fanatical devotion to the teachings of Muhammad b. Tamīm in these parts are noted for their fanatical devotion to the teachings of Muhammad b. Tamīm in the two Hawtās. By side with Tamīm, close ties link the people of Tamīlm in the two Hawtās.

opinions are given in the History of the Berbers of Ibn Khaldun (8th/14th century), regard them as a tribe forming the 3rd branch of the B. Maghar, which is mentioned in this part of Tripolitania in the year 681/1282. The home of the tribes of the tribe of the B. Maghar, the Malila, the Maslata (Masallata), the Mazata (Mazata), the Karkuda, the Lahän or Lahana (Luhän, Luhana), the Maghar, the Malila, the Maslata (Masallata), the Mindasa or Mindas (Mandasa, Mandas), the Misrata (Misrata, the Raźin (the Raźin, the Saraj, the Tarhuna), the Wannfän (Wannfa), the Warfalla (Warfal), the Wargha, the Warsatía (Warsatī), the Waghsta, the Yagmorasaen (Ghomrāsān?), the ZakkaNova and the Zanaza.

In the earliest days, say Ibn Khurradadhbih (234/846-7) and al-Masʿūdi (345/956), the Hawwara lived in the country of Ayās (Oea), that is, Tripolitania, "a country which then belonged to the Roman Byzantines". They continued to live there, along with other Berber tribes, such as the Naṣīfa (g.v.), the Zenāta (g.v.), the Mazāta (g.v.) and the Lawāta (q.v.), at the time of the Muslim conquest. It seems that in the later decades of the 1st/7th century, at the time of the great movements of the Berber peoples, in flight from the invaders and resettling in the west of Ifrikiya and in the Maghrib under the leadership of Kusayla (q.v.) and afterwards under that of Kāhinā (g.v.), several Hawwara factions left Tripolitania, and spread throughout North Africa. Other Hawwara followed this first wave of emigration at the time of the Khāridjī rebellion against the orthodox Arabs, a rebellion which broke out about the year 122/740 and in which practically all the Berbers took part. The Hawwara, who had been converted to Islam at the end of the 1st/7th century, enriched by the vast territory of the "country of the Blacks" where they "graze flocks of sheep", but, burdened by taxation, no longer show that pride and independence for which they were at one time noted, when their warriors were famous for their victories. Now scattered and weakened, they have fallen into degradation".

Only the Hawwara of Morocco seem to have enjoyed a more prosperous situation in the 7th-8th/13th-14th centuries and in the following centuries. In the first part of the 8th/14th century they even became very powerful in the Tamesna district. Many Hawwara tribes, formerly so powerful, disappeared leaving no trace, and there are no more than a few place names to witness to the existence of these peoples who from the 2nd/8th-10th centuries played such an important part in the history of Ifrikiya and the Maghrib.

We may now consider the Hawwara tribes in the 3rd-10th/9th-16th centuries, that is, the period on which, thanks to the writings of Arabic historians and geographers, we have the most complete and detailed knowledge.

Baraka and Egypt. According to Ibn Khaldūn, the Hawwara of Baraka came to cultivate their crops on the land between Alexandria and old Cairo. Another fraction of this tribe took part in the conquest of Egypt by the Fatimid army in 358/969 and were given by the Fatimid caliphs a tract of land which, thanks to the writings of Arabic historians and geographers, we have the most complete and detailed knowledge.

Tripolitania and Fezzan. In Tripolitania, which was the ancient homeland of the Hawwara tribes, from about the middle of the 2nd/8th century mention is made of an arḍ Hawwara ("country of the Hawwara"). According to the Arab geographers of the 9th or 10th century, the eastern boundary of this land ran through Tāwarghah (Tawarga) and Waddān (in the oasis of al-Djufra), even through Zāla (Zēlla), an area in ancient times belonging to the Māzāta, eastern neighbours of the Hawwara. The western boundary first passed through the city of Tripoli, then, in the 8th/14th century, west of the oasis of Zanār (Zenār), where the Hawwara fraction of the Banū Madjīr lived. The southern boundary of the country occupied by the Tripolitians Hawwara was formed by the Fezzān. Among the Hawwara tribes who inhabited the arḍ Hawwara the Karkūda should be mentioned, whose name is apparently related to that of the ancient town of Karkūza (Gargūza), lying south-west of Zanzūr and mentioned by Tījānī. The Misrāta, whose chief centre was the little town of Suwayqat Ibn Khaldūn, occupied the most eastern part of the coastal zone of the "country of the Hawwara". They devoted themselves, according to Ibn Khaldūn and Leo Africanus, to trade with Egypt, the Bilād al-Djārid and the "country of the Blacks". The name of Wādī Maghār (Wādī Mager, to the south-east of Zliten) doubtless has its origin in that of the tribe of the B. Maghar, which is mentioned in this part of Tripolitania in the year 685/1286. The home of the
Malila is not known. The Ibaḍi chronicles refer to the existence of this tribe in Tripolitania in the 2nd/8th century. The Lebda region—according to Ibn 'Abd al-Hakam, the most ancient settlement of the Hawwāra—was occupied by the tribe of the Maṣṭāta (Massallāta), whose name survives in that of the present Djebel Msellāta. This tribe was still rich and powerful in the 10th/16th century. Earlier, towards the interior, Arabic sources note the presence of the Tarhūna, who led a nomadic life in the present homonymous district, and also that of the B. Gharvan, who disappeared at an early date from Tripolitania, have left their name in the area of the Zab, near Hodna, where the later al-Masila, by the Fāṭimid prince, Abu 'l-Qāsim. They appear again in this district in the year 352/964, in revolt against the Fāṭimid al-Manṣūr, in the ranks of the army of the famous Nukkārī chief Abū Yūsuf Makhli b. Kāyādī, of whom, together with their confères south of Constantine, they became the most faithful followers. Another group of the B. Kāmilān, from Zāb, settled at Kayrawān, after the defeat of Abū Yūsuf. Abu 'Abd al-Wahhāb al-Hawwārī. It is in the same region that Arabic sources mention the Hawwāras as being in revolt against the Aghlabid government, in 315/927, in the neighbourhood of Tāfšā (Bējā), whither they came with the Ṣurfī chief 'Abd al-Wahhāb al-Hawwārī. It is in the same region that Arabic sources mention the Hawwāras as being in revolt against the Aghlabid government. We must also add that to the east of the ārāf Hawwārī, in the heart of the Mazātā country, lived the Hawwārī tribe of the Mindāsā.

The Tripolitanian Hawwāras, who were probably Warf alia, who were still pagan in the 5th/11th century, in the northern zone of the Tunisian Haut-Tell, in the 8th/14th century, at the time of Leo Africanus they spoke the same Berber language as the Adjara. Between the end of the 6th/12th century, of a small Ibadī-Berber population, the Aures (Awras) appeared in the Mazātā, established in the plain of Kayrawān, the左右 Kāsim also in the same region. In the 7th/13th century, found in revolt against the Aghlabid government. Other Hawwārites groups came to settle in the Zāb around 343/953, after the defeat which the Fāṭimid ruler al-Mu'izz inflicted on the Ibadī Hawwārī of the Djebel Awras. They were still living there in the 12th/18th century, towards the end of the town of Tabūda, and still faithful to Ibadīsm. Al-Ya'kūbī also describes Hawwārī tribes (among others the Sahmār) in the western Zāb. It is probably from the Zāb that certain Hawwārī tribes found their way to the Wdī Sīf and the Wdī Rāfī, where they are described by Ibadī sources towards the 6th/12th century. Certain Hawwārī tribes and factions inhabited, along with other Berber peoples, the Aures (Awras) and the area to the east of this towards the town of Tēbessa. Ibadī Hawwārī are already found there towards the end of the 2nd/8th century, at the beginning of the reign of the Rustamid imām, 'Abd al-Wahhāb b. ʿAbd al-Raḥmān. To the west, the whole Hau-Tell of Tunisia was in the Middle Ages the classical homeland of Hawwārī tribes. They appear already in 124/742 in the neighbourhood of Bādja (Bējā), and also in the area between this place and Zab, near Hodna, where the later al-Masila, by the Fāṭimid prince, Abu 'l-Qāsim. They appear again in this district in the year 352/964, in revolt against the Fāṭimid al-Manṣūr, in the ranks of the army of the famous Nukkārī chief Abū Yūsuf Makhli b. Kāyādī, of whom, together with their confères south of Constantine, they became the most faithful followers. Another group of the B. Kāmilān, from Zāb, settled at Kayrawān, after the defeat of Abū Yūsuf. Another group of the B. Kāmilān, from Zāb, settled at Kayrawān, after the defeat of Abū Yūsuf. Another group of the B. from the Hawwara), the B. Kamlân of the Aures and other Hawwàri fragments who had settled in this area and been converted to Nukkrârism by this chief and accompanied their chief in his flight to the neighbourhood of Tahert \( [q.v.] \) and the valley of the Mina (tribe of the B. Masâla). Some of the Hawwàri tribes was identified with the B. Kamlân and the Malila of the Aures set out for the Ahaggar in the second half of the 4th/10th century. Yakut \( [g.v.] \), quoting the lost geographical work of al-Muhallabi (364-85/975-96), mentions an important state, with its capital Aksintülâ, situated in the middle of Ifriqiya and ruled by a chief of the Hawwàri tribe. This account, in other particulars especially far-fetched, may relate to the beginning of the Hawwàri confederation of the Qâl Ahaggar.

Morocco. Nothing is known for certain about the history of the Hawwàri tribes of Morocco, traces of which, however, are to be found in this country from the 3rd/9th century, and certain groups of which have survived in various regions of the country to this day. It seems possible that the Hawwàra came to Morocco with the Berbers of Ifriqiya and of the central Maghrîb, who, according to the author of al-Baysâw al-maghribî, went to Tangier with the Muslim governor of that city, the future conqueror of Spain, Târib b. Ziyyâd. Today a Hawwàra fraction is to be found in the plain of Tafraât in the east of Morocco, on the right bank of the Mulûyâ, and, further to the north, to the east of the lower course of this river. The name of the town of Malîla (Melîla), already attested in the 4th/10th century, derives from that of the house of the Hawwâra chief. In the 7th/13th century the B. Râzîn are mentioned, probably in this country from the 6th/12th century. We know this from al-Bakrî, who describes another Tarhûna fragment there. A place named Washtatâ, among the Berber groups inhabiting the Fez region.

The centre of this state was situated, towards the end of the 3rd/9th century, on the territory of Hilîl and Relizân. In all probability the state of the B. Masâla included also the Kâfîlât Hawwàra \( [q.v.] \), today Kâfîlât B. Râshîd, lying in the mountains between Relizân and Mascara and in later centuries the headquarters of the Hawwàra of the Mina. Some other Hawwàri fractions established themselves, probably in the 2nd/8th century, on the plateau of Senûl and in the massif of Wânsûrîshât (Ouârsenîs). Among the Hawwàri of Orn were also a fraction of the Misrâtâ, whose name survives in that of the coves of Merkâtâ near Kâfîlât B. Râshîd, and a branch of the Mindâs, which has given its name to the plateau on the right bank of the Mina (mentioned by Ibn Khâldûn) and to the present village of Mendez in the south-east of Relizân.

Ahâggar (Hoggar). This region owes its name to the Touareg tribe of the Ahâggar \( [q.v.] \), whose name preserves that of the Hawwàra (Hawwâr > Hoggar). A fragment of the latter "crossed the sands", says Ibn Khâldûn, and settled near the towns of the Lamjâ, "wearers of the veil", who lived near the town of Kawkaw (Gao) in the "country of the Blacks". Ibn Baṭṭûța—who in 754/1353 crossed the country of this tribe (which he calls Hukûr < Hoggar) while travelling from Takaddâ (in Air) to Tawât (Touât)—says that its members wore veils on their faces. The history of the Ahâggar before the 8th/14th century is unknown. However, it seems that the ancient Hawwàrîs and the Ahaggar who now occupy must have been connected with the defeat inflicted on the Hawwàra of the Aures by the Fâtîmid ruler al-Mûṣîz in 342/953 and with the dispersal of the "assemblies" of these rebels, some of whom, Ibn Hâmûdû tells us, fled as far as the "country of the Blacks". We have mentioned above a place, west of the Aures, called Thâniyyat Hoggâr, which might be the point from which the Hawwàra of the Aures issued out for the Ahaggar in the second half of the 4th/10th century. Yâkût \( [g.v.] \), quoting the geographical work of al-Muhabbî (364-85/975-96), mentions an important state, with its capital Aksintûlâ, situated in the middle of Ifriqiya and ruled by a chief of the Hawwàra tribe. This account, in other particulars especially far-fetched, may relate to the beginning of the Hawwàri confederation of the Qâl Ahaggar.
HAWWARA
Africanus these peoples comprised 260,000 warriors.
Another considerable branch of the Hawwara lives
to this day on each side of the lower course of the
Wad Sus. In the time of al-Idrisi (549/1154) the
people of Aghmat, a town to the south of Marrakush,
who carried on trade with the "country of the
Blacks", belonged to the tribe of the Hawwara.
Finally, in the time of Leo Africanus, some Hawwara
lived also in the Sidjilmasa district.
Spain. Some Hawwara fragments left northern
Morocco at an early date for Spain (with Tarik b.
Ziyad, according to Ibn Khaldun). They established
themselves there in remote areas, where they enjoyed
almost complete independence with regard to the
Umayyad amirs. A Hawwari family called B. Zennun
(B. Phi *l-Nun) was dominant in the Shantabariyya
(Santaver) district, where it is mentioned in the year
158/775 as being in revolt against the Umayyad amir
€
Abd al-Rahman I. Some Hawwara lived at Shantabariyya, according to al-Istakhri (340/951) and the
B. Zennun dynasty was still in existence in the 5th/
nth century. In the immediate vicinity of Shantabariyya, east of this area, the B. Razin, another
Hawwari fragment from the north of Morocco,
settled at an early date. They occupied the plain
named after them Sahlat Bam Razin—Albarracin on
modern maps. Obscure in the first centuries of the
Umayyad period, this family acquired a certain
importance in the second half of the 4th/ioth
century, and after the downfall of the Caliphate of
Cordova became independent. To judge by the
place-names of the region, there were also Hawwara
in the neighbourhood of Valencia, where the author
of al-Baydn al-mughrib mentions a place named
Sakiyat Huwwara. The present name of this locality,
Mislata, probably comes from that of the Hawwari
Maslata tribe.
Sicily. It seems from Arabic sources and Christian
documents, as well as from the evidence of placenames, that there were also Hawwari fractions in
Sicily. The Hawwara of Ifrikiya took part in the
Aghlabid conquest of the island in 212/827. They
remained there for a long time. In 592/1196 there
were still Hawwara in Palermo. Among other
Hawwari tribes represented in mediaeval Sicily, the
Misrata, the Malila, the Karkuda and the Andara
should be mentioned. It seems that at least a part of
these immigrants remained faithful to Ibadism. Indeed, the 6th/12th century IbadI author, al-Wisyani
speaks of IbadI in Sicily, probably of Hawwara
origin, as being in touch with their co-religionists in
North Africa. According to another IbadI source,
the Dhikr asma3 ba*d shuyukh al-wahbiyya (6th-7th/
i2th/isth centuries?), Kasr Yanu (Castrogiovanni)
in Sicily constituted the northern limit of the
territory occupied by the Ibadis.

(T. LEWICKI)
Egypt and the Sudan. An important historical
role was played by Hawwara of Egypt, a completely arabized group. Their first centre was in
the Buhayra, where they became the dominant tribe.
Some Hawwara were settled in Upper Egypt by
Barkuk (c. 782/1380-1), their chief, Ismacll b. Mazin,
being granted the t'$£dc of Girga [q.v.]. His successor,
c
Umar (d. 799/1396-7) was the eponym of Band
c
Umar, the ruling clan for the next two centuries.
Under the next chief, Muhammad Abu'l-Sunun, a
period of agrarian prosperity began, connected with
the development of sugar-planting. Meanwhile,
Hawwara were expanding in Upper Egypt, and, in
815/1412-3, they attacked and devastated Aswan,
then held by Banu Kanz, an Arabo-Nubian clan.
The authority of the Mamluk sultanate was represented in the Hawwari territory by the governor of
Kus and Akhmim, but with the Ottoman conquest
of Egypt (922-3/1516-7) this appointment lapsed.
The ruling chief, the amir CA1I b. cUmar, was recognized as the governing authority in Upper Egypt:
he is described in Ibn lyas as "administrator of the
districts of Upper Egypt" (mutawalli d^ihat alSa'id), as well as "chief of the Arabs of Upper Egypt"
(shaykh 'Urban al-SaHd). The rule of Banu cUmar
lasted for about sixty years, but ultimately became intolerable to the Ottoman administration. In 983/1576,
Banu cUmar were formally deprived of their powers,


and a certain Sulaymān Bey (? Djanbulad) was appointed governor of Upper Egypt. In the 12th/13th century, there was a revival of Hawwāri power, associated with the tribal chief, the amīr Humām b. Yūsuf. He overshadowed the transient governors of Upper Egypt, who were distracted by the factional politics of the neo-Mamluk régime. Under Humām, Upper Egypt enjoyed a period of comparative tranquillity and prosperity. Dījbartī depicts him as a paragon of Arab shaykhly virtues—openhanded, hospitable and loyal. A less favourable memory of the period of Hawwara has been transmitted by Burckhardt, who speaks of extortion practised on merchants, and the reduction of the Copts to servile status. Humām and his tribe belonged to Nisf Haram, the group associated with the neo-Mamluk Kāsi-miyya faction. After the collapse of the Kāsi-miyya ascendancy in Cairo (1145/1730), remnants of the defeated faction took service with Humām, and were assimilated to the local people. Towards the end of his life, Humām played a critical part in Egyptian politics by the support he invariably gave to grandees who had been ousted from power in Cairo. He had particularly close relations with ʿṢāliḥ Bey, the last Kāsi-miyya notable, who was exiled by Bulut-kāpan ʿAll Bey (1178/1765). When ʿAll himself sought asylum in Upper Egypt (1180/1769), Humām effected a reconciliation between him and ʿṢāliḥ, enabling the two boys to defeat their opponents, and retake Cairo. After ʿAll had procured the assassination of ʿṢāliḥ, in 1225/1768, Humām assisted the dead grandee's followers to capture Assūt, and hold it against the governor of Upper Egypt nominated by ʿAll. The rebels and Hawaiāra were ultimately defeated, and Humām fled, to die near Isna (8 Šaʿbān 1183/7 December 1769). With his death, the political supremacy of Hawaiāra came to an end, but they retained their social and economic importance until the time of Muḥammad ʿAll Pāsha. After the extermination of the Mamlūks in Upper Egypt, Ibrāhīm Pāsha proceeded to confiscate the ʿilżāms and other sources of the wealth of the old régime (1813). The descendants of Humām were broken by this policy, and their tribesmen were subsequently absorbed into the masses of the peasantry.

In the Suwaydī Division of southern Egypt, there was a distinct group of Hawaiāra connected with the Hawwāri of Egypt. The Hawaiāra are a nomadic tribe, having their territory in the steppe, west of the Nile. They probably represent a southerly wave of Hawaiāri expansion from Egypt. The Dījlāba (i.e., pedlars) Hawaiāra have immigrated into Kordo-fan and Dār Fūr within the last three centuries, admitted as traders, as their name suggests. Their designation as Hawaiāra may imply no more than an original domicile in territory dominated by this tribe.

Ahmar, Raljamina, Manabaha, Harbîl) and of the Guich of the liawz, see J^ZAYSH; E. Aubin, Le Morrocco d’aujourd’hui, Paris 1904; L.t.-Col. Voinot, Les tribus guich du Haouz Marrakech, in Bull. du cinquantenaire de la Société de géographie et d’archéologie d’Oran, 15 April 1928. A small tribe from the Haôwz, the Awlad Abî Sîba (O. Bousbaa) has won a great reputation for its thick woolen carpets (P. Ricard, Corpus des tapiss marocains du Haouz Atlas et du Haouz de Marrakech, Paris 1927). Certain Moroccan Jews bear the name of Haôwz.

**G. (DEVERDUN)**

**HAWZ, in the sense of “astronomy”** [see *ILM AL-HAY’AYA*].

**HAWZ (a.), synonym (see LA; TA) for ‘shape’ (shakl) and form’ (swara), and also for ‘state’ (hâl) and ‘quality’ (hayatya).** Al-Kindî states that, according to Hippocrates, one of the meanings of the word ‘nature’ applies to the configuration (hayâ’ya) of the human body. In the *Rasâ’il Ikhwan al-Safa* we find: hay‘at al-arkân: the configuration of the elements; they use this word also to discuss the thesis of the materialists who think that the Living and All-powerful Being is a body, since he exists in a configuration that is distinguished by accidents, such as life, power, knowledge (‘âlâ hayâ’ya malikhîs bi-ardâd; ii, 55). In this sense, hay'â is the geometric shape of a body insofar as it reveals a metaphysical reality, form, which fashions it from inside. The idea of hay’â is bound up with that of a form and that of a motion, which is itself regarded as a form: “The term ‘form’ is used for any configuration (hay‘âya) and for any action upon a receptive (kabîl) object, whether simple or compound, so that motions and accidents are forms (swara)” (Ibn Sinâ, *Shifâ*; ii, 282). Avicenna distinguishes motion, as defective (nahîsya) form, from completed (tâmma) geometric shape, such as the square or the circle. The *Ikhwân al-Safa* have analogous ideas: there is constitutive form (swara muhawwima) like length, breadth, depth (for a body), and perfective form (swara mutammima), such as shape (shakl); triangle, square, pentagon, circle (ii, 202b 4). The illustration that should be noted. The word hayâ’ya is used to describe the result of motions that produce such and such a shape, whether in nature or in art. Hay’â is completed form, considered not by itself, but in relation to the motion that, in it, completes constitutive form. Hay’â is more alive and more dynamic; shakl is static. That is why the word hay’a is applied in particular to the bodies of animals and men, which certainly contain curves and angles, but whose configuration is more than an arrangement of geometric shapes.

From this meaning it is an easy step to that of ‘predisposition’, which is more frequent in the technical language of philosophy. It is found in Avicenna, and it is related to another term from the same root: takhayyuy: ‘aptitude’, often used in conjunction with is’tîd. A text of the *Ikhwan al-Safa*, concerning the development of the soul during gestation, is particularly clear; it speaks of ‘the aptitude (takhayyuy) and predisposition (is’tîd) that are stamped (yanâbil) into the soul, which are first form and potentially apt to become form in actuality by acquiring the aptitude (‘ind al-takhayyuy) for receiving moral characteristics, moral actions, the various types of knowledge, education . . .’ (i, 9). We are here concerned with the configuration assumed by the soul in the interval between its reality as first form in potentiality and its completion in actuality. The immediate situation is well indicated in the phrase in which takhayyuy is framed by the two particles be- (for, in order to): “al-sûra al-âlî bi-l’-humma li-tâsira sûra bi-l-lîfî ‘ind al-takhayyuy li-kabîl al-âlîhîd . . .’.

There is then a hay‘a of the soul, just as there is of the body. Aptitude or predisposition is inherent in hay‘a. In fact, the first meaning of the verb takhayyuy in Arabic is the same one’s ‘haîkah’ (al-kabîl), and it is from this meaning that it takes on that of ‘to be predisposed towards’. Avicenna says that one of the causes of the excitement of desire is a consequence (daghar) arising from one hay‘a, and the wish to change to another hay‘a. He speaks also of particular causes that particularly distinguish one hay‘a, to the exclusion of another (tahâfsî hay‘a dun hay‘a) and make it the object of desire (Shifâ; ii, 288). The dynamism that distinguishes every hay‘a becomes consciousness and desire in the soul.

A very special use of this term, which derives from the Arabic translation of Aristotle’s *Metaphysics*, should be noted. The word hay‘a is used to express in Arabic 3îsî or habitus (malaha). At first sight, this meaning appears very far removed from the preceding ones; but it may be derived from them, and may retain some connexion with them. It would seem that we should start from the force of the Vth form takhayyay: ‘to qualify oneself by the particular configuration that one assumes’; the fā‘î acts on a munfa‘î which reacts on it. Aristotle, in the first place, defines 3îsî: “οτὸς ἐνέργεια τὸς τὸ έχοντος ἕνα δυναμικόν” (Met., 1022b 4). The illustration that he draws from clothing is well represented by the Arabic Vth form: one who wears a garment (action) is clothed by that garment (reaction). Ḥabîlus lies between action and reaction. The definition of this hay‘a is translated: ka-ananah fi-lu-mnnâ il-lâqad hiya lahu wa-huwa lahd. Ibn Ruṣîd comments: “It is the action of an agent on an object that undergoes the action . . . Aristotle says: ‘When something acts and something else undergoes its action, the fact of undergoing the action (infi’dl) is between the two; this means: . . . when one thing carries out an action and acts on another thing, this action, the hay‘a is the state (hilâl) that occurs between them. If the hay‘a is considered with respect to the agent, it is called action; if it is considered with respect to the patient (munfa‘î), it is called passivity (the fact of undergoing the action)’. This commentary is not very clear, for it is based on an approximate translation. But, short of being a truism, it can have only one meaning: that the hay‘a unites two characteristics, one active, the other passive, and as an intermediary transfers the action that is carried out to the patient, and the action that is suffered to the agent, the two actions mingling into one. It should be remembered that hay‘a is an intermediate state, of the same type as a motion, which allows an object moving towards actuality to receive a qualification that it possessed in potentiality. We meet, once again, the lexicographical meanings of hâl and hayatya.

A second meaning of 3îsî is that of ‘disposition’ according to which a being is in a good or a bad condition (diâtheros, xalîl ḥâl) or is similar (diâthesis). Of the two Ping, nom., Met. 3122b 10). Diâtheros is rendered wa‘î. Averroes’s commentary: ‘Hay‘a is used of the state (3îsî) that is produced as a consequence of a composition (tarkhîh, instead of the wa‘î of the translation). It is the hay‘a by virtue of which the
composition of a thing is good or bad. For example, health is a hay'a which results from a composition, that of the organs and the humours. This hay'a is good or bad, either in itself, or with regard to another hay'a. This meaning comes close to that which we have encountered in Ibn Sinā, concerning the disposition from which desire springs.

Finally this term enters into the nomenclature of a branch of astronomy (ilm al-nujum) which is called 'ilm al-hay'a [q.v.]. According to the definition of the Ikhwan al-Safa', it is "the knowledge of the hierarchy of the spheres, the division of the zodiac, the number of the heavenly bodies, the divisions of the zodiac and its stars, their distances, sizes and motions". It is perhaps because hay'a is used of the organic human body, the microcosm, that the term is applied to the macrocosmic order.

HAY'Á (A.), life. The Kur'ān mentions life in very many verses. God is Himself living (hayy), see II, 255; XL, 65, etc. Al-Tabarī writes, in his Tafsīr (ed. Dār al-Ma'ārif, v, 386): "This word hayy describes Him who has perpetual (dā'imah) life and a permanent existence (ba'dah) without any initial or terminal limit, for everything that is not He, although it be living, has a life that begins at a definite point and ends at a fixed limit". On this, he says, all the commentators are agreed. They differ on other questions. For some God is Himself spoken of as living because He Himself provides for the maintenance of His creatures and allot every creature its portion. He is therefore living by virtue of His management (tadbir) of the Universe, not by virtue of Life. For others He is living by virtue of Life, which is one of His attributes. Others again say that it is one of His names. Al-Zamakhshāri states that hayy, in the technical language of the theologians, describes one who has knowledge and power (Kaghghal, Cairo 1948, i, 291). The question of the Life of God enters into general discussions on the divine attributes. A critical account is to be found in the Fiṣal of Ibn Ḥazm (Cairo 1317, ii, 253 f.). In the Mafātīḥ al-ghayb, Faḍhr al-Dīn al-Rāzī, taking up Ayverd's objections (between his terminology of the possible being, shows that God is the only necessary being, but that, contrary to Ibn Sinā's contention, the existence of the possible being does not necessarily follow from the existence of the necessary being in itself, that is to say that creatures do not necessarily proceed from God; they are created by Him, in His Wisdom and His Freedom. This is the sense that should be given to hayy (ii, 307 f.).

The Kur'ān also mentions life in this world (al-hay'āt al-dunyā) in order to contrast it in a religious and moral sense with the after-life. Life on earth, as a creation of God and considered in itself, is full of beauties; but it is nothing in comparison with the next life (Sūra III, 185), and the error of the unbelievers is to cling exclusively to it. Whether the attractiveness (kayyīriya) with which life on earth is invested in the eyes of the unbelievers is the effect of an illusion for which man is responsible, or the result of an action of God, is a problem that normally sets Muťazzils and Asgharíars, Kadaris and Djabaris at odds with one another (cf. Faḍhr al-Dīn al-Rāzī, Mafātīḥ al-ghayb, ii, 198 f.; commentary on II, 212). Life in this world, compared with life in the next, is something that is purely for use (mafā'; Sūra XII, 26; XL, 39), that is to say, according to the Tafsīr al-Djalālayn, a thing of little value which is enjoyed for a certain period of time and which disappears. It is a diversion (nāfis) beside out that real life (XXIX, 64; cf. Blachère, Le Coran, ii, 335, note on al-hay'ātun as an intensive of hay'āt). The True Life is the "abode of permanence" (dār al-ḥarakār). The life of this world may seduce one (gharrā; VI, 70, XXXI, 33, XLV, 34, etc.). A parable summarizes these ideas. It compares life in this world to the rain that fertilizes the fields; then, when man believes that he himself has the power to cultivate the fruits of the earth, God sends His "amr" that is to say, according to the Tafsīr al-Djalālayn, His judgment and His chastisement, and He mows down the crops, and it is as if they had never existed (X, 24). Consequently, life on earth and all that is connected with it is a gift of God which must be used with gratitude and piety, not for its own sake, but in order to expend it in good works and thus orientate it towards the future Life. Islam does not approve of contempt for life. Nevertheless the dunyā is an object of reproach, insofar as it "cuts" the path that leads to God. Nor is it merely loosely condemned, for life on earth is attended with values that remain associated with man in the next life (cf. Ghazālī, Ḥay'ā, 3rd part, Bālāk ed., 151 f.).

As for life in the biological sense of the word, it is a frequent theme in the Kur'ān. There is a kind of Kur'ānic embryology, for example XXIII, 12-4; XXXII, 7-8; LXXVII, 20. Al-Rāzī comments: "A human being is generated from a seed which is itself generated from the fourth of the excreta produced by the digestion (min faḍī al-ḥaḍm al-rābī', that is to say the spermatic fluid). This is generated as a consequence of the consumption of food, which is of animal or vegetable origin. The animal derives from the vegetable, and plants are generated from very pure earth and water" (iv, 189). The end of verse 14 of Sūra XXIII: "Then we developed him in a second creation", is interpreted as referring to the development of the human being after his birth, during his infancy and his youth, the creation of understanding (jāhm) and reason (ṭabī'), until his death. The text reads: anākhu'na, "We developed him", because God established the development of the spirit (aṣghā al-ruḥ) between the soul and the body. This is proof of the error of al-Nazzām, who thinks that man is spirit and not body, and of the mistake of the falāsifā, who say that man is indivisible and that he is not a body. In fact, man is a compound (murakhab) of both attributes.

Certain Muslim philosophers may have been inspired by these verses in their representation of life as a development away from matter, proceeding by way of organic life to spiritual life. Several passages in the Rasa'il Ikhwan al-Safā' and in Ibn Tufayl also give the impression that the idea of some kind of evolution is not unknown to them. For Ibn Bāḍi'da (Avempace), in his Risālat al-Ittīḥād, natural heat (al-harr al-ghariz) exists before all the other parts of the body; it is the instrument of the instruments; all the parts of the body function with reference to it; it exists in the embryo before it has blood, but it is also found in the animals that have no blood; it is called the motive force (al-buwaw al-muḥarrika) it is form (sūra), and this form is the prime mover, the natural spirit (al-rūḥ al-ghariz). In the womb the embryo has organs that make it resemble a plant: this is what is created in the first place; it is nourished, and grows, like a plant. On emerging from the womb, the human being makes use of the senses and resembles an irrational animal. It moves in space and
has desires: this occurs only because of the arrival of the spiritual form (al-sura al-rahānijyya) which appears in the “common sense” and the imagination. At this level of life the imaginative form (al-sura al-munmiyya al-khaydiyya), as the imaginative force (al-kuwwa al-fyuwwa al-munmiya al-khaydliyya), is the prime mover. Below this there is the impulsive nutritive force (al-sura al-fcuwwa al-munmiya al-abbadiyya), and the sensory force for propagating the species (al-sura al-munmiyya al-hissiyya). Animality begins with sensory spiritual form, the first degree of the spiritual forms. Below this is the vegetable kingdom, and it is disputed whether plants are living creatures; this problem is made more acute by the relationship of hayāt and hayawān. The plant-man in the womb is potentially an animal, for the natural spirit that is in it is capable of receiving spiritual form. The natural spirit that is in plants is incapable of doing so. The reason for this is a difference in the mixture of the humors (al-imitasād). Beyond the senses and the imagination comes thought (al-āwāqis al-fikriyya), when intelligibles, which are potential in the sense, become actual.

We can recognize in this structure the broad outline that the commentators have taken from the Kur'ān. But for the falsāsīfa this development is not due to a series of disconnected creative acts of God. The Aristotelian idea of potentiality introduces a dynamism into nature itself. Moreover philosophical doctrine, in the tradition of Plato and Aristotle, connects life essentially with the soul. For example, al-Kindī (Rasā'il al-Kindī al-falsafīyya, ed. Abū Rida, Cairo 1950, i, 226) sees life as an accident that happens to the body, since the living being disappears when life is extinguished, while the body retains its corporeity. The natural heat or natural spirit which is in the heart of the animal is not itself life; it is merely a disposition by virtue of which the animal can receive life (wa'dad ilā yandla bihd 'l-hayāt). Al-Kindī gives two versions of the Aristotelian definition of life: the (first) entelechy of a natural body (with organs) capable of receiving life (which has life in potentiality): (1) tamāmiyya dījrm tabī'ī dhi ādāt, dābi li-‘l-hayāt; and (2) isticmāl awal ilā dījrm tabī'ī dhi ādāt bi-l-hawāːna.

Thus the conceptions of life in Islam offer us a particular kind of life the imagination of Greek ideas and Kur'ānic images, even though the falsāsīfa, by transposing disconnected creative acts of God into terms of the continuity of natures, have altered the fundamental Islamic meaning.

ḤAYATĪLA, Arabic broken plural from Hayṭal, the name given by Islamic writers to the Hephthalites or White Huns, the Ye-Ta of the Chinese authors, a steppe people from Mongolia who settled along the Oxus during the fourth or fifth centuries A.D. and formed one, or perhaps several, powerful kingdoms. The first Huns to appear in Khorāsān, some twenty-five years earlier than the arrival of Huns in Europe, were the Chionites of Ammianus Marcellinus (XVI, 9, 4; XVII, 5, 1; XVIII, 6, 2). Their name may consist of the Pers. isticmāl ādāt, which connects life essentially with the soul. For example, al-Kindī (Rasā'il al-Kindī al-falsafīyya, ed. Abū Rida, Cairo 1950, i, 226) sees life as an accident that happens to the body, since the living being disappears when life is extinguished, while the body retains its corporeity. The natural heat or natural spirit which is in the heart of the animal is not itself life; it is merely a disposition by virtue of which the animal can receive life (wa'dad ilā yandla bihd 'l-hayāt). Al-Kindī gives two versions of the Aristotelian definition of life: the (first) entelechy of a natural body (with organs) capable of receiving life (which has life in potentiality): (1) tamāmiyya dījrm tabī'ī dhi ādāt, dābi li-‘l-hayāt; and (2) isticmāl awal ilā dījrm tabī'ī dhi ādāt bi-l-hawāːna.

Thus the conceptions of life in Islam offer us a particular kind of life the imagination of Greek ideas and Kur'ānic images, even though the falsāsīfa, by transposing disconnected creative acts of God into terms of the continuity of natures, have altered the fundamental Islamic meaning.

HAYATI-ZADE, Ottoman family of physicians and 'iāmād), the prominent members of which are: (1) Muṣṭafā Feydī, said to have been a convert from Judaism (born Moqhe ben Raphael Abravanel) and to have acted as interpreter during the interrogation of the 'Messiah' Shabbētay Ṣebī (q.v.), see above (1934), 22); and (2) Abū al-Tābarī Khushnavāz by Firdawṣī. He obtained his release by leaving his son Kubdā as a hostage, but later ransoming him returned to the attack, and charged his cavalry into a hidden ditch to perish with all his men. According to Ṭabarī, i, 879, his opponent had the bodies interred in tumuli (al-nawawī). The classic account of the (H)ephthalites in this context is by Procopius, Wars, 1, 3, who claims that though Huns by name and race, they did not live as nomads,
were of fair complexion and regular features (a detail scarcely corroborated by paintings at Bâmiyân) and practised inhumation of the dead, up to twenty of his boon-companions being buried with each chief. This contrasts with the cremation found amongst the Chionites. The Sâsânian Kûbâb owed his restoration in A.D. 488 or 9 to (H)ephthalite support. In A.D. 557 Khâsrav Anûshjîrwan allied himself with the Khan of the Turks, called Singîbû or Zîkîzîbolosî in the Arabic and Byzantine sources, to crush the (H)ephthalites. The fullest account is that of Firdawsi, who names the Chionites the Ghârjûs and the Arabian and Greek sources, such as the Kârouloş of Menander Protector (Fîg. IV, 206 and 225), who is called Wazar or Waraz in Tabarî, i, 859. After a fierce battle the Hayâtîlâ were dispersed, and their lands partitioned between the Turks and the Sâsânians. To the same period belongs the enigmatic rûper nphö MLKû, whose name appears thus in Pahlâvi script on coins of the Kâbul area, and who may also have minted at Andarab. The extent to which the king of the Khûrâsân (q.v.), south of the Hindu Kush, was distinct from that of the Hephthalites in Bactria is disputable. Even after the arrival of the Arabs in Khûrâsân during 31/651, (H)ephthalite survivors from Harât took part in resistance to 'Abd Allâh b. 'Amîr in Kûhîstân (Tabarî, i, 2886), while as late as Sûjûn'îsîr others are mentioned with 'Tibetans' and 'Turks' during confused fighting in the rebellion of Mûsâ b. 'Abd Allâh b. Khâzîm (Tabarî, ii, 1153). Yâkût, s.v. Bâdghîs, calls this the district of the 'headquarters of the Hayâtîlâ' (Dâr mamlûkat al-Hayâtîlâ), a reminiscence of the tribe's participation in the wars of the local chief Târkân Nizak against the Arab governors, in particular Kûtyaba b. Mûsîlîm. Earlier, the main centre of the Hayâtîlâ was probably at Kunduz.

Unless it survives in Khaljî Turkish (see below), the language of the Hayâtîlâ is entirely unattested, like that of the European Huns. The 'Iranian' hypothesis of Ghîrshman and Enoki—based on the coin legends in cursive Greek script, though these are sometimes difficult to decipher—has now been overthrown by the discovery of earlier inscriptions at Surîk Kotal which prove the language in question to have been the local Iranian dialect of Bactria. For the reign of Bulak, supported by Minorsky's evidence, now holds the field. According to the Chou Shu, the Hayâtîlâ practised polyandry. Eastern Hun military equipment, probably Kîdarite, is represented on a silver dish (O.M. Dalton, 1964, 53, no. 201), and included a straight sword, possibly used for either sex (naml 'ants'/nam/a 'an ant'), live in flocks: a collective noun and a noun of unity (naml/ây/ây 'ants'), the form used for either sex (naml 'ants'/nam/a 'an ant'), but the noun of unity, characterized in this case by the same suffix as the feminine, tends to be felt as indicating the female (kâmûna 'pigeon'/hamâmîna "a pigeon" > "a female pigeon"); (2) wild or domestic animals in which the sexes are distinguished: the masculine form is reserved for the species and for the male when the feminine form comes from the same root (kâhî "dog"/kâhîba "bitch"); when the

---

(A.D. H. Bayb)
opposite is the case, the word for the female, though grammatically feminine, has a masculine form and often indicates both the female and the species (dabū'ī (fem.) "bynea", dhādā'ī (mas.) "male bynea").

c. Three terms are used for a certain number of species: a collective noun, a noun of unity used regardless of sex, and a term to indicate the male of certain animals who live in flocks (nā'ūmīn "ostriches") nā'ūmīn "an ostrich" of either sex (salīm "male ostrich"). In cases such as bīmārīn "donkey" / bīmāra and alān "female donkey", bīmāra seems to be a secondary fem. and not a noun of unity for either sex (cf. nā'īn "male").

(d) For some domestic species which live very close to the Bedouin, four terms can be found: one for the species, one for the individual regardless of sex, one for the female and a fourth for the male (ibīb "camels" / bātir "one animal of the herd" / nābi "female camel" / dījāmi "(male) camel"). In this category the name of the species is generally masculine in form but treated grammatically as feminine (e.g., ibīb, qhanām, etc.) because of the preponderance of females over males.

Examination of a certain number of names of animals shows that the name of the male is independent of that of the name and that the formation of the feminine by the addition of the suffix -tī > -ā is secondary; this "particularizing" suffix serves basically to form the nouns of unity used for either sex (bāgījā means a he-mule as well as a she-mule) but, the females being always more numerous than the males among the animals which live in herds, the noun of unity comes to be confused with the noun for the female (e.g., dājādāji "one fowl of the poultry yard" > "hen"). On this question, see Ch. Pellat, Sur quelques noms d'animaux en arabe classique, in GLECS, 25 May 1960.

Among the great number of names found in the lexicographical or zoological works, the existence should be noted, along with specific or metaphorical terms, of appellations formed like the kunyya (q.v.) or the mu'rifah (see 193) of humans: umm būbāsīy "chameleon", ibn dādā "jackal", etc.; these metonymical forms, widely used throughout the centuries especially in Arabic dialects (see Dozy, Suppl., s.vv. ibn, ābā, umm), have sometimes ended by supplanting the corresponding specific term, but this cannot be considered as a systematic personification of the animals in question, for a number of plants have similar names; we might rather consider them as euphemisms used with prophylactic intent or as a kind of pet-name, notably for example when such an attractive creature as the sparrow is called Abū Mūhibbī, Abū Mūṣākīn, Abū Yā'kīhī, etc.

2. Animals among the pre-Islamic Arabs.

All the same the Bedouin, like other peoples, attributed to animals the qualities and the faults of humans, as is proved by a number of proverbs which are also found in the pre-Islamic. These proverbs almost all appear in the form of an elative followed by the name of the animal; thus generosity is attributed to the cock (asābī min lāfīsīs), perfidy to the lizard (asābī min lāfīsīs), stupidity to the bustard (amlāb min būbāsī), boldness to the lion (alānīn min al-lāyī), etc. (see the collections of proverbs, and especially the index to the proverbs in the K. al-Hayawān of al-Dībājī). It has been noticed moreover that a certain number of tribes of ancient Arabia bear the names of animals: Asadūn, Kuraysh "shark", etc. and it has been suggested that they might have a totemic signifi-
cance; on this subject, W. R. Smith (Kinship and marriage in early Arabia, London 1903) collected some factual details about survivals of animal cults, prohibitions of certain foods and other indications, and inferred from them the existence of a totemic system among the early Arabs; his theory has not on the whole, however, been accepted by ethnologists, and it is possible that the importance which the Bedouins of necessity attach to animals of every kind does not arise at all from totemism but is simply a form of animalism (see J. Henniger, in F. Gabrieli (ed.), L'ontologie sociale bedouine, Rome 1959, 85-6 [for references there given]). It is perhaps worth recalling here that the early Arabs portrayed the souls of the departed in the form of a bird (hāmē), usually a sort of owl, which flew for some time around the tomb and on occasion cried out for vengeance (see J. Goldziher, in Globus, Ixxiiii (1903), 3 ff., analysed by G.-H. Bousquet, in Arabica, 19603, 257-60). Although the Prophet rejected this belief (liā "some- one-else- is-him-who-was-later-safar") it has lived on under Islam in various forms [see ta'ayr].

The Kurān (V, 102/103, VI, 139/138 ff.) inveighs against the practices of the dījāliyya which consisted of consecrating certain animals to certain gods, or of applying a taboo to certain camels, sheep and other animals among the herbs. The animalism of the early period included also, as well as the bābīyā (q.v.), various terms, containing which it suffices to refer to the comprehensive work of J. Chelod, Le sacrifice chez les Arabes, Paris 1955; a number of them, however, have been retained in Islam [see gharīb] and Muslims today still perform sacrifices on many occasions (see, e.g., A. Jaussen, Coutumes des Arabes au pays de Moab, 337-63). Animals were and still are associated with the practice of sympathetic magic such as islāmīr (q.v.), even quite recent zoologists expatiate happily upon the method of interpreting the sight of one or another animal in a dream [see ṭaḥr al-ru'yā], also on the magic properties of the different organs, of which sorcerers make great use [see shirr]. Fabulous animals inhabited the deserts [see gūrūl], and it was often in animal form that the dījins (q.v.) approached humans. Animals such as camels, horses, cows, sheep, greyhounds, cats and bees possess barākā (q.v.), but dogs, cats and others also possess the evil eye (on this question see E. Westermarck, Pagan survivals in Mohammedan civilization, London 1933, passim).

3. The creation of animals. Apart from the proverbs mentioned above, the folklore of early Arabia, in the form in which it has reached us, contains hardly any animal stories (see below); at the most we find legends explaining the creation or the modification of certain animals. Thus the mouse (fa'ra) was a miller's wife or a Jewess who was metamorphosed; similarly certain lizards were formerly tax-gatherers, etc. (see al-Dībājī, Tarbī, 197 and references). This question of animal metaphors (wasākh) retains a certain importance, even under Islam, while the Kurān, apparently, solved the problem; for it states repeatedly that animals were created by God (II, 159/164, XXXI, 9/10, XLII, 29, XLIII, 11/12, XLV, 3/4) "[starting] from a liquid" (XXIV, 44/45) and that, of every thing, God "created a pair" (LI, 49). To the word dābba (pl. dawābb), which is used here instead of hayawān and refers more especially to riding animals and domestic animals, is opposed, in the verses intended to emphasize the Divine solicitude, the term anūm, the herds, of which God "created down "eight (single) pairs" (XXXIX, 8/6; see also XXV, 54/49, XXXVI,
71); camels deserve a special mention for “they were created by Him for you” (XVI, 5).

However, early beliefs concerning the temporary or permanent metamorphoses of certain humans into animals are confirmed by such verses as “Those whom Allah has cursed, against whom He has been angry, of whom He has made monkeys and pigs” (V, 65/60) or “We have said (to those who have broken the Sabbath): “Be despicable monkeys!” (II, 61/65; see also VII, 166). There were two problems for commentators to solve: the first was to find out to what events the verses quoted above referred, and the second to examine the fate reserved for these creatures who had been metamorphosed. It goes without saying that the replies to the first question were various; al-Kisâ, for example (Kisâ as al-anbiyâ? 274 f.), considered that the monkeys were Israelites who had undergone metamorphosis in the time of David for having caught and cooked fish on a Saturday, and that the pigs (op. cit., 307) are contemporaries of Jesus who did not believe in him. The same Kîsâ, following other authors, thinks that the monkeys resulting from these metamorphoses multiplied, while others on the contrary think that they died without issue, that is to say that God had created independently the species in question (see al-Djâhî, K. al-Hayawân, iv, 68). The belief in creation by metamorphosis or in the modification of certain animals is still current (see, e.g., H. Masse, Croyances et coutumes persanes, Paris 1938, i, 185 ff.). To masûd is closely linked the question of metempsychosis, at least for the unorthodox sects and the theologians who admit the transmigration of souls into the bodies of animals [see hulûl, tanâsukh]. We should note in passing that the Beast [see dâbâra] is associated in Muslim eschatology with the LastJudgement and that a Kûrânic verse (VI, 38): “No creature is there [crawling] on the earth, no bird flying with its wings, but they are nations like unto yourselves. . . . Then to their Lord they shall be mustered”; permits commentators to consider that the animals too will experience the Resurrection and the Last Judgement [see kiyâma]. Furthermore, the Kûrân, which mentions some dozen different species, contains five sûras named after animals: the Cow (II), the Bee (XVI), the Ant (XXVIII), the Spider (XXIX), and the Elephant (CV)—the largest and the smallest creatures thus being described.

4. Animals and Muslim law. Islam concerns itself with animals in many other connexions, and there is hardly a chapter of Muslim law which does not deal with them. Domestic animals are subject to the zakût [q.s.]; the sale of animals [see bâyû, tâdâra] is bound by restrictions in connexion with the legality of the consumption of their flesh (e.g., it is forbidden to sell pigs; however it is permitted to sell leeches, though it is forbidden to eat them); the question of their barter against other animals [see J. Schacht, Origins, 108] or of a contract for delivery with prepayment [see sâlam] is also debated; ritual sacrifices are the subject of precise instructions as is the killing of animals intended for eating [see dhâhâ]; to this chapter is connected that of hunting and game [see sâvu] and, secondarily, of furs [see farî]; the prohibitions imposed on pilgrims in a state of ihram form another legal question [see hardî and ishrâm], while some traditions of the Prophet lead to the posing of the question whether, outside the state of ihram, it is legal to kill certain animals and, on occasion, to eat their flesh. Thus the fundamental problem is reached, which concerns on the one hand food, and on the other the use for other purposes of one or another portion of a forbidden animal. In what follows we shall concern ourselves with the juridical status (bukhûm) of the various species of animals.

The Kûrân authorizes and imposes the prohibitions concerning the eating of the flesh of an animal which has not been ritually slaughtered, concerning the spilt blood, and the pig (V, 4/3; see also II, 168/173, VI, 146/145, XVI, 116/115), but in the last verse it provides for the lifting of the prohibitions in a case of absolute necessity (on the question of the pig, see khînâ; for the spilt blood, we remember that David—Arabs, whereas they are dying of thirst in the desert, sometimes resigne themselves to slaughtering a camel and drinking its blood [madjâd; see Arabicia, 1955/5, 327]). Traditions of the Prophet and Islamic jurisprudence concede this darura, but in general they are much stricter, for they impose prohibitions upon species of which nothing is said in the Kûrân, but without it, seems, restoring pre-Islamic practices (on which at present we do not undertake to enter). In the schools, much the same schools as have been applied by all the schools. Thus, by virtue of V, 97/96 “Permitted to you is the game of the sea and the food of it”, all fish are lawful and their flesh may be eaten without ritual slaughter; however, some marine or aquatic animals are declared hardî or mahrâk, or are still the subject of discussions, for they come within the sphere in which other criteria are applied; thus the frog, which would normally be halâl, is regarded as harâm because the Prophet forbade the killing of it (see below). Moreover, some fudhâ biâ zealots, in their meticulous search for anything impure, condemn the eating of those aquatic animals which have names resembling those of unlawful land animals (“dog of the sea”, “pig of the sea”, “ass of the sea”); their zeal leads them to prohibit an animal which has the same name as a forbidden animal even in a language other than Arabic, as with the ass, which in West Africa has the same name as the pig, cf. A. Gaully, L’Islam dans l’Afrique occidentale frangaise, Paris 1953, 205, or those which have the same shape (especially the eel, which is the same shape as the serpent). They go so far as to declare unlawful all marine creatures which have not got the shape of fishes (Hânâfs), with the explanation that the Kûrânic text authorizes fishing, but not necessarily the eating of everything caught (al-Marghînâ, Hâdîyâ, ms. Paris ar. 0763, fol. 248 v.). Special cases are the scaphophagous fishes, fishes found inside the belly of another fish, and above all the tâfî, dead fish floating in the water, which is lawful only for the Mâlikîs and the Shâfi’îs, though the Hânâfs permit the tâfî if it has been killed by an accident and has not died a natural death, which leads to a discussion of whether death from heat or cold is to be considered as natural (al-Marghînâ, op. cit., fol. 249 v.). The crustaceans are often
unlawful or reprehensible, as is the whole class of animals with shells.

By virtue of the verses (V, 6-7/4-5) "The good things (ta'ādāh) are permitted you", we find included in the chapter of what is хаālī those animals whose flesh is esteemed for its flavour (chickens, sheep, etc.); conversely, the peacock and other animals are declared хаārim because of the bad quality of their flesh. By the same token istiṣbaṣh or istiṣbahī, i.e., the habit of consuming unpleasant food, causes animals possessing it to be classed among those which are хаārim. In this field there is a certain amount of indecision and not a little subtlety: the stork for example, which would be хаālī, is regarded as хаārim because it eats snakes. Snakes themselves are хаālī, but eating them class the stork among the carnivores. Indeed, among the Traditions of the Prophet which are also invoked, there is one (see Abū Dāwūd, xxvi, 32; Zayy b. 'Alī, Corpus iuris, no. 536), which was to serve also as the basis for a division into хаārim and хаātīb (see below), and according to which all carnivores are forbidden whether they are mammals equipped with fangs (dhu nād) or birds provided with claws (dhu mikhlab); but it is not universally accepted, and the Mālikīs (see al-Kayrawānī, Risāla, ed. and tr. Bercher, *Algeriens 1949, 299) permit the eating of the flesh of birds of prey, while the Awzā'īs (see al-Dāmirī, s.v. al-bāzā) consider that no bird is хаārām. All the jurists consult the cat, the dog, the wolf, the crocodile etc. as хаārām, and travellers report with disgust any cases of eating dogs which they witness (see, e.g., al-Mu'āskadda, *Description de l'Occident musulman*, Algiers 1950, 61 and n. 172); the fox is generally considered as lawful, the jackal and the wild cat are unlawful, and the hyena is lawful, except for the Mālikīs, who pronounce it маbārīh. (The Prophet, questioned on the lawfulness of the hyena, is said to have replied: "But who eats the hyena?"; see al-Dāmirī, s.v. arnāb; Ibn Mādīja, xxviii, 15; al-Tirmidhī, xxiii, 4). The classification of the elephant is disputed, for although it is a herbivore, it possesses means of defence which are termed sūd in Arabic.

**According to another хаādīth the Prophet is said to have forbidden the killing of bees (because God made a revelation to them [see NAHL]), which states (for the same reason) that [bisāh] like the lizard (dubb), the scarab beetles. In this field personal dislike, but some others say that this species represents a tribe of the Banū Isra'il which had been metamorphosed, and this leads to their being prohibited (al-Bukhārī, lxx, 10, 28; Abū Dāwūd, xxvi, 27; al-Dārimī, vii, 80; Ibn Sa'd, i/2, 111 f., etc.; cf. al-Ghazālī, *Ibīd,*, ii, 93). Animals which are considered to have no liquid blood are in general regarded as lawful, since blood is what constitutes the impurity of animals which have not been ritually slaughtered (al-Ghazālī, *Ibīd*, ii, 83). Many, however, are forbidden (except by the Mālikīs) because of the disgust which is felt for them and which causes them to be classed among the хаādīthī, "unclean foods", discouraged by the Kur'ān (VII, 156/157). This vicious circle, from the logical point of view, is moreover applied to other foods and allows all prohibitions to be canonized. This is particularly true for the хаārārdī al-araq, (sometimes хаārārīs), a term which embraces in a variable and inconsequential way the small animals which live on the ground, and are in general forbidden or reprehensible, in spite of a хаādīth (Abū Dāwūd, xxvi, 29a; cf. Dāmirī, s.v.). They include scorpions, all kinds of insects, and worms. Concerning the latter there is much disagreement, for it is difficult not to eat them accidentally with other foods. Some schools make efforts to distinguish those which have been engendered by the earth itself, and are dead or alive, those which have דאכית or not (cf. discussion by al-Dżāzarii, *Kitāb al-Fuḥůkh*, ii, 3 and n. 1). In general birds without talons are permitted, but certain of them are the subjects of discussion, and receive different classifications according to the schools; this is the case notably with the parrot and the owl.

It goes without saying that a certain number of animals have not received any classification, because it has not occurred to anyone to eat their flesh. Similarly for very rare species the question has not been solved because it has not arisen; thus al-Dāmirī mentions that nobody has been concerned with the rhinoceros, which he himself considers at first sight to be хаālī; the case of the giraffe is disputed; and finally the monkey is regarded as хаārām except by the Mālikīs who consider them to be canonized. The nīsān (see Ibn al-Uqīqawa, *Maṣālīm al-kurba*, ed. R. Levy, London 1938, 105, tr. 34) the new idea of a resemblance between animals and humans, which, by a kind of natural law, prevents people eating these creatures without a formal prohibition being necessary (Ibn ʿAbd al-Barr, *apud* al-Dāmirī, s.v. کید, where is found moreover a хаādīth condemning the eating of monkeys).
Among domestic animals, while the camel, the ox, the sheep etc. present no problem, the equidae, in contrast to the other schools, consider it *mahráh*; the domestic ass is *hárám*, except for the Ḥanbalis who regard it as *mahráh*; while the wild ass is *halál* for all schools except the Ḥanafis. The mule, arising from a crossing of two differently classified species, is prohibited, except that, at least for those who regard the horse as *halál*, the offspring of a horse and a wild she-ass is permitted. In contrast to the other schools, the Ḥārīfs, and particularly Ibn Ḥazm [q.v.], remain faithful to their fundamentalist criterion and base themselves on *Kūrān*, VI, 179 "... seeing that He has distinguished for you that He has forbidden you", to reject prohibitions which are not found in the *Kūrān*.

The *Shāfi‘i* do not differ radically from the Sunnis; although they differ from them on points of detail, they nevertheless base their decisions on identical criteria. Thus the *bidden* of *Nasīr al-Mu‘īn* (Kūdūb al-Bīlār, ed. Mu‘īn Waḥīd Mīrzhā, Damascus 1376/1957, 95-6), who sets forth the doctrine of the Ḥārīfs, points out that God has forbidden the eating of carrion, split blood and pork (*Kūrān*, V, 4/3) and that the Prophet declared unlawful carnivores with fangs and birds with talons (see above); he adds that the hyena and the fox are forbidden, and that the eating of the lizard, the hedgehog, insects (*bāshārdī*), snakes and all the small reptiles or insects included under the name of *shārdī* is to be discouraged; only locusts caught alive while in flight are permitted. However, the *Shāfi‘i* include among the flesh which is forbidden or reprehensible that of several particular birds (the lark etc.) and that of two new categories: birds which hover more than they fly, and birds which lack both a gizzard and other organs (Querry, *Droit musulman*, ii, 252 ff.). The Ḥārīfs authorize the eating of horse-meat only in the case of an animal useless for any work, and they forbid absolutely the flesh of mules and domestic donkeys; also *hárám* are animals which habitually eat excrement (*gāllālāt*), unless they have been fed a certain time on herbage. It is also *hárám* to consume the milk or the eggs of forbidden animals, but abstention from eating certain parts of permitted animals—the glands, the skin and the haunches, and the intestines—is also obligatory. Among aquatic animals those which have no fins and scales; birds which are held in abomination and reptiles which are lawful are listed separately, as are those which are not alive when caught. In cases of necessity, however, all these prohibitions are waived.

These general considerations leave the way open for argument, especially in the case of animals which are difficult to classify; an example is the cat-fish (*diwr*; see H. Laoust, *Profession de foi d’Ibn Batîta*, 136-8). Divergences appear as well among the *Shī‘i* sects; thus Ibn Batîţa (ii, 352; tr. Gubb, ii, 468) relates that for the Ḥanafis the inhabitants of Sinope (*ṣūnūb*) was to offer them a hare, for the Rafidis do not eat the flesh of this animal (though the *Islāmīs* do). To the question of the legitimacy of killing certain animals is added the forbidding of pilgrims in the state of *tāyr* [q.v.] to shed blood, from which arises the problem of how one is to deal with vermin; the question arises also in connexion with prayer [see *ṣalāt*].

At another level arises the question of the way in which animals are to be treated; for example it is permitted to kill a cock, but the Prophet forbade reviling it because it performs the religious function of awakening the Faithful at the time of prayer; the same rule applies to flocks "who awakened a prophet". In general Muslims are counselled to treat other living beings, and particularly their mounts, well, for they will have to give account in the next world of any cruelty which they have inflicted on them in this (on behaviour towards animals, see G.-H. Bousquet, *Des animaux et de leur traitement selon le Judaïsme, le Christianisme et l’Islam*, in *St. Isl.*, ix (1958), 31-48; H. Ritter, *Das Meer der Seelen*, Leiden 1955, ch. xxii).

The problem presented by the use of the parts of animals regarded as *hárám* is a complex one which cannot be given here the full treatment which it deserves (al-Damîrî gives precise details on this topic). By way of example, among the Mâlikis (al-Kayrawānî, op. cit., 297), the Muslim who has had of necessity to eat the flesh of an animal not ritually slaughtered may not use its skin as a prayer rug, nor may he sell it. Similarly, before the skins of wild beasts (*ṣūbā‘*) may be used as prayer rugs, or sold, it is necessary for them to have been ritually slaughtered. Although pigs are forbidden in the *Kūrān*, the Mâlikis allow the use of hogs' bristles.

It is hardly possible within the limits of this article to enlarge on the subject of the lawfulness of animals, the complexity of which in Islamic law is due to what the doctors consider to be the insufficiency of the *Kūrān*ic regulations. Prohibitions concerning food being considered necessary—as is proved by the fact that later "prophets" hastened to enact more of them [see, e.g., *ṣalāt*]—the schools, in order to develop the system outlined in the verses at the beginning of this section, applied various criteria (on which they are not always unanimous), so that in order to present this intricate subject more completely, it would be necessary to list all the animals and to indicate for each one the *ḥukm* adopted by each of the different schools. It would also be instructive to compare these classifications with the Biblical regulations (Leviticus, XI, 1-47; Deuteronomy, XIV, 4-21; see also Isaiah, LXV, 4, LXVI, 3, 17) and with the criteria laid down: it is lawful to eat ruminant quadrupeds with cloven hoofs (this excludes the horse, the donkey, the camel, the rabbit, the hare and the leporid), to eat birds with fins and scales; birds which are held in abomination and reptiles which are lawful are listed separately. The prohibitions set forth in the Old Testament are regarded in the *Kūrān* (IV, 138/166) as a punishment inflicted on the Jews for their iniquity and their disobedience to God, and the Holy Book of Islam had no reason to be so severe, but the scruples of the *fukhād* led them to adopt a more rigorous position and to restrict the alleviations from which Muslims could benefit. In certain cases custom superseded a legal ruling which is considered to be too liberal: thus, the coney (*wādr*) is in general considered lawful, in contrast to the Biblical regulation, but it is the object of prohibitions based on custom, for example among the Egyptian Bedouin (see G. W. Murray, *Sons of Ishmael*, London 1935, 90), or among the settled communities of Southern Arabia (see Freya Stark, *The southern gates of Arabia*, Penguin ed., London 1945, 67 f.).

5. Animals in literature. Several animal species occupy a notable place in pre-Islamic Arabic poetry. To give an idea of the extent of this, in vol. i of *al-Majdīm ‘l-sadīthā* of F. al-Bustānî, Beirut 1945, which provides a representative survey of this poetry, are mentioned, under various names, about
80 animals among which camels [see IBIL], horses [see FARAS], ostriches [see NACAM] and lions [see ADJ, BILLAWR, C] are among the most frequent (M. M. D. al-Nowaihi has studied this question in an unpublished thesis presented at London in 1942: *Animals in ancient Arabic poetry* [excluding the horse and the camel]; a thesis entitled *Le chameau dans la poésie arabe antéislamique*, by E. Z. Zakharia, is in course of preparation at Paris).

In Arabic poetry in the Islamic period, animals of the desert naturally tend to occupy a less important place than in the classical and neo-classical writers, although these continue to describe their camels and to boast of their journeys across the empty spaces; in spite of the abundance of new sources of inspiration, the "modernists" did not hesitate to display their linguistic knowledge in *tarādiyya* [q.v.] in which they built up artificially an extraordinarily rich vocabulary. Some of them wrote charming verses on pet animals, especially Mub. b. Yasir (see Ch. Pellat, *Muhammad b. Yasir al-Riyāḍī wa-asābīrāk*, in Machrîq, 1955, 289-338) or al-Kāsim b. Yūsuf b. al-Kāsim (see D. Sourdel, *Vissirat*, 229 and index), who composed elegies on goats, cats, birds (see K. A. Farîq, *An ʿAbbāsid secretary-poet who was interested in animals*, in IC, xxiv (1950), 261-70). During the following centuries the crow [see GIÂS] and the lion retain their place in literature (for they symbolize respectively the sadness of separation, and strength and boldness), while new species appear: e.g., the elephant and the giraffe. Descriptions of nature induce new themes and original symbols, and the poets describe the ugliest animals as well as the pleasantest; the pigeon [see HAMAM], the nightingale [see BULBUL], the peacock [see TÂR], and the elephant and the giraffe. Descriptions of nature induce new themes and original symbols, and the poets describe the ugliest animals as well as the pleasantest; the pigeon [see HAMAM], the nightingale [see BULBUL], the peacock [see TÂR], and the elephant and the giraffe. Descriptions of nature induce new themes and original symbols, and the poets describe the ugliest animals as well as the pleasantest; the pigeon [see HAMAM], the nightingale [see BULBUL], the peacock [see TÂR], and the elephant and the giraffe.

In the field of the prose the situation is quite different. No stories of animals are found in pre-Islamic Arabia, which in any case did not, generally speaking, possess a very highly developed folklore [see BIKLAYA], and the fables attributed to Luṭmān [q.v.] date for the most part long after the beginning of Islam. The translation of *Kalila wa-Dimna* [q.v.] was thus something of a revelation, but it remained a master-piece which was occasionally imitated but never surpassed. First should be mentioned the verse rendering of these fables by Abân al-Lâbîlī [q.v.], then that by Ibn al-Ḥabbâriyya [q.v.] in his *Naṭâṣi al-fiṣṭa fi Ṽaṣm Kaʿla wa-Dīmna*; next the imitations of Sahl b. Hârûn [q.v.] in his *Ḳalâma*, ʿAfîḥā and his K. al-Nâmir wa-l-ṭhaʿlab [a ms. of which has just been identified in Tunis; see *A. al-Mhiri, in Haselböldt al-Djima al-Tanuseyya*, i (1964), 10-40] of Ibn Zafâr [q.v.] in his *Sultân al-mulâjlī fi udwân al-ḥāba*, as well as the K. al-Sâlid wa-l-bâghim of Ibn al-Ḥabbâriyya and the *Fihāḥ al-ḥulāfā* of Ibn ʿArabgâhī [q.v.]. None of these works can have gained the same success as *Kalila wa-Dimna*, and it may be said that Arabic literature still awaits its La Fontaine.

We note also that a certain number of animals are introduced in the *Thousand and one nights* and that in it the theme of metamorphosis is widely used (see N. Elisséeff, *Thèmes et motifs des Mille et une nuits*, Beirut 1949, 93, 142-4, 193 and passim; M. I. Gerhardt, *The art of story-telling*, Leiden 1963, 305 ff.).

Apart from ʿajīms and ḍhāls [see above] there exists also a certain number of fabulous animals, mainly birds [see H. Basset, *Essais de la littérature des Arabes*, Algiers (1920), 240 ff.]. In the dialectic of the Arab North Africa, the perceptible Berber influence is added to the eastern borrowings drawn principally from *Kalila wa-Dimna*; apart from the jackal, the most usual figures are well-known animals: the donkey, the ox, the ram, the he-goat, the hen, the dog, the cat, as well as the fox, the gazelle, the hyena and the lion. Most of the manuals and collections of texts in dialect Arabic reproduce some of these stories (see *Bibli.* of the art. HIRAYA).

6. Animals in art. Representations of animals occupy only a restricted place in the art of the Islamic countries, limited by the tendencies towards non-representationalism and decorative abstraction which typify this art and which, though varying considerably from one region and one period to another in their development, contribute in large measure to the originality of Muslim civilization [see PAH]. For it was primarily religious restrictions which led to the prohibition of all representations of living beings and which explain their total absence from public buildings such as mosques. Such restrictions, however, in no way prevented painted or sculptured compositions of a secular character from taking their inspiration from nature, and in particular from fauna, even when they avoided too precise a delineation of physical form, or from frequently testifying, within the bounds of Islamic culture, to the continuance or revival of very ancient traditions.

A systematic inventory of the zoomorphic figures thus used and their main types has not yet been undertaken. The diversity of the various fields in which such an inquiry would have to be conducted, from architectural ornament to illustrations of manuscripts and ranging through all the luxury articles produced by craft-work, suffices to show its importance. The results obtained do not vary greatly according to the nature and material of the objects under consideration [see *Ahl, Billawr*, etc.]. It would also reveal the differences of treatment accorded to each species of animal, based on ideas derived either from literature or from daily observation as well as symbolic and magic significance [see SAD, FAS, etc.]. This point has been made clear in the all too rare studies of any profundity based on certain iconographic animal motifs, such as, for example, the unicorn or the ibex devouring a snake (cf. R. Ettinghausen, *Studies in Muslim iconography*, i, *The unicorn, Washington 1950*, and The "Snake-eating Stag" in the East, in *Late and mediæval studies in honour of Albert Mathias Friend Jr.*, Princeton 1955, 272-86).

Even beyond all these investigations of this kind are undertaken, it may be stated that certain animal figures, employed as much for their ornamental qualities as for the different connotations that they might convey and often associated with the glorification of royal power, made their appearance in Islamic art as early as the Umayyad period. Certain elements of the bestiary were thus incorporated in the sculptures carved in half-relief on the façade of the
palace of Mshatta [q.v.], while subjects of the same order, though more familiar, were painted on the walls of various other palaces. The principal mosaic of the castle of Khirbat al-Mafdjar [q.v.] had as its theme two facing gazelles grazing and a lion attacking one of them, on each side of a majestic tree. Mention must also be made of the realistic representation of a galloping horse and wounded deer in a fresco of Kasr al-Hayr al-Gharbi [q.v.], for in these experiments we can see the first illustrations of a taste which was subsequently to provide the stimulus for the development of a new art. Indeed, the decoration of palaces and rich mansions sought to find a place for a whole stock of more or less stereotyped animal motifs taken from the Sasanid or Hellenistic East, and later associated with the life of luxury and pleasure lived by the new holders of sovereign power.

The same reasons explain the frequency of these motifs on articles of furniture connected with the daily routine of princely life and, whether ceramic or metal artefacts or even precious fabrics, characterized alike by the need to ensure the glory, happiness and good fortune of the patrons who had ordered them. For this reason, particular preference was shown for representations of those animals which had long been utilized as the symbols of royal power (the lion, the bird of prey, etc.), which might evoke the sovereign's pastimes (hunting scenes), or which had been endowed with some benevolent properties of talismanic and astrological origin (signs of the Zodiac). These images provided the craftsmen with the essential elements for linear decorations (painted, engraved, or worked on a flat surface) which generally combined interlaced floral and geometrical forms with bands embellished with strings of quadrupeds or birds, as well as medallions decorated with figures exactly repeated or sometimes symmetrically facing each other. They also formed the subject of the rarer sculptures in relief imitating the silhouettes of well-known animals especially for ewers and incense-burners.

Examples of this kind remain relatively rare during the earliest centuries of Islam, from which period we can cite only the bronzes influenced by Sasanid tradition, such as the group to which belongs the splendid vessel known as the "aiguiere of Marwan II. But their number steadily increased with the development of 'Abbasid civilization and its growing receptivity to foreign customs, some of which were tainted with heterodoxy. A significant proof of this is afforded by the Buwayhid articles of goldsmith's work or textiles which, with due observance of the aesthetic laws of stylization and repetition, were decorated with such animals as felines, ibexes, elephants, eagles, peacocks and even griffins (analyses of these motifs in G. Wiet, Soieries persanes, Cairo 1947).

But we can also take as an example the ivory boxes made in Muslim Spain in the 4th/10th century [see 1940] and Egyptian Fatimid sculptures in crystal, ivory or wood (see particularly G. Marçais, Les figures d’hommes et de bêtes dans les bois sculptés d’époque fatimide, in Musée du Caire, in Mélanges Maspero III, 1935-40, 241-57), not forgetting the dishes and bowls of faience with lustre decoration that were made at that time in different parts of the Muslim world.

Of these various instances in which animal decoration takes a prominent place, some employ a range of figures of "heraldic" style, to be found principally in 'Irāq or Iran, and whose Sasanid antecedents can be recognized without difficulty: simplified interpretations of these motifs appear even in the most common types of ornamented pottery (see, for examples from the 5th/11th century, sherds found at Bāb Zu'ayr, in the exhibition "Iranian Art in Islam," in Storia dell'Arte, 1947, pl. 12). Other figures reveal the appearance of touches of a delicate realism, which in their veracity of detail or sense of movement, renew the handling of classical subjects and give an authentic freedom of posture to the animals carved on Egyptian panels or painted with rapid strokes on pottery of the same origin (cf. the remark by F. L. Hoffman, in T. Arnold, Painting in Islam, Oxford 1928, pl. LIX d) — while a later echo is to be found in the "lions of Baybars" which were to mark, as though with a coat-of-arms, the principal constructions and foundations of this Mamlūk sultan.

In the same period too zoomorphic figures were utilized in linear ornamentation to decorate the walls of public buildings studied in J.-C. Gardin, L'art des Mamlūks, and not forgetting the region of Mosul (for its workshops of bronze-workers, see AL-MAWSL). But it must be noted that only the provinces of Khurāsān witnessed the development of those astonishing types of zoomorphic inscriptions, restricted to objects in metal, which have quite recently attracted attention and which made use of the silhouettes of animals either to delineate the actual characters, or else to "animate" them by outlining them within the interlaced foliage which formed the background (see D. S. Rice, The Wade Cup in the Cleveland Museum of Art, Paris 1955, 21-33). No doubt this must be regarded as the most perfect example of the adaptation of fauna to the requirements of the arabesque to be found among the typical aspects of ancient art in Islam.

It was moreover in the Iranian or Indo-Iranian arts that, during the later periods, the taste for...
animal motifs continued to serve as a pretext for ornamental stylizations that are full of freshness and delicacy, while in the other regions of the Muslim world they were gradually abandoned. Safavid brocades and carpets thus provide, up to a recent period, an illustration of the resources of this at once graceful and conventional repertory, which research in the Mongol period had successfully revived, but which thereafter was to remain unknown to Muslim artisans working elsewhere than in Persia. Outside by side with the zoomorphic elements of Islamic decoration, we must also not overlook the representations of animals multiplied, though in quite a different spirit, by Muslim painters and miniaturists, who very frequently took their models from the animal world and succeeded in giving interpretations of markedly ornamental character, yet sometimes not devoid of exactness or even realism.

Indeed, even in an ancient period, at the time of the rise of what it has recently been suggested should be called “Arab painting” (cf. R. Ettinghausen, Arab painting, Geneva 1962), and which corresponds more precisely with a flowering that took place in post-Salju?ukid Irako-Mesopotamian or even Syro-Egyptian culture (from the end of the 6th/12th to the 8th/14th century), the actual nature of the works illustrated, books of adab including collections of fables as well as technical treatises on the art of hunting on zoology, further encouraged the very particular popularity that representations of animals then enjoyed. By way of example it will suffice to refer to the illuminated copies of the Kalila wa-Dimna of Ibn al-Mu?affa which have survived (copies in Paris, B.N., Ar. 3465 and 3467; Munich, Staatsbibl. C. arab. 66; Cairo, Nat. Lib., Pers. lit. 61; Oxford, Bodl. Lib or technical treatises as well as copies of the two K. Manf?j's al-Hayawan edited by Ibn Bakht?gh? (in Persian; New York, Morgan Lib., M. 500; Washington, Freer Gall. No. 27-5) and by Ibn al-Durayhim al-Mawsili (Escolar, Ar. 898), without overlooking the K. al-Baytara of Ab?l Ahmad b. al-Husayn b. al-Ahnaf (Istanbul, Topkap? Saray, Ahmet III 2113) or the K?sh?l al-s?r?r of Ibn Gh?nim al-Makd?l (Istanbul, Süleymaniye, Lala Ismail 565) and also the other Arabic manuscripts (in Persian; in Latin) Ambrosian fragments of an illuminated manuscript containing the zoology of al-Q?simi, Uppsala-Leipzig 1946.

But in these various works, to which might be added the “genre scenes” with figures of familiar animals found occasionally in other illustrated manuscripts of the same period (see, for example, the scenes known as “the herd of camels”, “the departure of the caravan”, or “the discussion near a village” in a MS of the Mak?mat al-Har?r? (Paris, B.N., Ar. 5847), it is of particular interest to note a stylistic continuity which makes it permissible to speak of a style of portrayal of animals peculiar to the pictorial art thus represented. This style might essentially be defined as the “combination of a zoomorphic element with a natural way of presenting them” (R. Ettinghausen, Arab painting, 136).

In point of fact, in the earliest known copy of Kalila wa-Dimna, of the beginning of the 7th/13th century (MS Paris, B.N. ar. 3465), it is easy to see that care has been taken to give life and expressiveness to animal forms, little by little escaping from the conventionalism inherent in the traditional Iranian style, which incidentally is reflected in the balance of each picture. The apogee of this tendency is ultimately found in such a typical work of the so-called Baghd?d school as the MS Hariri-Sch?fer previously referred to, signed by a certain al-Wsa?fi in 634/1237. It can be seen to disappear finally with the rise of the formalism that was to characterize Maml?k painting, while it was to be reborn in a new form in the truly Persian schools of painting which were to take shape after the rupture brought about by the Mongol conquest. These schools were indeed set up in order to preserve the feeling of the animal’s movement, even when they substituted the return to a more ornamental conception of the different subjects treated and when their masterpieces took shape under the inspiration of extremely varied aesthetic sensibilities (in addition to the classical works on the subject, see the recent work of B. Gray, Persian painting, Geneva 1961).

Thus it is possible to confer upon the Muslim miniaturists, considered as a whole, the well-deserved epithet of “master animal-painters”, a title which it would seem difficult to reconcile with the regulations restricting the freedom of the creative imagination in that civilization, but which none the less justly emphasizes one of the most attractive aspects of art in Islam.

Bibliography: There is no comprehensive study devoted to this question. Various individual works have been referred to in the text. For further study of certain of the aspects discussed above, reference should be made to K. A. C. Creswell, A Bibliography of the architecture, arts and crafts of Islam, London 1961, to which may now be added E. J. Grube, Three miniatures from Fus?f in the Metropolitan Museum of Art, in Ars Or., v (1963), 89, 95, and H. Goetz, Indo-Islamic figural sculpture, ibid., 235-41.

See also E. J. Grube, Ars Or., v (1963), 89, 95.

7. Zoology among the Muslims. On the scientific plane, one might have thought that the works devoted to animals by Aristotle (see Aristotelis, the founder of rational zoology, who have allowed those Arab scholars who were willing to use the results of Greek learning to make great progress in the knowledge of the animal kingdom and to introduce zoology among the disciplines cultivated by the Muslims, on a level with, for example, scientific geography, mathematics or medicine. But, in spite of Yah?b b. al-B?tr?k’s translation of Aristotle’s Historia animalium (2nd-3rd/8th-9th centuries), zoology has never been a very popular discipline and the increasingly limited place which it occupies in the various theoretical classifications of the sciences is significant in this respect. In the classification of Aristotle it forms an integral part of “physics”, linked with psychology, and it is still found with the soul (nafs) among the physical and natural sciences (al-’ilm al-tabii) in al-Farabi’s ?h?d? al-‘ul?m, ed. ?thm Amla, Cairo 1949, 99 (see L. Gardet and M.-M. Anawati, Introd. a la th?l. mus., 106); it appears as an independent science among the ?h?w?n al-?af’ (Gardet-Anawati, 109), in classified among foreign sciences in the Mak?mat al-‘ul?m of al-Kh?rizmi (Gardet-Anawati, 111), but is no longer found in the ?h?d? al-Q?za?l (Gardet-Anawati, 117), or in the Protegomena of Ibn Kh?lid (Gardet-Anawati, 123-4). It does not seem either to have interested al-Kal?kh?ndi, who does not cite any work of zoology proper among Les classiques du s?rie g?n?rien (G. Wiet, in St. Isl., xviii, 50-5).

This growing indifference to zoology shown by Arab thinkers and writers is very difficult to explain
when one considers the interest taken in animals by Muslim law, but is probably due in great part to the absence of organized research and specialist works of truly scientific character, although zoological gardens (hayy al-wafrsh) in which the rarest and fiercest species of animals had been assembled at great expense (see A. Mes, Renaisonce, 383; Eng. tr., 404-5, where also organized combats are mentioned) ought to have aroused the curiosity of scholars and encouraged them to undertake thorough studies. But zoology among the Muslims remained at the literary, or perhaps one may say the religious stage; it is true that the scholars and jurists (fiyrah al-wafrsh) ought to have aroused the curiosity of scholars and encouraged them to undertake thorough studies. But zoology among the Muslims remained at the literary, or perhaps one may say the religious stage; it is true that the scholars and jurists (fiyrah al-wafrsh) have often mentioned the existence of the Creator through the observation of His creation (ii, 109 ff., iii, 209 ff.) and the glorification of the Divine Wisdom which has created nothing completely useless or harmful: dangerous or malicious animals (which it is permissible to kill, i, 307-9) are in fact a trial (miḥna) imposed on men by God (iii, 300). Al-Dījāz is perfectly well acquainted with Aristotle and allows himself on occasion to criticize him (e.g., vi, 17) and quotes from him quite extensively (see T. al-Hājījī, Taḥīrī fī nasīṣ aristaṭīlīyya min Kitāb al-Hayawān li ’l-Dījāz, in Majdallat Kulliyat al-Adāb, Alexandria 1953 ff.), but he is convinced that he has no need of recourse to Greek ideas, given that practically all that is found in the zoological works of the "philosophers" is known already to the Bedouins (iii, 268); thus, although an admirer of the ʿAbī al-Manṭūk, he deliberately ignores Aristotle's principles of classification, admittedly rather negative and difficult to grasp (see Parties des animaux, tr. J.-M. Le Blond, Paris 1945, i, 66), in order to adhere to a rudimentary empiricism.

After having stated (i, 26) that created things are divided into three categories: mutaṭṭaf (similar), mutuṭṭam (different), muṭādād (opposite), al-Dījāz, after some hesitation as to the place to give to the spirits (muthānā), is divided into four sections, on the one hand inorganic (dījāz = inert) and on the other organic matter (nāmūn = growing). He then divides the organic section into two "kingdoms": animal (hayawān) and vegetable (nabāt); the animal kingdom is in turn subdivided into four branches according to the way in which the animal moves: walking (mā yawāḥ), flying (mā yaʃār), swimming (mā yasāḥ), crawling (mā yawāt); this classification, which is based simply on current observation, is the same as the Biblical division (I Kings, 4:33: "[Solomon] spake also of beasts, and of fowl, and of creeping things, and of fishes") and corresponds to one of the Platonic criteria of classification. Starting from these "classes", al-Dījāz experiences some embarrassment, for not only does he admit that his own division is not a rational one since he is obliged to exclude the ostrich from the "class" of birds while including the bat, but he has to give up the attempt to adopt too rigid subdivisions because of inability to pass from the particular to the general in defining the fundamental attributes of the species and the genera. Finally, he mixes functional criteria and habits of life to determine the species, and though he has a vague idea of what were to be the "orders", "families" and "genera" in the modern systematic classification, he adheres in general to the species which he divided into the four categories mentioned above:

1. animals which walk: men (māṣ), the bahādīm (i.e., non-political quadrupeds, either domestic or wild), the sībā (fierce animals, i.e., carnivores, domestic or wild), insects (bashkarāt) without wings.

2. animals which fly: of these there are only three "orders": (a) carnivorous birds (sībā) which in turn are subdivided into "noble" (ahdār, i.e., large birds of prey such as the eagle, the vulture, etc.), "common" (bashkarāt, less equipped with means of defence), and little birds which feed on insects; (b) the birds which are high up, i.e., in general the grain-eaters which protect themselves by fleeing; (c) the hamādi, winged insects.

In the course of his work he distinguishes many different species of reptiles, but he does not suggest any classification. Similarly he does not venture to classify the fish (among which he includes intentionally mammals such as the whale), and in any case he says that he has not found in early poetry enough reliable evidence, the accounts of sailors being untrustworthy (vi, 16).

The Kitāb al-Hayawān, which is a work of adāb of religious character and not of natural science, is characterized by the greatest disorder. Its sources are varied, but the most important are the literary data collected by the investigators of the 2nd and 3rd/6th and 5th centuries, enriched by oral traditions, by information obtained from conversations and current observation, and also by little experiments performed by the author himself or by his Muṭāzill friends, e.g., that which concerns the effect on animals of spirituous drinks (ii, 228-9), or his researches on spontaneous generation (iii, 348), of which he is a convinced supporter (iii, 372, v, 371, etc.) against those who deny it and claim that an animal can be begotten only by a male (v, 349). Al-Dījāz takes a particular interest in hybrids and devotes to the mule [see Bashq] a treatise which follows the K. al-Hayawān. On another plane, following the method of Aristote, who links zoology with the study of the soul, he scatters throughout his work pertinent notes on the psychology of animals (e.g., vi, 69 ff. on pride) and, considering the influence of environment to be of major importance, he sketches a doctrine of evolution which is not without interest. In all, nearly 350 animals are examined in a manner more or less profound but always unsystematic, and to find one's bearings use must be made of the excellent index to the edition of ʿAbd al-Salām Ḥārūn; it is thus possible to gauge the zoological knowledge of the early Arabs and to gain an idea of the opinions which they held on certain animal species. Being a good Muṭāzil, who submits everything to the criterion of reason, al-Dījāz makes an effort in passing to demolish some legends (e.g., ii, 14) and mingle with the traditions which he relates thoughts of his own which, if they were not so chaotically expressed, would earn him an honourable place between Aristote and Buffon.

While his Bayān has been to a certain extent systematized and presented in a more orderly form by al-ʿAskarī (q.v.), in his K. al-Simāt al-sayn, the K. al-Hayawān and zoology in general have hardly inspired later writers. At the time when adab flourished, Ibn Kūṭayba (q.v.) in his Qayān al-akhrūr (tr. L. Kopf, The natural history, etc., Paris and Leiden 1949) and a little later Abū Ḥāyyān al-Tawḥīdī (q.v.) in his Ḥillā (tr. L. Kopf, in Osiris, xii (1956), 390-466) devoted some space to animals but without bothering about scientific classification. Similar
treatment is given in the popular encyclopaedias of which the Mustafa' (ch. ixii) of al-Damiri (q.v.) is a typical example. The 'I⋮awun al-'Sa⋮a', on the other hand, set out clearly, at the end of the second part of their Ras hasil, the hierarchy of created things which comprises, in ascending order: minerals, plants, animals, man, the heavenly bodies; in each of these categories the highest rank is close to the lowest rank of the next category; thus the palm-tree, which belongs to the highest rank among the vegetables, is very little removed from the snail which possesses only the sense of touch because the Divine Wisdom does not endow an animal with organs of which it has no need. The top of the scale among animals is occupied by the monkey, who is close to the uncivilized human, placed on the lowest rung of the next subdivision. Man constitutes a separate category because he alone possesses all the privileges which are granted only separately to animals.

It was not until the 7th/13th century that al-Kazwini (d. 682/1283) put forward the theory that fables in which animals play the role of human beings are of Indian origin, while earlier ideas and inserted a treatise on zoology in his Tuhfat al-zaman wa-kharidat al-a逴d (MS Topkapi Sarayi, Revan Koskii, 1664), the earlier history of the Arabian Nights, 1924, 8, Fann, i, translated by D. B. Macdonald, (Pantschatantra, Vol. I, p. xxi, Leipzig 1859) put forward the theory that fables in which animals play the role of human beings are of Indian origin, while evidence that by the 4th/10th century the view was current that the telling of stories about animals was a useful manual for the identification of the names of animals; glossaries for particular areas are found in A. Hanoteau and A. Letourneux, La Kabylie et les coutumes kabyles, Paris 1893, i, 208 ff. (the fauna of Kabylia); J. B. Panouse, Les mammifères du Maroc, Tangiers 1957, 191 ff.; V. Monteil, Faune du Sahara occidental, Paris 1951. See also A. Mez, Renaissance, 429-31 (Eng. tr. 455-8) and passim; D. Santillana, Istituzioni, Rome n.d., index, ii, 665; J. J. Rivlin, Gescts im Koran, Kultus und Ritus, Jerusalem 1934; Maswani, Islam's contribution to zoology and natural history, in IC, xii (1938), 328-33; on a fragment of a hitherto unknown work on zoology, see A. J. Arberry, in JRAS, 1937, 481-3. On the so-called "Twelve animal" calendar, see TA ⧲[ilm] and L. Bazin, Remarques sur les noms turcs des "Doux animaux" du calendrier dans l'usage persan, in Mélanges H. Masse, Tehran 1963, 21-30.

(Ch. Pellat)

Animal stories in Persian literature

In looking for the origin of the animal story in Persian literature, we are handicapped by the virtual absence of secular works prior to the 4th/10th century. The earliest extant literary sources in which animal stories occur (if we except the surviving fragments of Rōdahl's (d. 329/940-1) Kalila wa-Dimna and Sindbādnāma) are Abu 'l-Ma'allā Naṣr Allāh's translation of the former, made in 538-9/1143-5, and Zahrīl Samarkandīl's version of the latter, composed in 556-7/1160-1. Of these, while Kalila wa-Dimna is certainly from India, the Sindbādnāma has been convincingly demonstrated by B. E. Matravers, "Indian origins of the "Arab Book of Sindbad", Berlin 1960) to be of Persian origin, though probably not earlier than the 2nd/8th century. The Ḥasār afsīnā, the presumed Persian original of the Afī layla wa-layla, can be traced back to roughly the same period. The Pahlavi translation of the Sanskrit Pantalantara can on the other hand be quite safely assigned to the 5th century A.D., and even Ibn al-Mukaffa's Arabic version of this is earlier than the Sindbādnāma. Is this then, when and how the animal story entered into Persian literature? According to Ibn al-Nadim, author of the Fihrist (c. 400/1008), "the first who made separate compilations of ḫurūṣīt and made books in which to put them and laid them up in libraries and in some gave speaking parts to beasts were the early Persians" (Makāla 8, Fann 1, translated by D. B. Macdonnelt, The earlier history of the Arabian Nights, in JRAS, 1924, 364-5). In the context, the last term refers to the first two Persian dynasties, and the passage is at any rate evidence that by the 4th/10th century the view was current that the telling of stories about animals was buried deep in Persian tradition. Theodor Benfey (Pantschatantra, Vol. I, p. xxi, Leipzig 1859) put forward the theory that fables in which animals play the rôle of human beings are of Indian origin, while
those in which they act as animals are "Aesopic", that is, Near Eastern.

In the classical Persian literature the animal tale is introduced primarily to illustrate moral or mystical points, notable examples being the Ḥadīdat al-kalbīya of Sanāʾī (d. 525/1130), the Tafṣīr of Abu’l-Futūḥ Rāz (d. 538/1143), the Asrār-nama and the Ilāhī-nama of ʿAṭṭār (d. ca. 627/1229), and above all the Maṭmawī of Dīlāl al-Ḏīn Rūmī (d. 672/1273-4). More directly in the tradition of the earliest animal story collections are the Marbūn-nama of Warāwīn (622/1225), the Tafṣīr of Nāshabī (730/1330), the diary of Dījan’s Bahārīnān (893/1487) and the Anbār-i Suḥaylī of Husayn Wāḍī Kāshifī (d. 910/1504-5). These are followed by the Layājīf al-tawāṣif of Fāhr al-Ḏīn ‘Alī Safī (d. 939/1532-3), the Dījāmī al-lamţālī of Muḥammad Ḫābālārūdī (1054/1644), and other similar collections that have no particular moral intent. Aside from all this, there still remains much fresh material to be recovered from the current oral literature.

We may tentatively classify the animal tales of Persian written and oral literature as follows:

i. Moral tales, in which animals behave much as human beings, and serve as types.

ii. Tales in which both animals and humans are involved, the animals often showing human characteristics such as speech.

iii. Adventure stories and romances, in which humans play the major roles, while animals appear in helpful or hostile capacities, usually with magic powers.

iv. Stories involving mythical animals.

In the oral literature, as against the written, the last two categories are the more common. Examples include the Ĥāṭim Ťārī, Rustam, Ḫusayn-i Kurd, and Šīhrīyā cycles.

The list of animals that figure in the tales is extensive. Many are identified with particular characteristics. The lion is the symbol of majesty, both tyrannical and beneficent; the bear is stupid, selfish and kindly, the wolf simple and kindly, the fox cunning, the jackal shrewd, the peacock and the peahen beautiful, the bear and swan gentle and kindly, the wolf and dog simple and kindly, the fox cunning, the jackal shrewd, the peacock and the peahen beautiful, the parrot worldly-wise, the elephant clumsy and gullible. However, even unclean animals like the dog and the pig may be found playing sympathetic roles.

L. P. Elwell-Sutton

ANIMALS IN TURKISH TRADITIONS

In various Turkish languages, the Turkicized forms of the Arabic hayawān (hayvan, ayvan, ayban, etc.) indicate the animal species, excluding man; the Klqnhz word ḥijānbar, with the same meaning, is made up of a Persian element, ḥijān (soul) and a Turkish element, bar (there is, has); ḥijānbar (= caṇavār) in the Turkish of Turkey (from the Persian ḥijānbar, "possessing a soul") has a more particular meaning: wolf, wild boar, fierce animal, wild beast, monster; the words ḥijānl, ḥijānt, etc. derived from the Persian ḥijān, and irtīg, ṣirtī, ḥinnc, etc., from Turkish roots, are used to indicate all animate beings, including man.

Many Turkish tribes had animal names; others, as for example the 24 clans descended from Oguz Kaghan, each had a bird emblem; many Turkish personal names are derived from names of animals; furthermore a large number of beliefs and practices, which are today tinged by Islamic features, are survivals of an animal cult which formed one of the important elements of the religions of the Turks before they were converted to Islam. The wolf has a specially important place in these: according to an account attested in a 7th century A. D. Chinese document, the Tou-K'iu were descended from the union of a she-wolf with a man [see Ergencen]; vestiges of an ancient wolf cult are still attested in Anatolian folklore (see Ali Riza, Anadolu’da Bostur, in Halk Bilgisi Haberleri (= HBH), i, 1930, 200 f., ii, 1930, 32 f.). The bear is also the main subject of many stories which are related today (at least in Turkey) as true adventures, but which are nevertheless the scarcely discernible remains of ancient myths (see P. N. Boratav, Histoires d’ours en Anatolie, in FFC, no. 152, Helsinki 1955). In the same category of survivals of an animal cult can be classed the stories of eponymous heroes reared by a leoness (see Kūḏīb d Ded Korkut, ed. and tr. E. Rossi, Vatican 1953, 193; Abū Bakr b. ‘Abd Allāh b. Ayyāb, Kanā al-dawar, Istanbul, Topkapı Sarayi, ms. Ahmed 3 1932, vol. vii, 173 f.).

Among the accounts in oral tradition concerning animals (animal stories of the fable type and stories of marvels with animal heroes treated separately in the article ḤİΓAYA), a number, aetiological in type, are part of the international repertoire; among them are those which form part of the cycle of the Flood and those which are related to the Hoopoe of Solomon. The source of these must be Biblical and Kurdīnic traditions (commentaries and apocrypha).

But a great number of aetiological legends concerning various animals are certainly original creations of Turkish folklore or original re-castings of themes borrowed from the traditions belonging to the countries which the Turks had occupied. The horse occupies first place, through its importance in narrative literature; there are recounted legends concerning its supernatural origins: a race of horses said to be descended from a stallion which inhabited the depths of the waters, one of winged steeds, or a combination of an eagle and a horse, or a race of horses whose ancestor, tamed by an eponymous hero, was called the "horse of fire" (for this last race see Abū Bakr, op. cit., vii, 180 f.). In the epics and other heroic tales, the horse is represented as a devoted companion of the hero; it is endowed with speech and is able to converse with its master in order to give him advice and warn him of dangers. The veneration of the horse seems to have conferred on it, in certain circumstances, an aura of saintliness. The tomb of the horse of Sultan ʿOṯmān II at Üskūdar became a place of pilgrimage; it was known as At-Ewliyāš ("Saint of the horses") and sick horses were brought to it (see İstanbul Ansiklopedisi, s.v. At Mezar).

From a more general point of view, popular superstitions attribute to certain animals magical powers because they are considered capable of embodying evil spirits [see ḤIN]. The metamorphosis of men into animals and, less frequently, of animals into men, belongs apart from the repertory of stories of the fantastic, to the field of miracles performed by saints.
Some animal species have their patron saints; these usually take the form of the animals they protect. The superstitions, legends and practices connected with these supernatural beings can be traced for the most part to rites belonging to hunting and the beliefs attached to them. Originally the guardian spirit was identical with the animal itself; this explains the designation, among the Khurgz, for example, of the animal species by the name of the patron saint: Oysul Ata (<Uways al-Karanl), patron saint of camels, also "camels"; Kambar Ata, patron saint of horses and "horse", etc. In Turkey the stag is still considered sacred and the patron saint of stags (sometimes a woman) is believed to strike the hunters who pursue them (see Y. Z. Demircioğlu, Yürükler ve köylülerde hikayeler, masallar, Istanbul 1934, 115 ff., 120 ff.). There are also legends describing saints metamorphosed into stags or riding on them (cf. the legend of Abdül Məsə, in S.N. Ergun, Türk masalları, Istanbul n.d., i., 166-9, and that of Geyikli Baba, in A. Gölpınarlı, Yunus Emre ve tasavvuf, Istanbul 1961, 10-3).

The saints also possess the power of charming animals, including wild animals and fabulous beasts such as dragons. There is a wealth of legend providing edifying examples of their kind actions towards domestic and wild animals. The ox, being used for ploughing, has acquired, more particularly in the rural districts of the 'Alawi-Bektashis, an especial veneration; several episodes of the legendary biography of Hacıddi Bektash are stories inspired by this notion (Vilâyetnâme of Hacıddi Bektash, ed. Gölpınarlı, 53 ff., 83, tr. E. Gross, Leipzig 1927, 90, 93; Vilâyetnâme of Hüdâım Sultan, ed. R. Tschudi and G. Jacob, Berlin 1914, 28, 32). Shepherds are considered to have certain supernatural powers, generally interpreted as proofs of sanctity; many stories of folklore stress the intimate understanding between them and their animals and a part of their magic powers was manifestly due to the animals.

Turkish art—even in the Islamic period—has been fairly rich in animal themes. In weaving, embroidery and knitting a number of stereotyped figures are stylized representations of animals. On one kind of prayer rug—the most ancient types of this ritual practice—the only decorative element is the reproduction of animal skins: sheep, stag, goat, bear. It appears that this type represents the transitional stage between the use of an actual animal skin and that of a prayer rug with ornamental figures of a secular character (see Yusuf Durul, Türkmen, Yırık, Asfar kah ve kitim motifleri üzerinde bir araştırmâ, in Türk Etnografya Dergisi, i (1957), 65-6, pl. XL and XLI).

In the imagery of popular anonymous works and in the works of known artists (of drawings, paintings and miniatures), animals are depicted as often by motifs which are stylized, often to the point of being abstract, as by a very realistic representation situated in the context of everyday life: scenes of hunting, stock-rearing, training, etc. (see S. Eyuboglu and M. Ş. İşpıroğlu, On "L'album du conquérant," the Turkish periodical Turk Folklor Araştırmaları by P. N. Boratav, in Öreni, x (1957) onwards, and the same author's bibliographies at the end of the chapters L'opération et la "hîkâye" and Le conte et la légende, in Ph.T.F., ii, 38-44 and 62-7. (P'hettv N'hîl Boratav)

Haydar, menstruation. The laws of purity concerning menstruation are less complicated and less severe in Islam than in Judaism, but much more severe than in Christianity. A discharge which exceeds the legal duration fixed by the laws of purity is called sîhidâ; these irregular losses involve only minor impurity, hadath [q.v.]. Contact with a woman who is menstruating does not result in impurity (contrary to the laws of Judaism) and although the Kursîn (II, 222) forbids sexual relations with her, the violation of this taboo is not penalized in this world. Menstruation being one of the circumstances which, involving a major impurity, invalidate the state of purity, a ghfisi [q.v.] (complete washing of the body) with water which is legally pure is necessary to re-establish that state of purity in which the performance of the salât etc. is valid. To those in this state of major impurity, in addition to the consequences of hadath, the following prohibitions apply: they may not recite the Kursîn (except for one or two verses) or touch the Devil nor remain in the mosque (or even walk through it). Furthermore the Ramadân fast and the salât performed by those menstruating are not valid, and the fast is even forbidden to them. The regulations concerning the nifâs (lochia) are almost the same as those concerning menstruation: thus the ghfisi of the woman who has given birth takes place when there is no more discharge, the fixed interval of forty days (Levícus, Zend-Avesta) being unknown at least in theory. The casuistical differences between the various schools on this subject may be omitted here.

The hayd plays an equally important part in family law: it determines the prescribed period of waiting ("idda) before a widow or a divorced wife may remarry. It determines also the legitimacy of certain children (the theory of the child asleep in the womb), fikh conceding that long periods of gestation may occur.

Bibliography: The collections of hadâts (cf. Wensinck's Handbook) and the books of fikh all discuss the question, near the beginning (see Hâdâtd). (G. H. Boussuert)

Haydar, "Ilium" [see as-lasad]; by-name given, particularly by the Shîfs, to 'All b. Abî Tâlib [q.v.].

Haydar, Shaykh, the 5th Safawid shaykh in line of descent from Shaykh Šaff al-Dîn Ishâk, the founder of the Safawî farîka. The son of Dînâyad [q.v.] and Khâdîjî Begum, the sister of the Ak Köyunlu ruler Uzun Hasan, Haydar succeeded his father as head of the Safawî farîka at Ardabil in 864/1450.

Haydar, by his marriage to Hallâma Begût Âgha (or Marta; better known as 'Alamshâh Begüm), the daughter of Uzun Hasan and Despina Khâtûn, the latter the daughter of Calo Johannes, the Emperor of Trebizond, maintained the close alliance with the Ak Köyunlu which had been formed by his father Dînâyad. Haydar was thus at once the nephew and the son-in-law of Uzun Hasan, and the brother-in-law of Ya'kub, who ruled the Ak Köyunlu empire from 883-901/1478-90.

With the overthrow of the Kara Köyunlu empire by Uzun Hasan in 872/1467, the Ak Köyunlu—
Haydar, b. 'Ali Husayni Razi, Persian historian, b. ca. 993/1585, date of death unknown; author of a large history of the world, which in the manuscripts is sometimes entitled "Istahla" and sometimes "Zubdat al-tawdrikh"; and is generally known as "Tabihi-i Haydari." The work is arranged chronologically. They deal with political history and frequently reach into the time of the author, so that occasionally otherwise inaccessible accounts have been preserved. (Ch. Rieu's view that the work is nowhere original is based on an error.) A second part which was to deal with philosophers, learned men and poets was apparently not written (in any event it is not known.) The work does not contain a dedication to a prince and only portions of it have been published; otherwise it has been used only in manuscript form. Its value lies particularly in the information it gives on Central Asia.

'Ali Khan Bahadur rose to power in Mysore (Mahisur) during the second half of the 18th century. His family claimed descent from the Kuravay and to have migrated from India to Mecca at the end of the 10th/16th century. He was born in 1721 at Dodballapur, 27 miles north-west of Bangalore. When he was five years of age his father, Fath Muhammad, a soldier of fortune, lost his life while in the service of the Nawab of Sira. Left an orphan, Haydar was brought up by his cousin, Haydar Shabih, an officer in the Mysore army. Haydar first entered the service of 'Abd al-Wahhab, brother of Nawab Muhammad 'Ali of Karnatak, and then secured a small command in the Mysore army. Having distinguished himself in the siege of Devanhulli (1749), he received the title of Khan from Nandjaradji, the 'ulama (imam-in-chief) and the most powerful man in Mysore. He then fought in the Carnatic wars, and Nandjaradji, much impressed by his abilities, made him jangidjar of Dindigul (1755). In 1758 Haydar was rewarded with the fort and district of Bangalore for repelling a Maratha invasion; and when shortly after Nandjaradji retired from politics (June 1759), he took his place. But in August 1760 his dewan, Khande Rao, put him into a cage. But he forgave the Raja and allowed him to continue as a figurehead on the throne. Haydar then rose to power in Mysore and invaded Mysore and annexed some of the districts. But he died in 1772, and Haydar, taking advantage of this, occupied all the Maratha territory south of the Kistna.

On 12 November 1766 the English and the Nizam formed an alliance to overthrow Haydar, and jointly invaded Mysore. But Haydar managed to win over the Nizam, and with his help carried the war into the Carnatic. Although after a year the 'Nizam deserted him, he fought alone and succeeded in concluding a favourable peace (April 1769). But the English refusal to help him against the Marathas aroused the hostility of his neighbours. Between 1764 and 1772 the Peshwa Madhav Rao thrice invaded Mysore and annexed some of the districts. But he died in 1772, and Haydar, taking advantage of this, occupied all the Maratha territory south of the Kistna.

Haydar was tall, robust and of fair complexion. He was a figurehead on the throne.

Bibliography: Storey, 124, 1241 (Manuscripts, partial editions); Richard Gosche, Über die Chronik des Haidar, etc. (monograph with selections), in manuscript, see Rieu, CPM, iii, 587b. (W. Bartold-B. Spuler)
Brave and resourceful, he never despairs in defeat. Though illiterate, he was an able ruler. He was harsh but just, ruthless to his enemies but kind to his friends. He appointed Hindus to positions of responsibility, endowed temples and, in deference to Hindu sentiment, retained the Râdji on the throne of Mysore, himself remaining only as dalanâ-yî and Nawâb of Sîra, a title conferred on him by Bâsîlât Dîang and confirmed by the Mughal Emperor.

**Biography**

(MOHIBULL HASAN)

**HAYDAR MIRZÁ** (his real name was Muhammad Haydar; as he himself says, he was known as Mîrzâ Haydar; Bâbur calls him Haydar Mirzâ), a Persian historian, author of the Ta'rikh-i Rashidi, born in 905/1499-1500, died in 958/1551 (for his descent see below). Though his mother was a grand-daughter of the Çâhâtây Khan Yûnus and a cousin of Bâbûr. Most of our knowledge of his life is gleaned from his own work; Bâbûr (ed. Beveridge, p. 11) devotes a few lines to him; the Indian historians Abu 'l-Faqîl and Fîrîghta give some information about his later years.

After the assassination of his father (914/1508) he had to flee from Bukhârâ via Badakhshân to Kâbul, which he reached in 915/1509. Received like a son by Bâbûr, he took part in the victorious campaigns against the Özbek and in the reconquest of Bûkhârâ and Sama'rând, but abandoned his benefactor in 918/1511, betook himself to Farghânâ to the Mongol prince Sa'id Khan, received from him the title Gurgân (son-in-law) and accompanied him against Kâshâhar and Yârândân. In the Mongol empire as restored by Sa'id Khan he held a prominent position; by the Khan's orders he carried out several campaigns to defeat the evilvâns Kâshâhar, Kâfîrîshân, Lâdakh and Tibet. On the Khan's death in 939/1533 and the accession of his successor 'Abd al-Rashid, who was presumably active before this, engaged in the civilian population was impressed i.e., the cavalry population was impressed in the hunt. He was surrounded near Ulu-borlu and killed.

The first mention of the son in the sources (Na'îmâ, loc. cit.) refers to the autumn of 1055/1647, but he was presumably active before this, engaged in brigandage in the passes between Andakâr Parsi, Harîlî and Hamîl-elli, i.e., on the main caravan routes from Persia, the Arab countries and Izmir to Bursa and Istanbul. His headquarters were at Sûgyûd-âdâl (north of Eskişehir), and all the notorious bandits of the day were in his following (Ewilîyâ encountered them at Bâlk-işâr near Ankara and mentions their names, i.e., 418-26); the most prominent of them was Kâshâhîrî-î oglu [q.v.]. These brigands, called in the sources eştîkî and gilîdî [q.v., in Supp.], from time to time joined by substantial numbers (200, in 1058/1648) of the vagabond troops of Anatoîa or Anastîa (or Kâshâhar, Kâfîrîshân), its more generally legend [q.v.]; when they could not find employment with a paşa or in the service of the state, these wandering soldiers would attach themselves to a rebel leader and support themselves by brigandage (see C. Uluçây, Saruhan'îda eştîkilîk ve halk hareketleri, Istanbul 1944; M. Akdağ, Gilîdî isyanları, 1550-1603, Ankara 1963; M. Cezar, Osmanlı tarîhinde Levandîler, Istanbul 1965). At one point Haydar-î oglu, wishing to enter the service of the state with his following, asked for appointment
as a sândîqâh-begi; but in spite of the substantial bribe which he sent to the Grand Vizier (Na‘imî, iv, 249, 347), this was refused. Therefore, he attacked the great Pilgrim caravan between Akşehir and Hîghun. He was in control of all the roads, and obliged the local people, peasantry and notables, to enter his service. The vizier İbshîr Mustafâ Pasha [q.v.], beglerbegi of Karaman, was then appointed ser’âshker and ordered to suppress Haydar-oghlu in co-operation with the beglerbegi of Anatolia, İbrahim Pasha (by a firman dated Dhu ’l-Ka’dâ 1057/December 23, 1647; see Ç. Ulucay, op. cit., doc. 120; cf. Na‘imî, iv, 270). All the troops of all categories which were left in Anatolia (the absence of so many on the campaign in Crete had left the brigands a clear field) were put under his command. Although İbshîr Pasha hemmed in Haydar-oghlu at Sogud-dagî, he was unable to capture him (letter to the Exalted Highness, a British title conferred in 1918) the Nişâm.

Haydar-oghlu city

The site of the present city was selected in 997/1589 by the fifth Kutb Şâhî dynast, Muhammed Kutb Şâh, on the right bank of the river Mûsî, a tributary of the Kırshâna, some 11 km. east of the fortress of Golkondâ [q.v.], and at first given the name of Bâhnagâr after a Hindû dancing-girl named Bâhmâtî, one of the sultan’s concubines. A city quickly grew up on this site, since there was no room for expansion in the overcrowded Golkondâ where, moreover, there was no water-supply. The exact date of the transfer of the seat of government from Golkondâ to Haydar-oghlu is not known, although this seems to have taken place within a dozen years of the foundation; Haydar-oghlu was not at first fortified, Golkondâ remaining as the citadel of the capital. At this time North India was in the hands of the Mughals, and envoy’s from Akbar were well received in 1599/1591; the Kutb Şâhî sultan sent valuable presents to Akbar, and entertained the Mughals as tribute, and his domains were left unmolested. The new city prospered, some of its finest buildings dating from this time (see below), until the intervention of the Mughal prince (later the emperor) Awrangzîb in the dispute between Mir Dîjumî [q.v.] and Abd Allah Kutb Şâh in 1665/1655 when Haydar-oghlu was plundered before the sultan bought peace; but the peace was uneasy, and Haydar-oghlu again fell to the Mughals under Awrangzîb four years before the great siege of Golkondâ in 1688/1689. After the conquest Haydar-oghlu became the residence of the şâhâddar of the Deccan, under the last of whom, Cm Kilic Khan, Nişâm al-Mulk, the governor Mubâriz Khân commenced the fortification of the city by a stone wall. After the important and decisive battle of Shâkarkhâldî [q.v. in 1137/1724, by which the Nişâm al-Mulk crushed the plan of his deputy Mubâriz Khân to usurp power in the province, Haydar-oghlu became the capital of the now independent Deccan province under the Nişâm al-Mulk, who received the title of Aşaf Di’llî from the Mughal emperor Muhammed Şâh; the titles Nişâm al-Mulk and Aşaf Di’llî henceforth became hereditary in his family. The new province which Aşaf Di’llî thereby acquired included the co-extensive modern state of Haydar-oghlu before its dissolution, plus the northern province of Barâr and the so-called Northern Sarkâs—is described below. The political history of the city thereafter is little different from that of the state. The city has grown continually as it became the centre of an increasingly organized state, its suburbs soon spreading on both sides of the river Mûsî far beyond the old city walls completed by the first Aşaf Di’llî. The central district of the state, called Atraf-i balda, is the sarf-i khâss or ‘crown’ assignment around Haydar-oghlu city itself, and was constituted, with the other districts, in 1865; the municipality of Haydar-oghlu, with four divisions in the city proper and five in the suburbs (now much extended), was created in 1869; the suburbs include the important cantonment of Haydar-oghlu (‘Sikandarbad’), named after Mir Akbar ‘All Khân Sikandar Di’llî, the sixth Nişâm, which now has its own city corporation. Haydar-oghlu is an important communications centre (road, rail and air), with a modern hospital, important museums, one of the best equipped astronomical observatories in India, and the flourishing ʿUtrzymîyyâ (Osmania) University (1918). With a population of well over a million, it is the sixth largest city in India. Textiles,
including fine velvets, carpets, red earthenware, glass and paper are produced by industries within the city, and excellent cigarettes are made in Haydarabad for local trade.

Monuments.—The old city is surrounded by a bastioned wall, completed by the first Asaf Dîhâb, with thirteen gates and a number of smaller posterns. The city is connected to the northern suburbs by four bridges, the oldest of which (Purândâ pul) was built by Muhammad Kûl Kûtb Shâh in 1001/1593. The same ruler was responsible for the buildings in the central focal point of the city, notably the Câr minâr, 'four minarets', a triumphal archway, 30 m. square in plan, its ground storey consisting of four great arches of 10.8 m. span, each facing a cardinal point; above this is an arched tridrome running round the building supported on carved corbels, with a smaller arched tridrome supported above it; each corner stands a minaret 55.8 m. in height from the ground level, each decorated with a double arcade and a perforated marble screen above it; at roof-level (this is the characteristic feature of the Kutb Shâhi architecture); and each minaret is topped by yet another such balcony supporting a round kiosk with an ogee dome foliated at its base in the Bidjapur (g.v.) manner. The small rooms inside the upper storey are said to have been used for instruction by shaykhs; but, from the strictly ceremonial and royal nature of the use of this building under the Kutb Shâhis and Asaf Dîhâhs, this story may be doubted. (See Annual Report Arch. Dept. Hyderabad State 1917-18 AD (1327 F.), 2 ff., with an inscription of 1043/1633, A.C. (1346 F.), 2 of the Shaykhpet suburb, see ARADHyd. 1936-37 A.C. (1356 F.), 3 ff., with an inscription of 1043/1633, X.E.I.M., 1937, 211 ff. and Pl. XII.)

The city water supply depends on tanks, to which the former Ismâ`îl Shahi sultanate of Barâr, and the Barid Shâhi sultanate of Bidar had already been attached, in 1042/1633; the 'Âdil Shâhi sultanate of Bidjapur in 1097/1686; and the Kutb Shâhi sultanate of Golkonda in 1098/1687 their lands eventually became one great Mughal province—except for those tracts which had been taken by the French soldier M. (Michel Joachim Marie) Raymond (corrupted locally to 'Musa Rafrim'), d. 25 March 1798, are worth notice.

b. Haydarabâd State.

When the old sultanates of the Deccan [see DAKHAN] fell one by one to the Mughal emperors Shâh Dîhâh and Awrangzhâb in the 17th/18th century (the Niçâm Shâhi sultanate of Ahmednagar, to which the former 'Imâm Shâhi sultanate of Barâr and the Barid Shâhi sultanate of Bidar had already been attached, in 1042/1633; the 'Âdil Shâhi sultanate of Bidjapur in 1097/1686; and the Kutb Shâhi sultanate of Golkonda in 1098/1687) their lands eventually became one great Mughal province—except for those tracts which had been taken by the French soldier M. (Michel Joachim Marie) Raymond (corrupted locally to 'Musa Rafrim'), d. 25 March 1798, are worth notice.

The city water supply depends on tanks, to which modern waterworks are now attached, excavated in former times. The Husayn Sâgar, about 8 sq. miles (2100 hectares), lies between Haydarabad and Sikandarabad, the road between the two cities running along the band on its east; it was originally excavated by Ibrahim Kûtb Shâh in 983/1575 as a reservoir for Golkonda and was filled by a channel cut from the Mûsî. South-west of the city is the Mir 'Alam tank, built by French engineers in the Niçâm's service early in the 19th century, while the Mir Diumla tank to the south-east, now no longer used, was constructed in 1035/1625.

Of European monuments the old British Residency of 1803-5, now a women's college, and the tomb of the French soldier M. (Michel Joachim Marie) Raymond (corrupted locally to 'Musa Rafrim'), d. 25 March 1798, are worth notice.
Kilid Khan, entitled Nizam al-Mulk, set the internal administration in order (he had indeed been rühadār of the Deccan some six years earlier, but had then had insufficient time at his disposal to reorganize the province). This noble, the ablest man in the Mughal empire, was after two years recalled to Dilli to become chief minister, but retained his Deccan appointment, leaving Mubāriz Khān to govern as his agent at Ḥaydarābād. The latter, instigated by Nizām al-Mulk's enemies, opposed him on his return to the Deccan to combat a Marāthā invasion, but was decisively defeated at the battle of Shākarkhelīdār (q.v.) on 22 Mufrarrām, 1137/11 October 1724, the date usually taken as the beginning of Nizām al-Mulk's dynastic rule over the Deccan, although his independence had been virtually complete two years earlier when he led the opposition against the Mughal kingsmakers, the Sayyid brothers of Bārha. After his victory he marched for Ḥaydarābād, which he made his capital; the Mughal emperor Muhammad Shāh, wise enough not to oppose him further, deposed the Mahrātā agent and henceforth blessed the award of the further hereditary title of Āṣaf Dīāh.

Āṣaf Dīāh had soon to recognize the power of the Marāthās in the Deccan, to whom the Mughal emperor had in 1130/1718 granted the right to levy the cess known as cawn, one-fourth of the land revenue; their demands were met by Āṣaf Dīāh's agreement to pay this tribute from his own treasury—thus excluding the Marāthā tax-collectors from the necessity of entering his dominions; and continuing to publish the unauthorized sardeṣhmukhī and rābhdārī extortions [for these taxes see marathās]. The agreement was concluded on behalf of Shāhāb, the Marāthā ruler; but the Marāthā Peshwā Bādīl Rāo, now rising to a position of great power, pursed a more aggressive policy towards Āṣaf Dīāh, who in 1140/late 1727 invaded Mahārāshṭra against him. Bādīl Rāo's light guerrilla cavalry eventually completely out-manoeuvred Āṣaf Dīāh, who did not receive the expected support from the Peshwā's rivals, and the campaign ended with the cession of several border forts to the Marāthās. Local conflicts, however, continued, until eventually by a secret agreement between Āṣaf Dīāh and the Peshwā the Marāthās left the Deccan undisturbed except for the levy of cawn on condition that Ḥaydarābād remained neutral during the course of the Mughal empire. This noble, the ablest man in the hands of Asaf Dīāh, returned to Dilli, Āṣaf Dīāh had no sooner re-ascended the Mughal throne—doubtless hoping thereby to be able to rule the Deccan as his deputy. Ghazī al-Dīn marched from Dilli with his army, and, though indecisive, not unsuccessful, obtained the award of the further hereditary title of Āṣaf Dīāh.

In 1178/1765 the coastal districts north of Mādrās (the "Northern Circars" [i.e., sarkārs] of the older histories) were ceded to the British by the Mughal emperor, having been previously under French administration. Nizām 'All considered these tracts to be a portion of his dominions, and in the following
year advanced to recapture them, but without success; the British negotiated a treaty whereby they re-
maintained the districts and undertook to maintain a
body of troops for employment by Haydarabad
whenever required; the treaty was extended in 1768 to include the Nawwâb of Arakât in the obligations
to assist the Niżâm. In 1790, when war broke out
between Tipû Sultan [v.] and the British, a tripart-
tite offensive and defensive agreement was concluded
between Haydarábâd, the Maráthás, and the East
India Company, who shared the land ceded by Tipû
Sultan to be kept for peace. The treaty further
promulgated in 1791, it was to include the Nawwâb of
the late ruler's brother Mubarîz al-Dawla was im-
perilously; the Nizám's services in the revolt the districts of Uthmanabad and the Raycur
dbâb were restored and the "assigned districts" of Barâr became a British trust territory. Niżár
dawla died in 1859 and was succeeded by his three-
year-old son Mir Maḥbûb al-Dawla. The treaty was
extended in 1768 to include the Nawwâb of Arkat in the obligations on payment of a 5 per cent duty.
*Ali's health was failing, and the Nizám
In 1803 Niżám 'Alî's health was failing, and the
Maráthâ râджâs Holkar and Sindhi, dissatisfied
alike with the reinstatement by the British of Bâджi
Râo II as Peşwâ and the possible accession in
Haydarábâd of the pro-British heir-apparent Sikan-
dar Dîjah, prepared to invade the Niżâm's dominions. The British and Haydarábâd campaign under
Welliesley against the dissident Maráthâ forces culminated in the battles of Ase ("Assaye") and Arête
when the British in turn agreed, the bâitions and secured the safety of the Niżâm's do-
minions. Sikanârar Dîjah duly succeeded as Niżâm in the same year; during his reign of twenty-six years
the Peşwâ was overthrown (1818) and the British,
who had thereby technically succeeded to the right
of exacting tâush, released the Niżâm from the obli-
gation to pay it. Sikanâr was succeeded in 1829 by
his son Nâṣir al-Dawla, who reigned for twenty-
eight years with a rare spirit of religious toleration.
The notable events of his reign included the suppres-
sion in 1839 of a Wabhâbî [v.] conspiracy, in which
the late ruler's brother Mubâriz al-Dawla was im-
plicated; serious Šhîl-Sunni riots in 1847, which
did not abate until the Niżâm's government made a
pro-Suni settlement; the assignment in 1853 of the districts
of Bâdar, Uğmánábâd (Naldrug) and the Raycur to the British who
maintained a British auxiliary force, not part of the
Niżâm's army, of 5000 infantry, 2000 cavalry, and
four field batteries of artillery, and to release the
Niżâm from the unlimited obligation to provide
service and assistance in the event of war; and,
perhaps the most significant event in the modern history of Haydarâbad as a state, the accession of
Nawwâb Sâllâr Dîjah [v.] as minister in 1853.

When Nâṣir al-Dawla died in May 1857 his eldest
son Afgâl al-Dawla succeeded to the throne at a
critical period in Indian history, for it was feared
that if Haydarâbad joined the Sepoy Mutiny the whole of Bombay and Southern India would follow
suit; but Haydarâbad adhered to the British cause, and in consequence of the Niżâm's services in the revolt the districts of 'Uthmânabad and the Raycur
doab were restored and the "assigned districts" of Barâr became a British trust territory. Niżár al-
dawla died in 1859 and was succeeded by his three-
year-old son Mir Maḥbûb al-Dawla. The treaty was
extended in 1768 to include the Nawwâb of Arkat in the obligations on payment of a 5 per cent duty.
*Ali's health was failing, and the Nizám
In 1803 Niżám 'Alî's health was failing, and the
Maráthâ râджâs Holkar and Sindhi, dissatisfied
alike with the reinstatement by the British of Bâджi
Râo II as Peşwâ and the possible accession in
Haydarábâd of the pro-British heir-apparent Sikan-
dar Dîjah, prepared to invade the Niżâm's dominions. The British and Haydarábâd campaign under
Welliesley against the dissident Maráthâ forces culminated in the battles of Ase ("Assaye") and Arête
when the British in turn agreed, the bâitions and secured the safety of the Niżâm's do-
minions. Sikanârar Dîjah duly succeeded as Niżâm in the same year; during his reign of twenty-six years
the Peşwâ was overthrown (1818) and the British,
who had thereby technically succeeded to the right
of exacting tâush, released the Niżâm from the obli-
gation to pay it. Sikanâr was succeeded in 1829 by
his son Nâṣir al-Dawla, who reigned for twenty-
eight years with a rare spirit of religious toleration.
The notable events of his reign included the suppres-
sion in 1839 of a Wabhâbî [v.] conspiracy, in which
the late ruler's brother Mubâriz al-Dawla was im-
plicated; serious Šhîl-Sunni riots in 1847, which
did not abate until the Niżâm's government made a
pro-Suni settlement; the assignment in 1853 of the districts
of Bâdar, Uğmánábâd (Naldrug) and the Raycur to the British who
maintained a British auxiliary force, not part of the
Niżâm's army, of 5000 infantry, 2000 cavalry, and
four field batteries of artillery, and to release the
Niżâm from the unlimited obligation to provide
service and assistance in the event of war; and,
perhaps the most significant event in the modern history of Haydarâbad as a state, the accession of
Nawwâb Sâllâr Dîjah [v.] as minister in 1853.

When Nâṣir al-Dawla died in May 1857 his eldest
son Afgâl al-Dawla succeeded to the throne at a
critical period in Indian history, for it was feared
that if Haydarâbad joined the Sepoy Mutiny the whole of Bombay and Southern India would follow
suit; but Haydarâbad adhered to the British cause, and in consequence of the Niżâm's services in the revolt the districts of 'Uthmânabad and the Raycur
doab were restored and the "assigned districts" of Barâr became a British trust territory. Niżár al-
dawla died in 1859 and was succeeded by his three-
year-old son Mir Maḥbûb al-Dawla. The treaty was
extended in 1768 to include the Nawwâb of Arkat in the obligations on payment of a 5 per cent duty.

doab were restored and the "assigned districts" of Barâr became a British trust territory. Niżár al-
dawla died in 1859 and was succeeded by his three-
year-old son Mir Maḥbûb al-Dawla. The treaty was
extended in 1768 to include the Nawwâb of Arkat in the obligations on payment of a 5 per cent duty.
1884, and was succeeded by his son, the present Nizam Mir 'Uthman Ali Khan Bahadur Fatih Djang, in 1911. Under both these rulers the process of modernization of the state continued, with notable improvements in sanitation, education, communications and other public works; further departments parallel to those of British India were introduced, including a government department of publications, and the excellent department of archaeology which, besides assuming responsibility for the preservation of the archaeological monuments of the state, undertook an extensive programme of research and publication in which much attention was given to Hindú and Buddhist material (for example the caves at Adzentía, Elurá [g.v.] and Awrangábād; the corpus of Telugu inscriptions, etc.) as well as to Muslim history and monuments. Muslim learning in a wide field was represented by the Haydarábad journal Islamic Culture (1927). The political boundaries of the state remained more or less unchanged, except that administration was divided into Districts of Barár were leased in perpetuity to the British government in 1902 at an annual rental of 25 lakhs of rupees; while the titular sovereignty of the Mughal emperor at Díhil had been theoretically recognized by Haydarábad until the deposition of the last emperor in 1902, it was explicitly asserted by Lord Reading in 1926. The British title of "Exalted Highness" was conferred on the Nizám in 1918 in recognition of Haydarábad's contribution to the allied war effort, and in 1936 Barár was added to his title, the heir-apparent being styled "Prince of Barár".

At the time of the partition of India into the new dominions of India and Pakistan the Nizám's government opted for accession of the state to Pakistan; the state was, however, forcibly integrated into the Indian Union in 1948, although maps published in Pakistan continued to show Haydarábad as a part of Pákistán territory for long afterwards. The Indian States Reorganization Commission's recommendations resulted in an Act whereby from 1 November 1956 the former state of Haydarábad was redistributed on a linguistic basis between Bombay [now Maharashtra] (Marathi), Mysore (Kannada) and Andhra (Telugu), Haydarábad city becoming the capital of Andhra Praësth. The Muslim population was much depleted by emigration to Pákistán; although there has been no official discrimination against Muslims in the new predominantly Hindú state; Haydarábad is still an important Islamic cultural centre, with Urdu the common language of Muslim intercourse.

Bibliography: For the early history of the first Nizám al-Mulk see W. Irvine, Later Mughals, ed. and continued by Jadunath Sarkar, 2 vols., Calcutta 1921-2, and bibliography given there; short notices in Kh‘āsr Khán, Muntakhab al-lubāb, Bibl. Ind., Calcutta 1869, Eng. tr. in Elliot and Dowson, History of India . . . , vii; Ghulám ‘Ali Asád, Muzaffar-i umira, lith. Kānpur n.d.; Sháh Násir al-Dín, Mu‘allaqat al-qawwá‘, “Nisvat al-mulk,” on the Ilaydarábad mint, the paramountcy of the Rajás and the Muslim intercourses, appeared in Delhi in 1825, and was printed at Paris by Henri-Robert Lamy in 1829; Arabic and Persian translation of this treatise were published in 1861 and 1865. The journalfur the later history of the state, especially the reforms of Sir Sálár Djang: Syed Hossain Bilgrami and C. Willmott, Historical and descriptive sketch of His Highness the Nizám's dominions, Bombay 1883-4; Gazetteer of Awrangabad, Bombay 1884; on these are based the various series (Main and Provincial) of the later editions of the Imperial gazetteer of India, with revised information being continually added from Census reports and the communications of local administrative officers. Of biographies by officials resident in Haydarábad that of Col. Meadows Taylor, Story of my life, 2 vols., London 1879, is notable. See also bibliography to sálár Djang.

(J. Burton-Paige)
The old town, built in a haphazard way, consists of narrow lanes and bystreets lined with dingy, old-fashioned, many-storied houses. A peculiar feature of these houses is that they carry on their roof-tops strange-looking contraptions for catching the sea-breeze blowing from Karachi. These wind-catchers deceived Sir Charles Napier, during his victorious march on Sind, into taking them for small guns. The main street known as Şahî Şâhâyis is slightly wider but is crowded at all hours of the day. In 1847, it was inhabited till recently by Muslim refugees from India who have now been moved to the new colonies constructed for them. In earlier days the fort was surrounded by a ditch, now completely filled with debris, which separated it from the old town (for a full description of the town and the fort as they stood in 1836, see the Gazetteer of the Province of Sind, "B" volume II, Hyderabad District, Bombay 1902, 404). In April 1896, an explosion in the ammunition stored in the fort destroyed many buildings and shops both within the fort and outside. Thereafter the fort was handed over to the civil authorities. In the compound of the blown-up magazine were buried many British officers who fell in the battles of Mîyân and Dubba.

Among the notable buildings in the town are the tombs of the Mîrs, the former rulers of Sind, at the northern extremity of the ridge on which the town stands. While the tombs of the Kalhôrânas are fine specimens of Sindhi architecture, those of the Tâlpurs are a poor imitation of modern styles. All the tombs are richly decorated with coloured tiles set in geometric and floral patterns, but both the colours and designs are of inferior workmanship. Under the Tâlpur rule, the tombs of their vanquished rivals, the Kalhôrânas, are greatly neglected; indeed they still lie neglected although they are now in the midst of a very busy district and are protected under the Ancient Monuments Preservation Act. With the moving of the University of Sind to this town in 1954 and in 1962 of the Sindhi Adabi Board, established by the Government for the development of Sindhi language and literature and for the publication of works of Sindhi authors of Sindhi origin, it has become a prospering centre of cultural activities. The town also houses the recently established Şâh Wall Allâh Academy, devoted to research on the philosophy of Şâh Wall Allâh [see al-Dîhlawî] and his contribution to Islamic religious and theological thought.

The town has considerably expanded in recent years and two new suburban townships—Laţîfshâd and the Industrial Trading Estate—have sprung up, adding to the amenities of the town. The languages spoken are Urdu and Sindhi, and the population consists of many ethnic elements, such as Balûchis, Sayyids, Rûdjîts, pure Sindhis of Dîjât and Mêd origin and the Mewânts.

(A. S. BAZMEE ANSARI)

HAJDARÂN, an ancient place-name in south-eastern Turkey—which may be located in the neighbourhood of Gabês on the road leading from that town to Kayrawân, according to Ibn Hîdjiya 443/ 14 April 1052. The Sanhadja forces under the command of the Zîrid amîr al-Mu'izz b. Bâdis were annihilated by the Hîlîlî hordes, to whom the Fâtimid caliph in Cairo had handed over Ifriqiya as a reprisal for its recognition of the ʿAbbâsîd caliph of Baghdîd. There were not two battles at Hajdarân, taking place, at one year's interval, on the same day and in the same place, as a misinterpretation of a passage in the Bayâns of Ibn ʿIdhârî has suggested. After fondly entertaining the hope of enrolling the Banû Hîlîl and minimizing the importance of an invasion whose causes are perhaps as much demographic as political, the Zîrid stayed all to stop the barbarian flood. Hajdarân commemorates the collapse of the Zîrid power, the end of the civilization typified by Kayrawân and the start of a new era for the whole Maghrib, which thereafter, progressively from East to West, was to suffer from an increase in nomadism so serious that its effects are still visible today.

(H. R. IDRIS)

HAYFÂ, modern Haifa, a port at the foot of Mount Carmel. The name does not occur in the Bible, but appears frequently in the Talmud and in later Jewish sources, and is mentioned by Eusebius as 'Egaz. In the early Muslim centuries Haifa was overshadowed by 'Akkâ [q.v.], and is first described by Nâşir-i Khusrav, who was there in 438/1046. He speaks of the palm-groves and numerous trees of this village (diš), and mentions the nearby sands of the kind used by Persian goldsmiths and called by them diš, which he said, he also found shipwrights who, he said, made the large, sea-going ships called ʿDjûdî [Safar-nâma, ed. and Fr. trans. Ch. Schefer, Paris 1881, text 18, trans. 60; ed. Kaviani, Berlin 1340 s., 26; English version in PPTS, iv, 13].

The Crusaders on their way south at first by-passed Haifa. They soon turned their attention to this useful port, perhaps still containing a shipyard, and ca. Shawwdî 493/August 1100, after a siege of about a month, captured Haifa with the help of a Venetian fleet. According to Albert of Aix (vii, 22-5, RHC.Occ., iii, 531 ff.) the population were Jews, who inhabited this place with a special grant from the Fâtimid Caliph, for which they paid tribute, and who defended it in arms, with the help of Muslim troops. After the capture, the Jewish and Muslim garrison and population, apart from a few who escaped, were assembled and massacred.

Under Frankish rule Haifa acquired some importance, and was often a subject of dispute between the Frankish barons. Idrisi, whose account belongs to this period, describes it as an excellent anchorage and as the port of Tiberias (ed.吉ildeimeister, in ZDPV, viii (1885), Supp.). During the wars between the Crusaders and the Muslims, the fate of Haifa, like other ports on the Palestine coast [see ʿAkkâ, ʿAyyârîyya, ʿYâfa], was linked with that of 'Akkâ.
In 583/1187, after the fall of 'Akka, Haifa, with other places, was occupied by Saladin's forces (Baha al-Din b. Sha‘shu‘i, Rawdatayn al-Suljndiyya, ed. G. Shayyal, Cairo 1964, 79; Abu Shama, Rawdatayn, ii, 88; Muhammd al-Hamawi, al-Ta'rikh al-Mansuri, ed. P. A. Graznevich, Moscow 1960, fol. 92 b; Ibn Wsii, Mu‘assirm al-kurbd, ed. G. Shayyal, ii, Cairo 1957, 202. In view of the evidence of the Muslim sources, the statement of some Frankish sources, repeated by most modern Western historians of the Crusades, that Haifa was captured before the fall of 'Akka must be rejected (see W. B. Stevenson, Crusaders in the East, Cambridge 1907, 205). In 587/1191, anticipating the Frankish recovery of 'Akka, Saladin demolished the walls and fortifications of Haifa, before abandoning it to the Franks. Haifa now remained in Frankish hands, and was refortified by King Louis IX of France ca. 1250-1. In 663/1265 it was abandoned by its inhabitants before the advance of Baybars, who razed its fortifications to the ground. It was later recovered by the Franks, and was finally reconquered by the Mamluk Sultan al-Ashraf Khallil in 690/1291, after the reconquest of 'Akka.

In the Mamluk period Haifa was affected by the general policy of keeping the Palestine coast in a state of devastation, as a precaution against a return by the Crusaders. Kalkashandi mentions it only as a ruin (Sabh, iv, 155 = Gaudefroy-Demobynes, La Syrie a l‘époque des Mamelouks, Paris 1923, 224). The first Ottoman survey registers of the conquest [see DAPTRA KGAPKAN] do not list Haifa among the inhabited places. At about the same time Piri Reis, in his description of the Palestine coast, mentions only a ruined castle (U. Heyd, A Turkish description of the coast of Palestine in the early sixteenth century, in IEJ, vi (1956), 206 and 210-1). By 1012/1601, however, a Turkish document speaks of Frankish merchants who "used to come" to the port (iskele) of Haifa. They had stopped coming because of molestation, which was therefore to cease (U. Heyd, Ottoman documents on Palestine 1552-1615, Oxford 1960, 129). In this period Haifa seems to have formed part of the possessions of the 'Arabah (q.v.) family. In 1032/1623 it was besieged by Fakhr al-Din II Ma‘n (q.v.), who offered to raise the siege if Ahmad Ibn Tarabulus and another man destroyed the walls of Safad. The latter, however, preferred to destroy Haifa rather than risk its falling into the hands of his enemy (I. Ben-Zvi, Erez-Yisra‘el we-yishuv Yisra‘el, Jerusalem 1877, 851; P. Carali, Eres-Yisra‘el we-yishuv dh Ahwatz, ed. P. Constantino Bacha, Harlez n.d. (2 1927), 45 ff.).

The new village built by Shaykh Zahir was the nucleus of modern Haifa. After his fall it was ruled by Djazzár Ahmad Pasha, and in 1799 was captured by the French, who, however, abandoned it after their failure to take 'Akka. In 1837 it was captured by Ibrahim Pasha of Egypt, and in 1840, with 'Akka, suffered damage when the two ports were bombarded by Turkish, British, and Austrian ships. The gradual silting up of the port of 'Akka had resulted in a diversion of traffic to Haifa, which began to grow in size and importance. The Jewish population was increased by newcomers from Morocco, Turkey and later from Europe. A new element was the Templars, a group of German Protestants from Württemberg who settled in Haifa in 1868. Though their purpose in coming was pious, they inaugurated the modern economic development of Haifa. They built roads, introduced four-wheeled carriages, and established regular passenger services to 'Akka and Nazareth. Among other activities, they built a steam-mill, planted vineyards, and introduced modern agricultural methods. Another group of religious settlers were the Baha‘is (q.v.), the followers of Baha‘i Alíh (q.v.) who died in exile near 'Akka in 1892. The tomb of his precursor the Báb (q.v.) on the outskirts of Haifa had been attacked by the Turkish authorities, and was a mausoleum on the slopes of Mount Carmel; Haifa is the administrative centre of the Baha‘i religion.

In 1886 work was begun on a government carriage road from Haifa to Tiberias and Djinn; in 1896, on the occasion of the visit of the German Emperor and Empress, a pier was built, and a carriage road was constructed from Haifa to Jaffa. Despite these developments the population remained small. Towards the end of the 19th century Turkish estimates put it at about 6000 souls, most of them Muslim; by the outbreak of war in 1914 they had risen to between 10,000 and 12,000, of whom about half were Muslims, and the rest Catholic and Orthodox Christians, with a few hundred each of Jews and of Germans and Austrians. The Jewish impressions of the German and Jewish settlers, and their work, see Bereketzade Ismail Halaki, Yid-ta‘ maid, Istanbul 1332/1914, 132 ff.). In late Ottoman times Haifa was the seat of a kad¿ in the sandjak of 'Akka in the vilayet of Bayrut.

On 23 September 1918 Haifa was occupied by British troops and, as part of the mandated territory of Palestine, entered on a phase of intensive growth and development. A new era in the economic life of
the town had already begun with the opening, in 1905, of the Dar'asidah branch of the Hijáz railroad [q.v.]. This, by linking Haifa with Damascus and Haurán as well as with Arabia, had given a great impetus to its development as a port. The low freight charges, made possible by the gift capital of the Hijáz railroad, gave it an immediate advantage over both Jaffa and Beyrút. In 1912 a new line linked Haifa with Southern Palestine and Egypt; the port was improved in 1921, and a major expansion completed in 1933, by which date the tonnage entering Haifa harbour had quadrupled in ten years. The completion of the oil pipeline from ʻIrák in 1933 and of the refinery in 1939 also contributed greatly to the economic growth of the city. These developments helped and were helped by a considerable Arab immigration into the city, and, especially in the thirties and forties, by the immigration of large numbers of Jews, chiefly from central and eastern Europe. Cenuses held under the Mandate show the following population figures: 1922: 9,377 Muslims, 8,863 Christians, 6,250 Jews, 164 others; 1931: 20,324 Muslims, 13,824 Christians, 15,923 Jews, 332 others. By the end of the Mandate, in 1948, the population of Haifa was estimated at 120,000, two-thirds of whom were Jews and the rest Arabs.

On 27 April 1948 the general commanding British troops in Haifa informed Arab and Jewish leaders that he was going to concentrate his forces in the port area and the roads leading to it, and withdraw them from the rest of the city. This announcement was followed by a swift struggle, which left the city in Jewish hands, and, after abortive negotiations for a surrender, by the departure, by sea to ʻAkka and Lebanon or overland to Nazareth, of the greater part of the Arab population. The circumstances of this departure remain obscure and controversial (for varying accounts, see Ārif al-ʻArif, al-Nabka, i, Beirut 1956, 205-23; R. Gabbay, A political study of the Arab-Jewish conflict, Geneva-Paris 1959, 94-5; J. and D. Kimche, Both sides of the hill, London 1960, 115-6, 118-24; G. Kirk, The Middle East 1945-1950, London 1954, 261-3; Walid Khalidi, The fall of Haifa, in Middle East Forum, December 1959, 22-32; Muhammad Namr al-Khatib, Min al-ʻarab al-waṭanî, n.p. [7 Damascus] 1951; N. S. Lorch, The edge of the sword, London 1961, 116-100; H. Sacher, Israel, the establishment of a state, London 1932, 241-5; R. D. Wilson, Cordon and search, Aldershot 1949, 167 ff. and 199).

At the present time (1963) there is an Arab population of about 20,000 in Haifa, including Muslims, Druzes, Bahá'ís, and Christians. Most of the Muslims live in the Wādī Niṣān quarter, on the slopes of Mount Carmel. The Great, or ʻIzaryana Mosque, damaged during the fighting in 1948, was repaired and brought into use again in June 1949. The Carmel village of Kafr ʻAyrūs, inhabited by Ahmādīya [q.v.], is now also within the city limits of Haifa.

Hāyīl or Hājīl, chief town (pop. 20,000 in 1987) of the district of Ḥājīl in Central Arabia, former capital of the Rashīd dynasty of Najd after 1340/1922 a provincial capital of the enlarged realm of the House of Suʿūd (since 1351/1932 the Kingdom of Saudi Arabia). Ḥājīl, bounded on the north by the basin of the Great Naḍf, forms the natural northwestern limit of Najd, although residents of the Ḥājīl area sometimes refer to al-ʻAsāq as the northernmost district of Naḍf proper. Ḥājīl, situated at an altitude of 979 metres near the eastern edge of the granite massif of Aqīl, lies at the heart of the dira of Shammar [q.v.] (of Tāy; of the classical historians), dominant tribe of the area. The hill of Samra, also known locally as al-Mawikīda, bounds the town on the east; the ridge Umm Arğāb forms a barrier on the north. The name Hājīl was first applied to the area adjacent to the town of the settlement, itself originally known simply as al-ʻAṣāq. Hājīl was mentioned by the poets Imruʾ al-Kays and Tāräṣ b. al-ʻAbd. Sprunger identifies Hājīl with the Arme Kome of Ptolemy.

The Ḥājīlīs inhabited the region Hājīl submitted to Wahhābī [q.v.] rule in 1202/1786-7, and in the early years of the 19th/19th century were marked by disputed between the Houses of Ibn ʻAli and Ibn Rashīd for local authority. The forces of Ibrahim Pasha, commander of the Turkish-Egyptian expeditionary force, exacted tribute from Hājīl after the fall of al-Dirayya [q.v.] in 1233/1818. Occupation troops entered the town again in 1253-1837. In 1255/1838 the House of Rashīd became firmly established as rulers of Hājīl under the suzerainty of Al Suʿūd. Independent Ḥājīl Shammar reached the height of its power under Muhammad Ibn Rashīd, ruler of Hājīl between 1289/1872 and 1315/1897. The town then had a population of about 20,000 in four quarters around the market square, al-Masāhba. On the northeast was Barazn fortress, the construction of which was begun by Muhammad Ibn ʻAli early in the 13th/19th century. The Lubda quarter was on the south; al-Makka on the west; and Affān on the northwest. Commerce was in the hands of 80 merchant families from al-Naḍf in Iraq. At the mosque in Barazn was the religious law school of al-Margahī, and the Lubda quarter had a similar institution.

Muhammad b. Bāhā, an armourer at Hājīl during this period, was famous throughout Arabia for his decorated weapons. Hājīl and its environs were stricken by an epidemic ca. 1288/1871, when many of the townsman died. Doughty estimated the population to be only about 500 at the time of his visit in 1294/1877. After the death of Muhammad in 1315/1897, large parts of the town were destroyed during a period of dynastic disputes that weakened the House of Rashīd. The successors of Muhammad received active assistance from the Ḥājīl region: ʻAbd al-ʻAsāq Ibn Suʿūd, who finally took Hājīl on 1 Rabi I 1340/2 November 1921.

The economy of Hājīl is based on small-scale farming and commerce. Staples long grown in the area, such as dates and grains, have been supplemented by a wide variety of vegetables and citrus fruits. Hājīl lays on the pilgrim track from Iraq, but the economic benefits of this traffic were often lost owing to the lack of public security in the district before 1340/1921. Overland pilgrim traffic was diverted, ca. 1383/1963, to the north through the district of
al-Djawf [q.v.]. Muhammad Ibn Rashid was known for the quality of his horses; he kept some 500 head in the Hā'il area and was called "Aziz b. Mușād b. Bājlūlī, who was installed c. 1341/1323 by 4Abd al-'Azīz Ibn Su'ūd. He administers an area of some 160,000 square kilometres including the towns of Kībā, Taymā, and Khaybar.

**Bibliography:** Ibn Bishr, *Unmān al-maǧdād* (Cairo 1373); Lady Anne Blunt, *A Pilgrimage to Najd* (London 1888); C. M. Doughty, *Travels in Arabia Deserta* (Cambridge 1888); J. Euting, *Tabakht al-Shāfīْīyya*, iv, 220, a good general account of the region.

**Important quarters in the modern town, in addition to those mentioned above, are al-Djundayda, al-Zabārā, and al-Wusayţā. The garden suburb of al-Suwayfīla is now contiguous with Hā'il, and the formerly barren tract known as al-Nukra, between Hā'il and Khufā, is cultivated.**

The flora is not as rich as in the north, but there are many coffee-groves, and luxuriant in all the glories of gorgeous vegetation, amongst which banana-leaves could be plainly distinguished, waving their green heads!" Glaser considered that the best coffee of al-Ḥayma came from the region of al-Urr. Rathjens and von Wissmann mention fig trees, peaches, and large sycamores to provide shade. These two authors and Deflers give other details on the flora.

The district of al-Ḥayma is believed to be Hamdānī's land of the Akhrādī, an offshoot of Hamdānī. Today the district is regarded as a stronghold of Zaydism, even though the Ismā'īlīs of the tribe of Yām in Nafrān [q.v.] penetrated there during their advance on Ḥarāz in the 19th century. In the last years of the Mutawakkilite Kingdom of the Yaman and the first years of the Yaman Arab Republic, the People's Republic of China built a paved highway from the Hudayda through al-Ḥayma to Su'ān [q.v.].

**HAYIL [see HAYR].**

**HAYS [see Supplement].**

**HAYSA BAYSΑ, nickname of the Arab poet Shihāb al-Dīn Abū 'l-Fawāris Sa'd b. Muhammad b. 'Alī al-Šayfī al-Tamīmī. He was born c. 492/1098-9 and died at Baghdad on 6 Shaban 574/11 January 1379. He studied fiqh under al-Wazzan al-Shāfī, at Rayy and bājdī under 4Abd b. Wallīb Husayn b. Muhammad al-Zaynabī and others, but turned to poetry and belles-lettres and gained fame by the elegance of his style. At Hilla he eulogized the Banū Anushiwān b. Ḥālid and especially of the latter's rival 4All b. Tārrād al-Zaynabī. He also eulogized other grandees of his time, e.g., al-Djawād Muhammad b. 4All, the Atbgeg Gi'hāzī b. Ẓangī, and the Begtgegnīd 4All Kūlīk.**

As a writer Hayṣa Bayṣa is a representative of the florid style in vogue in Arabic poetry and ornate prose from the 10th to the 12th century. In his odes he praised the caliphs, e.g., al-Mustarshīd, al-Muṣṭafī, and al-Mustadī, but also the Sa'dīyūt inhabitants, e.g., Muhāmid b. Muḥammad and his brother Mas'ūd b. Muḥammad, after whose death he was imprisoned for a while by order of al-Muṣṭafī. He enjoyed the patronage of the vizier Anūshīwān b. Ḥālid and especially of the latter's rival 4All b. Ẓurūl b. al-Ẓarāzi. He also eulogized other grandees of his time, e.g., al-Djawād Muhammad b. 4All, the Atbgeg Gi'hāzī b. Ẓangī, and the Begtgegnīd 4All Kūlīk.

Hayṣa Bayṣa was very proud of his Arab lineage, claiming descent from Aχbām b. Șayfī [q.v.]. He dressed himself like a Bedouin chief, riding on horseback through the streets of Baghdad fully armed. He also affected Bedouin speech, pronouncing the qāf like g; he was fond of obsolete words—he got his nickname from the expression fi ḥayṣa bayṣa "in straits and distress"—and addressed everyone in the classical language with all its grammatical niceties. The biographers give instances of the affected style of his private letters which made them nearly unintelligible to the addressee. These weaknesses made him an easy target for the satire of his enemies, e.g., the physician Ibn al-Kaṭānīn (d. 558/1163).

HAYTĀL [see HAYṬIΛA].

AL-HAYTHAM b. 'ADI Al-TAṬ, Abū 'Abd al-Rahmān, author of historical works (ahkāmī) born at Kūfah ca. 120/738 in a family originally from Manbījī, died at Fām al-Sīlīḥ in 206/721. His father, Abū al-Muḫṭalīb, who was a poet, left him as a child in the care of the Abu Hāriūni family, which is represented in the form of a branch of history. He was freed by the latter after a criticism of Abī Ḥabbās b. Abū al-Muḫṭalīb that his wife's family had slanderously attributed to him, and that the Abbasid court more or less regularly from the 3rd/9th to the 6th/12th century, most of whose works have been lost. The Fihrist (Ibn al-Kalbi, Abu Mikhnaf and other authors of the Abbasid period, etc.), genealogy for himself. On the whole, he is blamed for an impropensity of his stories (K. al-Mu'ammarīn; Khawdīm al-Khulafā; Fihrist vii, 209-211; Askalānī, vi, 207-209; J. W. Fock).—It is current in translations from the Greek, and in the researches and systems that draw their inspiration from them. According to the taste of the various thinkers, and (2) of the "Hellenistic Philosophers" (falsafīyā), we find it again in the treatises of 'Imād al-kalām which discuss the arguments of both of these groups.

A complete survey would be very extensive. The following constitute some points of reference:

1. In Abū Bakr al-Rāzī, al-hayūlā is the third of the "Five Eternals (i.e., Principles)", in its strict sense of "principle matter" (Raḍā'il falsafīyya, ed. F. Kraus, Cairo 1939, i, 195 ff.).—A recession and summary of al-Rāzī's arguments was made in Persian by Nāṣīr-i Khusrāw, and in Arabic by Fakhr al-Dīn al-Rāzī. The "Second Eternal", the Universal Soul (al-nafs al-kulliyāyya), shook and agitated Matter in order to produce the world—without success; it needed the help of the "First Eternal", al-Bārī', the Creator (op. cit., 308). Matter is then subjected to Form.

2. Emanatist world-views, particularly in Shi'iism, take up the theme of Primary Matter, emanating or radiating from the Supreme Principle, and eternal. In Karmatī cosmology, as well as, for example, in the Kītāb al-Yanābī of the Isma'īlī Abū Ya'qūb al-Sidjāstānī (4th/10th century), al-hayūlā is the third emanating Principle. According to al-Sidjāstānī, it is when the First Intelligence imagines its "Follow", the Universal Soul, that Matter comes into being. The last "is powerless to manifest itself by itself; it needs the help of Form, that is Nature, since Matter is by definition that which can manifest itself only with the help of something else" (text and trans. apud H. Corbin, Triologie ismaélienne, Tehran-Paris 1961, 62/85). We find an analogous cosmogenical process in Ibn Sinān, but here al-hayūlā is replaced by the Celestial Body.

Three characteristics seem to be inherent in this Isma'īlī Matter: (a) it is pure virtuality vis-à-vis Form (cf. also Mullā Sadrā Shīrāzī, 4th/10th century); it can "manifest itself" only by means of Form; (b) it has, as it were, a positive desire for Form; (c) it nevertheless keeps its autonomous position as the third emanating Principle. Nāṣīr-i Khusrāw says that when all the souls of the sublunary world have found their true Homeland again, not only the Universal Soul, but Abū Bakr al-Rāzī would have it, but Matter also "will be liberated, released from its subjection to Form, just as it was in pre-eternity" (H. Corbin, introduction to the Kītāb Dhīmān al-hayūlā yawmān of Nāṣīr-i Khusrāw, Tehran-Paris 1953, 133). The "desire for Form", constitutive of Matter, therefore remains, as it were, ambivalent: it is a positive desire to be manifested in Being, but a desire that is also a subjection. It is a force that is both negative and positive.

A tradition attributed to Empedocles had a great effect on the elaboration of Isma'īlī systems (cf. Asīn Palaçios, Atenismarr wa su Escuela, Madrid 1914, chap. V, 54 ff.). In the extracts of pseudo-Empedocles reproduced by the Kītāb al-Mīlāl wa-l-nīḥal of al-Shahristānī (ed. Cairo 1320, ii, 168), the first, and thus the most noble "Thing Caused" is called al-'unsur, "(primordial) Element!", simpler than Intelligence, Soul, Nature and the Mixtures.
This ʿunṣūr, the First of the Five Emotions (the same theory is found in the summary of Thāle given by al-Shahrastānī, op. cit., 158), seems to have done much to foster the idea of a primordial spiritual or intelligible Matter (al-ḥayūlā al-rābīʿiyya). We find the idea of this again in Mullā Ṣaḥdār ʿṢhīṣāz in Iran, in Ibn ʿArabī, al-Ḥikma al-Makrama in Andalus. In this sense, too, ʿAbd al-Karīm al-Dīlī calls God the Ḥayūlā of the Universe.

3. The Rasāʿīl ʿlīkhwān al-Ṣafāʾ give us, as it were, an abridged (and sometimes rather clumsy) version of the Ismāʿīlī views on Primordial Matter. The ṣūṣāla on “matter, form, time and place” (ed. Cairo 1347/1928, ii, 4 ff.) reaffirms clearly that the principle of individuality (contrary to the Aristotelian tradition) comes not from matter but from form. “All bodies are of one single genus—which is of one single substance and one single matter. Their differences come from form; this is why purer and nobler than others” (op. cit., 6). It is ʿūrū, not ḥayūlā, that is changeable and volatile (cf. ṣūṣāla on “Intellect and the Intelligible”, iii, 230-2).

The ṣūṣāla on “Matter and Form” (ii, 4-5) explicitly states that ḥayūlā can be understood in four ways: (a) “the Matter of art”, ḥayūlā al-ṣandāʿa, every substance that serves as material for the craftsman; (b) “Physical Matter” or “the Matter of nature”, ḥayūlā al-ṭabāʿa, that is the “four elements” of which all sublunary bodies are composed, and to which they return when they decay; (c) “the Matter of the Whole”, ḥayūlā al- kull, “the absolute (mūlāb) body from which the Cosmos emanated”; (d) “primary Matter” (or, here, rather “primordial Matter”), al-ḥayūlā al-ʿālī, defined as simple, intelligible “substance” (dawāḥir), not perceptible to the senses, and as the “form” (ṣūrā) of all Selfhood (hwawūyya).

The term ḥayūlā, then, is used for “secondary matter” (already formed), as well as for “primary matter” — or rather the ʿlīkhwān al-Ṣafāʾ do not refer to this classical distinction; their idea of ḥayūlā ʿālī is not that of “pure potentiality”. In fact, the hierarchy of ḥayūlās begins with their lowest degree, the idea that every existing thing is, in different respects, both “form” and “matter”; each one of the four classes of ḥayūlā is “form” with respect to the class above it. “... The Absolute Body is form in Primordial Matter ... The latter is a spiritual form emanating from the Universal Intellect, which emanates from the Creator” (Rasāʿīl, iii, 230). According to the Ismāʿīlī idea of “form” (see above), all form, even spiritual form, can disappear, since it is limitation. The Creator (al-mubdiʿ) alone remains (op. cit., 231), and every existing thing returns to Him (op. cit., 232).

This hierarchy of the four connotations of ḥayūlā, as synthesized by the ʿlīkhwān al-Ṣafāʾ, accords closely with that subsequently adopted by Ibn ʿArabī. It is, in fact, probably a Hylemorphism, or rather a Hylemorphism remodelled on Neoplatonic lines. Matter exists for form, and, in sublunary beings, form for matter (e.g., al-Ḥārīb, al-Madīnā al-fāḍila, ed. Dieterici, Leyden 1895, 20-1; the term used is mudda, but in one example, mudda wa ḥayūlā: similarly in Maʿānī al-ṣalāḥ, 46). Ibn ʿArabī, in another connexion, stresses the interaction of matter and form, giving priority to form: “It is untrue that matter (mudda) is in some way the cause of form. Form alone is that by means of which matter necessarily exists” (Ṣaḥīḥ, ʿIlāhiyyāt, viii). It follows from this that “form is anterior to matter (ḥayūlā); not that it always exists potentially of itself; but (in composition) it is actuated only by means of matter (mudda)” (ibid., 88). On the following page (69): “Form exists only in matter (ḥayūlā). It should be
330 HAYULÁ — HAYY B. YAKZÁN

noted here that the world of “material forms” (suwar maddiyya, a common expression) is not confined to the corporeal world. Primary matter, hayuld, can receive forms other than corporeal forms (ad-ḏa'.) Ibn Sīnā appears here to allude to the world of Celestial Souls, showing also, perhaps, some influence of the Shi‘i “spiritual matter”. The world of Separate Intelligences, however, is usually represented as free from all matter.

In the famous Risāla fī l-iṣbīḥ (ed. Mehren, Leyden 1894, 5-7), it is the term hayuld that denotes the first of the three simple Substances that have no existence of themselves: matter, form, accident. They too are pervaded by the impulse of iṣbīḥ, of “desire”; it is with an “innate” (gharīḥ) desire, we might say “an ontological desire”, that matter desires form, without which it does not exist, and form desires matter, as its substratum. We find here again the positive desire for form that we have already found in Isma‘īlī system.

Many other references to the fašāṣīfa could be given. We should note in Ibn Sīnā (an Aristotelian line of thought, influenced by Alexander of Aphrodisias?) the idea of a “material intellect”, al-ṣabī‘ al-hayyulānī, conceived of as pure potentiality vis-à-vis all knowledge, and so called because “of its resemblance to primary matter, by which itself possesses no form, while being the subject for all existing forms” (Nāṣīr, 165). The expression is not found in al-Kindī, or in the Averroës literature, and the later Māturidis, who particularly adopt the term fašāṣīfa, as used by Ibn Sīnā, for the “material intellect”. In certain modern dialects the word hayy, which denotes the name of the principal tribe in the region of the Arabian Peninsula, has only the meaning “to live”, but the name of Eve, the mother of the human race, Hawwā‘, which is explained in Genesis (III, 20) by a Piel form “who gives life”, could well represent the concrete starting point of the same semantic derivation.

In certain modern dialects the word hayy denotes a quarter in a town or settlement, more precisely a quarter inhabited by the same ethnic or tribal element (see Madīnā, Mahāllā).

(H. LECÉRÉ)

HAYY B. YAKZÁN, the name of the principal character of two philosophical allegories, one by Ibn Sīnā, Kīṣāt Hayy b. Yakzān, and the other by Ibn Tufayl, Risāla Hayy b. Yakzān fī asrār al-bikma al-muḥāṣabīyya (L. Gauthier’s vocalization; Hourani gives it as muḥāṣabīyya). Until the end of the 19th century the Risāla of Ibn Tufayl was much better known than Ibn Sīnā’s short work, the contents of which if not the title were unknown. The similarity in titles led to the belief that there was a
close kinship of thought, and at times that the one was a translation of the other. Mehren, *Traité mystiques*, i, 7-8, translates the title given in 1299/1882 to the Risâla published in Istanbul: "Traité Hayy ben Yaqzan sur la philosophie orientale, que l'Imam Abou Djafar ben Thoefli a tiré des ouvrages précieux du grand maître Abou Ali ben Sindâ". The last page containing a note: Ibn Khallikân attributes this treatise to Ibn Sinâ; "perhaps he wrote it in Persian, and so we may have an Arabic translation of it, made by Ibn Thoefli". De Goeje, in Léden, was the first to notice, on examining a manuscript, that Ibn Sinâ's work was in fact written in Arabic and that the title was all it had in common with the other. Its authenticity is now indisputable and it figures in all the bibliographies, but the text was only established and published two centuries after that of Ibn Tufayl.

I. — *Kissat Hayy b. Yakzdn*, by Ibn Sinâ, who wrote it while imprisoned in the fortress of Ferdagdân, probably in 414/1023, as it seems likely that his captivity took place between 412/1021-2 (when the Buyid prince Samâî al-Dawla succeeded his father Shams al-Dawla, who, at the time of his death, still had Ibn Sinâ as his doctor) and 414/1023-4 (when the town of Hamadân was captured by 'Allâ al-Dawla, whose minister he was). The *Account of Hayy b. Yakzdn* is mentioned by Djuzdjapl in his bio-bibliography of Ibn Sinâ, which is repeated by all the Arabic notices. Ibn Sinâ's work inspired the poetic allegory *Hayy ben Melis*, by the Spanish Hebrew author Abraham ibn 'Ezra (?1050-1167).—Critical editions: 1) Mehren, *Traité mystiques*, i, 1889, the text preceded by a kind of paraphrased resume which is not a translation, and accompanied by extracts from the commentary written in Arabic by Ibn Zayla, a disciple of Ibn Sinâ. 2) Corbin, 1952, with a translation which does not follow the Arabic text exclusively, but takes into account the Persian translation and even the Persian commentary. These accompany the text and are also printed *en extenso*; both were written at the request of prince 'Allâ al-Dawla in the five years following Ibn Sinâ's death, by an anonymous writer who may be Djuzdjapl (Corbin, *Avicenne et le récit visionnaire*, ii, 151). The division into paragraphs by the Persian commentator gives great clarity to a text which in itself is all the more difficult to comprehend since it is the proper name of the active Intellect; "Living", since Ibn Sinâ places his main works for him an insurmountable obstacle. To the reader familiar with Ibn Sinâ, however, the *Account* brings a wealth of echoes of themes already discussed, to such a point that the French translation published by A.-M. Goltchon in 1959 is illustrated with a continuous commentary drawn from these very works of philosophy and medicine, thereby following the Persian commentator's advice. Indeed, the latter concluded his work with these words: "It must be realised that a simple statement has been given here of each of the questions discussed in this epistle. A complete exposé of them can be found in the major works. The Master Avicenna has himself discussed them ..." (following Corbin's translation).

Adherence was as close as possible to the Arabic text; this new translation was checked by comparing all the ideas expressed, phrase for phrase and often word for word, with the passages in the great works that they called to mind. This method allows the meaning of the *Account of Hayy b. Yakzdn* to be fully appreciated, both in the general sense and in detail. It is then seen to be a poetic narrative, related in form to the celebrated *Poem of the Soul* and similarly based on a philosophic doctrine which, beneath the decorative imagery, remains very precise.

This philosophical meaning was confirmed by research into the sources. These were discovered in Aristotle, Plato, Porphyry, Galen, Ptolemy, Fârâbî, in the Kur'ân, in popular Semitic and Iranian legends and the Arab geographers. But certain chapters are specifically Avicennist, in particular the three most beautiful ones which conclude the *Account*.

The unity of the work can then be grasped: it is that of the theory of forms taught by Ibn Sinâ. Alike given by the active Intellect which is the last of the pure Intelligences, the material forms constitute the terrestrial world, whilst on the other hand the intelligible forms permit the knowledge of the universe peculiar to the human spirit which, with their help, can pass beyond the attainments of the senses. The material forms of the astral bodies and those of the pure Intelligences are above the active Intellect and the sublunar world, but can also be known. The *Account of Hayy b. Yakzdn* is thus found to include the Avicennist theory of knowledge even as far as its loftiest reaches, the Prime and Necessary Being.

The name given to the work is then easily explained. *Hayy b. Yakzdn* is the proper name of the active Intellect; "Living", since Ibn Sinâ places perfection in life in intelligence and action, "son of the Wakeful One", because he emanates from the penultimate pure Intelligence which knows neither sleep nor inattention. This name is closely connected with the theory of creative emanation professed by Fârâbî and Ibn Sinâ. The active Intellect is also, through knowledge surpassing the perceptible world, the soul's guide towards its prime Principle, the Being that shines forth over all others.

We now give an outline of the *Account*:

The human soul, mastering its sensual faculties, comes with these, as it were while walking, to the edge of intellectual knowledge. A splendid Sage, whose beauty is unassailable by time, appears before it, and the soul desires his acquaintance. He is the first to speak (it is he who gives the intelligibles), a conversation develops; the Sage gives his name—"Living, son of Wakeful". "My profession", he said, "is to travel through all the countries of the world, to be able to embrace them all in an exhaustive knowledge (it is he who possesses all the intelligibles). My face is always turned towards my Father (the Wakeful), and I have received from him the keys to all knowledge". Looking at his interlocutor, the soul
with its human nature, he tells it that its features reveal it to be the possessor of the best of the natures in the terrestrial world; but it must beware of its evil companions. These are the taste for carnal pleasures, violence and giddy imagination, that retails both true and false. It is, however, impossible to remain aloof from these on earth; it is necessary at least to compel them to obey, to preserve a balance, and not to let them take control.

With this warning, the soul reflects and is then quite ready to learn how to keep these difficult companions under restraint. It would be very happy to travel like the Sage. He replies that, in its present condition, it can only make a journey punctuated with halts. And the soul replies by questioning him about the regions that he knows and about which he has undertaken to acquire complete information.

He then sketches out for the soul a metaphysical geography of the world. One of the regions, bounded by the East and the West, is well known and a subject of study; it is there that forms are to be seen in matter, it is the world as ordinarily presented to man. The latter can only penetrate into the other two regions by means of a strength not entirely natural to him, since it must have the help of the active Intellect. Ibn Sinā here makes use of popular geographical data about the terrible Ocean which none can cross, and describes it as the home of matter. The region in the West, where the material forms come for refuge, to lose themselves, just as the sun disappears over the horizon. Symmetrically, the East is the place of origin of the light which the forms, whether material or intelligible, carry with them. A description which takes its features from the mountain of Kāf reveals the land of the intelligibles, reached by the human spirit after a dreadful ascent. To walk above the abyss, to climb ever higher towards more perfect forms, is possible only by means of a vigour renewed by fresh, ever-flowing water from a spring near the motionless source of the Living Being. The two commentators have seen logic in this ever-moving water with which the human intelligence was to revivify itself; as for the source of the living Being, it is motionless because the intelligible form, in the absolute and direct state at the origin of the material form, is quite certainly removed from all mobility. With the help of logic, the reasoning soul can traverse the deserts and darkness of the unknown, the sea of matter, and scale the mountains of the intelligibles. After the darkness of the unknown the soul, still fortified by logic, reaches a great light. It is the light arising from the explanations given by Ḥāyā b. Ṭakān.

Under the symbolical form of a band of émigrés fighting against the inhabitants, the Sage explains to the soul the incessant changing of forms in matter. Many of the terms recur in the Epistle on Love, the Poem of the Soul, the soul which little by little becomes accustomed to being in contact with "the ruin deserted" by previous forms, which has become its body. The forms are the light which creeps into the obscurity of matter, given, according to the latter's requirements in its dark preparation, by the luminous active Intellect. It is for this purpose that Ḥāyā b. Ṭakān must know all beings and all circumstances perfectly. But the corruptible world can only be a ruin temporarily decked out. "Every animal and every plant has come by night into this country", for every form comes invisibly. "Joy and beauty are taken from a distant place", the place whence come the forms which are the light, whether material in beings, or intelligible in the spirit.

Between this living, immaterial Orient and the world of incorruptible matter is located the world of incorruptible matter, that of the astral bodies, nearer than our own to the "window of light". It is the Region of stability and peace, for there the forms are not driven away from matter. The heavens are described as spaces populated with inhabitants whose features express the physical characters of the astral bodies according to Ptolemy. The Empyrean, the ninth sphere, is described as the dwelling of the pure Intelligences, "beyond there is no more inhabited land". The elements are outstripped, the vast earth, the mass of water, winds imprisoned, flaming fire . . .

How can these forms, which have just been shown us under their aspect of substantial forms, be possessed by intelligence as intelligible forms? They are first captured by the five senses, then handed over to the general or common sense which is as it were a guardian responsible for the five paths taken by the watchers for news. It hands over all its prizes to the memory; this places them at the disposal of the intelligence, which gives fecundity to the intelligible forms (that is to say universality), if imagination has not previously spoilt them. Like a sun, intelligence rises between the senses and the imagination, despite the satanic rule that they enact upon it, insinuating themselves through the breath into man's inmost parts. If it succeeds in holding them in a harmonious, submissive state, intelligence lives in a sense in the realm of the angels. It mounts upwards to regard the pure Intelligences themselves, the primordial creation through the medium of which being descends from the prime necessary Being, down to the very lowest creatures. The soul contemplates the Intelligences, each with its own immutable place, grouped round the supreme King like children around their father, in a region without matter.

Above all these, and above all expression, is the King, the prime and necessary Being, in an absolute unity, with none of the divisions that our language attributes to him, "all countenance through his beauty, all hand through his generosity", so dazzling that he is veiled by his own radiance. Some men, those the best, leave the baseness of this world to make their way in solitude towards him.

Here the Sage, the active Intellect, directly intervenes; he reveals that to awaken a human soul to these lofty realities is his own way of serving the King, and adds: "If you wish, follow me towards Him". This invitation is the last episode in the Account.

The links between this work and Ibn Sinā's other writings appear to be extraordinarily numerous, close and precise. If certain translations have failed to grasp them, it is because they have minimised or paraphrased the unexpected terms, while they are in fact the key to the passage in which they occur. On consideration, it is impossible to see a dress in a fancy or theosophy, in those pages; one can only admit that they present the philosopher's thought in a new and poetic, but faithful and coherent, form. A philosopher is not forbidden to be a poet. On several occasions Ibn Sinā showed that he had the ability to be one, and he did not remain dryly didactic, but enriched by his own sensibility the discoveries of his intelligence. The highest knowledge open to the human soul, that of the pure Intelligence which is the King creator, is expressed with a tone of undeniably personal emotion, which is repeated
when the other works speak of knowledge through
the depth of the heart, the sirr. This is the point that
survive intact today. List of the manuscripts and

Hayy ben Yaqdan, 2nd ed., XXII-XXXIII, com-
pleting the first list included in the ed. of 1900. The
Risala was published for the first time in 1671, with
a Latin translation, by Edward Pocock at Oxford
(reprinted 1700), followed immediately by two
English translations and one Dutch made from the
Latin, and also a German one in 1726. Translations
from the Arabic text: Hebrew, by an unknown
author, with Hebrew commentary by Moses of
Narbonne in 1349; then from the text established by
Pocock: English, Ockley, London 1708 and 1731;
German, Eichhorn, Berlin 1783; Castilian, Pons
Boigues, Saragossa 1900 (repr. Cairo 1905). It is
possible that Defoe's Robinson Crusoe, the first part of
which appeared is 1719, owed something to
Ockley's translation of Ibn Tufayl. Another English
translation by P. Brünnele appeared in London in 1904
(revised A. S. Fulton 1929). Three editions of the
text alone in Cairo 1882, 1921; two in Constantinople,
one in Beirut (1936). Critical edition of the text with
French translation: Gauthier, Algiers 1900, followed
by a new edition of the text, improved by the use
of new manuscripts and accompanied by a new
translation, Algiers 1936. Russian translation,
Kuzmin, St. Petersburg 1920; Spanish, González
Palencia, Madrid 1934, from the text established by
Gauthier.
Without any doubt, Ibn Tufayl borrowed the title
from Ibn Sīnā; but curiously enough, it was to
introduce a philosophical thesis entirely contrary to
that writer's. We have just seen that the very name of
Hāyy b. Yaḥṣān and his rôle were inspired by the
theory of emanation, which makes the active
Intelect the last of the separate Intelligences. By
attributing to it the gift of the Intelligibles to the
human soul, Ibn Sīnā deprived the latter of its
highest intellectual function, namely the abstraction
of the Intelligibles. Ibn Tufayl, says González Palencia
in his introduction (22-3), teaches that one cannot
apply to separate essences either our categories of
thought or our ways of reasoning, and he raised the
question of the unity of human intellect. In our
opinion, Ibn Tufayl went further; for he returns to
the name which denotes the active Intelect to
attribute it to a man. This man, the Philosophos
autodidactus as Pocock called him in the title of his
translation, succeeds precisely in discovering, quite
alone, the sciences and philosophy, and clearly by
means of abstraction. That is to say, he appears as
"the incarnation in man of the active Intelect", as
Gauthier puts it (Ibn Thofail, 89), or better still as
the personification of the specifically human active
Intelect. Its true function is thus restored to man's
intelligence. This is a fundamental change in the
discipline described above, presented in the form of
imaginative writing. This work sums up the con-
tradictions which continued for two centuries in the
West; for it implies the theory that St. Thomas
Aquinas put forward nearly a hundred years later,
that the perfection of human nature requires that
the active intellect should not be external to man
(En Aristotelis librum de anima commentarium,
§§ 730 and 734).

The prologue to the Risala refers expressly to Ibn
Sīnā in respect to the choice of this name and those of
Asāl and Salāmān which occur in the narrative. On
some particular points it refers to his doctrine and
to that of al-Ghazzālī, which are studied and compared
with "opinions expressed in our own time", as words
which have made it possible to isolate the truth
(1936 ed., 6-7). Four long textual quotations from
the Ṭghtardi (ed. Forget, 202-4, French trans. 493-7)
leave no doubt that Ibn Tufayl approved of Ibn Sīnā's
exposé of the Šofā'ī states, their asceticism and the
beginnings of ecstasy, and probably also the
ending of his Account of Hāyy b. Yaḥṣān which,
however, is not quoted verbatim. This harmony of
views is all the more evident in that the freedom with
which he handles his source is also more marked, as
well as the dissatisfaction which Fārābī and the
Šofā'ī inspire in him, no less than the Andalusian
scholars (trans. 10-11 f.). No kind of allusion to any
esoterism in Ibn Sīnā is made.

Ibn Tufayl's story has often been summarized,
among others by Carra de Vaux, E1, art. Ibn
Thofail, and more briefly by Gauthier himself (Ibn
Thofail, 62-3) as follows:

"On a deserted Indian island situated on the
equator, and thus under particularly favourable
conditions, from amidst the ferment of the surround-
ing clay a child was born, with neither father nor
mother. According to another version, the author
tells us, he was brought to the island by a current,
in a chest which the mother, a persecuted princess
dwelling on a neighbouring island, had been compelled
to entrust to the waves to save her child's life. This
child was Hāyy b. Yaḥṣān. He was adopted by a
gazelle which suckled him and acted as his mother.
He grew up, observed and reflected. Possessing a
superior intellect, he was not only able to supply all
his needs with ingenuity but, through a com-
bination of observation and reasoning, he soon
discovered by himself the highest physical and
metaphysical realities. The philosophical system
which he finally evolved, which was naturally that of
the fašasīfa, led him to try to find in mystical
ecstasy the intimate union with God which con-
stitutes at once the plenitude of knowledge and
sovereign, continual, eternal felicity. Withdrawing to
a cave where he succeeded in fasting for forty days on
end, he trained himself to separate his intellect from
the external world and from his own body by
exclusive contemplation of God, to unite himself
with his Lord; in this he finally succeeded. At that
moment, he met Asāl, a devout man who had come
dwelling on a neighbouring island to devote himself in
peace to the ascetic life on this little island which he
believed uninhabited. Asāl teaches language to this
companionship as singular as unexpected, and he is
astonished to find in the philosophic system discover-
ed by Hāyy b. Yaḥṣān a transcendent interpretation of
the religion that he himself professes, as well as of
all the revealed religions. He takes him to the
neighbouring island which is ruled by the devout king
Salāmān, and commissions him to disseminate the
sublime verities that he has discovered. But the project fails. Our two philosophers finally have to recognize that pure truth does not at all suit the vulgar, enslaved by the senses; to penetrate those materialistic intelligences, to act upon those rebellious wills, it is obliged to clothe itself with the symbols that constitute the revealed religions. They therefore left these poor people for ever, recommending them faithfully to observe the religion of their fathers; and they returned to their desert island, to live the superior and truly divine life which very few are privileged to "believe" (Ibn Thofail, 62-3; another more detailed resumé, 101-13). Hayy, Asāl and good king Salāmān represent respectively Philosophy, Theology and simple Faith (Ibn Rochd, 20).

The book can also be divided, under a more schematic form traced out by G. F. Hourani (The principal subject: ..., 40), as follows: 1. The author's introduction, sources of knowledge on mystical philosophy. — 2. Unassisted, Hayy progresses from the most elementary knowledge to the loftiest mystical state. — 3. Harmony of Hayy's philosophy with the religion which Asāl claims to be revealed. — 4. Attractions of the external aspects of religion for the majority of men. — 5. The author's conclusion.

According to Gauthier, the book's essential purpose is to show "the harmony between religion, principally the Muslim religion, and the philosophy of the falāṣīfa" (Ibn Thofail, 89, repeated in Ibn Rochd, 20). Every reader seems to have interpreted the work in his own way. Munk: a simple treatise of natural philosophy; Pocock: the history of an auto-didactic philosopher, whose life traverses the whole as- sent possible for human reason; Renan: Sufi mysticism (cf. Ibn Thofail, 64-6); Meir: it can lead man to the same development as civilization, etc. Gauthier's interpretation was rejected by E. García Gómez, who discovered a popular story bearing some analogies with Ibn Tufayl's work; he claimed to find in it a proof of a source common to both Ibn Tufayl and B. Garcia who, in the 17th century, wrote an allegorical novel in which Gauthier sees an imitation of Ibn Tufayl. The opinion expressed by García Gómez would change the whole perspective of the problem; but this hypothesis does not explain the references to the philosophers clearly indicated by Ibn Tufayl, still less the numerous passages inspired by their works and those of the physicians, without any indication of source but still very recognizable.

Gauthier's thesis is challenged on grounds more in keeping with the subject by G. F. Hourani, who points out (The principal subject, 42) that the prologue, following Ibn Sīna, announces the description of a mystical state, which in fact is dealt with in the second part, that of Hayy's progress, and presented at the end of the book as the object of all his desires, since he abandons men in order to come back to it.

To the reader, it certainly seems that the book's purpose is to show the capacity of the human intelligence. It is capable not only of discovering the sciences and the existence of the soul, but also of somatic intelligences, which the author considered as being attached itself uniquely to Him when He has been found. The journey made by Hayy is necessarily described in terms of the scientific knowledge and philosophy then understood, and at the same time an answer is given to the great preoccupation of the falāṣīfa, by confirming the harmony between philosophy and religion. It is a kind of consummation of the experience of Hayy b. Yaqzan, but it is very difficult to believe that the latter had been imagined in order to provide proof of it. The result however, when acquired, was to be compared by Gauthier and Hourani with the most exclusively philosophical theory of this harmony as expounded by Ibn Rūghd, particularly in the Fasl al-Mahāl. Bibilography: I. Ibn Sīna. Manuscripts noted particularly by Anawati, Essai de bibliographie avicennienne, 1950, no. 219, and Madhavi, Bibliographie d'Ibn Sīna, 1934, no. 65. — A. F. Mehren, Travaux mystiques, fasc. I, Leiden 1889, L'allégorie mystique Hayy ibn Yaqzan, preceded by an article with the same title in Mamluk, 1886. — Risālat Hayy b. Yaqzan, 91-113 in the collection Qamāl al-badā'ī, Cairo 1917, Istanbul 1937, 41-53 in that of Ahmad Amin, Hayy ibn Yaqzan li-ibn Sīna wa-ibn Tufayl wāl-Suhrawardi, Cairo 1952; but the very short work published under this name and attributed to Suhrawardi is in reality the 'Story of the exile from the West', Kifṣat al-ghariba al-gharibiyaha, written to supplement what he considered to be a lacuna in the Hayy b. Yaqzan of Ibn Sīna, which makes no mention of the great Mount Sinai in the esoteric sense. — Critical text, Persian translation, Persian commentary, French translation by H. Corbin, Le récit de Hayy ibn Yaqzan, vol. i of Avicenne et le récit visionnaire, Tehran 1952, followed by vol. ii, Étude sur le cycle d'Avicenne, 1954. — A. M. Goichon, Le récit de Hayy ibn Yaqzan commenté par des textes d'Avicenne, Paris 1959, French translation, with explanatory comments taken from other works of Ibn Sīna, and others, edam, Le prétendu esotérisme d'Avicenne dans le Récit de Hayy ibn Yaqzan, communication to the XXIVth Congress of Orientalists, Munich 1957, published in extenso in Giornale di metafisica, 1959, 538-46; edam, La théorie des formes chez Avicenne, in Atti del XII Congresso internazionale di filosofia, ix, 131-8; edam, Le Sér, l'intime du cœur, dans la doctrine avicienne de la connaissance, in Mélanges J. Bankoé, Prague 1965. II. — Ibn Tufayl. For editions and translations, see the text and Brockelmann, I 460, II 704, S 1 831. Also the 1952 edition by Ahmad Amin, already referred to, and a German translation by Quatremère, in ms. at the Staatbibliothek, Munich; Léon Gauthier, Ibn Thofail, sa vie, ses œuvres, Paris 1909; idem, La théorie d'Ibn Rochd (Averroës) sur les rapports de la religion et de la philosophie, Paris 1909, 168-74, analogy of thought between Ibn Tufayl and Ibn Rūghd; idem, Ibn Rochd (Averroes), Paris 1948; E. García Gómez, Un cuento árabe, fuente común de Ahelofail y de Gracian, in Revista de Archivos, Bibliotecas y Museos, 1926; George F. Hourani, The principal subject of Ibn Tufayl's Hayy ibn Yaqzan, in JNES, xv (1956), 40-6; idem, Averroes on the harmony of religion and philosophy, London 1961. (A. M. Goichon) ḤAYYA (A.) "snake", generic name of the ophi- dians, embracing all kinds of reptiles (mā yānšūd) from the most poisonous to the most harmless, the viper (aṭfār) competing to be the largely disting- uished species among them. Terms such as hanāqūḥ, aym, ḥubūš, usuṣad, rakāša, sīl, etc. are given in classical Arabian to species which are not always easily identifiable from the descriptions in the early zoological works, there being a certain amount of confusion in this field; and present-day terminology is still far from being precise even in dialects and for the species which actually live in the Arabic-speaking countries (see e.g., V. Montel, Faune du Sahara.
occidental, Paris 1951, 81-8); it is desirable that some fresh researches should be made.

There are various ideas on the origin of the snake: some present it as a creature of Satan, others as the result of a metamorphosis, while others hold that it was created by God, Who, when He drove it from Paradise, made it fall at Isfahan or at Sīgīsītān (whence the great number of vipers in this region). The word ḥayyā appears only once in the Qur'ān—

in the description of Moses's staff being changed into a serpent (XV, 21).

There naturally exist in folklore monstrous or fabulous serpents, the most enormous of which is probably the tinnin (see al-Djahīz, Tarbīt, s.v.); here it need be noted only that these animals have an important place in popular beliefs, for they are one of the forms in which dinins most often choose to appear.

The ḥayyā enjoys an extraordinarily long life, never dying a natural death; twice a year, in spring and autumn, it casts its skin and gains fresh strength. When mating, snakes curl themselves one round the other; the female lays 30 eggs (the same as the number of her ribs and of the days of the month), but only a few are hatched because ants gather on the eggs and destroy most of them. The eggs are of elongated shape and of various colours. The female stays with the eggs until the young are hatched, while the male clings tightly close about.

The tongue of the snake is so deeply split that some believe it to have two tongues. Snakes feed on birds, mice, frogs, young chickens and pigeons, eggs, meat, grass, etc., but never on dead animals, and if no food is available they can live on air. They swallow their food without chewing and break down any bones in their stomachs by coiling themselves tightly round a tree. They need no drink, but once having started to drink they may absorb an excessive amount of liquid and die of it; they are particularly fond of milk.

They have eyes like nails, fixed and immobile in their heads, which grow again if torn out in the same way as their fangs, or their tails if cut off. A snake which has become blind or has come blinded from naked men. They possess extraordinarily strong fangs, or their tails if cut off. A snake can swim, but they are unable to climb up walls.

The snake is friendly to the spider, the fox and some other animals, but is very hostile to man, pigs, and weasels. Cats, wolves, eagles, hedgehogs, pigs, etc. all eat snakes and sometimes die of it; in pre-Islamic times some tribes ate them, and this custom is a favourite theme of the satirical poets. In Islam it is as meritorious to kill a snake as to kill an infidel.

Snakes are widely used in medicine. Widely varying interpretations are put upon their appearance in a dream.

For protection against snakes and their poison [see Sallāt], there exist various forms of incantation [see ṭalqat] used by the ṭāki or ṭaqbāt, who may also be a snake-charmer (khwāi [q.v.] or būwāi?).

Bibliography: Dīghīt, Hasayyān, index; Damirī, Ḥayāl al-ḥayāyān, s.v.; Kazwini, ʿAdīṣbāh, s.v.; these works contain material which might profitably be used as the basis for a monograph.

(J. Rūska)

Háyyān b. Khalaṣ [see IBN HÁYYÁN].

Hazaqī [see ṬARQ].

Hazāra [see Supplement, and IRĀN—LANGUAGES].
Sayed Ahmad Barelwi and the Sikhs; Diyar Khan, chief of the Khanpur Gakkafs [q.v.] from 1789-1803; Gulshir Khan, head of the Tanawls, and Nadilb Allah Khan, chief of the Tarins who defeated the Ghurids [q.v.] from 8 f.]. In 599/1203 the Khazars defeated the Khwarizmians here and occupied their Bengal, near the left bank of the Oxus; in Djumada I-II 542/October-November 1896-7 and 1899-1900, the last two being not so

Taking advantage of internal dissensions, the Sikh governor of Rawalpindi, Makkhian Singh, invaded Hazara, occupied the country and built a fort at Saray Salih (Serai Sahib). Emboldened by the Sikh occupation of Kashmir, Makkhian Singh pressed the Tarin chief, Muhammad Khan, also for revenue. This was resisted by the tribe, who attacked the Sikh force, overcame their resistance and murdered the governor. The defeated Sikhs vacated the fort of Saray Salih and retired to the stronghold of Attock built by the emperor Akbar. This reverse was followed by a number of skirmishes between the Hazara tribes and the Sikhs, in which the Sikhs practically always lost. The repeated Sikh reverses brought prince Shri Singh, eldest son of Randjit Singh, the Sikh ruler of the Pind, to the scene; he established himself in the Harspur plain and built a fort at Tarbela. Not satisfied with the measures taken by Shri Singh, Randjit Singh deputed Hari Singh Nalwa, the governor of Kashmir, to subdue the refractory tribes. Hari Singh, known for his ferocity, fell on the tribes and cut them down mercilessly. Nalwa celebrated his victory by building a fort at Nawalgarh and then marched on to lower Hazara. As a reward for his exploits Randjit Singh conferred on him the governorship of the country. His rule, which lasted from 1831 to 1837, was marked by unprecedented barbarity and is still remembered by the residents with horror. It was during the governorship of Hari Singh, founder of the town of Haripur which now houses the biggest telephone equipment manufacturing factory in Pakistan, that the followers of Ahammad Barawli infiltrated into the district and rose against the oppressive Sikh rule, but were defeated and crushed (1828) and finally routed in 1831 at the historic battle of Balakote. That very year Hari Singh brought the semi-independent tribes of the Gakkhars, and the Dhunds under his control. Gradually Hari Singh succeeded in making Ahammad Khan, chief of the Girans who had his sway the various tribes who had refused to recognize his authority. His rule ended with his death at the battle of Djamrud, at the mouth of the Khayar pass, in 1837. The Sikhs, however, continued to hold Hazara till 1847 when it was ceded to the British by Raja Gulab Singh, ruler of Kashmir, in exchange for a part of Diamd Mountain. In May 1847 a British officer, Maj. James Abbott, was deputed to administer and organize the country. For a number of years he remained in Hazara, occupying positions of control and responsibility. He established a fine administration ushering in an era of peace and prosperity for the country. As a tribute to his services the flourishing hill-station of Abbottabad was founded in 1853 and named after him. "Among the people of Hazara he left a name which will not die". The country-wide military campaign also had its repercussions in this district but the disturbance was soon brought under control. Thereafter it remained practically peaceful except for the agrarian riots of 1868 and 1888 in the Aghor valley. It suffered great scarcity in the widespread famine of 1783, and again in 1879-80, 1897-8 and 1899-1900, the last two being not so severe as the previous ones. Hazara has made considerable progress during the post-independence period and with the construction of new roads and marked improvement in the means of communications a new era of increased prosperity has been opened for the district with the merger of the tribal states of Phulka and Amb in 1950 with the district and the establishment of the new capital of Pakistan at Islamabadd in 1959, the district is likely to develop rapidly.

Hazarasp (Persian: "a thousand horses"), a town in Khizarim, near the left bank of the Oxus [see AMO DARYA] at the outlet of a navigable canal, a day's journey from Khiva and 10 farasah from Gurgandi (Hamid Allah Mustawfi, Nusha, 179 ff.). The town had wooden gates and was surrounded by a moat (Mukaddasi, 289), which almost entirely enclosed it, so there in 1616/1229 there was only one entrance. Hazarasp was a strong fortress, and at the same time an important trading centre with large bazaars, lying on the trade route from Amul on the Oxus to Khazarim (Yakut, iv, 471 = Beirut 1957, v, 404). As a result of its military importance, Hazarasp was fought over at various times in the Middle Ages: in Muharram 480/June 1077, Muhammad of Ghzna defeated the Kharatirids who held his sway the various tribes who had refused to recognize his authority. His rule ended with his death at the battle of Djamrud, at the mouth of the Khayar pass, in 1837. The Sikhs, however, continued to hold Hazara till 1847 when it was ceded to the British by Raja Gulab Singh, ruler of Kashmir, in exchange for a part of Diamd district. In May 1847 a British officer, Maj. James Abbott, was deputed to administer and organize the country. For a number of years he remained in Hazara, occupying positions of control and responsibility. He established a fine administration ushering in an era of peace and prosperity for the country. As a tribute to his services the flourishing hill-station of Abbottabad was founded in 1853 and named after him. "Among the people of Hazara he left a name which will not die". The country-wide military campaign also had its repercussions in this district but the disturbance was soon brought under control. Thereafter it remained practically peaceful except for the agrarian riots of 1868 and 1888 in the Aghor valley. It suffered great scarcity in the widespread famine of 1783, and again in 1879-80, 1897-8 and 1899-1900, the last two being not so severe as the previous ones. Hazara has made considerable progress during the post-independence period and with the construction of new roads and marked improvement in the means of communications a new era of increased prosperity has been opened for the district with the merger of the tribal states of Phulka and Amb in 1950 with the district and the establishment of the new capital of Pakistan at Islamabadd in 1959, the district is likely to develop rapidly.

HAZARASPIDS — HAZIM

which thus contributed to the preservation of a native Persian individuality even under foreign dynasties.

From their capital Ishjadj [q.v.], the Hazaraspids ruled over eastern and southern Luristan [q.v.] from about 550/1155-6 to 827/1424, though the extent of their domains varied greatly. They were descended from a Kurdish chieftain, Faḍlō, and were known also as the “Faḍlawi dynasty” after him. The tribes grouped around this chieftain had left Syria (when?) and after wandering through Afcharbāyjān had reached the district round Ushtrān-Kūh in Luristan in the early 6th/12th century. Here in about 550/1155-6 Faḍlō’s descendant in the ninth generation Abū Tāhir (no. 1) gained independence from the Salghūrids [q.v.] in the area round Kūh-ū Sīlūya, and assumed the title “Atābeg” [q.v.]. His son Malik Ḥazarāsp, however (no. 2), after whom the dynasty is named, makes his appearance in history only at the beginning of the 7th/13th century. By driving out the Shīl tribe [q.v.] and extending his domain to just west of Isfāhān, he became the real founder of the small principality. He was clever enough to remain neutral between the ‘Abbāsīd Caliph al-Nāṣir [q.v.] and the Khwārizm-Shāh Muhammad II [q.v.]. In this he was helped by the not inconsiderable forces (infantry and cavalry) which he had been able to assemble round him from Iranian and Arab tribes also recently arrived in the area. On the other hand, his successor Tākla (no. 5), having won many victories over the Salghūrids, finally quarrelled with the Mongols; Hūlagū had him executed in Tabrīz in 655/1257. But in this case as in others the Ilkhan rulers (such as Arghun in 1284 and Gavkhatu in 1296) allowed the local state to remain undisturbed. It was obliged from that time on to bow to their authority, contribute troops and from time to time render homage to successful Ilkhan rulers (such as Arghun in 1284 and Gaykhatu in 1291). In return the Hazaraspids were granted various territories, including Khūzistān. When Afrāsīyāb I (no. 8) tried to go even further and seize Isfāhān, Hamadān and Fārs (690/1291), he finally paid for the attempt with his head in 1296. His successor (no. 9), who grew up at the Ilkhan court, adapted himself remarkably well to their wishes, paid an annual tribute of 91,000 dinārs and even tried to introduce Mongol laws in his territory, without, however, falling out with the *ulamd* and wishes, paid an annual tribute of 91,000 dinārs and after renewed troubles, that his grandson Isfāhān, he became the real founder of the small principality. He was clever enough to remain neutral between the ‘Abbāsīd Caliph al-Nāṣir [q.v.] and the Khwārizm-Shāh Muhammad II [q.v.]. In this he was helped by the not inconsiderable forces (infantry and cavalry) which he had been able to assemble round him from Iranian and Arab tribes also recently arrived in the area. On the other hand, his successor Tākla (no. 5), having won many victories over the Salghūrids, finally quarrelled with the Mongols; Hūlagū had him executed in Tabrīz in 655/1257. But in this case as in others the Ilkhan rulers (such as Arghun in 1284 and Gavkhatu in 1296) allowed the local state to remain undisturbed. It was obliged from that time on to bow to their authority, contribute troops and from time to time render homage to successful Ilkhan rulers (such as Arghun in 1284 and Gaykhatu in 1291). In return the Hazaraspids were granted various territories, including Khūzistān. When Afrāsīyāb I (no. 8) tried to go even further and seize Isfāhān, Hamadān and Fārs (690/1291), he finally paid for the attempt with his head in 1296. His successor (no. 9), who grew up at the Ilkhan court, adapted himself remarkably well to their wishes, paid an annual tribute of 91,000 dinārs and even tried to introduce Mongol laws in his territory, without, however, falling out with the *ulamd* and the dervishes, on whom he bestowed lavish presents. Nor did he discontinue local customs, according to the description given by Ibn Baṭṭūta, ii, 30 ff.; tr. Gibb, ii, 287 ff. of his visit to the country.

After the disintegration of the Ilkhan empire (736/1335) Luristan was repeatedly subject to attacks by the Muzaffarids [q.v.]. They made many incursions, and also interfered in disputes between individual members of the family. More dangerous were the attacks of Timūr, who finally in 798/1395-6 carried off Fīr Ṭabaḥ (no. 14) and two of his brothers to Samarkand. But it was not until about 827/1424, after renewed troubles, that his grandson Ṭabārkhān [q.v.] b. Shāhruḵ ended the Hazaraspid dynasty.

Many details in the history of the Hazaraspids are uncertain, and there are many contradictions in the accounts passed down, so that all sorts of chronological problems arise. The following list of rulers can therefore be given only with reservations:

2) Malik Ḥazarāsp, son of the above; the dynasty is named after him. Mentioned from about 600/1203-4.

The date of his death is given as 626/1228-9 or 650/1254-3.
3) 'Imād al-Dīn, d. 646/1248-9, son of no. 2.
4) Nuṣrāt al-Dīn Kalba, d. 649/1251-2, brother of no. 2. 
Nos. 3 and 4 appear only in Ghafrār (cf. below), fol. 137 f.; in other sources Malik Ḥazarāsp’s reign is reported as continuing until 650 (cf. above).
5) Tākla (Takla), son of Ḥazarāsp, mentioned from 655/1257; executed probably in 657/1259.
6) Shams al-Dīn Alp Arghūn, brother of no. 5, 657/1259 to 673/1274-5.
7) Yūsūfshāh I, son of no. 6, 673/1274-5 to about 689/1288.
8) Afrāsīyāb I, son of 7, about 689/1288 to 27 Dhu 'l-Hijja 695/26 October 1296.
9) Nuṣrāt al-Dīn Ahmad, brother of no. 8, beginning of 696/1296 to 730 or 733/1329-30 or 1332-3.
10) Ruḵ al-Dīn Yūsūfshāh II, son of no. 9, 733/1332-3 to 740/1339-40.
11) Muṣṭafār al-Dīn Afrāsīyāb II (Ahmad), son (or brother, according to Ibn Baṭṭūta, ii, 30 f.) of no. 10, 740/1339-40 to 756/1355.
12) Nāwīr Ward, son of no. 11, ruled only briefly, 756/1355.
13) Shams al-Dīn Fāḡān, cousin (or nephew) of no. 12 (? presumably a descendant of Yūsūfshāh II), 756/1355 to 780/1378-9.
14) Civil war between Malik Fīr Ṭabaḥ, 780/1378 to 811/1408-9
15) 22

HAZMIRIIYUN — HEKIM-BASHI

—

therhood, founded by the two brothers Abu Zayd 'Abd al-Rahmān and Abu 'Abd Allāh Muḥammad, sons of 'Abd al-Karīm al-Hazmīrī. The Hazmīrī to

—

tribe, from which the brotherhood was created and which was the confederation of the six tribes of the Dukkāla.

—

The first of these brothers died, at a very great age, at Fez, in 706 or 707/1306-8 and the second, at Ṭāmānī, in 678/1280, at the age of 60. In view of these dates, the brotherhood can be founded at the earliest only during the second quarter of the 7th/13th century.

—

Ibn Kunfūdḥ al-Kusantūlī (740-810/1339-1407), in his Un al-fakīr, listed the principal brotherhoods which existed in Morocco during the period in which he was conducting there his researches on the saint Abū Madyān Shu'aybā and his disciples, i.e., between 759/1358 and 777/1376. He counted six main ones: the Ḥādiyyūn of Abū Shu'aybā of Azemmour, the Shu'aybīyūn; the Ṣanḥādiyyūn which, in the Ṭibāt of Tīt, situated about 12 km. south-west of Mazagan, comprised the Banū Amghār; the Mūṣiliyyūn, the Shu'aybīyūn; the Sanḥādiyyūn which, in the Ṭibāt of Aṣṣīr (Ṣafī), who was himself one of the Banū Māḡār; the Hūdīdājī, whose members had to have performed the Pilgrimage to the Holy Places; the Hābbīyūn, settled in the Atlas to the south of Marrākūṣh. The last one mentioned, and the most recent, was that of Abū Zayd al-Hazmīrī. The author specifies that it was that of the Ghāmāṭīyīn (its centre was indeed at Ṭāmānī).

—

The first two of these brotherhoods grew out of the teaching of Abū Shu'aybā Ayyāb, who died at Azemmour in 561/1165, and his disciple Abū Ya'qūb al-Wādī bi-man hall Marrākūṣh, who may therefore have known the two men. It is entitled Ṭāmānī wa Ṭītun al-aḥṣām, who was still living at Marrākūṣh in 719 or 720/1320, and who may therefore have known the two men. It is entitled Ṭāmānī al-ajwān wa mustah al-majārīn fi maḥātah al-ahdawayn Abī Zayd wa Abī 'Abd Allāh al-Hazmīrīyyūn, and Abī 'Abd al-Salām Ibn Sūdāa mentions that there is a copy in the library of the Fāsiyyīn (see Dālī mu'tarrīk al-Maghārib al-aḥzā, Tetuān 1950, 209); on the documentary value of this manuscript and the bibliography of these two saints, see E. Lévi-Provençal, Les historiens des Chorfa, Paris 1922, 233-4. In addition see 'Abāb b. Ibrāhīm al-Ṭā'im bi-mān Hall Marrākūṣh wa Ṭāmānī min al-ajwān, Fez 1337, ii, 162-92; the text of Ibn Kunfūdḥ, Un al-fakīr wa tas al-jaḥr, established by Muḥammad al-Fāsī and A. Faure has just been published (Rabāt 1965); there are several manuscript copies of it in the Rabat Public Library and one in the Karawiyīn.

HERIM-BASHI, (HARIM-BASHI), "Chief of the Physicians", in the Ottoman Empire the title of the chief Palace physician, who was at the same
time head of the health services of the state: besides being in charge of all the Palace physicians, surgeons, apothecaries, pharmacists, etc., he exercised supervision over all the physicians of the Empire, Muslim or non-Muslim; it was he who appointed and dismissed all physicians, surgeons and pharmacists, who kept a check on them, who examined aspirants to these professions, and who appointed and promoted worthy candidates.

Physicians were employed in the Palace, whether permanently or temporarily, probably from the earliest times. In the reign of Mehemmed II the skill of the Hekim-bashi, the former physician of Abü Sa‘id the Timurid, procured his appointment as head of all the physicians of the Ottoman court, who at that time included Shukr Allâh Shirwânî, Khâdîja ʻÂṭâ, Allâh ʻAdîmî, Lârî, and others. His daily stipend was 500 akçe, which remained in later years the usual salary of the Hekim-bashi; there were also the perquisites of official gifts of summer and winter garments, and personal gifts as well.

The Hekim-bashi counted as one of the officers of the Kâşk-oda. He resided in the Bash Lala Kulesi, built under Mehemmed II [see Saray]; he was to some extent subordinate to the Bash Lala (Chief Preceptor of the sultan, see Lala). When the sultan fell ill, his was a most important responsibility; if his patient died, he was usually dismissed. The medicines which he prescribed were made up under his supervision by the Palace pharmacists in the pharmacy situated in the Bash Lala Kulesi; they were placed in vessels sealed by the Hekim-bashi and the Bash Lala and administered to the royal patients as required.

From the time of Mehemmed II onwards, such famous and skilled holders of the post as Yaşkıb Paşa [q.v.], Lârî Celebi, Ağa Celebi and Gâhs al-Dîn-zade were also highly favoured intimates of the Sultan. In later years, on the eve of the (solar) New Year (21 March), the Hekim-bashi made a special ecclesiary called Newruziyye, which he presented to the Sultan and to the high officers of the Palace and of the government. One indication of the high esteem which they enjoyed is that their status and comfort of being in the Kashmir, or vizier. In the nth/17th century it began to be reckoned as one of those depending on the Ağhas of the Dâr al-Safıdât and came completely under their influence, the holders of the post being frequently changed. From 1836 onwards appointments to the post were made from the mülkiyye branch of the administration. The title was changed in 1844 to Ser-Tâbib-i Şehriyârî, and with the establishment of the Ministry of Medical Affairs (Tibbiyye) in 1850 the holder's duties were limited to those of private physician to the Palace.

because the latter had seized his share of their father's estate, he went to Istanbul, embraced Islam and received the name of Ahmed, under which name he is mentioned for the first time in 1474. As early as 882/1477 he is mentioned in a firman of Mehmed II as the "servant of my kingdom Ahmed Beg". The reason for his going to Turkey and embracing Islam is shrouded in tales and legends which have been diligently recorded by Ewliya Celebi (Seyahatname, iii, 4, vi, 423, 425-4; see also J. Radonic in Vatroslov Juglic-Festscrb, Berlin 1916, 406-14). In the following year (883/1478) he is found in the retinue of Mehmed II in the Albanian campaign as the Sultan's mir-i-alem.

Before 14 December 1481 he was married to the princess Khâñûdi Khâtûn, daughter of Bâyezid II, and became first sandiakbegi of Bursa and then beglerbegi of Anatolia. In this capacity he fought against Prince Djem (Djumâddâ I 887/July 1483) and helped his father-in-law to strengthen his position on the throne. As beglerbegi of Anatolia he was appointed, in the first ten days of Rabî I 891/16 March 1486, as commander-in-chief of the expedition whose aim was to avenge the Turkish defeat in Syria (889/1484), in which the sultan's son-in-law, Ferhâd Beg, had been killed, and to take from the Mamlûks of Egypt the towns of Adana and Tarsus; but he was defeated, wounded, captured (Şafar 891/Februrary-6 March 1486) and taken to Cairo (Dhu 'l-Ka'da 891/November 1486). In Muḥarram 902/January 1487 he was released from captivity and sent back to Turkey. Already at the end of the following month he is mentioned as vizier. Before 3 Rabî I 893/17 March 1488 he had become kapudân pasha, for on that date he led the Ottoman fleet in an operation, carried out in co-operation with the land forces, against the Mamlûk army, but his fleet was all but destroyed in a storm, and also the Ottoman land forces were defeated at Agha Çaybîr (8 Râmâdân 893/16 August 1488). After this unfortunate expedition, Ahmed Pasha remained on his îmârât at Gallipoli until the autumn of 1489, when he was again appointed beglerbegi of Anatolia. When the Mamlûks besieged Kaysâri [q.v.], Ahmed Pasha, in Rabî II 895/February-March 1490, was sent against them for the third time as commander-in-chief. The outcome of this, the third battle, was ambiguous, but it is certain that Ahmed Pasha was not taken prisoner by the Mamlûks either then or at any time later, but only on the one occasion in 1486, and it is to his captivity at that period that the Arabic inscription in Cairo published by Van Berchem (see Bibl.) relates. In the spring of 1493 and in Djûmâddâ II 901/Feburary 1496 Ahmed Pasha is referred to as beglerbegi of Anatolia, On a Radjâb 902/8 March 1497, or some days later, he became for the first time Grand Vizier; but in the following year (after 19 August 1498) he was dismissed and appointed kapudân pasha and sandiakbegi of Gallipoli. In this capacity he took part in the following year in the attack on Aynabâhît [q.v.], which was taken on 19 Muḥarram 903/26 August 1499. In the spring of 1500 he became vizier and in this capacity, in the autumn of 1501, commanded the Ottoman fleet in the fighting against France and the defence of Mîdilli [q.v.]. Shortly before December 1502 he again became Grand Vizier, concluded a treaty of peace with Venice (12 Djûmâddâ II 908/14 December 1502) and a truce with Hungary (25 Şafar 909/20 August 1503). He remained in office until 18 Rabî I 912/7 September 1506, in a period of great difficulty and unrest, when the country was afflicted by famine and plague, and also by general insecurity on sea and land. It is probable that he was subsequently again appointed kapudân pasha and sandiakbegi of Gallipoli, although he is mentioned in the sources in this office only in the spring of 1509, with the title of vizier. In September 1510 he became effectively vizier and in Rabî II 917/July 1511 he became for the third time Grand Vizier (upon the death of Khâdîm 'Ali Pasha), but at the end of Djûmâddâ II 917/end of September 1511 he was dismissed at the insistence of the Janissaries, who had mutinied and demanded that he be replaced as chief obstacle to the accession to the throne of prince Selim. Before that, they had looted his residence and he only just escaped with his life. As the new Grand Vizier, Köşma Muştâfa Pasha, was very soon executed (9/1512), Ahmed Pasha, who was then Second Vizier, was again appointed Grand Vizier and in that capacity took part in Selim I's victorious campaign against Persia (battle of Câdlîrân [q.v.]). He remained in office until 9 Râmâdân 920/28 October 1514, when he was dismissed and sent into retirement. As his successors, Dulkâñ-zâde Ahmed Pasha and Khâdîm Sinân Pasha, very soon incurred the displeasure of the ruthless and hot-tempered Sultan Selim, Ahmed Pasha became Grand Vizier for the fifth and last time on 29 Radjâb 921/8 September 1515. Seeing how easily the officers of Selim I could lose their lives, he attempted to avoid the appointment, pleading old age, illness, and exhaustion, but consented at the insistence of the sultan and the other viziers. Suffering torments from rheumatism, he rarely attended the diwan but dealt with affairs in his own house. The following incident demonstrates that it was by no means easy for him to serve Selim. At the end of April 1516 the news was received at the Porte that the Safawis were besieging Dîyarbakr. On learning this, the sultan became extremely angry and vented all his wrath on his viziers. Then Ahmed Pasha suffered one of the worst days of his life: the sultan summoned him to the diwan and in anger seized him by the throat and began to strike him about the head so that all his turban became unwound. He was immediately deprived of his office and his liberty, and, together with the vizier Fîrî Pasha, escorted to Yedî Kol 23 Ramîd ûmûr 1, but, when the intervention of the new Grand Vizier, Khâdîm Sinân Pasha, both of them were pardoned and set free on the same day. At the time of Selim's campaign against Egypt Ahmed Pasha was muâlbîf of Bursa, and after the victory went to Cairo to congratulate him. On 9 Djûmâddâ II 923/23 June 1517 he was received in a last audience by the sultan and given a reward. He died on 2 Radjâb 927/1 July 1527 while returning from Egypt in the Kêlî Col mountains on the borders of Dhu 'l-Kadr. He was buried beside the mosque which he had built in the village of Dil, near Yalova, which is called Hersek after him. Here he built also an îmârât and an aqueduct. His mosque in the village of Dil was a masterpiece of Ottoman architecture. He built another mosque in the village of Rûmâhلك (in the sandjak of Gallipoli); he made over a number of villages to his wakfs.

Having spent forty years in the service of three important sultans, Ahmed Pasha played a prominent role in the Ottoman empire. Even while he was the Sultan's mir-i-alem he had so much influence with Mehmed II that through his intervention Gedik Ahmed Pasha was released from prison. He enjoyed still greater prestige with his father-in-law, Bâyezid II. He was remarkable for his wise and independent
opinions in the diwaan, which he bravely maintained even before Selim I. He was a friend and protector of the republic of Dubrovnik. His foreign contemporaries also thought highly of him. The Venetian ambassador, Andrea Gritti, describes Ahmed Paşa as "valentissimo di buon animo e ingenuo". He was a courageous, but not very successful, general. He excelled as a skilled diplomat and politician. Ahmed Paşa had a daughter named Humâ (who died after 1531) and two sons, Ali Beg and Mustafa Beg, both of them born before 1509, in which year they were circumcised. *Ali Beg* distinguished himself as a lyric poet and wrote under the name Shîrî. He is mentioned until 1545, and Mustafa Beg until 1582. With him the Muslim branch of the Hercegović family died out.

**HEYBELI ADA** [see MARMARA].

**HEZÆRFENN** [see HAZÆRFENN].

**HEZĂRGRAĐ, Ottoman name of Rázgrad in north-east Bulgaria, on the Bell Lom. A prehistoric settlement, it is the site of the classical Abritus, in which the Roman-Bulgarians are mentioned. No details are known of its fate during the Ottoman expansion; it was probably occupied in the course of Cândarî *Ali Paşa’s campaign of 790/1388*. It begins to be mentioned only towards the middle of the 10th/16th century as a village, variously named Yeğidîye, Herzârgârd-i Djeidî and Kayadîjk, belonging to the kaďâ of Cernovi (Cervern). The Ottoman name Herzârgârd is a deformation of a pre-Ottoman name Hrazgârd. With three other villages it was, in the 10th/16th century, incorporated in the waqf of the Gate of Constantine and Ibrahim Paşa.

In the second half of the 10th/16th century it is mentioned as a kaďâ in the sanhâq of Nicopolis. The town and the district around contained a significant population of Turkish colonists, yirûks [s.v.] among them. In the middle years of the century there were over 400 Muslims in the town (Turks, and also many converted Bulgarians), and about 1300 Christian Bulgarians. In 1566-1569 there were in the town 800 Bulgars (and 10 Catholics, immigrants from Dubrovnik). In 1606/1659 there were no more than some 350 Bulgars, while the Muslim population had increased to 7000 (with 30 Catholics). Later there were also some Jewish and Armenian inhabitants.

Situated in a fertile district, Herzârgârd rapidly became a vigorous commercial town, where numerous crafts flourished, one of the chief centres for the export of raw hides to Dubrovnik. There were in 1300 shops in its commercial quarter. A code of regulations for its market was in existence in the 10th/16th century (Paris, Bibl. Nat., MS a.f.t. 85, fol. 118 v). In the 19th century there was in the town a Government saltpetre factory.

A pleasant town, it contained several mosques, the best known being those of Ibrahim Paşa and Mehmed Paşa. There were 12 kâns, some modernes, a clock-tower, baths, fountains, and a bridge over the river. The sources mention two churches in the 11th/17th and 19th centuries. This town suffered many disasters, attacks by brigands, and massive emigration between the 16th and 19th centuries. The Bulgarian inhabitants of the town played an active part in the political and religious struggles for independence in the 19th century.

**HIBA,** one of many Arabic words used to express the concept of "gift", and the preferred legal term for it, see following article.

The giving of gifts, that is, the voluntary transfer of property, is a fundamental material and psychological purpose. In the pre-history of man, it probably antedates the contractual payment for goods and services. In Islam, it has retained its inherited functions as an important component of the social fabric and has exercised a considerable influence on political life. Literature (in the narrow sense of the term) tells us more about gifts than it does about commercial transactions.
A Muslim definition of "gift", attested for the 5th/6th century and reported by the Ottoman jurist Ibn Nudjaim, speaks of it as "something to which no condition is attached" (in contrast to bribes, cf. E. Tyan, Histoire de l'organisation judiciaire, Leiden 1960, 259; F. Rosenthal, op. cit. (below), 136, n. 8). The latent or obvious purposiveness of all gifts was, however, fully realized. In one of the many attempts made to distinguish between the different Arabic words for "gift", which were arbitrary from the etymological point of view and rarely obtained the sanction of usage, hiba is considered the transfer of property from a more highly placed person to one on a lower level of society (and, therefore, also as applicable to God's gifts to man); hadisiyya, on the other hand, implies an effort on the part of a person on a lower level of society to get into the good graces of a recipient of a higher social status (and the word, therefore, is not and cannot be used in connexion with God) (Abû Hilâl al-'Aštârî, and the Maltezer-Z Yaşar, Cairo 1321, 133, but cf., for instance, Ibn Kûtaybi, 'Uyun al-akhdhâr, Cairo [reprint] 1964, iii, 38, who finds no inherent distinction of social levels in hadisiyya). The purposiveness of giving is above all indicated by special linguistic usage. Thus, the Arabic vocabulary knows a meaning of the root m.n.n (minnas, maninâin) which implies an objectionable insistence by the giver upon the obligations created for the recipient as a result of gifts received. The Kur'ân, LXXIV, 6, using the verb istaahirâ, warns against giving (m.n.n) in the expectation of receiving a larger gift in return, this being the widely, if not generally, accepted interpretation of the passage (cf. al-'Tabari, Tafsîr, Cairo 1321, xxix, 80 f.; Wörterbuch der klassischen arab. Sprache, 6.f.). The third and tenth conjugations of gâ.b.r are noted as special terms for the procedure, which, in the minds of some lexicographers, is a custom preferably associated with strangers, in accordance with an alleged hadith (cf., for instance, Ibn al-Athir, Nihâîyâ, Cairo 1322, iii, 181; I. A, vi, 326, and the commentators on sura LXXIV, 6).

Generosity was acknowledged to be one of the primary virtues of the pre-Islamic Arabs, among whom it naturally found its principal expression in hospitality, and the generosity shown in Islam to guests remained a custom much remarked upon. The ideals of the pre-Islamic Arabs, among them the primary virtues of the pre-Islamic Arabs, were often noticed and complained about. The higher a person was placed within the power structure, the more he was expected to dignify his status and secure his position by frequent manifestations of largesse. The lavish gifts of caliphs and powerful waizârs are often mentioned and commented upon. They were correctly interpreted as a sign of firmly established power and political success. Obviously, such "gifts" were as a rule expected forms of remuneration. The rich rewards bestowed upon poets and artists, and the unhappy occasions on which such rewards were not forthcoming, were the result of the sponsorship of the arts felt to be part of the duties of the government. Gifts by rulers were in a way the more spectacular extension of regular government spending, and they fascinated writers and readers more than the routine character of the latter.

Gifts to persons in positions of authority were usually proffered for the purpose of engaging or rewarding their services. At times, this came to be customary procedure, and officials (occasionally even those in the highest places) depended on it for their income. It was an obvious source of moral corruption and political decay, and was, in turn, nourished by it. It is impossible to give a precise and final answer as exemplified by Hâtim al-Târî [q.v.] to some degree counteracted by the Aristotelian definition of generosity (kuriyya, sakhâ') as a subdivision of moderation (sophrosyne, 'îffa), involving the prudent balancing of income and spending; in this sense, the giving of gifts as an expression of generosity required taking into account the appropriate size of the gift and the deserving character of the recipient (cf., for instance, Abu 'l-Hasan [al-'Aimirî], Sa'adâ, ed. M. Minovi, Wiesbaden 1957-8, 87 f.; Miskawayh, Tahdhib, Cairo 1322, 8). However, the philosophical virtue blended well with the traditional appreciation of the liberal spender. The admiring reports in literature of anecdotes about outstanding generous men (gawâd) and their acts of generosity ([q.w'])-> never ceased to interest Muslim readers. The lively discussion of the opposite view, stinginess (bukhl [q.v.]), is merely another way of illustrating the Muslim esteem of generosity. To pre-Islamic and Classical tradition, Muslim religious tradition further added the concept of generosity shown to the needy, charity (sadaka [q.v.]), as a virtue of great merit.

The giving of gifts was viewed as an activity among equals and an expression of friendship. Characteristically, Ibn Kûtayba discusses the subject of generosity from the larger context of friendship, and in the eyes of the religious authorities, the giving of gifts helps toward the establishment of better personal and communal relations. Gifts were exchanged on joyous personal occasions, such as weddings or circumcisions. Special occasions for the exchange of small gifts among relatives and friends were various holidays, among them the 'id al-fitr [q.v.] as well as the festivals of naurusî and mihrân [q.v.] (M. Froula, Renaisse, 400 f.). The latter festivals were, however, also used at times as occasions on which the people had to present major "gifts" to their ruler. Gifts on festive occasions, as well as other gifts, were often accompanied by appropriate verses deemed worthy of preservation in literature, or by messages in artistic prose.

From the personal sphere of generosity and friendship, where the motivation was primarily psychological, there was a short step to the—broadly speaking—politically motivated giving of gifts by or to persons holding positions of authority in the community. The higher a person was placed within the power structure, the more he was expected to dignify his status and secure his position by frequent manifestations of largesse. The lavish gifts of caliphs and powerful waizârs are often mentioned and commented upon. They were correctly interpreted as a sign of firmly established power and political success. Obviously, such "gifts" were as a rule expected forms of remuneration. The rich rewards bestowed upon poets and artists, and the unhappy occasions on which such rewards were not forthcoming, were the result of the sponsorship of the arts felt to be part of the duties of the government. Gifts by rulers were in a way the more spectacular extension of regular government spending, and they fascinated writers and readers more than the routine character of the latter.

and between Muslim and non-Muslim rulers through their ambassadors or through persons who functioned, or presumed to function, as such; usually, participants in the countries of giver and recipient and upon their relative standing as to wealth and industrial development.

As in the societies preceding Islam and contemporary with it, the personal giving of gifts came under the scrutiny of the law (see below). The propriety of diplomatic gifts and of gifts to officials was occasionally questioned by jurists. Rules were proposed to govern the tender and acceptance of such gifts. Presumably, they were disregarded most of the time (cf. Rosenthal, op. cit., and, for an apparently complete copy of Taqi 'l-Din al-Subkhi, Faṣl al-makālī fi hadiyāt al-amālī, Ms. Chester Beatty 4870, fols. 1-5).

In addition to human giving, we find the concept of God as the giver of gifts, which concerned Muslim theology. All existence, including that of man himself, is a gift of God’s kindness (ni‘ma), and so are all special benefits, talents, and achievements of man. Sufism quite generally tends to describe every spiritual breakthrough by the mystic toward the achievement of his mystic striving as being given by God, and every material manifestation of saintliness in the form of miracles as possible only through some divine gift (ma‘wida). While God’s gifts are unsellably given and cannot be matched or requited in any way, human beings are expected to show their gratefulness (shukr [q.v.]) by obeying the divine commands and doing what is right in the eyes of God; yet, their gratefulness can never exhaust the depth of their obligation to their Maker. The role of God as the unique Giver requires mention here, for an individual section following. See further BAKHTAM, BIBLIOGRAPHY. (F. Rosenthal)

i.—The Caliphate

The giving of presents was a practice which permeated all levels of mediaeval Islamic society, its aim being to cement the bonds of obligation and dependence which ran through the structure of that society. At the highest level, the exchange of presents was an integral part of diplomacy. In ch. xxii of the Sīyāṣat-nāma, Nizām al-Mulk refers briefly to the diplomatic use of presents, and Fakhr-i Mumtāz al-Mubarakshah devotes a whole chapter of his treatise on war and statecraft to the despisation of ambassadors and the gifts which they should bear (Ādāb al-mu‘āk, India Office MS 647, bāb xii, fols. 45b-52a). Also, the general works on secretarial practice (kiyāda) often refer to the letters which should accompany presents or which should be sent in thanks for them. Thus Hilāl b. al-Mu‘āassin al-Sāhī’s Ghurar al-baladīgha has a chapter on hadiyyāt (cf. W. Björkman, Beiträge zur Geschichte der Staatskunst der islamischen Ägypten, Hamburg 1928, 14-15). Kalāqashan and gives example of the correspondence involved on the occasion of gifts of robes of honour, horses, hunting falcons, game, fruits, etc. (mukadabat al-takaddi wa ‘l-mul‘iṣafa) and when seeking gifts (istiḥdād), in his Šuḥ al-‘alā, viii, 339 ff., 351-6, ix, 100-24.

The most important non-Islamic power with which the Caliphs had to deal was, of course, Byzantium. The Emperors themselves had long appreciated the value of court diplomacy, of impressing their subjects with the splendour of their court and using costly gifts to mollify opponents; and for the luxury textiles and mechanical contrivances which were the staple presents, the Emperors had the productions of the state workshops to call upon (cf. W. Ensslin in Byzantinum, an introduction to East Roman civilization, ed. Baynes and Moss, Oxford 1948, 306-7). The Caliphs, for their part, exerted themselves equally to impress Christian ambassadors. The Frankish chronicler Einhard speaks of the rich gifts sent to Charlemagne by Ḥārūn al-Rashīd in the course of their celebrated diplomatic exchanges, involving the textiles and aromatics of the Islamic world and such exotica as an elephant and a water clock (Vita Karoli Magni, ed. and tr. L. Halphen, Paris 1923, 47). In 305/917-18 al-Mu‘tadīd staged an especially lavish reception in his palace for the envoys of Constantine Porphyrogenitus, in the course of which rich gifts were exchanged (cf. Kāfī Ibn al-Zubayr, Kitāb al-jahādīn wa ‘l-tuḥaf, 130 ff.). Many of the Baghdād-Constanтинople diplomatic exchanges revolved, as did this last mission, around the making of truces on the Anatolian frontiers and the ransom of prisoners. Just over a century later, Constantine Monomachus in 441/1049-50 sent an embassy with presents to the Saldjūk Sultan Ṭoghrī (q.v.) seeking for peace and for the ransom of the Georgian prince Liparit Orbeliani; when Ṭoghrī, on the intercession of the Marwānid ruler Nasr al-Dawla Ibn Marwān, released Liparit without a ransom, the Emperor sent further presents and allowed the construction of a mosque in Constantinople (Ibn al-Aṯīr, ix, 380).

When the Caliphs and other Islamic rulers delegated their military or civil authority to subordinate rulers or governors, presents were invariably bestowed on the recipient of the office, as a material sign of the grantor’s favour. In an age when dress was so decisively an indication of official or social status, and when wealth was often stored in the form of textiles, it is not surprising that richly-embroidered or bejewelled robes of honour are the most constant element in these presents (see ʿGaris, a). Such centres of manufacture as Damasci, Baghdād, Mawṣīl, Ḫisān, Ṭayy, Niẓāmūr and Marw, all produced luxury textiles for these robes, and in some cases, rulers had special workshops producing luxury goods for court consumption or for bestowal as gifts; Narshāqī mentions the bayt al-tīrās at Bukhārā, whose products were taken each year to Baghdād in lieu of taxation (The history of Bukhara, tr. Frye, 19-20; see also qaṣīr and ṭirās).

In 284/897 al-Mu‘tadīd was compelled to invest ʿAmr b. Layth with Transoxania in succession to the Tāhrids, who had exercised an overlordship in that region. He sent with the investiture diploma seven robes of honour, a crown set with sapphires and other gems, eleven horses with golden accoutrements and bejewelled caparisons, and chests of clothing and luxury articles (Gārdīzī, Zayn al-ʿāqāḥī, ed. Naṣīm, 17). In 369/979 Ḥādūd al-Dawla demanded from al-
That he should be crowned in Baghdad, should have further honorific titles and should be given robes of honour. The feeble Caliph had to assure his son-in-law the Byzantian emperor that he should be crowned in Baghdad, and invested him with the robes and two swords; three days later he further sent a linen tunic, a gold dish and a crystal vessel and goblet (Ibn al-Djawzi, al-Muntasi, vii, 98-100). In 513/1120 the supreme caliph, Sultan Sanjar, appointed his nephew Mahmod b. Muhammad, ruler of Ṭābil and Ṭabād, and, in addition to the usual robes of honor, sent a horse with luxurious equipment and an elephant with a bejewelled litter (Rāwandī, Rābat al-sudur, 170). The presents sent by the Caliph al-Musturghid in 527/1133 to Mas‘ud b. Muhammad, when he recognized as his Sultan the western caliph, included seven ceremonial durrāt (fabrics or tunics of various materials and colours, one being in the 4th/baghdad colour of black, a jewelled crowned, two arm bracelets (sawād), a gold collar, two swords and two banners (Ṣadr al-Din ‘Usayn, Akhbār al-halēla al-Qalīṣīyya, 102). Victory brought the Caliph, and other commanders with robes of honour, a gold collar and two arm bracelets (‘Arīb, 3, under 291/904; cf. Mez, Renaissance, 137; Eng. tr., 133).

The bestowal of lesser honours, those of a social rather than a military or political nature, was likewise accompanied by presents. In 321/933 al-Kahir made Ibn Muṣka a nadim or boon-companion in the Caliphal entourage, and at the same time gave him robes of honour, began calling him by his kunya or his patronymic, and added further gifts of a silver-gilt dish of ambergris, perfumes and musk, a second dish, a crystal decanter and goblet and a silver washbowl. Five years later, the Turkish general Beckem was honoured in similar terms when he became al-Raṣi’s nadīm (Miskawiyh, in Eclipse of the ‘Abbāsid Caliphate, i, 258-9, 396, tr. iv, 293-4, 440).

On the other hand, the grant of honours and awards from the Caliph usually involved the recipient in much reciprocal expense. Even when the secular authority of the ‘Abbāsids was at a low ebb, such as the period and early epochs dominated by the Seljuqs of Persia in the 4th/baghdad and 5th/baghdad centuries, their moral and spiritual influence was still very important. They alone could legitimate de facto power, and for the privilege of this approval, the provincial ruler who sought an investiture diploma (‘ābd, manhār) or a grant of honorific titles (aikdā) had to be prepared to pay. The sale of honours and the seeking of presents were, indeed, some of the means by which the Caliphal court augmented their meagre resources during these lean years. According to Hilāl al-Ṣabi, the requiring of presents had to be distributed not only to the Caliph himself, but also to his chief wife, to the wall al-‘abd ‘Uddat al-Din (the later al-Muktadil) and to the princess’s own mother (Ibn al-Athīr, ix, 436-7; Bundārī, 22).

It was the custom to exchange gifts at such festivities as weddings (cf. the munificence of al-Hasan b. Sahl when his daughter Būrān married al-Ma‘mūn at Fām al-Ṣibl, described in, e.g., Ṭabarī, iii, 1085-8; ‘Ṭal‘ūb, Latīf al-maṣādīr, ed. de Jong, 73-4; Nāḍīr Ibn al-Zubayr, 98-100, 100; and Nizāmī ‘Arifī Samarkandī, Cāhār mābūlā, Browne’s revised tr., 21-2), circumcisions and the obsequies of early central and eastern parts of the Caliphate. We hear, too, of personal gifts from subjects to rulers; doubtless some private advantage was often sought. A Zoroastrian mībāhā presented a flask of precious ointment to al-Muṭawakkil; and a landowner of the Ghazna district, one Mānk ‘Alī, had the custom of annually presenting the Ghaznavid Sultans with pickles, savouries, dried meats and fine cloth (Mas‘ūdī, Murādī, vii, 229; Bayhaḵī, ed. Ghāni and Fayyāḍ, 128-9).

The goods and products most frequently given as presents have emerged through the examples given above, with fine textiles, aromatics and spices, and jewels, to the fore. However, the gifts sent westwards by governors and rulers on the eastern fringes of the Islamic world usually included some of the specialities of those eastern regions and even of the Indian and Chinese worlds beyond. Very prominent were Turkish slaves from the Central Asian steppes, greatly in demand for the new professional armies of the Caliphs and provincial rulers (see gulalm i. The Caliphate, and ii. Persia). From the 3rd/baghdad century onwards, the tribute and presents forwarded by the Tāhirid governors of Khurāsān and then by the Sāmānīd Amīrs of Khurāsān and Transoxania always included large numbers of Turkish slaves. In a very detailed list in Bayhaḵī, 416-17, of the presents sent to Hārūn al-Rashīd by ‘Alī b. Ṣa b. Māḥān (Governor of Khurāsān 180-91/796-807) are 1,000 each of Turkish men, coloured cloths and, and one of the Central Asian specialities mentioned in it include hawks and falcons for hunting, Badakhshān rubies, Nīṣāpūr turquoise and Tūkhrāstān horses. Particularly interesting is the inclusion of 200 pieces of Chinese porcelain (‘īnī faqṣāfūrā), which already at this early date were making the long and hazardous journey across Asia (on this product see P. Kahe, Chinese porcelain in the lands of Islam, i Opera minora, Leiden 1936, 230-61). Elephants sporadically appeared in
The presentation by Muslim rulers of costly and often exotic gifts to European heads of state, for long a common practice, accounted in large part for the mediaeval western view of Islam as a world of luxury and splendour. This view was nourished nowhere more abundantly than in Mamluk Egypt, whose rulers staged lavish receptions for foreign envoys and their principals included precious and elaborate stuffs of local manufacture, presented sometimes as cloth not made up, or with honorific titles, with examples from the caliph period. Of outstanding interest is the K. al-Dhakhdhīr wa 'l-tufyaf of the Fatimid official Kādī Abū 'l-Husayn Ahmad b. al-Zubayr, ed. Mub. Hamlī Aūlāh, Kuwait 1955, which dates from ca. 463/1071. Inter alia, the author describes here famous offerings of gifts amongst rulers in pre-Islamic and Islamic times, with many examples from 'Abbāsid and Fatimid history.

ii — Mamlūk Egypt

The presentation by Muslim rulers of costly and often exotic gifts to European heads of state, for long a common practice, accounted in large part for the mediaeval western view of Islam as a world of luxury and splendour. This view was nourished nowhere more abundantly than in Mamluk Egypt, whose rulers staged lavish receptions for foreign envoys and their principals included precious and elaborate stuffs of local manufacture, presented sometimes as cloth not made up, or with honorific titles, with examples from the caliph period. Of outstanding interest is the K. al-Dhakhdhīr wa 'l-tufyaf of the Fatimid official Kādī Abū 'l-Husayn Ahmad b. al-Zubayr, ed. Mub. Hamlī Aūlāh, Kuwait 1955, which dates from ca. 463/1071. Inter alia, the author describes here famous offerings of gifts amongst rulers in pre-Islamic and Islamic times, with many examples from 'Abbāsid and Fatimid history.

(C. E. Bosworth)
ments; carpets, arms and armour (notably the famous shields of leather made from the skin of lam’i [q.v.], a type of antelope peculiar to the western Sahara); harness; state tents; furs; perfumes; ambergis, musk; thoroughbred horses; falcons; slaves. More rarely there were presented copies of the Kur’an, of historic value or richly bound and ornamented! by the prince of Genoa sending to the Marinid sultan Yusuf the famous sword of leather made from the skin of lamp [q.v., a type of antelope peculiar to the western Sahara]; from the Marinids to the Il-Khanids, and in the early 14th c. to the Ghurids and the Il-Khanids.

In the towns, the costs of the hadiyya, in money and in kind, were divided by the government among the rulers of the town and the guilds. The Jewish community had its own hadiyya, often consisting of items of gold or silver work. In the rural areas, the hadid of each tribe was charged with the distribution of the spoils among the victorious. The exchange of gifts was that between Mahmud of Ghazna and Kadr Khan: Mahmud presented gold and silver dishes, precious stones (or pearls), “Baghdad” vessels, beautiful clothing and carpets, weapons (battle-axes and Indian swords), horses with costly trappings, ten elephants, camels with luxuriously appointed litters, sandalwood and ambergris, leopard-skins, falcons and eagles, and slave girls. Kadr Khan responded with a large sum of money, horses, slave-girls, falcons and products of Turkestan (weasel, squirrel and fox pelts) and, significantly, objets d’art of Chinese origin (brocade, articles made of silk). A year amongst the Persians, (1830) and the defeat of the Moroccans in the wadi Fumey, ii, 172. — 2. Michaux-Bellaire, Histoire des Berberes, 144; tr. de Slane, Glossar zu Firdosis Schahname, Berlin 1935, s.v. Hadiyya, the term hiba does not appear here. At least from the Mongol period onwards, presents from governors etc. are described as pishkash wa hadiyya indiscriminately for any kind of present (F. Wolff, Glosarry, nos. 153, 240, 242, 404; Salawi, GMS, n.s. xvi, London 1943, 156) simply indicates a broadening of this clerk’s duties.

The presentation of the haddiyas was an obligatory gift made to the sultan by his subjects; from being the spontaneous homage of gratitude and of vassal status it ended as a supplementary tax. Particularly at the time of the two canonical feasts of the haddiyah, a tree in gilded metal was an obligatory gift to the sultan, of the nature and the amount of which were fixed by the government. At least from the Mongol period onwards, presents from governors etc. are described as pishkash wa hadiyya indiscriminately for any kind of present (F. Wolff, Glosarry, nos. 153, 240, 242, 404; Salawi, GMS, n.s. xvi, London 1943, 156) simply indicates a broadening of this clerk’s duties.

Islamic rulers practised this exchange of gifts not only on the signing of treaties and at their accession, but also on family occasions such as the circumcision of a son. Nizam al-Mulk had an already quite Machiavellian conception of the principal purpose of diplomatic missions: it was to profess subservience to the opponent by the presentation of rich gifts, lull him into security, and reconnoitre his strength or weakness in the event of a war (Siydsat-ndma, c. 96). The type of presents exchanged between Islamic rulers varied little from the early Middle Ages until modern times: jewellery, brocade and other costly stuffs, which were given to the Caliph by the famous Byzantine mission of 937 A.D., continually recur in the lists of presents given by Persian rulers too; also included were money, weapons, perfumes, saddles, horses, slaves, and many other things. The Turks quickly adopted Iranian customs: Toghrilbeg, on the occasion of one mission to the Caliph, sent 10,000 dinars, precious stones and precious cloths. A famous exchange of gifts was that between Mahmud of Ghazna and Kadr Khan: Mahmud presented gold and silver dishes, precious stones (or pearls), “Baghdad” vessels, beautiful clothing and carpets, weapons (battle-axes and Indian swords), horses with costly trappings, ten elephants, camels with luxuriously appointed litters, sandalwood and ambergis, leopard-skins, falcons and eagles, and slave girls. Kadr Khan responded with a large sum of money, horses, slave-girls, falcons and products of Turkestan (weasel, squirrel and fox pelts) and, significantly, objets d’art of Chinese origin (brocade, articles made of silk).
of horn, etc.). Similar presents were given by the Ilkhans to foreign rulers: money, armour, precious stones, cheetahs, silverware, musk, and garments of green and white wool. No doubt some symbolic significance attached to a throne of rattan-wood (Sah-i kbayzurin) with canopy (sadababan), which an Ak Koyunlu ruler received from India. The renowned Kuh-i-Nur diamond came briefly to the Safawid Court in 1544 when Humâyûn (q.v.) sought refuge in Persia. Costly Frankish robes and other European products came into the possession of the Safawids after the 16th century. The horses, always much coveted, were given by the Safawid Shah to the Ottoman mission in 1566/1560-1, as well as the usual robes of honour (khilâf[q.v.]) and gilded saddles and harness. For India, Persia was a transit country useful as a source of Arab horses; Shah 'Abâb I once sent the Emperor Akbar (as well as costly stuffs) 100 stallions and mares of Arab and Georgian stock. From the Indian court came elephants and exotic beasts (tigers, leopards, gazelles, rhinoceroses, parrots and hip-popotamuses), but also (perhaps originally from Europe?) optical instruments, as well as armour set with jewels. A valuable sabre presented by Akbar must have had symbolic significance (victory over the enemies of the Safawids). Even in the very lively diplomatic exchanges with European courts after 1600 A.D., the Safawids confined themselves to the traditional list of presents (slaves naturally did not figure here). Anthony Sherley was commissioned by the Shah to take to various European rulers presents of sabres, bows and arrows, turban silk, belts of pure linen and broad woollen belts. The Persian embassy to Louis XIV in 1715 presented 100 small pearls, 280 turquoises and two gilded boxes of mummy balm [see Wûrm].

From the Crusades onwards, Europeans were well acquainted with oriental customs and preferences, and also, through trade with the East, they were well provided with objects suitable for presents. We therefore find that in the lists of presents of European missions to the Ilkhâns, apart from tents, leopards and hunting dogs, precious stones, etc., there are included silk, purple dye, velvet, canopy material, and mosquito nets, silver gloves, musk boxes, etc., which in the Safawid period relations between Europe and Persia were renewed and intensified to a hitherto unparalleled extent, technical equipment found its way to Persia along with the presents previously customary. Moreover, gifts began to be chosen more to suit individual tastes; specialities of particular countries gained prominence; and firearms were on some occasions delivered in numbers which already approximated to a kind of 'military aid'. The embassy from Philip III of Spain in 1617 brought to Shah 'Abbâb I brocade, dishes and vessels of silver-gilt, harness and armour, but also surgical instruments, locksmiths' and carpenters' tools (the Shah was in some way a forerunner of the Czar Peter the Great in his interest in carpentry), as well as portraits of the Infanta of Spain and the Queen of France (European portraits by way of the Armenians of Djulfâ). Portraits were then very often offered by other embassies too. From France came spy-glasses, crystal chandeliers and crystal mirrors, and (the result of Far East trade) porcelain from China, veils from India, and tea; but there were also cannons of the most modern design, and carpets of silk and gold thread from the Savonnerie factory (near Paris). A coach and four, which the East India Company wished to present to the Shah in 1621, was not greatly welcomed in Persia, where there were no roads; on the other hand the Shah accepted 1,200 arquebuses from the same mission, whereas he criticized armour as unserviceable in war. A Russian mission also had little luck later with a carriage drawn by six horses, which was brought only with the greatest difficulty from Djulfâ to Isfâhân. More welcome were the valuable Russian sables and the barrels of vodka, which the Shah greatly appreciated. An embassy from Holstein brought among other things a fine pavilion and porcelain dishes. The gifts offered by the Dutch ambassador in 1652 were equally conventional, if more luxurious: 2,000 ducats (only gold coins were accepted, as Tavernier states; silver coins, not to speak of forged coins, the Shah rejected), scarlet cloth, a large mirror, ambergreis and amber boxes, Hindustani metal bowls, Japanese lacquer wares and exotic birds. Clocks in costly cases were also favourite articles for presents. The Russian embassy of 1837 had already fallen in with the standards of the other European countries in its choice of presents. The gifts included a set of cut-glass, a set of St. Petersburg porcelain, toilet mirrors, a clock in the form of an elephant, guns, pistols and sabres from the renowned arms factory of Tula, two wall mirrors, diamonds and rings, as well as the traditional sables. The gifts of the British mission of 1812, on the other hand, seem to have been chosen more to suit the personal tastes of Fath 'All Shah: several coaches (kindly received but never used), a pianoforte (the Safawids had once received an organ from Moscow), a large mahogany dining table and 70 mirrors. Most of these, however, were broken on the difficult journey from Bushir to Tehrân.

Christian clergy, too, who were sent as envoys of the Pope or of their Orders, did not present themselves at the Safawid Court without presents, but in these cases even less costly gifts were accepted with indulgence. A Capuchin presented nautical and astronomical instruments (a compass and an astrolabe), a Dominican a clock and "petites nippes de feu de valeur" (as Chardin puts it). A Carmelite mission from the Pope had the extreme naiveté to present Shah 'Abbâb I with a costly crucifix, at which the Shah took no offence. Safl I received from the Vicar-Provincial of the Carmelites an edition of the Psalms in an Arabic translation, together with a few water-melons, and from the Bishop of Baghdâd a portrait of Urban VIII. Innocent XII sent Shah Sultân Husayn in 1700 Venetian brocade, striking clocks, a few pictures, mirrors with filigree frames, a microscope and a magnifying glass, and a block-and-pulley. Organ, spectacles and lifting-gear, also intended for the Shah, were left behind in Aleppo. An Archbishop, on the other hand, presented himself before Nâdir Shah in the traditional manner with a splendidly briddled horse as a gift.

The presentation of gifts was accompanied by a solemn ceremonial. Here it was of the utmost importance to make as great an impression as possible. Thus the presents of Philip III of Spain in 1617 were borne in by not less than 600 servants. Individual missions would arrive in the Persian capital with a baggage train including hundreds of persons. On the other hand, the relatively few presents given by 'Abbâb I to Anthony Sherley were transported on 32 camels. For the Persian embassy to Louis XIV things were simpler: the interpreter carried the presents (pearls and turquoises) in a casket which, like the ambassador's credentials, was
wrapped in gold brocade. On Persian soil the ambassads and their often numerous retinue were entertained at the expense of the Shah, and provided with saddle- and baggage-horses. On top of this would be personal presents, for the ambassador himself usually a robe of honour, horses with trappings, and other gifts, and for his suite presents of more or less value according to rank. Provincial governors were also in the habit of honouring passing ambassadors with presents. Johann Cunaeus, on returning to Holland, was permitted to keep robes of honour and sabres, and one of 15 horses given to him, and for the other gifts he received compensation on account of the expenses incurred by him personally. At the beginning of the 19th century ambassadors were already receiving decorations (the Lion and Sun Order), but in addition still received the traditional robes of honour.

v. OTTOMAN EMPIRE

The giving of presents had some curious ramifications in the Ottoman Empire. During the centuries in which their armies stood at the gates of Central Europe, the Sultan and his viziers were well aware of their power. Accordingly they could expect considerable sums of money to be spent on providing the "presents" which were offered to them by ambassadors.

The justification for expecting such presents was to be found in the case of the Turks (as with other Muslims) in their regarding foreign ambassadors as guests of the Sultan and the Government. Since they were given hospitality and entertainment, it was expected at the Ottoman Court that they would pay back their respect in the same coin. It was considered necessary that foreign ambassadors should receive presents. These included gifts for the ruler of the land to which the envoy was returning after the discharge of his mission (see Usually and, for a general discussion of diplomatic practice, sapfr). The usual presents for this purpose were fine materials and clothing, finely wrought bows, and spices. The ambassador himself almost invariably received the kâhil (g.n.), which had the same significance as a European Order.

The presents brought by the envoys also consisted in the majority of cases of examples of their native arts and crafts, or the natural products or animals of their homeland. In the case of Western and Central Europe, typical gifts were goldsmiths' work, textiles, richly ornamented clothing, or chandeliers. Great Britain would also send mastiffs, and Poland greyhounds. The Slav countries, Poland and Russia, would often present "Nordic wares" as they were called, and as they were known to Arab geographers of the early Middle Ages: furs, especially sables, falcons and other birds, walrus tusks for making trinkets, and also medicines; but equally they included products of native industry: chandeliers, clocks, dishes and so on. The extensive collection of porcelain in the present-day Topkapi Sarayi Museum (especially celadon) originates largely from presents from China at the time of the Manchu dynasty (1644-1912).

It is a fundamental truth of human nature that these presents should be prized not only for their ideal, but also for their material value, and that the circle of those who expected such gifts should grow continually. In the course of time it embraced not only the Grand Vizier and his ministerial colleagues, but many dignitaries, the Agha of the Janissaries, the Governors of particular provinces, especially those which the ambassadors had to traverse on their journeys to and from the Court, but most important of all the interpreter of the Sublime Porte [see TAHİRÎ VOSPAN] and his assistants, upon whom ambassadors bestowed in the language were almost entirely dependent. According to Islamic social custom, any gifts explicitly destined for ladies were unacceptable, and indeed their existence was hardly acknowledged in diplomatic life at the Ottoman Court at that time. Naturally one might indulge the hope that some present or other might come into their possession by indirect means, and arouse their interest in the donor's country.

As ambassadors came into direct contact with the leading Government officials and even the Sultan only at the presentation of their credentials, at official meetings and on taking leave, whilst at the same time they must attempt somehow to exert some influence during their sojourn of months or even years at the Sublime Porte if they were to safeguard the interests of their own countries, "presents" proved a useful means of attracting notice. They could indeed play a decisive role, and many a vizier
or interpreter was not above demanding presents—even with threats. These gifts naturally involved the envoy in considerable expense, and he was under-
standable in view of the frequent changes among the influential officials, especially in the 11th/12th and 12th/13th centuries, that many ambassadors delayed for a time before sending a present. It was always possible that a newly-appointed official might be very quickly relieved of his office, as in the case of Surnâzen Mehmêd Paşâ, who was Grand Vizier for only four hours on 6 March 1566. On the other hand, such swift reversals of fortune did not occur, as in the case of Ahmed Köprüli [see Köprüli] a few years later, it could have highly unpleasant consequences for the dilatory ambassador (French in this case).

It goes without saying that under such circumstances these so-called “presents” acquired more and more the character of bribes for officials, and that the representatives of the various Powers continually tried to outdo one another in the extravagance and frequency of their gifts. Equally there can be no doubt that the interests of the Ottoman Empire were not always served by this custom (as on the Frutch in 1711; see BALTADJİ, at end). The side-effects of present-giving, therefore, undoubtedly contributed to the ruin of the Ottoman Empire and the decline of its moral standards.

HIBA, gift inter vivos, transfers the ownership of a thing during the lifetime of the donor, and with no consideration payable by the donee. The term ṣadaka is used to designate charitable donation, which does not require offer and acceptance and which, moreover, is always irrevocable. As for the term hadîyya, this is preferably applied to the donation of a movable object, given as a present; according to certain Shafi’is it would be valid even without acceptance on the part of the donee.

Gift is a contract. It is formed, say the scholars, by kâdir wa-kabul, by offer and acceptance; though this mutual agreement, however indispensable (barring exceptional circumstances), does not have the same juridical value in all the schools.

(a) According to the Hanafis and the Shafi’is, mere acceptance by the donee not only does not transfer ownership, in sale, it does not even create any obligations binding on the donor. Transfer of ownership is effected only by the donee’s taking possession, when this has been authorized by the donor. Until this taking of possession (kabûl), the donee can neither compel the donor to deliver the subject of the gift, nor put himself in possession against his wishes. The death of the donor or of the donee before possession is taken terminates the agreement. It is true that the Shafi’is, in their so-called “presents”; 

(b) In Mâlikî law, mutual agreement or, if preferred, the acceptance of the donee added to the offer of the donor, creates a true contract which, even if it does not transfer ownership—this is acquired only by kabûl, taking possession—does procure some very great advantages for the donee. Indeed the latter has the right to compel the donor to effect delivery of the thing given, and consequently the transfer of ownership, a right which then passes to the heirs of the donee if the latter dies before taking possession. It should be added that in Mâlikî law the donee could dispose of the thing given, even before delivery, in case of the donor’s decease, provided he took care to have his act officially recorded by the kâdiri.

(c) Of the four Sunnî schools it is the Hanbali alone which attributes to the mutual agreement the effect of transferring ownership, at least when it is a question of gifts of things which are not measured by capacity or weight (Ibn Kudâma, Mughâlî, v. 591). Where the latter are concerned (precious metals, foodstuffs, grain), taking possession again becomes indispensable.

Since gift is a “necessarily impoverishing” act, it can be performed only by individuals whose capacity is complete. Hence it is forbidden even to the semi-incompetent, the prodigal, the weak-minded, even if attended by his guardian (wâli). But it is permissible for the person of full capacity to donate inter vivos the whole of his property, despite the fact that such an act is morally reprehensible if it is aimed at depriving prospective heirs or at favouring some over others. To this rule the jurists add three qualifications, the first two common to all schools, the third peculiar to the Mâlikîs. The bankrupt (muflûr) cannot dispose by gift of goods acquired by him before the sentence of interdiction. Gifts made by an individual at the point of death (fi marad al-ma’âsî) are assimilated to bequests. In other words a person suffering from a fatal disease, or one who finds himself in danger of death, although enjoying all his mental faculties, cannot give more than a maximum of one third of his property, with the further condition that the donee should not be one of the heirs. Finally, in Mâlikî law the married woman, although considered fully competent as in the other schools, is not entitled without her husband’s authorization to give more than one third of her possessions, the husband alone being entitled to contest the validity of a gift in excess.

Broadly speaking, everything susceptible of being sold can be donated. However, this assimilation applies fully only in Shafi’i and Hanbali law. The Hanafis and the Shafi’is treat in gift the same things as in sale, as a general rule the gift of undivided property (muqâbî) when it is divisible by nature; this is an important reservation, for a share in property indivisible by nature (slave, animal, tiny house) can always be donated, the taking of possession, of course, being total in such cases (Hûdâya, iii, 164). The Mâlikîs, on the other hand, display a more liberal attitude towards gift than towards sale, authorizing the gift of something future, uncertain, or insufficiently defined as to kind, quality or value. In their view the exigencies of the law with respect to sale are dictated by an anxiety to avoid risk and illicit profit; they lose their raison d’être in the case of acts of liberality, since these call for no consideration from the side of the donee.

Revocation of gifts: this is a point where the differences between the schools seem quite arbitrary, despite the efforts of the jurists to explain these differences in the light of certain hadîthûn which the proponents of the two conflicting doctrines invoke, in opposite directions of course. Thus on the one hand we have the Hanafi doctrine, according to which the donor is normally entitled to revoke his gift (barring impediments), unless he is related to the donee within the degrees where marriage is forbidden, or is the
The right to revoke, more or less liberally accorded by the various schools in terms of the quality of the donor, disappears in the presence of one of the following impediments:

(a) The death of the donor, revocation being a right attached to the person of the donor, or the death of the donee, since the property then passes from his ownership;

(b) Alienation by the donee of the thing given, with or without consideration;

(c) Its loss or destruction, whether due to the passage of time, to accident, or to the act of the donee himself;

(d) Changes produced in the thing given also create an obstacle to revocation. It is not necessary that the change be caused by the donee. Any change which may rest on the donor before possession is taken (Egyptian Civil Code art. 493; Syrian Civil Code art. 401). That is why the withdrawal of gift from the domain of personal status, where it was traditionally placed, has been accompanied by many changes in the rules of Ijana law. Indeed it is in the countries of Hanafi persuasion that this phenomenon is especially apparent. For instance, nearly all these countries have purely and simply abandoned the restrictive and complicated ruling of their school relative to the gift of undivided or jointly-owned property. The Sudan gave the lead on this point with its Judicial Circular no. 13 of 1953. Likewise, there is a tendency no longer to demand taking possession as a condition of validity, provided the gift is effected by an authentic deed (Egyptian Civil Code art. 490; Syrian Civil Code art. 458). Lastly, the Maliki principle that the donor binds himself immediately to ensure delivery of the thing given has been substituted in most places for the Hanafi rule under which no obligation rests on the donor before possession is taken (Egyptian Civil Code art. 493; Syrian Civil Code art. 401).

Besides gift proper (hiba), the essential characteristics of which have just been outlined, there are certain special forms of donation about which a few words may be said, if only to establish the degree to which they are valid.

'Umar, as defined by the Hanafi, Shafi'i and Hanball schools, is gift with full ownership but as an ordinary gift, it is enough for an animal to have grown bigger or fatter, a slave to have become more handsome, a house to have been whitewashed, etc. One would suppose that this kind of impediment would be most often invoked in order to render a gift irrevocable.

In three schools, the Maliki, Hanball and Shafi'i, revocation is impossible where it could harm the creditors of the donee; for the first two of these schools, everyone who became a creditor after the gift, should be allowed to attach to the person, or the death of the donee, the withdrawal of gift from the domain of ownership of the thing given has been substituted in most places for the Hanafi rule under which no obligation rests on the donor before possession is taken (Egyptian Civil Code art. 493; Syrian Civil Code art. 401).

'dimmi, vizier of the caliph al-Mustazhir. Hibat Allah was once appointed vizier in Muharram 501/August-September 1107, but he was dismissed in Ramadan under pressure from the Saljuk sultan Muhammad b. Malikshah. It is true that the caliph soon restored him to office, in the form of Muhammadan Law, the withdrawal of gift from the domain of personal status, where it was traditionally placed, has been accompanied by many changes in the rules of Ijana law. Indeed it is in the countries of Hanafi persuasion that this phenomenon is especially apparent. For instance, nearly all these countries have purely and simply abandoned the restrictive and complicated ruling of their school relative to the gift of undivided or jointly-owned property. The Sudan gave the lead on this point with its Judicial Circular no. 13 of 1953. Likewise, there is a tendency no longer to demand taking possession as a condition of validity, provided the gift is effected by an authentic deed (Egyptian Civil Code art. 490; Syrian Civil Code art. 458). Lastly, the Maliki principle that the donor binds himself immediately to ensure delivery of the thing given has been substituted in most places for the Hanafi rule under which no obligation rests on the donor before possession is taken (Egyptian Civil Code art. 493; Syrian Civil Code art. 401).
HIBRI — HIDJA

Tophaps Sarayi .... türkçe yazmalar katalogu, ii, Istanbul 1961, no. 2728); (3) a concise History of the Ottomans, from the beginnings to the reign of Phōbim I, with lists of viziers, etc., entitled Defter-i ahhbār, it is of some importance for the events of his own time (see Ist. kit. tarih-coğrafya yazmaları katalogları, li, Istanbul 1944, no. 40); (4) and (5) short accounts of Murād IV's conquests of Baghdād and Rewān (A. S. Levend, Gazavat-nāmelere, Ankara 1956, 111); (6) a riddle on the times of prayer, composed in 1607/1606-7; (7) a small disdēn.

He is remembered for his Anis al-musāmmirīn, completed in 1045/1065-6 (but added to in later years), a history and description of his native town. In the tradition of earlier 'histories of cities' in Arabic and Persian literature (but apparently for the first time in Ottoman literature, if a few panegyrics of Istanbul are excluded), he describes in detail the mosques and other public buildings and records the famous men of the town. It was used by Ḥāḍidatī Ḥājī for the relevant section of his Taṣārīmil Āmmār (fr. J. von Hammer, Rumeli und Bosna, Vienna 1827, 1-15), and was revised and considerably expanded by Bādi Ṣumār Ef. (d. 1908) as Riyād ū tedāl-i Edīrīne (unpublished: 1 vol. Autograph MS in the Library of the Selimiye mosque, Edīrīne). The so-called Ṭarīḥat-i Ḍiwarī Čelebi, 2 parts, Istanbul 1293-2, consists in part, at least, of extracts from the Anis al-musāmmirīn and the Defter-i ahhbār (see Babinger, 214).

(V. L. Ménage)
Encyclopaedia of Islam III
In the pre-Islamic period, "poetry was abundant only in regard to wars between the clans... If Kuraysh had little poetry, it was because they harboured no hatreds and were never at war".

It is in the struggles that took place between Muslims and polytheists that we see the important part played by hidja, and the verses of the Kur'an (XXVI, 224-7) condemning poets, except for those who were believers, are a retaliation against the attacks to which the nascent Islam was subjected; the Prophet himself had to resign himself to using the services of several poets to combat his adversaries with the appropriate weapons to dishonour and vilify them, even going so far as to pledge his supporters the aid of Gabriel (see Ibn Sallâm, Tabâdâl, 181); the most celebrated and virulent of these champions of Islam is Ḥassân b. Thâbit [q.v.], but we should also note at least Kâb b. Malik [q.v.] and 'Abd Allâh b. Rawhâ [q.v.], who is less mordant but perhaps more effective in the mockery with which he overwhelmed the incredulity of the Meccans. If hidja had not been so influential in Arabia, the Prophet, who disavowed it, would certainly not have gone so far as to incite the poets against the infidels; incidentally he said that the shafts they shot were more potent than arrows.

Under the first caliphs, hidja was rejected as being contrary to the teachings of the new religion, but to a certain extent it continued to be practised, feared and encouraged, for religious, political and racial reasons. It was primarily cultivated in what C. A. Nallino (Raccolta di scritti, vi, Rome 1948, 110 ff.; French trans., La littérature arabe, 170 ff.) calls the poetry of the troops (delle milizie). Feeble when the enemy was non-Arab, it reached the vivacity and verve of the ancient hidja as soon as the adversaries present could understand (see, e.g., the accounts of the Battle of the Camel [q.v.]). Perhaps of greater interest are the poems inspired by the politico-religious hatreds born or inflamed during the early days of Islam, an especially eloquent echo of which can be found in the works of the Khârijî [q.v.] and in isolated poets like al-Âshâ of the Banî Hamdân [q.v.] or Ibn Mufârrîgh [q.v.].

Hidja was also practised in a quasi-official manner in that sovereigns tended to surround themselves with poets able to defend their glory and attack their enemies; thus al-Âkhâl [q.v.] hurled invectives at all his master's foes, while at the same time insulting his own rivals, Dîjarf and al-Parâzâd [qq.v.], who heated abuse upon each other and set out to procure each other's destruction in Nâkâhid [q.v.] which remain a characteristic example of hidja of the Bedouin type—but of a hidja henceforward deprived of its social character and reduced to a punishment in the form of an insult delivered by opinion (represented in this case by the poet) upon anyone who failed to conform with the modes of existence, outlook and behaviour inspired by the sentiment of honour.

This character is even more markedly absent from another form of hidja, of the most sordid sort, which came into being at the very beginning of Islam: for the poet, it consists in earning himself a reputation for foolishness of speech, with the aim of extorting nothing less than blackmail from potential patrons. Thus, for al-Ḥuṭâyâ [q.v.], that "eroder of honours" (mihrâb al-aš'âda), invective was a means of subsistence, for the terror inspired by his reputation won him a stream of gifts. This extortioneer poet had a crowd of emulators in the 2nd/8th century, and a certain rhymester reached the point of simply writing on his stick the object of his desire, so great was the dread of his comments in verse (see AL-MAKAM B. 3ARHAL)

In the same period, hidja became epigrammatic in the hands of poets of greater or lesser renown who respected nothing and took malicious pleasure in denigrating their opponents, and sometimes even their friends, by addressing crude and obscene observations to them; the Aghdân teems with verse of this type, the writers being Bashâhr, Ḥarmâd 4Ashrâd, Ibn Munâshîr, Dîbîl [qq.v.] and many others; among them the Khârijî [see-q.v.] were never behindhand, since the epigram had become a pastime of the upper classes.

The indecent hidja underwent a relative eclipse in the 3rd/9th century when neo-classical poetry flourished, although Ibn al-Rûmî [q.v.] became a past-master of the art of abuse, and a quantity of satirical verses is to be found in Abû Tammâm, al-Buhîrî, and then in al-Mutanaâbi [q.v.]. They are, however, in no way comparable with the writings of the 2nd/8th century, nor with the works of later poets such as Ibn al-Ḥadîdâdji or Ibn al-Habîbîrîyâ (qq.v.); the propensity of these last poets for subha [q.v.] inspired them to write virulent, gross and obscene epigrams which they addressed to patrons whom they held to be too misererly; the principal themes were avarice, meanness of spirit, and lowly origin, but more and more insinuations crept in, not to say accusations, of homosexuality and other deviations.

The theorists had, however, endeavoured to restrict the subject-matter of hidja by restoring greater moderation; for them, it consisted essentially in refusing every praiseworthy quality to the person under attack and attributing to him defects of a purely moral order such as avarice, greed, lack of courage, etc. Physical defects should not be taken into consideration, nor, for some, even the smallness of the group (see al-ʿAskârî, Sinâât al-ṣâyîn, 105); Ḫudâmâ [q.v.] and other critics stood up against the grossness of the hidja and recalled the remark of Abû Ṭâmâr b. al-ʿAlî [q.v.]: "the best hidja is that which can be recited by a girl without loss of modesty", but Ibn Rasîq [q.v.] admits that it should be adapted to the milieu for which it was intended, although he prefers the discreet and subtle allusion to over-emphatic assertion (see A. Trabulsî, Critique poétique, Damascus 1955, 228-30).

In Muslim Spain, where the eastern tradition was faithfully followed, Ibn Bassân [q.v.] stated in his Dakhîbra (vol. iii, still unpublished) that he had not included any hidja in his anthology, in order not to spoil it; Ibn Bassân lived in an austere period, which explains his scruples, but his contemporary al-Fâth b. Ḫâfîk [q.v.] and others as well did not refrain from attacking their fellows, though without exceeding the limits permitted by decency, at least as understood by Arab authors.

In regard to style, the literary form of the hidja, which is very supple, allows the use of generally clear and simple language; only the subtlest epigrams appear obscure on account of the allusions that they contain.

This genre being exclusively poetic in origin, one would hardly expect to find any hidja in prose; and yet, from the 3rd/9th century, simple prose tends to replace certain functions of poetry, and al-Dîhâs [q.v.] does not disdain to include in his Kitâb al-Turbi wa l-ṣudâr some satirical pages in the best vein, and even to create satire with a portrait of
Muhammad b. al-Djahm al-Barmaki (g.v.; ed. T. Husayn, in al-Katib al-Misri February 1947, 55-64) and some rasālī in which he pokes fun at his closest friends, though without malice. In the following century his emulator, Abū Ḥasyān al-Tawfīdī (g.v.) further developed the genre with the Makhālib al-waṣairayn (ed. I. Kaylānī, Damascus [1961]) and, in the 12th/11th century, the Andalusī writer and poet Ibn Shuwaydī (g.v.) drew satirical portraits of great subtility (see Ibn Bassām, Dabḥa, i/s, passim); here we are concerned with an intellectual and literary truth in its most respectable connexion with the writings in verse described above. Perhaps we should also mention the Mabāmatī (g.v.), which contain a large proportion of true satire; it is only here that the translation of ẁαμμαξία by hidżī is justifiably “satire”. Satire of manners, which has scarcely been cultivated in Arabic (see al-DuQaQī, and ʻUkāya) has not resulted in comedy any more than mabhāma, but it will be noted that comedy makes its entry into the Arab theatre before the other dramatic genres (see Masraya).

Hidżī in verse, of more or less the classical type, has not disappeared even at the present day; leaving aside its too unfamiliar survivals in dialectal Arabic, we find in many poems invectives which would not be disowned by the ancient poets, although the subject matter has for the most part changed; now the themes are mainly colonialism, imperialism, foreign (even Arab) governments, and hostile political parties, which are the target for attacks in verse by poets, and pamphlets too are renewing the ancient tradition; the great difference lies in the fact that gross insults are mostly banished from this verse, the best examples of which recall the wittiest and subtlest writings of certain poets of the 2nd/8th century.

Bibliography: in addition to the sources given in the article: Poems of hidżī occur throughout the diwanī of the ancient poets and the great collections such as the Bayān of Ḍahīz, the K. al-Ṣhrī wa ʻl-ḥuwarā of Ibn Kuttāya, the Ḥāqānī, etc.; certain anthologies devote to it a chapter entitled bāb al-hidżī, in particular the Ḥamāsā of Abū Tamām, the ʻIshā of Ibn ʻAbd Rabbīh, the Musṭaṣrīf of ʻIshbīlī, etc.; in the same way, the critical works generally contain in bāb al-hidżī, particularly the Nakhr al-ḥadīth of ʻUkūdama, the ʻUmdu of Ibn Rāshīk, etc.—The principal works of orientalists were named at the beginning of the article; to them should be added: W. Ahlwardt, Über die Poesie und Poetik der Araber, Gotz 1856, 51-2; T. Husayn, Fi ʻl-adab al-ṣāhilī, Cairo 1927, 122-40, 171-81; F. Gabrieli, Estetica e poesia araba, in RSO, xli (1930), 293-300; ʻAbbās M. al-ʻAkkād, Ibn al-Kāmī, Cairo 1932, 217-43; M. Husayn, al-Ḥājī wa ʻl-ḥadījāfān, Cairo 1947; E. J. Webber, Comedy and satire in Hispano-Arabic Spain, in Hispanic Review, xxvi (1958), 1-12; R. Blachère, HLA, ii, 380-2, 417-25. (Ch. Pellat)

II.—PERSA

Though hidjzi is more specifically “satire”, this section of the article will contain general considerations on Persian humour.

Persian humour finds its expression in various literary genres: ḥadīw (satire), ḥawād (parody) etc. Amongst the rhetorical figures most widely used to obtain humorous effects are ṭadhim or “quotation”; where a poem by another author is taken as the basis and inserted in one’s own poem, macaronic verses (mulamma), a mixed composition of Arabic, Persian and sometimes Turkish elements, etc. Humorous or jocose poetry is moreover defined by classical Persian literary critics under various headings, with reference to its contents rather than to its form. So we have ḥayyībā (jocose poems), ḥufriyāt (blasphemous or heretical poems), ḥammiyāt (wine-poems), ḥasāliyāt (facetious poems) etc., and in prose the ḥalqī (pl. of ḥalq), i.e., facetiae.

It would be impossible here to make even a sketchy history of Persian humour. Almost all the poets of the classical tradition wrote in common with the style, which was already present in the Arabic literature of the early ‘Abbāsīd period, from which Persian took so many forms and ideas. One of the oldest Persian specialists in humorous verses was Sūzān of NAS (d. 569/1173-4 or 574/1179) who founded a sort of school of this kind of poetry in Transoxiana: Abū ʻAlī Ṣharīfī al-Samarqandī, author of the “Stick Kaṣdī” and, Ṣafī al-šarīfī Ḫāwāvī, Djamātī of Nakshāb, Lāmī of Bukhārī. By far the greatest of the Persian parodists and satirists is however the contemporary of Hāfīz, Ḫubāy-i Zākānī of Kāzvin (d. ca. 772/1371), whose masterpiece is the Abkhlāq al-āṣrāfī ("Ethics of the Aristocracy"), in prose mixed with verses, composed in 740/1340; the authorship of his famous long kaṣdī Muḥī u gurba ("the Cat and the Mouse"), is now doubtful (MINO). In the following century Abū ʻIṣbāq or ʻAbūl Ṣaḥrāb (active in the first decades of the 9th/15th century), called Alī maqī (foods), specialized in writing jocose poems concerning food (Kans al-igtiha), "Treasure of Appetite"; Diwān-i Afsīma, etc.). It is significant that he, a carder of cotton, was connected with the mystical order of Shāh Niʿmat Allāh of Māhān (near Kirmān) and showed some malamašt tendencies (parodies of his own master’s mystical poems). A specialist in "clothes" was ʻAbd al-Dīn Mahmūd Kārī of Yazd (first half of 9th/15th century), author of the Diwān-i Alīsīs ("Sartorial Poems"). For later times, we mention only Yaghmā (1782-1859), also coming from a poor family, a very popular poet of the Kādjar period. But, as has been said above, almost all the great classic poets (e.g. Sa’dī, and, later, Kā‘ānmī and others) indulged in writing fayyībā or hasāliyāt.

A specialist in the study of Persian humour is that represented by folk verses or folk tales, which are not generally included in the traditional histories of Persian literature. Their central character is that of the "fool of God" of the type of the Italian Bertoldo, with a different name in different places. In Iran we find Mullā Naṣr al-Dīn, Mullā Du-Piāza, Shāykh Bahdur, Mullā Muḥāfīzī, etc. He is rather a Persian-Islamic than a typically Iranian character (St. Dūjā in Arab countries, Nasrattīn Hoca in Turkey, Birbal in Muslim India, Pak Pandir, Pak Kadok and others in Malay and Indonesia etc.).

As regards classical Persian humour we must never forget that its stylistic background remains that (definable in general as decorative-symbolic) of all classical Persian literature. The abrupt insertion of ultra-realistic butts into otherwise non-satirical verses is produced by a singular vis comica. One of the most comic passages of Zākānī is, for instance, a nazm in Firdawsi’s style inserted in the chapter of the Abkhlāq al-āṣrāfī devoted to chastity; in the static decorative style of the Shāhnāma when it describes battles and duels, accompanied by a couple of moralizing verses, Zākānī describes here, in the most direct and asymbolic way, the homo-sexual intercourse between two famous heroes of the
Shāhnāma, Rustam and Hūmān. The stylized majestic decorativeness of the verses of Firdawsi applied to such an incongruous object creates almost automatically a powerful vis comica. We should also keep in mind that the stylistic bases of our Western humour generally differ from those of the classical Persian literature; a verse of the famous ḩājida in an by Amir Muṭẓizi, where the poet in love is compared to a chicken roasting on a spit, invariably produces laughter in an unprepared Western reader, who interprets this purely static image in a dynamic way. One of the elements of classical Persian humour is however simply the exaggeration of the background style. For instance in Zākānī’s works in prose mixed with verses the background style is that of Sa’dī’s Gulistān: but the exaggeration in the use of this style is clearly visible, e.g. the continuous interruption of even short sentences through minute “commentaries” in verse form.

Another element often present in Persian comical verse is the dynamic personification of inanimate objects which, for obvious reasons, plays only a secondary rôle in our modern Western humour. The complete lack of mythological trends in the Muslim world, the highly developed Neoplatonic static symbolism of its style may explain—by contrast—the comic force of such a stylistic device. The pots that become pregnant and give birth to infant pots in the famous laffia of Mullā Naṣr al-Dīn, or the personified “beard” of Zākānī’s Rishgīnāma might produce only a smile in a Westerner, but in the stylistic world of classical Persian literature the abrupt appearance of a ribald old character called Ṛgh al-Dīn Abu ’l-Mahāsīn (“Beard of the Religion”, “Father of Virtues” [maḥāsīn, also “beard” in Persian]) out of a hole in a wall is so uncommon “stylistically” that it creates laughter. And—here is another element of Persian classical humour—the vis comica is even augmented by the irreverent macaronic play on words implicit in the name of this character (ḵūr. Persian for “beard” is macaronically combined with din through an Arabic ṣada). The use of courtly and religious Arabic words or elements together with the most common, and often vulgar, Persian names (e.g. the Arabic article al- in the humorous “Dictionary” by Zākānī, called Ta’rifās, or Ṩiṣāb al-ṣadīq), makes even the most serious contemporary sources lack even in folk tales of the Mullā Naṣr al-Dīn type.

The whole may give sometimes the impression of social criticism or realism, but we should always keep in mind the stylistic motives that lie at the basis of all this. Generally speaking, classical Persian humour seems to be the by-product of highly refined urban milieus that contrast with the ignorant mulūds on one side, but, on the other side, also with the equally ignorant peasants (so often criticized by Zākānī); we are in a palaeo-bourgeois and rather bookish world, creating a sort of “clerks’ humour” equally anti-mystic and anti-popular.

This does not mean, of course, that social and sometimes even bitter social criticism is absent from Persian humour. Numerous elements of it are present, especially in Zākānī’s Aḥbāb al-ṣaghfīs and even more in the works of recent satirists. Last but not least, Persian writers of this genre supply us with extremely important information—not yet sufficiently studied—concerning the common life of the people of their time, on food, clothes, customs, social institutions, etc., which is so difficult to obtain from other, more serious, contemporary sources.

**iii.—Turkish Literature**

The characteristic of ḥidjād (ḥīdaw, mod. hīdaw) in Turkish literature is that, with rare exception, it is blended with humour. It has been expressed both in verse and in prose and was not confined to any particular literary genres.

In Ottoman Turkish literature the earliest example of satire is the famous Khar-nāme (the Book of the Donkey) by the 9th/15th century poet Sheykhī (g.s.) of Germiyan (?-833/i430?). This is a poem of about 124 couplets (the number varies in the different manuscripts) in maḥnawi form and in ḏaḥif metre, which is included in most dīwan (a good copy is in Istanbul Un. Lib., T.Y. 2408, fols. 60b-63b, which is better than that of the text in the dīwan published in fascimile by the Türk Dil Kurumu, Istanbul 1942, 64-70). A donkey, working for a master who has broken his word, by hard labour and ill-treatment, is one day allowed by his master to graze in the meadow. There he sees well-fed oxen enjoying life, and particularly envious their horns, which are like crowns on their heads. He goes to an old and experienced donkey and asks him the reason for this injustice. The old wise donkey explains to him that the reason why oxen are so privileged is that they work in the corn and barley fields whereas all that donkeys can do is to carry wood. Inspired by this explanation, the donkey rushes to a cornfield and begins to devour the green corn with delight. When he has eaten his fill he rolls on the ground and bays loudly. Hereupon the owner of the field appears, gives him a thorough beating and cuts off his tail and his ears.

This short poem contains in miniature all the elements of a classical maḥnawi. The sources do not agree to whom the work was dedicated. Although some MSS mention Murād II in the introductory part, the evidence is stronger for Mehmed I, who was treated and cured in Ankara by Sheykhī, a physician by profession, during the sultan’s Karaman campaign (818/h1415). The Sultan rewarded the poet by giving him the fief of the village Tokuzlar or Tokzu. As Sheykhī was on his way to the village, the former
owners of the region held him up, beating him and wounding him badly, and took away everything he possessed. The *Khar-nâme* is an indirect complaint against their rivals, poems of this type conceits and plays on words, the strong satire couched in subtle humour to make this little poem a masterpiece almost without parallel in this genre until Dıyâ (Ziya) Paşa's *Zafer-nâme* in the Tanzimat period.

During the 9th/15th and 10th/16th centuries many alevî poets wrote satirical *hifâs* against their rivals and enemies, but the famous name for *hîdâ* in the classical period is Nefî (*q.v.*). This outstanding *hâşida*-writer composed a special book of satires, *Sîhâm-i kâdâ* (Arrows of Fate), which contains violent satirical poems in the forms of *hâşidas* and *hifâs* against leading personalities of his time, viziers, scholars, poets, government officials and his own father. The majority of these satires contain gross invectives and obscenities and reflect the violent and arrogant temperament of the poet. Nefî thus takes vengeance on his victims by exposing their vices and enumerating the injustices they had made him suffer. Nefî was very popular at the courts of Ahmîd I and particularly of Murâd IV, who enjoyed reading his virulentic attacks against political personalities also known to him. It is not surprising that this made Nefî many enemies. According to an anecdote reported in most contemporary sources, Murâd IV, on a stormy day in 1639, was reading the *Sîhâm-i Kâdâ* in the Beşiktaş Palace when lightnings struck nearby. Drawing an evil omen from this, the sultan tore up the book and forbade Nefî to write any more satires. But the poet could not resist the temptation very long. He wrote in 1044/1634 a violent *hîdâ* against Bayram Paşa, who was then deputy Grand Vizier. According to an anecdote about these enemies, jealous of the imperial favours of the Police. In the whole work, written in a refined style, always scintillating with subtle irony, remained unrivalled in modern Turkish literature are used in this work, Diya Dişdiye-i Fâdil Efendi (1875) and later Pâ'îb (1882) and Kânsü (1882) began the series; they were followed by Redja'izlde Ekrem's (1847-1914) 'Arâbâ Sveâîî (1889, published 1896) and Hüsân YâhÎmî's (1864-1944) *Sîs* (1897), *Sâîasîsî* (1900) and *'Omer Seyf al-Dîn* (1884-1920). At the turn of the century *hîdâ* in Turkish poetry is brilliantly represented by Me'mehâd Efref (1847-1912) who, after a year's imprisonment for his political activities, went to Egypt (1903) and wrote there his famous satirical *hâşidas* and *hifâs* in which 'Abd al-Âhâm II, his pashas, and his régime are mercilessly attacked in a very personal style where irony and sarcasm dominate.

A number of poets developed after the revolution of 1908 a new genre of satire in the form of pastiches or *nasâres*, with the same metre and rhyme as well-known *hâşidas* and ghâzâls of the great classics, particularly of Fudûtî, Nefî and Nâdim. Two names stand out: Fâdîl Âhmed Aykaç (born 1884), the author of the *Dinâmîn-i Fàddî* (1913), and Khâlîf Nîhâd Bostêpe (1882-1949), the author of *Sîhâm-i sîhâm* (1923). These two poets and a few other minor writers of this school wrote humorous satire mainly of a political nature, generally aimed at the individuals playing a prominent part in Turkey during the years 1908-1923.

Between 1908 and 1920 the essayist, short-story writer and satirist Nefî Khâlîl Karâv (*q.v.*) (1888-1965) produced the best specimens of political satire in prose. In many essays he attacked and ridiculed the governments of the Committee of Union and Progress, their leading personalities, and Istanbul society during the First World War and immediately after. His mastery of the language and his colourful, vivid and flowing style, always scintillating with subtle irony, remained unrivalled in modern Turkish until a new prose style was developed by the generation of young writers following the language reform movement of the 1930's. Most of his satirical essays have been collected in the following works: (1) *Sâkîn aldanma inana na man* (1915, in Roman script 1941); (2) *Kîrsînîn dedikleri* (1916, 1940); (3) *Aqğ* *Pâşâ'nın köprüsü* (1918, 1939); (4) *İstanbul'un hafızları* (1920); (5) *İstanbul'un hafızları* (1936, 1939); (6) *Sığaçubîlî sahan* (1922, 1940); (7) *Tandikâlar* (1922, 1941).

In contemporary Turkish literature, several writers make use of humorous satire to combat extreme traditionalism, bigotry and political intolerance. The most popular and successful writer of this school is Azîz Nèsin (b. 1915), the prolific short story writer, novelist, essayist and playwright (for a list
of his main works see Behcet Necatigil, Türk edebiyatı tarihi ve isimler sözlüğü, Istanbul 1964, 157), who is essentially known as a humorist but who actually aims at killing by ridicule social and political prejudices and the shortcomings of a society in transition.

In Turkish folk-literature social and political satire is one of the principal themes, and the tales of Naşir al-Dîn Khoja and Bektaşi anecdotes, folk tales, the stories told by meddârîs (public story-tellers) abound in satirical criticisms of public figures and social prejudices. Satirical interpolations in the improvised converses on set themes in the Ortaoyunu and the Karâğa is q.q.s are very frequent. These public performances have often been censored and at times temporarily suspended when the element of satire was thought to be dangerous.

In folk poetry a special satirical genre called tasgîlama has been developed. Tasgîlamas may have a great variety of subjects, but social injustices are one of their main targets (see İhlan Başgöz, Türk halk edebiyati antolojisi, Istanbul 1963, 16 and 129).

In Eastern Turkish (Çağhätay) literature the great 9th/15th century poet and writer All Şîr Nâwî is the most outstanding representative of satire. In many of the ghâsals and rubâ'îs in his four divânîs there are powerful satirical passages against hypocrites and bigots. In a typical ghâsâl he addresses the wâdîr (the preacher) in these terms: ‘What lies, what ridiculous behaviour, O preacher! Are you not ashamed of the community? They asked you to moderate people’s unceouthiness by counsels; who told you to kick and break the pulpit? . . . The tears on my cheeks are because of my hidden suffering and not because of the effect of your sermon, O preacher! To drink wine at night, and by day to tell people not to drink it, these are really nice virtues, O preacher!’ (TEDD, ii (1962), 43-4).

Examples of interesting social satire of minor literary value have been given by some late Eastern Turkish poets in Turkish literature.

In Adharbaydjan Turkish two writers stand out in hâjdâ: Mirzâ Fezî ʿAllî Aşqûzâda (1812-1878), a leading modernist and the first Turkish playwright, and Mirzâ ʿAllî Şîr Nâwî, who, together with some minor poets and writers of the humorous and satirical review Molla Nazreddin (founded in Tiflis in 1906), waged a relentless campaign against fanaticism and ignorance, and the conventional concepts of the old divânî literature.

But the best representative of the satire proper is Mirzâ ʿAllî Ekerb Şâbir (1862-1911), who, together with some minor poets and writers of the humorous and satirical review Molla Nazreddin (founded in Tiflis in 1906), waged a relentless campaign against fanaticism and ignorance, and the conventional concepts of the old divânî literature. His personal satires such as Kasîda-i şeyh ʿâşîh and Mukhabmas-i şeyh ʿâşîh are ‘complaints’ of the life and times at a juncture when owing to the rapid decline of Mughal power the feudal society of Dîhil’s society was disintegrating; and in the city it was precarious and undignified on account of the depredations of the Marâthas and the Dîkts and the invasions of Nâdîr Şîh and Ahmad Şîh Abdâbî. Most illustrative of these satirical and decline of the feudal society in Dîhil are Sawdâ’s Kasîda-i tahtîkh-i râşgâr, a satire on a nobleman who had fallen on evil times, and Muḥânwî dar ḥadîw-i Siddî Fulâd Khân, kowâlî-i Şâhîzâhânâbâd, which is also full of some personal venom. Sawdâ’s personal satires such as those directed against a satirist of lower calibre, Mir Şahîk, tend to be incisive, sardonic and vulgar. The most criticised of Sawdâ’s personal satires is Kasîda dar ḥadîw-i ḥâkîsh ki muṣûsâ ashîb, written from a Şîfî polemical viewpoint against the theologian Wall Allâh Dîhaltî (q.q.s.).

Sawdâ’s great contemporary Mir Tâkî Mîr (1722-1820) had a lyrical genius suited to the writing of ghâsals, but the element of social satire is also present in his ‘complaints’ like the Dar ḥadîw-i hâdwâ-i ūyûd.

It developed in the Lucknow school of poetry, but its use was limited. Here, in comparatively secure social conditions, social satire is rarely found. Instead we have personal exchanges between poets like Inshâ (1756-1817) and Muṣâbîl (164-1824). Inshâ, the better satirist of the two, had a frivolous virtuousity which his more dignified contemporaries lacked.

The satirical heritage of the Lucknow school produced a striking synthesis with counter-modernism under the impact of Western ideas and institutions in the verse of Akbar Allâhâbâdî (1846-1921), the pre-eminent social and political satirist of modern times.

Thematically Akbar’s satire is anti-West. It aims to ridicule, in isolated verses as well as in short poems like Dikhâ Darbâr, Barû-i bûtesa and Cûrûn Nûma, the glamour of British Indian life and institutions, and beyond it the very essence of Western civilization. He often directed his satire against Sayyid Ahmad Khân (q.q.s.) and the modernism of the ʿAllârîh movement. Akbar achieves his satirical effect by an intelligent cynicism, by reducing the sublime and the scientific to the ridiculous, by an amazing inventive ness in the interplay of rhymes, by coining and establishing a symbolic satirical vocabulary of his own, by an instinct for playing to the conservative gallery and by a passionate though pessimistic faith in the values of the Muslim past.

The tradition of political satire established by Akbar soon became a broad movement. The freedom movements organized by the Indian National Congress, the Khilâfat Conference and the Muslim
League produced a school of more sustained and topical satire. Its outstanding representative was Zafar All Khan, a political leader of shifting loyalties and the editor of the Zamin'dar. During and since the 1920's topical political satire became one of the regular and attractive features of Urdu journalism.

Prose satire in Urdu had its beginnings in the dastan literature of the early nineteenth century, especially in the Tijjami hizbub. From the prose dastan the satirical elements travelled to the modern novel and are discernible in Ibn al-Wahab, a novel in which Nadhhr Ahmad (1836-1912) seems to ridicule Sayyid Ahmad Khan's adoption of the Western style of living. Sarghars's (1845-1903) novels have also an element of social satire. Caricature, bordering on generalized satire, forms the subject matter and details of the novels of Sayyid Sadidjat Husayn, founder and editor of the humorous journal Awadh Panal.

Awadh Panal, modelled on Punch, was published in Lucknow in 1877 and continued until 1912. It was conservative in social outlook and opposed Sayyid Ahmad Khan's liberal and modernism. Much of its satirical content is directed against the Aliaghar movement and Western institutions. Awadh Panal established the tradition of prose satire in Urdu journalism, which is traceable in a number of journals that have succeeded it as well as in the columns of caustic political comment which are a permanent feature of Urdu newspapers.

(Aziz Ahmad)

AL-HIDJA—HURUF [see huruf al-Hidja].

HIDJA (a., from the verb hidjat, "to hide from view, conceal") is used of any object placed in front of a person or an object in order to conceal it from view or to isolate it. In medicine, it is a membrane which separates certain parts of the organism: al-hidjat al-huwai or hidjat al-djawal "diaphragm"; hidjat al-mustabjan "pleura" and hidjat al-bukhriya "b hymen" (al-Tahanawi, Kalsud; LA: Dozy, Suppl.).

Scarcely anything is known of the pre-Islamic use of this word; but the Kur'an, though it is found there only seven times, provides as valuable information on the basic and metaphorical meaning of the term as it does, to a certain extent, on its evolution. In general hidjat in the Kur'an means a separation: it is the veil or the curtain behind which Mary isolated herself from her family (XIX, 17); it is also the separate establishment (lately the gynaeceum) which was imposed at first only on the wives of the Prophet (XXXIII, 53; cf. XXXIII, 35), apparently on the advice of 'Umar. On the Day of Judgement, the saved will be separated from the damned by a hidjat (VII, 46), which is glossed as wall (sur) by the commentators, who deduce this interpretation from Kur'an LVI, 13. "It belongs not to any mortal that God should speak to him, except by revelation, or from behind a veil" (XXII, 54), a veil apparently intended to protect the elect from the brilliancy of the Divine countenance. (As for hiddan, it is certain that this custom was very little observed before the time of Muhammad, the veiling having been the prerogative of women of a certain rank, who used for this nafs, sir, sidjat, etc. ("Ali al-Hashshmil, Al-Mar'a fi 'l-gharr al-hidjat, 79-80, 146). The versifying of the Kur'an in which the wives and daughters of the Prophet are commanded "to draw their veils close to them" (XXXIII, 35 — dawat, dawjab) and "to the believing women ... to cast their veils over their bosoms" (XXIV, 31) probably date from the year 5 (Ibn Sa'd, Tabaddal, viii, 1734). Nevertheless 'Aisha is said to have worn the veil from the time of her marriage with Muhammad (ibid., viii, 59), which took place in Shawwal in the year 1 (al-Baladhi, Anad, 1, 403).

It is certain that this custom was very little observed in Medina. The Kur'an justifies it in the ground that thus "it is likelier [the believing women] will be known and not hurt" (XXXIII, 59). But with the expansion of Islam the custom spread rapidly in Arabia and elsewhere. It was adopted by almost all the women in towns, especially those belonging to the licensed classes; but neither the Bedounins nor the peasant women nor working women adopted it completely.

The wearing of the veil, being general in the towns,
where intellectual movements developed and spread, contributed to a large extent to the keeping of Muslim women in a sort of seclusion. At the end of the 19th century, however, under the influence of the reformist ideas of the Khedive Isma'il, who founded in Cairo in about 1290/1873 the first school for girls, some Egyptian women abandoned the veil. But the real champion of feminism was Kāsim Amin. In his work Taḥrīr al-ma'rū'a, in which is apparent the influence of Shāykh Ḥasan Ahmad ʿAbdūh's liberal interpretation of the Qurʾān, he denounced the necessity of keeping women in a state of subjection, stated their right to education and stressed the evils of the veil, which he considered to be "the vilest form of servitude". Nevertheless, he did not demand that it be totally abolished, but simply proposed that it should conform only with the strict demands of religion. As a jurist, he stated that there is in fact in Islamic law no text which justifies the use of the veil, which he considered to be "the vilest form of servitude". Nevertheless, he did not demand that it be totally abolished, but simply proposed that it should conform only with the strict demands of religion.

As Shārīf Eifni Nasif, better known by her pseudonym Hijattice, wrote in reply to Kāsim Amin’s articles, the veil is instituted: this allows thelearned to hide the sawing of the courtiers and intimates also. The veil is the curtain behind which the sovereign, giving up primitive customs, and the people. Finally, as the state declines, the dignitaries who have placed on the throne the heirs of the reigning dynasty sometimes seek to seize for the honour of mounting the steps and of occupying the places on the left and the right of the sovereign. At a signal from the vizier, everyone veiled himself and then the caliph, also veiled, began to speak. At the end of the address they withdrew their veils (al-Kalkashandi, op. cit., iii, 514 f.).

Introduction to Andalusia, North Africa and Egypt, this institution grew more complicated as court etiquette of the court to have any communication with the sovereign. In their turn the ruler’s intimates and intimates also place a frīḍidb, which signifies also the curtain behind which caliphs and rulers concealed themselves from the sight of their household. This custom, which appears to have been unknown to the early inhabitants of the Hijāzb, seems to have been introduced in Islam by the Umayyads, probably under the influence of the Sassanid civilization. The partition is also known as sidāra and sīr, but the custom is the same, and it finally developed into an institution (to be distinguished from the hijāzb, sometimes also called hijābj, which indicates the office of chamberlain [see Hijāb]).

According to the Ps.-Djakiz, Muḥā’īya and the majority of his successors were separated from their household by a curtain (sidāra) so that none of the latter could see the actions of the caliph when, under the influence of drink, he was no longer in control of his countenance. The first is adopted when nomadism is abandoned and the sovereign, giving up primitive customs, and the people. Finally, as the state declines, the dignitaries who have placed on the throne the heirs of the reigning dynasty sometimes seek to seize for the

cence of the world, was almost the object of worship. Because of this he was expected to hide himself as far as possible from the eyes of his faithful followers, who were conscious of the radiance of his countenance.

In Cairo, the official in charge of the curtain was called sāḥib al-maḏdlīs (al-Kalkashandi, al-Fadlī, i, 458; al-Makrizī, Khīṭāt, i, 386), a different office from that of sāḥib al-bār, or master of the door, who was the same as the Great Chamberlain. He was called also muṭānawwāl ʿl-sīr (al-Makrizī, op. cit., i, 411) and sāḥib al-sīr (M. Canard, op. cit., 374; Aş Kāzayla wa-ṭādiriyya, ed. of the Calendar, Beirut 1956). He was the Chief Eunuch and sometimes combined with the office of Master of the Curtain that of Chamberlain (M. Canard, op. cit., 374 n.). During receptions it was his particular duty to inform the vizier when the caliph was installed in his place and to give the order to his two assistants to raise the curtain in front of the ruler. The latter then appeared seated on his throne and facing the gathering. At the end of the audience the curtain was lowered and he then returned to his apartments (al-Kalkashandi, op. cit., iii, 495 f.). A sīr was also suspended in front of the door of the audience chamber when the ruler wished to ride in procession on the occasion of the New Year. The vizier and the important dignitaries waited outside, near to the sovereign’s mount. At the proper moment the curtain was raised and the caliph came out, preceded by his eunuchs, and mounted his horse (al-Kalkashandi, op. cit., i, 506).

The use of the frīḍidb was current in Fāṭimid receptions and solemnities, and its use during Ramaḍān should be particularly mentioned. On the second, third and fourth Fridays of this month, the caliph visited the mosque. On his arrival he ascended the minbar and sat under the cupola (kūbba). At his invitation, the vizier also ascended, approached him, publicly kissed his hands and his feet, and closed the curtains. The ruler was thus hidden as though in a litter (kawadda). He then pronounced a short sermon, after which the vizier opened the curtains (al-Kalkashandi, op. cit., iii, 511; al-Makrizī, op. cit., i, 451 f.); on the day of ḫaḍ al-fitr (q.v.), after the solemn prayer, the bāṭi, named one of the dignitaries who had been granted the honour of mounting the steps and of occupying the places on the left and the right of the sovereign. At a signal from the vizier, everyone veiled himself and then the caliph, also veiled, began to speak. At the end of the address they withdrew their veils (al-Kalkashandi, op. cit., iii, 514).

At the Shīʿī ceremony of mourning for the death of Husayn, the caliph, his face veiled, on a seat without a cushion, received the dignitaries, who were also veiled (al-Makrizī, op. cit., i, 432).

Ibn Khaldūn distinguished several sorts of hijābj which a state adapts to its needs as it develops. The first is adopted when nomadism is abandoned and the sovereign, giving up primitive customs, separates himself from the people and allows only his intimates to cross his threshold. With the development of the state and the complexity of its workings, a second hijābj is instituted: this allows only those who are initiated into the customs and etiquette of the court to have any communication with the sovereign. In their turn the ruler’s intimates and intimates also place a hijābj between themselves and the people. Finally, as the state declines, the dignitaries who have placed on the throne the heirs of the reigning dynasty sometimes seek to seize for
themselves the privileges of power. The dictator then sequesters the sovereign: he isolates him from his family and from his councillors by a hidjab, making him believe that his dignity demands that he be separated from them (Mukaddima, ii, 100-3, tr. Rosenthal, ii, 111-3).

III. In the eyes of the mystics, hidjab represents everything that veils the true end (al-Djurjani, Ta‘rifat, 86), all that makes man insensate to the Divine Reality. “It is a curtain interposed between the novice and his desire, between the marksman and his target” (Massignon, Haddad, 699). It is produced by the impression, on the heart, of the images of the tangible world, which hinder the manifestation of the truth. The man who is “veiled” (mahdjub) is he whose heart is closed to the Divine light, because his awareness is dominated by sensual or mental passion. “Your veil is your infatuation”, said al-Halladj (Massignon, Haddad, 325). The realization of the mystical union is impeded equally by the internal feelings which are centred on the soul, the reason and the spirit. The veil of the nafs is the passions and the desires, that of the heart is all observation which has no foundation, and that of the reason is its dwelling on intelligible meanings (al-Tahanawi, Kasbah, i, 276).

The opposite of the hidjab which is characterized by the contraction (kabd [q.v.]) of the heart is the ka‘af (revelation), which means, by contrast, its expansion (basp [q.v.]), its spreading open. Kabd and basp are involuntary states in which no human effort can produce or destroy, for they proceed from God (al-Hujwiri, op. cit., 374). However, when the lower soul is so weakened that it is incapable of overcoming obstacles, and when passion is annihilated, then all vain desires are effaced in the manifestation of the truth. The veil is rent and he who seeks God attains the fullness of his desire (al-Haddad, 325). The realization of the mystic separation, a supra-terrestrial protection, even to protect from bullets. They are worn round the neck, to render a barren woman fertile and to overcome obstacles, and when passion is annihilated, then all vain desires are effaced in the manifestation of the truth. The veil is rent and he who seeks God attains the fullness of his desire (al-Haddad, 325). The realization of the mystic separation, a supra-terrestrial protection, even to protect from bullets. They are worn round the neck, to render a barren woman fertile and to overcome obstacles, and when passion is annihilated, then all vain desires are effaced in the manifestation of the truth. The veil is rent and he who seeks God attains the fullness of his desire (al-Haddad, 325). The realization of the mystic separation, a supra-terrestrial protection, even to protect from bullets. They are worn round the neck, to render a barren woman fertile and to overcome obstacles, and when passion is annihilated, then all vain desires are effaced in the manifestation of the truth. The veil is rent and he who seeks God attains the fullness of his desire (al-Haddad, 325). The realization of the mystic separation, a supra-terrestrial protection, even to protect from bullets. They are worn round the neck, to render a barren woman fertile and to overcome obstacles, and when passion is annihilated, then all vain desires are effaced in the manifestation of the truth. The veil is rent and he who seeks God attains the fullness of his desire (al-Haddad, 325). The realization of the mystic separation, a supra-terrestrial protection, even to protect from bullets. They are worn round the neck, to render a barren woman fertile and to overcome obstacles, and when passion is annihilated, then all vain desires are effaced in the manifestation of the truth. The veil is rent and he who seeks God attains the fullness of his desire (al-Haddad, 325).
AL-HIDJAZ, the birthplace and still the spiritual heart of the Arabian Peninsula. As the site of the Ka'ba, the home of the Prophet Muhammed and the scene of Allah's revelations to him (manzil al-wahy), and as the capital district of the early Islamic state, al-Hidjaz is for Muslims as much the Holy Land (al-bilad al-mubaddasa) as Palestine is for Jews and Christians. Muslims are, in fact, even more zealous in guarding the inviolate character of their chief shrines; the areas surrounding Mecca (Makkah) and Medina (al-Madinah al-Munawwara) are sacred preserves (harams) which only Muslims are allowed to enter, and restrictions have often been placed on the penetration of non-Muslims into other parts of al-Hidjaz.

While agreeing in general that al-Hidjaz means "the barrier", the Arabic sources differ in interpreting its application. The common view is that the barrier is the mountain chain of al-Sarât [q.v.] separating the lowland of al-Ghawr or Tihama [q.v.] along the Red Sea from the interior uplands of Nadid and Iraq coming along Darb al-Sha'miyya was Dhat Akik, a more usual by-passed Djudda in order to save time. Three hours out of Mecca were the dome of the Prophet's last wife, Maymuna [q.v.], in Sarif, where she was married. North of Wadi al-Sayyid Dhat Akik is often mentioned as the limit of al-Hidjaz, although from this direction the road now winds down the mountains from al-Tâ'if directly to Mecca, so that the long loop to the north is avoided. The two Najilahs, now called simply al-Yamaniyya and al-Shamiyya, empty into Wadi Fâtima (classical Marr al-Zahrân), the fertile bed of which is crossed by the road from Mecca to Djudda.

Throughout the history of Islam travellers between Mecca and Medina have had a choice between two ways, one following the coast (al-Târîq or al-Darb al-Sultânî) and the other running east of the great harra (al-Târîq or al-Darb al-Shanjî), with variations in the itinerary for each way. Before the introduction of motor vehicles those choosing al-Târîq al-Sultânî usually by-passed Djudda in order to save time. Three hours out of Mecca were the domed tomb and mosque of the Prophet's last wife, Maymûna [q.v.], in Sarif, where she was married. North of Wadi Fâtima the road went through Usfân, the scene of the Prophet's raid on the tribesmen of Libyân [q.v.]. Next the road traversed the cultivated area of Khuylas set back some distance from the coast. Not far beyond al-Kadhôma the Red Sea would be sighted. Rabigh, though a port, had no proper harbour, ships anchored well away from the shore and transferred their cargoes to local sailing craft. As the barrier for pilgrims coming overland from Syria, Egypt, and al-Maghreb, Rabigh succeeded the now ruined village of al-Djuhûfa, which lies in a valley reaching the sea just south of Rabigh. Pilgrims coming down the Red Sea enter into ithrâm as their ships pass Rabigh. North of Rabigh is the reputed burial place of the Prophet's mother, Amina, at al-Abâwâ [q.v.], now called al-Maâ'idah.

From Rabigh secondary routes ran northwards through the mountains to Medina, providing a more direct but more difficult approach than al-Târîq al-Sultânî, which continued to hug the coast. From the port of Masûmâ a alternate route known as "the detour" (al-Malaff) turned inland, but the main road did not do so until it reached Badr Hûmayn [q.v.], where the Prophet humbled Kuraysh on the battlefield. The road from Yanbu', which has taken the place of al-Dijâr [q.v.] as the principal port for Medina, joins the road from the south at Badr, whence al-Târîq al-Sultânî ascends Wâdi al-Safîr towards Medina. In this valley 'Abd Allâh b. Sa'ûd of Nadîd won a signal victory over Ahmad Tusun and his army from Egypt in 1226/1811.

Now that an asphalt highway joins Mecca and Medina via Djudda, Rabigh, and Badr, it is easier and faster. A new highway runs through Usfân and the mountain passes farther north.

The usual course for al-Târîq al-Shanjî runs northwards down 'Aqîk Dhat 3'îrîk [see AL-3'ARîK]. Sometimes it goes through the old oases of Hâdâh and Sulaym on the eastern edge of the harra, and at other times it passes a little to the east of them. The oasis of al-Suwayrîkiyya (modern al-Suwayrîkiyya), also on the eastern edge of the harra, is even farther off the road. North of the modern mine of Mahd al-
Dhahab, now abandoned, al-Ṭarīq al-Sharkī proceeds for a space down another valley named al-Kā'īya and al-Dawādāmlīl to al-Riyāḍ, replacing the old pilgrim trail via al-Kunzūliyya and al-Kūfayya.

The northern section of al-Hidjaz may be taken as extending to the boundary between Saudi Arabia and Jordan, which stretches from a point south of al-ʾAkhāba [q.v.] over to the range of al-Ṭubayq. The occupation by the state of Israel of a position on the Gulf of al-ʾAkhāba has made it impossible for pilgrims to follow the old overland route from Sinai via al-ʾAkhāba. Among the ball ports are Ḥaṭl and Ṣaʿīda on the Gulf of al-ʾAkhāba, and al-Muwayliḥ, Ḍabāḥ, al-Wādīḥ, and Amlāḍī (orthography uncertain) on the Red Sea. From al-Wādīḥ tracks cut across the mountains to meet the interior highway at or near al-ʾUṭlā.

During the past century the heaviest traffic in the northern section of al-Hidjaz has been over the routes east of al-Šarāt, first the old Syrian pilgrim road through Tabūk and al-ʾUṭlā [q.v.] and then the Hidjaz Railway [q.v.], which in most places followed the pilgrim road closely. The railway was damaged during the First World War, and reconstruction did not begin until 1938/1946. In the meantime a paved highway was being built north from Medina to Tabūk and the Jordan boundary. The highway runs through Ḥaṭyar and Ṭaymā [q.v.] both of which lie a considerable distance east of the pilgrim road and the railway.

The southern section of al-Hidjaz has higher mountains, more rainfall, and much more cultivation than the other two sections. A road parallels the coast from Diʿadda through the ports of al-Līth, al-ʿUṣfūdha, and Ḥaṭl (Ḥaṭl Ibn Yaḥyā [q.v.], once regarded as the southern limit of al-Hidjaz) to al-ʾAkhīma, now reckoned as the beginning of Tiḥmāt ʿĀṣīr. The two lower parts of the valleys that flow seawards from high ground near the coast and the mountain ranges now being occupied in a general way by al-Ḥuwaytīt [q.v.], towards the coast and Banū Abī Ṭayyīla in the interior. Musayna [q.v.], Fazzāra, and Saʿīd ʿUḥdāmīyān have dissolved, but Bālī [see ʿĪlī and ʿĪlī, s.v. al-Balāwī] and Djuhayna [see ʿĪlī, Suppl.] remain as flourishing entities based respectively on al-Wādīḥ and Yānbū'

The tribes shown on the map for the southern section of al-Hidjaz have given way to the great confederations of Zahrān and Ḥaṭmīd [q.v.] in the highlands and numerous other tribes in their neighbourhood and in Tiḥmā. The borderlands between al-Hidjaz and Najd are occupied by elements of the modern tribes of Muṭayr, ʿUthayya, the Buṣūm, and Subay [q.v.], who have replaced such older tribal groups as ḤaṭCAFān and al-Hawzīn [q.v.]. In the far south is the tribe which bears the hoary name of Kaḥṭān [q.v.].

As the history of al-Hidjaz is intimately bound up with the history of Mecca and Medina and the many other places and the various tribes referred to above, it will not be recounted here. Suffice it to say that since the beginning of time al-Hidjaz was the official name of an independent polity for less than ten years, under the reign of King al-Husayn b. ʿAlī from 1334/1916 to 1343/1924. Since 1344/1925 the whole of al-Hidjaz has belonged to the domains of the House of Suʿūd.

Always a poor land inhabited by a people who chafed under the restraints of law and order, al-Hidjaz is now in many ways coming upon brighter times. The rapaciousness of the tribes, which for centuries made the overland pilgrimage a perilous undertaking, has been curbed and intertribal feuding
brought to an end. Improvements in communications by land, sea, and air; closer ties with the outside world; and developments in education, public health, and other fields are bringing easier life to many of the inhabitants. The revenue received by the Saudi Arabian government from the petroleum industry has freed al-Hijaz from its former dependence on the bounty of Muslims abroad.

**Bibliography:** See the bibliographies for **Hijaz Railway**, **Arab, Makka**, and **Al-Madina**. The topography of al-Hijaz is depicted with a relatively high degree of accuracy on a set of geologic maps (1:500,000) published by the United States Geological Survey (1958-62). Toponyms are given in the Latin and Arabic scripts, but the standard of accuracy for these does not match that of the topography. The areas discussed in this article are covered by geographic maps I-200B, I-204B, I-205B, I-210B, I-212B, I-216B, and I-217B in the series entitled "Miscellaneous Geologic Investigations". Corresponding geologic maps are also available. The data on the 1:500,000 maps are summarized on a map of the Arabian Peninsula (1:2,000,000) issued in separate English and Arabic versions by the USGS (2nd ed., 1963).

(G. Rentz)

**Hijaz Railway**, one of the two major railway projects (the other being the Bagdad Railway) of the reign of Abd al-Hamid II. Its ostensible purpose was to facilitate the hajj by means of a railway laid between Damascus and the Holy Cities, and its construction was used to further the Pan-Islamic policies and propaganda of the Sultan. It also served the more practical strategic and military purpose of transporting troops to the often turbulent Arab provinces of the Empire and thus establishing effective control over them. It had been contemplated for a long time. In May 1900, the Sultan, by an Imperial irādah, created two Commissions, one supervisory at Istanbul under 'Izzet Paša, a Damascene who was a member of the palace staff, and the other executive at Damascus under the šāli of Syria. At the same time 'Abd al-Hamid, himself donating a gift of £T. 5,000, appealed to Muslims all over the world for subscriptions. But not all contributions were voluntary: civil and military officials of the Empire were ordered to appropriate a part of their salary and a special stamp duty was levied on all classes and creeds. The balance sheet generally showed a surplus, and the scheme never suffered from lack of finance. Included in the project was a branch line from Dar'a to Haifa, for which the concession had been granted to a British firm in 1890 but which the firm had failed to complete. The few miles of line actually laid by the firm and the building material were purchased by the Hijaz Commission. Two other branch lines, one from Zarka to the phosphate mines near al-Šalt and another from Ma'ān to 'Akkāba (later abandoned in 1905, in consequence of the frontier dispute between Egypt and Turkey), were also planned. In 1901, the Italian engineer, La Bella, originally entrusted with the construction work, was replaced by the German engineer, Neisser, under whose direction the construction was completed, though beyond al-'Ula only Muslim engineers were employed. The Damascus-Medina line was surveyed by Muhktâr Bey, a Turkish engineer; it generally followed the old pilgrim and caravan road, deviating only occasionally to avoid hills and unsuitable ground. Its construction through a country mostly waterless, vividly described in T. E. Lawrence's *Seven Pillars of Wisdom* as an area of 'thronging suns' and 'feverish winds' where attacks of dysentery were a frequent cure, was a remarkable feat. Water supply presented the greatest difficulty and was partly overcome by constructing wells and working them by steam-pumps or windmills or by bringing water in railway-trucks. Considerable engineering difficulties were encountered near 'Ammān with its steep gradients (where the train while ascending to Kesir had to be taken up in two sections), and near al-'Āqabah al-Hijāziyah, where the line reached a height of over 3,700 ft. above sea level and immediately afterwards descended through some of the wildest country in the world, such as Baţān al-Ghil. Construction was made possible through the employment of military labour—three regular Nişām battalions and two specially enrolled battalions raised by conscription—totaling about 5,650 men, who received a special additional allowance for their work. Military labour was confined to simple navvying and the laying of the permanent way, while the more difficult work like constructing the bridges, station buildings, culverts and tunnels was given to Itarians, Greeks and Montenegrins.

The railway reached Zarka (203 km. from Damascus) in 1902, Kaťra (326 km.) in 1903, Ma'ān (459 km.) in 1904, Dhat al-Ḥadîd (610 km.) in 1906, al-'Ula (993 km.) in 1907, and Medina (1,320 km.) in 1908. The Dar'a-Haifa section (160 km.) was completed in 1905. The railway cost about £4,000,000, including the purchase of rolling-stock and construction of necessary buildings (Consular Reports). Between 1904 and 1917 the Dar'a-Haifa section was extended to Boşra, and branch lines from 'Akkā to Balad al-Shaykh (17 km.), 'Aţaul to Ludd (100 km.), Wādī al-Sūr to al-Awāz (155 km.), al-Tin to Bayt Hanum (39 km.) were added (Foreign Office Handbook, *Syria and Palestine*, London 1920, 69). The laying of the main tract (Damascus-Medina, Dar'a-Haifa), which averaged 382 km. a year—a rate of progress not achieved even by the Anatolian Railway—was the quickest in the history of the Ottoman Railways. With the exception of a few carriages which were made at the marine arsenal, the entire material was purchased from abroad; rails and sleepers were supplied by Belgian, German and American firms and the rolling-stock by Belgian and German firms. The length of trains was usually determined by the weight of the engine and the steep gradients of the 'Ammān and Yarmūk valleys. Originally hand-brakes were used but Hardy's system of automatic brakes was gradually introduced (Consular Reports). The gauge being 1.05 m., the carrying capacity of the railway was never great, and was considerably diminished by the necessity of taking large supplies of wood (originally coal was used) and water on each train. An additional problem was that boiler tubes were often damaged by the minerals in the desert water. In consequence, in 1914, only 15 engines were reported to have been fit for service (Admiralty Handbook, *Arabia*, London 1917, ii, 37-41). Only a small percentage of pilgrims, some 16,000 a year, used the railway (the great majority being Syrians and Kurds), for the bulk of the pilgrim-traffic passed through Harrāda. The journey from Damascus to Medina took about 26 hours, at an average speed of 23 km. an hour. The single fare was £2.30 sterling for third class passengers (Consular Reports). The main stations were Damascus, Dar'a, Haifa, Kaťra, Ma'ān, Tabûk, Ra'il al-Mu'āṣam, Ma'ādan al-Šālib, al-'Ula, Hadīyaa and Medina. Generally the stations were about 20 kilometres apart and were used as 'garrison forts', for...
protecting the line against the constant Bedouin attacks. During 1908, 128 attacks were reported; Bedouins cut telegraph wires, destroyed rails, damaged station buildings and robbed passengers.

The railway, ‘the unholy Prankish thing’ as they called it, threatened their vested interests in the pilgrim traffic in which the Grand Sharif and the walls of Hijaz were also involved (Consular Reports). Their combined hostility, the Young Turk Revolution and the Turco-Italian war brought construction to a standstill and the original plan for railway extension to Medina could not be carried out. The project for a line between Djudda and Mecca, for which a survey had been made in 1911, was shelved for the same reasons.

The Hijaz railway ‘belied the political hopes of its projectors’. Far from being the ‘backbone of Ottoman territory in Arabia’, it marked its uttermost eastern fringe. Expensive to build and difficult to maintain, it hardly contributed to the economic growth of the peninsula or to any appreciable increase in population along its course (Foreign Office Handbook, Arabia, London 1920, 26). However, it proved to be a great boon to the development of Haifa, which prior to the opening of the Dar'a-Haifa line was a small port outshone by its rival Jaffa. With the opening of the railway, Haifa developed steadily, diverting from Beirut the export of grain from the hawrān and the import trade with Damascus and Arabia. In 1909, the total value of Haifa's exports was £700,000; in 1912 it increased to £340,000; in 1907 its total imports excluding railway material amounted to £240,000; in 1912 it grew to £375,100 (Admiralty Handbook, Syria (including Palestine), London 1919, 304, 492). The entire railway was in operation until World War I, when Lawrence successfully damaged parts of the section between Ma'in and Medina which since then has remained out of operation. After the war, the ownership of the railway passed to the territories through which it ran, Syria owning Damascus-Dar'a, Dar'a-Samak; Palestinian owning Haifa-Samaq; Transjordan, Dar'a-Ma'an and Saudi Arabia, the Ma'in-Medina sections. (This was confirmed by the arbitral award of 18 April 1925, by the Swiss Professor M. Eugene Borel appointed by the League of Nations, Permanent Mandates Commission (League of Nations, Permanent Mandates Commission, Minutes of the Fifteenth Session, 189-90, 262, 279-80). This being refused, the Muslim Congress held at Jerusalem in December 1932 discussed the issue and reiterated the demand made in the earlier petitions. Meanwhile, Ibn Su'ud had modified his former attitude, and was willing to discuss the technical problems of re-opening the railway without pressing his own claim to ownership forthwith, while reserving his rights. In 1938, the British Government, desirous of winning the good-will of Ibn Su'ud in view of the situation in Palestine, was prepared partly to finance the repairs of the section lying in his territory and proposed the holding of a conference in the following year. The outbreak of the Second World War once again shelved the issue. The section between Ma'in and Medina is being rebuilt (1966) under a contract given to British firms. **AL-HIDJAR, ancient ruin site in north-western Saudi Arabia (approx. 35°50' E. and 26°45' N.) near the small settlement of Ma'in Sāliḥ, some 70 miles (110 km.) south-west of Taymā. It has been identified as the Ḥiyra of Strabo and the Hegra of Pliny. The name al-Hijr has fallen into disuse and Ma'in Sāliḥ has been substituted. As used by the Bedouins of the region, the name refers to a flat area, about 3 km. from North to South and 2 km. from East to West, its northermost point being the land surrounding the Ma'in Sāliḥ station of the Hijaz railway. The plain, in which are located several Bedouin water wells, is surrounded by, and dotted with a number of sandstone cliffs and buttes. The tracks of the Hijaz railway cross the plain from North to South. The quite extensive ruins of the ancient commercial town of al-Hijr are approximately in the centre of the plain, where the railway tracks take a southwesterly direction. A large field dotted with a number of sandstone cliffs and buttes and the ruin field, however, is the large number of potsherds as well as remains of buildings and part of the town wall testify to the importance of al-Hijr in antiquity. Much more impressive than the ruin field, however, is the large number of structures carved into the cliffs all around the plain, and in particular on the rock called Kaṣr al-Bint. Most of these structures are family tombs, with loculi generally sunk into the floor, but occasionally carved out of the sides of the main chamber. Many of the tombs have elaborately carved façades, with finely chiselled pillars, lintels and cornices, sometimes ornamented withurns or representations of birds, often topped by a double set of steps ascending from the centre, almost indistinguishable from some of the tombs found in Petra. In the complex of rocks called Djabal Ihlīb, at the eastern edge of the plain, is another series of rock carvings consisting mostly of small niches with carved columns, urns, or bird figures, which probably had religious significance. At the entrance to a narrow canyon in Djabal Ihlīb is also a very large hall, referred to as Diwān or Māghīs al-Sulṭān, carved into the sandstone—about 10 metres wide, by 12 metres deep and 8 metres high—which also is considered to have been connected
with religious ceremonies. At the opposite end of the canyon, where the walls separate, there is a long cave, carved in the north face of the cliff, which is believed to have been used to bring water into the site.

Vast numbers of inscriptions have been found in al-Hijr: in Arabic, Aramaic, Thamudic, Nabatean, Minean, Lyhyanite, and even in Hebrew, Greek, and Latin. No archaeological excavations have as yet (1966) been conducted in Mada'in al-Salih, but from what evidence is available it is held that al-Hijr was second only to Petra in the Nabatean period (see Nabat). The Kur'ān relates (VII, 71 ff.) that this region was inhabited by a godless people, the Thamūd (q.v.), who carved their houses out of rock. God sent the prophet Ṣalih to exhort them to mend their ways, but the people of Thamūd not only persisted in their idolatry, but also slew the camel which the prophet Ṣalih had miraculously conjured out of a cleft in the rock to give evidence of his divine mission. God then sent an earthquake that destroyed the town and its people. This story was the origin of the name Mada'in al-Salih (al-Salih's towns) now given to the area. Geologists see no evidence of an earthquake in Mada'in al-Salih; some believe that, because the Arabic term for earthquake can also be rendered as a "calamity from God", the town and its people may have been destroyed by another sort of disaster, such as a plague. There are other references to al-Hijr, or Mada'in al-Salih, in Arab legends: one mentions that this is the place where God ordered the patriarch Abraham to abandon Hagar and her son Ishmael, who are both said to be buried here. Another legend relates that when the Prophet Muhammad was going through the area with his army, on the occasion of the raid on Tābuk (9/621), he would not permit his soldiers to refresh themselves at the wells, because this was an accused spot. After having flourished during the Nabatean period, the site of al-Hijr seems to have declined rapidly. In the first half of the 4th/9th century al-ʾIṣṭakhri mentions it as being only a village with few inhabitants.

The first European to visit al-Hijr, and to bring back a well illustrated description of its monuments, was C. M. Doughty. Al-Hijr was later also visited by J. Euting, C. Huber, and (more recently) by H. St. J. B. Philby. The most complete account of the monuments of Mada'in al-Salih is that of J. A. Jaussen and R. Savignac, who visited the region in 1907.

**HIDJRA**, latinized as Hegira, the emigration of Muhammad from Mecca to Medina in September 622. The first stage of an event which has been termed "flight from friendly association" (cf. Kur'ān IV, 34/38) or "to avoid association with" (LXXIII, 10); there is often an explicit or implicit reference to a sexual relationship, as in the first Kur'ānic verse. The third stem ḥāḍara refers to a mutual ending of friendly relationships. Thus ḥāḍara proper does not mean "flight" as it has been traditionally translated but connotes primarily the breaking of the ties of kinship or association (cf. C. Snouck Hurgronje, *Twee populaire Dwalingen verbanden, in Verspreide Geschriften*, Bonn 1923, i, 297-305, esp. 305; also Lm. viii, 189-90).

The reason for Muhammad's leaving Mecca is the loss of support from his clan on the death of Abū Ṭālib (about 619) and his replacement as chief of the clan by Abū Lahab, who had commercial relationships with some of Muhammad's bitterest opponents. From the fact that after his visit to al-Ṭa'fīl (in 619 or 620) Muhammad had to seek the protection (džiūr) of the clan of Nawfal before entering Mecca, it is to be inferred that he had refused protection (Tābarī, i, 1205 from Ibn Ḥishāk; Ibn Ḥishām, 251, but only as a note by Ibn Ḥishām himself). After various attempts, including the visit to al-Ṭa'fīl, to find a suitable sphere for continuing to propagate his religion, Muhammad negotiated successfully with representatives of all the main Arab clans of Medina, finally concluding an agreement with them at al-ʾAqaba (q.v.) during the pilgrimage of 622 (June-July). This agreement is known as "the pledge of war" (bayʿat al-harb), since the men of Medina agreed to defend Muhammad by force of arms, if necessary. Even before this agreement Muhammad had begun to encourage his Meccan followers to go to Medina, and in all about seventy went in small parties, until of those willing to go only Abū Bakr, 'All and Muhammad with their womenfolk were left.

By this time Kuraysh are said to have become suspicious, and this was probably the case (though by no means all the stories which became attached to the Hijra are to be believed). Ibn Ḥishāk says that at a meeting of most of the clans it was agreed that chosen young men, one from each clan, should simultaneously attack Muhammad with their swords and kill him; in this way, since so many clans were involved, Ḥāšim could not exact revenge but would have to be content with blood money. The young men assembled at Muḥammad's house, but he slipped away secretly, leaving 'Ali in his bed to make them think he was still asleep. Whether this story is accepted or not, Muhammad must have slipped out of Mecca secretly in the company of Abū Bakr, since a later passage of the Kur'ān reminds men of it (IX, 40): "If you do not give him support, still God has already supported him when he came out as the second of two; the two were in the cave, and he was saying to his companion, Do not grieve; God is with us . . .". They spent three days in the cave, then accompanied by 'Āmir b. Fuhayra, a freedman of Abū Bakr, and a nomad as guide, and mounted on two camels, made their way by an unusual route to Medina. Their arrival at Kūbāh in the south of the oasis of Medina is dated Monday 12 Rabiʾ I by Ibn Ḥishāk, which in the accepted calendar corresponds to 24 September 622, but is a Friday. The reason for their going into hiding and avoiding the main road is presumably that when Muhammad left Mecca he would cease to be under the protection of Nawfal, but until he reached Medina he would not come under the protection of his followers there.

In the document sometimes called the Constitution of Medina (Ibn Ḥishām, 341-4) those who had thus made the ḥijra with Muhammad appear as the "emigrants (muḥāḏjirūn) of Kuraysh", and have collectively a position comparable to that of one of the Arab clans of Medina. As time went on the status of muḥāḏjir (fem. muḥāḏjirah) came to be greatly prized, perhaps sometimes placing people in a higher category in the ḍāhīma or stipend-list; and the status
was granted to others than those who had actually journeyed from Mecca to Medina in 622. Members of nomadic tribes could pledge themselves to Muhammad with the pledge of migration (bay'at hidjra) (Ibn Sa'd, iv/2, 66, line 3); they then settled in Medina, presumably as his clients (mawallit; cf. al-Buhkārī, Manākhī, 2), thus counting as belonging to the "clan" of muhādhirūn. Those who went to Abyssinia about 615 and remained there until fetched to Medina by Muhammad in 7/628 were counted as having made a hidjra, viz. to Abyssinia; perhaps this was part of the inducement to go to Medina. A consequence was that those who had gone to Abyssinia, returned to Mecca before 622 and then made the hidjra with Muhammad could claim two hidjras (cf. Ibn Sa'd, iv/1, 79 line 8; viii, 205 foot). The tribe of Muzayyin was given the status of muhādhirūn without actually settling in Medina (Ibn Sa'd, i/2, 38, 114); Aslam and Khūzā'ī were in a similar position. There is also evidence of other uses of the status of mukācir. (al-Māwardi, al-Āhkām al-sulā'īyya, ed. Enger, 220; tr. Fagan, 270).

Nāfi' b. al-Azraq, leader of the Khāridī sect of the Azārīka, held that only those who actually supported him were genuinely Muslims, and spoke of them as mukācirūn, who made the hidjra to his camp, which was dār al-hidjra (al-Asbā'ī, Māhkātī, i, 86–9).

Muslim dates are normally given according to the era of the hidjra (see ʿala'ī ridā) which may be distinguished from the initials A.H. (= Anno Hegirae). This era does not begin on the date of Muhammad's arrival at Medina, but on the first day of the lunar year in which that event took place, which is reckoned to coincide with 16 July 622. This result is based on the assumption that intercalary months did not occur after the hidjra, but this is by no means certain (see further tā'ākī).

HIDJRA [see RIDJAR]

HIPZ [see KIRĀ'A and KURĀN]

HIKĀYA (A.), verbal noun of ḥakhā, originally meaning "to imitate", but which, in consequence of a readily explained semantic evolution, came to acquire the meaning of "to tell, to narrate"; similarly the noun ḥikāya, starting from the meaning of "imitation", has come to mean more specifically "imitation," and finally "tale, narrative, story, legend". In classical Arabic the intensive form ḥākīya meant a "mimic" and modern Arabic has adopted the active participle ḥākit to translate "gramophone".

The radical h. b. y. w. is not represented in the Ku'ān but it is found in ḥādirr with the primary meaning of "to resemble" or "to imitate" (cf. ḥādir, s.v.), a meaning expressed and retained up to the present in the 3rd form, ḥād; this is the only meaning given to it in the classical dictionaries; the Lisān, which makes no mention of the meaning of "to relate" for the verb and "story" for the noun, states that both the first and the third forms have a slightly pejorative shade of meaning: "to try to imitate, to ape". The problem is therefore to discover by what process ḥakhā and ḥikāya have acquired the meaning which they now usually have; then we shall try to draw up a classification of stories and to establish the place occupied by those which are now called ḥikāya in the Arabic narrative or recreational literature.

I. — Once again al-Dājīšī provides a convenient starting point. In a well-known passage of the Bayān (ed. Hārūn, i, 69–70), he discloses that there existed imitators (kākiya) able, he says, not only to copy the mannerisms, gestures, the voice and the habits of speech of the different ethnic groups which formed the population of the empire, and more particularly of the capital, but also to reproduce with the most exact fidelity the mimicry and even the mannerisms of all kinds of people, the blind for example, and finally to imitate the calls of wild and domestic animals. Al-Dājīšī adds that these imitators created real types whom they endowed with all the characteristic traits of the groups that they were mimicking. This gift of imitation, which demands no ordinary power of observation, had long been exploited in the East by professional and amateur entertainers (see J. Korovitz, Spurei berichteischer Menschenbei den iiber Berlin 1905), and we find for example in the "Book of the crown" of the Ps.-Dājīšī (tr. Pellat, 149), an anecdote of a courtier who managed to restore himself to favour with a Persian king by means of a stratagem based on mimicry of the cries of various animals. A. Mez (Abulkāsim, ein bagdader Sittenbild, Heidelberg 1902, xv–xvi) has already remarked that the proliferation of mimics and the development of a form of entertainment much favoured by monarchs was certainly helped by the existence of Arabic dialects very different from one another and by the more or less successful attempts made by the non-Arab populations to speak the language of the conquerors. There were often mimics among the entertainers and the jesters who were regularly or occasionally admitted into the presence of the sovereigns, and al-Mas'ūdī (Murūjī, viii, 161 f.; cf. A. Mez, Renaissance, 386–7, Eng. tr., 408) confirms this in relating the success with al-Mu'ṭāṣidī of one Ibn al-Maghāzī who mimicked (yakhkā, yahākā, bi-kāya) all kinds of people, with an accompanying patter of humorous anecdotes (nādira). The hikāya, in fact, could not be a silent mimicry, and the performer was obliged to compose a little recitation or think up a story to add piquancy to his imitation. Thus one finds a well-experienced writer relating hikāya in such cases by "story", although one can understand that this term, originally applied solely to the imitation, later covered the gestures and the words, and finally the words alone, especially when authors began to commit to writing the words recited by the hikāya. This evolution, further encouraged by the carelessness of writers over the exact use of words, hides to a large extent the fact that the mimics, provided of which, however, is to be found throughout the Middle Ages; A. Mez (Renaissance, 399; Sp. tr. 505; the English translation, p. 423, misses the point) mentions one in 415/1024 and it is worthy of note that the performance in question entailed also shadow plays (khayāl). Although the modern theatre takes its origins from abroad, its historians have not failed to find ancestors for it precisely in the hikāya and the khayāl (cf. J. Landau, Studies in Arab theater and cinema, Philadelphia 1958, 1 ff.); they have also been induced to take into account the existence, in Turkey, of the meddah (maddāk [s.v.]) or mukhallīt (mukhallīd, corresponding exactly to the hikāya) who related anecdotes while performing amusing imitations and expressive mimicries and even
dressed up in accessories symbolic of the characters that he wished to imitate. This profession seems to have declined in Turkey as in other Muslim countries, particularly in Egypt, where, at the beginning of this century, a certain Ahmad Fahim al-Far had formed a company which presented in Cairo plays which were very popular, thanks to his skill in imitating the cries of animals and in reproducing different scenes (see J. Landau, op. cit., 3-4 and bibl. quoted). On the madadh of North Africa see maddas. We cannot omit to mention however that it is again a derivative from the root h.k.y./w., hikawyati, which is used in the East for a teller of tales, whose mirmicy is closely related to that of the early hikaya.

From the 4th/10th century onwards elements of mirmicy (see J. Horovitz, op. cit., 21-7) appear in the genre of the manahim [g.v.], which however the literary efforts of Badi' al-Zamàn and his successors have separated from the hikaya proper. On the other hand it was at the same period or at the beginning of the 8th century that a phase of the evolution which ended in the hikaya appeared in Arabic literature, which calls to mind the mahama while differing from it quite clearly in its technique—the Hikayat Abi 'l-Kasim al-Baghdâdi of Abu 'l-Mu'tahhar al-Azdi (ed. A. Mez, Abu'lkasîm). It marks a new though brief phase in the semantic evolution of the term hikaya. In his preface the author reproduces the very passage of al-Dâhibî mentioned above, and this reference justifies in his opinion the creation of a new type of work which would put on the stage a single character, typifying the mentality of the inhabitants of the capital; in his introduction Abu 'l-Mu'tahhar promises also a hikaya badawiyya, a picture of Bedouin manners, which has not survived. In the text which has come down to us, the scene is Bagdad, a bourgeois milieu. The hero, Abu 'l-Kasim, is a sort of vagrant who entertains this society and reels off jokes and sarcastic remarks in doubtful taste; after the evening meal the revellers sink into a drunken stupor, awaking only at the call of the muezzin; then Abu 'l-Kasim harangues them and castigates their wickedness, urging them to repent (cf. F. Gabrieli, in RSO, xx (1942), 33-45). The quotation from al-Dâhibî enables us to see the meaning that the author wishes to give to the name hikaya. It is a realist representation of the manners of Bagdad, a picture borrowed from real life, and this is why A. Mez has translated the title of this play by ein bagdader Sittenbild, it being quite impossible to translate hikaya by "story". In attempting to produce a "type", Abu 'l-Mu'tahhar displays a certain advance from al-Dâhibî, who in his studies of manners, notably in the "Misers", merely put together anecdotes with the meaning of "story which was invented, but which was borrowed from real life, or was at least true to life; we have no proof of this, but the Hikaya of Abu 'l-Mu'tahhar provides a sufficiently strong link in the chain, and we shall see that in Morocco hikaya has retained the meaning of a story which is more or less truthful so long as it is not unlikely.

It should not be forgotten that the term hikaya belongs also to the terminology of the sciences of tradition and that the expression hikayatu 'anshu 'l-hadith 'hikayat'â implies a literal quotation, a report on the authority of the hadith, more often than not in a narrative of the verbal form which would have been used at the time when the event narrated took place; the expression hikayat saust, "onomatopeia", preserves the primitive sense of the term; hikayat i'd-ro, or simply hikaya, means the exact repetition of a word used by a speaker with a vowel of declension no longer appropriate to its function in the new context, e.g., "ta'ayatu Zayaditi"—"man Zayaditi"? (instead of Zayd?u); but this hikaya is not permissible when the noun is followed by a qualifying element (see L. Machuel, Voc. des principaux termes techniques de la grammaire arabe, Tunis 1908, 27). The word appears again for example in the Fihrist (Cairo ed., 422, 429, 445, etc.) to indicate a textual copy as well as an account of the facts, equivalent here to riways. The same meanings are found in Hamza al-Isfahani (ed. Gottwald, 17, 64, 65, 201) and in the Agbân (notably i, 4), although in this last passage hikaya is used of the reproduction of words heard, without any claim to verbatim quotation. On the other hand, al-Zamâkhshari (Asâs al-balaghâ, s.v.) says that the Arabs use hikaya in the sense of "language", which they consider to be an imitation or a representation,
and this explains why in the Syrian and Lebanese dialects the verb hakā is normally used for “to speak”. In Spain, Dozy (Suppl. s.v.) notes ḫikāya also in the sense of “model”; but for him it is already primarily a “story”.

Thus it seems that it was from the 8th/14th century onwards that ḥikāya, whose primary meaning is now considered archaic, acquired the general meaning of “tale, story, narrative, legend”; it is current in the Thousand and one nights and appears in the title of the Kūth al-Ḥikāyat al-ṣadrīya wa l-ʿawwān al-ṣadrīya of al-Ḥārīrī, the edifice of Baybars, Wiesbaden 1956, from a MS of the beginning of the 8th/14th century; in this last collection however each separate story is still called ḥadīth, which is one of those general terms whose technical meaning tends to obscure its other uses. Thus we have here significantly combined three words which are evidently interchangeable: ḥikāya, ḥabar, and also ḥadīth, which might it be profitable to restore to the group of words used in Arabic for “story”.

The Kurʾān contains a certain number of narratives which are of a religious character and are to serve for the edification of the Believers; in the Holy Book “to narrate, tell” is expressed by ḥāṣa, ḥaddaṭha, and nābbaʾaʾ, three terms which tend later to become specialized, forming with their derivatives and those of other roots a collection of lexicographic material which deserves examination. In fact the diversity of the words used in the first centuries of Islam would seem to indicate that tales, legends and stories of all kinds were in vogue and that they were distinguished from one another with great precision; on the other hand, each of them through the centuries has undergone an evolution distinctive enough to merit a special article, so that we need not attempt to discuss here the history of all narrative literature: ḥāṣa is used in every kind of story, but this word has been applied particularly, through the use of the verb ḥāṣa and the noun ḥāṣa in the Kurʾān and of the professional ḥāṣa (q.v.), to edifying tales and stories of the prophets. It is to be noted however that nowadays it has been adopted to mean a novel, its diminutive ṣāṣaʾa, pl. ṣāṣaṣ, being in its turn used for a short story.

—[uṣṣa]a is Kurʾānic in the expression asṣīr al-ʿawwāna (the treasures edited by H. Wehr, Damascus—Djakarta, 1966), vii, 57, xvi, 62, xxii, 85/83, xxv, 65, xxvii, 70/68, xlv, 16,71, lxxiii, 13), which has a distinctly pejorative connotation when used by unbelievers inclined to compare the revelation with fables and old wives' tales to which no credence should be given. The difficulty which lexicographers have in finding the singular of asṣīr proves that this term, probably deriving from the Greek ἰδιότης or the Latin historia, had served to form a pejorative plural (cf. ābāḍīl) and that the corresponding singular had been forgotten or had never existed. Nowadays the term has been reinstated in the singular form uṣṣa in the particular meaning of legend or myth.

—nabaʾ has in the Kurʾān the meaning of “news”, “announcement” which it has retained until the present day (vi, 65/67, xxvi, 22, xxxviii, 67, xlii, 6, etc.); but it is also found that of an edifying tale, a story of a prophet (ix, 71/70, v, 30/37, vi, 34, etc.); in this sense it has been completely replaced by ḥāṣa and ṣāṣa.  

—ḥabar [q.v.] is also Kurʾānic, with a meaning similar to that of nabaʾ: “information, an account of someone or something”. In later literature this word was to have a great vogue and to be applied to a narrative of historical or biographical character.

Although a ḥabar need not necessarily be authentic in the eyes of the critics, in principle the term could not be used of a story presented as fictitious; it appears however parallel with ḥikāya in the title of the collection, edited by H. Wehr.  

—ṣira [q.v.] is found in the Kurʾān only with the meaning of “state” or “appearance”, but in literature it has also that of “conduct”, “way of life”, “biography” (especially of the Prophet); it is the term used for the romantic biographies of famous characters of antiquity or of the Islamic era [see ʿāntar, Baybars, etc.].

—ḥadīth (plural of ṣira) rather than of ḥadīth is used of legendary tales (xxviii, 46/44, xxviv, 18) and, in a general way, of lying talk. Independently of its technical meaning in the science of Tradition, ḥadīth is in general use for a story, a tale, a narrative; it is found so used in the Aḥbānī, the Fihrist, the stories published by H. Wehr and elsewhere.

—nādira [q.v.] in the Kurʾān is not only an image or a likeness, but also an example (xvi, 52-54, xxv, 35/33, etc.), indeed even a parable (xii, 72, xviii, 43/45). In later usage it is a proverb as well as a story invented to illustrate a doctrine or explain a circumstance of life; it is used to describe the apocryphes of Kaʿla wa-Dimma (q.v.) in, and in general, fables of animals.

Outside the Kurʾān we find in literature the following:

—risāya [q.v.], oral transmission of a ḥadīth, a poem or a story; this term, which retained this connotation in the technical language of tradition, grammar and criticism, was sometimes synonymous with ḥikāya in the sense of transmission and account of facts. In modern Arabic it has been adopted to mean a story, a novel, a play or a film.

—nādira [q.v.] has been used since the early Middle Ages for a witticism, an anecdote, especially a humorous one; the genre of the nādira contains enough typical characteristics to justify a separate article. In the article NADIRA will be found the rules which narrators were supposed to follow.

—samār, pl. asmār, is primarily a conversation, an evening gossip, for it comes from a root meaning “to chat in the evening” (cf. Kurʾān, xxiii, 69/67), but it is also found there with the meaning of “information, an account of someone or something”. In later usage it is a proverb as well as a story invented to illustrate a doctrine or explain a circumstance of life; it is used to describe the apocryphes of Mūsā Sulaymān maintains (al-ʿAdab al-baṣṣīrī, Beirut 1956, 16-7), stories can in principle be related only at night (see infra). It seems that samār is used mainly of tales of the supernatural, but also of reports, since Ibn al-Nadīm sometimes refers to authentic siyar and asmār (asmār sāḥka, Cairo ed., 242). After ḥikāya came to be used in a general sense, samār regained its earlier meaning of conversation at an evening gathering.

—khurāsī, finally, is said to be the name of an ʿUdhīr who was carried off by demons and who on returning related his adventures; nobody had believed him and the expression ḥadīth Khurāsī was adopted to express the meaning of “entirely fictitious talk”, “hambub”: however the Prophet himself vouches for the existence of the character and the authenticity of his statements (see al-Džāhīz, Hayawān, i, 301, vi, 210; al-Maydānī, s.v. ḥadīth Khurāsī). With the dropping of the first element of the expression, and through contamination by the root b.r.f., “to talk nonsense”, khurāsī became a common noun applied to a fabulous

Encyclopaedia of Islam, III
story. It is the word used by al-Mas'ūdī (Muraḍī, iv, 89 f.), in a well-known passage on the nucleus of the Thousand and one nights, to translate the Persians of Ṭabārānā and indicate stories in general. The Fihrist, which makes great use of it, seems to contrast it with samār, apparently attributing to it a more fictitious character. This term has remained current until the present with the meaning of "superstition", "fantasy tale", "legend". It is interesting to note that in certain Moroccan dialects hikāya denotes a story more or less truthful, but in any case probable, hikāra a story of marvelling, and bāṣṣa a historical account (see L. Brunot, *Textes arabes de Rabat*, ii, 163-4). In Tunisia (see W. Marçais, *Glossaire de Taboréna*, s.v.), we notice kharāfī with the meaning of "baseless talk" and kharṣīfī "boaster, humbug", while bāṣṣīfī still is a story-teller; elsewhere (cf. G. Boris, *Lexique du parler arabe des Marocains*, Paris 1958, s.v.), kharṣīfī is a story and bāṣṣāyī a short tale or anecdote.

II. — It would perhaps be rash to claim that the early Arabs, preoccupied solely with poetry and rhetoric, paid no attention to the tales of marvels and to the legends which are the common heritage of primitive man, but the brief semantic study given above certainly does not prove that they took a great interest in them, for, in fact, only the plural ḥikāyāt, and that which is a fictitious story, useless, and that which is a baseless talk, useless, and that which is a fictitious story, useless, and that which is a fictitious story, useless, and that which is a fictitious story, useless, and that which is a fictitious story, useless.

It is certain that, generally speaking, where the early Romans were familiar with stories and legends, it is best therefore to refer to the essential source for information on this literature in the first centuries. In his view this literature is divided into two broad categories: i. the borrowed stories concerning musicians and singers, tales of love, traditions about fakhr, hadjī, etc.; lexicographical (lughawī: mafrīāt); and ii. the genuinely Arab bāṣṣāyī which can be subdivided into: historical (akhirārī: stories concerning musicians and singers, tales of love, traditions about faṭḥ, ḥadi, etc.); heroic (bulaqī: Antar, Bakr and Taghlīb, al-Barrāḵ, etc.); religious (dinī: Ḫisās al-anbīyāt, etc.); lexicographical (lughawī: ḥadīṯ); and philosophical (al-Tawdbi wa l-esṣābī) about Ibn Sulayhād, the Risālāt al-Ǧurūf, al-Bahrānātī, l-Yafrī al-Ǧurūf, l-Taqqī, l-Ṭufayl, al-Sāḥib wa l-bāqīm of Ibn al-Habbārīya). From this classification it appears that for one thing the author does not take account of all the relevant literature, that for another some of his interpretations are mistaken (particularly about Ibn Sulayhād), and finally that he denies that the Arabs possessed any original stories of the supernatural. It is best therefore to refer to the essential source for information on this literature in the first centuries of Islam, the Fihrist of Ibn al-Nadīm, who gives to the first fann of his eighth mákāla the title: aḥḥār al-musāʿamīn wa l-muḥharīfīn wa-ṣaṣām al-muṣaṣṣaṣnaṣa fi l-ʿasār wa l-bāḥṣā (the copyist uses at this very point the expression bāḥṣāt bāḥṣat al-musāʿamīn to indicate that he is copying verbatim); he first lists there the works concerning the aṣmār and the bāḥṣāt, treating separately the translations of texts of Persian, Indian and Greek origin; he includes in the fann traditions about Babylon and the Arcadians, then the love tales, the stories of the supernatural in which appear dīnna (s.v.) who have amorous dealings with humans (see also qurlī), and finally accounts of the wonders of the sea (see sagnān). Ibn al-Nadīm states that the first to compile collections of the proceedings of the Persians of the first period, i.e., the Kayānids, and adds that this material went on growing until the Sāṣānids;
later these tales were translated into Arabic, and Arabs added stories of their own. It is at this point that Ibn al-Nadim’s Book of Fabulous Tales of One Thousand and One Nights [see Alif Layla wa-Layla] and of the attempt of Diaghlyâri [q.v.] to collect a thousand tales (samar)—Arabic, Persian, Greek, etc.—by calling upon story-tellers (mussâmir) and making use of written collections, but retaining only those which seemed to him the most interesting.

M. F. Ghazi ([La littérature d’imagination en arabe du IVe au VIIIe siècle], in Arabic, iv/2 (1957), 164-78) has tried to make use of these pages of the Fihrist, but his work is not free from errors and the result is rather disappointing, for the titles listed by Ibn al-Nadim are not established with certainty and are liable to give rise to erroneous interpretations. It is evident that the great majority of the collections mentioned have not survived, having either been absorbed into the Thousand and one nights or relapsed into oral tradition where they have become more or less part of the folklore of the various Arabic-speaking countries. Here we have something rather strange. In the first half of the 4th/10th century, Ḥamza al-Isfahāni (ed. Gottwald, 41-2) declared that about 70 books of entertainment were very much read in his time; some decades later, Ibn al-Nadim gives a still longer list of them, asserting that the samâr and sâdhâf were very popular in the ‘Abbâsid period and especially under al-Mukhtar, which encouraged the bookseller-copyists to reproduce them and perhaps themselves to collect new tales. A. Mez (Renaissance, 242-3; Eng. tr. 253; Sp. tr., 311-2) attributes this infatuation for narrative literature, and for stories which a critic as experienced as Ibn al-Nadim considers feeble and lacking in vigour, to the decline of pure Arab taste in the 4th/10th century, but perhaps because everyone had work to do, but in certain hot regions gatherings of this sort were suited to the coolness of the long summer evenings. Tradition forbade story-telling during the day, perhaps because everyone had work to do, but primarily because to tell a story is an act which savours of magic; according to popular belief, any infringement of this prohibition was penalized by a fate which Arab scholars have never been able to consider worthy of the slightest esteem, seeing in it merely a trivial diversion incompatible with the tastes which a true Believer should profess. In other words this masterpiece of world literature, which was revealed to the Arabs themselves by orientalists, has remained foreign to Arab literature even though, while of foreign origin, it contains authentic ‘Irâkî and Egyptian elements (see N. Elisséeff, Thèmes et motifs des Mille et une nuits, Beirut 1949, 47 f.). The disdain felt by the educated classes for stories amply explains why Arab folklore has developed in a completely different way from that of other parts of the world, and why the phase of its being handed on in written form, in the golden age of Arabic culture, was followed by a return to an exclusively oral tradition, even though chapbooks, hawked in the markets, continue to circulate at popular levels. It is also remarkable that myths and legends never inspired Arabic writers, while a Firdawsi, although he had no more direct access than they to the original tradition, succeeded in employing materials equally well-known to the Arabs to create so superb an epic as the Shâhnameh. We must on the other hand refer here to the influence exercised in the West by the so-called Arabic stories, and we shall merely recall that, in imitation of Galland, several orientalists collected in their turn stories generally drawn from literary works or from popular works which echoed them: Pèdes de la Croix and his Mille et un jours, Paris 1830, Gaudefrey-Desmoynes and Les cent et une nuits, Paris 1912, and above all R. Basset, the eminent folklorist who in his Mille et un contes, récits et légendes arabes, Paris 1924-6, has made such instructive comparisons.

III.—To be fair, it must be said that some modern Arabic authors are trying hesitantly to revive the ancient themes in order to make of them truly literary works, but it is quite certain that, on the whole, folklore hardly inspires contemporary writers, who are more interested in imitating the West, neglecting this traditional material. The choice would not in fact be an easy one, for the world of today is more attracted by the hikāya in the sense in which Abu ‘1-Mutahhar al-Asdl understood it than by the myths of antiquity, and one even has the impression that the ordinary people have less and less the time to listen to the stories and tales which delighted their ancestors—at least when they did not consider it beneath their dignity to be interested in them.

The observation of present or recent conditions in North Africa and elsewhere gives us an idea of what may have been the form of this country, and R. Blachère (in Sévency, vi (1956), 83-4) has put forward the hypothesis that the Kur’ânic term asâdir was applied to stories which were told by men, while kūrâfat indicated those reserved for women. This is quite possible, but the two spheres are not everywhere so neatly distinguished as the observations of H. Basset (Essai sur la littérature des Berbères, Algiers 1920, passim), which inspired R. Blachère’s interesting hypothesis, would lead us to believe. Although, in general, adult men affect to disdain old wives’ tales, they are often prepared to produce from the depths of their memory stories heard in their youth and ostensibly forgotten. There are some who do not refuse to yield to the insistence of the researchers and to relate, even in the day-time, fantastic or supernatural tales; thus the author has been able to collect from both North Africa and the Middle East, examples from friendly storytellers, whose memories, however, were sometimes at fault. But such a search does not reproduce normal conditions and it can be said that traditionally two fields are to be distinguished: the tales of the supernatural, the ancient asmâr which correspond to the German Hausmärchen, are told by women, especially old women, while the heroic tales and historical legends are the province of men.

Women famous as story-tellers were booked long in advance and gathered round them each evening, after supper, in a village- or town-house, an audience consisting especially of women and children; the ceremony took place preferably in winter, but in certain hot regions gatherings of this sort were suited to the coolness of the long summer evenings. Tradition forbade story-telling during the day, perhaps because everyone had work to do, but primarily because to tell a story is an act which savours of magic; according to popular belief, any infringement of this prohibition was penalized by a supernatural punishment, the nature of which varied from place to place; in one place, the woman who told stories during the day would give birth to dwarfs or monstrous children, whereas her offspring would be killed by wild beasts, or she would be threatened with having children with ringworm, unless by
chance one could, as was believed at Fas, count eleven beams in the ceiling. Several ways existed to do this, which was the origin of the fable of Indian origin. There is no doubt at all that the formula of hikāya is regarded here as referring in a rather flowery style to the text; see also: Carra de Vaux, Les penseurs de l'Islam, i, Paris 1921; V. Chauvin, Bibliographie des ouvrages arabes ou relatifs aux Arabes, iv, Liège 1892; Pearson, 23806-914, suppl., 6339-52; A. Abdel-Meguid, A survey of story literature in Arabic from before Islam to the middle of the nineteenth century, in Isl. Quarterly, i (1954), 204-73; idem, A survey of the terms used in Arabic for “narrative” and “story”, ibid., 195-204—E. Montet, Le conte dans l'Orient musulman, Paris 1930; R. Blachère, Regards sur la littérature narrative en arabe au IVe siècle de l'hégire (VIIe s.f.-c.), in Semitica, iv (1956), 75-86, contains some original ideas of which use has been made in this article.—The bibliography of R. Basset, Mille et un conies... contains a long list of Arabic works which contain various stories.—For the field of Arabic dialects, see ARABIYYA, iii, 2-3, adding especially Artin Pasha, Contes populaires inédits de la Vallée du Nil, Paris 1895; E. Littmann, Modern Arabic Tales, i, Ar. text, Leiden 1905; S. Benchenek, Les contes d'Alger, Oran 1946; Dress Légey, Essai de folklore marocain, 1926; tend to be based on genuine fact in that they do not least losing their prophylactic character; in Berber for example, the story-teller says at least “Our tale is finished, but the wheat and the barley are not finished”. And even in such an abbreviated formula as this: tatā ta’ad, khlijjī ‘l-haddātā, “mulberry, mulberry, end of our story”, heard in Syria, some-thing of magic survives.

For men, R. Le Tourneau (Fès, 555-6) has observed the story-tellers (faduwā, pl. faduwān or fādwa) of Fès who “intoned to the rhythm of a square tambourine the deeds of Arabs of former times; the majority of the listeners (about fifty in winter, up to two hundred in summer) knew the stories already and rebuked the narrator or prompted him if by chance his memory failed him, but they took great pleasure in hearing for the hundredth time the story of journey of single combat, of deeds of treachery and daring, and allowed themselves to be lulled or moved by the endless repetition of stereotyped formulae”. The same writer relates that a shoemaker famed for his talent as a story-teller would take up his place on a chosen site between the ‘asr and maghrib prayers and “recited day after day a long story which he was able to make lively and sometimes poignant”. His repertoire however consisted of only three stories: ‘Antar, which lasted a year, the story of the Ismā‘īlīs (i.e., the Fāṭimids), which lasted six months, and the romance of Sayf Dhu ‘l-Yasa‘ī (sic = Yazan), which lasted four months. At the end of the session, a member of the audience made a collection and handed it over to the story-teller.

It is not possible within the scope of this brief article to study the popular tales which are gathered together wholesale in the cycle of the Thousand and One nights on the one hand and the great romances of chivalry on the other, and it is desirable that those collected up to now and those still to be collected should be submitted to an investigation at least as far-reaching as that which H. Basset has devoted to the Berber field; such a study would certainly be a very welcome in length which is exactly the solution of the numerous problems which remain unanswered. Mention should be made of the recent work of Mia I. Gerhardt, The art of story-telling, a literary study of the Thousand and One Nights, Leiden 1963.

At the end of the session, a member of the audience made a collection and handed it over to the story-teller.

It is not possible within the scope of this brief article to study the popular tales which are gathered together wholesale in the cycle of the Thousand and One nights on the one hand and the great romances of chivalry on the other, and it is desirable that those collected up to now and those still to be collected should be submitted to an investigation at least as far-reaching as that which H. Basset has devoted to the Berber field; such a study would certainly be a very welcome in length which is exactly the solution of the numerous problems which remain unanswered. Mention should be made of the recent work of Mia I. Gerhardt, The art of story-telling, a literary study of the Thousand and One Nights, Leiden 1963.
Varamin (622/1225) and in the Rawgat al- 'ukul of Muhammad b. Ghazi of Malatya (end of the 7th/13th century).

Two cycles of very popular fables also had remote Indian origins and underwent developments similar to those of Ka'ilat wa- Dimma. Notable among them were the Sindbad- nāma (Book of Sindbad), which should not be confused with Sindbād the Sailor of the Thousand and One Nights; this is the framework story of the Forty Viziers or of the Seven Viziers), the Bahāghār- nāma, similar to the preceding work (Book of the Ten Viziers), the Tūṭi- nāma (Book of the Parrot), all of them moralizing works, whereas the Kīsās-i čahār dārūgā (Stories of the Four Dervishes) are pure fiction. All of these texts were re-written several times by various authors in prose and in verse.

The ornamental style which, in these stories, varies with the contents, becomes purely an aesthetic sport in one literary genre which might be classed as hikāya, namely the mahāma (q.v.); the first mahāmāt in Persian, those of Ḥamīd al- Din (d. 559/1164), are simply translations from the Arabic of Bādi' al- Zaman al- Hamadhānī, who was however himself of Persian birth.

The task of collecting as many hikāyāt as possible and classifying them under various different rubrics was fulfilled in the enormous collection of Muhammad 'Awfī [see 'awfī], Djamānīsī al- hikāyāt wa- lauśamīsī al- riwāyāt, which collects together more than 2,000 stories and anecdotes (first half of the 13th/19th century); it was inspired by such Arabic works as al- Farājī bādī al- shīda of al- Tanūkī (d. 384/994), which was re-written in Persian by 'Awfī himself and others. Anecdotes of the humorous type were collected also by 'Ubayd- i Zākānī (8th/14th century), whose Risāla- yi Dilwāhī is merely a collection of hikāyāt, often obscene, in Arabic and in Persian.

The unequalled master of the hikāya is Sa'dī (q.v.) in his Gulistān (656/1258), which is basically only a collection of light moralizing hikāyāt in prose interspersed with verse, divided according to subject; it has been imitated more than once, among the best of the imitations being the Bahārīstān of Dāmī (d. 898/1492) and the Khābā- i Pareghān of Kānānī (d. 1270/1854).

This brief survey excludes the "novel", which, although it possesses some of its characteristics, cannot be classed as hikāya. The novel in its modern sense is practically non-existent in the classical literature, where its place is taken by long fabulous stories (dāštān) (generally not very highly thought of by the classical historians of literature), the earliest example of which is the Samak ' Ayār (585/ 1189) of Šādakā b. Abī Ḵāsim Ṣhīrāzī, full of the imaginary adventures of cavaliers who aspire to the hand of the princess, daughter of the emperor of China. This romance was followed by many others, some of them midway between learned and popular literature, which relate the extraordinary adventures of various heroes (e.g., of Amīr Ḥamzā [see Ḥamzā], uncle of the Prophet) and which were particularly popular in India.

It is possible to consider as collections of hikāyāt also the Tadbīrāt al- awwalīyār or semi-legendary "biographies" of saints, the most famous of which, in Persia, is that of Farīd al- Din ʿAṭṭār (6th/12th century), classifying them under various hisorical rubrics (see historical rubrics).

What all this heterogeneous material has in common is primarily a matter of style: the narrative style of the short tale, which in general appears in two main forms, the straightforward and the ornate. In the first case the narrative is advanced by extremely simple stylistic and syntactical means, with very rare use of subordinate clauses, or none at all, in a series of statements expressed in brief sentences which follow each other without any links. The attempts to make such a disjointed narrative more "complex" generally took the form of an elaboration in ornamentation. If the rhetorical ornaments are removed however, the basic style is found to be straightforward. The development is not necessarily from the plain to the ornate and the two styles may be found together in works of the same period and sometimes of the same author.

Thus, on the eve of the modern era, Persian narrative art found itself somewhat at a disadvantage when faced with the powerful influence of European novels and short stories, which in the West had a long history behind them: among the most difficult and fascinating tasks of modern Persian writers is to create a complex realism which surpasses the earlier realism attempted in the hikāyāt and a narrative style which, rejecting the use of complicated ornament, achieves a simplicity which is not merely straightforward narration; and they have sometimes produced some noteworthy results in this direction (e.g., Dāmālīzāda, Ṣādīk Hīdāyat, Ṣādīk Čubak, etc.).

iii. — THE NARRATIVE GENRES OF TURKISH LITERATURE AND FOLKLORE.

The word hikāya, attested also in the form hikāyet (¢ Ar. hikāya) in Ottoman texts, means, when it is used with the auxiliary verb et., "to relate", "to narrate". It means a story, when it is accompanied by simple or compound verbs such as de-, söyle-: "to say", naklet-: "to relate". As a generic term, the word has not had, in the Turkish of Turkey, any specific sense, but has indicated each and all of the narrative genres: tale (masal < Ar. mathal), legend (memkule, efşane), anecdote (laufa, filare), story, novel, romance. It is only in recent scientific terminology that it has acquired the value of a precise technical term to indicate three clearly defined genres: in oral tradition, a lengthy story in prose alternating with verse passages (the hikāye of the ʿalīkh, see below), or a mimed story in prose performed by professional story-tellers (the hikāye of the meddāhs [q.v.]; in modern written literature, a novel [see below].

In the modern Turkish of Turkey, the word efşane (< P. afşāne) is used as a technical term to mean a legend; but, in the current language, past as well as present, it can have, with the words masal (< Ar. mathal) and hurafe (< Ar. hurafe), the pejorative sense of "a completely fantastic story, fabricated or superstition].

There should also be mentioned the uses, which nowadays have completely disappeared, of certain other terms. First the words compounded with nāme (Pers. nāma) added to the name of the hero or to the word denoting the main theme, to indicate large scale narrative works, usually in verse but sometimes also in prose: Iskender- nāme (the "Romance of Alexander"), Hamza- nāme (the "Geste of Hamza"), Ghazavīt- nāme ("Stories of holy wars"), Fath- nāme ("Stories of conquest"), Wildyet- nāme ("Hagiography"), Oğuz- nāme ("Stories about the Oghuz"),
et. This latter term has, in the Book of Dede Korkut, which, in the recension which has survived, was probably compiled in the 13th-14th century (see P. N. Boratav, Dede Korkut hikayelerinde tarihi olaylar ve hicânasânî'î tarîhi, in TM, xiii (1958), 31-62), the meaning of "epic episode composed and declaimed in honour of the main hero of the adventures related". In the same work are found also two terms, boy and soy, used together with the verbs which are derived from them: boy boyla-, soy soyla-; the former has the meaning of "to relate, in the epic style, a story which describes the memorable deeds of a hero", the second "to declaim (or sing or chant) the verse sections of an epic narrative". The term boy is, in addition, used in the titles of the twelve episodes found in one of the two manuscripts (that of Dresden, which is nearest to the lost original) of the Book of Dede Korkut; it accompanies the name of the hero and means simply "episode": Bamsi Beyrek boyl, "Episode of Bamsi Beyrek"; Basat Depegoz oâdur-dügi boy, "Episode [in which is related how] Basat killed Depegoz", etc. Boy and soy, synonyms, mean strictly "tribe", "clan", "family"; they were probably originally used to denote the stories and songs recounting the memorable deeds of a clan (cf. the term boy, "feast", "banquet", "wedding ceremonies"), used also for "wedding song"; see F. N. Boratav, Halk hikdyeleri ve halk hikdyeciligi, Ankara 1956, 52, 117, 120, 294-7). In the sense of "episode", the word boy has been replaced in the later epic narrative tradition of eastern Anatolia by the word kol ("arm", but also "branch", "detachment"); it denotes an episode in the great narrative corpus of the adventures of the noble bandit Koroghlu: Demirejügölgü kol, Ayva kol, etc. In the second, and more Ottomanized, manuscript (that of the Vatican) of the Book of Dede Korkut, the term boy is replaced in the titles by hikayet: Hikayet-i Bamsi Beyrek, etc.; even the title of the book (Kılıb-i Dedem Korkut) in the Dresden manuscript is, in that of the Vatican: Hikayet-i Oghusnâme-i Kazan Beg ve ghâryrih.

The terms hikâya (pl. hikâyâ) and menâhib (sing. menâhâbe) have been used in the same sense as the words formed with boy; but more often for prose works dealing with epic-religious themes; from the first is derived the word hikâyâ, the equivalent of the Arabic kahsâs, used of the teller (or "reader") of stories about the pre-Islamic prophets, the champions of Islam or the great mystic figures: Kâsâs-i emâniyâ, Menâhib-i khasâvâli-i Seyyid Bâbiî, Menâhib-i Hâdiy Behâdah, etc.; siyâr (sing. siyet; Ar. strob, pl. siyâr) is the term reserved for stories of the life of the Prophet Muhammad. As an example of technical terms used for specific genres of narrative literature there should also be mentioned mabtâl which means, in the tradition of ŞH'î circles, the account of the death of Husayn at Karbalâ'.

From about the beginning of the 10th/16th century, there spread through the territories of the Ottoman empire a tradition of popular poetry, that of the ḍâshiks [q.v.] (literally "lovers"). These poet-singers of the same type as the troubadours of the mediaeval West were the successors of the osan ("bards") of Oghuz poetic tradition. They composed and disseminated lyric poetry but they also carried on the epic tradition. They transformed the heroic epic into a new genre called ḍâshîye. This ḍâshîye retained certain formal and thematic elements from the epic tradition, inserting poems of their own composition at the points of the narrative which seem most suitable. The various processes and the successive phases of such a production—in part improvised while it is being recited—have been observed among ḍâshîkh-"writers" (= mu'asâmîf) of the present day (see P. N. Boratav, op. cit., 130-86, and more particularly 158-63).

A number of ḍâshîkh (that is, 'professional poets') are common to other Turkish-speaking peoples; to mention only a few examples: the episode of Beyrek in the Book of Dede Korkut has spread beyond the Oghuz area among the Karakalpaks, the Ūzbekê, the Karâkhs, and the Altays; various episodes from the Koroghlu cycle exist in Adharbâyjân, Türkmen, Ūzbek and Tobol Tatar versions (and even non-Turkish versions: Armenian, Georgian, Kurdish, Tadjik); the romance of the romance of the loves of Tâhir and Zühre in these two countries and in Ūzbekistan (see P. N. Boratav, L'épopée et la "hikâye", in Philologiae Turcicae Fundamenta, ii, Wiesbaden 1964, 11-44).

The ḍâshîye vary in length. Those of Koroghlu form a vast cycle in which each episode (köl) is related independently and is in general of the same length as a full-scale hikâye. When recited by a skilled story-teller a lengthy hikâye may entertain his audience for several sessions (evenings), each lasting 3 or 4 hours. If in addition he is encouraged by an enthusiastic audience of connoisseurs, a good story-teller can always find a pretext to prolong his recital as much as he wishes, filling it out artificially with non-narrative additions: musical sections (instrumental and vocal) added at the beginning and in the middle of the story (when "pauses" are reached), anecdotes and short tales (= korâsvellî) introduced at random, etc.; the sessions may also be prolonged by interventions sung by talented members of the audience. The shorter ḍâshîye (lasting one or two hours) are known as serhâshtî (or serhâshtî or krasîde.

There are also recorded some extraordinary adaptations of the ḍâshîkh. Some 19th century manuscripts exist (see P. N. Boratav, op. cit., 206-10); also in the 19th
century, some lithographed editions were produced, very probably based on manuscripts; however, editions based on oral versions are also possible, without the intervention of copies circulating in manuscript; some quite recent editions (in Latin characters, hence printed since 1928) produced by this process are known (see P. N. Boratav, op. cit., 212-3).

There should also be mentioned the classical themes such as Leyla and Demna, Ferhad and Shirin, etc., which, without being completely assimilated to the hikaye, particularly in their verse sections, have nevertheless become part of the repertoire of popular hikayes which are distributed in the form of books sold in the streets by peddlars, first in lithographed then in printed form.

The classics of Arabic-Persian narrative prose such as Kalila wa Dimna, Tüsfîname, and the Thousand and One Nights have, since the beginnings of the Islamic Turkish literatures, existed in written recensions recorded in the various Turkish-speaking areas. The culmination of this literature, in the Ottoman area, at the end of the 18th century, is the famous collection Muhkâyeceli-1 ledümü-i ıdâhi of Aziz Efendi (see A. Tietze, in Orients, i (1948), 248 f.). But very few examples are known of the true popular story which has passed into a written version: there may have been a Dâstân-i Ahmed Efendi (ed. by A. Tietze, in the international catalogue of Aarne-Thompson), an anonymous work, probably 8th/14th century; a short verse tale by Şahîk Pasha (17th/18th century), which corresponds to the folk-tale type no. 1626 of the international catalogue. The collection Bâllâr Kâggî, containing 13 stories drawn from oral tradition, is a recent compilation, probably of the 19th century. On the other hand, the comic narrative literature, which seems to have drawn a large part of its subject matter from oral tradition, has appeared much more frequently in written versions. The collections of amusing anecdotes of Naşr al-Dîn Khojâja (q.v.) begin from the 10th/16th century to sprout the others because of their populare, is a comic genre, such as those of Bekâr Muştâfa or İndîli Câvûgh, both of them actual persons of the 11th/17th century, which at first were transmitted orally, were also to appear in modern editions in books peddled in the streets. The anecdotes concerning the adherents of heterodox sects (e.g., the Tahtâgül and the Kırîfbâqül), and also the “discriminatory” stories which different racial, regional or religious communities tell against one another, remained until fairly recently exclusively oral. Nevertheless there are to be found in some 11th/17th and 12th/18th century manuscripts jokes about the Râfdîs which appear again later, attributed to the Bektâşîs.

In Turkey, the modern novel and short story began as a kind of negation of the ancient narrative traditions, both classical and popular. It is nevertheless true that the first modern novels and stories were deeply influenced by works of these two ancient traditions. Although they succeeded in eliminating all irrational and supernatural elements, yet so far as style, forms of expressions and construction are concerned, the old narrative techniques of the story-tellers of scholarly literature and of the meydâns were to survive for a long time, right up to the period of the realist-naturalist novels of the beginning of the 20th century, for example in the works of the great novelist Mustâsîn Hüsâyn Rhâmi [Gürpınar] (q.v.) (1864-1944), who here follows his master Ahmed Midhat (1844-1913), the father of the modern novel in Turkey. The very titles of the early novels which appeared at the same time as the first works of Ahmed Midhat are significant in this respect: Mühâcûncü (1872-3) by Emîn Nîhâd, Sîyâset-i Sûnûvas (1873-4) by T. Abdî. At this time works of this genre were called “roman”, but also hikaye, as is illustrated by the title of an anonymous novel Hikâyə-i Ferdâne Khanım (1872-3); thus the word hikaye acquired a new meaning and it was thereafter to be reserved for the “story in written educated literature. The composite term kâşîk hikaye (short story) refers only to the length of the story.

Spies, Türkische Volksbücher, Leipzig 1929; Mustafa Nîhât Özvân, Türkçe roman, Istanbul 1935; İbân Bâgîsî, Turkish folk stories about the lives of minstrels, in Journal of American Folklore, i lv (1925), 331-9; W. Eberhard, Minstrel tales from southeastern Turkey, Berkeley-Los Angeles 1955. Bibliographies in the above works and in Philologias Turcicæ Fundamenta, ii, Wiesbaden 1965; the latter work gives, in the relevant chapters, accounts of the narrative genre in the literatures of all the Turkish-speaking countries, followed by extensive bibliographies. For Turkish tales see the catalogue by W. Eberhard and P. N. Boratav, Typer türkischer Volksmärchen, Wiesbaden 1953. (Pervat Nâilî Boratav)
The basic material of the dastan-litterature was the cycle of Amir Hamza, written and recited in most Muslim countries from Turkey to Indonesia. Dastans characters fell broadly into three categories: the hero, the heroine and their chivalrous friends; ‘tricheurs’ (‘suyyūr’) who supported them and supplied some comic relief in the narrative; and the sorcerers or magicians (gāddāgar) who were their adversaries.

The dastan has a repetitive pattern of almost identical stock situations in which heroes aided by ‘suyyūr’ challenge sorcerers in a magical landscape with a labyrinthine monotony which draws on to enormous lengths.

The authorship of Dastan-i Amir Hamza is attributed apocryphonally to Akbar’s [q.v.] poet-laureate Fayyūl: It was rendered into Urdu from Persian by Ashk under the auspices of the Fort William College in 1215/1801. The entire dastan runs into seventeen volumes divided into a number of series. The first of these series is Nasb-i ‘araid Nāma. The most popular series is the seven-volume Taisīm-i Ḥoshrūbī, the first four volumes of which were translated from a Persian original by Mir Muhammad Husayn Diwāḥ, and the remaining three by Ahmad Husayn Kāmar.

An imitation of the Ḥamza cycle is the Bustān-i Ḵiyālī, a dastan of 4,000 pages composed in Persian by Mir Taqī Khān under the patronage of the decadent Mughal emperor Muhammad Shāh (1713/ 1719-1726/1728). It was translated into Urdu by Ḵayāl-Adān Dihlāwī and Mirza Muhammad ʿAskārī among others. In stylistic quality the Bustān-i Ḵiyālī is inferior to the Ḥamza group, though both rely on linguistic cadence, rhymed sentences and ornate phraseology.

Fasāna-i ‘aṣḡāb (1824), Mirzā Raḍiāb ‘Alī Bāg Sarū’s (1877-1867) short volume of inter-related stories, is thematically descended from the dastāns and has the same involved magical elements, but it is distinguished from them by its brevity, its occasional reflection of the actual life of the period and its primary pre-occupation with the concentrated decorativeness of style. These new characteristics, especially the last, were inherited by Pandit Rātan Nāth Sarshār (1846-1902) in his novels, which also reflect the influence of dastāns in love scenes and certain conventional situations.

Ḵāhār darwarh, originally a collection of inter-related stories in Persian, has wrongly been attributed to Ḵᵛājā Ḵusraw [q.v.]. It was composed probably during the 11th/12th century. It has been rendered into Urdu in two literary versions of considerable importance. One of these was Muhammad Husayn ‘Aṭā Khān’s Naw ḥar-i muṣraḥa composed in 1798 in a highly Persianized style. It was rendered into simpler and idiomatic Urdu prose by Mir Amman Dihlāwī and at the Fort William College in 1801, under the title Bāgh-u bāhār. Both these works probably mark the development in the original prose. Another Naw ḥar-i muṣraḥa of inferior literary quality was compiled at the Fort William College by Ṣairr in 1801.

Saṣf al-mulḵ wa Bādī al-ḏālamā, a story from the Arabian Nights, was first rendered as a maḥaṣṣālī by the Dakhani poet Ḡawwāṣī in 1035/1625. It was written as a prose romance by Ṣaḥān ‘All in the early nineteenth century.

Other remarkable specimens of the ḵāyā literature of the early nineteenth century include Ḥayyāt al-ḵulūb, Wall Muhammad b. Hāṭīz Mīrān’s rendering of Bākīr Maqṣūr’s work on the stories of the prophets; Ṣayḥkh Ṣaḥīḥ Muhammad ʿUṯmānī’s Sayyīr-i Ṣithrāt, ḡāmī al-ḵẖāyā (1825), an imitation of Ṣaḥīḥ’s Gulašlān, the Haft ḡulāmā, a collection of Ṣaḥīḥ’s ʿAlī Khān Wāṣṭī’s translated from Persian into Urdu by Mirzā Ḵaṭl ‘Alī Wīlā; Bīnī Ṣarāyān’s Ḡar ḡulāmā, translated from Persian in 1812; and two collections of prose tales Mor ṣanbāt and Raḥq-i ṣurāi compiled by Ṣaḥān ‘All about 1243/1823. Ṣaḥān, the translator of Dastan-i Amir Hamza, also wrote a prose romance, Gulašlā-i Ṣīm, in 1215/1804. Ḥayyāt Bākhṣ Bāydar (d. 1833) Ṣaḏīq-i maḥfī belongs, like several other tales written in the early nineteenth century, to the Ḥāṭim Tāʿī cycle. Ḥayyāt is also the author of Laylā Majdīnān and Gulašlā-dīnāḵ, which is a translation of Ṣhaykh Ḥaydār ʿAlāt’s Bāhār-dīnāḵ containing stories of feminine wiles and infidelity.

Ḥayyāt’s most famous work Totā kahānī, compiled in 1215/1801 at the Fort William College, belongs to another group in the ḵāyā-literature, that of stories of Indian origin. Dīyā al-Dīn Ṣaḥḥābī’s Tāʾī Nāma (731/1330) is the Persian version of a Sanskrit collection of seventy stories, Saka saptakāt. The central plot around which the stories are clustered evolves around a faithful parrot who keeps an unfaithful wife, whose husband is away on a distant journey, from adultery by relating to her a series of stories to keep her absorbed and out of mischief. A simpler abridged version reducing the number of stories to thirty-five was compiled in Persian in 1049/1639 by Muhammad Kādīrī. Ghaḏwālī’s Urdu maṭlaḥna-i Ṣāt Nāma (1049/1639) is based on Ṣaḥḥābī’s version, while Ḥayyāt’s prose Totā kahānī is based on Kādīrī’s abridgement.

Other stories of Indian origin compiled at the Fort William College include Singhāsana Bāṭīṭī by Kāzīm ‘Alī Diwān and Lālū Lāl; and Bayātī Pāṭī translated into Urdu by Ṣaṭṭ ‘Alī Wīlā with the help of Lālū Lāl. Wīlā also translated a Hindi romance, Māhā Māl.

Inghī’s (1756-1817) Kāhānī Rānī Kīthā aww Kawwār Uḍaybāh kā (1803) is a story of Indian origin in which not a single word of Arabic or Persian origin has been used.

A famous Indian cycle is of the quest of a rare flower Bakwālī, which is also the name of a woman. The story was rendered into Persian in 1124/1712 by Ḥaḍrat Allāh Bangālī, and from this version it was translated into Urdu by Nīḥāl Cānd Liḥīrī (eds. Ḵᵛājā Ḥaḍrat Allāh Bangālī). These works form a summary in JA, 1836. Earlier versions of this romance were written in Dakhani verse in 1035/1625 and 1151/1738. The most famous Urdu version of the Bakwālī romance is Dayā Shāhkh Nāsīm’s Maṭlaḥna Gulašlā-i Nāsīm composed in 1254/1838.

Hikayat in Malay as in Arabic means 'story, tale, narrative, historical account'. It occurs in the titles of many works and a number of the earliest 16th century hikayat texts show the history of the rulers of Pasai (Ht. Raja Ra' Jasa) and Ht. Iskandar Dhu 'l-Karnayn, the story of Alexander the Great as a missionary of Islam. The same translator Abd Allah, and also the Arab missionaries such as the Spanish 9uatoX6yoi Science and philosophy were concerned with the kind of the heavenly bodies, and also with the kind of things that occur among mankind to which it was desired to render perfect. A reflection of the sciences of the religious law, and also of the secrets that elude common knowledge, that is to say the secrets of the Divine Essence. It is then al-hikma al-mas'ukā 'anhk, "the science about which one remains silent".

On the other hand, "wisdom" from the beginning extended to the sense of "science", since the seven Sages included several scholars, Thales certainly being among them. The astronomer Cleostrotas was a philosopher, as was Anaximander, said to be the author of the first book about nature. The Sages were called 9uatoX6yoi Science and philosophy were founded at the same time, in a study of nature which was desired to render perfect. A reflection of the original unity appears in Ibn Sina's fine definition: "Wisdom (hikma) is the passage of the soul of man to the perfection possible for him within the two bounds of science and action". It includes, on the one hand, justice and on the other the perfecting of the reasoning soul, inasmuch as it comprises the theoretical and practical intelligibles (Burkhan, 260).

Distinctions became established in proportion as increasing knowledge called for specialization, but they were recognized as forming part of a whole. Thus the beginning of the Mañik the mañikriyyān presents hikma as the main stock from which spring directly the āyāl or al-9ulim al-āṣiyya, the fundamental sciences, such as the study of the world and logic, while medicine, agriculture and the other individual sciences are derived sciences, branches, fura'. The lost work, of which the Mañik is a fragment, was entitled al-hikma al-ma9qriyya, but we do not know what sciences it covered. Dju9dānī tells us only that the hukama? sibrā'iyān were under the leadership of Aflāātan (Ta'raflīt), Plato? Plotinus? Naṣīr al-Dīn al-Tūsī follows Ibn Sīnā and leaves the individual sciences, medicine, agriculture and the others, in their subordinate place.

The tradition of the inclusion of the sciences in wisdom seems indeed to have remained unbroken
from the Greeks to the Arabs. A short manual of medical ethics which forms part of the Corpus Hippocraticum affirms that "a philosopher is at the same time a philosopher is the equal of the gods". Similarly, 'All al-Tabari, a Persian physician of the 3rd/9th century, wrote in Arabic a compendium of medicine which is one of the oldest in that language, entitled *Firdaws al-hikma*, "Paradise of wisdom". Its arrangement is inspired by Oribasius and Paul of Aegina, not by al-Razi or Ibn Siná; the sources quoted are Hippocrates, Aristotle, and Hunayn b. Ishák [q.v.], a contemporary of the author. This little book also deals with the natural sciences, and concludes with a sketch of medicine in India; it was quoted by E. G. Browne, *Arabian medicine*, Cambridge 1922, and analysed by Meyerhof. Dābir b. Ḥayyān said on the subject of the [supposed] founder of alchemy: "Know that successive philosophers have made science benefit from the greatness of men whose existence is not dependent on man, and even attaining to faith in God in revelation. It goes beyond falsafa, which denotes only Hellenistic philosophy; it transcends science, *hikmat*; "Science consists in grasping those things which it appertains to human intelligence to grasp in such a manner that no error enters into it [...] and if this is done by means of certain proof and actual demonstrations, this is called *hikma*" ([ʿAhd, 143]). By bringing absolute rectitude, both in his search and in the application, "The truly Wise Man is he who, having formed an opinion on a question, speaks to himself as to others, which signifies that he has spoken the truth faithfully" (Safaṣat). 6.

Averroes seems to take *hikma* rather in the limited sense of "philosophy", as against "religion" (Faṣāl al-maḥbūl); nevertheless he calls it "the supreme art", *mishār al-ṣanādīd*; ibid, 5, line 7.

(A. M. GOICHON)
HILAL, the new moon, the crescent.

i. — IN RELIGIOUS LAW

The new moon is important in Islamic religious law, because, in the Islamic lunar calendar (see Ta‘wīl), it determines, among other things, the date of the pilgrimage (see Hadrī), and the beginning and the end of Ramadān (q.v.), the month of fasting (see Sāwim).

The Kur‘ān refers to the new moon in sūra II, 189 (a verse of indeterminate date; Gesch. des Qor., i, 181): "They ask thee about the new moons; say: 'They are fast times (ma‘dūdah) for the people and for the pilgrims.'" Another relevant passage is sūra II, 183 f. (to be dated shortly before the Ramadān of the year 2; Gesch. des Qor., i, 178): "O ye who believe, fasting is prescribed for you as it was prescribed for those before you—maybe ye will show piety—during a certain number of days (ayyām 'ma‘dūdah)." As the observation of the new moon even in a clear sky is subject to chance, as described, for instance, by Ibn Ḥubayr (162), whereas the terms ma‘addah and ma‘dūdah in the Kur‘ān seem to refer to an exactly determined date or period, it seemed indicated that the beginning of the month should be determined by calculation, and several systems of calculation came into being. An argument in favour of calculation (biṣād) was also drawn from sūra X, 5 (belonging to the third Meccan period; Gesch. des Qor., i, 158) which reads: "He who has made the sun a glow and the moon a light, and has given it determined stations (wa-kaddarāhā manādsīt), that ye may know the number of the years and the reckoning (biṣād) [of time]." Calculation was, however, rejected by the Sunnis, the Ṣa‘ūdīs, the Zaydis, and the "Twelver" Shi‘itis, whereas the Ismā‘īlīs adopted it, and whilst traces of it are found in the literature of the other schools, it has become a distinguishing feature of this last (and of the present-day Bohrās). It is, of course, generally agreed that the actual observation of the new moon at the beginning and at the end of Ramadān is decisive, and the difference comes down to this, that if the new moon has not been observed on the evening of the twenty-ninth day the majority consider the thirtieth day as still belonging to the month in question, so that both Sha‘bān and Dā‘īr (the twenty-ninth day the majority consider the thirtieth day as still belonging to the month in question, so that both Sha‘bān and Dā‘īr) may have thirty days, which can never happen under the rule followed by the Ismā‘īlīs.

There is an arbitrary interpretation of the words ayyām 'ma‘dūdah as referring to a fast of three days in each month which had allegedly preceded as a religious duty the fast during Ramadān; the interpretation aims at eliminating the seeming implications of the words in favour of calculation; the traditions in which it is expressed (Ṭabarī, Ta‘ṣīr, Būlāk 1321, ii, 76) can be dated between 5A‘īd (d. 114 or 115/732-33) and Ibn Abī Laylā (d. 148/765). The commentators Ṭabarī, Dījassās, Ibn al-‘Arabī, and Fāḍl al-Dīn al-Qādī al-Mudhahhab, Bālāq (d. 321), in his Sunan, mentions before (ed. Istanbul 1308 ff., v, 170) reject this interpretation, and Kuršābī (al-‘Aṣīrī) li-ṣāḥab al-Qur‘ān (Cairo, 1353/1934, ii, 256), does not even mention it.

The opinion of the majority is expressed in a tradition from the Prophet which occurs in two classical collections and in many other works of hadīth (for detailed references, see Wensinck, Hand- book, s.v.v. Fast (ing) and Ramadān; further, Kanz al-‘umādī, iv, nos. 6060 ff.); its main tīmād goes through Mālik—Nāfī‘—Ibn ʿUmar, and it can therefore be traced back to the second century of the kisra (cf. my Origins, 176 ff.). A typical version of it (in Mālik’s Muwatta‘, Kībat al-‘Aṣīrī) runs: "The Prophet spoke of Ramadān and said: 'Do not fast until you see the new moon, and do not break the fast until you see it; but when it is hidden from you (by cloud or mist), give it its thirty days (‘ instead of laḥā')." Because the expression fa-ba‘dūrā laḥā could be taken to mean not only the computation of thirty days from the last new moon but also the calculation of the mansions of the moon, it was replaced in other versions by fa-‘akhmiṣu ‘l-tīmād, "complete the reckoning" (an expression taken from sūra II, 185), or by "count thirty".

According to another tradition, going back (through Nāfī‘) to Ibn ʿUmar only, which occurs in the Sunan of Abū Dāwūd as a corollary to his version of the tradition from the Prophet, Ibn ʿUmar on the twenty-ninth of Sha‘bān used to have the new moon looked for, and if it was seen that was that; if it was not seen in a clear sky, he continued to eat on the following day, and if there were clouds or dust in the sky he started fasting; but he finished his fast [at the end of Ramadān] together with the rest of the people and did not follow that method of counting. This reflects two early, not necessarily conflicting, attitudes, the meticulousness typical of the pious and the desire to follow the community, i.e., the orders of the imām, and both have left other traces in traditions. It was as a counter-move against this tradition that the (latter) tradition of the Prophet was provided with the tīmād Mālik—Nāfī‘—Ibn ʿUmar. The Ḥanbali school has essentially adopted the doctrine attributed to Ibn ʿUmar, whereas the other orthodox schools of law follow the implications of the tradition from the Prophet. (That one ought to start fasting after the 29th day of Sha‘bān, if the view of the new moon was obscured by clouds, is also the doctrine of the "Twelver" Shi‘itis, expressed, e.g., in a tradition from Dījār al-Ṣāliḥ in Tāfṣīr al-Ṣahih al-Bayānī.)
